On his first small property acquired at Concord in 1807, Lawson had kept six horses and his interest continued when he established Veteran Hall.

Following his retirement from the military in 1824 he became a significant player on the Australian equine scene, importing a number of stallions and breeding and racing numerous horses. (Binney 2005, pp. 35-38)

His horses were also prized by the emerging coaching services.

In an 1826 memorial written to Earl Bathurst of the Colonial Department he claimed to own 70 horses (along with 9,000 sheep and 1500 head of cattle) (Magann nd., p. 68)

The four sumpter horses chosen in 1813 were most probably locally bred, selected with an eye for fitness and stamina and, in light of the above, primarily of Arab descent.

They were the precursors of a great equine heritage, for the pasture lands to which they helped open a passage would become, with increased Thoroughbred imports, a nursery for that hardy Australian stock horse, the Waler, a horse that later found its place in both the 'bush' ('Man from Snowy River') and 'ANZAC' (Australian Light Horse) legends. (Yarwood 1989, p. 17)

The performance of the horses during the expedition

Though a detailed list of the expedition's provisions is not available, a list of sorts can be made by using the journals themselves and the list of Caley's provisions mentioned earlier.

In this way some idea can be formed of what the horses were required to carry.

The expedition took seven muskets plus ammunition, tents, brush clearing implements (hooks, hoes etc.), compasses and cooking utensils.

Their food included salt meat and flour and probably, like Caley, also a supply of biscuit, rice, sugar and tea and perhaps even the portable soup which Caley valued greatly.

With seven men, the weight of these provisions would have been considerably greater than Caley's.

Five dogs and four horses, of course, also had to be fed and while the odd bird or wallaby might have helped feed the dogs, as we shall see the natural fodder available for the horses proved inadequate and had to be cut where available and added to their load.

The horses were not burdened, though, with a growing collection of natural history specimens!

There is no doubt that the loaded horses experienced problems with the mountain terrain and sometimes stumbled and fell. (May 13, 19, June 4) They "travelled very awkwardly", wrote Blaxland, "being much incommoded by the small trees and brush at places and the ridge they followed being very crooked and intricate between the gullies" (Blaxland 1813, p. 3).

The ground too, often with sharp, jutting rocks and loose stones that made ascents and descents especially difficult, severely tested the horses.

The general method of proceeding was to cut a path through the bush and then bring the loaded horses forward.

A camp would be established and a couple of men left to look after the horses and provisions while the others cut and cleared a path forward through the often thick brush, returning to camp at the end of the day.

The daily distances achieved often varied considerably and sometimes, when the going was especially difficult, they camped in the one spot for a couple of days and were forced to re-walk the same section of cleared track several times. It was tedious and exhausting work.

Several times they were forced to redistribute the horses' loads.

Descending Mount York (May 29) they used a hoe to cut a small trench to prevent the horses from slipping, but even so "the descent was so steep, that the horses could but just keep their footing without a load, so that, for some way, the party were obliged to carry the packages themselves." (Blaxland 1823, p. 74).

On the return ascent of Mount York (June 2) they again had to carry the horses' loads for part of the way and later, towards the end of the return journey (June 4), "one of them fell this day with its load quite exhausted and was with difficulty got on after putting its load on the other horses" (Blaxland 1813, p. 11).

On only one occasion did they actually lose a horse. It got away in the night (May 16) and fortunately they found it again the next morning "about a mile and a half back" (Blaxland 1813, p. 4).

The most serious and regular problem was lack of feed and water.

Good grass was generally difficult to procure on the mountains, reported Blaxland, the horses surviving on "coarse swamp grass or rush [as] nothing else could be got for them." (Blaxland 1813, p. 5).

"It was", confirmed Wentworth, "the scanty fare which these swamps afford that enabled our horses to exist." (Wentworth 1813, p. 112)

Where grass and rush was available it had to be cut and loaded on the horses for later use.

Occasionally only enough water could be found for the men and the horses went without.

Perhaps the decision, unlike the majority of earlier expeditions, to go out in the cooler months was made not only with the men in mind, for there is little doubt that the horses would have fared very badly in the hot, dry months (Brownscombe 2004, p. 223).

By the time they got the horses down Mount York "they were getting into miserable condition" (Blaxland 1813, p. 9).

Continued page 11

A wise innovation or silly mistake?

Continued from page 10

Soon, however, they passed into "open meadow land clear of trees, covered with grass two and three feet high" and "encamped on the bank of fine stream of water to rest themselves and to refresh their horses" (Blaxland 1813, p. 10).

Feed for horses continued to be a problem even after the road was built and had to be carried, until inns offering baiting facilities began to appear in the 1820s and 1830s.

It is interesting that many of the feed and water locations identified in 1813 eventually became regular stopping places for stock, then as locations for inns and eventually towns.

Springwood, Lawson ('Christmas Swamp') and Wentworth Falls, for example, can trace their stories in this way.

Conclusion

So, back to the question posed at the beginning – a wise innovation or a silly mistake?

It seems to me that the inclusion of sumpter horses to carry the provisions and equipment was a carefully planned one made in conjunction with the strategy of tracking along the ridge and that their presence was also important in demonstrating the practicality of moving livestock along the route the expedition travelled.

The horses certainly experienced difficulties but they did cope and, despite all the problems, all four returned safely, proving the quality of locally bred horses and their ability to survive in inhospitable terrain.

As suggested by Favenc, this *was* the horse's first real test in inland exploration and did in a sense begin what he termed "a new phase of exploration" (Favenc 1888, Ch. 2).

George Evans, sent out by Governor Macquarie to confirm and survey the newly discovered route later that year, saw no reason not to follow Blaxland's example and also included horses in his party.

After the road was built, Bathurst established and exploration extended further inland, horses became a common component of exploratory expeditions.

John Oxley in his exploration of the Lachlan River in 1817 took 13 horses, while explorers like Parr, Howe and Gregory Blaxland's nephew John who later (1817-1824) explored the Northern Blue Mountains also made use of horses. (Macqueen 2004)

When Melbourne folk were confronted with the extraordinary sight of Burke & Wills leaving that city in 1860 with 28 horses and 24 camels; horses (and other baggage animals) were well and truly taking "their share of sacrificing their lives in the cause" (Favenc 1888, Ch. 2).

The text of this article formed the research for an address by John Low OAM to the Mt Wilson and Mt Irvine Historical Society Inc on November 10, 2012 and was later published for that society as Historical Paper No.13.

The author ... John Low, OAM

Long term former president ofthe RAHS and vice president of BMACHO, Associate Professor Ian Jack in a tribute to John when it was announced that John had been honoured with the Order of Australia Medal probably more than most succinctly summed up the man, when he wrote:.

"All students of heritage and history in the Blue Mountains are much in the debt of John Low.

"By developing a local studies centre of excellence at Springwood Library, John has been an essential force in broadening public awareness of the diversity of surviving evidence.

"John's amiability, unflappability and determination, combined with his own effortless mastery of so many unfamiliar corners of Mountains history, have given him a very special place in the affections of all right-minded scholars," wrote Dr Jack.

John was employed by the Blue Mountains City Library as a local history librarian in March 1982 on a 6 month contract to establish a local history collection.

Following an extension of this contract, he was appointed on a permanent basis in September 1983 and retired in August 2007.

Wild Ephemera a collection of some his poems is indicative of his ability and skill as an unbiased observer of the natural and human history of the Blue Mountains.

John is a regular contributor to *HERITAGE* and other newsletters and journals and has published a number of books.

John is a much sought after and accomplished public speaker.

He is an individual member of BMACHO and served a term on its management committee.

The ubiquitous plaque

Blue Mountains City Council will conduct the invitation only 'Mount York Civic Event' as part of the Blue Mountains Crossings bicentenary celebrations on May 28.

A commemorative plaque will be unveiled.

Grant to research Woodford Academy students who served in World War 1

Fifteen graduates from Woodford Academy who enlisted in the First AIF during the First World War will be the subject of further research.

A grant of $2859 from the NSW Office of Communities (Veterans Affairs) will be used to assist this research.

They served in a variety of capacities. Two were killed in action and one was awarded the Military Medal.

They can now be seen as a mini-study of the time and experience of men who served in that war.

There is a large collection of unprocessed resources and records that contains information about these men and their school experiences.

This includes photographs, school records, fees paid family contacts and the like.

It is proposed to research these boys and the period 1910 -1918 and to add their military records to create a teaching and learning experience for schools in the area and the wider community.

The information will be of particular interest to a study of the social history surrounding the men and the motivations that caused them to join.

The untapped material will also be valuable to university undergraduates and research students

A number of years ago, Mrs Neryl Medcalf carried out an extensive study of the men and this formed the basis for an interesting standing display at Woodford Academy.

1813: A tale that grew in the telling

1813 has been long celebrated as the year that three intrepid European explorers – Gregory Blaxland, William Charles Wentworth and William Lawson – successfully penetrated the sandstone prison walls around the prison colony at Sydney.

The First Crossing of the Blue Mountains is thus a key historic story of early Australian exploration, as it was the first significant land-based expedition into the continent's interior.

Over 200 years the Blue Mountains have been heavily inscribed figuratively and materially by European travellers, settlers, and their descendants.

First perceived as a barrier to westward progress the mountains were reviled for their 'wildness' in early accounts, but once they had been travelled over, the 'fair prospect' they provided gained them more positive descriptions.

Eventually the mountains became a health and recreation resort in their own right.

The language of bodily health and enjoyment associated with tourism continues to this day.

Parallel with the figurative inscriptions upon the landscape came the material ones.

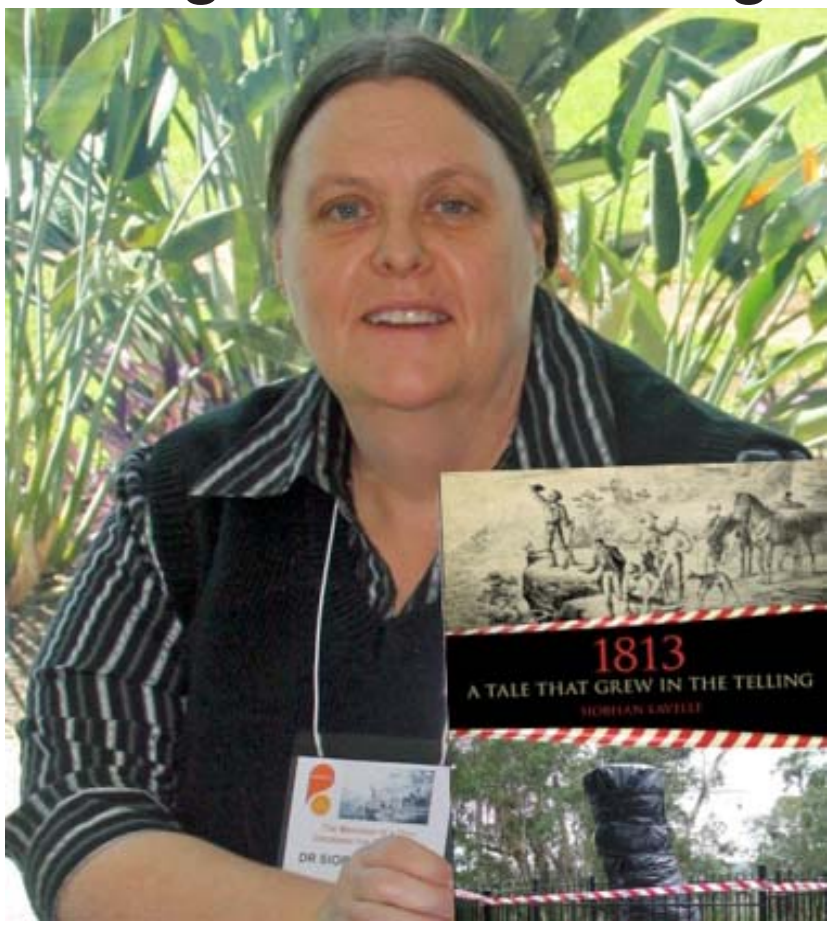
Trees were marked, cairns built, roads made and later memorials were erected.

Dr Lavelle's book, *1813: A tale that grew in the telling* does not deal in detail with the events of the 1813 Crossing.

Instead it examines the commemoration of the First Crossing through poetry, literature, and visual images as well as commemorative ceremonies, monuments and plaques.

Five chapters are devoted to sites and monuments regarded as icons, each of which marks a focal point or key event in the story of the crossing.

The sites were associated with 'original' events or reputed happenings, and with later commemorations and celebrations.



Siobhan Lavelle, OAM, MA, PhD with her latest book 1813: A tale that grew in the telling.

The region contains about a dozen sites associated with the First Crossing, ranging from simple monuments such as rock cairns, to more complex sites thickly populated with elaborate landmark structures and explanatory plaques.

The author explains that the sites were erected by local people to claim their part in the historic narratives about European exploration, discovery, possession of the country, national progress and expansion, with explorers as central heroes – the agents of empire and transformation.

Thus an historical narrative may be written both *about* the landscape and also *in* the landscape or place, by the people who live or lived there.

Chapters 1 and 2 examine the genesis, evolution and re-casting of the master narrative during the 19th and 20th centuries.

Chapter 3 examines the commemorative celebrations and ceremonies. Chapters 4 to 8 deal with specific sites, their histories and their roles within the overall ideological construct and requirements of the narrative of the 'First Crossing'.

The 1813 book argues that the details of memorialisation and twists in the overall narrative of the First Crossing are inextricably tied to significant changes in the settler ideology and to historical explanations about Australia's origins and key events.

The sites are discussed in chronological order based upon when they were first identified or memorialised.

Sites discussed in detail include: the Explorers' Marked Tree (Chapter 4), Mount York (Chapter 5), Caley's Repulse (Chapter 6), a series of smaller monuments or sites (Chapter 7), and Mount Blaxland (Chapter 8).

Continued page 14

1813: A tale that grew in the telling

Continued from page 13

These sites were valued as the product of a dominant narrative that remains remarkable for its longevity.

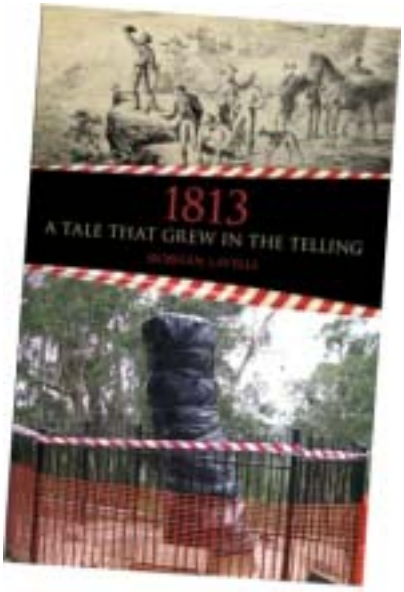
The first site was memorialised in 1884; the last new monument was added to a site in 1988.

Some renewal of structures has occurred recently and new monuments, additions and refurbishment of some existing sites will happen in 2013.

It is argued that the importance of the sites examined in this study lies not in issues about authenticity or otherwise but in the way they have been used in different historic contexts and eras.

With the 1813 First Crossing bicentenary occurring in May 2013, this account of earlier commemorative efforts has special interest.

Dr Lavelle's book was launched in Sydney on April 18, 2013 at History House by by Associate Professor Grace Karskens and in the Blue Mountains at the Cultural Centre, Katoomba, by Wendy Blaxland on May 3, 2013.



It is available in Blue Mountains independent book shops with a rrp of $35

About the author - Siobhan Lavelle, OAM, MA, PhD

Siobhan Lavelle has worked in archaeology and heritage since 1985.

She commenced her career at the NSW National Trust, then established a private consultancy in 1989 providing advice and assistance to the private sector, government and community groups.

From 1994 to 2003 she was the consultant archaeologist for the Heritage Council endorsed "Convict Trail Project" with much work undertaken on an honorary basis.

Between 1990 and 2004 Siobhan won several heritage awards, both state and national.

Siobhan completed a history PhD on the First Crossing of the Blue Mountains in 2004.

In 2008 she received a National Trust Commendation (Bronze Medal).

In 2009 she received an OAM for service to historical archaeology and heritage conservation, particularly the preservation of colonial roads and cemeteries.

Siobhan re-joined the public sector full time in 2005 and works as a senior heritage officer for the Heritage Council of NSW.

BMACHO support for Thompson Square National Heritage Listing

Nomination of Thompson Square, Windsor for National Heritage listing has been supported by BMACHO with a submission made to the Federal Minister for Sustainability, Environment, Water, Population and Communities, Tony Burke, MP

Thompson Square, Windsor, the oldest town square in Australia, is under threat from the present plans of Roads and Maritime Services, to replace the existing historic Windsor Bridge with a high level road and bridge, which will cut a swathe through Thompson Square, isolating some of the colonial buildings on the northern side from the rest of the square.

A new bridge is planned and this would encroach on Thompson Square and the remaining historic buildings.

The current bridge can be repaired for a lot less than the cost of a new bridge and these repairs would last for at least another 20 years. There is an alternate route that could be taken for a new bridge over the Hawkesbury River.

Thompson Square, Windsor, has the highest significance and value in the course of Australia's cultural history, as the first developed example of this country's town planning.

It is within the planned structure of Macquarie's largest and first developed rural town, yet still visibly within the context of its 1794 farming roots.

Thompson Square retains its civic structure and the form it evolved between 1795 and 1800. The Square remains still legible, useful and esteemed in 2013, after 218 years.

A BASTILLE DAY LUNCHEON will be held at Everglades Historic House and Garden, Leura on July 14.

A delicious French flavoured luncheon will be served in the stunning art deco tearooms. Bookings essential to 4784 1938 or everglades@nationaltrust.com.au

Scenic World sculpture exhibition stands well in heritage rain forest

Blue Mountains artist, Daniel Kojta, has been awarded the $20,000 Scenic World acquisitive prize for his highly polished stainless steel sculpture, *Reflect Phi [a momen].*

Kojta's work is one of 35 artworks from as far as America and Ireland, on exhibition for selection along the rainforest floor at Scenic World.

The award was presented by Scenic World's joint managing directors, Anthea and David Hammon, on behalf of the Hammon Family Council, during the official exhibition opening last month

The winning artwork consists of three independent but related sculptures translated through the mathematical Phi formula of Australian natives.

Kojta said: "it was an incredible opportunity to receive the award at an exhibition that is growing and supporting professional contemporary arts in the Blue Mountains".

Judges for the 2013 exhibition were: artist and Environmental Research Initiative for Art (COFA) Director Allan Giddy, Dinosaur Designs Creative Director, Louise Olsen, and Associate Professor in Art History and Theory at the College of Fine Arts (COFA), Dr Alan Krell.

The judges said the winning sculpture was a unique response to site that reflected both a modernist and contemporary aesthetic sensibility.

"What appealed to us about Kojta's work was its beguiling ability to reflect subtly the immediate environment and successfully create a dialogue between the geometric and the organic," they said

Highly commended sculptures are;

- Last year's winner from Wollongong, Greer Taylor's *resting place* – "a delicately knitted wire structure that belies its materiality and seemingly floats in the rainforest";
- Nigel Harrison's *Bypass* – "an enigmatic work that references and challenges the rainforest through its evocation of 'energy' both literally and figuratively; and
- Ireland's Darragh O'Callaghan's "copper pipe configuration, *Serosa* that resonates wonderfully with the calligraphic qualities of the rainforest."

Exhibition manager, Lizzy Marshall, said Sculpture at Scenic World had again pushed the boundaries of onsite responsive art.

"All of our exhibiting artists have magnificently created within the context of an environment that is adherent to the complexities of sculpture and its mass, tension, formalist ideals and narrative objectives," she said.

Australia's only dedicated rainforest sculpture exhibition includes the indoor *Sculpture Otherwise* exhibition, and public programs featuring guided and independent tours, free evening lectures, and family and children's activities.

Sculpture at Scenic World 2013, offered a $20,000 acquisitive award, the new $5000 artist peer award, a $2000 Scenic World staff choice award and The Carrington Hotel's $1000 people's choice award.

Scenic World has also released a series of special overnight exhibition packages, starting at $207.50 for couples and $299 for families, at a collection of iconic Blue Mountains hotels and resorts.

Sculpture at Scenic World closed on May 19, 2013.

For more information about Daniel Kojta, visit www.onaircontemporary.com For interviews, images or media famils, contact Australia PR director, Michelle Grima, on 0416 114 911 or email mtgrima@gmail.com. For more information about the event and packages, visit www.scenicworld.com.au/sculpture

Mt Victoria museum creates new displays

MOUNT VICTORIA and District Historical Society is working hard to present new displays at the museum for the Crossings commemoration on May 25 and 26.

One room will be devoted to aspects of the crossing from the time of explorers to Evans, Cox and the Macquaries.

Dramatic images will be in place and tools of trade on display from cross cut saws and a boot-maker's last to the historic circumferenter, an early surveying instrument.

Another new display is of artifacts from the Gundungurra tribe which were donated to Melbourne Ward for his local museums and later donated to the Mt Victoria and District Historical Society.

The third major display is of farm implements from farms in the local valleys, showing how resourceful the settlers were and what tough lives they led.

It is hoped to improve signage for all these displays.

***Mt Victoria museum is uniquely situated in the beautifully restored sandstone bulding which continues to service passengers travelling to* the west**

Opening hours for the museum for the month of May have been extended and are from 12 noon to 5pm each weekend. The hours for the crossing weekend will be from 10am to 5pm. The museum is housed in the Mount Victoria Railway Station.

There are five display rooms on the ground floor which are wheelchair accessible and there are displays in most of the upstairs rooms. Admission is $5 adult/ $1 child.

Contributed by Jean Winston.

Powerhouse Museum Movable Heritage Fellowship 2013

POWERHOUSE Museum Movable Heritage Fellowship 2013

Coming up with an idea for a research project was not difficult for Leanne Wicks from Kandos, living as she does on the Western coalfields of NSW.

Leanne has just been awarded the Powerhouse Museum Heritage Festival for 2013.

Evidence of Kandos' past reliance of the winning of coal doesn't take much digging.

First hard hat issued to miners in 1947. It is lined with copper mesh. It replaced the cloth hat.

With superior Kandos cement from kilns heated with Kandos coal contributing to the concrete footings of Sydney Harbour Bridge no wonder it stands strong after 80 years.

Evidence of the regions' present reliance on coal is also easy to find with many coal mines still dotting the landscape.

Fascinated by objects in the Kandos Bicentennial Industrial Museum, which came from the Kandos Collieries, Leanne wanted to tell the story of the many men who have mined the black treasure from 1913 to 2001.

"Having grown up with green coloured glasses, I'm enjoying the challenge of respecting the history of coal-mining, researching the facts about the industry and recoiling from at what some mines are doing to the land," Ms Wicks said.

Museums workshop

BMACHO will conduct a workshop to assist volunteers to better manage local museums and collections.

The workshop to be facilitated by Lynn Collins will be held at the Mt Victoria & District Historical Society Museum on Saturday, July 20 commencing at 10am and finishing at about 3pm

Lunch will be provided by BMACHO at the Blue Mountains Manor House.

As numbers are limited, only the first 30 registrations will be accepted. Contact Jan Koperberg at j.koperberg@bigpond.com or 4751 5834 (leave a message if unanswered) by July 13.

Newspapers and genealogy

By Audrey King, president Blue Mountains Family History Society

NEWSPAPERS have always played an important role in Australian life.

A wooden-screw printing press came to the colony with the First Fleet and in 1796 George Hughes, the first "government printer", was at work in a small building behind Government House, his job being to print government orders, broadsheets, and so on.

But until 1841 most of the government's printing was contracted out to the many private presses.

In December 1840 Governor Gipps established a government printing office on the corner of Bent and Phillip Streets, and appointed John Kitchen as government printer, with two free men as assistants.

One of these was my husband's great-grandfather, John Spring, who had previously worked on the *Sydney Herald* from its inception in 1831. In 1831 John Spring was not a free man!

At the beginning of 1838, *The Australian* contained a notice advising intending migrating pressmen, that there was constant employment available, as 17 papers were being printed in the colony.

Immigrating pressmen were given free passage for themselves and their families, and *The Australian* itself required two pressmen. Wages were 50 shillings per week. This was in 1838.

Not all the newspapers established in the colony were successful.

Many were started by men with a bit of spare cash and an axe to grind, and the freedom of the press was abused so much that sensitive governors unsuccessfully attempted to introduce censorship.

Battles raged between various editors, often on sectarian grounds, and libel suits were common.

When people began moving out of the cities, newspaper men followed closely behind, for information was important.

It was the printer or compositor who was the important person behind the newspaper, and in fact many early editors were artisans rather than creative writers. Perhaps we could say the same today in many cases!

The gold rush spawned many newspapers, and when the fields closed and the diggers moved on, so did the presses.

Even away from Sydney the rivalries between newspapers was keen, and Goulburn was a good example, with five papers being printed in the early 1850s and quite a bit of unhealthy rivalry existed.

The first newspaper in Katoomba appears to have been *The Mountain Advertiser* (1876).

William Spring (son of the aforementioned John Spring) started *The Katoomba Times Plain Dealer* in 1889, and then sold it to his son and a partner.

It was not a success and the plant was moved to Kaduna South Australia about 1894.

The Mountaineer was begun in 1894, *The Observer* c1895.

Others began, faded, were resurrected, died again and amalgamated throughout this century and now there is just *The Blue Mountains Gazette.*

As I said before, many of the early newspapers were started by men with a message to spread, but today's editors need to be a little more circumspect in expressing their opinions and they usually try to ensure an appearance of impartiality.

The advent of a better educated community means that most people can now think for themselves, and are not keen on having the opinions of others rammed down their throats.

The big metropolitan dailies attract a loyal readership, but the local papers, usually supported by advertising and free to householders, are community-based and so cater for the local area.

They provide us with council happenings and non-happenings, community events, town plans, local gossip, public notices, advertisements for just about everything and (a source of considerable amusement and amazement) letters to the editor.

Continued on page 18

The author - Audrey King

Born and schooled as Audrey Eamens at Parramatta, I became a high school teacher (French) at the new and absolutely huge Fairfield Girls High School back in the 1950s.

My later country service at Murrumburrah Inter High was an absolute pushover after such an introduction. Marriage to another teacher, and a move to Narrabri, was followed by a return to Parramatta.

When the last of our four children started school I was dragooned into primary teaching, which I actually enjoyed, for the next 15 years.

When our two married sons moved to Springwood and Kurrajong we found it easier and cheaper in 1988 to move to Springwood, having taken up a new career in building and renovations on their behalf.

Fortunately, as we've grown older so have they, and even the grandchildren no longer require child sitting.

Newspapers and genealogy

Continued from page 17

These often provide unbalanced and very partial views, but whether or not we agree with the opinions expressed, at least there is a forum for expression, and in our local area there is a fairly good chance of having a letter printed (unpaid journalists?).

Unfortunately even in country papers we find amalgamations having an effect, and there are very few independent local newspapers left.

So many local newspapers now have a few outside pages devoted to local news, and then the greater part is common to newspapers from one end of the state to the other.

The few remaining independent papers are the successors of those dear to the heart of the family historian.

All newspapers are important to family historians because they set the background for the social history of the times we are interested in, but it is the true country or local paper that makes our eyes light up and takes up an inordinate amount of our time as we are diverted by the trivia in our search for relevant information.

It was in the *Braidwood Observer and Miners' Advocate* of 1862 that I read of the steepness and the narrowness of the road to Araluen that necessitated "up days" and "down days" for traffic.

It was in the *Maitland Mercury* of 1892 that I read "The number of deaths for April is lower than in that month for 10 years past. The government statistician says that this is because people who might otherwise have died in April had died previously from influenza." A touch of Hibernianism here, surely.

I can still remember the hours wasted in taking up linoleum and carpet squares when I was younger.

In those days underfelt was not used — the linoleum or carpet was laid on a few thicknesses of newspapers, and how interesting those papers were many years later!

That's where the waste of time came about.

However, I digress. The great importance of local newspapers for family historians is in the publication of the trivia.

When my mother-in-law holidayed with us in the early 1960s the event was recorded in the Harden paper (she came from Harden) and the Narrabri one (we lived at Narrabri).

The information did not come from us directly, but I guess each paper had its own "gossip writer" whose job was to collect such trivia.

But you all know the sorts of things I have in mind — graduations, weddings, competitions, etc. And if you're lucky you might even find a photograph.

The really big plus is the obituary!! I spent a small fortune trying to discover the death in Victoria of my husband's great -grandmother.

I knew she was still alive in 1863, but every search I requested of the VPRO for later years came back negative.

Eventually, after a plaintive complaint from me, they informed me that Victoria doesn't cross-reference, and that she may have remarried.

This, of course, is exactly what had happened. But it was in the days before public access to BDM's, so I took a trip down to Melbourne and read through the Broadford papers in the Latrobe Library until I found her obituary in 1905.

Obituaries in themselves can be a source of wonder. I have read some very flowery ones (especially from the Grafton and Maclean area) and some that make you feel good, like the one in the *Cootamundra Herald* in 1901: '…Her case was a hopeless one …Mrs King was ever ready to assist in any local matters, and she was of such a happy nature as to make all around her feel happy with her. In her illness she was visited by a large number of kind friends.' [my husband's grandmother!]

Over the years I had tried to discover more about John Spring and his time in Goulburn in the early 1850s, but the local history association was unable (at that stage at any rate) to help me.

Newspapers

Continued from page 18

Last year I wrote to the Goulburn Family History Society and BINGO! treasures galore!! These included photocopies of advertisements, reports etc culled from the local papers of the time.

Do you wonder that I like local newspapers, and sing the praises of family history societies?

Goulburn obviously has indexed its local newspapers, and it is a hope of mine that the Blue Mountains Family History Society may someday complete a similar index for the benefit of future family (and other) historians.

With my interest in names you can surmise quite rightly that I am also fascinated by the names of newspapers.

In actual fact, there are really not all that many when you consider the vast number of newspapers.

The owners show a lamentable lack of originality or an over-desire for conforming to tradition.

Off the top of my head I can think of: *The Globe, The Sun, The Star, The Gazette, The Press, The Herald, The Mercury, The Advertiser, The . . . Daily, The Observer, The Courier, The Express, The Advocate, The Mirror, The Dispatch* and *The Signal.* I leave you to add all the others you have come across. Now be honest! Are there many more?

In this article I have done little more than scratch the surface of the importance generally of newspapers in and to the local community.

From underwear to hardware

HAWKESBURY REGIONAL MUSEUM will celebrate its 5th anniversary on May 25-26 with a weekend of talks, activities for kids, things to eat and drink and the opening of a new exhibition, *From underwear to hardware* (Hordern Brothers, Windsor 1962-1998)

Funds for flagging works at Woodford Academy

SANDSTONE FLAGGING areas at Woodford Academy will receive a much needed restoration following a successful application for a grant from the NSW government.

A grant of $16,000 under the Community Building Partnership Program has been received and the Trust has allocated a further $21,000 totalling $37,000 to lift and repair the sandstone flagging areas of the Academy and repaint the external timberwork.

Meantime, Libby Burgess of the Woodford Academy Management committee has been instrumental in the new town entry signs showing Woodford, "Home of the Woodford Academy c 1834.

Libby is also the liaison person with Abigroup, which has agreed to build a connecting path between the Academy and Woodford Reserve, for the Lend Lease Community Day project in September 2013.

This will provide a pleasant alternative entrance for visitors after the dual highway is completed.

In 1979 this property was gifted to National Trust which in 2001 received an Australian government grant of $1 million from the Centenary of Federation fund for renovation.

A moment in time...
a remarkable exhibition at Hartley

OPENING MID-MAY *A Moment in Time*, is an exhibition that examines the celebrated crossing of the Blue Mountains by Europeans in 1813, and the consequences of that crossing.

Duncan Wass, chairman of the Hartley District Progress Association 1813 Sub Committee said: "In settling on the name *A Moment in Time*, we have tried to capture the essence of the crossing.

"It was but a moment in time and this is an exhibition that considers what existed before and what came after".

Curated by retired professional historian Joan Kent, now a resident in the Hartley Valley, *A Moment in Time* examines much more than the crossing by Blaxland Lawson and Wentworth and their party.

It begins with a consideration of the rich and ancient geology of the landscape into which the explorers intruded, where ancient sedimentary rocks lie juxtaposed with igneous granite.

In fact, the opening display in the exhibition is a most remarkable large mollusc or Brachiopod fossil, that has never before been on public display.

Discovered in the Hartley Valley, it nestles in, but is removable intact, from the block of late Devonian grit stone in which it was discovered.

Whilst geology is the opening theme, the exhibition explores many aspects of the crossing story, from the Indigenous peoples whose country was being traversed, through the explorers and the development of the Bathurst Road, to the first European visitors to Bathurst.

It closes with a consideration of the life and achievements of some of the earliest settlers in the Hartley Valley, John and Jane Grant and Pierce and Mary Collits who settled here in the early 1820s.

"This significant exhibition is a comprehensive, sophisticated, accessible and absorbing presentation of that exciting yet poignant moment when the Europeans vigorously fanned out westwards - it's a must-see amongst Crossings commemorations," commented noted museums adviser Lynn Collins who has acted as an occasional adviser to the project.

The exhibition has been open to the public on weekends from May 18 and will be until June 16, from 10am until 3pm, and by appointment midweek.

Party viewing can be arranged at any time by contacting Barbara Johnson on 6355 2017.

The exhibition will be held at the historic Hartley School and Hall located just off the Great Western Highway in Mid Hartley Road, Hartley.

A Moment in Time is just one element of the commemoration activities the Hartley community is undertaking, all promoted under the 'Hartley Rocks' logo.

Other activities include guided walks and rides along the line of Cox's 1814 road through the Hartley Valley, a project to date sign many of the heritage assets located within the valley and the commitment of a time capsule to inform 2113 residents of the valley.

The Cox's Road walk represents a unique opportunity to walk some of the country traversed by Cox and the explorers, much of which is located on privately owned land and is not normally accessible to the public.

For information on the Hartley Valley's Bicentenary events, go to www.hartleyvalley.org.au/hartleyrocks .

For more information on the Bicentenary of the Crossings, go to http://visitbluemountains.com.au/bicentenary.php

Festival to recall bushranger Ben Hall's 1863 raid on Bathurst

A FESTIVAL to mark the 150th anniversary of the Ben Hall raid at Bathurst in 1863 is being planned for the weekend September, 27-29, 2013

The raid on Bathurst saw some far-reaching effects that changed people's lives and the government of the day.

Bathurst District Historical Society president Alan McRae, FAIHA said, the anniversary will take the form of a weekend festival with numerous activities planned over three days.

There will be a full program of re-enactments, talks, tours, historic bushranging and colonial displays and memorabilia, book launches as well as a special dinner with guest speaker and bushranger historian Peter Smith with his talk entitled "Heroes to Villains."

A sub-committee of the Bathurst District Historical Society has been meeting since May last year to organise this special weekend.

This event marks the raid on Bathurst by the Ben Hall Gang and the effect it had not only on Bathurst but the Colony of New South Wales and the police system.

The raid took place on the evening of Saturday October 3, 1863, sending many residents into a panic as the news was passed around.

It was during the time in history where bushrangers roamed the country from the 1860s till the 1880s.

"Plans for the weekend are well in hand and coming together nicely. There is only a short time before visitors start arriving in Bathurst so be sure to book or arrange your weekend accommodation if you plan to stay for the weekend," said Alan McRae.

The Bathurst Regional Council has granted permission to close Russell Street in front of the historic Bathurst Court House to hold the activities on the Saturday afternoon and has agreed to finance the cost of the closure.

The Bathurst District Historical Society and the committee are very appreciative of their assistance.

Details, locations and information on the dinner, historic displays, talks, tours and other activities over the three days will appear in various issues of a special e-newsletter and media as details are confirmed.

It is hoped some families will use the weekend to incorporate a family reunion, especially on the Sunday.

Ben Hall - Penzig Collection

Some may wish to put a plaque on Bathurst's Pioneer Wall which can be organised through the Bathurst District Historical Society on info@bathursthistory.org.au to arrange for the information and application form.

To receive the e-newsletter direct just email amcrae@lisp.com.au

Contributed by Alan McRae, FAIHA, President Bathurst District Historical Society

BEN HALL RAID DINNER TO BE HELD AT HISTORIC BATHURST SHOWGROUND

A SPECIAL Ben Hall raid dinner will be held on the Saturday evening May 28, 2013, in the historic Beau Brown pavilion at the Bathurst Showground.

It was re-constructed in 1891 and 1892 and was initially known as the Showground Art Gallery (pavilion) having been purchased at Ashfield and dismantled and numbered before bringing it to Bathurst on the train and re-erected on the grounds.

CABLE CLERICAL INDEX ONLINE

AN INDEX to Anglican Clergy in Australia, prepared by the late Dr Ken Cable and his wife, Leonie is now available for searching online.

Ken Cable was a former councillor of the Society of Australian Genealogists.

Initially, his index was only intended to cover clergy who served in the diocese of Sydney from 1788 to 1890, but it was later extended to cover up to December 31, 1961 (when the Church of England became the Anglican Church of Australia).

Each entry provides both biographical details as well as information on the individual's 'career' within the church.

The Cables initially prepared the index on thousands of hand-written cards and these have now been transcribed in a Word document which is downloadable as a 2826 page PDF document http://anglicanhistory.org/aus/cci/ .

TRUST WALK ON COX'S ROAD

BLUE MOUNTAINS Mountains Branch of National Trust are organising a walk from Mt York to Hartley, down the road constructed by William Cox and his band of convicts in 1814-15.

The walk on Saturday, June 1, follows almost 200 years to the day in the footsteps of Blaxland, Lawson and Wentworth.

Those who wish to participate should meet at the Mt York car park at the end of Mt York Road, Mt Victoria at 9.30am.

There is much to see to remind us of the past.

The walk is quite steep and walkers need good, strong footwear.

There will be a hearty lunch to greet participants at the bottom and a bus will take walkers back to Mt York.

There is the possibility of a pickup and return to Blackheath Station.

Cost: includes food and drinks, NT members $30, non-members $35, child $10. Bookings/tickets: essential. Contact: Liz Van Reyswood (02) 4757 2694 or BlueMtsNatTr@gmail.com

HAZARDOUS TO HERITAGE

THE BETTER PLANNING Network (BPN) says the new planning laws proposed by NSW Planning Minister Brad Hazzard will endanger our heritage buildings and sites.

BPN's Corinne Fisher said: "With the government proposing that 80% of development will be approved with no opportunity for heritage assessment, community comment or involvement, we can expect a huge decrease in heritage assets over the coming decade.

"We are particularly concerned that Aboriginal heritage which has not yet been listed on a heritage register will simply be bulldozed."

Under the current system things like rock carvings and middens that neighbours are aware of but are not officially listed on the National Parks register, or are only discovered once the site is surveyed, can be protected.

"The proposed system opens the way for destruction of many priceless carvings, middens and artifacts simply because they have remained hidden and undisturbed, sometimes for thousands of years.

"Now they could be in the way of development where there is no heritage assessment and the community has no right to comment or raise objections,'' said Ms Fisher.

"We have to rely on the goodwill of developers to declare these heritage items and to protect them."

The same fate will await heritage houses that local government has been slow to place on heritage registers.

The new planning laws allow buildings with heritage value but which have not been formally listed as heritage to be demolished without any opportunity for their character to be preserved.

"We urge residents who do not want the local character of their suburbs to be demolished and who do not want what is left of our Aboriginal heritage to disappear to voice their opinion strongly to the minister.''

"The minister can act to protect heritage. It's up to the community to show him we care."

Bradman house wins Trust award

THE ICONIC tank stand, where a young Don Bradman honed the skills that would see him become part of Australian Folklore, is among the amazing and varied pieces of heritage restored and recognised at the 19th annual National Trust Heritage Awards.

The awards have come to represent the pinnacle for those saving our past for the future.

2013 winners include the restoration of a now-vibrant wetlands in the Hunter Valley, re-building a crumbling church, reviving Wollongong's North Beach Bathers Pavilion, creating a 'sand library' to assist with vital mortar restoration projects, and re-shaping the Chinese Gardens in Darling Harbour.

For more information and a list of all the winners visit http://bit.ly/12SNnFc

More accolades for *HERITAGE*

From Conrad Mathias, St Joseph's College Hunters Hill: *Thank you very much for forwarding your excellent newsletter. I am once again struck by the professionalism and accessibility of your publication. The preservation of historical issues and the oral testimony of learned people is such an important facet of a civilised society.*

From Mary Reynolds, research officer Mt Wilson & Mt Irvine Historical Society: *The newsletter is a remarkable triumph.*

From Wendy Blaxland, a descendant of Gregory Blaxland AND playwright *Crossing!* the play*: Just loved the March-April 2013 edition of HERITAGE, and have said so at length in an email to other members of the committee. Well done!*

From Wendy Hawkes cultural development officer, Lithgow City Council: *What a FANTASTIC edition of HERITAGE John. Thanks for popping so much Lithgow things in, especially our workshop. Really appreciate it. The Mercury has agreed to do a column for us on the Crossings every fortnight and I was wondering if I could forward this on to them as a resource as it has so much well researched info on so many events and stories.*

From Kate Matthew – Historian and member of Blue Mountains City Council's heritage advisory committee: *Thank you for another great newsletter – it is a great source of information on the work being done on Blue Mountains history and heritage*.

From Associate Professor Ian Jack former president of Royal Australian Historical Society: *My warmest congratulations on HERITAGE, which goes from strength to strength.*

The servants and kangaroo hunter

THE NAMES of Blaxland, Wentworth and Lawson already household names in Australian history are being thrust before the community with regular monotony as this year's Western Crossings bicentenary celebrations and commemoration proceed But what of the lesser known characters in this much lauded adventure.

Marcia Osterberg-Olsen of the Mt Victoria & District Historical Society has written and had published in the *Sydney Morning Herald*'s RSVP column a plea to find and to recognise the descendants of the three servants and the kangaroo hunter who accompanied the three explorers. Marcia wrote that there appears to be no record of these men.

STOP PRESS Two of the convicts with Blaxland, Lawson and Wentworth have been named. The kangaroo hunter was John Burns or Byrnes and one of the convicts was Samuel Fairs, discovered recently by Christine Yeats, senior vice president, RAHS. Christine found the information on a petition written in 1817 by Samuel Fairs to the Governor.

BMACHO WILL PROMOTE MEMBERS EVENTS

DICK MORONY, email address richardmorony@optusnet.com.au compiles the 'Calendar of Events' list for BMACHO members and sends it out by email monthly.

Member organisations can send their events for the whole year if they wish or as they plan during the year.

Scott Pollock, email address everglades@nationaltrust.com.au will add members' events, with a description and photograph to the BMACHO website.

Scott would like to receive the submissions about six to eight weeks before the event.

Events are also published in the association's newsletter *HERITAGE.*

HERITAGE is published and distributed by e-mail six times a year in January, March, May, July, September, November.

Material including photographs should be e-mailed to John Leary at johnnanette@optusnet.com.au about 6 to 8 weeks before the event for the best coverage.

It is suggested BMACHO members make use of these options for publicity.

In addition to publicity and promotion, it also helps other societies and organisations with their planning.

Western crossing commemoration 2013-15

great ideas - thoughts - just being talked about or it's really going to happen!

Poem for bicentenary

LINDEN BUSH POET Gregory North has been commissioned to pen a commemorative ode to mark the first recognised European crossing of the Blue Mountains.

The poem will be recorded and performed at events throughout the Blue Mountains Crossings Bicentenary.

Blue Mountains Lithgow and Oberon Tourism chairman Randall Walker said the crossing is 'such an iconic piece of local and national history that it deserves its own piece of poetry to commemorate the bicentenary".

"There is no better talent than the Blue Mountains' very own champion bush poet Gregory North, who has already encapsulated many times through poetry the essence of what it is to be Australian, this magnificent World Heritage landscape and the wonderful characters who have formed the community in which we now all live," he said.

Mr North said trawling through the annuls of history had provided rich pickings for countless priceless anecdotes to inspire and weave into his poem.

Music, markets and plane spotting

HARTLEY DISTRICT Progress Association is planning for Saturday May 25 from 10am to 3.30pm, music and markets day at Hartley School Hall, Mid Hartley Road, Hartley.

They are planning for a memorable day of lively music, varied market stalls and the opportunity to view the bicentennial flyover as they pass over Hartley School during the day.

The exhibition *A Moment in Time* will also be open for viewing on that day.

Businesses Supporting the Bicentenary founders Tom Colless OAM (Colless Foods) and Philip Hammon (Scenic World) at the recent Blue Mountains Bicentenary Community Ball. Photograph: David Hill, Blue Mountains Lithgow & Oberon Tourism.

Support for coins to school children

BUSINESS and individuals can help sponsor coins free to all school students in the Blue Mountains.

Sponsorship of $500 can ensure that 100 or more students receive this historic memento which can be accompanied by a message from the sponsor company or business.

Businesses and individuals can also make a wholesale purchase of coins at $5 each (minimum order 100 coins). The coins can either be sold at a rrp of $10 each or used as promotional gifts

The coins are also available to individual members of the community at $10 plus postage. Orders for 6 or more are free of postage.

Produced by Philip Hammon of Scenic World and co-founder of Business Supporting Bicentenary, the holey dollar coins are a lasting memento of this historically significant occasion

All enquiries to sponsorship@bicenteary.com.au or telephone (02) 4757 1425.

Governor Lachlan Macquarie acquired Spanish silver coins to overcome the problem of the early colony not having a currency.

He punched the centre out of the coin, the larger coin being known as the holey dollar and the smaller the dump creating two coins of different values.

WENTWORTH FALLS CELEBRATIONS

WENTWORTH Falls Chamber of Commerce will celebrate the bicentenary with an event around the lake on May 25 .

Radio plays

BLUE Mountain Radio Players will present *1813 an all that*, a lighter side of the crossing of the Blue Mountains by Colin Semmler on May 25 at 2.30pm in the Mt Vic Flicks (bookings 4787 1577) and on May 26 at 2.30pm in the Mountain Heritage Ballroom (bookings 4782 2155).

The *Lost Special* by Arthur Conan Doyle will also be presented on each day.

Beam holds clue to Mayan calendar

CARBON-DATING of an ancient beam from a Guatemalan temple may help end a century-long debate about the Mayan calendar.

Experts have long wrangled over how the Mayan calendar correlates to the European calendar.

Texts and carvings describe rulers and great events and attribute the dates according to a complex system denoted by dots and bars, known as the Long Count.

But the date of its starting point is unknown. Spanish colonisers did their utmost to wipe out traces of the Mayan civilisation, destroying evidence that could have provided a clue.

Mayan mask. Stucco frieze c.250-600AD

An example of the confusion this has caused is the date of a decisive battle that shaped the course of Mayan civilisation.

It occurred 1,390,838 days from the start of the count, but attempts to transcribe this into the European calendar have given estimates that vary by hundreds of years.

Anthropologists led by Douglas Kennett at Pennsylvania State University took a sample from a carved wooden lintel found at a temple in the city of Tikal.

Using a technique called accelerator mass spectrometry, the team concluded the tree was cut down and carved about AD658-696.

The estimate closely matches that of a decades-old benchmark for Mayan dating, the Goodman-Martinez-Thompson method, which put the battle at about AD695-712.

The small discrepancy may be explained by the wood itself, Kennett's team believes.The study, published in *Scientific Reports*, says the huge lintel was taken from a sapodilla tree, which has a very hard wood and would have taken years to strip and carve using stone-age implements.

Historians should now be able to build a more accurate chronology of the rise and fall of the Mayan civilisation, the study says.**AFP**

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place, Springwood, 2777 (02) 4751 5834
E-mail: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com

ABN 53 994 839 952

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc. (BMACHO) was established in April 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference which sought from Blue Mountains City Council the creation of a cultural heritage strategy for the city.
BMACHO in its constitution uses the definition: "Cultural heritage is all aspects of life of the peoples of the Blue Mountains which was later changed to cover Lithgow and the villages along the Bell's Line of Roads. It therefore involves the recording, preserving and interpreting of information in whatever form: documents, objects, recorded memories as well as buildings and sites."
The objectives of the organisation are:

i. To raise public consciousness of the value of cultural heritage.
ii. To encourage and assist cultural heritage activities of member organisations.
iii. To initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact, to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society Inc.

HERITAGE BMACHO's official newsletter is edited by John Leary, OAM.
Blue Mountains History Journal is edited by Dr Peter Rickwood.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc., Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc, Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc, Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine History Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., Mudgee Regional Library, National Trust of Australia (NSW) - Blue Mountains Branch, National Trust of Australia (NSW) - Lithgow Branch, Scenic World – Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committe, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE The committee for 2012-13 is: John Leary, OAM (president), Ian Jack (vice president), Jan Koperberg (secretary), Kevin Frappell, Wendy Hawkes, Doug Knowles, Dick Morony (public officer), and Scott Pollock, Jean Winston.

DISCLAIMER Views and opinions expressed in ***HERITAGE*** originate from many sources and contributors. Every effort is taken to ensure accuracy of material. NEWSLETTER OF THE BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

JULY - AUGUST 2013 ISSUE No. 28

HERITAGE FOREST OF WOLLEMI PINES

Many botanic gardens are increasingly becoming involved in conservation activities that integrate in situ and ex situ approaches to tree conservation, which are typically undertaken in partnership with other organisiations such as national park agencies, forest services, non-government organisations(NGOs) and local communities.
(BGCI- Integrated Conservation of Tree Species: A reference manual)

by Ross Ingram, Acting Curator Manager, Blue Mountains Botanic Garden

In the early 1990s Blue Mountains Botanic Garden acquired almost 200 hectares of wilderness, adjoining and to the north of the existing garden.

Following the discovery of the Wollemi Pine in 1994 and with the declaration of the Greater Blue Mountains World Heritage area a few years later the acquisition took on even greater significance and opportunity.

All of these changes precipitated the need for a review of the gardens thematics to refocus the role and function of the garden in a World Heritage area and to explore the new opportunities and possibilities arising from these changes.

Into this context came an approach from University PhD student Heidi Zimmer in conjunction with the Wollemi Pine Recovery group which stimulated interest and the immediate possibility to initiate a planting of some 200 trees. To quote Heidi's report –
To date, research of the natural populations of Wollemia nobilis has been observational.

Studies on the natural history, and morphology, biology, genetics and phylogeny of Wollemia provides a fundamental understanding of the species and is a necessary precursor to informing conservation strategies.

However, the current populations of Wollemia exist in a relatively narrow set of environmental conditions.

View into rugged a gorge and selected planting site on Blue Mountain Botanic Garden conservation area. Photograph Greg Bourke

One potential conservation strategy is to establish ex situ populations in natural environments. To maximise the effectiveness of this approach it is critical to understand how Wollemia responds to a broader range of environmental conditions. This requires an experimental approach. (Zimmer and Baker, 2011)

After careful exploration and research of a number of locations within the conservation area, a site which almost replicates the original discovery site, was identified and the challenging task of planting out began

A new visitor experience

With this planting project completed successfully, the idea arose of creating another site using some very advanced trees not utilised in the initial project to create an ex situ forest that would provide visitors with a relatively safe and managed "wild *Wollemi* experience".

Access to the conservation area has to date been challenging.

The first obstacle was overcome with the donation of funding by the Friends of the Botanic Gardens for a footbridge which made safe access across the highway possible.

Visitor access has been limited to students participating in formal field study trips and to those who were prepared to book and pay for an organised tour with a guide.

The area is abundant with natural attractions ranging from lush rainforest to dry sclerophyll and heath, ancient rock formations, wildflowers, dozens of bird species and spectacular views.

An opinion from the editor.....

Sealing of Cox's Rd is heritage vandalism by local government

Plans by Blue Mountain City Council to apply bitumen over the unsealed parts of Old Bathurst Road (Cox's Road), Woodford impregnating with tar, a road constructed of and on sandstone,198-years ago; can at least be considered cavalier and at worst sheer heritage vandalism.

When one considers the wealth of misinformation that councillors and senior staff spread, suggesting that this roadway had no heritage significance and that 'there is no heritage listing at either local or state level', it is well time that someone should look at council's flow of information both within the organisation and to the ratepayers and residents of this city.

It has been claimed by several descendants of the explorers that pressure was brought upon them not to alert the media. as it might affect the success of the celebrations.

It is certain that every member of Blue Mountains City Council's heritage advisory committee was aware of the listings and the heritage significance of this road construction had council or its senior staff taken the trouble to consult with this body.

The simple fact is that the Cox's Road is listed on the State Heritage Inventory and in council's Local Environment Plan 1991.

At council's ordinary meeting of June 4, 2013 some councillors appeared to be in complete denial about these facts.They could not or did not want to understand, that the heritage value is in the road construction itself, not in some cast-off shoe from Cox's horse or a broken clay pipe dropped by one of his convicts.

There is a legal requirement on council to take note of this item in the SHI and LEP 1991 and certainly a moral obligation to future generations.

It is ironical, at the present time as we commemorate and celebrate the bicentenary of the Western Crossings 2013-2015, that this work which if it goes ahead will ultimately destroy one of the earliest colonial road-lines which allowed the starving settlement at Sydney to expand and open up the golden west of NSW.

It is almost like a Bacchanalian celebration of ancient Greece where after the festivities there followed a drunken orgy of crimes and conspiracies. Here in the Blue Mountains, after the commemoration and celebrations of the achievements of the three feted explorers, an orgy of destruction of one of the only major heritage structures remaining from that period will follow.

Many who live in this rustic setting would prefer it to remain an unsealed road unattractive to the hoons likely to see it as a route to a bush rubbish tip or worse. The concerns of local residents need to be taken into account. The most serious concern is drainage after summer storms. Sealing the road on its own will only make the drainage problem faster and more destructive. The drainage concerns can and should be addressed without having to seal the road.

Council will now wait on an archaeological report before taking further steps to seal the road; but until councillors accept that heritage is just more than a word to which they pay lip service, the future of heritage conservation in the Blue Mountains will sound very hollow. With a little innovative thought by council, Cox's Road could be equal to Old Great North Road - World Heritage walk which features a historic convict-built, some in chains, road overlooking the Hawkesbury River, in Dharug National Park.

John Leary, OAM - President, Blue Mountains Association of Cultural Heritage Organisations Inc.

A wilderness walk plunging into a Wollemi gorge

Continued from page 1

Here was the opportunity to offer a truly unique visitor experience by creating a varied wilderness walk with the chance to experience rainforest, open woodland and wildflowers, cliff edges, a magic *Angophora* forest and then finally plunging into a Wollemi gorge.

However, this is more than just about providing visitors with a pleasant, relatively safe ”emersion” in wilderness.

The botanic garden of the 21st century has a role and a responsibility to address much more than simply providing visitors with pleasant experiences and displaying collections of plants in well organised high standard horticultural displays.

Here is the chance to interpret and explain conservation, the nature and importance of biodiversity, habitat, the relationship between people and plants and the understanding of place - in a botanic garden managed wilderness.

Blue Mountains Botanic Garden natural area staff have begun systematically surveying the area so that we have a good idea of what the area has to offer and what responsibilities we have in managing the site.

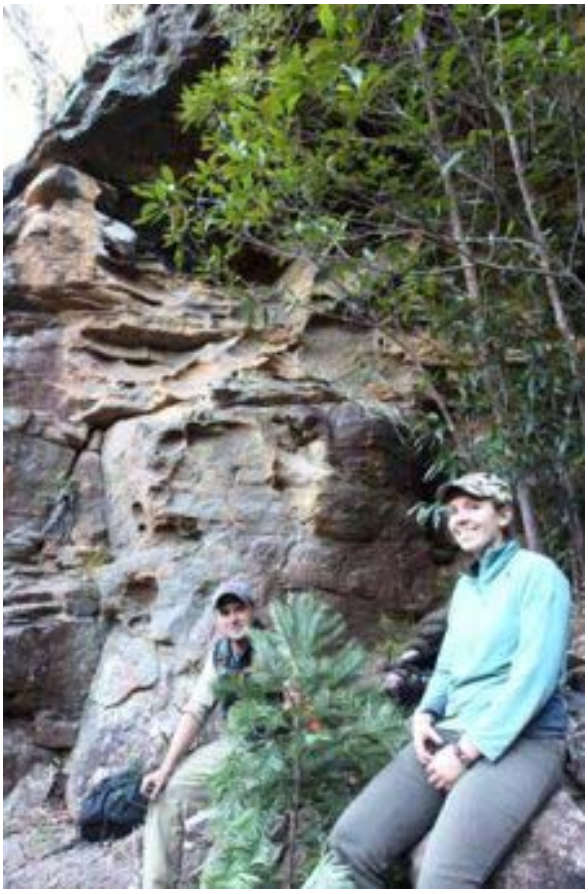
Tracks have been created and some preliminary guided walks have been laid out.

Horticulturists planting out and recording details. Photograph: Greg Bourke

A circular walk through a variety of ecosystems and features and across different terrains will lead walkers to the Wollemi grove which nests in a moist gully beneath sandstone cliffs.

The proposed boardwalk will minimize the impact of walkers, avoid erosion problems and enable intimate contact with the trees and associated vegetation.

Unfortunately the conservation area is difficult terrain and access will be limited to relatively fit and able persons.



Research scientist Heidi Zimmer (right) and horticulturist Chris Crottey take a break during “operation plantout”. Photograph : Greg Bourke

At least two hours will be needed to fully enjoy the walk and the country is quite steep in places.

Because it is a heritage and conservation area, the proposal is to not intrude unnecessarily and for the infrastructure to be as unobtrusive as possible.

Approval was sought and received and work has started.

The project will need to attract substantial sponsorship as it will be necessary to construct a lengthy boardwalk to provide access.

The boardwalk will reduce the impact of visitors on the fragile site and provide means to maintain the highest standard of hygiene. (The disease Phytopthora is carried on footwear).

Wildfire and disease represent the two big threats to a project such as this.

Recently, in collaboration with the Botanic Gardens Trust, the Rural Fire Service conducted a very successful hazard reduction exercise to help manage the threat of wildfire.

Part of the ongoing management plan for the site is that such exercises will need to be conducted at regular intervals as determined and recommended by ecologists to both ensure the integrity of the natural ecosystems and to protect the Wollemi plantings into the future.

Wollemi nobillis

‘Crossing of the Blue Mountains’ an outstanding exhibition at Mt Victoria

A remarkable and innovative engagement with the community

“There has been plenty of opportunity for celebratory activities and some of them have been memorable, such as the Blue Wave crossing re-enactment by John Sullivan and descendants of the three explorers, the spectacular flyover of aircraft and the mass circulation of the commemorative holey dollar to schoolchildren to name but a few.

“There has however, been few enduring things which have so far come from the three-year commemoration of the bicentenary of the ‘western crossing’ other than the foundation proposed by Dr David Blaxland and the splendid activities centred around the Hartley Valley.

“To its great credit the Mt Victoria Historical Society has produced another enduring legacy, which will have immense value for many years to come — the outstanding exhibition created at Mt Victoria museum in a newly dedicated Crossings Room.

“Not only has the concept and energy of Marcia Osterberg-Olsen, herself of descendant of some of our earliest pioneers been harnessed, to curate this commemorative exhibit; but it has also seen the engagement by this historical society with a much wider community including Rotarians, volunteers, professional and business people as well several generous donors.

“Other groups could well learn from this successful engagement with the community for the preservation and presentation of our heritage.

“This exhibition is as well presented and as professionally created to equal those displays found in many of larger state owned museums.

“In this article, president of the Mt Victoria and District Historical Society, Mrs Jean Winston outlines the work involved to create this exhibition. Congratulations to all concerned.” **John Leary, OAM – president, Blue Mountains Association of Cultural Heritage Organisations Inc**

An outstanding exhibition, to commemorate the bicentenary of the ‘Crossing of the Blue Mountains’ has been created at the Mount Victoria Museum.

The concept and execution of the exhibition were driven by the determination of Marcia Osterberg-Olsen whose family were pioneers in the Little Hartley district.

There were many pitfalls to be overcome before the display could be mounted, including renovations and painting of the designated room.

This was done by members of the historical society.

Money was limited and an application for a grant from Museums and Galleries NSW had been declined.

A graphic designer and Blackheath Rotarian, Clive Jones of Red Egg Design offered his skills free of charge, as did his wife Gabrielle.

The Blackheath Rotary Club generously offered financial and physical support to get the exhibition under way.

One Rotarian sent a letter to local residents asking for financial support and a Katoomba Rotarian erected a false wall in the exhibition room.

These efforts were gratefully received by the Mount Victoria and District Historical Society which managed the exhibition.

Marcia said that she wanted a ‘wow’ factor for the exhibit.

Continued page 5

A clever illusion: a real table and glassware in front of the graphic of Governor and Mrs Macquarie drawn by Clive Jones.

A chronology of the crossings

Cotinued from page 4
This was to be achieved through artifacts, tools of trade, stories, line drawings, pictures and photographs.

Her idea was to show the chronology of the crossings of the Blue Mountains starting with the Aborigines and ending with the journey by Governor and Mrs. Macquarie to Bathurst in 1815.

The three local Aboriginal tribes, Gundungurra, Darug and Wiradjuri had been crossing the Blue Mountains and the Great Dividing Range for centuries carrying chert and mudstone to make tools.

Examples of these objects found in the Hartley area are on display.

The routes of four earlier attempts to cross the mountains are depicted, those of Bass, a ship's surgeon, Everingham, a convict, Barrallier, a Royal Navy surveyor and Caley a botanist.

None were successful and Caley was amazed when he heard it had been done. He is depicted sitting at home in England, with a parrot on his shoulder, a virtual recluse.

Large panels of text give information on the explorers, surveyors, road makers and on the governor and Mrs. Macquarie.

The display gives extensive biographical notes on each of the men up to the time that they crossed the mountains. Blaxland aged 35, Lawson 39 and Wentworth 23 set out in 1813.

They got as far as Mount Blaxland, further west from Mount York where they stood and overlooked the western plains.

A copy of Gregory Blaxland's diary written, very legibly, on May 28, 1813 at Mount York is on display and really connects the viewer with the explorers.

To progress each day, they struggled through dense bush and had to go ahead to reconnoitre a route ahead of the main group, blazing trees as they went, and then went back to bring the horses.

Grass for the horses had to be cut where available and carried, increasing their loads to about 100kg each.

The party encountered one group of Aboriginal women and children who were frightened at first but when interest was shown in the children they all relaxed.

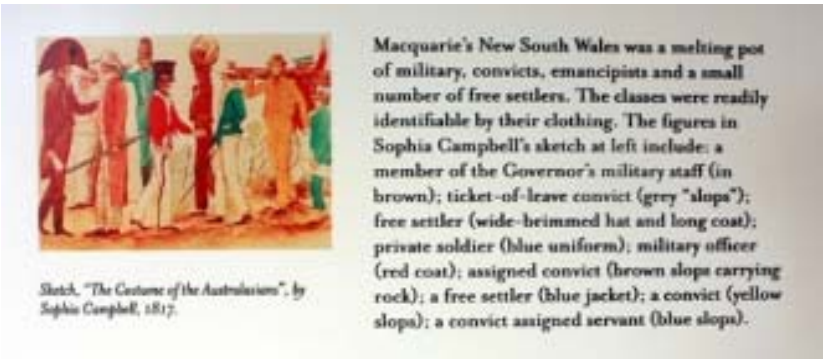
It was reported that both the women were blind in the right eye.

Surveyor Evans, who was thirty three years old, was asked to make a route suitable for horses and stock. He took enough stores for a two months period.

One of his tools of trade was a circumferentor which is a surveyor's compass, an earlier version of the theodolite.

The Land and Property Information Service at Bathurst has kindly lent a circumferentor to the society. The instrument measures horizontal angles. The east and west points on the face of the instrument are reversed from the normal way.

The road maker William Cox, aged fifty one later built a road of 101.5 miles on Evans route.



Sketch, "The Costume of the Australasians", by Sophia Campbell, 1817.

Macquarie's New South Wales was a melting pot of military, convicts, emancipists and a small number of free settlers. The classes were readily identifiable by their clothing. The figures in Sophia Campbell's sketch at left include: a member of the Governor's military staff (in brown); ticket-of-leave convict (grey "slops"); free settler (wide-brimmed hat and long coat); private soldier (blue uniform); military officer (red coat); assigned convict (brown slops carrying rock); a free settler (blue jacket); a convict (yellow slops); a convict assigned servant (blue slops).

Details are given of the equipment used and some examples are on display: gunpowder, block and tackle, crowbars, sledge hammers, axes, two man cross-cut saws, picks and shovels.

The method of sawing used in a two man pit saw was for a saw pit to be dug to about 2.5metres deep and 1.5 metres wide.

Poles were placed across the pit and the log to be sawn was placed on the poles.

The bottom man stood in the pit and the top man or senior sawyer balanced on the log above and guided the saw in making the cut.

English artist John Lewin who travelled with Macquarie's party to Bathurst in 1815 painted scenes along the way.

A huge reproduction of his watercolour painting 'Spring Wood' stands in a commanding position on the false wall at the end of the room.

Line drawings of Governor Macquarie and Mrs Macquarie, sitting like ghosts in the scene, are superimposed on it.

In front of the figures is an actual table with a lamp, a decanter, wine glasses and a pack of cards put ready for the evening game of whist.

Beyond the Spring Wood scene is a beautiful chiaroscuro screen named 'Eucalypt' which was made by Marcia's daughter Vashti Gonda and donated by Creative Powerhouse Pty Ltd. It is a work of art in itself.

The following panels depict and describe Governor and Mrs. Macquarie.

It was noted that Macquarie like other governors before him had given orders that all colonists make every effort to live in friendship with the Aboriginal people.

On Thursday May 4, 1815 Macquarie's expedition reached the Bathurst Plains where the town of Bathurst was proclaimed.

Continued on page 6

...a beautiful chiaroscuro screen named 'Eucalypt'...

Continued from page 5
The final small picture shows how the colour of their clothes delineated the status of the wearers.

A society member assisted Marcia by doing research for the text.

A Hartley man gave money for the installation of the lighting system.

Numerous other people have assisted in preparing this exhibition and I apologise to any whom I have omitted.

The Mount Victoria and District Historical Society is immensely pleased with the final display and is most appreciative of the creative ability and determination shown by Marcia Osterberg-Olsen in seeing the project through to the finish.

Pictured is the chiaroscuro screen named 'Eucalypt' made in aluminium by Vashti Gonda and donated by Creative Powerhouse Pty Ltd.

BLUE MOUNTAINS HISTORY CONFERENCE IN 2014

SUCCESS of the 2012 History Conference organised by BMACHO has spurred the committee into staging another in May 2014.

Three venues are currently being considered and in the meantime, a number of eminent historians are being approached to be speakers.

A good number of people interested in heritage and history attended the day long conference last October and at least this number is expected to register for the May 2014 event.

All who attended last years conference will be contacted and invited to next year's function.

Further details will be announced in coming weeks and will appear on BMACHO's website www.bluemountainsheritage.com

Woodford Academy seeks grant for schools program based on service in World War 1

DURING the First World War, up to 48 graduates from the Woodford Academy enlisted in the First AIF.

They served in a variety of capacities. Two are known to have been killed in action and one was awarded the Military Medal.

The study of the Academy's records of all these veterans has not yet been undertaken.

These men and their experiences can now be seen as a mini-study of the times and experiences of men who served in that war.

There is a large collection of unprocessed recourses and records that contains information about these men and their school experience. This includes photographs, school records, fees paid, family contacts and the like.

The military records of these men are freely available from the National Australian Archives.

Their unit records are freely available from the Australian War Memorial in Canberra.

Woodford Academy management committee has submitted an application for funding from the Australian Government's Department of Veteran Affairs *ANZAC Centenary* grants program.

The funding would be used to develop the recourses that exist at the Academy that deal with these boys and the period 1910-1918 and to add their military records to create a teaching and learning recourse for schools in the Blue Mountains.

Through the study of this history the Woodford Academy would like to contribute to the understanding of Australian school students about the social and political situation under which these particular men lived and enlisted and to see how this might have been affected by their First World War experience.

Council were set to destroy heritage integrity of Cox's Road, Woodford

by Jan Koperberg and John Leary --- photographs by Patsy Moppett taken on June 7, 2013

BLUE MOUNTAINS City Council has damaged some of Australia's oldest road construction when it graded Old Bathurst Road (Cox's Road), Woodford.

A number of local residents became alarmed, as were members of BMACHO and other heritage and historical societies on the Mountains, that the Blue Mountains City Council had graded the Woodford stretch of Bathurst Road (Cox's Road), ready for sealing.

Council had earlier decided to include this heritage carriageway, as part of a project to seal presently unsealed roads on the mountains.

People with knowledge of the road's heritage approached a number of councillors who had been publicly stating there was no heritage value in the roadway.

This particular section of Old Bathurst Road is listed on the NSW Heritage Branch Inventory, as 'LD 019: Remnants of Cox's Road'.

This listing covers Old Bathurst Road and Taylor Road, Woodford. It is one of the earliest colonial-era road-lines surviving in Australia.

The 1814 road is tangible evidence of the development of the colony at Sydney and the expansion of white settlement into western NSW.

This was originally listed in LEP 1991 and was updated in January, 2005, the study being done in 2003 by Dr Siobhan Lavelle and Dr Ian Jack.

When council became aware of the concerns by historians and others of the road's heritage status, a site inspection took place with the attendance of several councillors, council senior staff, council's heritage advisor, a representative of Roads and Maritime Services who had considerable knowledge about this road, and local residents.

To council staff's credit, when they became aware of the heritage listings, the sealing of the road was delayed.

Stone wall is evidence of 1820s improvements to the original Cox's Road over which council had planned to seal with bitumen.

Following protests to council by people with heritage knowledge, and after grading of the road had been finished and machinery brought in for sealing, a report by staff was presented to council.

Some damage to the original roadwork was done to the construction of the 198-year old heritage road.

The staff report stated: ' …there is no heritage listing at either local or state level'.

This is clearly untrue as it is listed in the State Heritage Inventory and also in council's own LEP 1991.

It is understood a report drawing attention to the road's heritage status was not made available to councillors for the council meeting of June 4, 2013.

A number of people for the sealing and against the sealing, attended the Blue Mountains City Council meeting on Tuesday June 4, 2013.

Three people were allowed to speak in favour and three against. Those who spoke against the sealing of the road were John Leary, OAM, president of Blue Mountains Association of Cultural Heritage Organisations Inc, Ian Harman, chairman, Woodford Academy management committee and Jan Koperberg, secretary, BMACHO.

Those residents in favour of sealing this rural road cited dust and stormwater run-off problems.

Not all residents are in favour of the road being sealed and some are concerned that it will increase traffic movements to a property where an allegedly unauthorised commercial activity is taking place.

Cr Geordie Williamson, a Woodford resident, was the only councillor to speak in favour of retaining Old Bathurst Road as an unsealed road.

At the time *HERITAGE* was published on-line, council was seeking advice from an archaeologist.

Devotion – Sir Joseph and Dame Mary Cook

An exhibition celebrating Lithgow's Prime Minister

AN EXHIBITION celebrating the lives and achievements of Sir Joseph and Dame Mary Cook is on display at Eskbank House and Museum until October 7, 2013 having been officially opened earlier this month.

"Lithgow is very proud to have its own Prime Minister in Sir Joseph Cook," said Lithgow City Council Mayor Maree Statham. "It is also very special to see, in this exhibition, the bond between Sir Joseph and Dame Mary and how they were able to achieve so much together."

The couple moved to Lithgow in 1886 and Sir Joseph worked in the Vale of Clwydd Colliery as he studied and worked his way up through the unions and into politics.

He was a minister in the first federal government, became prime minister in 1913, was high commissioner in London and knighted in 1918.

As well as being beside him every step of his career, Dame Mary was heavily involved in the Red Cross and was made a Dame in the Order of the British Empire in 1925 for this work.

This exhibition focuses on the lives of Sir Joseph and Dame Mary and their devotion to politics, the community and family.

As well as stories and images, several items from the couple, not exhibited before, will be on display, such as a lovely reference written by Dame Mary for one of her maids and the original letter from Her Majesty's Privy Council to Sir Joseph Cook offering him the position of Australian High Commissioner in England.

The exhibition was officially opened by Mayor Statham followed by talks from Hartley Cook (great grandson of Sir Joseph and Dame Mary), Cassandra Coleman (a member of the Sir Joseph Cook Commemorative Group) and curators Miriam Scott and Wendy Hawkes.

Joseph Cook photographed at the time he was post master general.

During Sir Joe's time as high commissioner in London both Sir Joe and Dame Mary were very active in promoting Australia's interests in Great Britain. In these photographs Dame Mary is officially commissioning the first Australian amphibian flying boat "The Seagull" in 1926. Sir Joe then took a flight in the plane. The bottom image is Dame Mary wishing him well and the top is a very relieved kiss when he landed safely. A photograph album gifted to the Cooks by the Supermarine Aviation Works Ltd. is in the National Australian Archives and is a beautifully told story of the occasion. (Photographs from the National Australian Archives M3613)

ALICE IN WONDERLAND

by John Low, OAM - Loal historian

WHEN THE ENGLISH aristocracy visited the Blue Mountains, as they regularly did, the unfamiliar pleasures of the landscape often seduced them into relaxing the normal formalities of their class.

Even the future Queen Mary and her ladies took to the swings at Leura Cascades in 1901 and wandered the bush paths for longer than they should.

Almost a decade earlier, following a visit to Jenolan Caves in January 1893, Alice, Duchess of Buckingham and Chandos, alighted at the Carrington Hotel with her friend Hilda.

Having roughed it at smaller accommodation houses, they settled in to the comfort of the grand hotel, a panoramic view from their verandah and their dinner table "covered with flowers".

The following day Sir Frederick Darley of 'Lilianfels' took them to Wentworth Falls and the Three Sisters and despite the heat and flies they were not deterred from accepting an invitation the next morning for "a grand picnic expedition" to Govetts Leap.

Coach driver Harry Peckman, their guide for the day, was a man well versed in the art of introducing the aristocracy to the informalities of the bush.

Bushman, poet and raconteur, it was he who had taken Lord and Lady Carrington by horse across the Six Foot Track in 1887 and introduced them to the camaraderie of the camp fire and the delights of billy tea.

"Oh, such a beautiful, wonderful place!" exclaimed Alice on arrival at the Leap, the amphitheatre of cliffs intersected with dashing waterfalls (her words) becoming the background against which the 'theatre' of the picnic played out.

Both director and performer, Peckman always ensured that his guests were part of the action.

It began with a story, a skeleton found in the thick bush in the depths of the valley, a lost soul who'd wandered from his friends and died "bewildered in the endless scrub and forest".

A 19th century picnic at Govett's Leap

Then a lesson in fire-making and the baking of potatoes, followed by a warning about snakes and a careful study of the ground to ensure no serpents would spoil their "excellent repast".

After lunch and an exciting scramble down to the edge of the precipice, "throwing stones to see if we could hear them fall", it was time for the ritual of 'billy tea' and the climactic flourish of the guide's own poetry.

His 'Laughing Jackass', a humorous verse and prose piece that included a reputedly faultless imitation of a Kookaburra, brought the picnic to a suitably colourful conclusion.

But the drama had not yet ended! Nature still had a few lines of her own to deliver.

"On the way home", Alice reported, "we were caught in a tremendous thunderstorm, and got well soaked – hailstones like peas ... and sheets of rain.

It rains like a water-spout here when it once begins.

Some of the ladies were so frightened that they took refuge in a house, but most of us drove on and braved the elements".

An outing with Harry was invariably a memorable experience!

Authors note: A copy of Alice's letters, *Glimpses of Four Continents*, written during her world tour and published in London in 1894, is held in the Local Studies Section at Springwood Library.

Also, copies of Jim Smith and John Low's book on Harry Peckham, *The Prince of Whips,* are still available at the give-away price of $5!

This article was first published in *Hut News* of the Blue Mountains Conservation Spociety, Issue 298, November 2012**.**

Longtime series

KURRAJONG Comleroy Historical Society will hold its annual general meeting on Monday, September 23 when the guest speaker will be Lesley Jane Abrahams.

Lesley will share local history from the "Longtime Series" by Hesba Hungerford Brinsmead and other interesting research.

The meeting will be held at the Kurrajong Community Centre, McMahon Park, Kurrajong.

Sydney Rock - On the Ways to the West

SYDNEY ROCK is a striking sandstone outcrop some six metres high beside the Great Western Highway and the recently realigned railway on the eastern approaches to Lawson.

It is listed on the State Heritage Inventory and recent highway construction and railway deviations have left it more isolated and best approached from Somers Street.

On its irregular top surface it has weathered into a small-scale lunar landscape.

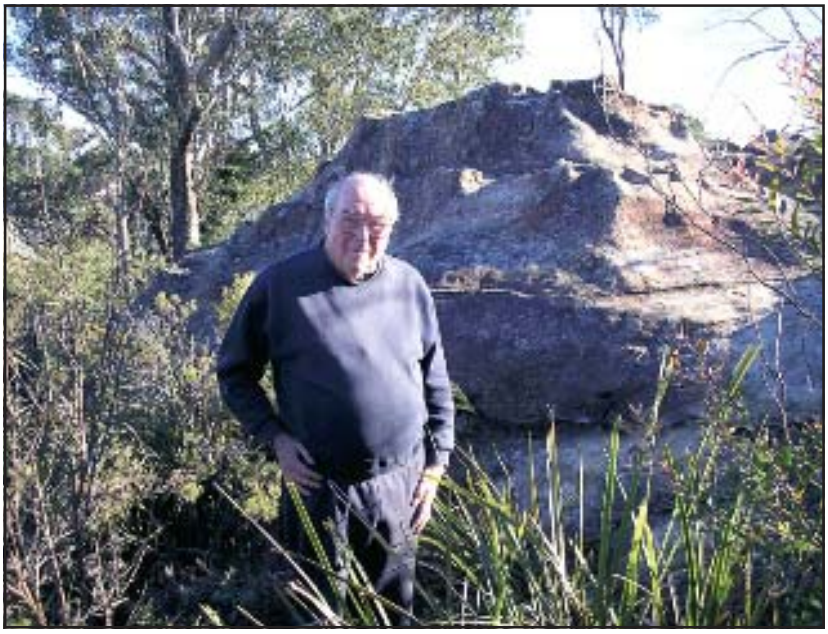
Beside the highway, the west side of the rock has been chipped away, probably as a result of highway widening.

Historic notes forming part of the State Heritage Inventory listing state: 'Sydney Rock was a significant landmark at the north-eastern approaches to nineteenth-century Lawson.

'In 1903 it was damaged by 'vandals who had begun to blast it out for road metal': the four drill-holes evident at the north end of the outcrop today are probably the work of these 'vandals'.

'The breaking-up of the rock was stopped in 1903 by the brisk intervention of John Geggie, the store-keeper and honorary secretary of both the Lawson Progress Committee and the Reserves Trust.

'The damage to the lower part of the rock adjacent to the highway is likely to be the result of roadworks later in the twentieth century.



Eugene Stockton at the playground which he shared with butterflies.

'Sydney Rock was a popular picnic area, with a commanding view down to Sydney before the regrowth of the bush.

'It was a vantage point from which local people during World War II would go to watch searchlights probing the skys over Sydney or in peace-time fireworks displays on [Sydney] Harbour.'

'It also gave its name to a refreshment house opposite on the highway, known as the Sydney Rock Cafe long before Hard Rock Cafes were invented.'[1.]

Sydney Rock was long recognised as a prominent landmark along the highway. Brian Fox in his *Blue Mountains Geographical Dictionary* records its recognition as early as 1882.[2.]

Now a book *Sydney Rock - On the Ways to the West*, published by Blue Mountain Education and Research Trust and edited by Lawson's, Father Eugene Stockton has been released. Father Stockton may be contacted on(02) 47 591818

"Sydney Rock loomed large across the highway from my childhood home," recalls Eugene.

"In the 1940s we kids clambered over the Rock imagining ourselves as early explorers who first crossed the Blue Mountains.

"Parties often enjoyed picnics on the Rock, savouring the far distant views and the mountains breezes.

"During World War 2 one watched the searchlights waving across the Sydney horizon and the fireworks at war's end.

In those years petrol rationing severely limited traffic on the highway, but since then increasingly heavy traffic has virtually closed access to the Rock and tree growth has hidden it from the view of passing motorists.

Continued page 11

Pictured is Sydney Rock some years ago.

Western most outcrop of Hawkesbury sandstone

Continued from page 10

"Now with the completion of the roadworks in 2012, Sydney Rock can be restored to public enjoyment, while the old railway cutting left partly unfilled allows inspection of the sandstone stratagraphy and of the pick marks of the rock cutters (1867 and 1902)

"The rock brings together the history of the road and railway, geology and botany – and even mating butterflies!!," according to Father Stockton.

Greg McNally an engineering geologist and chartered engineer believes that Sydney Rock is the westernmost outcrop of Hawkesbury sandstone in the Blue Mountains.

"With the 2013 realignment of the road and railway, the now abandoned and partly backfilled railway cutting on its southern flank exposes contact between the Hawkesbury sandstone and the underlying Narrabeen group rocks

"The cutting is significant because it contains the only identified Hawkesbury sandstone/Narrabeen contact in the area, though other occurrences could be present in local gullies and road cuttings," Greg McNally has said.

Sydney Rock overlooked a precious pocket of bushland, according to Hazelbrook's Chris Whiteman a horticulturist for the Commonwealth Agriculture, Fisheries and Forestry who is particularly interested in the preservation of the mid-Blue Mountains heathland and has completed botanical surveys of this area.

In 2007, this pocket of about 1.25 hectares was surveyed by botanists Judy and Peter Smith, who found this small area,

Cross bedding in sandstone on southern face of the cutting, beneath the third (steel) bridge.

supported a rich mix of plant communities and species, some of special conservation significance and interest.

The Smiths recorded 118 species across 47 plant families in the course of a brief survey, noting that further species, particularly grasses and orchids, could well be revealed in future searches.

Three Aboriginal sites have been recorded in the neighbourhood, including rock shelters with deposit, axe grinding grooves and rock engravings

The rock itself shows no sign of Aboriginal activities.

However, Father Stockton considers, to Gundungurra people travelling along the main ridge, Sydney Rock could well have served as marker turning north along this ridge.[3.]

Copies of *Sydney Rock - on the Ways to the West* are available direct from the publisher at $15 a copy plus postage and handling.

For more information about this publication, telephone Eugene Stockton, Blue Mountain Education and Research Trust (02) 4759 1034 or e-mail: olon@tpg.com.au

RAHS Conference in Katoomba

The annual RAHS Conference will be held this year at Katoomba RSL.

It will begin on Friday afternoon, November 1, with a visit to State Records.

This will be followed by a *Meet and Greet* pre-dinner drinks and 'nibblies' at Hobby's Reach.

Tarella will be open for those who would like to see through the cottage.

The Conference whose theme is *The Great Divide - From Here to There* will be held on Saturday and Sunday, November 2-3.

Details of the speakers and their topics have not yet been released. For more details visit the RAHS website.

Lithgow migration and settlement study

LITHGOW CITY Council has entered a partnership with the Powerhouse Museum's NSW Migration Heritage Centre to undertake a Lithgow Region Migration and Settlement Thematic Study.

This scholarly research and resulting history will involve the research and production of a community history through researching and uncovering the hidden story of all the waves of migration and settlement to the Lithgow City Council area, with a focus of industrial and family history.

The history will research from first European settlement to the present.

It will encompass Anglo-Celtic migrations (with reference to particular diaspora) and contact history with Aboriginal Australians, including the shared labour histories on farms and in local industries.

- The early pastoral economy, including settlement patterns and the use of convict labour.
- Coal, oil shale, minerals processing, electricity generation and munitions industries, and their workers.
- The impact of the railway coming to Lithgow
- Manufacturing industry, including the linen mills and more recently, Berlei.
- Hostels for contractual and migrant labour, including Lithgow and Wallerawang.
- Social groups, friendly societies, worker organisations and religious practice.
- The experience and impact of migrant women and children.
- The influence of migrant groups on political activism and ideas. Employment-driven settlement patterns and subsequent living conditions such as housing supply.
- 19th Century Chinese migration.
- Post Second World War refugees
- Recent, ie within past 20 years, migration including refugees.
- The impact of the White Australia immigration policy and its abolition.

A wonderful image of coalminers from the Lithgow Valley Colliery taken in the 1880s. Research by Ray Christison indicates these men came from Northumberland and Durham, Shropshire, Staffordshire and Cornwall. Some came to Lithgow via the goldfields, the Turon, Bendigo, Ballarat or California. A substantial proportion of the early miners were Methodists and Free Methodists. (Lithgow Regional Library 42439)

Research for the project will concentrate on the Lithgow City Council area including Lithgow, Wallerawang, Hartley, Portland and surrounding districts.

Among other groups Blue Mountains Association of Cultural Heritage Organisations Inc (BMACHO) is to be consulted during the project. Other groups who will be asked for participation in the project are the Eskbank House and Museum, The City of Greater Lithgow Mining Museum Inc, Lithgow Small Arms Museum Inc, Lithgow and District Family Historical Society; (all four groups are members of BMACHO), National Parks & Wildlife Service, and Office of Environment & Heritage.

An illustrated history is to be the outcome of the first three stages of the project.

The history will focus on key places and industries – including places of work, recreation, religion and business – that will help tell the story of the region and its distinctive migration and settlement history, township by township.

The history will include an oral history component to access the knowledge of elderly former migrants or people with recollections that will assist the project. This is a priority as many post-World War Two former migrants are aging and frail.

Lithgow City Council is currently seeking an experienced consultant with professional historian qualifications to under take stage one of this study project.

The project is scheduled to be completed by May 31, 2014.

Capt Cook's pistol fetches $220,000

A RARE PIECE of Australian history has gone under the hammer, netting a small but tidy profit for its seller.

A pistol belonging to Captain James Cook handed down through the family for many generations, was sold at auction in Melbourne earlier this year for almost $220,000.

For a man who had such a profound effect on the European colonisation of Australia, there is remarkably very little physical evidence of Captain James Cook or his personal possessions.

Had he failed to make landfall in 1770, Australia might have become a Portuguese, Dutch or Spanish dependency.

While his legacy looms large in Australia's collective consciousness, only Cook's pistol remains as the one key link to his life and relationship with Australia.

If not for the efforts of former Melbourne Lord Mayor, Grand Prix impresario and philanthropist, Ron Walker AC CBE, even this would have stayed well away from our reach.

Mr Walker purchased the pistol in 2003 from the descendants of Cook at an auction in Edinburgh, Scotland.

It had been willed to the family by Cook and remained in their possession for more than two centuries.

Now, almost 250 years after his death in Hawaii, the early 18th century Continental Flintlock holster pistol was offered for sale by Leski Auctions of Melbourne under instructions from Mr Walker.

"There is a wealth of memorabilia available that is associated with the icons of Australia, be it Bradman, the Kelly Gang, Phar Lap, Kingsford Smith or Mawson," says Charles Leski.

"Yet James Cook, arguably the most significant of that group in terms of his impact on Australia as a nation, has left us virtually nothing.

This pistol is therefore the one tangible link to him personally.

"We can confidently argue that he has left his DNA on this, something that can't be said for the anchor of the HMB Endeavour which is located at the James Cook Historical Museum in Cooktown or the ship's cannon which is located at the Australian National Maritime Museum in Canberra."

The lock of the pistol is signed "Corbau-A-Maastricht", a reference to its Dutch gunmaker, Godefroi Corbau Le Jeune.

It features a plain 13 bore barrel, brass fore-sight, spurred brass pommel, brass trigger guard, replacement ramrod and pipe, and pale fruitwood full stock with carved shell behind tang. The barrel is 31cm long.

Polar trek made to measure

WHEN SIR DOUGLAS Mawson led his epic scientific expedition to Antarctica, cutting edge technology meant being able to send daily wireless messages back to Australia.

A century on, Chris Turney's six week scientific expedition will use a modern mix of Twitter, You Tube, live streaming video conferences and blog sites.

Surveying tools such as the clunkey theodolite, used by Mawson's men, will be replaced by a drone that will scan the icy continent to collect data to create "bird's eye" film in 3D.

The drone will map areas of several square kilometres in a matter of hours, with an accuracy rate within 10 centimetres. In Mawson's day this would have taken days or weeks.

But despite differences in technology, the trips a century apart are motivated by the same thing: a sense of scientific curiosity.

"It's still very much science-driven, climate scientist Professor Turney said of the privately funded $1.5 million voyage which leaves Hobart on November 25.

On his fifth trip to the Antarctic Professor Turney said the information collected by Mawson and his team between 1911 and 1914 would be a valuable comparative resource for modern scientists.

"They generated a vast amount of data and things like the saltiness of the water is today a very useful measure of how much the ice is melting."

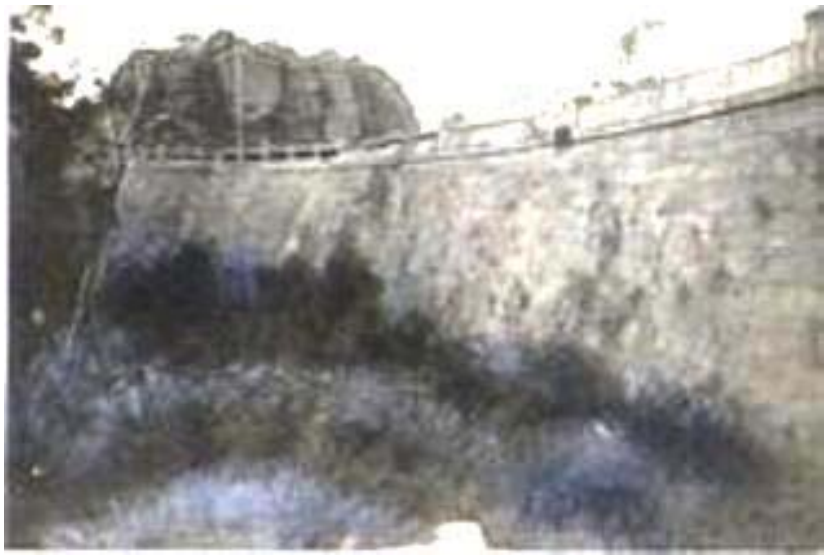
Professor Turney and University colleague Chris Fog will be among 20 scientists, oceanographers and ornithologists and even a tree ring expert, to trace the steps of Mawson

The first part of the trip will concentrate on the sub-Antarctic islands down to 50 degree latitude.

Bridie Smith, *science reporter, The Sydney Morning Herald*

Sir Douglas Mawson,

History at your fingertips



A NEW WEBSITE full of Blue Mountains historical photographs and publications has been launched by the Royal Australian Historical Society.

The website was developed following a grant from the NSW Department of Premier and Cabinet to mark the bicentenary of the first crossing.

This fantastic collection of material is available for everyone to explore for themselves," said RAHS president, Dr Anne-Maree Whitaker. Website: www.rahs.org.au.western-crossing/

There are over 300 photographs and six historical publications included and these will be added to in coming months.

Pictured from the website is: The great wall of the old Mt Victoria Pass constructed by the chain gang in 1832 when forming the old Bathurst Road. ***Courtesy RAHS – The Frank Walker Collection***

Plans to bring water into museum

THE AUSTRALIAN National Maritime Museum will turn to the private sector to try and realise a major revamp of its exhibition space.

Its director, Kevin Sumption, has set out plans to 'bring water into the museum' by building exhibits that reach out to its 14 floating vessels in Darling Harbour.

Plans to float HMAS Onslow inside museum

The museum will seek to complete the first stage — a new pavilion to tell the story of its submarine, HMAS Onslow, and destroyer HMAS Vampire — in time for the ANZAC centenary in 2015.

More than 8 million people have visited since the Maritime Museum opened in 1991.

Government has said that the $8 million to $10 million required for the project over a six to 8 year cycle would need to come substantially from commercial partnerships, grants or foundations.

Later stages not yet costed, include a new exhibit to complement the museum's replicas of the HMS Endeavour and a maritime archaeological centre where visitors could don a wetsuit and step into the harbour to explore wrecks already owned by the museum.
Leesha McKenny, *The Sydney Morning Herald*

Aboriginal heritage grant for Kandos Museum

THE KANDOS Museum has received a $12,000 Aboriginal heritage grant to enable it to develop a Dabee Travelling Cultural History exhibition in partnership with the Aboriginal people of Kandos.

"The grant will help us with site identification, the building of the travelling exhibition on the Dabee people and the creation of a small introductory exhibition at the Kandos Museum, Colin Jones curator at the museum said. "The project is about recognising family ancestors of the Dabee people.

"The exhibition itself will identify individual north-eastern Wiradjuri people and their ancestors who contributed to the creation on Kandos and the culture in the region today," Mr Jones said.

Lyn Syme, Native Title cultural heritage officer at Moorlarben Coal was instrumental in getting the exhibition off the ground.

Ms Syme put forward the initial $12,000 and it was with that money the Kandos museum was able to apply for the "dollar-for-dollar" Aboriginal heritage grant.

The exhibition will travel around to schools, other museums and cultural centres in order to educate people on the significance of the Dabee people in the local area.

"In the local area, many people are under the incorrect assumption there are no more Dabee people remaining in the district," Ms Syme said.

The exhibition will include photographs, stories and artifacts and will also include information about the descendants of these Dabee ancestors who were a large community in the Kandos area. *Laueren Stanford*

CRONJE, THE BRUMBY BRIGAND

by John Low, OAM – Local historian

PIET CRONJE was a Boer General, rough of manner, ruthless, courageous and a thorn in the side of the British in South Africa.

At the same time in the vicinity of Jenolan, in the mountainous back country of the Cox and its tributaries, a brumby stallion was causing similar disruption among the European settlers.

Life in this isolated part of the Blue Mountains demanded a tough resilience from its inhabitants.

They were skilled bushmen and expert horsemen, every bit as daring as the Snowy River men.

They recognised in the wild stallion the characteristics of the Boer Cronje and bestowed that name upon him with genuine, if grudging, respect.

The story of Cronje is documented in that splendid book, *Cullenbenbong;* by Bernard O'Reilly whose family settled at Long Swamp in the second half of the nineteenth century.

At the feet of his father and the older men, young Bernard (born 1903) absorbed the stories of the wild brumbies sweeping down from the mountains at night, killing tame horses and making off with the mares to replenish their breeding stock.

It is claimed "...on one occasion Cronje hurdled to freedom over two mounted men."

He learned of the brumby runners, those men of "reckless courage and riding ability" who fought these depredations with their skills in pursuit and capture and the use of assorted firearms and who, aided by drought, gradually reduced the numbers of the marauding horde.

By the end of the century one dominant stallion remained, the last of a "long rebel line", a magnificent horse, "a brigand and a killer" but so coveted by the mountain horsemen that they set upon a reckless determination to capture him.

Drives were organised and strategies planned, issuing in dramatic displays of skill and courage, near success, injury and even death, but always failure.

Cronje was equal to the challenge, usually with a surprise in reserve.

He out-ran them, charged through lines of shouting, stockwhip wielding riders, ran pursuers into wombat holes (a rider "spinning along the ground like a football"), crashed out of timber enclosures and on one occasion hurdled to freedom over two mounted men.

The climax came when Cronje, cornered at the edge of a precipice, leapt "in a beautiful arc and disappeared into the blue air", traversed a landslide prone scree slope and in a "thrilling wild-horse run" escaped to the bottom of the gorge, leaving only "the ring of his hooves and the clatter of the rocks he took with him".

Continued page 16

On the gently-swelling ridge in the fork of two creeks stands a house – the type of house which has disappeared from the Australian scene along with the generation who built it. It is of slabs silvered by the weather; it has a thatched roof and a great stone chimney, and like nearly every other pioneer home it faces the north-east.' Bernard O'Reilly's Cullenbenbong still stands today in Kanimbla Valley, the quintessential slab hut. Photograph courtesy of Ian Jack

New Aboriginal heritage tour at the Blue Mountains Botanic Garden, Mt Tomah

AN AUTHENTIC new Aboriginal tour focusing on the Indigenous use of plants was launched at the Blue Mountains Botanic Garden recently.

The Aboriginal heritage tour provides visitors with a unique opportunity to experience the culture and plant resources of the Indigenous people of the Greater Blue Mountains World Heritage Area, led by an expert Aboriginal guide.

Brenden Moore, Aboriginal horticulturalist at the Garden who has developed and will be leading the tour says: “The Aboriginal heritage tour offers an opportunity for visitors to learn about the rich heritage and culture of the Aboriginal people of the region.

“Although this was thought to be an impassable mountain range by early Europeans, Mount Tomah and the surrounding Greater Blue Mountains World Heritage Area provided important trade routes for Aboriginal people.

“With a diverse array of flora and fauna, ample fresh water, rock shelters and views to the coast, it was a safe haven for many local Aboriginal people for thousands of years.”

The one and a half hour walking tour takes visitors around the Garden highlighting plants that were traditionally used by Aboriginal people for food, medicine or tools.

The tour concludes with a didgeridoo performance by Brenden.

Bush tucker can be arranged if booked in advance.

The tour is available on request but bookings are essential.

To view Brenden talking about the Aboriginal heritage tour visit: www.youtube.com/user/BotanicGardensTV .

Tour details
When: Book anytime.

No minimum fee on Fridays tour runs 10 am - 11.30 am.

All tours must be pre-booked at least 24hours ahead.

Aboriginal tour guide, Brenden Moore playing the didgiridoo at Mt Tomah. Photograph by Michelle Leer.

Cost: $36.50 pp. $275 minimum tour cost (except Friday 10 am - 11.30 am). $16.50 student/child. Friends and Foundation discount on request.

Bush Tucker is available at an extra charge, at the end of the tour if pre-booked.

For further details telephone (02) 45 67 3000 or e-mail:

Cronje

Continued from page 15
That was enough and the pursuit of Cronje came to an end.

It’s a great story, even if perhaps grown a little more colourful in the telling.

The isolated life of men and women, thrown back so often on their own ingenuity, fosters a rich tradition of legend and story.

Apparently, Cronje escaped the devastating bushfire of 1904-1905 and was last seen, still wild and free, years later in the ranges at the head of the Kowmung River.

If you look at your map you will find him remembered in Cronje Mountain, Cronje Ridge and Cronje Gully.

This article was first published in *Hut News* of the Blue Mountains Conservation Society.

"The Biggest Estate on Earth: how Aborigines made Australia"

by Bill Gammage, 2011

A Blue Mountains critique

by Andy Macqueen

IN HIS BOOK "The Biggest Estate on Earth", Bill Gammage seeks to demonstrate, particularly through historical artworks and writings, that virtually every inch of Australia was managed by Aboriginal people by the systematic and scientific use of fire.

He discounts the role of natural wildfire arising from lightning ignitions. (Gammage 2011) Whether or not all aspects of his thesis are beyond challenge, his book is important in highlighting the significance of the traditional Aboriginal custodial role.

Gammage draws from a number of the journals of early Blue Mountains explorers and surveyors, using them to provide examples of the sorts of landscape management in which the traditional custodians engaged.

As a person familiar with the early journals and the country they concern, the writer was naturally interested to examine the references which Gammage relies on. These are all addressed below:

Firstly, on pages 72, 188 and 207 Gammage refers to two locations mentioned in the journal of Surveyor George Evans on November 30 and December 17, 1813, to support ideas concerning manufactured clearings in the Blue Mountains.

Unfortunately, neither location is in the Blue Mountains. The former date relates to the Fish River country, as Evans observed it from the Great Dividing Range near Cheetham, while the latter relates to a place on the Macquarie River 30 kilometres north-west of Bathurst. Both are today represented by farmlands. (Weatherburn 1966)

Secondly, on page 7 Gammage points out Surveyor William Govett's observation that the mountain summits were "clothed with grass, which circumstance, considering the barrenness and excessive sterility which pervades all the connecting ridges, and that region of the mountains, is certainly very extraordinary … In general … the ranges are covered with short timber and scrub." (Govett 1977, pp3,4) Govett was referring to the basalt-capped Mounts Hay, Banks and Tomah.

However, he was working in the area in 1831, by which time there had been European impacts.

As Govett himself explains in the same piece, the top of Mount Hay had been totally cleared of all but one tree for survey purposes (Figure 1), while the eastern side of Mount Tomah "has been cleared and cultivated, and a large house and buildings have been erected".

Govett describes the vegetation elsewhere on Tomah in similar terms to George Caley, who back in 1804 wrote that "The brush seems to occupy the whole of the summit, as well as most of the other parts ...

The part which was void of brush was thickly covered with timber". (Andrews 1984, pp61-2)

Thirdly, on page 207 Gammage cites the "small piece of ground, which was destitute of trees, and no herbaceous brush" mentioned by George Caley, as evidence of a clearing created by Aboriginal people. (Andrews 1984, p71)

The place concerned is not really "above the Grose Valley", as Gammage suggests, but on the west flank of Mount Tomah South, traversed by Caley on November 13, 1804.

Continue page 18

Figure 1: William Govett's "View of the gullies of the Grose River from a cataract named Govett's Leap" (National Library n/a.pic-an3364840_v). The mountain on the right is the basalt-capped Mount Hay, one of Govett's "extraordinary" features. As shown by the drawing, it had been cleared of all but one tree for survey purposes.

The hardest day of Caley's remarkable expedition

Cotinued from page 17

That day was one of the hardest of Caley's remarkable expedition, involving scrub so thick that in places they could "scarce force a passage".

His reason for remarking on this spot was that it offered respite from the scrub and a view of the terrain ahead, including Mount Bell.

His precise route is impossible to determine, but there is no doubt that for a time he sidled above the sandstone rim of the mountain (below the basalt) and in doing so would have encountered some of the natural swamps and small bare rock areas to be found there today.

There is a bare rock area some 15 metres across about 850 metres south-west of Tomah South Trig which appears to fit all the necessary requirements with regards to Caley's account, and there are probably others.

Fourthly, on page 207 Gammage mentions the "about two thousand acres of land Clear of trees" described by Blaxland (and others) in 1813, as further evidence of Aboriginal clearing. (Richards 1979, p71)

Again the location is wrong: the place is not "north of Katoomba".

It is the northern part of Kings Tableland, a windswept place with shallow sandstone and stony soil, typical of many natural heaths on the plateau of the upper Blue Mountains. (Figure 2)

Today it is mostly characterised by heath species of banksia and casuarina, whereas the early descriptions indicate a predominance of "coarse grass".

It is therefore apparent that the area had been subjected to more fire in the years prior to 1813 than it has been today.

To that extent, it may be relevant to Gammage's thesis, though it should be understood that today's low fire frequency is largely due to the fact that authorities actively *prevent* fire there. Baker (1997, p67) has suggested that "it is possible that this heath was kept in a low state by fire management perhaps to partly allow for ease of movement through the area which is known for its Aboriginal occupation and industrial sites".

That hypothesis relies on an assumption, perhaps not an unreasonable one given the place's accessibility and views, that the sites at Kings Tableland were more significant than the hundreds of other known sites, many of which are situated in shelters in scrubby, wooded areas.

Fifthly, on page 159, Gammage quotes selectively from Evan's account of a fire on the Blue Mountains in January 1814, concluding that it was an example of a cool summer burn by Aboriginal people because Evans "walked close behind the flames.

He could not have done so behind any of Australia's recent big fires". This interpretation does not stand scrutiny, and it is worthwhile to reproduce Evans' complete description:

> *3 Jan [near Katoomba]: The mountains have been fired; had we been on them we could not have escaped; the Flames rage with violence through thick underwood, which they are covered with. Bad travelling the stick of the Bushes here are worse than if their leaves had not been consumed; they catch my Chain which makes the measuring very fatiguing; also tears our clothes to pieces, and makes us appear as Natives from black dust off them. The Marks in the Trees are burnt out; therefore am obliged to go over them again; Our Horses now want Grass; the herbage in this spacious Valley [Jamison Creek] is destroyed; we cut some sweet Rushes for them that grow on the edge of a stream of Water which runs through it. distance, 4 Miles.*
>
> *4 Jan: The Mountains are as yesterday; fired in all directions; at 11 o'Clock I was upon the high hill: all objects Eastward are obscured by thick smoke; We stopped where there was feed for the Horses and Water. [Lawson vicinity] distance, 5¼ Miles*
>
> *5 Jan: Still in thick Brush; the leaves of it are burnt. The weather is disagreeably warm and boisterous, which has been the case for the last 3 days. … distance, 4½ Miles [stopping in Linden vicinity]*

Continued page 19

Figure 2: The open heath country of Kings Tableland is extensive but not unique. It is associated with exposed and shallow rock, as is this open area on the Mount Hay Range. The grooves prove that the people clearly lingered there, but whether they fire-managed the place comprehensively is speculative. A. Macqueen 1996.

6 Jan: The fires have been in my favour, otherwise it would be impossible to measure; the flames have consumed the foliage from the highest Trees. The Ridges continue as usual until the latter part of my journey which is Forest Land [Springwood] for ½ a Mile; the timber on it is chiefly lofty stringy Bark and Oaks; there are small patches of grass left that the fire missed. … distance, 5¼ Miles

7 Jan: The Forest land continues a Mile farther; afterwards the brushy Ridge commences again, the thickest of it consumed, which I consider fortunate, had it not I should be obliged to have given off measuring; at the end of today's Journey is a Lagoon of good Water, with tolerable grass round the edge of it. [Glenbrook Lagoon] distance, 5¾ Miles. (Mackaness 1965, pp30-31)

This was an extensive fire, ranging at least 36 kilometres in a west-east line and apparently well to the south and north.

It occurred in the heat of summer, and burnt through the thick scrub of which Evans, and Blaxland, Lawson and Wentworth, had previously complained.

On December 29, when still in the Hartley Valley, Evans had commented that "The Natives seem to be numerous; there are fires in many parts not far from us".

This statement, together with his opening words on January 3, seems to imply that he thought Aboriginal people were responsible for the fire.

However, it is not clear whether he thought they did it deliberately, and he makes no comment on why they might have lit it or whether they were managing it in any way.

His description of the fire seems quite consistent with what one might expect from an uncontrolled summer wildfire sweeping across the Blue Mountains today: shrubbery reduced to blackened sticks, with the leaves on the highest trees being consumed in places.

Given the extensive thick scrub which Blaxland and Evans previously reported, and the "warm and boisterous" weather, it is hard to imagine that the fire could have been anything other than intense.

Gammage proposes it was a cool fire because Evans was able to walk close behind it.

However, Evans does not say that he walked close behind it. He may have been several days behind the flames.

Perhaps Gammage interprets the present-tense clause "the Flames rage with violence through thick underwood" to mean that Evans was witnessing those flames, whereas Evans may only have been making a general statement about the character of fire in scrub.

Incidentally, Evans' "forest land" with its "small patches of grass that the fire has missed", was situated on the rich Wianamatta Shale around Springwood and Faulconbridge—an area noted by Blaxland for its open grassy nature.

That is the only part of the entire Blue Mountains Ridge between Lapstone and Mount York not characterised by soils derived from the sandstones and interbedded claystones of the Triassic series.

Baker (1997, pp67-68) noted the evidence for Aboriginal burning in that vicinity and along the associated Hawkesbury Ridge. (Figure 3)

The large summer fire that Evans encountered was not unique in early accounts.

Caley's men accidentally started a November bushfire when lighting their campfire during his 1804 expedition.

He described the subsequent inferno which raged across the hills, causing trees to fall with the sound of gunfire. (Did not Aboriginal campfires ever similarly escape?)

Francis Barrallier observed what appeared to be a large wildfire in the southern Blue Mountains in December 1802, while William Parr encountered an enormous fire in the Wollemi in November 1817.

These are discussed in Macqueen (2004, ch4).

Sixthly, and finally, on page 197 Gammage raises matters from John Wilson's 1798 expeditions.

These were not in the Blue Mountains as we now generally understand them, but as he traversed rugged country of similar

Continued page 20

Figure 3: John Lewin's depiction of Macquarie's 1815 party at Springwood (NSW State Library). This was the grassy forest land which Evans (and Blaxland, Lawson and Wentworth before him) remarked on. It corresponds to the rich shale-derived soils of the area which contrast with those of the surrounding sandstone country.

These were not in the Blue Mountains

Continued from page 19
geology, and because the accounts are some of the earliest of any value, it is relevant to consider the matters raised. Gammage states that on his first expedition Wilson

> *reached the Wingecarribee-Wollondilly junction northwest of Berrima. In what is now mostly dense forest, they crossed "fine open country, but very mountainous", grass meadows, thinly timbered plains. And scrub and vine brushes, including Bargo Brush, soon notorious for poor soil, stringybark, and tangles of scrub and fallen timber.*

This interpretation relies on Cambage (1920) and Chisholm (1955).

Subsequent analyses by Andrews (1990) and Brownscombe (2004), and also by the writer (unpublished), discount that view.

The terminus of the first expedition was almost certainly in the Berrima-Bong Bong area, which now features open farming country.

The particular "fine open country, but very mountainous" country mentioned in the above quote was actually encountered on January 27, 1798 when the party appears to have been travelling up the long ramp which forms the watershed between the Bargo River and the Nepean system.

The surface geology for much of the way consists of Wianamatta Shales and would, if burnt frequently, have produced open grassy forest (as at Springwood).

Much of the area, such as around Yerrinbool, is now occupied by small farms, not scrub.

Gammage further states (still page 197):

> *In March 1798 Wilson led another party to Mt Towrang east of Goulburn… He found*

Figure 4: Rural scene near Berrima. This is the country crossed by John Wilson on March 19, 1798, which Gammage states is "thick of timber" today. A. Macqueen 2011

> *"a most beautiful country, being nothing but fine large meadows with pools of water in them; fine green hills, but very thin of timber." They are thick of timber now.*

The "most beautiful country, being nothing but fine large meadows …" was nowhere near the party's Mount Towrang terminus.

It was reported by the diarist on March 19, 1798 just south of Berrima, in today's aforementioned open farmlands. It is certainly not "thick of timber" today. (Figure 4)

To conclude. The archaeological record tells us that the sandstone terrain of the Blue Mountains was of great cultural significance to the traditional owners.

However, the pattern, frequency and purpose of their occupation or visits is not well understood. (Attenbrow 2009)

Nor is the nature of their burning practices.

However, it can be said with reasonable certainty, based on the early historical accounts and on the botanical evidence, that most of the sandstone country was covered in the scrubby vegetation that we still see today, rather than the open grassy woodlands that many imagine. (Macqueen 2004, ch4; Benson & Redpath 1997)

This is not inconsistent with Gammage's thesis. He acknowledges that "people burnt the most useful land most and the most sterile or sensitive land perhaps not for generations", and that they might only have burnt dry ridges "every 15-25 years". (Gammage, pp162, 165)

However, if dry ridge country of the Blue Mountains were left alone for such periods one would expect that fire from lightning ignitions, accidental ignitions, or escaped fires, would attain more significance.

This would be consistent with palaeoenvironmental research which suggests that the frequency and intensity of fire on the Blue Mountains mainly reflected the climate. (Mooney & Martin 2009)

Setting those questions aside, it is unfortunate that Gammage's above acknowledgement is relatively hidden in the book.

By the manner in which he presents examples from the Blue Mountains historical record, he implicitly invites the reader to think that attention would have been given to all the mountains on a detailed and frequent basis.

However, from the above discussion one is entitled to conclude that the pieces of evidence cited have not been properly examined with respect to their context or relevance.

Continued page 21

'…systematic and scientific use of fire…'

Continued from page 20

In terms of their usefulness in supporting Gammage's thesis that all of the country was managed by the systematic and scientific use of fire, they are variously not applicable to the Mountains, misleading or doubtful.

While the cited evidence suggests that part of Kings Tableland and places on the Nepean Ramp may have been burnt frequently to promote open landscape, such practice can simply be associated with the particular geological environments to be found there, in the same way that frequent burning may have been applied to the Wianamatta Shale country at Springwood, the alluvial flats of the Burragorang and other large incised valleys, the alluvial flats of Putty and Mellong, the volcanic diatremes and the upland swamps. (Figure 5)

Those examples say nothing about traditional management on the vast area of rugged sandstone country with its scrubby woodland.

It is not intended to deny that the traditional owners managed their country throughout the Blue Mountains.

However, the evidence educed by Gammage is unhelpful in understanding the nature of that management.

The writer

Andy Macqueen has spent many years analysing Blue Mountains explorers' accounts and following in their footsteps.

He has also been closely involved in the survey of remote Aboriginal cultural sites.

His knowledge of fire in the mountains derives from observations as a bushwalker, and wide reading and briefings in the course of his 18 years on the NPWS Regional Advisory Committee.

He is not a fire ecologist, but neither is Bill Gammage.

Figure 5: The explorers came across many natural clearings associated with swamps, such as this one (Burralow Swamp) encountered by Caley in 1804. Elsewhere on his journey Caley described the same scrubby vegetation that we see today. A. Macqueen 1996

Focus on the George Evans story

FOCUS WILL be on the George William Evans story, explorer, surveyor and artist seconded by Governor Macquarie to survey the newly found route over the Blue Mountains in late 1813 when Associate Professor, Ian Jack speaks at the mid-year dinner of Kurrajong-Comleroy Historical Society.

The dinner will be held at Loxley circa 1833, on Bellbird Hill Kurrajong on Friday evening, July 26.

The cost is $55 per person and bookings should be made with Suzanne Smith on 4567 7410 by July 19.

George Evans lived in the Hawkesbury area, near the present day RAAF base.

Along with Surveyor Meehan, Evans assisted in the survey of the five Macquarie Towns.

He was the man who did the all-important surveying and mapping of the route blazed by Blaxland, Wentworth and Lawson.

They had turned back at Hartley Valley, but the surveyor went much further west and created his own route to what became Bathurst.

Evans's house, 1806-1810, front. Photograph, Ian Jack 1989

The surveyor, in short, was also an explorer, and the first European to stand on the Bathurst Plains.

George William Evans was a well-educated Englishman, who came to New South Wales via the Cape of Good Hope.

He had eloped to Cape Town in 1798 with a fifteen-year old bride and moved on to Sydney in 1802, where he was soon appointed Acting Surveyor-General while Charles Grimes was in Britain.

Evans's story is not, however, a simple one of colonial success.

He was dismissed for some unspecified fraud in 1805 and went to live on the quite large Hawkesbury farm which he had been granted in trust for his two infant daughters in 1804.

Evans's 519 acres was immediately adjacent to the 200 acres held by the young children of William Cox. This is half-way between Windsor and Richmond: the present Richmond Air Base.

The association of Evans and Cox did not begin with the planning of the western road, but had begun a decade earlier, with an unexpected intimacy.

Both the Cox and Evans farms were largely rich arable land on the Hawkesbury River flood-plain, with a small strip of high land at the south end, adjacent to the common.

The two farms, looked towards the river with the Blue Mountains evocatively in the distance.

When the rains come in earnest, all that lowland as far as the Blue Mountains can be under water, even today. Cox prudently built his house, Clarendon, on the strip of high land. [1]

THE SEX LIVES OF AUSTRALIANS: A HISTORICAL REFLECTION (and other topics)

For those interested in topical history beyond the Blue Mountains, the Blackheath History Forum will be hosting the first of its 2013 lectures on Saturday August 3.

The speaker will be Frank Bongiorno, author of the recent book "The Sex Lives of Australians: A History".

The History Forum will be held every second Saturday until October 26, at 4pm at the Blackheath Public School hall. Anyone is welcome. Entry is just $5.

For more information on this year's program visit www.blackheathhistoryforum.org.au

Walk to the Cattle Rustlers' Yards

with members of Glenbrook & District Historical Society on Saturday 10 August

For information Doug Knowles 4751 3275 or Tim Miers 47439 2384

Lynn Collins to facilitate museums workshop

THERE ARE still some vacancies for those wishing to register for the Museums Workshop being sponsored by Blue Mountains Association of Cultural Heritage Organisations Inc. on Saturday, July 20.

The workshop is to be held at the Mt Victoria & District Historical Society's Museum, Station Street, Mt Victoria and will commence at 10am and finish at about 3pm.

This workshop will be facilitated by Lynn Collins,(pictured at right) the BMCC Museums & Galleries Adviser.

Lunch will be provided by BMACHO, at the Blue Mountains Manor House, Montgomery Street, Mt Victoria.

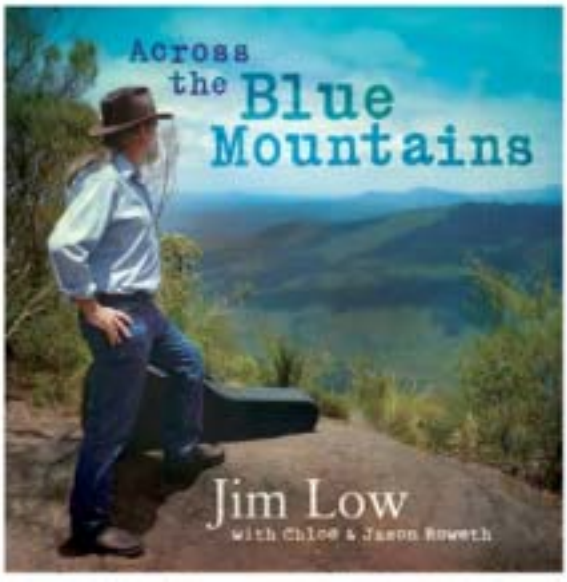
The objectives of the meeting is for members of other societies/ organisations to exchange information, and to identify possible joint ventures, for instance -

- skill based workshops (eg interpretation/display techniques, collection management issues, marketing)
- combined displays and promotions, linking with tourism industries
- research and publishing opportunities
- collection development
- the feasibility of well-appointed, shared storage
- building numbers and users
- succession planning and support
- making best uses of all resources in the Mountains and beyond

Each participant is asked to come to the workshop with three issues presently concerning their group and/or where your society/ organisation is/will be in five years' time.

RSVP to Jan Koperberg by email: j.koperberg@bigpond.com or by phoning 02 4751 5834 (if unanswered, please leave a message).

Across the Blue Mountains ... the new CD by Jim Low



Jim Low is a singer/songwriter and author. He presented some of his songs and observations of the region at last year's Blue Mountains History conference produced by BMACHO

Across the Blue Mountains is his latest CD released on Undercover Music's Rouseabout label and it contains 18 songs about the area and its history.

Many of Jim's songs have been inspired by the Blue Mountains where he lives.

The human impact has made the Mountains rich in history.

Jim has captured some of it in his music with songs about exploration (Cayley, Evans, Blaxland, Lawson and Wentworth) road and rail building (Cox and Whitton), travellers (Mrs Elizabeth Hawkins) and bushfires.

Also included are songs in response to the natural beauty of the landscape.

Along with the CD there is a website which is also called *Across the Blue Mountains*. It can be found at: http://acrossthebluemountains.com.au

As well as links to the songs, it contains articles and resources pertaining to the Mountains and the Crossing.

The CD is available from the website, selected Blue Mountains outlets and digitally on iTunes.

Western crossing commemoration 2013-15

great ideas - thoughts - just being talked about or it's really going to happen!

Coins still available

More than 14,000 school students and teachers throughout the area have received a set of commemmorative coins as part of Businesses Supporting the Bicentenary co-founder Scenic World owner Philip Hammon's lasting legacy of the Blue Mountains Crossings Bicentenary 2013-2015.

The holey dollars will be a reminder of the first recognised European crossing of the Blue Mountains by explorers Gregory Blaxland, William Lawson and William Charles Wentworth in 1813.

Mr Hammon personally underwrote the cost of the holey dollars. which he and descendants of the explorers, presented to students at special school assemblies.

Each holey dollar accompanied by an inspirational message to students from NSW Governor Her Excellency Professor Marie Bashir.

The coins are also available to individual members of the community at $10 plus postage. Orders for 6 or more are free of postage.

All enquiries to sponsorship@bicenteary.com.au or telephone (02) 4757 1425.

Festival of Walking

The bicentenary Festival of Walking will be launched in The Gully, Katoomba in conjunction with the Gully Traditional Owners, Gundungurra Heritage Association, National Parks & Wildlife Service and Blue Mountains, Lithgow and Oberon Tourism at 9am on Saturday, October 9, 2013.

Activities will include: self guided interpretive walks, indigenous gallery exhibition, bush tucker, cultural performances and launches of Aboriginal Cultural Experience Guide, iconic Six Villages Walk and the latest bush trackers guides for children.

Aboriginal insight in crossings walk

A Gundungurra Ancestral Pathways Walk will take place in the Blue Mountains later this year as part of the bicentenary commemorations.

Participants will walk from west to east following the Aboriginal pathways.

The walk which is expected to take place in October will make use of the traditional and post-contact Aboriginal pathways and cover 67 kilometres of country in seven days and six nights.

The official Crossings website says the walk "affirms the ongoing presence of Aboriginal people in the Mountains, connected to and walking their country, looking after it and uttilising it for cultural purposes.

It recognises the ongoing stories and beliefs that account for Country."

The walk is also open to "non-Aboriginal people to participate and experience the Blue Mountains from a different perspective".

Participants will experience first-hand Aboriginal cultural heritage and tradional sites of the Mountains, the website states.

Bathurst looks to 2015 proclamation celebrations

Monica Morse

The crossing of the Blue Mountains was significant for the development of inland Australia. In the same year that a route was found, the explorer Evans mapped the way to the plains which he named the Bathurst Plains.

Bathurst Regional Council is looking forward to acknowledging the importance of the first crossing in opening up of the towns of inland Australia. Between 2013 and 2015 a series of events and activities will be developed to follow on from the celebrations and re-enactment of the success of the first explorers.

We look forward to history buffs and tourists retracing the steps of those brave men who made that first crossing and the subsequent road builders. We have already welcomed surveyors to come to Bathurst to recreate and replicate the original surveys using old and modern techniques.

The first Sunday in May is called Proclamation Day in Bathurst which marks the date when the first flag was raised, the site of a new town to be called Bathurst was proclaimed and the first divine service was held west of the Blue Mountains. The flag staff which was erected on May 7, 1815 remained in place until the 1850s and served as the survey point for all exploration inland.

I am sure that the energy and enthusiasm which have been generated by the interest in the early crossing of the Blue Mountains will continue until 2015 when we plan to have many celebrations to mark the history of Australia's first inland settlement.

CLR MONICA MORSE
Mayor of Bathurst

Ancient Syrian sites imperilled by war

Across much of Syria, the country's archaeological heritage is imperilled by war, facing threats ranging from bombing and bullets to opportunistic digging by treasure hunters who take advantage of the power vacuum to prowl the country with spades and shovels,

Ebla has been celebrated for insights it offers into early Syrian civilisation. Now it is a prime example of the scores, if not hundreds, of archaelogical sites often built and inhabited millenniums back, because of their military value, puts them at risk as they are once more put to military use.

In the 1960s and 70s Ebla became well known among archaeologists when the city-state's long-buried archives of more than 16000 stone tablets were discovered. Elba was the most important kingdom in the era of 3000BC.

Translated from cuneiform script, these tablets have shed light on life in a city from another time

First settled more than 5000 years ago, Ebla became a fortified walled city whose residents traded olive oil and beer across Mesopotamia. Destroyed about 2200BC it flourished anew centuries later and was then destroyed again.

Part of the excavated city of Ebla

The latest disruption came after war began in 2011. Once the rebels pushed the army back and into nearby garrisons, the outcrop which is Ebla made it ideal for spotting government planes that in turn the MiG and Sukhoi jets have repeatedly bombed on towns that have fallen from Assad's control

Maamoun Abdul-Karim, who leads the Directorate-General of Antiquities and Museums in Syria, has appealed to combatants on both sides to avoid using ancient sites for military purposes, and to protect the ruins from vandals, looters and thieves.

"A whole civilisation belonging to all humanity is being destroyed," he says. ***New York Times***

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place, Springwood, 2777 (02) 4751 5834
E-mail: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com
ABN 53 994 839 952

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc. (BMACHO) was established in April 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference which sought from Blue Mountains City Council the creation of a cultural heritage strategy for the city.
BMACHO in its constitution uses the definition: "Cultural heritage is all aspects of life of the peoples of the Blue Mountains which was later changed to cover Lithgow and the villages along the Bell's Line of Roads. It therefore involves the recording, preserving and interpreting of information in whatever form: documents, objects, recorded memories as well as buildings and sites."
The objectives of the organisation are:

i. To raise public consciousness of the value of cultural heritage.
ii. To encourage and assist cultural heritage activities of member organisations.
iii. To initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact, to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society Inc.

HERITAGE BMACHO's official newsletter is edited by John Leary, OAM.
Blue Mountains History Journal is edited by Dr Peter Rickwood.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc., Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc, Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc, Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) - Blue Mountains Branch, National Trust of Australia (NSW) - Lithgow Branch, Scenic World – Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committe, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE The committee for 2013-14 is: John Leary, OAM (president), Ian Jack (vice president), Jan Koperberg (secretary), Kevin Frappell, Wendy Hawkes, Doug Knowles, Dick Morony (public officer),Scott Pollock and Jean Winston.

DISCLAIMER Views and opinions expressed in ***HERITAGE*** originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or members. If errors are found feedback is most welcome.

SEPTEMBER - OCTOBER 2013 ISSUE No. 29

Men and women of the bush in early Australian cinema

By Andrew Pike, OAM

A summary of the Theo Barker Memorial Lecture delivered in Bathurst on August 16, 2013, presented by the Bathurst District Historical Society in conjunction with Charles Sturt University.

WHEN I FIRST started researching the history of Australian film history in the late 60s, the landscape was very bleak.

There were no film studies at any university, and no publications to act as a guide.

I eventually located some oases in the desert – the pioneering research of Ross Cooper, Merv Wasson, Anthony Buckley, Joan Long and a handful of others, and some dedicated librarians (Larry Lake, Rod Wallace and Ray Edmondson) working within the film section of the National Library of Australia, doing their best to find resources to save films at risk of being lost.

Ross Cooper and I decided to pool our resources to try to provide a framework for our own research and hopefully to help others.

Our book was eventually the result (*Australian Film, 1900-1977*, published by Oxford University Press).

In working systematically towards our listing, I began by working backwards from the late 60s, scouring capital city newspapers and trade publications to find evidence of Australian films that had been produced and released in the past.

It was a long but exciting journey back in time, and I became used to finding only a small handful of films each year – maybe 6 or 7 in a good year, or none in some grim years.

Lorna Denver (played by Vera James) shows her skill at branding - a scene from the 1921 film, 'A Girl of the Bush'

Back through the decades to the 30s and the 20s and the First World War years the story was always much the same – just a thin scattering of Australian films in Australian cinemas.

But then we reached 1912 and 1911, and suddenly we found evidence of Australian films everywhere, scores of films, many each month.

Our excitement was perhaps like that of an archaeologist who digs down through geological layers and then suddenly reaches a layer where there is evidence of a lost civilisation.

Here in 1911 and 1912 was a rich treasure trove of Australian cinema that had been forgotten, and was unlike anything in later years, at least up to the late 60s where our searching had begun.

The landscape of film in 1911 and 1912 was indeed strange – not only Australian films galore, but no sign of Hollywood.

Instead theatres showcased films from Germany, Sweden, Denmark, Italy, England – and only a few short films from America.

Silent cinema knew no language barrier, and Australian films were a vital part of this cosmopolitan mix.

An opinion from the editor.....

Planning backflip: new laws in doubt --- but vigilance imperative

One of the first actions by the O'Farrell government when it came to power some 2-and- a-half-years ago was to repeal the notorious Part 3A section of the Planning Act which the ousted Labor government had allowed to be abused.

The Liberal government promised to return planning decisions back to the local community.

The government has touted its planning reforms as the biggest changes to the planning regime in 30 years, to streamline approval processes and ensure development matches the need for new homes and jobs.

Instead landmark planning reforms have met with severe criticism at all levels of the community.

The central plank of the Coalition's election promise — that local communities have more of a say in the planning process did not rate a real mention in the draft Bill nor the government's white paper.

Instead it was proposed that 80 percent of development applications be waved through under a proposal by which applications would be assessed strictly against planning codes — "codes assessment" — rather than have to be considered case-by-case by local government councils.

Grave concerns had been expressed that heritage and environmental issues would be sidelined to prevent the community from opposing unwanted development.

The changes would have erased ecological principles which limited the community's ability to protect natural assets.

Local government around the state was in revolt and full credit to councils in this region for their stand. Blue Mountains City Council led by its then deputy, now mayor Mark Greenhill did much to put the case that this region has special planning needs and that a "one-fits-all" code was not acceptable.

A white paper outlining the changes attracted almost 5000 submissions, hardly the "small vocal minority" suggested by a rapacious development industry.

One group alone, the Better Planning Network Inc. (BPN) has some 420 affiliated community groups including BMACHO.

The relentless work of Corrine Fisher from BPN has brought together a wide spectrum of stakeholders to oppose this proposed legislation which even ICAC is reported as having warned the Bill contains a high risk of corruption.

BPN's campaign is not a ragtag protest it is a professional exercise which could well be taken as a model for future actions against threats to individual and group dissent to bad legislation.

Planning and Infrastructure director-general Sam Haddad has admitted that the planned overhaul had "gone further than the government intended" and department staff may have unintentionally spread "inaccurate or misleading information"

It now appears that the NSW Planning Minister, Brad Hazzard has done a backflip, lacking the support of cabinet colleagues for major components of the Bill.

But stakeholders and the community need to be vigilant and keep up the pressure on local MPs to ensure this toxic planning proposal never becomes law. The proposed reforms empower developers not communities.

John Leary, OAM - President, Blue Mountains Association of Cultural Heritage Organisations Inc.

Continued from page 1
It was during the First World War that the high levels of production in Europe were disrupted and Hollywood stepped into the breach internationally, gaining a foothold that it never lost.

The boom in Australian films faded away after two glorious years for reasons which are complex and had nothing to do with Hollywood, but to some extent the Australian films made in these boom years carried a seed which contributed to their own demise, as we shall see.

‘Australian films made in those [early] years were entirely for Australian audiences’

Overseas sales were not part of the business model, and were rare. It was emphatically a local film industry, making films for local audiences – audiences that the filmmakers could know and understand.

The subjects were many and varied - convict era dramas, filmed versions of American and British plays, films inspired by paintings, poems, songs - and of the 100 or more films made at that time, about 40 were dramas set in the bush – usually stories which romanticised the past.

That past could encompass gold mining dramas, stories of clashes with Aboriginal Australians, and pioneering stories, but about a third of the bush films were about bushrangers.

Captains Midnight, Starlight, Moonlite and Thunderbolt were heroic figures in these bushranging sagas alongside Ben Hall and members of his gang, and of course Ned Kelly.

The shearing shed at Freemantle Station, outside Bathurst, used as a location for the 1921 film, ‘A Girl of the Bush.’ Vera James as ‘the Girl’ is in the centre.

These bushranging films constituted a distinctive local genre well before Westerns became established in Hollywood: we had our own stock characters, our own stock situations that owed nothing to American cowboys and Westerns. As one filmmaker from those days, Raymond Longford, later recalled: “All they needed was (sic) horses hired from stables in Redfern, some uniforms, guns, a stagecoach, and enough men to play troopers and rangers.

“They would take their gear down to the bush at Brookvale, outside Manly, camp out for a week and - without any script - make a film. Their action was usually a stagecoach hold-up, a lot of galloping, and a shooting-match.” (*Daily Telegraph*, Sydney, November 9, 1946)

By 1912, the popularity of bushrangers started to cause concern to the New South Wales Police who had carriage of film censorship at that time.

They felt that this wave of films glorified criminal behaviour, made a mockery of law enforcement, and was unhealthy for young audiences.

The result was a police ban on bushranging films which effectively removed the most popular male figure from Australian cinema.

With the sudden loss of the strongest male characters in the local bush genre, the men who were left seemed to be an empty shell.

Many of them seemed to become bland and polite, and were no match for the later heroes of the American West such as WS Hart and Tom Mix who took over the popular imagination during the war years.

With the bushranger ban, the “real men” of the bush disappeared, but the women did not.

The women who featured in many of these early bush dramas appear to have followed a particular stereotype which survived in bush dramas until the last great manifestation of the bush heroine in the Daphne Campbell role in *The Overlanders* in 1946.

The women of the bush were a distinct local phenomenon: they differed profoundly from many later Hollywood heroines of the Western genre.

The Australian bush heroines could confidently and reliably do the work of a man – could manage a station, go mustering, work in the shearing sheds, brand cattle, and ride with great proficiency.

At the same time, they could be attractive, demure and glamorous after the day’s work was done.

Continued page 4

‘In the absence of strong male heroes, these women were often the protagonist’

Continued from page 3

They were far from being tomboys and in no sense competed with men; on the contrary, they enjoyed male company, even flirting with the bland young men who courted them.

In the absence of strong male heroes, these women were often the protagonist.

The duality in her personality, balancing the “masculine” and “feminine” aspects of her character, could be expressed in her very name. In *The Squatter’s Daughter* (1933) she is Jo to the men, and Joan to those who know her domestically.

The heroine of *Silks and Saddles* in 1921 is known around the station as Bobbie, but is Roberta in the homestead.

In some films the bush heroine shared responsibilities with a man who might be a brother but who would sometimes be weak, lazy, snivelling, dishonest, immoral, selfish and irresponsible – in short, a bounder.

Sometimes he was literally disabled as in *The Squatter’s Daughter*.

Interestingly, the hero who romances the heroine in *A Girl of the Bush* (1921) is a well-mannered surveyor, not a “true” man of the bush though doubtless he will become one when he marries her.

Lorna Denver (played by Vera James) at work on the station, watched by her dissolute suitor Oswald (played by Herbert Linden) - a scene from the 1921 film, ‘A Girl of the Bush’.

The contrast with some of the strong women of the American West is remarkable: in Hollywood, women who did a man’s job were often depicted as tomboys, sometimes emotionally disturbed, and had to be tamed**.**

Lorna Denver (played by Vera James) . This image and others included in this article have been accessed courtesy National Film and Sound Archive.

Gun-toting, whip-cracking, tough-as-nails characters such as Anny Oakley were essentially competitive and challenging to men (“*Anything you can do, I can do better*”), but the Australian counterpart had no need to be competitive: she was a balanced, well-rounded character who could be an equal of the men in her life.

Very few of the early films from 1911-12 survive but we can learn a lot from newspapers articles, advertising and other published material.

Where fragments of the films do survive, we can see vivid examples of these women who are far from being conventional “romantic interest” or relegated to home-making and child-rearing roles like many women in the American West.

They were a distinctive local creation, strong and forceful characters at the forefront of our national cinema when it burgeoned before the First World War.

Since the 1950s, her demise from our national culture is almost complete.

Women in the bush in later films had little in common with her.

Continued page 5

Forgotten gems

Continued from page 4

The bush became a claustrophobic, stultifying environment from which a woman needs to escape (*Dust in the Sun* and *My Brilliant Career*) or with which a woman struggles long and hard (*We of the Never Never*). Nicole Kidman's role in *Australia* might have had potential but missed the mark entirely.

Perhaps the conventions of American film and television have now become so pervasive that we no longer know what we once had, or even feel the need for it.

But exploration of our own national cinema and its unique characteristics can reveal exciting elements that are worthy of much more study and discussion.

When the National Film and Sound Archive can marshal the resources to re-release forgotten gems like *A Squatter's Daughter* and *A Girl of the Bush*, we will finally have the tools to understand the characters who once stood strong and proud at the centre of our popular culture.

About the author

Andrew Pike is a film distributor, film historian, documentary film-maker and former exhibitor. With Ross Cooper, he wrote *Australian Film 1900-1977*, published by Oxford University Press.

His films as director include the award-winning *Angels of War* (1982) about Papua New Guinea during World War 2, *The Chifleys of Busby Street* (2008) about Australia's post-war Prime Minister, Ben Chifley, and *Emily in Japan* (2010), an arts documentary commissioned by ABC TV.

He has personally produced several documentaries for other directors.

Andrew managed the Electric Shadows cinema in Canberra for 27 years, from 1979 to 2006, and through his company, Ronin Films, has distributed many Australian films including *Strictly Ballroom* and *Shine*, and 500 documentaries.

In 2007 Andrew was awarded an OAM and an honorary doctorate from the University of Canberra for his services to the film industry and community.

Andrew Pike, OAM

In 2003 he was appointed by the French government to the rank of *Chevalier dans L'Ordre des Arts et Lettres* for Ronin's promotion of French cinema in Australia.

He served on the Board of the National Film and Sound Archive from 2008 to 2012 and is a member of the ACT Government's arts policy advisory council.

State government sale of Bridge Street buildings

The three major NSW Government owned Bridge Street, Sydney sandstone buildings – the Lands Department, Department of Education and the Chief Secretary's Buildings are proposed for sale/lease by the government prompting expressions of deep concern by the public to the National Trust.

The three buildings were listed on the National Trust Register in the 1970s and on the State Heritage Register in 1999.

As a group and individually they have the highest heritage significance.

For example, the Lands Department Building "is one of the most influential and major public buildings ever established during the mid nineteenth century in Australia's colonial history."

While the National Trust supports the concept of "adaptive re-use" to keep buildings intact and to fund their ongoing maintenance, any development proposal for these three buildings must be sympathetic.

These are landmark buildings seen "in the round" with important ornamentation on their rooftops.

Like the Queen Victoria Building any development would have to respect the scale of these buildings and their extraordinary exteriors, interiors and rooftops.

Lands Department tower - 1892

The Trust has expressed deep concern about proposals in the new draft state planning legislation that would transfer planning approval powers for State Heritage Register listed buildings from the Heritage Council of NSW to the Director-General of the Department of Planning & Infrastructure.

The treatment of these buildings is likely to be the first major test of the new planning/heritage regime.

There must be careful consideration given to development proposals to ensure that they properly protect these historic gems

The Trust will carefully monitor any proposed developments.
Reprinted from *National Trust Heritage Alert.*

Little Jacky Tougher - a grave story

IT WOULD BE hard to imagine any possible connection between the death of a baby in Lithgow in 1898 and the Australian Customs & Border Protection Service marine base at Neutral Bay but some very strange things do happen as this story will reveal.

James and Mary Tougher had emigrated from Scotland around 1879, to make a new life in Lithgow where James probably found work with Hoskins steel works.

James' brother John and his wife Margaret had joined them in the town and the brothers were stalwarts of the municipal brass band.

James and Margaret were the parents of four sons and five daughters – a typically large family for the time.

In April 1897 their last child, Jack, was born but he was to have only a very short life, dying on March 17, 1898.

The cause of death is not known but at that time and in that area typhoid claimed the lives of quite a number of young children.

Jack was buried in the Presbyterian section of South Bowenfels Cemetery which lies a little to the east of Lithgow on the Great Western Highway.

A small marble headstone was subsequently erected on his grave which bore the inscription:

IN LOVING MEMORY
OF JACK
BELOVED SON OF
J. & M. TOUGHER
DIED MARCH 17 1898
AGED 11 MONTHS
A BUD IN HEAVEN.

The next part of the story is pure hypothesis. Let us fast-forward to the 1970s when two Customs officers, after a weekend shooting trip in the west, stop at Lithgow for refreshments at a pub.

It is a moonlight night as they set off for Sydney along the highway but nature calls and they decide to avail themselves of the quiet of South Bowenfels Cemetery which is unfenced and freely accessable.

The officers notice the small headstone (which measures some forty centimetres square) and in a spirit of devilment easily remove it from the plinth and take it with them.

On their return to work on the Monday they place it in the garden beside the car park at the Neutral Bay marine base.

In December 2000 a Customs officer from Canberra was waiting for a taxi in the car park and noticed the little headstone.

He noted the details and contacted the Customs history officer in Sydney, Peter Chinn to see what might be found out about this curious item.

Considering the possibility that the headstone might have been on the site before the Customs marine base was established in the early 1960s Peter Chinn contacted the North Shore Historical Society to see if they had any knowledge of the headstone.

The Society's investigations determined that Jack Tougher's headstone belonged in far away South Bowenfels Cemetery.

North Shore Historical Society's journal editor Cameron Sparks made contact with John Bayliss, Local Studies Librarian at Lithgow Regional Library to arrange for its return.

This was finally done in 2003, and Lithgow City council, which is responsible for this very fine old cemetery, restored the headstone to its rightful place.

Peter Chinn who contributed this article is president of Springwood Historical Society, a member of Springwood Historians and a regular contributor to HERITAGE

Mary Reynolds to "retire"

MARY REYNOLDS, the driving force behind the establishment of Mt Wilson & Mt Irvine Historical Society in 1996, is to "retire" from the day-to-day activities of the society.

Mary plans, when time permits, to concentrate on her history of Mt Wilson and sorting and cataloguing of archival material.

President of Mt Wilson & Mt Irvine Historical Society, Des Barrett has said, "Mary's contribution to our society and to the study of local history generally, has been truly remarkable.

"A full recognition of her commitment to and work for the society will be acknowledged at this year's annual meeting, to be held on Saturday November, 9."

Mary was honoured in January 2011 with the award of an Order of Australia Medal (OAM) for service to the community through a range of historical, environmental and charitable organisations.

The Paragon, Katoomba

by Ian Jack, an edited version of a talk given to the Australian Society for the History of Engineering and Technology and the Royal Australian Historical Society on July 25, 2013

KATOOMBA INITIALLY developed in a fashion quite distinct from the other Blue Mountains townships along the 1860s railway line.

From 1874 onwards trains halted at The Crushers, in the vicinity of the later station, not for passengers but for stone quarried near the later court-house.[1]

The first settlement in the area was two kilometres to the south-west of the railway, near Katoomba Falls, where John Britty North opened a coal-mine complex in the Jamison Valley in 1878.

There was a village near the top of Katoomba Falls and another village grew up deep down in the valley itself close to the base of the Falls, just below where the Scenic Railway ends today.

North built a private tramway from the top of the incline near Katoomba Falls to join the main western railway line at what is now known as Shell Corner, a kilometre west of the present station.[2]

All this diverted attention away from what we all think of as the core area of the urban development, the area on either side of Katoomba Street, that essential north-south connecting link between the railway and Echo Point.

This area around Katoomba Street was within the large land-holding of James Henry Neale, a master butcher and Sydney politician, who had been a member of the Legislative Assembly from 1864 until 1874.

In 1877 Neale built a country retreat called Froma on what is now the new Cultural Centre site on the east side of Parke Street. But in 1881 Neale sold his interest in central Katoomba, including the house, to Frederick Clissold.

Clissold, a wool-merchant resident in the Sydney suburb of Ashfield, immediately sub-divided the land, creating and naming the modern street system.

Parke, Katoomba and Lurline Streets were created, running north-south, while Waratah Street ran east-west and defined the southern edge of the initial commercial centre of the new town. The Great Western Highway and the railway defined the northern limit.[3]

Olympus,12 Cliff Drive, Katoomba, the house built by Zacharias and Mary Simos in 1940. The upstairs section was altered in the 1980s. Photograph, Ian Jack, 2001.

So Katoomba changed rapidly. It started as only two industrial halts on the railway, with stone for railway works at one and at the other a private tramway leading down to a coal-mine and two mining villages.

Then it became a characteristic Mountains town relating to a proper railway station serving real people, as the 78 allotments created in 1881 were, over two decades, purchased and developed.

During this period from the 1880s up to the First World War, the whole area below the Carrington, quite close to the railway station, along Katoomba, Parke and Lurline Streets, became a busy commercial precinct, dominated by shops, services and a cluster of guesthouses, tempered by a remarkable number of churches (Anglican, Methodist, Presbyterian, Catholic and Congregationalist) along with their halls and manses.

The influx of seasonal tourists and the increasing number of permanent residents who serviced the tourists created a need for local services, so the area between the station and Waratah Street gradually filled up with shops, restaurants, cafés, two theatres and public utilities, such as the post office and the public school.[4]

But there was still a lot of free space in 1906, captured in a marvellous photograph showing south Katoomba from the most spectacular of the early consolidations, the Great Western Hotel of 1882, better known as the Carrington, on its spacious hill-top site.

A real entrepreneur at 19

Froma was still there in 1906, just below the Carrington although it was demolished six years later. Between Froma and Katoomba Street, the site of the later Paragon was a large, empty space, which remained undeveloped until 1909, when William Newlind built four shops on the vacant Katoomba Street block.[5]

Newlind had built the four shops as a speculation and three of them were soon bought as an investment by the Anglican rector of St Hilda's, just across the street.

These were all retail shops until 1916 when one was converted into refreshment rooms, called the Paragon.[6]

This was just at the beginning of a new phenomenon in Australian country towns, the Greek café.

From the early 1910s onwards a number of émigrés from Greece, often with experience of the United States, created a new café experience in cities and towns throughout Australia.

The Greek café was 'essentially an evolutionary amalgam' of the Greek coffee-house and the American oyster saloon and soda parlour with the familiar fare of the existing British-Australian steak-houses, and the names of the cafés, Californian, Golden Gate, Niagara on the one hand and Acropolis, Parthenon, Paragon on the other, reflected the shared inheritance.[7]

In Katoomba a drapery store built at 92 Bathurst Road near the station about 1905 was converted in 1917 to a Greek café called the Acropolis and soon rechristened the Niagara to emphasise its trendy American drinks.[8]

This is the Australian environment which a fifteen-year-old Greek boy called Zacharias Simos found when he migrated from Greece in 1912.

Where did he find work? In Greek cafés, of course, in Sydney, in Windsor and in Tenterfield.[9]

By 1916 he was in Katoomba, where in a brief partnership with Demetruos Sophios he became a fruiterer and a confectioner, opening his own premises in Katoomba called the Paragon Café and Oyster Palace.

He was advertising his Paragon wares as 'confectionery, fruit, American fountain drinks, and ice cream specialities'. This was in September 1916.

He was a real entrepreneur at the age of 19, offering to deliver fresh lobsters and oysters anywhere in the Mountains and making a speciality of 'late suppers'.[10]

Simos was an early exponent of American-style soda drinks with fancy flavours: he fell foul of the law in 1918 for combining raspberry syrup (brought from America) with too much sodium benzoate

.

But he survived the fine of £2 (about $150 today) and expanded the Paragon in 1925 to create the present deep restaurant area which we all love today.[11]

This doubled the length of the café and a new soda fountain was installed at the rear bar, with a lavish use of Australian marble.

At this time wall panels were added, not the present ones, but 'artistic plaques', framed in gold, which have not been captured in any known photograph.[12]

The bench seating was pleasant though not out of the ordinary. But the decorations and the style of the Paragon were of an elegance which distinguished it from most of its rivals.

Simos and the Poulos family which ran the Niagara round the corner were good friends although rivals and the Paragon and the Niagara were keenly aware of each other.[13]

The area just behind the Paragon bar is now a sort of hall-way, but in 1925 it was an elegant private supper-room: this is why it has fine period detailing, such as its Art Deco ceiling light.

Behind this supper-room was a new change-room with all modern conveniences for 'the girls' who worked in the café. Further back again was the kitchen, just as it is today.[14]

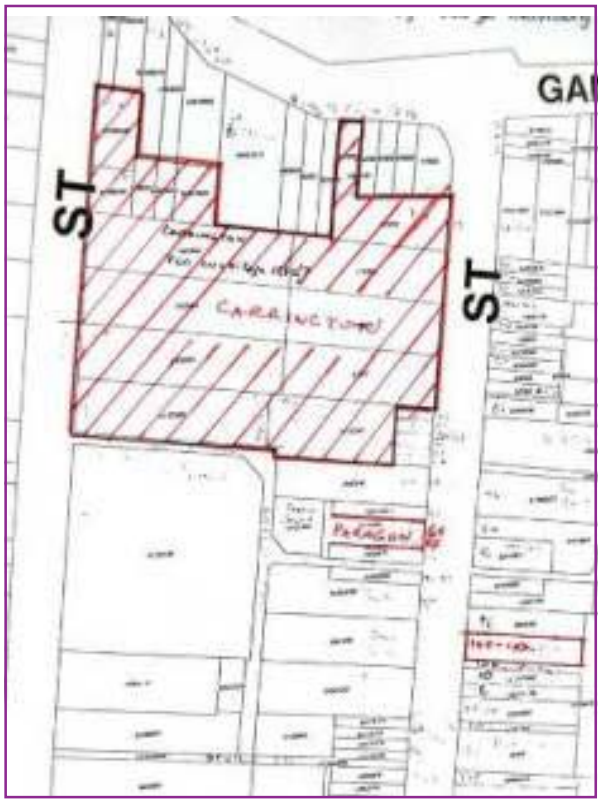
Upstairs in 1925 was the industrial side of the enterprise, not open to the public.

There was a bakehouse, a large refrigeration plant for the ice-cream made on the premises and a new 'sweet factory', with a gas boiler and a forced-air draught for cooling the chocolate.[15]

The technology of the chocolaterie is well documented, although the equipment was dismantled a decade ago.

Photographs of the upstairs rooms survive from various periods and have been gathered together and displayed by Robyn Parker.

Continued page 9



Location map of the Carrington hotel and the Paragon Café.

“... industrial dimension to the Paragon is of exceptional importance.”

Continued from page 8

The chocolate-making equipment is still stored upstairs and on April 10, 2013 members of the ASHET committee inspected and photographed the various items with a view to compiling a full report later in the year.

This industrial dimension to the Paragon is of exceptional importance.

Chocolate-making at the Paragon had been of a high order ever since Zacharias Simos had been joined by his two brothers: George was a master confectioner and they were trading as Simos Brothers by 1926.[16]

During a visit to Europe in 1929, Zacharias married an American-born daughter of café proprietors whom he met in his own home town of Kythera in Greece when they were both on holiday.

Maria or Mary became something of a legend in Katoomba and as a widow after 1976 managed the Paragon until 1987.[17]

Mrs Simos sums up the complex influences evident in the way in which America and Europe (Austria as well as Greece) contributed to the Australian Greek café.

In 1946 and 1947 new bas-relief friezes were commissioned for the front rooms.

These were by an émigré Danish artist, Otto Steen, who had arrived in Australia at the end of 1927.

He also did significant work at Everglades for Henri van de Velde

The chocolate room upstairs at the Paragon, showing the equipment now in store still in situ in 2000.

and assisted Rayner Hoff with the sculptures in Sydney’s Anzac Memorial.[18]

Steen’s fine friezes matched very well with the fairly extravagant new rooms right at the back of the Paragon when it was remodelled again in 1934 and 1936, designed by the theatre architect Henry White (who had also created the Capitol and State theatres in Sydney in 1927-1929).[19]

These two private rooms for functions are remarkable, not only for their décor but also for their very sexy lighting.

Robyn Parker, the present enlightened lessee of the Paragon, has rescued important memorabilia and documentation from various cubby-holes around the building and has put up a valuable museum display in the ballroom. We are all much in Robyn’s debt.

It is illuminating to compare the Paragon with the Simos family’s own house in Katoomba.

Originally, Zach Simos lived above the shop, in that part of the upstairs rabbit-warren overlooking Katoomba Street which was not used for making chocolates or for baking cakes.

In the late 1930s Zach and Mary bought vacant land on what is now Cliff Drive down at Echo Point and in 1940 they commissioned GN Kenworthy, the architect of the State Ballroom in Sydney, who had also worked on the State Theatre, to design a classy Functionalist house, which they called, of course, Olympus. Despite some additions to the upper frontage in the 1980s, the house and its important outbuildings, (garage, pergola, summer-house, fuel store), have retained a great deal of integrity.[20] This is the necessary corollary to the Paragon, blending perfectly with the developed façade of the famous café.

The Paragon is the apotheosis of the Greek café in Australia and it reflects the increasing prosperity and stylishness of the Simos family as the premises were extended and aggrandised between the two world wars.

It has managed to preserve to an astonishing degree the features which made it so famous, and the continuing quality of the chocolates, still made upstairs, and the décor of the long room which everyone sees are stunning.

But it is the unseen Paragon which makes it ultra-special: the two underused grand private function rooms at the back which so few people ever see, let alone eat and drink and dance in; and most of all, not least for ASHET, the crowning glory is the survival of the upstairs industrial rooms for chocolate-making and for baking, and the survival of much of the earlier equipment seen *in situ* in the old photographs.

Continued page 10

"…[this] Art Deco Cafe extremely rare and precious

Such an industrial dimension within the context of a spectacular Art Deco café is extremely rare and precious. Robyn Parker is to be congratulated for her exemplary stewardship.

Valley Heights locomotive depot centenary

Andrew Tester from the Valley Heights Locomotive Heritage Museum, last month held a gathering of local historical and family history societies from Nepean and Blue Mountains at the Museum

This was to hand out their brochure *2014 – Celebrating the Past, Envisioning the Future*, which is a celebration of 100 years of service to the Blue Mountains community.

Andrew went through the proposed event calendar for 2013/2014 (which is subject to change), starting with community events from January 2014. The first event will be the local community pre centenary celebration on Australia Day, Sunday, January 26, 2014.

On Friday January 31, 2014, the museum official opening and official opening of centenary celebrations will be held – this event will be invitation only.

This will be followed by a community event on the weekend of February 1-2, 2014. Organisers are hoping to hold a community day in March, where the local historical, family history,heritage organisations can hold information stalls.

On the same day, the members of the public will also have an opportunity to experience steam train rides with shuttle trip being planned to operate between Springwood and Penrith. This will be confirmed in due course. There will be other events during the year up until the World War 1 centenary event in October 2014.

After the presentation, Andrew took all those present on a tour of the grounds and Museum, where there is a lot of work being carried out in preparation for next year.

Good speakers, entertainment and lunch in heritage dining room planned for conference

THE 2014 Blue Mountains History Conference being organised by the Blue Mountains Association of Cultural Heritage Organisations Inc, will be held again at The Carrington Hotel, following the success of the 2012 event in this venue.

The conference will be held on Saturday, May 10, 2014 and already a number of speakers have been secured.

Associate professor Ian Jack, MA, PhD, FRHistS, FRAHS will give a talk on historical educational buildings.

Ian served as president of the Royal Australian Historical Society for 11 years and is regarded as an eminent historian with numerous books and other publications to his credit. He has been described by one of his peers and a "consummate scholar".

He is constantly being sought as a speaker around the state and throughout the nation.

Another speaker will be Hector Abrahams, a heritage architect and former RAHS councillor, who will give a talk on historical buildings built for religious activities including churches and schools.

Hec has a deep interest in the architecture of old places - the repair conservation and sensitive changes to buildings and the addition of new buildings within an existing precinct.

He has worked on larger projects including the new wings at St Paul's and St Andrew's Colleges at the University of Sydney, and the Sydney GPO.

He isre very familiar with the architecture of many of the religious buildings in this region

Robyn Parker, proprietor of the Paragon Café, Katoomba will participate in a question and answer (Q & A) half hour session on the history of the Paragon, assisted by Ian Jack.

Dr Nick Lomb, a former astronomer at Sydney Observatory, will provide an address about astronomy observed from the Blue Mountains. He has observed the Transit of Venus, the scientific event which led Captain Cook to Australia.

Nick has been involved in the observations of the Tansit of Venus from Woodford Academy in June 2004 and again in June 2012

The program for the Blue Mountains History Conference including an entertainment interlude will be finalised in the next few weeks when registrations will open.

The conference will finish by 3.45 – 4.00 pm and an optional extra will be offered on the registration form for those wishing to go to the Paragon Café for afternoon tea.

Robyn Parker has agreed to provide afternoon tea of tea/coffee, scones and cream, plus a tour of the Paragon Café for $10.

The fee for the conference, morning tea and buffet lunch at The Carrington will be $50.

The Carrington Hotel

The Carrington has a long and rich history spanning almost a century and a quarter since her establishment by Sydney hotelier Harry Rowell.

Opened in 1882 as The Great Western, this 'grand old lady' soon became a popular mountain retreat for international visitors, the elite of Sydney and those eager to see the natural wonders of the Blue Mountains.

Renamed 'The Carrington' in 1886, in honour of the then Governor of New South Wales, Lord Carrington, the hotel was extended by its new owner, Mr FC Goyder who is credited with the creation of the grand dining room. With its extended and upgraded facilities, The Carrington gained even more acceptance as a world class establishment.

By the early 1900's The Carrington's reputation as the premier tourist resort in the southern hemisphere was undisputed and the newspapers of the day often cited her as the only rival to Raffles within The Empire.

Sold in 1911 to Sir James Joynton Smith, who introduced the famous stained glass facade, The Carrington entered a new phase and quickly became known as the honeymoon destination of choice, and this remained so for the next half a century.

The Carrington closed her doors in late 1985 and remained empty and derelict until 1991 when it was purchased with the aim of restoring and relaunching this 'grand old lady' of the Mountains.

The Carrington reopened her doors in December 1998 after eight years of restoration, and works are continuing on the restoration of the gardens, garages, stables, and powerhouse.

RAHS annual conference - *Great Divide: Getting there from here* theme

THE THEME this year of the RAHS conference to be held in Katoomba in November is *The Great Divide: Getting there from here*.

It will examine new family history resources; commemorating the past; places and landscapes; museum collections and society management.

There will be opportunities to network with people who are committed to promoting local and community history and who enjoy sharing their successes and challenges with others.

The conference will be held in the Katoomba RSL Club on Saturday and Sunday November 2 and 3

The RAHS is delighted to announce that the distinguished historical geographer Associate Professor John McQuilton has accepted an invitation to deliver the 2013 Lesley Muir address.

His publications include *The Kelly Outbreak: The Geographical Dimensions of Social Banditry* (1979), *Australians: A Historical Atlas* (1988) and *Rural Australia and the Great War: from Tarrawingee to Tangambalanga* (2001).

Katoomba Street, 1920 - RAHS Photographic Collection

Outline of Conference Program
Day 1 – Saturday 2 November – Welcome to Country • Welcome to Region • Presentation of 2013 Cultural Grants • RAHS President's Address – Dr Anne-Maree Whitaker • 2013 Lesley Muir address – Associate Professor John McQuilton • Morning tea and book sales • Session on new family history resources • Lunch and book sales • Session on commemorating the past with particular focus on World War I • Afternoon tea and book sales • Choice of conference tours • Conference dinner

Day 2 – Sunday 3 November – Business Session • Presentation of 2013 Heritage Grants• Morning tea and book sales • Session on places and landscapes • Lunch and book sales • Session on museums & interpreting objects

For further information about the conference contact the RAHS on [02] 9247 8001 or email history@rahs.org.au.

There will be regular updates on the conference and other RAHS news in the fortnightly eNewsletter. Source: *RAHS eNewsletter September 2013 Issue 1.*

Pre-conference drinks at Hobby's Reach hosted by Blue Mountains Historical Society

Tarella 1910 - Ada McLaughlin with her two daughters and friends. Image - Blue Mountains Historical Society

BMHS will be hosting pre-conference drinks from 5.30 pm at their research premises Hobby's Reach on Friday November 1.

The Society will also be providing place mats using images from their extensive photograph collection to decorate tables for the Saturday night conference dinner.

There is limited parking at the pre-conference venue. However there is on-street parking near-by. There is also a community bus available to transport people from Katoomba RSL to Hobby's reach. Please contact outreach@rahs.org.au for details of this service.

EXPOSING OUR PICTORIAL PAST

HOW important are your old family photos?

Ted Szafraniec will explore how we learn from the past through our old photos during his talk, "Exposing Our Pictorial Past" at the Blue Mountains Historical Society Rooms, 99 Blaxland Road, Wentworth Falls on Saturday, October 5t, 2013.

Morning tea will be available from 10.00 AM. The meeting will commence at 10.30 AM.

Ted's talk will be of great interest to all those keen on photography, local history and the history of the Blue Mountains.

The Blue Mountains Historical Society's photographic collection provides a wonderful insight into the history and culture of our region.

During the morning, the BMHS Library and Research Centre will be open and the Society's publications will be available for sale.

Fish fossils in Canowindra

THE NATURALIST and wildlife broadcaster Sir David Attenborough has described a collection of Australian fossils neglected by the state's natural museum as 'world class"

On a break from his two-week speaking tour around the country recently , Sir David was taken to a site in NSW's central west where hundreds of ancient fish perished at the bottom of small lake 360 million years ago.

Arguably one of the country's most impressive fossils deposits, the site reflects a time when fish ruled the world and animals were on the verge of walking on land.

Today, evidence of this event can be seen on several large rock slabs on display at Canowindra's Age of Fishes Museum.

"When you look at one of these slabs you can see it is extraordinary," said Sir David.

"What you have here is dozens, if the rock was big enough, hundreds of these things piled one on top of another."

Sir David said the high quality exhibits at the small Age of Fishes Museum, run by the Cabone Shire Council, were a credit to the local community.

Sir David Attenborough and Dr Alex Ritchie looking at the fossils in Canowindra.

"But the find is world class and it deserves even more than it has got here," he said.

"It would be nice to think that the state or the nation should support such a thing."

Dr Alex Ritchie, an Australian palaeontologist, a world authority on early fishes and a former senior researcher at the Australian Museum who led the first, and only, excavation of the roadside site just outside Canowindra 20 years ago had invited Sir David to visit the rare fossil deposit.

Several leading international palaeontologists believe the site may contain some of the earliest evidence of tetrapods, the first animals to walk on land.

Leading professionals join National Trust Board

THE PRESIDENT of the National Trust of Australia (NSW), Ian Carroll OAM, is pleased to announce the appointment of two outstanding new directors to the Board - renowned architect Clive Lucas and chartered accountant Alan Kerr.

Clive Lucas OBE is one of Australia's most respected architects, and a founding partner of Clive Lucas, Stapleton & Partners.

Clive has won numerous awards, including the National RAIA Lachlan Macquarie Award for restoration nine times. Clive has been appointed to fill a casual vacancy and will be required to stand for the 2013 election.

Alan Kerr is a Fellow of the Institute of Chartered Accountants (FCA), a profession he has worked in for 42 years, and has been the principal of Alan Kerr & Co for 21 years.

He holds many credentials, including as a chartered tax advisor with the Taxation Institute (CTA), and is a registered company auditor and registered SMSF auditor. Alan has been appointed for a fixed term expiring in November 2014.

"The National Trust of NSW is very fortunate to be gaining leadership and expertise of this calibre, and I welcome both Clive and Alan to the Board," Mr Carroll said.

Everglades and beyond

October 5 - 27

An exhibition of watercolours by Esther McFarlane at Everglades, Leura

Gardens and gardening are great loves of Esther, so naturally, they are favourite subjects of hers to paint. For further detail Scott 4784 1938

Time for spring cleaning your museum?

by Peter Stanbury, OAM, PhD

SPRING IS HERE! It is time to review your museum…what can you do to protect your heritage items…what can you do to attract more visitors…more volunteers…more funds?

Recently I escaped winter in the Blue Mountains to the monsoon season in Phnom Penh to face a similar agenda at the National Museum of Cambodia under the aegis of *Australian Business Volunteers*, a non-government, not-for-profit international development agency that sends volunteers to 16 countries throughout the Asia Pacific region.

You can find out more if you fancy an overseas volunteer experience at http://www.abv.org.au/

The National Museum of Cambodia is a wonderful museum. It is housed in one of the most beautiful buildings anywhere in the world.

It has a large, important, well preserved collection. Overseas museums want to borrow exhibits and are prepared to provide material benefits in exchange.

It is centrally located in a city visited by people from all over the world.

When one has worked in a place for a long time the surroundings and habits become so familiar that they seem quite natural, satisfactory, and even unchangeable.

But the challenges are not insurmountable if one works in small steps. So thought the newly appointed director in the National Museum of Cambodia.

The director was determined to better the museum and to provide the staff with opportunities to advance their careers. As in any museum, keeping up with public expectations means constant improvements, both short and long term.

He wanted the eyes of a non-staff museum worker to look at the museum and its operations and discuss improvements with the staff.

It is important to recognise that successful change is composed of many small steps. The path to the eventual destination may at first sight seem long, difficult, even frightening but the most important part of the process is the decision to go and the first few steps. (Think of a double B truck doing a U-turn in a narrow street.)

Some of the steps will be large, but many will be simple, easy and even enjoyable.

It is wise first to choose simple first steps, relatively enjoyable ones that produce results quickly, or you may never start.

Think of the best you can imagine for your museum! How proud you will be to have achieved what you set out to do.

In spite of some difficulties on the way you will be able to look back and see that improvements have become a part of your life – an experience to pass onto your children and grandchildren

I had discussions with senior staff and together we came up with nearly 100 steps to better serve the public and re-invigorate the morale of the staff.

We realised that visitors usually have limited time to learn something of the local culture, so exhibits must be presented so their significance can be understood quickly.

Information should be easily assimilated. Visitors must be able to find their way around an unfamiliar building and not be distracted by public health and safety concerns.

The idea was to come up with ideas and plans to make the museum more accessible, to increase funding sources and to safeguard the building and its contents.

Some of the steps proposed were simple such as ensuring fire extinguishers were in working order, improving housekeeping so that insects and other animal pests do not damage the collection, and the provision of free information about the objects (improved labels and brochures).

The National Museum of Cambodia has a splendid roofline.

Spring cleaning your museum

Continued from page 14

Medium term objectives included improving storage conditions by monitoring and controlling humidity and temperature, and introducing added value-added visitation with 'behind the scenes' tours.

Introducing a privileged membership category to raise consciousness among local businesses, council staff and councillors and possible philanthropists were also suggested.

Longer term proposals considered specialist "curator" positions, additions to the building to house the library, thousands of historic photographs and a conservation space.

This would allow expansion of the exhibition space and improved facilities for school groups.

These efforts were to be guided by a policy document with a declared mission and vision understood by all staff.

This document is important to inspire confidence in the museum's achievements and goals by the relevant government departments and when seeking funding.

Do you have a few spare umbrellas? Is the path to the museum from the gates safe when wet?

Pictured above and clockwise are Peter Stanbury and Suzanna Edwards working at the National Museum of Cambodia as volunteers. 1. Protect yourself when carrying out dirty jobs; 2. Change your displays often to rest objects from the light and repeat visitors; 3. Those objects that are packed away should be unwrapped and checked for mould, insects or other damage.

Touring the past: tourism and history in Australia

AN EXHIBITION,'Touring the past: tourism and history in Australia' currently be staged at the Macleay Museum at Sydney University until February 14, 2014, charts the way Australians began to discover they had a past worth visiting.

The exhibition, curated by Rebecca Conway, will showcase images from Sydney University Museums Historic Photograph Collection.

How did the Australian past become an object of the tourist gaze?

For well over a century Australians have learnt to be nostalgic about their past. Convicts, bushrangers and rebellious diggers became standard tourist fare surprisingly early.

At the same time, Australia's past was also acquiring a patina of nostalgia, as artists discovered the beauties of colonial architecture and country towns recognised the benefits of promoting their history to tourists.

From Port Arthur to the Dog on the Tuckerbox, this exhibition explores the variety of pasts that tourists visited, the exhibits that drew them in and the souvenirs they took away.

At left : CALEY'S REPULSE — The discovery of the remains of the long-lost relic was made by a party of members of the Australian Historical Society in 1912 near Linden.

BMACHO MEMBERS DEMYSTIFY SOCIAL MEDIA PHENONOMEN

IT WAS ONLY 20 years ago the *New York Times*: revealed: "One of the new technologies American vice president Al Gore is pushing is the information superhighway, which will link everyone at home or office to everything else—movies and television shows, shopping services, electronic mail and huge collections of data."

There's a statistical theory that if you give a million monkeys typewriters and set them to work, they'd eventually come up with the complete works of Shakespeare. Thanks to the Internet we now know this isn't true.

The Internet may be the superhighway to knowledge but when Sean Parker entrepreneur and computer hacker co-founded Facebook (today worth $US2 billion), launching Facebook into the social media arena, he introduced a different network to which millions around the world including BMACHO now subscribe.

At Everglades Historic House and Gardens, Leura this beautiful ironstone wall curves along the edge of the lookout looking through eucalypts to Mt Solitary.

BMACHO is grateful to former president Pamela Smith, current committee members Scott Pollock of Everglades Historic House and Gardens and Wendy Hawkes of Lithgow City Council and Eskbank House for bringing this organisation in to the 21st century media realm with its own Facebook page.

BMACHO's Facebook page is https://www.facebook.com/heritagebluemountains

Please 'Like' BMACHO's Facebook page.

Most organisations seem to be using social media to create interest and to network with people and organisations from far and wide, with great success.

BMACHO's website is - http://www.bluemountainsheritage.com.au/

BMACHO members are asked to continue to send events to Dick Morony for placement in the 'Calendar of Events' at richardmorony@optusnet.com.au which are emailed monthly by Dick.

Members are also asked to send events with photographs to, webmaster Scott Pollock at evergladesgardens@bigpond.com for placement on the website under 'events' and for the Facebook page.

THE RED ADMIRAL TO CONTINUE UNTIL YEAR'S END

WITH MORE THAN A YEAR passed since the Governor of NSW, Professor Marie Bashir, AC CVO officially opened "The Red Admiral" – an exhibition of Patrick White's years at Mount Wilson' it has been decided to keep the exhibition open until the end of this year.

Mt Wilson and Mt Irvine Historical Society celebrated the centenary of Patrick White's May 28, 1912 birth date with the opening of an exhibition that examines the writer's early years at Mt Wilson.

It highlights the impact of both the Australian natural environment and the influence of working class and wealthy society individuals and families that were to strongly shape White for the remainder of his life.

"He [White] was one of our greatest writers and this exhibition enriches our understanding of him," Professor Bashir, said in opening the exhibition last year.

"The hidden yearnings of White's characters are what I have most enjoyed and now I am inspired to revisit them," Professor Bashir said.

Most people were genuinely surprised at the deep affection White had for his childhood home and the profound influence it had on his work.

Sales of the video, *Patrick White at Mt Wilson* have been encouraging.

An on-line version of the exhibition is available for those who may want to see it, but who cannot get to the Turkish Bath Museum at Mt Wilson.

Details of opening hours can be obtained by emailing historicalsociety@mtwilson.com.au

Stories of Devotion will bring exhibition to an end

AN EXHIBITION celebrating the lives and achievements of Sir Joseph and Dame Mary Cook is on display at Eskbank House and Museum, Lithgow until October 7.

He was a minister in the first federal government, became prime minister in 1913, was high commissioner in London and knighted in 1918.

As well as being beside him every step of his career, Dame Mary was heavily involved in the Red Cross and was made a Dame in the Order of the British Empire in 1925 for this work.

Curators Miriam Scott and Wendy Hawkes have given a series of presentations based on the images, objects and stories from the exhibition "Devotion Sir Joseph and Dame Mary Cook" during August and September

A talk on the trials and tribulations of creating the history exhibition "Devotion" will be conducted as library forum at the Lithgow Learning Centre on Thursday, October 3 at 5.30pm for 6pm. For further information contact Wendy Hawkes 6354 9999

Wendy Hawkes to talk about the Cooks

THE LIVES of Sir Joseph Cook and Dame Mary Cook will be the topic for the guest speaker, Wendy Hawkes at a BMACHO general meeting to be held on Saturday, October 19.

Wendy Hawkes,(pictured at right) is the cultural development officer with Lithgow City Council and curator at Eskbank House, Lithgow, where an exhibition about the Cooks is in its final stages, closing on October 7.

The Cooks moved to Lithgow in 1886 and Sir Joseph worked in the Vale of Clwydd Colliery as he studied and worked his way up through the unions and into politics. He became prime minister 27 years later.

A light lunch will be provided, (catered by the Cultural Centre and at BMACHO expense), at the Cultural Centre at approximately 12.30 pm

After lunch, from 1.30 pm to 3.30 pm (or earlier) a workshop will be conducted, where a suggested format for an "Explorers Cultural Trail" brochure will be presented.

Wendy Hawkes

Those attending the workshop will be asked for input into this project.

Please RSVP by email j.koperberg@bigpond.com or phone Jan Koperberg on 02 4751 5834

When: Saturday, October 19, 2013 from 10.30 am to 3.30 pm

Where: Blue Mountains Cultural Centre, Parke Street, Katoomba

Cost to participants: FREE

Old Toongabbie Government Farm: an elusive vision for 5 governors

HAVE THE fearsome convict stories and the loathsome reputation of the old Toongabbie Government Farm in early colonial times sometimes caught your interest?

Historian Jan Barkley-Jack's latest work, Toongabbie's Government Farm: an Elusive Vision for Five Governors 1791-1824, will give those who have wondered about this harsh place an opportunity to understand what really happened there.

The book is beautifully published by Toongabbie & District Historical Society. Michael Flynn, well-known historian and author, has written the Foreword, and in Flynn's words, "those interested in colonial history will be fascinated by these new perspectives on the penal colony as it struggled to secure a reliable food supply".

Perhaps one of your forebears was amongst that human struggle.

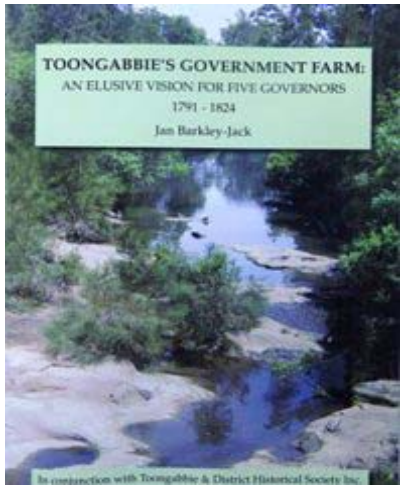
The story of the years beyond 1793 provides insight into the emotional fortitude of some sent there, while showing how most administrators, including Governor King, had their visions tested.

By quirky fate the Toongabbie Government Farm cattle became linked to William Bligh's overthrow and added fuel to long-term opposition to the farm by John Macarthur.

Lachlan Macquarie added a twist to the implementation of the British Government's plans to close the NSW public farms, by applying for Toongabbie to become his own colonial estate.

The book is A4 format with cardboard spine and covers, containing 120 pages with 36 colour plates and 9 black and white plates, and includes maps.

In addition there are tables showing the stock and agricultural details year by year, as well as early settlers by date of promise of grant 1792-1795.



Three appendices include lists of grants given by Governors Hunter and King in the district of Toongabbie, a distinct entity to the Government Farm but highly influential in causing its demise.

The price of the book is $30 (does not include postage), and it is available from Toongabbie & District Historical Society, ph. 96361905

Scrutinizing paper-based collections

AFTER a successful mid-year tour of museums and keeping places in the Lithgow region, conservator Tamara Lavrencic visited the Blue Mountains in August to advise on management and treatments for paper-based objects causing concern to carers of four local collections.

As museum programs & collections manager with Museums & Galleries of NSW, this was another familiarisation exercise allowing Tamara and her colleague – program & collections coordinator, Phoebe Arthur – an occasion to meet volunteers and sight collections while offering practical assistance with artefacts ranging from insect-ravaged photographic portraits to early copperplate correspondence fading away.

Having spent a fulsome hour at the Glenbrook Historical Society's new base then, at a pace, less than sixty minutes at the vast Mt Victoria Historical Society Museum, the visitors examined items in the Varuna Writers' Centre before moving onto a generous Blue Mountains Historical Society luncheon and a further hours consultancy with their collection: the whirlwind visit culminated in a power-point presentation by Tamara offering additional insights to preventative conservation materials and resources; best museum practices; and grant opportunities to assist with the caring of paper-based (and other) collection items.

In July, the roving duo from M&GNSW had spent two days viewing collections in the Lithgow local government area with an introductory tour of diverse sites – the respected Lithgow State Mine Heritage Park, the slowly transforming Charlie Pinch museum in Portland, charming Rydal village and Hartley Historic site – which preceded a day of a similar consultancies involving brief overviews of collections and expert advice on a variety of challenges facing Lithgow Small Arms Factory Museum, Lithgow Library Local Studies unit, Esbank House; and the Lithgow & District Family History Society.

As with the folks in the mountains, an end-of-day summary session presented museum volunteers with more valuable guidance, and a chance to meet Phoebe, an affable and practical M&GNSW administrator of VIM and other project and program grant opportunities …that could benefit conservation, management and interpretation of collections in the two regions? (see www.mgnsw.org.au)

"The best thing about Tamara's friendly, informative visit was the assurance she gave sorting through our collection and advising where a professional conservator should be involved," said manager-curator at Esbank House, Wendy Hawkes.

Continued page 19

Scrutinizing paper-based collections

Continued from page 18

"Then with other objects, she showed us how, with often only minimal treatment and careful storage, our books, photographs and documents could be happily preserved for ages".

Doug Knowles from Glenbrook was very appreciative of the help and attention their "totally disorganized documents" were given along with valuable insights to light levels required for storing them.

Jean Winston from Mt Victoria was surprised gloves were not recommended for handling paper-based objects and that insecticides used for marauding insects may do as much harm as the critters themselves.

She learnt a great deal about archival storage materials.

Overall, those visited seemed well pleased with the day-tour consultancy format, many reeling away over-loaded with ideas and information, but invigorated to tackle issues at their museums and keeping places.

Discussing Varuna archival material, from LHS, CEO Jansis O'Hanlon, Phoebe Arthur, archivist Barbara Palmer and Tamara Lavrencic.
Photograph by Lynn Collins

For the visitors, who were delighted to meet so many dedicated museum personnel, it was a useful way to gain an understanding of local concerns and scope and state of a variety of collections.

M&GNSW would be pleased to assist with follow-up workshops, perhaps employing experts in other disciplines working with collections:

Lynn Collins Collins, the museums adviser with both Blue Mountains andand Lithgow City Councils, is interested in discussing other similar compact events with museum volunteers …perhaps involving disaster planning around bushfires and other local hazards; or pest management; handling and cleaning large-format photographs; maybe caring for furniture and paintings, which were amongst a number of suggestions immediately arising from these successful couple of visits to the regions.

To Register interest or to offer other proposals, contact Lynn at lynngcollins@iinet.net.au

Tamara Lavrencic with Phoebe Arthur at her side, discusses storage and conservation options for recently received school records with Glenbook Historical Society president Doug Knowles, Mary Knowles and Pam Pascoe. ***Photograph by Lynn Collins***

Restoration of Springwood's historic monuments

by Peter Chinn

AS INITIATIVES in commemorating the bicentenaries of the Western Crossing in 1813 and the construction of the Western Road in 1814-15 Springwood Historical Society and Springwood Historians made representations to Blue Mountains City Council for action to be taken to restore and appropriately mark two significant historical relics in Springwood.

The Macquarie monument is an obelisk located on Macquarie Road about half a kilometre from the town and marks the approximate location of the place where Governor Macquarie and party camped on April 26,1815 on their way westwards to the site of Bathurst.

It was here that Macquarie, impressed by the abundance of tall trees and the proximity of springs in the gullies named the site "Spring Wood".

The first permanent European habitation (albeit three soldiers) was established in this vicinity in November 1815.

This small military depot was set up to control access to the Western Road on the orders of the governor in order to prevent unauthorised settlement over the Blue Mountains, and to capture runaway convicts.

In 1939 the Royal Australian Historical Society erected the Macquarie Monument on a small piece of ground – some two metres square – excised from the adjacent property.

A marble plaque with inset lead lettering reads:

Governor Macquarie and his party
Camped here on their way to Bathurst
On April 27 1815
And named the place"Springwood"
William Cox erected here A military Depot
Early in 1815

Over the years the monument has suffered deterioration – lettering lost, mortar eroded and general weathering.

The oldest known European grave on the Blue Mountains lies beneath a tree in Springwood cemetery.

It is surrounded on three sides by dilapidated wooden palings.

Apart from essential restoration it was felt that this most important relic of Springwood's history warranted more appropriate surrounds as well as interpretive signage as to how it came to be erected – an integral part of its history.

Private Francis Smith's Grave

The oldest known European grave on the Blue Mountains lies beneath a tree in Springwood cemetery – that of Private Francis Smith who died at Springwood on May 5, 1836.

Smith was a soldier of the 4th Regiment of Foot (King's Own Regiment) which performed garrison duties in New South Wales from 1832 to 1837 and he was detached with two other soldiers to man the Springwood military depot on the Western Road.

Private Smith died at the depot from causes unrecorded and as there was no cemetery on the Blue Mountains he was buried in the bush near the depot (which consisted of a primitive hut).

At this time the depot had been relocated from its original site, where the Macquarie monument now stands, to a location now the site of Springwood Mews in Ferguson Road.

A headstone bearing the following inscription was placed on the grave:

Sacred to the memory of
Francis Smith
Who died May 5th 1836
Aged 43 years
Having served
For 25 years
As a soldier in
H.M. The King's Own Regt

In 1878, in response to a Parliamentary enquiry, it was reported that a solitary soldier's grave was located near the site of the old military post in Springwood and that the headstone, "is broken and supported by a sapling".

Thomas Hobby makes his mark as Cox takes a 'sickie', August 1815

by Peter Rickwood PhD

THE CURIOUS NAME, Hobby's Reach, the property of Blue Mountains Historical Society came from the stretch of Cox's Road (now Blaxland Road) between c. Edward Parade and the north-west corner of the society's property.

It was completed under the supervision of Thomas Hobby between August 19 and 26, 1814 when William Cox was away recuperating from a bad cold.

In his journal entry of August 26, Cox wrote: "Arrived at the working party at 2pm. Found Mr Hobby well. The road finished during my absence. Done well."But a month later on October 3, 1814, he added: "At the 29th mile is a very handsome long reach, quite straight, which I call, from the layer of it out, 'Hobby's Reach'." (Cox 1901, p.69).

Thus on Friday, October 3, 2014 it will be the bicentenary of the assignment of the name and surely an event that we should celebrate; fortuitously it comes at start of a long weekend holiday.

But while being of historical significance that stretch of road only has a length of 640 metres (700 yards) and it is by no means the longest straight and continuous bit of road in the Blue Mountains.

So where is the longest stretch of sealed road?
Before dealing with that it is important to observe the requirement 'continuous' as many roads were drawn on plans to go across valleys where those sections were quite impractical to construct, so some road names have been applied to two or more unjoined sections.

But Megalong Street in Leura is not one of those as it is continuous,and essentially straight from York Street, (in the Katoomba Industrial Estate) to Gladstone Road, a distance of 2.26 km (1.4 miles).

But is there a longer one ?

The longest essentially straight section of the Great Western Highway is in Blackheath, between the south-west corner of Whitley Park and Ridgewell Road; it is 1.61 kilometres in length so exactly 1 mile.

Private Smith exhumed

Continued from page 20

In 1886 Springwood Cemetery was established and the Church of England portion was in use by 1887.

It was probably not long after this that the remains of Private Smith were exhumed and reinterred in this section of the cemetery (Grave No. 91) and marked by the broken headstone and intact footstone.

Examination of the grave some years ago revealed that only the bottom half of the headstone was in place and that the footstone was in two pieces on the site.

It was believed that the top part of the headstone had been removed to the council depot but enquiries were unable to establish that this was a fact.

The broken portion of the footstone remains by the base.

While the grave remains almost forgotten in the cemetery a monument to this earliest of our European inhabitants was erected in the small park in the front of Springwood Civic Centre in May 1990 and unveiled by Brigadier DJ McLachlan, Commander of the Second Military District, assisted by 15 months old Nathan Dubber of Tweed Heads, Francis Smith's youngest direct descendant.

As a result of the representations by Springwood Historical Society and the Springwood Historians the Blue Mountains City Council was successful in obtaining government funding to undertake remedial and interpretive work on both monuments.

Council has advised that the Royal Australian Historical Society have engaged a contractor to undertake some maintenance and restoration work on the Macquarie monument which will involve replacing missing lead lettering, cleaning the plaque and repointing of the stone work.

In relation to Private Smith's grave Blue Mountains City Council has done a commendable job in putting in place at the foot of the grave a fine sandstone plinth with a brass plaque containing a history of Private Smith and its historical significance.

The Royal Australian Historical Society has also undertaken work on the Macquarie monuments at Glenbrook and Blackheath as part of a broader project

Japanese culture at Norman Lindsay Gallery

JAPANESE culture will be featured as two workshops at Norman Lindsay Gallery, Faulconbridge on Saturday, October 6.

Commencing at 11am to 12.30pm Patricia Waters, will demonstrate the art of ikebana. The cost of $20 includes gallery viewing and refreshments.

Between 1pm and 2.30pm Haylee Hill and Shirley Jenkins will demonstrate origami and teach people of all ages how to make beautiful paper birds and cranes. Cost: $12.

Bookings for both workshops are essential on 02 4751 1067.

Blue Mountains Explorers Trail Map idea

AN IDEA for a project sparked by the BMACHO museum workshop at Mt Victoria Museum has prompted the setting up of a project group to develop a Blue Mountains Explorers Trail map.

Richard Woolley a member of Blue Mountains Historical Society was so inspired by the activity that he came away from the workshop determined to see the development and publishing of such a map.

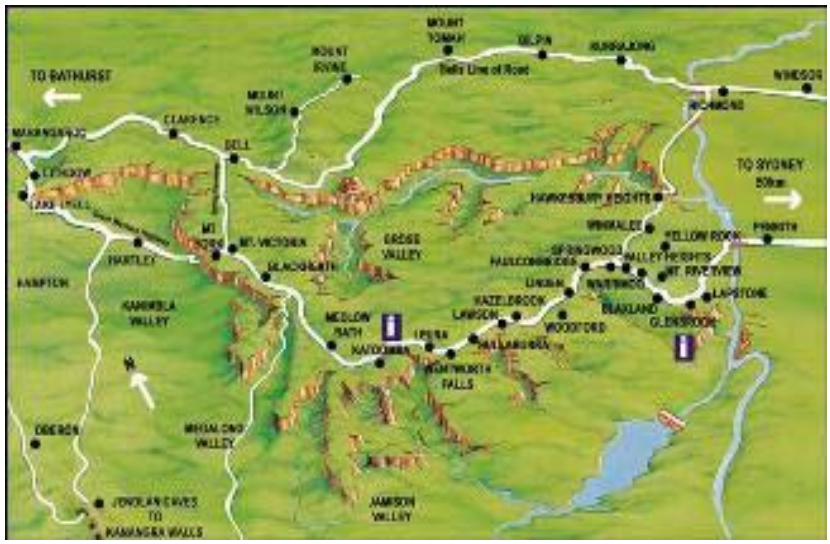
“The mountains has a prolific variety of scenic wonders which already attract a huge volume of local and international tourists bringing tourist dollars and recognition,” Richard has said.

“It also contains a wealth of state and nationally significant history and historic places which are supported by local councils and a diverse group of volunteer organisations working to promote their particular interests.

“The geographical structure of the community means that many of these groups are stretched out along the Great Western Highway and are focussed mostly and naturally on their local village communities.

“Tourism, backed and funded by commercial interests and government, has done a great job in promoting the region with events, publications and websites combining the resources of many groups for greater impact.

Lenox Bridge. ***Photograph by John Leary, OAM November 2011.***



“Heritage and cultural groups have been less successful, being fragmented by their local and limited volunteer resources but are eager to pool their resources to create a co-operative marketing idea which is greater than any individual organisation could mount.

“So let’s change this situation, take a leaf out of the tourism push and combine our resources and influence to present a united front to those who can help fund such enterprises and to our huge visitor target audience .

Richard says the idea is to construct and promote to all visitors and potential visitor groups to the Blue Mountains, a visitors’ trail map which connects heritage and cultural groups, interesting and accessible historical sites (eg: Lennox Bridge or Mt York) with selected cafes, restaurants and accommodations between Emu Plains and the Lithgow Valley and back down Bells Line of Road to the plains

Designed to be very flexible the trail should provide for day visits to sites or organisations, overnight or longer ‘short breaks’ as well as contact resources for all other museums, family history groups and commercial operators that may be identified on the Cultural Explorers Trail map.

Primary promotion

* A high quality, full colour Trail Map (say A3 folded to A4) distributed through all participating museums and keeping places and through Glenbrook, Katoomba and Lithgow visitor centres.

* Promotion on the websites of all BMACHO participating groups.

* Extensive website listings on sector sites (RAHS, MGNSW, CAN) media sponsored sites, Tourism NSW, council sites.

* Maybe develop a dedicated website for the Trail Map.

It will be vital that sites which are shown on the Trail map must be readily accessible (open) as far as possible and that those that are not can be listed in the Explorer Heritage contact listing.

The instant nature of modern communication (internet, Facebook and Twitter) demands that information is accurate and timely so and for this reason the map must not promote inaccessible places.

Funding needed for production will depend on the details of the developed concept and should aim to be self sufficient from grant sources, commercial contributions from enterprises mentioned on the map, local councils, and members of the BMACHO group.

The project group comprising Richard Woolley and BMACHO management committee members Scott Pollock, and Wendy Hawkes and museums adviser, Lynn Collins are currently working through a number of options.

Railway journeys to the upper Blue Mountains: before and after October 20, 2013

by Peter C. Rickwood

READERS MAY well wonder why historians should be concerned about the progressive reduction in time to travel by railway from Sydney to the Blue Mountains.

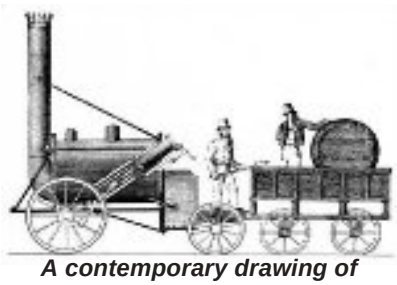
The answer lies in the feasibility of commuting to the Sydney or Parramatta CBD on a daily basis, and how that was really not tolerable prior to 1957 and so affected the employment possibilities for residents and the social structure of the villages.

The inevitable protests came following the leaking of a draft of a new railway timetable that is to be introduced on October 20, 2013 and now that the final version has been released it is timely to see if the complaints are justified.

The residents of the upper Blue Mountains have been the most deprived of service so I have taken Blackheath as an appropriate station for this investigation - an extension of one that was printed five years ago in *Hobbys Outreach*, (Dec.-January 2008-2009, pp.6-8).

Number of trains.
After October 2013 there will be 23 trains per weekday, one more than there has been since 1993, a gain but a small one indeed. The new one is to depart Sydney at 11.18am so it fills a two hour gap in the former timetable.

In future there will be about one train per hour but from 1946 until 1962 there were only nine per day, and from 1893 until 1910 only three, so we must consider ourselves well served by comparison to those who travelled in the first 100 years of railway service.



A contemporary drawing of Stephen's Rocket (1829) the world's first modern steam locomotive.

Average travel time - Central to Blackheath
Prior to this new schedule, the average travel time remained almost constant from 1978 but in future the average time for that journey has been reduced by two minutes to 2 hours and 11 minutes.

The most significant speed increase occurred in 1957 after electrification of the line when the average travel time reduced to below 3 hours.

Pity the residents of earlier years who from 1893 until 1957 suffered average travel times of about 3 hours and 22 minutes and for some reason those travelling between 1918 and 1930 faced even lengthier journeys averaging 3 hours and 43 minutes!

Fastest
And if you are pressed for time just how quick will it be possible to get to Blackheath?

Under the new schedule the quickest journey will be 2 hours and 5 minutes or two minutes longer than earlier this year!

However there has been little change for 50 years and mostly those quick journeys were at around 5.15pm.

Convenience
Getting to work in Sydney by 7am will necessitate catching a train at Blackheath at 4.21am, and for an 8.00am start being on the station at 5.44am and for a 9am start the relevant train leaves at 6.44am.

Those departure times are a little later than under the current timetable so there will be a few more minutes in bed for those commuters!

For the upper Blue Mountains residents working in Sydney there will be three trains departing Central between 4 and 5pm, two in the next hour and two between 6 and 7pm.

In each of those periods one train departs in the first half of an hour so those leaving work on the hour should find the new service satisfactory.

Whether there will be adequate seating for all of the commuters is another matter altogether.

Getting to work in Parramatta by 7am necessitates catching a train at Blackheath at 4.51am, and for 8.00am and 9.00am starts the appropriate trains depart at 6.14am and 7.12am respectively.

Again a few more minutes of sleep than commuters currently get.

Making the return journey home from Parramatta should not be too awkward for there will be two trains between 4 and 5pm that go through to Blackheath, two in the next hour and two between 6 and 7pm.

Conclusion
After October 20, 2013 not a lot will be changing as far as the upper Blue Mountains railway travellers are concerned.

Commuting to work at either Sydney or Parramatta will remain arduous but marginally less so than it has been earlier this year.

So there is little to fear as a result of the new timetable - but commuter satisfaction is likely to be dependent on

- the adequacy of seating - which is only a problem when travelling westwards.
- the cleanliness of the carriages.
- punctuality.

Locomotive No 1 brings to life the age of steam travel, which began in 1855 when this very locomotive hauled New South Wales' first train. Image courtesy PowerHouse Museum

Fizzy soda waters much loved by the gentry since 1783

ONE WOULD BE forgiven for thinking Coca Cola were first in the field of fizzy drinks

Forget Coca Cola. Schweppes is the real pioneer of the fizzy drink.

In 1783 a young Swiss watchmaker and keen amateur scientist, Jacob Schweppes (1740 - 1821), became the first person to perfect an economical process for making carbonated mineral water, much loved by the gentry and widely administered by doctors to cure a variety of ailments including indigestion and gout.

It was described as a “safe and cooling drink for persons exhausted by much speaking, heated by dancing or crowded assemblies”.

He perfected a way of capturing and bottling bubbles (the process of carbonation).

The addition of carbon dioxide was considered at the time, to have medicinal properties.

He founded Schweppes in Geneva the same year, 1783, and within seven years had expanded into England with a factory in Drury Lane, London.

Erasmus Darwin, the grandfather of Charles Darwin began talking up the beverage, which started to become popular. In 1831, King William IV of England adopted the beverage which could then use the famous “by appointment of”.

In 1798, Jacob retired and sold most of his interest in the company to three men.

In exchange, he revealed to the partners, ’ the whole art, mystery and process of making and composing artificial mineral waters’.

The company introduced fizzy lemonade in 1831, the success of which led to a flood of other flavoured fizzy drinks. The most famous was Schweppes Tonic Water, introduced in the 1870s.

The company continued to expand geographically with factories opening around the world with the brand being a popular drink throughout the world until this day.

In 1877, the Schweppes brand arrived in Australia with the first factory built in Sydney.

So its a sure bet that if you have had a gin and tonic, a whisky and soda, a mineral water or a ginger ale the refreshing carbonated waters have been enjoyed thanks to young watchmaker, Jacob Schweppes.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place, Springwood, 2777 (02) 4751 5834E-mail: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc. (BMACHO) was established in April 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference which sought from Blue Mountains City Council the creation of a cultural heritage strategy for the city.
BMACHO in its constitution uses the definition: “Cultural heritage is all aspects of life of the peoples of the Blue Mountains which was later changed to cover Lithgow and the villages along the Bell’s Line of Roads. It therefore involves the recording, preserving and interpreting of information in whatever form: documents, objects, recorded memories as well as buildings and sites.”
The objectives of the organisation are:

i. To raise public consciousness of the value of cultural heritage.
ii. To encourage and assist cultural heritage activities of member organisations.
iii. To initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact, to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society Inc.

HERITAGE BMACHO’s official newsletter is edited by John Leary, OAM.
***Blue Mountains History Journa*l** is edited by Dr Peter Rickwood.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc., Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc, Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc, Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) - Blue Mountains Branch, National Trust of Australia (NSW) - Lithgow Branch, Scenic World – Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committe, Zig Zag Railway Co-op Ltd.
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE The committee for 2013-14 is:
John Leary, OAM (president), Ian Jack (vice president), Jan Koperberg (secretary), Kevin Frappell, Wendy Hawkes, Doug Knowles, Patsy Moppett, Dick Morony (public officer), Scott Pollock and Jean Winston.

DISCLAIMER Views and opinions expressed in ***HERITAGE*** originate from many sources and contributors. Every effort is taken to ensure accuracy of material. NEWSLETTER OF THE BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

NOVEMBER - DECEMBER 2013 ISSUE No. 30

An alternative crossing: Bells Line of Road

Part 1: Alexander Bell junior

by Ian Jack

Introduction

THROUGHOUT 2013 there has been a bicentennial preoccupation with the genesis of the Great Western Highway over the Blue Mountains.

The development of a viable road along the high ridges south of the Grose River to the plains beyond had powerful consequences which were gradually realised over the decades following 1813.

The recent and continuing commemorations of Blaxland, Lawson, Wentworth, Evans, Cox and Macquarie have contributed to a welcome appraisal of the events of 1813 to 1815.

It is worthwhile, however, to recall that another ridgeway to the north of the Grose gorge had also been explored by Europeans and was surveyed as a viable road in 1823.

Bells Line of Road was a real enough alternative to the Western Road, although, for a variety of reasons, it has always played second fiddle to the southern route.

But when Archibald Bell and Robert Hoddle created the alternative road in 1823, the descent from Mount York was still a challenge for the traveller on the Western Road and Thomas Mitchell had not yet arrived in the colony to make autocratic determinations about the best lines for all three main roads, north, south and west.

Mount Tomah proved to be Bell's Mount York, but in 1823 the northern route promised much.

Whereas the southern route ran from the lower Nepean at Emu Plains, the new route started on the upper Hawkesbury adjacent to North Richmond, climbed the escarpment through Kurrajong to Kurrajong Heights with deviations over the years, then descended onto a singularly equable ridgeline until the great obstacle of Mount Tomah presented generations of road-users and road-makers with dangers and dilemmas.

Ian Jack in this image of the Grose River gorge from Bells Line captures the immensity of the dividing line between the two roads the Bells Line of Road to the north and to the south the Great Western Highway as the routes are know today.

Once over Mount Tomah, the road followed the only practicable ridgeline until it turned south at the Darling Causeway, where the Grose River had its source.

Halfway down the Darling Causeway it turned west again down a viable creek gully into Hartley Vale (the route still in use today as Hartley Vale Road).

Once safely down in Hartley Vale, it passed the inn that Pierce Colletts had established in 1821 and joined the Western Road (*Figure 1*).

Aboriginal and early European knowledge

The Kurrajong hills had been familiar to Europeans since the earliest days of the colony. Captain Watkin Tench, Lieutenant William Dawes and Sergeant Isaac Knight were the first Europeans known to have climbed the Kurrajong foothills.

They had no Aboriginal people with them. 'Stopped by a mountainous country', they ended their foray on top of Kurrajong Heights (or just possibly Bowen Mountain) which Tench and Dawes named Knight Hill in May 1791 in honour of the sergeant of marines.[1]

An opinion from the editor.....

Bushfires' ferocity touched the region's heritage

The devastating bushfires which ripped through parts of the Blue Mountains and Lithgow areas destroying more than 200 urban homes is in itself a piece of history which students of cultural heritage in the future will ponder particularly as to the effect on the community at large.

The destructive force of the fires and the heroic efforts of those volunteers and professionals who fought the fires often at danger to themselves, has been well recorded in the media and it is not the intention to comment other than to add to the overwhelming chorus of appreciation which has rightly been showered upon these men and women.

Closer to home, a number of those associated with BMACHO were under real threat and to them go our sincere hopes that like Phoenix they will rise from the ashes. Particularly our sympathy goes out to former president of Mt Victoria & District Historical Society, Robert Cameron who was one of those to lose his home to the flames.

With fire within two kilometers of the Valley Heights Locomotive Depot Museum wise precautions were taken to move off site and away from the district some valuable paintings housed in the complex. Members also took appropriate action, rolling out fire fighting hoses to ensure the site was adequately covered should an outbreak of fire occur.

A little further west at Faulconbridge, up to 10 fire trucks surrounded the historic National Trust property of Norman Lindsay Gallery where priceless art works were carefully packed up and moved off the Mountains. The decision to move the treasures despite on-site fireproof storeroom was made because of the ferocity of the fires and the weather conditions.

Not so lucky was the Zig Zag Railway where members had been working tirelessly for some time to satisfy the Rail Safety Regulator and had genuine hopes of resuming passenger services towards the end of this year. The fire brought devastation mainly to the Bottom Points depot complex where the destruction of the workshop facility and office occurred. However, the society still has enough rolling stock to resume passenger operations in the future while the three stations buildings were not touched by the fire.

Clearly, it is a time for all museums and heritage properties to look to bush fire survival plans, because inevitable bushfire is one of the prices we pay for living and working in such a beautiful environment.

CONGRATULATIONS

All too often the outstanding and dedicated work of our volunteers and those professionals with whom they work , is overlooked. In the pages of this edition of *HERITAGE* is recorded the awards to a number of these people.

Firstly those individuals and organisations who have worked tirelessly for the success of the bicentenary celebration of the Western Crossing have been honoured by the Blue Mountains, Oberon and Lithgow Tourism. Secondly we have the National Trust awards where 5 out of the total of 20 awards this year have come to the Blue Mountains.

BMACHO warmly congratulates those who have been recognised with an award and thanks both organisations for realising the worth of the volunteers and the professionals who work alongside them in the heritage sector

John Leary, OAM - President, Blue Mountains Association of Cultural Heritage Organisations Inc.

Macquarie rode up to Kurrajong Heights

Continued from page 1

With the development of farming in the Hawkesbury Valley from 1794 onwards and the granting of land on both sides of the river, there was a natural likelihood of further early exploration.

The only written account to survive from these first years is by Matthew Everingham, a First-Fleet convict, who set out from his Hawkesbury farm in 1795 with two other Europeans 'to cross the blue mountains of this country', climbed up to Kurrajong Heights as Tench had done, though his exact route is uncertain, and then went beyond as far as the eminences of Mount Wilson/Irvine or Mount Tomah.[2]

In 1804 the naturalist George Caley travelled from Kurrajong Heights to Mount Tomah and Mount Banks by a very difficult route, still remembered by names such as the Devil's Wilderness and Dismal Dingle (*Figure 2*).[3]

Because of their proximity to the Hawkesbury River, the Kurrajong hills and the North Richmond area were settled and developed quite early, including the Bell family's Belmont in 1807.

James Meehan surveyed North Richmond in 1809 and Kurrajong in 1811.[4]

Governor and Mrs Macquarie rode up to Kurrajong Heights in December 1810 after visiting the Bell family at Belmont, found no difficulty in ascending the final hill and used an alternative route down to the north-west, already marked out by the same surveyor, George William Evans, who was to survey Cox's Road in 1813-1814.[5]

Although Aboriginal people knew the route along the ridges from Kurrajong Heights to Mount Tomah, this does not seem to have been a common indigenous way across the Mountains.

This is suggested by a story retailed in 1904 by a well-informed Richmond man, Sam Boughton, born locally in 1841.

According to Boughton, an altercation just before 1823 between the local Belmont Aborigines and a group from Pipers Flat near Wallerawang, who had crossed the Mountains via Springwood, led to the abduction of six Belmont women:

'In about six days one of the gins returned alone, but from a different direction than by the way she was taken off: and when questioned as to how she came back, she pointed to the Big Hill (Kurrajong Heights), saying, "that feller".

'This event caused some surprise, not only to the Bells, but to the blacks also, as it was thought there was no other way over the mountains than by Springwood.'[6]

This story does not imply that local Aboriginal people did not know how to cross Kurrajong Heights, but it makes it clear that they did not expect to go to the Bathurst Plains directly from Kurrajong .

The evidence of George Bowen, who lived at Berambing, near Mount Tomah, in the 1830s, is categorical:

'The Aboriginal natives never lived in [that part of] the mountains, but there was a tribe who wandered over the neighbouring lowlands [i.e. the plateau between Kurrajong Heights and Mount Tomah] and occasionally paid me a visit.'[7]

The evidence strongly suggests that the Darug people had some knowledge of the area as far as Mount Tomah, but that no regular Aboriginal thoroughfare from the Bathurst Plains to the Cumberland Plains existed immediately to the north of the Grose River.

Archibald Bell junior and his three expeditions in 1823

Archibald Bell junior spent almost his entire early life in the Kurrajong district.

Born in England in 1804, he had arrived in New South Wales with his parents and eight and a half siblings in 1807.

Continued page 4

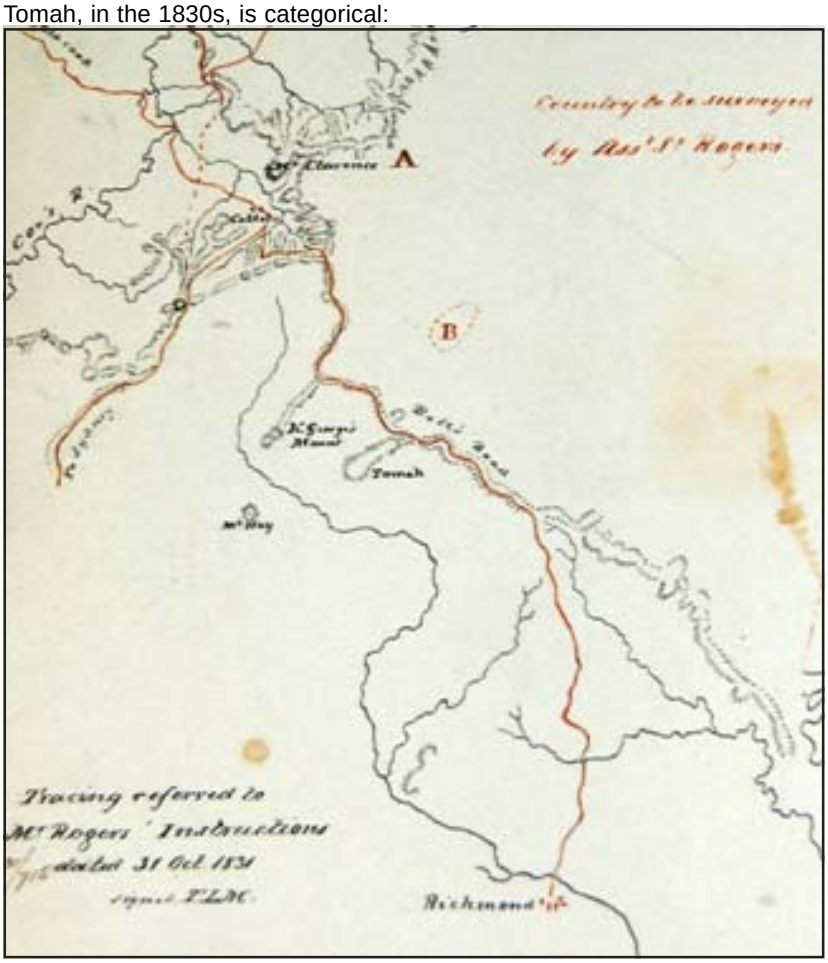

Figure 1. Bells Line of Road as surveyed by Robert Hoddle in 1823, sketch-map used in 1831 by Surveyor Rogers. State Records NSW, Surveyors' Sketch-books, X751, item 206.

Archibald senior a member of the Rum Corps

His father, Archibald Bell senior, a member of the Rum Corps, was given 500 acres [200 hectares] on the north bank of the Hawkesbury at North Richmond by Governor Bligh, built his house of Belmont there, expanded his landholdings during the interregnum and under Paterson and, despite his complicity in the fall of Bligh, was in 1810 confirmed in his acreage by Governor Macquarie.[8]

Lachlan and Elizabeth Macquarie visited the Bell family at Belmont in November 1810 and took tea on the verandah.[9]

Belmont was already a comfortable home in 1810, and Archibald Bell senior and his wife Maria developed the property between 1826 and 1834 into the delightful house drawn by Conrad Martens in 1838 and painted by Henry Fullwood in 1892 (*Figure 3)* .[10]

Young Archibald was still living at home in 1823, a lad of nineteen.

Three years before he had been stimulated by his elder brother, William, who enterprisingly followed John Howe's newly blazed route to the Hunter Valley via Bulga Ridge, but Archibald had been too young to join William on this expedition.[11]

The original ZigZag constructed probably in 1823-1824 by convicts under the control of Archibald Bell senior was essential to the success of his son's 1823 road. Image Ian Jack October 2013.

The ZigZag descended the steep cliff leading from the top of Warks Hill Road at Kurrajong Heights down to the Cut Rock, which is now on the realigned line of road. The image is of the last Zag in the descent. The rock cutting is very clear. Further up the ZigZag there is also stone walling to buttress the road on tricky stretches.

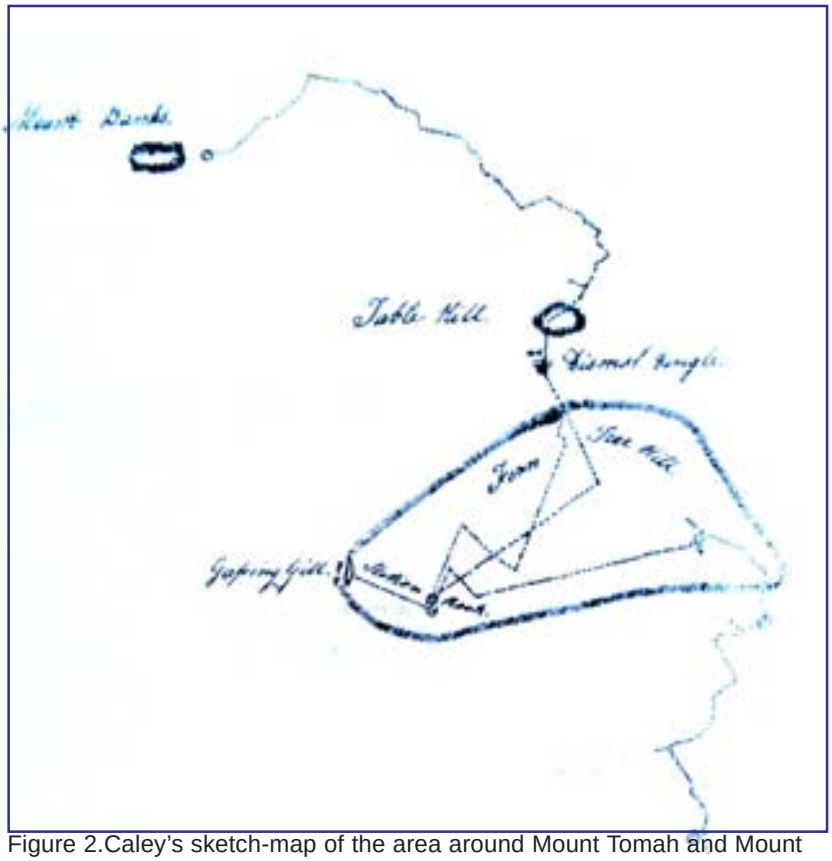

Figure 2.Caley's sketch-map of the area around Mount Tomah and Mount Banks, which he explored in 1804. *Historical Records NSW*, vol.5, after p.724.

In 1823, the incident of the Aboriginal woman returning by a northern route to Kurrajong and Belmont from her abduction by a group from Wallerawang, inspired Archibald to mount an expedition of his own.

He mustered his small party at the water-mill on Little Wheeny Creek on August 1, 1823, and left with two settlers, one of them the local blacksmith, William McAlpine.

In the diary which Bell kept while on his expedition and carefully copied out on his return in a notebook which luckily survived in the family library, he makes it clear that he had 'Native Guides' but does not identify them.[12]

Sam Boughton, who knew two of Archibald's sisters, was quite sure that the abducted Aboriginal woman went with Bell, while Alfred Smith, another local identity, claimed in 1910 that on Bell's first or second expedition there were only 'two blackfellows "Cocky" and "Emery"', men who are known in other documentation and were about 27 years old in 1823.[13]

Continued page 5

Continued from page 4

The first expedition reached Mount Tomah, but the horses were unable to proceed beyond because of the extreme hazards of the western exit from the mountain.

With a larger group Bell returned in September, found a viable route half-way up Mount Tomah and went on farther than Everingham or Caley had done, turned south onto the Darling Causeway and then down to Hartley Vale.[14]

When Bell returned to Belmont, he quickly spread the news of his success and gained publicity for the argument that the new line of road was shorter and easier than the Great Western Highway, with better feed for stock.[15]

Hoddle was to climb every 'remarkable' mountain

John Oxley, the surveyor-general, was impressed and at once sent his new assistant surveyor, Robert Hoddle, freshly arrived from the Cape of Good Hope, to survey Bell's route.

Hoddle was to describe the country, estimate the amount of cultivable land, climb every 'remarkable' mountain and mark the direction of every creek.[16]

On October 6, 1823 Hoddle set out from Kurrajong accompanied by Bell, two Aborigines, five European men and three horses. The field-book which Hoddle maintained throughout the fortnight taken to reach Collett's Inn survives, along with the more polished account that he sent to Oxley on November 4, 1823.

Hoddle compiled a workmanlike map, showing the whole length of around fifty kilometres surveyed.[17]

Hoddle shows that the existing road from the Hawkesbury to Kurmond followed a line very close to the modern Bells Line, but this road then went north of what is now Kurrajong village: Hoddle

Figure 3 Henry Fullwood's watercolour of the Bells' Belmont, painted in 1892, just before the house was demolished. Photocopy of sale catalogue, in State Library of NSW, Mitchell Library, Small Picture File, mistakenly filed under 'Newcastle Suburbs, Belmont'. Courtesy of State Library.

suggested on his map a deviation through Kurrajong, the road known today as Old Bells Line of Road through the village.

Kurrajong Heights was named 'Bell's View' on Hoddle's map and along the relatively easy road to Mount Tomah the surveyor marked, as instructed, places where there were 'plenty of water', 'good soil' and 'fine timber'.

After the descent from the Darling Causeway, Hoddle showed two possible end-games once the road levelled out, with a preference for the more easterly route, making a beeline for Collett's Inn .

Otherwise the road as surveyed in October 1823 represents the route established by Bell's second expedition in the previous month.[18]

Archibald Bell was an able publicist for his new route. Not only the *Sydney Gazette* in 1823 but also the English *Morning Herald* of June 21, 1824 compared the old and the new roads and believed Bell's propaganda about the new: 'Besides considerably reducing the distance, the road will be comparatively level, and free from nearly all the obstacles which render the bleak and barren one now used so uninviting to the traveller, and ill adapted for the passage of carts and driving of cattle.'[19]

But the advent of Thomas Mitchell as surveyor general, the continuing intransigence of Mount Tomah and the building of the railway in the 1860s ensured that Bells Line remained subsidiary to the Western Road for the rest of the nineteenth century.

A breathtaking floral display of purple haze

by John Leary,OAM

WALKING OR DRIVING through the main thoroughfare of Springwood, Macquarie Street, locals and visitors are at this time of year, struck by the breathtaking floral display of purple haze surrounding the Jacaranda tree (Jacaranda mimosifolia) at the Frazer Memorial Presbyterian Church.

Its vivid lilac-blue clusters of trumpet shaped blossoms appear in late spring and early summer, later falling to the earth carpeting the church grounds with a mass of colour and spilling over to the pedestrian footpath along Macquarie Street.

It is said that if you are walking underneath the Jacaranda tree and one of the trumpet blossoms falls on your head you will be favoured by fortune.

Jacarandas are used world wide as a decorative ornamental tree commonly used to line avenues.

The blooming Jacaranda and to its left the branches of the Cedar of Lebanon enhance the picturesque Frazer Memorial Church in Springwood. Photograph by Jan Koperberg, November 2013

Their history and significance has been extensively documented from the famous annual Grafton festival in Australia to Pretoria, the Jacaranda City, (located 50 kms north of Johannesburg) noted for it's 70,000 plus flowering Jacaranda trees.

Jacarandas have richly figured timber that is rarely cut, as its ornamental value is high. The interesting leathery seedpods follow flowering.

But it is not, as is so often said to be, a native of South Africa, but of the mountain deserts of Brazil.

Although considered to be of significance in Blue Mountains City Council's LEP 2005 and listed on the State Heritage Inventory it is another tree which has a much more interesting origin — a few metres east of the Jacaranda in the church grounds.

This tree is older than the 20th century plantings of both the Jacaranda and Illawarra Flame Tree (Brachychiton acerifolius). It is a very mature cedar of Lebanon (Cedrus libania) which is marked by a plaque: 'This tree was grown from a seed brought back from Lebanon by Mrs John Frazer in 1890s'.

These giant, beautiful, evergreen trees grow in mountainous regions, at altitudes of 3,300-6,500 feet (1,000-2,000 m).

They can be found in Lebanon, south-central Turkey, and Cyprus. They produce cones which grow on top of the branch.

The trees can attain a height of 100 feet (30 m) and the trunk may reach 6 feet (2 m) in diameter. Compared with the trees of Israel, the cedar is indeed a mighty tree, and it is highly praised in Scripture.

BIBLICAL SIGNIFICANCE

Commonly referred to in scripture as the cedars of Lebanon, this aromatic, durable wood was highly desirable for building in Iron Age Israel.

David used it in building his palace (2 Sam 5:11; 1 Chr 17:1), and Solomon used it in the construction of the temple and a palace for himself (2 Chr 2:3-8). He was said to make the cedar as plentiful in Jerusalem as sycamore-fig trees in the Shephelah (2 Chr 1:15). The second temple was also constructed from cedars (Ezra 3:7).

Continued from page 6
significance describes, 'The Frazer Memorial church as a striking example of Victorian philanthropy, financed entirely from the generosity of a prosperous Presbyterian businessman in Sydney and his widow, Elizabeth Frazer.

...strikingly beautiful church built with a gift of £500...

'It reflects significantly the rapid growth of the Scottish and Northern Irish Presbyterian community in the Lower Mountains in the last years of the nineteenth century.

'The design of the Frazer Memorial Church is a tribute to the important architectural firm of Slayter and Cosh, later known as Spain and Cosh; Spain, Cosh and Minnet; and Spain, Cosh and Dods.

'The Frazer Memorial Church features high quality stonework in its handsome Federation gothic design.

'The design of the church is completed by the fine sandstone tower with the tall copper spire.

'Its spire and its location in the centre of the commercial centre of Springwood make it an important landmark in the town.

'The trees associated with the Frazer Memorial Church, the Cedar of Lebanon (Cedrus libani) Jacaranda (Jacaranda mimosifolia) and the Illawarra Flame Tree (Brachychiton acerifolius) are of high aesthetic significance at a local level for their value as individual specimens and for their contribution to a complex of considerable value in the streetscape of Springwood.

Historical notes attached to the State Heritage Inventory listing indicate 'The funds to build this strikingly beautiful church derive from the bequest of £500 and the gift of 1.4 hectare (3.5 acres) in central Springwood made by John Frazer, who died in 1884.

'Frazer was a successful Sydney merchant. Born in co Down in 1827 to an artisan Presbyterian family, he had come from Ireland to seek his fortune in Australia along with three siblings when he was fifteen years old.

'After a period working in the bush, followed by a clerical position in Sydney, Frazer opened a wholesale grocery business in 1847 and never looked back, leaving an estate of £400 000 pounds on his death.

'The firm of John Frazer and Co was under John Frazer's control until his early retirement due to ill-health in 1869, but his partners in the business were able men, a brother and two brothers-in-law of Elizabeth Ewan, whom John married in 1853.

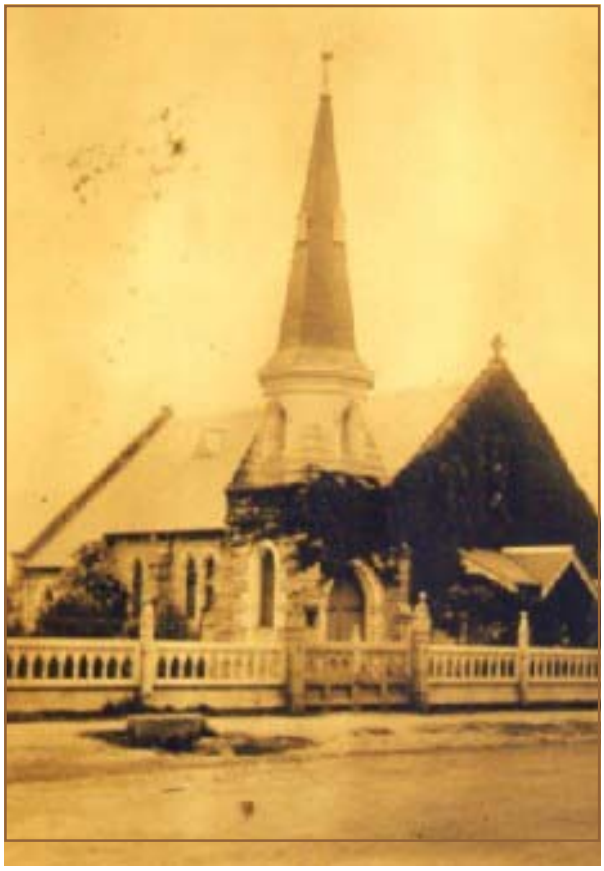
'In the 1870s, John Frazer resumed his interest in the business and took a larger role in public life, as a member of the NSW Legislative Council from 1874 until his death ten years later and as a philanthropist.

'Two fine fountains, one in Hyde Park, the other at the entrance to the Domain, are surviving memorials to his generosity to the city; the University of Sydney, where he hoped to fund the chair of History, still awards the Frazer scholarship in History; and he is remembered in the Presbyterian foundation, St Andrew's College, within the university, as a founding councillor in 1870 and the donor of funds to assist candidates for the Presbyterian ministry studying at the College. (Maddock, 5-13; ADB IV 218-9)

'Frazer's connection with the Blue Mountains began in earnest when he built Silva Plana at Springwood in 1881.

'This country retreat on the east side of Hawkesbury Road, on a landscaped site of 14 hectares (35 acres) now partly occupied by the Buckland retirement village, was characteristic of the Mountain estates developed in the later Victorian period by a number of Sydney businessmen, politicians and lawyers, including friends of Frazer's such as Sir Henry Parkes, whose son Varney designed Silva Plana.(Searle and Morony, 6, 32; Robinson, map of Springwood c.1910)

Continued page 8



An early image of the Frazer Memorial Church showing the ornate sandstone fence. Photograph courtesy Springwood Local Study Collection.

Mrs Frazer sent her gardener to the church

Continued from page 7

'Frazer survived only three years after building Silva Plana, but spent a good deal of time there and was anxious to provide a church for the increasing Presbyterian community on the Lower Mountains.

'In 1884 Springwood had no church of any denomination and Frazer, with the encouragement of his friend, the Reverend James Cameron, a fellow councillor of St Andrew's College, who had in his early years in the 1850s been responsible for the Lower Mountains as well as his main centre at Richmond, donated land he had acquired from Frank Raymond's grant in central Springwood, in a very long narrow allotment, and instructed his trustees to spend £500 on the building of a Presbyterian church there. (Maddock, 7-19)

'There was, however, a long interval between Frazer's death in 1884 and the opening of the church in 1895.

'This was caused by the reluctance of his trustees to release the money until it was plain that there were sufficient Presbyterians in the Springwood area to support a minister.

'Despite the active interest of the Presbytery of the Hawkesbury, stimulated by Dr Cameron of Richmond and Dr Clouston of Penrith, the trustees were cautious.

'In 1893 the first Presbyterian services in Springwood were held under the turpentines on the land donated by Frazer, just where the great cedar of Lebanon stands today, then in the Oriental Hotel and finally in 1895 on the verandah of James Lawson's Braemar. Attendance increased dramatically from 25 to 50 to 100, and the trustees were convinced, once the local people had guaranteed £60 a year for the minister. (Maddock,20-8)

'On August 17, 1895 the foundation stone for the church was laid by the sister of the widowed Mrs Frazer, who was abroad. At the same time memorial stones were laid by Mrs Frazer's sister, the widow of John Frazer's business partner, William Manson; by Mrs Rayner, wife of the Methodist storekeeper whose premises were just across the road; by Mrs Ellis, wife of John Ellis of Valley Heights, who had signed the building contract on behalf of the church; and by Mrs Flora Urquhart, the daughter of James Lawson, the Scottish cabinet-maker who had built Braemar and the Oriental Hotel, where services had been held in expectation of the building of the church. (Maddock, 26-7)

'The church was opened only three months later, on December 8, 1895. (Maddock, 36, 55, 74)

'Mrs Frazer returned from her trip to Europe and the Near East in 1896, bearing the seed from which the cedar of Lebanon grew beside the church, on the site of the grove of turpentines where the first services had been held.

'Elizabeth Frazer was not satisfied with the church building, however, as the Lower Blue Mountains Presbyterian magazine commented in December 1945, Mrs Frazer immediately had additions made and the building beautified.

'The present chancel and the porch and steeple were added. Further, she sent her gardener [from Silva Plana] to lay out the grounds and plant the trees, which add to the beauty of the surroundings. (Maddock, 35)'

Blue Mountains History Conference

THE 2014 Blue Mountains History Conference being organised by the Blue Mountains Association of Cultural Heritage Organisations Inc, will be held again at The Carrington Hotel, following the success of the 2012 event in this venue.

The conference will be held on Saturday, May 10, 2014 and already a number of speakers have been secured.

Associate professor Ian Jack, MA, PhD, FRHistS, FRAHS will give a talk on historical educational buildings.

Ian served as president of the Royal Australian Historical Society for 11 years and is regarded as an eminent historian with numerous books and other publications to his credit. He has been described by one of his peers as a "consummate scholar".

He is constantly being sought as a speaker around the state and throughout the nation.

Another speaker will be Hector Abrahams, a heritage architect and former RAHS councillor, who will give a talk on historical buildings built for religious activities including churches and schools.

Hec has a deep interest in the architecture of old places - the repair conservation and sensitive changes to buildings and the addition of new buildings within an existing precinct.

He has worked on larger projects including the new wings at St Paul's and St Andrew's Colleges at the University of Sydney, and the Sydney GPO.

He is very familiar with the architecture of many of the religious buildings in this region.

Final arrangements with speakers is expected to be made in January and information will be available from Jan Koperberg at j.koperberg@bigpond.com.au

The fee for the conference, morning tea and buffet lunch at The Carrington will be $50.

WOODFORD ACADEMY LAUNCHES BICENTENARY SCHOOL PROGRAM

Seriously 'Old School'

In commemoration of the bicentenary of the crossing of the Blue Mountains 2013-2015, the Woodford Academy, a National Trust property, is thrilled to launch the bicentenary school program.

The bicentenary school program provides the opportunity for school students to experience first hand the Blue Mountains' unique and intriguing colonial history within the walls of the Blue Mountains' oldest building.

The bicentenary school program offers a guided tour developed especially for school children.

The tour, presented by skilled volunteers in the tradition of oral histories, tells the story of the Woodford Academy and its changing uses over time.

Admission cost for the guided tour will be $5/student for a 2 hour program (morning or afternoon) and is available from Term 1 of 2014 for groups of up to 60 students plus supervising teachers.

The Woodford Academy is also offering free entry to teachers and their families (up to 4 persons) for the museum's monthly open days in 2013-2015.

This special educational offer is intended to encourage and inspire teachers to devise their own ways in which they can use this rich resource to teach curricula for history, the arts and technologies.

To be eligible for this special offer, interested teachers are requested to complete the information form in the new bicentenary school program brochure, which Woodford Academy volunteers have commenced distributing to Blue Mountains primary schools.

Members of the Woodford Academy Management Committee (from left) Felicity Anderson, Ian Harman and Ken Goodlet with the new Bicentenary School Program brochure at the Woodford Academy

Costs for teacher initiated educational programs will be assessed on application, depending on requirements.

The bicentenary school program brochure will also be available at the door at the Woodford Academy's next monthly open day – or interested schools can contact the Woodford Academy management committee by phone (02) 4758 8743 or email Woodfordacadmey@gmail.com .

Bicentenary tributes to George Evans and William Cox

IN ALL the plethora of the 2013 bicentenary celebrations of the Blue Mountains crossing scant attention has been paid to two other important aspects of the event.

Immediately after the three explorers' trek, at the behest of the government, there was the professional surveying of the ridge-top route by George Evans.

Next came the road-making itself, done in exemplary fashion by convicts working hard under William Cox, buoyed up by a promise of remission of their sentences when the road was completed.

A small monument to George Evans (the road builder) has recently been moved from private land.

Lindsay Green of Lithgow Branch of National Trust Australia (NSW) has advised that that the monument is now located on land owned by Lithgow City Council near where Evans had begun the descent to the Fish River.

Meanwhile, Hawkesbury Historical Society and a Cox descendant have recently organised the unveiling of two plaques at the Visitor Information Centre, Clarendon.

These two plaques are a bicentenary tribute to William Cox and George Evans, the two Hawkesbury men who were so instrumental in bringing about the construction of the first road over the Blue Mountains.

The ceremony at Lithgow and Clarendon commemorated the commencement of George Evans survey of the road on November 20, 1813.

William Cox completed the supervision of building the road from Emu Plains to Bathurst between July 24, 1814 and January 1815.

The Gully, officially opened

AS PART OF the Bicentenary Festival of Walking, The Gully, Katoomba was officially opened on Saturday October 5, 2013, The guest of honour was Neville Poelina, chair of World Indigenous Tourism Alliance.

This event followed the very successful 'Ancestral Pathways' walk, organised by Auntie Sharyn Halls from the Gundungurra Aboriginal Heritage Association.

The aim of the walk was to show people the best way to know Country, by walking Country.

Members of the Association traversed the Blue Mountains from west to east, following Aboriginal pathways.

The walk included both traditional and post-contact Aboriginal pathways, covering 67 kms of Country.

Participants were invited to do the full walk over seven days and six nights or join the group for sections of the walk.

The walk affirmed the ongoing presence of Aboriginal people in the mountains. It shows they maintain the connection by walking their country, looking after it and utilising it for cultural purposes.

Wiradjuri Dance and Corroboree gathering at Bathurst

The WIRADJURIi Wagangha Dance group featured in the Wiradjuri Dance and Corroboree gathering in the vicinity of Mt Pleasant in the grounds of Abercrombie House earlier this month.

The gathering acknowledged the 200 year anniversary of the first contact between the Wiradjuri people and the arriving European explorers which took place near this site of December 21 1813.

It also acknowledged the naming of the Bathurst Plains and Mount Pleasant by surveyor George Evans on December 10, 1813.

The gathering also acknowledged that the last Wiradjuri Corroboree in the vicinity of Mt Pleasant took place 164 years ago in 1849.

The evening was organised by the Wiradjuri Elders of the Bathurst Plains together with Bathurst Historical Society and the Morgan family to celebrate the endurance and renewal of Wiradjuri culture and customs on the Bathurst Plains

British campaign ends gallery's bid to buy historic animal art

THE NATIONAL Gallery of Australia was "extremely disappointed" when earlier this month it was blocked from buying two paintings representing the first known depictions of Australian animals in Western art.

The 18th century works by George Stubbs willl remain in Britain after a $2.5 million donation by billionaire shipping magnate Eyal Ofer enabled the country's National Maritime Museum to buy the paintings of a kangaroo and a dingo.

Joseph Banks commissioned Stubbs to paint the works after the naturalist returned from Captain James Cook's first Endeavour voyage.

World renowned naturalist, Sir David Attenborough, who headed the British "Save Our Stubbs" campaign, said: "Exciting news that these two pictures so important in the history of zoological discovery are to remain where they were commissioned and painted.

According to former Art Gallery of NSW director, Edmund Capon said: "I can't feel it's a huge loss to be honest.

"You have to recognise the fact both animals were painted in Britain. They weren't painted here. They have never been her." ***The Sydney Morning Herald.***

The making of a possum skin cloak

By Jan Koperberg

THE GUNDUNGURRA Tribal Council and Blue Mountains Cultural Centre invited the Blue Mountains community to observe the making of a traditional possum skin cloak in the Cultural Centre Central Courtyard in late September.

The Saturday of the three day workshop was windy and the carefully laid out possum skins (from New Zealand) were being blown out of order. They had been laid out and numbered, as they were to be sewn.

Possum skin cloaks (Carreng Golangaya in Gundungurra language) are one of the most sacred artefacts for Aboriginal people.

This workshop represented an important healing for the Gundungurra, who worked with Auntie Maree Clarke, an artist and curator from Banmirra Arts and Auntie Esther Kirk, both from Victoria, with assistance from Amanda Reynolds, the senior curator for the 'Our Story' section of the new First Peoples exhibition at Melbourne Museum. Amanda was a guest speaker at the recent RAHS State conference held at Katoomba RSL Club.

Aunty Sharon Brown on the left, holding up the possum skin cloak, showing the burnt patterns on the skin side.

The possum skin cloak being held by Kerren O'Grady

On the Saturday there were many observers, itching to help and Auntie Sharon Brown from the Gundungurra Tribal Council gave permission for interested observers to help with the sewing.

I was privileged to take part and enjoyed the experience, working with the team. I was not able to return on the Sunday, but the cloak was finished and Auntie Maree and Auntie Esther showed the method of applying patterns and burning them onto the skin side of the cloak.

I think the patterns were applied by Tom Brown, Sharon's artist husband, and they are beautifully finished. Aunty Maree and Aunty Esther then headed back to Sydney airport for their flight back to Melbourne.

Never mind Blaxland, Lawson and Wentworth; it's

All about Evans

First European explorer to cross the Great Divide and survey a route to Bathurst

Tarella Open Day January 18 10am-4pm

Crossings reading by Wendy Blaxland > Display of the 1814 lifestyle > Talk on Evans > Tarella cottage museum inspecton > Family friendly > no need to book just come and explore > refreshments available

Historic sharing culture — Aboriginal commemoration walk ‘Jummangunda Ngunninga’

by Jan Koperberg

The Aboriginal commemoration walk ‘Jummangunda Ngunninga’ (Gundungurra language meaning ‘many belonging here’)was held at Mt York and Bardens Lookout, Mount Victoria on Sunday October 13, 2013. This was a historic sharing culture event.

The Gundungurra Tribal Council, the Gundungurra Aboriginal Heritage Association and the Blue Mountains Lithgow & Oberon Tourism invited people to attend as part of the Bicentenary Festival of Walking.

This walk was conceived by Auntie Sharon Brown (Gundungurra elder) and welcomed representatives of all six Aboriginal language groups from across the Greater Blue Mountains World Heritage Area, (the Darkinjung, Darug, Dharawal, Gundungurra, Wiradjuri and Wonnarua), locals and visitors.

This special event recognised the impact of European settlement on Australia’s first inhabitants, and allowed Indigenous people to proudly share their culture with others ‘on Country’.

Aboriginal people and groups proactively involved in the bicentenary organised this event so that in 2013, the nature of what is recognised and commemorated included Aboriginal participation.

This demonstrated that community attitudes and cultural awareness have evolved since centenary (1913) and sesquicentenary (1963) events conducted at Mt York.

Walkers prepare for the commemoration walk ‘Jummangunda Ngunninga’ walk from Bardens Lookout to Mt York.

Blue Mountains City Council has completed an important upgrade of the Mt York precinct and it is now truly a world class interpretive historic site.

A ceremony was held at Mt York, where a plaque was unveiled,on which the text read as below.

The group then walked from Mt York to Bardens Lookout, where an Aboriginal smoking and healing ceremony was held, along with the sharing of cultural performances and stories.

During this ceremony the possum skin cloak was handed to Cr Daniel Myles to be exhibited at the Blue Mountains Cultural Centre.

The main Commemoration Walk ‘Jummangunda Ngunninga’ took place from Bardens Lookout to Mt York.

After lunch, I was lucky to be treated to an interpretive walk by Kathleen Brown, the daughter of Tom and Sharon Brown.

We caught the shuttle bus from Mt York and alighted at the entrance to Lawson’s Long Alley.

We walked from here to Lucinda Oval where my car was parked.

Along the way Kathleen showed me scarred trees (where bark had been removed to make items for use by early Aboriginal people), showed me different plants and described their uses, either for medicinal or for bush tucker.

I now know that a flour can be made from the seeds of the Lomandra.

She also showed me how the small banksia with very strong bristles could be used as a hair-brush and with softer bristles, how the end of the brush could be used for painting.

‘Not how did they die, but how did they live.
Not what did they gain, but what did they give.
These are the units to measure the worth,
Of a people, as a people, regardless of birth.
Recognising the impact of European settlement on the
Six Aboriginal language groups of the
Greater Blue Mountains World Heritage Area;

Darkinjung, Darug, Dharawal, Gundungurra, Wiradjuri and Wonnarua.
Community Aboriginal Commemoration Walk,
13 October 2013
Blue Mountains Crossings Bicentenary’

Exhibtion of bark paintings

Among the treasures of the National Museum of Australia are more than 2000 bark paintings created by Indigenous artists.

Later this year the museum will open a major exhibition devoted to the remarkable artists who made these paintings.

The 122 paintings will include the works of famed artists such as Narritijin Maymuru, Yirawala, Djunmal and Mawalan Marika.

RETROSPECTION AND CONTINUITY - THE COX'S ROAD JOURNEY

A village discovers its past

by Joan Kent

As the Western Crossings commemoration activities come to a close for 2013, a period of retrospection is necessary before the contemplation of plans for the continuation of the Cox's Road journey begin.

The communities west of the plains were treated with a fascinating array of events and activities acknowledging the first recorded crossing of the Blue Mountains by Europeans in 1813.

Some were formal civic events which reflected the changes wrought on the landscape, whilst others attempted to capture the cultural and social atmosphere of the mountains and valleys to the west two hundred years ago, involving the present population in aspects of colonial life not now often contemplated.

The Hartley Valley folk focussed on bringing the history of the local area to the present population, some of whom had previously had little interest in the past - in the process bringing to life an era which has often been culturally blinkered and romanticised.

The commemorative activities involved guided walks along the route of the original Cox's Road, now substantially located within private land holdings – not ending at Mt York so often believed as the termination of the original trek, but at Glenroy, the final campsite along the route.

These walks have proven so popular that requests have been received to make them an annual event.

A horseback version was well into the planning process when an infectious equine disease brought this to an abrupt halt.

Again it is planned to revive the activity in the future.

Also enormously popular was the exhibition 'A Moment in Time' displayed in the Old Hartley School Hall, often attracting the descendants of many former residents of the Hartley area from all over the state and even some overseas visitors.

So warmly was the exhibition received that the members of the Western Crossings Trust, the administrative body supporting the Hartley commemorations, were persuaded that a lasting memoir of the events should be produced and so the printed version of 'A Moment in Time' came into being, despite the exhaustion of the dedicated band of local volunteers.

Expanded from the exhibition, the book of the same name was produced by a trio of professionals, with research and text by historian Joan Kent in collaboration with internationally renowned theatre designer Michael O'Kane and graphic artist Kaylene Brooks, all of whom are local residents.

Historian and author, Joan Kent autographing a copy of 'A Moment in Time'. Image courtesy Carolyn Piggott, Lithgow Mercury.

The book begins with a consideration of the rich and ancient geology of the landscape into which the 1813 explorers intruded and moves on to examine many aspects of the 'crossing story', from the original inhabitants whose country was being traversed, to the development of the Bathurst Road and the first Europeans in the Bathurst region.

It closes with the life and achievements of some of the earliest European settlers in the Hartley Valley who began their new lives there in the early 1820's.

The book was formally launched in October at the Lithgow Learning Centre by internationally acclaimed 'plein air' landscape artist Warwick Fuller, also a local resident of Hartley Valley.

Warwick's great great grandparents settled in the valley in 1839, raising twelve children who attended the former Schoolhouse Creek School in Kanimbla Valley.

Warwick was recently a member of the Royal Visit Party at the personal invitation of His Royal Highness Prince Charles, who now has four of Warwick's landscapes in his private collection. Poet George Clark recited his poem 'A Moment in Time' from the book, inspired by George's visit to the Images Exhibition in May and June.

Continued page 14

The question of promoting the crossing stories to a wider public

Continued from page 13
The pleasant evening concluded with the mayor of Lithgow, Councillor Maree Statham cutting and distributing 'The Moment' cake to those in attendance.

The book is available at $29.95 including postage, Perfect Bound, 200x260 in full colour from Barbara Wheat at thewheats@bigpond.com or Joan Kent at joantomkent@bigpond.com.

A deluxe hardcover full colour edition, 290x320 is available from Blurb Books at $131 plus postage from the US at http://blur.by/1cpKjKp.

All proceeds go to the Western Crossings Trust, the charitable entity established by the Hartley District Progress Association to promote consideration of the consequences of the crossing of the Blue Mountains by Europeans in 1813, and the acquisition of items of moveable cultural heritage relevant to the Hartley Valley.

Donations to the Western Crossings Trust are welcomed and are tax deductable.

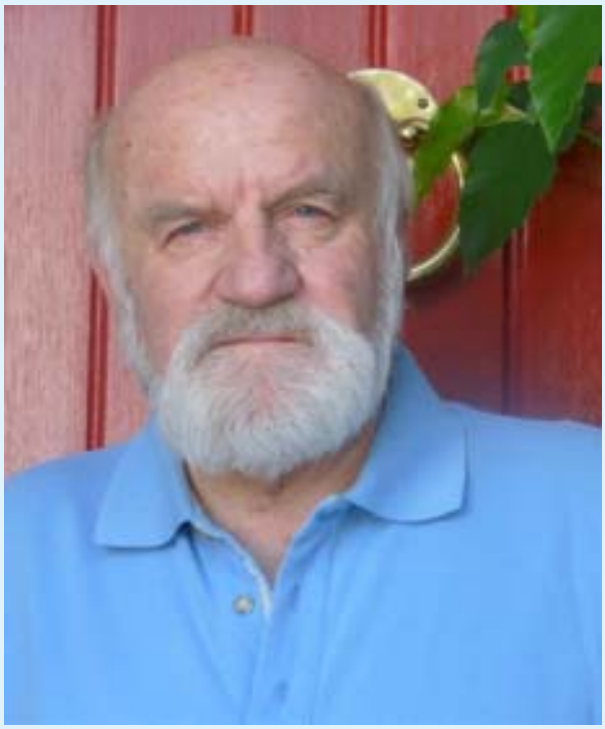
The question now under consideration for all with an interest in the history of the European settlement of the 'New Country' is 'Whither Goest Thou?'

Careful thought must be given to the continuation or otherwise of the presentation of the crossings stories to the wider public, and indeed the long-term storage, preservation and extension of the products of the 2013 commemorations to encompass the progress of the 'Journey to Bathurst and beyond' over ensuing years.

This article was contributed by professional historian and curator of the outstanding exhibition, *A Moment in Time* Joan Kent officially opened and acclaimed by the Governor of NSW Professor Marie Bashir.

The exhibition was the major plank in the Western Crossing commemoration activity of the Hartley Valley District Progress Association.

Historian with song writing to his credit becomes president at Kurrajong



STEVE RAWLING AM, (pictured) the newly elected president of the Kurrajong-Comleroy Historical Society, was a founding member of the society, and has been a member of its committee at various times.

His initial interest in local history was sparked by the discovery that the property he has lived on since 1996 in Kurrajong Heights is part of the larger property once owned by Louisa Atkinson, "the botanist of the Kurrajong" and pioneer woman writer.

He has contributed a number of articles about Louisa and on other topics to the society's newsletter *The Millstone*, as well as speaking about related topics to the society and to other community groups in the Hawkesbury.

He has written a suite of songs which was produced as a CD and songbook entitled "Memories of Kurrajong – History in Song" which was presented at the National Folk Festival in Canberra some years ago.

He was also a founding member of the Hawkesbury Branch of the National Trust, having been a member of the National Trust of Australia (NSW) for more than forty years. He has served as chair and secretary of the Hawkesbury Branch.

Steve has spent almost all his working career in the university sector, including periods at the universities of Sydney, Oxford and Wollongong, and the Australian National University.

He now has a part-time consulting role at the University of Western Sydney.

He was made a member of the Order of Australia in 1992 for services to education.

He has also been involved as a director and chairman of an environmental consultancy run by his wife, Judie, and is a Fellow of the Australian Institute of Company Directors.

Persistence wins museum a grant

PERSISTENCE and a change of ideas about its museum's collection has seen the Mount Victoria and District Historical Society recently being successful in receiving a Community Heritage grant for $4686 from the National Library of Australia.

The Community Heritage grant is for a significance assessment to be carried out on some of the collection of its museum.

Roy Bennett the curator applied for the grant which is to fund the services of an assessor and the society's president, Jean Winston attended the workshop in Canberra organised by the National Library and other federal bodies to gain more insight into the meaning of significance and to learn more about conservation.

The society had been unsuccessful before but Roy thought on the second try that he had portrayed the historical associations of the collection in a better way.

The collection has to be of national significance.

Other criteria required are historical, aesthetic, scientific/research or social/spiritual.

An important part of the collection is showing the opening up of the Blue Mountains and lands to the west by road and rail.

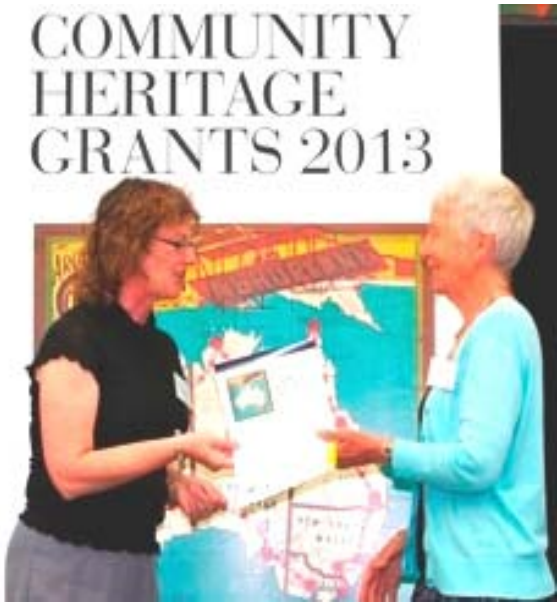
The actual tools used by the early land holders are on display.

Memorabilia and exploits of the explorers, surveyors and road makers, including convicts, form part of the collection.

The museum itself is housed in the sandstone railway station opened in 1868 and still operating.

The railway brought tourists to the area and local hotels catering to the tourists who are depicted in photographs and memorabilia.

Notable people have lived at Mount Victoria: Sir Henry Parkes and the Fairfaxes had grand houses built in the coolness of the mountains.



Ms Anne-Marie Schwirtlich, director general of the National Library of Australia presenting the grant documents to Mrs Jean Winston, president Mt Victoria and District Historical Society.

At Blackheath a unique girls school Osborne Ladies College, run on naval lines, had boarders and day girls. One room at the museum is dedicated to memorabilia from that school.

Roy detailed these unique events and showed how the museum collection told the stories of what had happened locally.

Community groups will have a greater capacity to preserve Australia's heritage with the announcement of the 2013 Community Heritage grants.

A total of 78 grants worth $426,000 will go to 77 community groups and organisations, with the History Trust of South Australia, the recipient of two grants.

Recipients also attended a three-day intensive preservation and collection management workshop held at the National Library of Australia, the National Archives of Australia, the National Museum of Australia and the National Film and Sound Archive in Canberra.

Director-General of the National Library Anne-Marie Schwirtlich said the CHG program showed the commitment by the National Library, along with its partner institutions and the federal government, to assist communities to care for the nation's heritage, in the cities, the country or out in remote Australia..

The Community Heritage grants program is funded by the Australian government through the National Library of Australia; Ministry for the Arts, Attorney General's Department; the National Archives of Australia; the National Film and Sound Archive; and the National Museum of Australia.

Governor to open Valley Heights Loco Depot museum

The Governor of NSW, Professor Marie Bashir has agreed to officially open the Valley Heights Locomotive Depot on January 31, 2014 as the first event of a year-long centenary of the depot.

Her Excellency will be accompanied by her husband Sir Nicholas Shehadie.

For further details of centenary activities
www.infobluemountains.net.au/locodepot/centenary.shtml

Friends of the Paragon formed

STRONG SUPPORT has been given to the formation of the Friends of the Paragon.

At a recent meeting in the heritage Paragon Restaurant, Katoomba it was decided to form a group to ensure the conservation of this heritage icon.

Paragon cocktail bar

The lessee of the premises Robyn Parker told the meeting that help was needed to ensure this piece of heritage did not disappear.

The general objectives, to be properly defined in due course in a formal document, include:

1. research into the history of the Paragon and the Simos family
2. assisting in tours of the Paragon for groups
3. assisting in the preparation of a renewed nomination of the building and its contents to the State Heritage Register
4. public advocacy
5. approaches to the Greek community (and others) in Australia for support
6. creating a program of public events in 2014 to raise the profile of the Paragon
7. establishing a Paragon Foundation in the hope that the property can be purchased.

The meeting heard that research is under way by Robyn Parker and Ian Jack and that Doreen Knox (who is a fluent speaker of modern Greek) will use her Greek connections.

Paragon wall pieces

Two people present at the meeting, Doreen Knox and Robert Trenchard-Smith, have volunteered to be tour guides and Ms Parker will organise a training session for them both in the near future.

Ian Jack said he will take carriage of a nomination for State listing and will talk to members of the listing team at the Heritage Division of the Office of Environment and Heritage.

Doreen Knox, has subsequent to the meeting, documented the existence of the Kytherian Association of Australia, in which George Poulos is a prominent member.

Since the Simos family and many other café-owning families came directly or indirectly from the island of Kythera, this flourishing association is of the greatest interest.

A short program of events is being finalised by Robyn Parker.

The Kytherian Association may be a key to the establishment of the Paragon Foundation.

The next meeting of those interested in the project is scheduled for Thursday February 20, 2014, at 6 pm in the Paragon.

Contributed by Ian Jack who represented BMACHO at the meeting.

New strategy for Australian heritage

IDEAS and suggestions for an Australian Heritage Strategy are being requested by the federal government.

Minister for the Environment, Greg Hunt said he wanted to hear from heritage practitioners and experts across Australia.

"The Australian Heritage Strategy will provide a common framework and priorities for Australia's heritage and help ensure our heritage is recognised and protected for future generations," Mr Hunt said.

"A draft strategy will be released for public comment in Australian Heritage Week next year."

He said the government's plan was to develop partnerships and provide initiatives that enabled practical local actions and solutions to protect and manage heritage places.

"We are providing $1.4 million over three years for small-scale community heritage projects for the conservation, protection and interpretation of local heritage.

Grants of up to $10 000 will be available to local heritage groups and historical societies, commencing in the 2014-15 financial year," Mr Hunt said.

Greg Hunt MP

"Under the Community Heritage and Icons program we will invest $1.5 million on vital restoration work at Port Arthur's World Heritage-listed penitentiary building, one of Australia's most significant heritage icons."

Mr Hunt said the government's Green Army would also play a key role in the protection of local heritage.

"Green Army projects will focus on the conservation and refurbishment of significant local heritage while contributing to a skilled workforce for heritage-focused business and industry," he said.

Sandstone the making of the Blue Mountains

Blue Mountains City Council has agreed to a round of small grants to assist owners of heritage listed buildings or places to carry our sympathetic repairs or restorations.

NSW Heritage Branch will provide a grant of $8500 and this has been matched by council to provide a fund of $17,000.

Applications closing on December 20 have been invited from owners of listed heritage buildings or from owners of a building within a heritage conservation area or period housing area.

The grants are targeted at small projects ready for an immediate start and which must be complete by mid April 2014.

The program is being managed by council with support from the heritage advisory committee.

The committee has suggested that one of the grant priorities is sandstone repair and restoration projects, but a range of other projects will be considered.

These could include repainting of exteriors of residences and shops, repairs o decorative external timberwork or joinery, repairs of shop fronts, awnings or repairs to streetscape or wider community benefit will also be considered and should be discussed with council staff and the heritage adviser beforehand.

Applicants must confirm that their project can commence early in 2014 and can be completed by mid April 2014.

A copy of the standard LHF guidelines and application forms can be downloaded from council's website or by contacting council on 4780 5740

Lights to be installed opposite Woodford Academy

Traffic lights are now planned to allow pedestrians to cross the Great Western Highway opposite Woodford Academy.

Road and Maritime Services (RMS) has scrapped its proposal for a pedestrian refuge island on the widened highway near Arthur Street in favour of traffic lights.

Woodford Academy chairman Ian Harman said it was fitting pedestrian safety would be boosted before the highway widening project was completed through Woodford in 2014, given the tragic circumstances of former Woodford Academy resident and principal, John McManamey's death on the highway in 1946.

John McManamey established Woodford Academy in 1907 as a 'young gentleman's school'. Woodford Academy closed in 1925 and McManamey used the building as a private residence.

He reopened the school for local children in 1930 it closing in 1936.

In 1979 his sole surviving daughter Gertrude donated Woodford Academy to the National Trust of Australia (NSW) on condition she could live there until she died. She died in 1988 having left the property 2 years earlier.

National Trust received a $1 million Centenary of Federation grant from the Australian government in 2001.

Nepean Historical Society joins BMACH0

The Nepean District Historical Society is the latest to join as a member of BMACHO.

The society has its home in the Arms of Australia Inn Museum at Emu Plains the gateway to the Blue Mountains.

The inn was once a staging post for travellers making the trip from Sydney over the Blue Mountains to Bathurst and the goldfields.

Built in two sections, the first in 1826, it is one of the oldest buildings in Penrith, if not the oldest.

‘Our Jan’ honoured for work on Western Crossings Committee

AMONG the individuals to recently receive a Blue Mountains, Lithgow & Oberon Tourism Award of Excellence 2013 for contribution to the Blue Mountains bicentenary, was BMACHO’s hard working and popular secretary, Jan Koperberg.

Jan has also been the minutes secretary of Western Crossings committee since its inception.

INDIVIDUALS to receive the award were: Auntie Sharyn Halls, Bob Kemnitz, Clr Daniel Myles, Dr Anne-Maree Whitaker, Dr Siobhán Lavelle OAM, Jan Koperberg, Jessica Blaxland-Ashby, John O’Sullivan, Ken Goodlet, Melissa Mylchreest, Meryl Butterworth, Philip Hammon, Professor David Carment, Randall Walker, Sandy Holmes, Tanya Loviz, Tom Colless OAM, Trevor Lloyd, Uncle Graeme Cooper and Wendy Blaxland.

BMACHO member organisations to be recognized were the Blue Mountains Historical Society and Hartley District Valley Progress Association.

ORGANISATIONS to receive the award were: Blaxland & Districts Chamber of Commerce and Industry, Blue Mountains City Council, Blue Mountains Historical Society, Blue Mountains International Hotel Management School, Blue Mountains Lithgow & Oberon Tourism, Chamber of Commerce and Industry Lawson, Falls Wines, Garden Clubs of Australia, Gundungurra Aboriginal Heritage Association, Hartley District Progress Association,

Jan Koperberg with her award

Katoomba Theatre Company, Lithgow City Council, Penrith City Council, Royal Australian Historical Society, TAFE Western Sydney Institute, Wentworth Falls Chamber of Commerce and Windowrie Estate.

NATIONAL TRUST HONOURS AWARDS 2013

FIVE OF THE 20 people statewide to be honoured with National Trust of Australia (NSW) awards at the Trust’s annual general meeting on November 30 are associated with Trust properties in the Blue Mountains.

Top honours go to the grand-daughter of Norman Lindsay, Ms Helen Glad who becomes an honorary life member of the National Trust and the manager Norman Lindsay Gallery and Museum, Amanda Trevellion who has received the staff distinguished service award.

Those to receive the voluntary service awards were Mrs Leonie Fry (Friends of Norman Lindsay Gallery), Mrs Jean Reynolds (Friends of Norman Lindsay Gallery) and Mrs Elizabeth van Reyswoud (Friends of Everglades and National Trust -Blue Mountains Branch.

Mrs Sandra Luxford of the Friends of Everglades received the Trust commendation award.

Blue Mountains new plan goes on exhibition

A PLANNING document to guide land use and development in the Blue Mountains went on public exhibition earlier this month.

Blue Mountains City Council's Draft Local Environment Plan (DLEP) 2013 has been the subject of long negotiations with the state government.

Blue Mountains mayor Mark Greenhill said the council's DLEP 2013 has been prepared in response to the NSW government requirement for all councils in NSW to prepare a new plan based on a standard template.

"The DLEP 2013 is essentially a conversion of council's existing planning document into a single comprehensive LEP for the city that complies with the NSW government's standard format while maintaining the key provision in our current LEPS," he said.

"In doing this, council has made a considerable effort to ensure the DLEP 2013 is a 'best fit' with the standard LEP, providing the planning framework that aims to protect our unique environment while permitting appropriate development in the future.

"All residents will notice that the zoning of their land will have a new name, and the permitted land uses may have changed, but for the most properties in the Blue Mountains the change will be minimal the mayor has said.

The public exhibition period for the DLEP 2013 started on December 4 and will conclude on March 4, 2014.

For further information on the DLEP 2013 and to have a say visit www.bluemountainshaveyoursay.com.au/draftlep2013

Mayor Greenhill said, "council acknowledges the commitment of the public exhibition in December is not the ideal time to engage the community on a significant planning proposal, however council is required to adhere to the direction of the NSW Government.

Mayor Mark Greenhill

In recognition of this, council has extended the closing time of the exhibition to March 2014 to ensure adequate time for the community to get involved."

SOURCE:*Blue Mountains Gazette December 4, 2013 - Shane Desiatnick*

NSW Government withdraws controversial planning bill

THE NSW government has withdrawn the proposed controversial planning legislation; the planning minister, Brad Hazzard indicating it could not accept the heavy amendments imposed by the upper house. .

Elizabeth Vines OAM president, Australia – International Council of Monuments and Sites (ICOMOS)

Liz Vines, OAM

has said the state government's landmark planning reforms are now under serious threat after the NSW upper house blocked key parts of the new laws.

"Community groups say the changes are an 'immense win' that will give residents a voice on what is built in their neighbourhoods.

"A new, streamlined development pathway known as 'code assessment' was stripped from the bill.

"Under this system, if a development in high-growth areas meets agreed requirements, such as building type, heights and environmental standards, it would have needed to be approved by a council within 25 days, and the community's right to object would be limited.

"The government has now announced that it cannot accept the amendments and has withdrawn the legislation while it considers its response, and is likely to reintroduce the legislation in March 2014.

"Notwithstanding the amendments passed in the NSW upper house, a number of aspects of the proposed changes have not been amended and remain of concern to Australia ICOMOS and the many other professional and community groups with an interest in the issue.

" What is also of concern is that the minister and organisations with a vested interest in removing many of the current heritage safeguards are portraying those who have lodged submissions against aspects of the proposed legislation as a minority of extremists.

"However, A-ICOMOS will continue to monitor the situation and make further presentations as required to get the best possible outcome for the care and management of our cultural heritage," Ms Vines said.

BLUE MOUNTAINS HISTORY JOURNAL No. 4 NOW ONLINE

The *Blue Mountains History Journal* No. 4 now online and also available in bound hard copy of six papers and one note is the largest edition so far since the Blue Mountains Association of Cultural Heritage Oganisations (BMACHO) decided on such a publication.

President of BMACHO, John Leary said editor of the *Blue Mountains History Journal* now in its 4th year, Dr Peter Rickwood deserves considerable acclaim for the work he has done to promote interest in local history and heritage through this medium.

He has sought out and encouraged authors to publish refereed material in the *Journal* the result being a very high quality of papers.

Dr Rickwood in his editorial provides an interesting overview of the papers which have been published.

In this edition Peter writes: 'two papers deal with explorations of the Blue Mountains before the 1813 crossing, the bicentenary of which is being commemorated this year.

'Three papers have pioneering individuals as their subject, one each inr elation to Blackheath, Medlow Bath and Lawson.

'The sixth paper focuses on the various ways by which the Nepean River has been crossed near Penrith - the main gateway to the Blue Mountains.

Dr Peter Rickwood, editor the Blue Mountains History Journal

'The first two papers have been written by Andy Macqueen, and they deal with different aspects of George Caley's explorations.

'They are complementary to each other, the first focussing on Caley's obsession to find a route across the mountains and his regret that he did not achieve that before he left the colony.

'The second of Andy's papers relates to the curious names that Caley used for various features in the Blue Mountains; it not only reveals where some have become attached to features that Caley did not intend but it also deals with the possible origin of the names given to somewhat similar features in Yorkshire.

'In the third paper Ron Brasier has brought together much of his extensive research on Osborne Ladies' College that had its final chapter in Blackheath.

'But the principal, Miss Gibbins, commenced on a career in education up in Queensland and the sequence of schools that she started has been traced.

'Ron reveals many fascinating aspects of this enigmatic character and his paper is illustrated by a generous collection of photographs.

'Medlow Bath is one of the smallest of the villages of the Blue Mountains but it too has had its characters.

'The fourth paper discusses the life of one Cornwallis Wade-Browne who started out in a military career in England, became a stockman in Queensland and ended up settling in Medlow (as it was then called) and having a peripatetic life moving between a farm on what is now Water Board land and a holiday home in Bay View.

'Fifthly, Brian Fox has revealed what he has been able to find out about another pioneer of Lawson.

'In our first issue (2010) he tackled Joseph Hay and now it is Benjamin Roberts - both at one time being owners of large parcels of land in Lawson.

'The one feature that is common to all who have contributed to the history of the Blue Mountains is that at some time they, or their ancestors, had to cross the Nepean/Hawkesbury River by some means in order to gain access to the Blue Mountains.

'Patsy Moppett has researched this most important aspect of travel to the Blue Mountains and in the sixth paper she provides the chronology of the ways by which the Nepean River has been crossed near to Penrith.

'That location needs to be stated for the crossings of the Hawkesbury River near to Windsor and Richmond await another study.

'All of the papers in Issue 4 have been independently reviewed and revised as a consequence of suggestions.

'The final contribution is a short postscript by Christine Cramer who has been able to confirm some of the conclusions published in Issue 3 relating to the death of Professor V. Gordon Childe in 1957 and the bones discovered at the same site in 1959.'

Ray Christison wins coveted IMAGinE award

Ray Christison of Lithgow State Mine Heritage Park has won the coveted 2013 IMAGinE award for individual achievement and the award for the best exhibition – volunteers has gone to the Lithgow State Mine Heritage Park for its exhibit *Fire in the Mine.*

Pictured above is Ray Christison with wife, Jenny and Museums and Galleries chairman Oliver Frankel at the November presentation night in Sydney.

The recently developed multimedia exhibit titled *Fire in the Mine* explores the working lives of coalminers in the mid twentieth century and the horrific consequences of an underground fire that occurred in the State Coal Mine in 1953

The IMAGinE awards recognise the people who work in museums and galleries across NSW and the contributions they make.

IMAGinE celebrates all institutions–the big to the small–and pays homage to those organisations run by volunteers, with limited budgets and minimal resources.

M&G NSW first launched IMAGinE in 2008 in collaboration with Museums Australia (NSW & ACT) and Regional & Public Galleries NSW.

Since then they have become our most popular event receiving around 70 nominations each year.

M&G NSW provides programs and services improving the visitor experience in small to medium museums, galleries and Aboriginal cultural centres across NSW.

BLUE MOUNTAINS HISTORY JOURNAL NOW AVAILABLE

Blue Mountains History Journal Issue 4, October 2013, can now be downloaded and viewed in .pdf on the BMACHO website http://www.bluemountainsheritage.com.au/imagesDB/wysiwyg/BMHJ41Elec.pdf

This issue, has once again been edited by Dr Peter Rickwood and designed by Peter Hughes and is also available in hard copy.

It is a large issue, over 100 pages on quality gloss paper and can be purchased for $30, with postage extra. It cost almost $30 to print, so BMACHO is not making a profit.

To purchase a copy, please email: The Secretary, BMACHO
1/19 Stypandra Place
SPRINGWOOD NSW 2777 and it will be sent to you with an invoice.

Postage varies from post code to post code, so postage will be added to the invoice when it is paid at the Post Office. Alternatively it can be collected from Jan Koperberg at Springwood.

Wendy Hawkes to talk about the Cooks

THE LIVES of Sir Joseph Cook and Dame Mary Cook will be the topic for the guest speaker, Wendy Hawkes at a BMACHO general meeting to be held on Saturday, February 8. at the Paragon Restaurant., Katoomba.

Wendy Hawkes, is the cultural development officer with Lithgow City Council and curator at Eskbank House, Lithgow, where an exhibition about the Cooks was recently staged.

The Cooks moved to Lithgow in 1886 and Sir Joseph worked in the Vale of Clwydd Colliery as he studied and worked his way up through the unions and into politics. He became prime minister 27 years later.

A light lunch will be provided, in the Paragon at BMACHO expense), at approximately 12.30 pm

After lunch, from 1.30 pm to 3.30 pm (or earlier) a workshop will be conducted, where a suggested format for an “Explorers Cultural Trail” brochure will be presented.

Those attending the workshop will be asked for input into this project.

Please RSVP by email j.koperberg@bigpond.com or phone Jan Koperberg on 02 4751 5834

When: Saturday, February 8, 2014 from 10.30 am to 3.30 pm **Where:** Paragon Restaurant, Katoomba Street, Katoomba
Cost to participants: FREE

St Stephens Parish Kurrajong Registers 1861 - 1902

THE BOOK *St Stephens Church, Kurrajong Parish Registers 1861-1902* published by the Family History Group, Kurrajong-Comleroy Historical Society was recently released.

The publication is a transcription of the parish records of St Stephens Anglican Church, Kurrajong, incorporating St Philips Chapel of Ease at North Richmond (formerly called Enfield), St James Church of England at Kurrajong Heights and Salis Flats Mission Church, later called St John the Evangelist when moved to the corner of Single Ridge and Comleroy Roads. Salis Flats is often written as Sallys Flats and this area is now known as The Slopes.

The Kurrajong-Comleroy Historical Society Family History Group began the process of transcribing the records with the full co-operation of the present rector, the Reverend Shaun McGregor, and the group is indebted to him for his assistance.

The Family History Group realised immediately the significance of the information contained in the records which document the growth, character and early settlement patterns in the Kurrajong district as well as giving an indication of local industries and occupations.

Kurrajong was a farming community and the majority of the people gave their occupations as farmers and / or orchardists. Following these were labourers, drovers, brickmakers, sawyers, butchers, blacksmiths and saddler.

The registers also indicate a strong sense of place and belonging, and outline a history of families in the area.

In a scattered, relatively isolated farming community like Kurrajong it was not uncommon for boy to marry the girl next door because social contact mainly involved interaction with the neighbours. It was not uncommon for brothers to marry sisters from neighbouring farms. For all these reasons it was considered essential to document this information.

St Stephens Church, Kurrajong

The transcription, recording and compilation of the information contained in this publication entailed countless hours of volunteer work by members of the Kurrajong-Comleroy Historical Society Family History Group.

Together with the actual records also included is a brief history of some of the early settlers to provide a better understanding of Kurrajong's past and its place in the history of the Hawkesbury.

The research team were Carolynne Cooper (team leader, Valerie Birch, Wanda Deacon, Kath McMahon-Nolf, Carol Roberts and Joy Shepherd.

The compilation and layout was done by Chris Upton, editor of the Kurrajong-Comleroy Historical Society's newsletter *Millstones.*

The180 pages book is priced at $27 plus postage and packing of $10 for postage and handling throughout NSW, and $14 for other states of Australia

For enquiries telephone (02) 4588 5867 and orders can be placed by contacting the secretary at PO Box 174 Kurmond 2757.

Paragon joins BMACHO

The Paragon Restaurant at Katoomba is another new member of BMACHO this month.

The Paragon first started by a Greek émigré in 1916 at the beginning of a new phenomenon in Australian country towns, the Greek café. From the early 1910s onwards a number of émigrés from Greece, often with experience of the United States, created a new café experience in cities and towns throughout Australia.

ANZAC Centenary grants available

LOUISE MARKUS MP, the Member for Macquarie has announced that applications are now open for the ANZAC Centenary grants program.

Mrs Markus said that for the 100th anniversary of the Gallipoli landing the federal government is making available $100 000 in funding allocated to each electorate in Australia to support projects in the community that mark the occasion.

Louise Markus, MP

These grants are a wonderful opportunity to honour the service and sacrifice of the servicemen and women.

Applications are open to:
*community and ex-service organisations,
* schools and education institutions,
* museums and cultural institutions,
* local government authorities,
* other non-profit organisations.

Types of projects that are eligible under this program include:
* public commemorative events,
* new First World War memorials or honour boards,
*the restoration of existing First World War memorials and honour boards,
* the preservation, interpretation and display of Fist World War wartime and military memorabilia and artefacts.
* relevant school projects, such as research with a focus on military involvement and social impacts, and the products of research.

Types of projects not eligible are:
* expenditure already incurred or ongoing expenditure (eg annual maintenance of memorials),
* construction and repair of buildings, including museums, memorial halls and sporting facilities,
*recurring activities (events held every year),
*salaries, travel and accommodation,
*sporting events,
*educational materials where projects by Department of Veteran Affairs already provides resources for schools.

Two public information sessions will be announced and held regarding the ANZAC Centenary grants program.

Guidelines for proposed projects and application forms can be accessed online at http://wwwanzaccentenary.gov.au/grants/

Deadline for grants applications is March 30, 2014.

Applications may be submitted to louise.markus.mp@aph.gov.au or mailed to the ANZAC centenary grants program PO Box 855, Windsor 2756.

Australian and British soldiers take a welcome break before going up to the front line trenches in France during World War 1

"I look forward to receiving all applications and working with the community to deliver commemorations they will be proud of, that honour the centenary of our nation's service at Gallipoli," said Mrs Markus.

NEW HERITAGE NETWORK FORMED

THE NSW Heritage Network has recently been established with the objective of bringing heritage campaigners and community organisations together to share information, resources, experiences and skills to support local and state heritage campaigns.

Speaking at the recent launch at the State heritage listed property Linnwood House, Guildford, Ms Barbara Perry, Shadow Minister for Heritage said it had been the vision of Anne Field, Peter Duggan, Leesha Payor and June Bullivant, OAM "to grow an alliance of community groups, representing constituents across NSW with a common bond – advocating for heritage issues across the state."

Ms Perry said, "It is the NSW government's planning legislation which has forced community advocates to the fore. The planning legislation does not support heritage"

"The NSW government has put emphasis on economic growth and development; our built heritage is virtually ignored and it is the ongoing management of that which is at risk.

"The clock will be wound back to the days prior to the Heritage Act of 1977"

For further information: June M Bullivant OAM (02) 9631 0216 or 0438 31 0216

Utzon's Opera House

IT IS A RARE ARTIST who has not been inspired by the Sydney Opera House

The SH Ervin Gallery Sydey is presenting the exhibition Utzon's Opera House over the summer period, coinciding with the 40th anniversary of the opening of the Opera House in 1973 and to celebrate its significance for Australian visual artists.

The Sydney Opera House, designed by Danish architect Jørn Utzon is an architectural icon and one of the most outstanding buildings of the twentieth century.

Recognised in 2007 by UNESCO on the World Heritage List, it is appropriate that the National Trust celebrate this milestone of Australia's most remarkable building.

The inspiration for the exhibition has its genesis in the 2012 exhibition Australian Artists and the Sydney Opera House (curated by Lin Utzon) at the Utzon Center in Denmark which took the work of eight Sydney artists to Aalborg, the birthplace of Jørn Utzon.

The SH Ervin Gallery exhibition expands on this selection and include images of the indigenous figure Bennelong, after whom the peninsula it stands on is named, as well as works by some of Australia's leading artists including Eric Thake, William Dobell, Lloyd Rees, Brett Whiteley, John Olsen, Margaret Olley, Martin Sharp, Ken Done, Peter Kingston, Kevin Connor, Noel McKenna and Chris O'Doherty aka Reg Mombassa.

There will also be on display original drawings and working models by Utzon, which are held by the State Library of New South Wales. Works will be drawn from public and private collections across the country.

The exhibition which opened in late November, will run until January 19.

For further information www.nationaltrust.org.au/nsw

Sydney Opera House at sunset

LANDMARKS

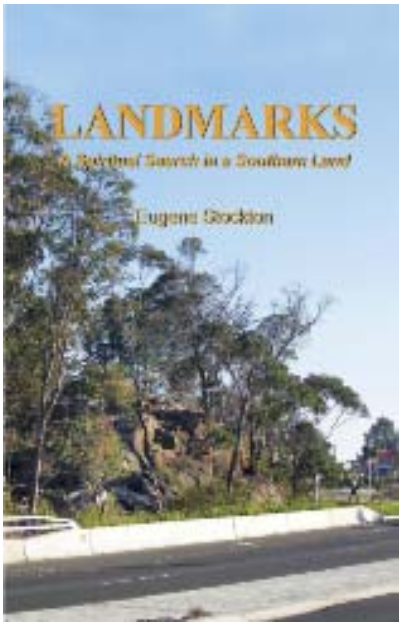
LAWSON PRIEST, researcher, author, and authority on the Australian Aboriginal culture, Father Eugene Stockton has recently published another book through the Blue Mountains Education and Research Trust.

Landmarks is an exploration of an Australian spirituality. Drawing on the cultural influences now in our land, it offers a graded, comprehensive presentation of gospel teachings, with an Australian diction and imagery.

The reader is introduced in terms of an "Australian setting", focusing on one particular aspect of the Australian experience.

The body of each chapter analyses that experience, exploring the parallels with its biblical counterpart.

The bible is used, not as a book of God or a store of normative texts, but as the story of people, who are our spiritual ancestors.



The attempt is made to insert ourselves into that story, with all its ups and downs, to identify our own experience in its unfolding, and through it to catch the vision of God which the past projects onto our present and future.

Blue Mountains Education and Research Trust a member of BMACHO was established to promote local research in religion and Aboriginal studies especially through the publication of findings.

Copies of *Landmarks* are available direct from the publisher at $15 per copy plus postage.

For more information about this publication contact Eugene Stockton (02) 4759 1818.

BMACHO support for grant application

LETTERS OF SUPPORT have been provided by BMACHO several historical societies and individuals to Blue Mountains City Council in the bid of its library service to obtain a $30 000 grant.

The grant application was to the Library Council of NSW.

If successful the grant would be used to complete the digitisation of all surviving Blue Mountains newspapers up to 1954; after which copyright becomes a problem.

Springwood Historian have already made a donation of $5000 to the library to allow digitisation of local newspapers to start.

Rome's gigantic waste disposal site

MOST MODERN CITIES today have a major problem with waste disposal. But the problem has been around for a long time as archaeologists have found in Rome.

Monte Testaccio is an artificial mound in Rome composed almost entirely of fragments of broken amphorae dating from the time of the Roman Empire,

It is one of the largest spoil heaps found anywhere in the ancient world, covering an area of 20,000 square metres at its base and with a volume of approximately 580,000 cubic metres, containing the remains of an estimated 53 million amphorae in which some 6 billion litres of oil was imported mainly from Spain.

It has a circumference of nearly a kilometre and stands 35 metres high, though it was probably considerably higher in ancient times.

It stands a short distance away from the east bank of the River Tiber, near the Horrea Galbae where the state-controlled reserve of olive oil was stored in the late 2nd century AD.

The huge numbers of broken amphorae at Monte Testaccio illustrate the enormous demand for oil of imperial Rome, which was at the time the world's largest city with a population of at least one million people.

Monte Testaccio was not simply a haphazard waste dump; it was a highly organised and carefully engineered creation, presumably managed by a state administrative authority.

Excavations carried out in 1991 showed that the mound had been raised as a series of level terraces with retaining walls made of nearly intact amphorae filled with shards to anchor them in place

As the oldest parts of Monte Testaccio are at the bottom of the mound, it is difficult to say with any certainty when it was first created.

Deposits found by excavators have been dated to a period between approximately AD 140 to 250, but it is possible that dumping could have begun on the site as early as the 1st century BC.

The mound has a roughly triangular shape comprising two distinct platforms, the eastern side being the oldest.

At least four distinct series of terraces were built in a stepped arrangement. Layers of small shards were laid down in some places, possibly to serve as paths for those carrying out the waste disposal operations

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc. (BMACHO) was established in April 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference which sought from Blue Mountains City Council the creation of a cultural heritage strategy for the city.
BMACHO in its constitution uses the definition: "Cultural heritage is all aspects of life of the peoples of the Blue Mountains which was later changed to cover Lithgow and the villages along the Bell's Line of Roads. It therefore involves the recording, preserving and interpreting of information in whatever form: documents, objects, recorded memories as well as buildings and sites."
The objectives of the organisation are:

i. To raise public consciousness of the value of cultural heritage.
ii. To encourage and assist cultural heritage activities of member organisations.
iii. To initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact, to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society Inc.

HERITAGE BMACHO's official newsletter is edited by John Leary, OAM.
Blue Mountains History Journal is edited by Dr Peter Rickwood.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc., Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc, Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc, Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) - Blue Mountains Branch, National Trust of Australia (NSW) - Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant - Katoomba, Scenic World – Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committe, Zig Zag Railway Co-op Ltd.
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE The committee for 2013-14 is:
John Leary, OAM (president), Ian Jack (vice president), Jan Koperberg (secretary), Kevin Frappell, Wendy Hawkes, Doug Knowles, Patsy Moppett, Dick Morony (public officer), Scott Pollock and Jean Winston.

DISCLAIMER Views and opinions expressed in ***HERITAGE*** originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or members. If errors are found feedback is most welcome.

NEWSLETTER OF THE BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

JANUARY - FEBRUARY 2014 ISSUE No. 31

Governor to open Locomotive Depot museum at Valley Heights

by John Leary, OAM

LONG GONE is the excitement of the steam train, like a great steel monster white steam gushing from its nostrils, as it pulls out of Sydney Central, quickly passing the back yards of another generation's dwellings of the western suburbs, then racing at what in those days was considered a break-neck speed across the Cumberland Plains much of it then still farmland until the noisy loco and its train reached Penrith, then a small country town soon to develop as the hub of a satellite city with new suburbs housing a considerable population.

Engine 5183 is turned at Valley Heights. ***Photograph - Australian Railway History Society (NSW RRC) 060615 NJ Simons Collection.***

At Emu Plains the speed slowed with the loco chugging along as it wound its way around the lower Blue Mountains until it reached Valley Heights.

At Valley Heights a pilot engine which had been waiting steamed up ready to do its work was hooked to the front of the main loco adding to the needed power to pull the carriages up the mountains to Katoomba.

The Valley Heights Locomotive Depot was officially opened in January 1914 and the Valley Heights Locomotive Heritage Museum has organised a year-long centenary celebration of events.

Engine 3827 and standard good pilot ready for departure from Valley Heights.

Photograph: Australian Railway Historical Society (NSW RRC) 004024.

On January 31, the Governor of NSW, Her Excellency Professor Marie Bashir AC, CVO will officially open the Valley Heights Locomotive Heritage Museum. (The opening is by invitation only). Some 47 years earlier, on July 11, 1867, the first official journey by train was made between Penrith and Weatherboard (Wentworth Falls) where the line terminated.

The depot's locomotives assisted up to 30 trains a day from Valley Heights to Katoomba. Located on the steeply graded line to Katoomba in the Blue Mountains, the depot served the railways for 75 years.

However, its days became numbered when more efficient and powerful electric locomotives were introduced - eventually resulting in the closure of the depot, marking a major milestone in the state's railway history. **Continued page 3**

An opinion from the editor.....

What is cultural heritage? ...Is it all about the past?

I am frequently asked: What is cultural heritage? ...Is it all about the past?

Definitions of cultural heritage are highly varied.

The definition perhaps I find to be the simplest and most decisive is, …cultural heritage is the legacy of physical artefacts and intangible attributes of a group or society that are inherited from past generations, maintained in the present and bestowed for the benefit of future generations.

The definition embraces simply the 'physical' and 'intangible' and has a timeline of the past, present and future.

I often think of the precise nature of that statement when I ponder a trust that was placed in me some 20 years ago by a very influential Japanese friend when he as the mayor of a large city and I, were directing efforts of a sister cities relationship which has endured from the 1980s to the present.

He had expressed to me a concern that young people in Japan were no longer interested in traditional music, but instead followed blindly the American trends.

These trends have built-in obsolecence that was gradually seeing the emergence of everything without an apparent use, being placed on the scrapheap of oblivion when its used-by date is reached..

My friend, Shimamura *sensei* asked if I would accept three instruments as personal gifts to be kept and passed down through generations of the Leary family to which I hesitatingly agreed to accept, being mindful of the obligation being place on me.

His vision was that if and when the traditional musical arts and craft were lost to Japan, that some time in the future some historian or musical researcher may find in Australia the instruments given to me and return them to their native country to see a revival in the tradition.

He recently passed away, but before he did, I told him that while I had kept the shakuhachi, the other two instruments, the koto and shamishan had been gifted to two separate institutions with the hope that a wider distribution of the artefacts might make possible the enactment of his vision.

The shakuhachi flute has been traced back as far as ancient Egypt and is thought to have migrated through India and China before being brought back to Japan by monks who were studying abroad in China during the 6th century.

Is this cultural heritage? I believe it is — it certainly fits the definition, that I most like, albeit the experience is more in the nature of Japan's cultural heritage and the vision of a far thinking and generous man.

Is it all about the past? No.It has a timeline embracingof the past, present and future.

Another reputable definition is that … cultural heritage is an expression of the ways of living developed by a community and passed on from generation to generation, including customs, practices, places, objects, artistic expressions and values.

Cultural heritage is often expressed as either intangible or tangible cultural heritage (ICOMOS, 2002).

John Leary, OAM - President, Blue Mountains Association of Cultural Heritage Organisations Inc.

'The care of our own historical memory reveals the degree of civilization and morality of a country.'

"The Fish" and "The Chips"

Continued from page 1

Although the depot has been on its Valley Heights site since 1914, February 2, 1957 saw the end of steam operations from Valley Heights.

On this day No. 27 passenger train was hauled by steam locomotive 3662 and on arrival at Valley Heights electric locomotives 4611 and 4617 backed out of the depot and assisted the train to Katoomba.

From that train all steam hauled trains, both freight and passenger were electrically assisted to Katoomba, until complete electrification saw steam removed from the scene.

The depot in latter years was basically a very efficient freight wagon and electric locomotive repair workshop, the electric engines receiving minor repairs and complete overhauls at the depot.

The demise of Valley Heights depot began when the 85 class electric locomotives were introduced in 1979 and through working of freight trains commenced.

The demise was accelerated with the introduction of the 86 class locomotives in early 1983. From the mid 1980s the number of trains requiring piloting from Valley Heights had been reduced to a handful each day, until the depot closed in 1988.

The site is now home to the Locomotive Depot Heritage Museum which provides interactive exhibits of engines and carriages, along with other unique displays of railway memorabilia.

Rail travel for more than150 years in Australia has been popular, despite the sometimes uncomfortable conditions with the odd coal cinder in the eye when one opened the windows and today, cramped and dirty commuter rail services.

There were and still are in Australia interesting services available to travellers who prefer the slower pace.

A 53 class engine assisting a 35 class out of Valley Heights -
Photograph Australian Railway Historical Society (NSW RCC) 012376

But for commuters in the Blue Mountains trains like the "The Fish" and "The Chips" were a way of life.

"The Fish" is still the name of one of the peak hour train services between Sydney and Lithgow.

For about fourteen years this service was regularly driven by a Mr John Heron who, being a big man, gained the nick name "The Big Fish" which eventually transferred to the train itself.

The original engine pulling "The Fish" survived about 20 years.

The era of steam trains which fascinated travellers around the world, may be long gone, but for those who enjoy a stroll along 'memory lane' the Valley Heights Locomotive Heritage Museum will go a long way towards bringing back that enchantment with steam train travel.

Another year for BMACHO --- annual general meeting

ANOTHER YEAR has come around as BMACHO goes into its 9th year of operations.

The association's annual general meeting will be held at the Woodford Academy on Saturday, March 22, 2014 commencing at 2pm.

The business including president's report, financial reports and election of office bearers will be followed by a guest speaker and afternoon tea.

A guest speaker soon to be finalised will be announced on Facebook and by e-mail to members.

Members of the association and their representatives at the meeting will also be given the opportunity to look through this building the property being the oldest on the Blue Mountains.

Formal notice of the meeting together with the calling of nominations for the 10 member management committee will be distributed in the near future.

‘For the cricket tragics’

By John Leary, OAM

MANY of our readers have probably spent considerable time during the 2013 - 14 festive season, watching grown men throw a usually red leather covered ball at three sticks, which another player seems to protect, while others on the field stand by in silly mid on and in slips seemingly with little to do.

It seems there have been five tests this summer between England and Australia and the uninitiated must wonder why so many examinations for what seemingly is a simple sport.

And they have played in these tests for the doubtful prize of a set of bails burned to ash and secreted in a small wooden urn.

Patriotically, the writer must state Australia seems to be the brightest, its team having succeeded in all five tests while the English have failed each time they were before the stumps behind which stands a man in a white coat and a number of hats.

Perhaps those ‘cricket tragics’ might ponder this little piece about the origins of this manly sport.

The game of cricket has a *known* history spanning from the 16th century to the present day, with international matches played since 1844, although the official history of international Test cricket began in 1877.

However, no one knows for sure when or where cricket began but there is a body of evidence, that suggests cricket was devised by children and survived for many generations as essentially a children’s game.

Cricket at Melbourne Cricket Ground January 1, 1864

Adult participation is unknown before the early 17th century.

Despite many other suggested references, the first definite mention of the game is found in a 1598 court case concerning an ownership dispute over a plot of common land in Guildford, Surrey.

A 59-year old coroner, John Derrick, testified that he and his school friends had played *crecket* on the site fifty years earlier when they attended the Free School.

Derrick’s account seems to prove beyond reasonable doubt that the game was being played in Surrey circa 1550.

There is also a reference to cricket being played as an adult sport was in 1611, when two men in Sussex were prosecuted for playing cricket on Sunday instead of going to church.

In the same year, a dictionary defined cricket as a boys’ game and this suggests that adult participation was a recent development

Cricket has had an influence on the lexicon of nations around the world, especially in the English language, with such phrases as “that’s not cricket” (unfair), “had a good innings”, “sticky wicket”, and “bowled over “.

Cricket has been played in Australia for over 210 years.

The first recorded cricket match in Australia took place in Sydney in December 1803 and a report in the *Sydney Gazette* on January 8, 1804 suggested that cricket was already well established in the infant colony.

Intercolonial cricket in Australia started with a visit by cricketers from Victoria to Tasmania in February 1851.

The first tour by an English team to Australia was in 1861 - 62, organised by the catering firm of Spiers and Pond as a private enterprise. A further tour followed in 1863-64, led by George Parr and was even more successful than the previous.

English cricket legendWG Grace “taking guard” in 1883. His pads and bat are very similar to those used today. The gloves have evolved somewhat. Many modern players utilise more defensive equipment than was available to Grace, notably helmets, and a thing called a “box” .

Cricket has a close relationship with Australian rules football and many players have competed at top levels in both sports.

In 1858, prominent Australian cricketer Tom Wills called for the formation of a “foot-ball club” with “a code of laws” to keep cricketers fit during the off-season.

The following year, Wills and other Victorian cricketers founded the Melbourne Football Club and codified the first laws of the game. It is typically played on modified cricket fields and borrows terminology from cricket, such as “umpire” and “sledging”.

It is often said that in Australia the office of test captain is second in stature behind the office of prime minister.

As a member of the No Cricket and Football League, the author is now so overloaded with cricket minutia it is perhaps an appropriate time, as the cricketing fraternity say, to ‘take tea” ,which may well be an euphemisim for consumption of a beverage better known as a beer

An alternative crossing: Bells Line of Road part 2: 1823 to 1872

by Ian Jack

IN THE November/December 2013 issue of *HERITAGE* I discussed the making of an alternative road leading across the Blue Mountains to Hartley Valley in 1823.

The main problem with the new route was Mount Tomah: the road from the Zig Zag descending westwards from Kurrajong Heights and leading to Mount Tomah was relatively level and straight, with good fodder for animals.

This section of Bells Line of Road soon attracted some settlement, in Bilpin and Berambing.

The Royal Veterans Company in New South Wales had been formed in 1810 mainly from old Napoleonic soldiers. When it was disbanded in 1823, it was anticipated that its members might be settled along Bells Line.[1]

This did not happen but when reincarnated veterans' companies arrived in the colony in 1826 and proved quite unsuitable in government employ, Governor Darling offered them either a passage back to Britain or a land grant of 40 to 100 acres.

Some of the veterans took up the offer of land and in 1829 twelve allotments each of 100 acres (40 hectares) were surveyed at Bilpin and Berambing, of which ten were taken up and occupied for a while.

In 1830 it was anticipated that three bullock teams would transport the necessary equipment to these veterans' farms over Kurrajong Heights, but, despite petitions from the new settlers, Mitchell in 1832 refused to spend public money on improving the Zig Zag at Kurrajong Heights.[2]

The other new owners of land on Bells Line in 1830 were Mrs Susannah Bowen and her son, George Meares Countess Bowen, a retired army man, who occupied substantial grants on Mount Tomah (1280 acres) and at Berambing (2560 acres) respectively.

Jacob's Ladder, on the notoriously difficult western pass leaving Mount Tomah in the nineteenth century. Conrad Martens made this drawing in November 1876 soon after improvements had been made but just before a by-pass was created. State Library of NSW, Mitchell Library,PXD307 vol.2 fo.13. Reproduced by courtesy of the State Library.

Bowen built a fine stone house called Bulgamatta (the Aboriginal name for the area), with three sitting rooms and four bedrooms along with outbuildings and a sawmill on the creek below, but in 1836 was obliged to sell to the entrepreneur Robert Towns (the later founder of Townsville) after he 'lost a large portion of [his] capital and some of [his] best years'.[3]

Bowen's mother returned to England in the same year and sold Mount Tomah, where she had not built any residence, to her son's army acquaintance, Captain George Bartley, in 1838.[4]

Bowen had built huts for his employees about 2 kilometres west of Bulgamatta. These probably remained in occupation under the overseer for Robert Towns, Sam Seinor, an ex-convict who lived in Bulgamatta homestead and had a number of workers on the property, with two farms under grain and pigs being reared.[5]

Because of this increased occupation of the stretch of Bells Line between Kurrajong Heights and Mount Tomah in the 1830s, because of the pressure applied by Bowen and Towns, because of overnight accommodation being offered by the Douglasses at Kurrajong Heights, and because of increased citrus orcharding on the Kurrajong foothills, there was increased local interest in improving the road from the Hawkesbury.

Accordingly a Committee of Management of the Windsor and Bathurst New Road, with the Surveyor-General, JL Scarvell, as its secretary, was formed and in 1839 was soliciting tenders 'for making a Dray Road from Richmond, through the Kurryjong, by Mount Tomah, over the Mountains to the present Bathurst Road'.[6]

‘£100 for dray road from Richmond over the mountains’

The stone cottage called Bulgamatta, built on Bells Line of Road by George Meares Countess Bowen at Berambing, just east of Mount Tomah, as soon as he entered on his grant of 2,560 acres (1,030 hectares) in 1830. The pencil drawing was done by Conrad Martens in July 1838

(State Libary of NSW,Mitchell Library, SSV SP Coll Martens 3).

Continued from page 5

The sum of £160 was raised and spent in 1840, principally for ‘clearing’ the road from Mount Tomah to Bowenfels, but Sam Seinor was also paid for ‘clearing the eastern side of Mount Tomah’ and James Douglass a similar amount for a rock cutting on Tabaraga ridge on Kurrajong Heights, while Thomas Dargan (who gave his name to Dargans Creek beyond Bell) had two men employed ‘improving the pass at Mount Tomah’.[7]

Despite these locally funded efforts, the ‘new line of road over Mount Tomah’ was described in 1841 as only ‘a bridle road’, though it was hoped that it would ‘shortly become fit for the carriage’.[8]

This was optimistic, for, in particular, the descent of the Western Pass, known as Jacob’s Ladder, was acutely steep and contained dangerous rock steps called ‘jumps’.[9]

The first crossing with a bullock team was indeed in 1840, with experienced men, including the blacksmith William McAlpine who had gone with Bell in 1823, and Thomas Dargan who had been supervising road works, but they used a ‘slide’ instead of a wheeled dray, dragged by four bullocks, and the slide was soon broken on a bad stretch of road at Mount Charles.

An improvised slide was created out of a tree-fork and the return trip to North Richmond was completed safely.[10]

This was, however, an exceptional act of bravura and did not create a habit. Sam Boughton, who knew most of the bullockies and the drovers, was quite clear that no drays coming from the Hawkesbury could get beyond Mount Tomah until the 1870s.[11]

Until a new Road Trust undertook successful improvements to the road in 1872 and subsequent years, Bells Line as a through-way to the west operated primarily as a drove road.

The western graziers regarded it as a desirable alternative to the Great Western Highway. George Cox, for example, wrote to his sons in 1848: ‘… when you come down … find out whether it will be at all practicable to send the sheep across … either down Bell’s line of road, or onto the Mountain Road at Blackheath. Either of which must be preferable to their going up the Mount Victoria Road to avoid all that pounded Red Ironstone up Mount Victoria.’[12]

The drovers on Bells Line were familiar faces in Richmond. Some were larger than life, like Jack Timmins of Yarramundi, born in 1813 and still yarning to Sam Boughton in 1903: ‘the only man I ever heard of [wrote Boughton] crossing the mountains with a drove of cattle without human aid. His only help was his dogs, which were the wonder of the age.’

One dog brought firewood to the nightly camp, another water and the third controlled the cattle, Timmins boasted, though Boughton expressed discreet reservations.[13]

The road was consistently used. Alfred Smith, born in 1831, was a drover in his youth and recalled how he had brought 63 flocks of sheep over Bells Line.[14]

Droving required yards and some occasional inns. Sam Seinor, Towns’ overseer at Bulgamatta, built stockyards for drovers at Dargans Creek near Bell, at Mount Charles and at Bulgamatta.[15]

During the Gold Rush years of the 1850s there were many prospectors on the move, walking across Bells Line to Ophir and the Turon, so Thomas Sherwood opened an accommodation house near Bulgamatta, built with timbers from Bowen’s old house.

Sherwood and his sons regularly went a distance west to meet drovers coming to the coast and to help them up Jacob’s Ladder.[16]

‘no ride in the colony can be more enchanting’

Continued from page 6

The Hawkesbury end of the road, from Kurrajong to the river, was by far the busiest part of Bells Line.

Not only was there increasing farming and orcharding, but the Putty Road, which was an important drove route from the Hunter, joined Bells Line at Kurrajong, so the final eastern stage saw cattle and sheep converging from both the western plains and the Hunter Valley.

The Packhorse Inn at North Richmond (later the Woolpack) became an important place for the Sydney butchers to acquire stock, just as Joseph Collett’s inn in Little Hartley was a rendezvous for Hawkesbury dealers to acquire stock cheaply in the 1850s before city price-rises were known over the Mountains.[17]

All the characteristics of Bells Line in this period are summed up in a letter from Thomas Cadell junior of Ben Bullen, published in the *Sydney Morning Herald* in July 1851.

He went on horseback from Windsor, crossed the river on the punt and rode up to Douglass’ accommodation house: it was a good road and ‘no ride in the colony can be more enchanting than this of a fine evening’.

Cadell had to walk his horse over Kurrajong Heights, but then he rode for two hours to Towns’ Tomah House, now unoccupied, and an hour later he came to Mount Tomah, where he dismounted and led his horse as any ‘merciful man’ would do.

There he met a herd of Fitzgerald’s cattle coming from Dabee to the coastal markets, ‘winding slowly round the mountain in “single file”, adding not a little to the scene’.

Cadell remounted and rode on westwards to Dargans Creek ‘over a monotonous road, some parts of it very good, others not quite so, but mostly free of the heavy sands which are such a hindrance on the other line [the Great Western Highway].[18]

And so Bells Line remained for another twenty years, until the local Roads Trust was formed in 1872 which was instrumental in opening the entire road to wheeled vehicles.

Heritage churches subject for BM history conference

HECTOR ABRAHAMS has now agreed to be one of the speakers for the Blue Mountains History conference to be held at the Carrington Hotel, Katoomba on May 10, 2014.

He has been asked to present an address about the architectural and cultural heritage value of religious buildings in the Blue Mountains, Lithgow, Hawkesbury and Sydney regions.

Hector Abrahams BSc (Arch) (Hons), BArch, ARAIA is an architect with diverse experience in public and private work in the areas of conservation, cultural projects and adaptive re-use since graduating from the University of Sydney over 25 years ago.

A particular interest is in Christian churches. He is chairman of the NSW Heritage Council Religious Property Advisory Panel as the representative of the Australian Institute of Architects and serves on several architectural panels in the Anglican Church. He is trustee and honorary secretary of the Camperdown Cemetery Trust. He is a former councillor and vice president of the Royal Australian Historical Society.

He is the author of the entry for Church architecture on the *Dictionary of Sydney*, and the very substantial entries for Edmund Thomas Blacket and John Horbury Hunt in the *Encyclopedia of Australian Architecture.*

Heritage pear tree remnant of Woodford Academy orchard bears fruit

IT WASN'T A PARTRIDGE IN THE PEAR TREE from the English carol lyrics first published in 1780, but it was four pears in a tree, the image captured by Elizabeth Burgess on a delightful festive greetings e-mail from Woodford Academy which leapt off the computer screen just before Christmas 2013.

Closer inspection revealed the pears had been growing on what is probably a heritage tree planted at Woodford Academy in the time of Alfred Fairfax's occupation circa 1868 -1880s.

Local professional horticulturalist and former horticulturalist teacher with TAFE, Doug Knowles has recently inspected the tree and suggests it could be as old as 150 years.

Mr Knowles says that the tree is in an advanced state of decreptitude. It has very short incremental seasonal growth and extensive wood rot.

"What we see are the remains of a very old tree easily one of the original trees. It could have been planted 150 years ago :1860/70," Mr Knowles has suggested.

"The Camden Park Catalogue of 1857 liists 31 cultivated varieties,

This magnificent image of the pears fruiting on what may well be a heritage tree on land adjacent to Wooford Academy was taken by Elizabeth Burgess, Woodford Academy Management Committee - summer of 2013

but no descriptions and I cannot therefore cast any light on its varietal name," Mr Knowles said.

Fairfax bought the property in 1868 from the widow of William Buss.

Buss had conducted an inn which was licensed as 'The Kings Arms' in 1855. The establishment was more popularly known as Buss' Inn.

There had been an inn on the property since circa 1834 with Thomas Pembroke having been granted 2 acres of land in 1831.

Pembroke named the inn 'The Woodman' and lived there with his wife and 6 children.

The inn provided food and lodgings for travellers from Sydney on their way to Bathurst and the western plains. Soldiers and colonial officials were some of their guests.

In 1835 Pembroke was granted a further 48 acres at what was then known as Twenty Mile Hollow

Pembroke fell on hard times, heavily mortgaging the property and being sentenced to 2 years on a road gang for stealing slabs of wood at Springwood.

His sentence was later reduced to one year but forced him to sell the property in 1839.

But back to the pears and in particular the tree which is most likely to be the last remnant of an orchard and garden planted for Fairfax who developed the property as a gentleman's residence.

Continued page 9

The pear tree in all its glory of spring bloom. Photograph by Elizabeth Burgess, Woodfrod Academy Management Committee - spring 2013

Pear tree probably planted 150 years ago in Alfred Fairfax's orchard

Continued from page 8

Fairfax renamed his home, 'Woodford House' and built the second storey east wing primarily to accommodate his Sydney friends and their servants.

It became an exclusive retreat for Fairfax and his friends.

During his time at Woodford he bought more land circa 1868 and then owned 90 acres on which he created an orchard and house garden to provide fresh food for his guests.

One of the more notable events at Woodford House was in 1874 when members of the scientific community visited the Fairfax property to observe the transit of Venus. Portable observatories were set up in tents for the observations.

In 1897 losing money in his financial dealings in mining ventures, Alfred Fairfax sold the house to a David Flannery who subdivided the property and sold some of the land.

The fruit in the picture on this page is in fact a China pear, not very good for eating unless cooked or made into bottling fruit and chutney.

Jazz in the artist'sgardens

THIS VERY popular Jazz in the Garden event celebrates the birthday of one of Australia's finest artists Norman Lindsay.

This event is scheduled for Saturday, February 22, 2014 from 5 to 9pm in the gardens of the Norman Lindsay Gallery, Faulconbridge

This vibrant picnic event attracts 800 jazz lovers from all over NSW, the very popular legendary Galapagos Duck will perform jazz classics and some upbeat jazz-rock from the gallery verandah.

Now is the time to organise your group of family and friends.

Bring with you some food and beverages, chair or blanket, free parking is included as is admission to the gallery.

The Friends of the Norman Lindsay Gallery and Galapagos Duck promise this evening of jazz will be like you've never heard before.

Tickets: adult $30, children $15 members $25.

Enquiries: (02) 4751 1067

Wendy Hawkes to talk about the Cooks

THE LIVES of Sir Joseph Cook and Dame Mary Cook will be the topic for the guest speaker, Wendy Hawkes at a BMACHO general meeting to be held on Saturday, February 8, at the Paragon Restaurant, Katoomba.

Wendy Hawkes, is the cultural development officer with Lithgow City Council and curator at Eskbank House, Lithgow, where an exhibition about the Cooks was recently staged.

Wendy was to have been the guest speaker at a general meeting last year, however the meeting was cancelled because of the bushfires which raged through the Blue Mountains and Lithgow.

The Cooks moved to Lithgow in 1886 and Sir Joseph worked in the Vale of Clwydd Colliery as he studied and worked his way up through the unions and into politics. He became prime minister 27 years later.

A light lunch will be provided, in the Paragon (at BMACHO expense), at approximately 12.30 pm

After lunch, from 1.30 pm to 3.30 pm (or earlier) a workshop will be conducted, where a suggested format for an "Explorers Cultural Trail" brochure will be presented.

Those attending the workshop will be asked for input into this project.

Please RSVP by email j.koperberg@bigpond.com or phone Jan Koperberg on (02) 4751 5834

When: Saturday, February 8, 2014 from 10.30 am to 3.30 pm **Where:** Paragon Restaurant, Katoomba Street, Katoomba.
Cost to participants: FREE.

Wendy Hawkes

HMS Bounty cannonball on display

A CANNONBALL from HMS Bounty is currently part of an exhibition at Hawkesbury Regional Museum at Windsor.

A very special recent acquisition, the cannonball is from HMS Bounty, infamous as the vessel whose crew mutinied and cast off their commander, William Bligh.

This is one of the best-known stories in the English-speaking world, and to have a material part of it in a local museum is very exciting, particularly because of Bligh's association with the Hawkesbury:

After the mutiny, Bligh came to New South Wales as governor, and helped the Hawkesbury to recover from the disastrous flood of 1806.

He established a farm for himself at present-day Pitt Town, installing Andrew Thompson as manager, and was supported by the people of the Hawkesbury in the conflict with John Macarthur and his cronies that culminated in what became known as the Rum Rebellion.

The relic is a donation by Barry Craft, who spent time on Pitcairn Island and was given the cannonball, as well as a replica of HMS Bounty made from local timber and using actual Bounty nails.

Yvonne Jenkins memorial award

YVONNE JENKINS of Rydal was a well known family historian and author of several books on family history in the Bowenfels, Rydal and surrounding areas.

She was the convenor of the Lithgow and District Family History Society in 1986 and encouraged members to write stories about their ancestors.

The Lithgow and District Family History Society has chosen to commemorate Ms Jenkins memory each year by conducting the Yvonne Jenkins Memorial Award.

Entry is open to members and non-members of the society and is in the form of a short essay (1000 words).

The topic for the 2014 award is "My Ancestor was a…..".

The winner will receive a certificate and one year's membership of the society.

Entries close on April 30 and must be accompanied by an entry form, available on the society's websitewww.lisp.com.au/ldfhs.

DIARY DATE; Blue Mountains History Conference at the Carrington Hotel, Katoomba May 10, 2014 j.koperberg@bigpond.com

Lesser known accounts of early and mid-19th Century journeys over the Blue Mountains

by Peter Rickwood

Dr Peter Rickwood the researcher and author of this article is a regular contributor to *HERITAGE and* in describing some of the perils faced by lesser known travellers than the three celebrated explorers, he has meticulously transcribed reports which have appeared in the earliest publications of the colony.

Peter is currently the editor of BMACHO's *Blue Mountains History Journal* which late last year released its fourth online edition although hard copies are available and will in time become a collector's item. He is a member of Blue Mountains Historical Society and its former president.

Introduction

The diaries of Blaxland, Lawson and Wentworth relating to their discovery of a route over the Blue Mountains in 1813, of Evans in extending that route to Bathurst in 1814, and of Cox in building the road, all predate the type of journey that is of concern here.

Well known, and often cited, are the descriptions of journeys over the Blue Mountains road that were collated by Mackaness in his "Fourteen Journeys"[1]. Amongst these are accounts of travel on the 'road' by Antill (1815), Macquarie (1815), Quoy, Guadichaud and Pellion (1819), Hawkins (1822), Field (1822), Lesson (1824), Dumaresq (1827), Backhouse (1835), Darwin (1836), Meredith (1839) and Stanger (1841) - many published long after the year of their journey. Accounts by 'celebrities' such as Louisa Meredith[2] and Rachel Henning[3] have recently been followed by John Low's discussion of the travels of Mrs Mary Elizabeth Martindale.[4]

But lying in the newspaper archives are some enchanting and graphic descriptions by lesser mortals whose turn of phrase warrants repeating. [The quality of copies of newspaper extracts is seldom good so what follows are carefully made transcriptions.]

The Journey Commences

In 1858 one writer, appalled by the opposing traffic on the road, pleaded for a railway:

> "The first thing that attracts the attention of the traveller leaving Sydney for the far west is the long string of drays laden with wood for the fires of the good people of that city, which he so frequently encounters, and as he passes dray after dray, with the miserable horses crawling and staggering under their heavy loads, he cannot but wonder why the railway is not available to this purpose, and so much labour and horse flesh devoted to some more useful and profitable occupation."[5]

A railway service to Penrith did not commence until July 1862[6] so prior to that year horse conveyances still had to be used and another who travelled in 1855 described the harrowing conditions encountered before even reaching the Nepean River:

> "I crossed the eastern creek, and on descending the hill opposite Minchinbury was enveloped in a perfect quagmire. There I got stuck up to the axel, and but for the assistance of two friendly good-natured bullock drivers, who lent their aid, I might have remained at the mercy of the elements all the live-long night.
>
> After being released from this unpleasant dilemma, and scraping off the mud and dirt which was pretty heavy and thick upon my members, I made an effort to get along through a mere pond of mud and slush knee-deep, for half-a-mile long. Oh ! shade of M'Adam, thy mantle has not yet descended upon the sapient members of the trust for this great thoroughfare, for it is sadly, it is grossly neglected; the chasms and rents which stand yawning wide to embowel man and horse, are fearful to contemplate."[7].

And with that traveller's experience already soured it is not surprising to read his summary:

> "It was my fate some days since, from urgent circumstances, to make a journey to the western interior for the first time, and I earnestly hope it may be the last, for the dangers and difficulties I have experienced through the execrable state of the roads, and other obstacles were truly appalling."

Figure 1. Emu Ferry - sketch by Conrad Martens, 15 May 1835

Crossing the Nepean River

Crossing the Nepean River in those times was quite an 'adventure' (Figure 1), an informative account of which was published anonymously in 1858:

> "A quarter of an hour's drive brings us to the banks of the Nepean, which have a gradual slope down to the river. The punt is all ready, and we are slowly driven into it, coach, horses, passengers, and baggage; but the puntman is not quite ready; he presently shows up, and with provoking coolness sets about adjusting preliminaries for our puntation across the river, which is a fine sheet of water. About a quarter of an hour, or perhaps more, is spent in slowly dragging us over, by means of hawsers extended from one bank to the other, and traversing over certain pulleys fixed to a kind of hand-rail or frame, which protects the passengers and cattle from falling over the sides of the punt. This piece of business is an index to the whole history of travelling on the Great Western Road. Nearly seventy years have passed away since the colony was founded; vast strides have been made by us in the interval, in settlement and civilization, but we still use the rude punt to cross the Nepean. The Western District yields a large revenue to the public treasury, and yet we have not a bridge across the Nepean, distant only 33 miles from the metropolis." [8]

But the real journey was only about to begin and according to this description even the approach to the Lapstone Hill proved uncomfortable as late as 1858:

> "After a great deal of pulling, and tugging, and straining, we are conveyed across in our barbarous conveyance; the chain in front of the horses is cast off, and away they plunge as if eager for a gallop; but they are now on the wrong side of the Nepean for galloping. Large boulders crop out of the ground as if they had been purposely placed there to upset the coach and break our necks.

'…with a crash and a bump; the shock is tremendous; your seat seems to leave you in mid-air, and down you come with a horrible jolt…'

> The horses make a desperate plunge; the wheels slowly rotate until they have arrived at the apex of these egg-shaped stones, when, all of a sudden, down go the front wheels with a crash and a bump; the shock is tremendous; your seat seems to leave you in mid-air, and down you come with a horrible jolt which shocks your whole frame, your teeth coming together with a gnash which sends fire out of your eyes; your bones knock against each other as though they would break off short, and you now for the first time begin to realise the dreadful stories of your friends about the Western Road. Shock No. 1 is the initiatory shock; shocks *ad infinitum* follow closely upon its heels; you almost feel inclined to implore the driver to stop and let you out were it not for very shame. By this time you get on to the last decent piece of road between the Bathurst Plains and the Nepean, and are whirled over Emu Plains at the rate of about eight miles an hour."[9].

The Ascent of Lapstone Hill

An 1827 account of an ascent contrasts with those of most travellers who have described this obstacle in terms amounting to 'horrendous' (Figure 2):

> "The first ascent of the Blue Mountains, by this new Lapstone Hill is excellent. It would be perfectly practicable to take over, as I said before, a train of twenty-four pounders. ... it would ... be a fine sight to see fifty bullocks harnessed to a gun marching in array up the bristling hill."[10]

Nevertheless the topography was deemed to be 'frightening' even in 1858:

> "A couple of miles over a rough cobblestone road now carries you, across the Emu Plains, to the foot of the Blue Mountains, and here you commence the ascent of Lapstone Hill.

Figure 2. Lapstone Hill - watercolour (no date) by Samuel Thomas Gill (1818-1880).

Continued from page 12

After a short distance, you find yourself on a broad road escarped from the side of a tremendous precipice of sandstone formation, and following the windings of a deep chasm; on the left, the rock rises some hundreds of feet in perpendicular height above you, crowned with loose masses, hundreds of tons in weight, which seem ever about to fall, and, like an avalanche, crush all beneath them; on the right, you look down for a fearful height when nothing is to be seen but heavy masses of rock, dark sombre looking trees, and scrub clinging to the side of the precipice, which gradually fade into gloom and darkness; while the precipitous and rocky mountain on the opposite side covered with stunted trees, casts his shadow over the road and seems to defy the power of man to reach his summit. The ravine now becomes more and more shallow as you proceed, and a sudden turn in the road leads to a fine bridge of one arch, over which the escarped way takes a sharp turn or two, and leaving the ravine and precipices behind soon leads to the top of the mountain and places you upon a table land from which you will not descend for forty miles. The road up the pass is in good condition, with the exception of a couple of hundred tons of rock piled upon the bridge for the purpose either of testing the strength of the arch, or trying the skill of the teamsters who have sufficient to contend with in the sharp turn on both sides."[11]

On the Lower Blue Mountains

Conditions were still bad in 1858 immediately after the ascent:

"... to the top of Lapstone Hill, two miles beyond Wascoe's Inn, the road becomes very bad, the naked rocks protruding, and rendering it almost impassable; a little further on a Canadian cord wood road has been laid down for about a quarter of a mile, the logs used being in the round and of unequal diameter, rendering the floor rough, and the vibration of the timber irregular – consequently it is full of mud holes, and forms one of the worst parts of a bad road. Still further on, and a patch of squared log work occurs; this is much better, and appears to stand, but is not equal to the sawn plank."[12]

'…I discovered a large white tarantula, about the size of a dollar, just over my head…'

And just a decade after the road had been completed, even a horse ride could be a challenging experience as was found in 1827:

"We now rode on for Springwood, and had an unpleasant ride the last six or seven miles in the dark, the road not being here so good, many stumps being left standing in the middle, on which my tired horse made a frequent stumble. From Sydney to Springwood in one day is no joke, to one not accustomed to the saddle: and I thought this ten or twelve miles in the dark, longer than all the rest of the journey put together. Once or twice, from the blackness of the night, and the narrowness of the road, I got into the bush, till suddenly brought up by a thick scrub, which the horse could not penetrate, or receiving a knock on the head from an impending bough, I was obliged to exert my lungs and cooey out for my companion, who cooeyed in return, and by the sound of his voice I was enabled to find my way back to the road. I thought we should never get to Springwood, and from the horrid length of the miles, had I been asked, at the moment, how I liked the Blue Mountains, I must certainly have answered with Maiochi '*piu no que si.*' At last the yelping of some dozen angry curs, resounding through the silent forest, gave symptoms of the abode of man – it must be Springwood – but it was a miserable melancholy hole – not a glimmer of light of any kind shone askaunt (*sic*) the lofty trees, and but for the noisy dogs, we might have passed it in the dark. I got off my saddle with a slight groan, and was soon convinced by the dark dungeon-appearance of the place, we were not exactly on the Bath road. "How many quarts of corn shall I give your horses?" said a private of the 57th regt. one of the road party under charge of a corporal usually stationed at this first stage of the Mountain road. I had previously heard that our horses would be very badly off going over the Mountains, but I was not prepared to hear of corn being sold by the quart. I thought I could not do better than refer the good natured soldier to the horse himself, and requested he might have for his supper as much as he could eat."[13]

Before the coming of the railway to Wentworth Falls in June 1867 and to Mount Victoria in May 1868[14], establishments on the Mountains often only provided 'very basic' accommodation and at Springwood in 1827 it could be zoologically 'interesting':

"I discovered a large white tarantula, about the size of a dollar, just over my head, upon a piece of cotton that served as a curtain to the couch or bed, outside of which we lay. We had made up our minds to fleas and bugs in quantity, and were not disappointed, but had made no reckoning for any of the spider species; my companion therefore seized a fork to run this tarantula through, but though an excellent shot in general, he missed his aim, and the tarantula fell down upon the bed, ... As an additional comforter to us, one of the soldiers in the adjoining room cried out "ah! there's a good many tarantulopes (*sic*) in that 'ere room." So what with the fleas, bugs, and the aforesaid tarantulopes, and the noise of two entire horses, who were fighting and kicking one another all night, loose in the paddock, we had not a wink of sleep, and were glad to jump out of our dungeon at the first peep of day."[15]

'…the passengers drunk, to the annoyance of the sober…'

Continued from page 13

Coach travellers were at the mercy of the driver when it came to the number and frequency of the stops. One in 1858 wrote that after leaving the Pilgrim Inn at Blaxland:

> "Thus we go on hour after hour, stopping at public-houses where there is no need whatever to stop, but to make one portion of the passengers drunk, to the annoyance of the sober portion, and to fritter away the time which would be infinitely better spent by the post-master in Bathurst, on the following evening, in sorting and delivering the letters to the good people of that town, about whom the mail contractor or his servants do not appear to care very much."[16]

Some parts of the Western Road were particularly bleak in the early years of its existence:

> "Near the 16 mile tree, for the trees are marked all the way to Bathurst, is the spot where some years ago, a gentleman of the name of O'Brien lost himself. It is supposed he left the ridge for the purpose of obtaining water for himself or horse, and going into the dell, met with some accident, and died, as he has never since been heard of. The horse was found some weeks afterwards, grazing on the mountain road with his saddle on. It is a melancholy spot, – "all the evils of dereliction rush upon the thoughts." We imagine the dying unfortunate, ..."[17]

There is a corroborating, but less detailed, report of that disappearance[18] without specifying that location, which is not a well known modern site – so where was the 16 mile tree ? William Cox wrote in his diary:

> "August 26. — At 10 a.m. arrived at Martin's ..."
>
> "August 27. — Measured to the 16th mile, immediately after which the ground got very rocky, and in half-a-mile we came to a high mountain, which will cost much labour to make a road over."[19]
>
> "September 3. — ... The road finished to Caley's heap of stones, 17¾ miles".[20]

[Evans saw Caley's Heap of Stones on the ridge at the W end of the boundary between numbers 2 & 3 Caley Lane, Linden[21], from where Cox reported that there was a view of "A table rock..." [22]. The identity of that summit is uncertain; it might be what is now known as 'Flat Top' (Figure 3A) which lay c.14 km to the WNW in the direction that they were travelling, or more likely it was the more prominent feature which in 1804 Caley called 'Table Hill' (Figure 3B) that is c.20 km to the NNW.

Irrespective, that comment indicates that it relates to a vantage point on the top of the ridge whereas the present location of Caley's Repulse (as it is now called - Figure 4) is below the ridge line so it cannot be in the original position - the offset from the true location is c.50 m in an ENE direction.]

Based on that measurement and measuring along the route of Evans

Figure 4. The present location of Caley's Repulse.
Photograph: Peter Rickwood, 2013

Survey, the 16 mile mark was between Faulconbridge and Linden at about Weemala Avenue. Thereabouts is the junction of four deep valleys (Figure 5) with Weemala Avenue having been constructed along a narrow ridge trending to the NNW and Cox's Road (now the Great Western Highway) along a NE-SW aligned narrow ridge - a fire prone and bleak spot indeed.

Figure 5. Topographic map of East Linden. © Land and Property Information NSW 2013 © City of Blue Mountains 2013

The "high mountain" mentioned by Cox was the summit where today is Linden reservoir[2]

'…the sooner we get off the mountain the better…'

Continued from page 14

When travellers eventually got to Lawson (Figure 6) in 1855 the road conditions ahead were no better:

> "At Perry's Blue Mountain Inn, which is reached a little before noon, and which terminates another stage, the country descends, forming a valley, above which, in the distance, tower the mountains from which the inn takes its name. Hitherto, the roads, although nowhere as good as could be desired, have been tolerably firm and regular. After leaving the Inn just named, however, a striking change for the worse begins to be perceptible. In some places, the rock appears at a very dangerous height above the sand and gravel with which the road is covered; while in other places, wide and deep ruts render very careful driving necessary, in order to keep at a distance the probability of an upset."[24]

But further on there were inns to distract travellers, such as at Woodford and Wentworth Falls:

> "Well, here is the Twenty-Mile Hollow. Don't go in! "Why ?" you ask. Simply because we wish to perform a day's journey, and if we once get in there, our day's work is at an end, for the agreeable host and hostess will surround you with so many comforts that you cannot leave them to face the d—d ugly road again. The sooner we get off the mountain the better, so let us push on to the "Weatherboard," which is a very decent inn; the present proprietor has made wonderful alterations – in fact, completely metamorphosed the place, and *it wanted it (sic)*." [25]

> Even in 1827 Wentworth Falls was a 'settlement' of note (Figures 7 & 8), but this description would not have appeal for a modern traveller!

Figure 6. The second Blue Mountain Inn - built 1875.
Royal Australian Historical Society Inc., Walker Collection U0152

> "The weather boarded hut was only two miles further; and there we refreshed, at the highest inhabited spot, of the Blue Mountains. It is a bleak and forbidding place, at the entrance of Jamison's Valley; the soil, is a wet and rotten peat, that after the least shower, will take a horse up to the girths at every step. In addition to the corporal's party stationed in this sterile region, we were surprised at finding an opposition shop newly opened, for the entertainment of travellers. What will not the spirit of English competition bring about ! Here we are in one of the wildest spots in nature, thirty miles in the midst of the mountains of Australia, and nearly 4000 feet high; and yet the question arose "which house shall we go to?" We patronised the nearest, and found ourselves and horses, after a couple of hours, all the better for the rest."[27]

Establishments on the Mountains only provided 'survival' food, and even as late as 1858 that was not always available:

> "Daylight breaks in and we draw up to get a cup of coffee at a public-house some distance from the road side; we get a cup of some kind of decoction (*sic*) resembling coffee in colour, but in all other respects tasting like burnt maize, sans milk, sans flavour, sans relish; having hastily swallowed the cup of coffee, the modest charge of one shilling is made, and we set forth upon our journey once more. A couple of hours driving bring us to Black Heath, where we ought to have breakfast if matters were properly arranged, but where we cannot from some cause of which everyone is ignorant."[28]

Thus what we now know as the Upper Blue Mountains was reached, and according to this 1858 writer the road improved although he seems to have misconceived ideas about the slope of the land!

> "The traveller has now a desert mountain road before him. From the soft and friable nature of the sandstone – the only stone to be obtained along the ridge for many miles – it is in the worst possible condition, and with this material it is equally impossible to keep it in repair. The road for the whole distance to Mount Victoria is carried along the crown of a ridge, with frequent escarpments, to avoid the many rocky peaks and summits that occur in its course;

'Finally the descent from Mount Victoria had to be faced.'

Continued from page 15

it rises by easy gradients until it reaches the Weatherboard Hut, and then gradually descends to the top of Mount Victoria. It requires nothing but a hard solid roadway to make it one of the best mountain roads in the world; as it is, it may be classed with the worst."[29].

Finally the descent from Mount Victoria had to be faced. In 1827 the unstated route was by Lawsons Long Alley:

> "The descent down Mount York did not surprise me, after so much has been said about it. It was the new road and comparatively easy. It is perfectly safe, but rather too narrow, as it will soon become cut up by water channels, after a winter's rain. It should be at least twice the present breadth, with a deep grooved gutter on the high side for the water, and a low parapet on the off-side, of solid stone work, with numerous holes underneath, like scuppers in a ship's deck, to let the water off. We soon arrived at the bottom, where the ground was strewed with fallen trees, in great numbers, all regularly arranged by the road side. As the country was by no means thinly timbered, I could not conceive what these trees were intended for. They all appeared more or less black by age; and it was only after my companion had rode up from the rear, that I understood how the trees came there. ... It appears that all carts coming down the Big Hill, as this is called, must, ere (*?sic*) they descend, cut down a tree at the top, to fix behind the dray, instead of locking the wheel. They were all of great weight and size, and I should have thought much too large for such a purpose."[30]

However by 1848 the Pass of Mount Victoria had long been completed and was then the normal route off the Blue Mountains, but this 'better' descent still troubled some travellers:

> "Descending Mount Victoria by a somewhat precipitous road, covered with loose stones like cannon balls, a viaduct presents itself, connecting the road which is about to be left behind, with a road cut out of the rock in an opposite mountain. This viaduct or causeway is, at a rough guess, about one hundred yards long, is about sufficiently wide barely to allow of two teams passing each other, should such an emergency ever arise, is according to one of the passengers on the coach, who is familiar with the district, 1000 feet high, and is curbed (*?*) on either side by a row of small flags placed upright, end to end. This peculiar parapet which I previously had occasion to notice along the road, gives the causeway a baby-house appearance which contrasts most singularly with the stupendous nature of the works in other respects. Passing to the other side, the descent commences towards Hartley, which is now about four miles distant, the road being, for some length, somewhat similar to that at Lapstone Hill – the hewn rock ascending on one side, while on the other the gully precipitously descends almost interminably. Here is shown the spot where, a short time since, the mail coach went over, killing two passengers out of seven. ... , where the broken carriage remains to this day."[31]

Honour for Andrew Tink

POPULAR former politician, and historian Andrew Tink (pictured) was listed in the 2014 Australia Day Honours list and becomes a (AM) Member of the Order of Australia.

Andrew was recognised for his services to the NSW Parliament, local history and the law.

He has been a great supporter of BMACHO and its member societies being readily available as an excellent speaker.

He has had published three major works: *William Charles Wentworth - Australia's greatest native son; Lord Sydney - The Life of Tommy Townshend*; and *Air Disaster Canberra - The plane crash that destroyed a government.* In July 2013, Tink was appointed as an Adjunct Professor at the Macquarie University Law School.

Joan Smith retires to Melbourne

JOAN SMITH who was highly respected locally for her work as Blue Mountains Historical Society's research officer, has retired from this position.

She is going to live in Melbourne to be close to her daughter and family. This is a loss for the society which will be deeply felt for some time to come.

President of Blue Mountains Historical Society, Mrs Judy Barham said: "Joan joined the Society in 1997. She became research officer and secretary in 2004.

"Joan was an active committee member until she retired from the committee in 2011 while still remaining research officer.

"Joan's contribution to the society has been enormous.

"She has done the research required for over 1,000 house histories which has greatly added to the pool of local knowledge in our files.

"Often phone queries came in which she could answer without hesitation.

"Members with that pool of knowledge are hard to replace. It takes time, dedication and an inquiring mind.

"She was highly regarded by members of the Blue Mountains City Council for whom she did occasional research," Mrs Barham said.

Members of the society who want a quick answer to a question, will no longer be able to say "Let's ask Joan. She'll know".

"We will miss you Joan but the society is so grateful to you for the great contribution you made and we wish you well in your new life."

Joan Smith was a member of the original management committee of the Blue Mountains Association of Cultural Heritage Organisations and her valuable contribution was appreciated.

The railway to the west

Doug Knowles

AS ALL STUDENTS will know the Blue Mountains was first crossed by Europeans in 1813 and within a very short time Evans had surveyed a route and Cox and his party of convicts had built a road to Bathurst. It wasnot until the late1860s when the Lapstone Hill section of the western railway was conquered that the real movement stock and grain was able to be achieved.

Cost constraints by the colonial government meant that expensive tunnels could not be built, so a zig zag layout was devised to get the single track line over the top of Lapstone Hill.

The limitations of the zig zag were later eased by by building a single track tunnel through the top of the ridge in 1892.

This single track tunnel created almost as many problems as it was supposed to solve. In 1910 it was decided to build a double track railway through the Glenbrook Creek Gorge.

President of Glenbrook and District Historical Society, Doug Knowles who has lived in the area most of his life with his inquisitive mind is an excellent choice as a speaker on this subject at this Blue Mountains History Confernce on May 10 at the Carrington Hotel, Katoomba.

Sydney's hard rock story
...the cultural heritage of trachyte

WHAT IS TRACHYTE and how did it become the unsung hero of Sydney's building stones?

The answer is found in this fascinating story of how hard stone quarried in the Southern Highlands of NSW became the city's most important stone after sandstone.

The title provides an apt description: trachyte was Sydney's hard rock.

Sandstone with all its virtues was the premier building stone of Sydney's early and middle years but trachyte had qualities sandstone lacked and so it perfectly complemented the 'yellowblock" of our heritage buildings.

Sydney's hard rock provided what sandstone, with all its beauty, could not provide.

This tough, distinctively coloured igneous stone was first quarried at Mount Gibraltar near Bowral in the 1880s and soon began appearing in the kerbs and gutters along the growing city's streets.

Soon it was adopted by builders and architects and can still be seen overhead in the keystones of the great buildings as well as under foot, in myriad small and large scale projects throughout New South Wales and beyond.

Its importance in the city is why the authors have called their tale *Sydney's Hard Rock Story.*

The book traces trachyte's extensive uses, starting with its geology and some of the dramas of Bowral's 'Gib' and its quarrymen.

It continues by examining its basic utilitarian beginnings like kerbing. After designers were awakened to its qualities they used trachyte to create some of our finest monuments, foundation stones, commemorative plaques and paving.

350 George Street, Sydney, formerly The Equitable Life Assurance Society of the United States building. Its American architect, Edward Raht, believed it would last 'a thousand years'. The facade is almost entirely of trachyte.

A special feature of the book, showcasing many fine and surprising examples of this special stone, is the illustrated trachyte walk in central Sydney. Handsomely illustrated throughout with 245 illustrations including 25 colour photographs.

Publication date: April 2014 **Retail price:** $29.95

Potential readers: Those fascinated with Sydney's built environment, architects, and engineers.

The authors

ROBERT IRVING is an architectural historian, a fellow and former president of the Royal Australian Historical Society (1987) and was a senior lecturer in architecture at UNSW.

He was the co-author of *Identifying Australian Architecture* published in 1989 as well as several other works including *First Views of Australia 1788 - 1825, The History and Design of the Australian House* and *Fine Houses of Sydney.*

RON POWELL is an architect and stone consultant. For a decade until recently he was manager of the NSW Centenary Stonework program, which provides strategic approach to the 'catch-up' of state-owned, heritage stone buildings and monuments; he was also landscape director for Darling Harbour and public domain co-ordinator for the Pyrmont/Ultimo Redevelopment.

A resident of the Blue Mountains Ron is a member of the Blue Mountains City Council's Heritage Advisory Committee.

NOEL IRVING is a research assistant and picture researcher who has worked on publications including *Paradise Purgatory Hell Hole* and *Twentieth Century Architecture in Wollongong*.

He was co-author of *Donald Thomas Esplin Architect: His Life and Work.*

Noel has also served as a member of Sydney City Council's Sandstone and Trachyte Committee.

Wasteland, Wilderness, Wonderland.

Getting to know Sydney's Sandstone Country
Gil Jones

Wasteland, Wilderness, Wonderland is the latest publication produced by Blue Mountain Education Research Trust (BMERT) at Lawson.

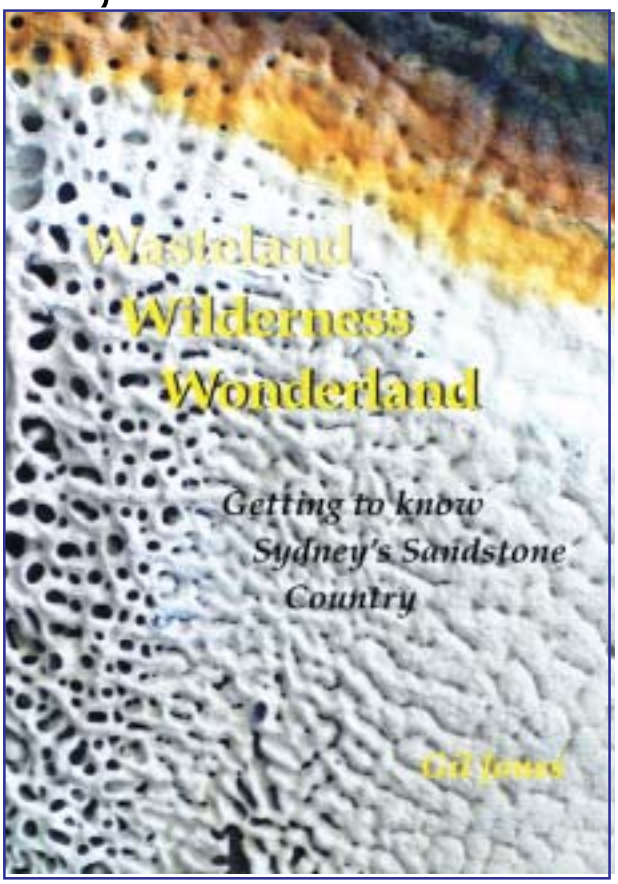
The official launch of Gil Jones book will be at Jamison Park, Wentworth Falls on Saturday, 12 noon on February 1, 2014.

Other publications produced by BMERT, can be viewed at their websitehttp://www.catholica.com.au/marketplace/bmert/ or contact BMACHO secretary, Jan Koperberg j.koperberg@bigpond.com for a full list, with jpgs of the covers and a descriptive list of the publications.

BMERT encourages those with interesting historical and cultural heritage research to commit it to paper and have it published. The books are beautifully illustrated and would make a fine gift.

The following is the description for *Wasteland, Wilderness, Wonderland*: Sydney city stands on the eastern rim of a shallow basin defined by deeply dissected sandstone plateaus encircling the lowlands of western Sydney and extending west to Lithgow, north to the Hunter Valley, and south to the Illawarra escarpment.

In this book, surveyors, scientists, writers and artists are joined in the physical and intellectual exploration of Sydney's sandstone country – its landscape and landscape history, and its distinctively Australian vegetation with its Gondwanan inheritance.



Also recalled is the ruthless dispossession of its first people whose rock engravings and cave paintings provide a glimpse of a sense of country and belonging which is critical to a fulfilled future in this privileged place.

Recommended retail price - $40 including GST, plus postage and handling ISBN 978-0-646-91496-1

Accolades for *HERITAGE*

THROUGH THE YEARS we have received numerous e-mail and communications congratulating those associated with the production of *HERITAGE* and this encouragement is really appreciated.

We strive for excellence, but regret that some times we fall short of the mark. There are many people involved in this publication from writers, researchers and contributors to proofreaders and all deserve credit for the work they are doing to keep alive an interest in our heritage and history and promote it as a living legend.

Space will not allow the publication of each accolade received and again this edition records just a sample of those received since the last edition.

From Dr Peter Stanbury OAM – Individual member of BMACHO: *Another great issue; especially the lead article and yours about the sealing of the road. In fact full of well written news, very welcome in Phnom Penh. Elections here in a week's time, present PM has been in power for 34 years, but will be challenged this time so lots of marching, loudspeakers, roads closed and mass demonstrations here.*

From Kate Santlben: Look forward to reading *HERITAGE* and congratulations on five years of publication...

From Wendy Blaxland, author and descendant of Gregory Blaxland: Thanks so much for another great issue, and many thanks for everything you have done and continue to do to keep the history of the Blue Mountains alive.

From Len Ashworth, OAM – Editor Lithgow Mercury : Congratulations on another great effort. I love reading it (and occasionally stealing from it).

From John Low, OAM - author and historian: *Thank you for the latest edition of HERITAGE and for all the work you put into its production. It is one of the most interesting 'newsletters' around and greatly appreciated.*

From Marcia Osterberg-Olsen Mt Victoria and District Historical Society: *Thanks for the wonderful HERITAGE newsletters.*

The kangaroo that could rewrite history

AN IMAGE of what is thought to be a kangaroo on a 16th-century processional could lend weight to the theory that the Portuguese were the first explorers to set foot on Australian soil, before the Dutch or English.

The document, acquired by Les Enluminures Gallery in New York, shows a sketch of an apparent kangaroo (''canguru'' in Portuguese) nestled in its text and is dated between 1580 and 1620.

It has led researchers to believe images of the marsupial were already being circulated by the time the Dutch ship Duyfken - long thought to have been the first European vessel to visit Australia - landed in 1606.

Portugal was extremely secretive about her trade routes during this period, explaining why their presence there wasn't widely known.

The pocket-sized manuscript, known as a processional, contains text and music for a liturgical procession and is inscribed with the name Caterina de Carvalho, believed to be a nun from Caldas da Rainha in western Portugal.

Peter Trickett, an award-winning historian and author of *Beyond Capricorn*, has long argued that a Portuguese maritime expedition first mapped the coast of Australia in 1521 - 22, nearly a century before the Dutch landing.

National Library of Australia curator of maps Martin Woods said that while the image looked like a kangaroo or a wallaby, it alone was not proof enough to alter Australia's history books.

''The likeness of the animal to a kangaroo or wallaby is clear enough, but then it could be another animal in south-east Asia, like any number of deer species, some of which stand on their hind legs to feed off high branches,'' Dr Woods said.

'For now, unfortunately the appearance of a long-eared big-footed animal in a manuscript doesn't really add much.''Read more: http://www.smh.com.au/entertainment/books/16thcentury-manuscript-could-rewrite-australian-history-20140115-30vak.html#ixzz2qpBjYIoh

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place, Springwood, 2777 (02) 4751 5834 E-mail: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc. (BMACHO) was established in April 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference which sought from Blue Mountains City Council the creation of a cultural heritage strategy for the city.
BMACHO in its constitution uses the definition: "Cultural heritage is all aspects of life of the peoples of the Blue Mountains which was later changed to cover Lithgow and the villages along the Bell's Line of Roads. It therefore involves the recording, preserving and interpreting of information in whatever form: documents, objects, recorded memories as well as buildings and sites."
The objectives of the organisation are:

i. To raise public consciousness of the value of cultural heritage.
ii. To encourage and assist cultural heritage activities of member organisations.
iii. To initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact, to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society Inc.

HERITAGE BMACHO's official newsletter is edited by John Leary, OAM.
Blue Mountains History Journal is edited by Dr Peter Rickwood.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc., Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc, Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc, Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) - Blue Mountains Branch, National Trust of Australia (NSW) - Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant - Katoomba, Scenic World – Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committe, Zig Zag Railway Co-op Ltd.
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE The committee for 2013-14 is:
John Leary, OAM (president), Ian Jack (vice president), Jan Koperberg (secretary), Kevin Frappell, Wendy Hawkes, Doug Knowles, Patsy Moppett, Dick Morony (public officer), Scott Pollock and Jean Winston.

DISCLAIMER Views and opinions expressed in ***HERITAGE*** originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or members. If errors are found feedback is most welcome.

Those Amazing Slab Huts

by Paul Wheeldon

Our earliest pioneers became renowned for their building expertise in the construction of their dwellings.

The Australian outback settler was also famous for his versatile use of the closest materials at hand.

If he had easily quarried stone and little timber, even if he had only the most elementary idea of masonry, he would probably build his habitation in stone, either in perhaps a two room hut or, if his family requirements called for greater accommodation, he would construct a cottage of several rooms.

If he was somewhat of a tradesman at all he would build a pitched roof and if it were to be a better class dwelling he would roof it in split shingles in preference to perhaps a bark roof.

By comparison the majority of outback huts or small cottages were of wooden or slab construction. The early settler learnt quickly that the old English 'wattle and daub' construction was not in any way suitable for the Australian climate.

The most common early constructions were of the 'vertical slab' type.

There were of course a considerable number of variations in their construction in this type alone.

Wingebelaley formerly Cullenbenbong, a slab hut built by Bernard O'Reilly in the Kanimbla Valley and immortalised in his son's book named like the hut. Photograph courtesy Ian Jack 1997

Primarily the frame of the building was erected, commencing with the corner posts, good solid logs of the desired height were let into the ground at least a half metre.

According to the degree of performance required they were either left round or adzed or broad axed into square shape.

Door openings and window outlets were generally indicated by posts.

In the more permanent buildings a base and top plate were prepared again not necessarily squared, by cutting a channel of perhaps 1 ½ inches wide and two inches deep in which to set the adzed and squared ends of the split up-right slabs.

Very often the based ends of the slabs were merely let into the ground, where, of course, they ultimately rotted.

The discriminating builder always used a good base plate set up off the ground on a foundation of stones and lime mortar to prevent rotting.

Stringy bark was the preferred timber for split slabs

The split edges of the slabs were nearly always adzed or squared off to ensure the best possible fit between slabs.

The roof frame was constructed from round timber 'saplings' (small young trees). It was a pitched roof often with 'hip' ends.

In an ordinary dwelling it was invariably roofed with stringy bark, or perhaps, if it was a fair size better class cottage, it may have used a wooden shingle roof requiring very much more roofing battens which has to be sawn.

Hence we do not find any real early primitive huts or houses with shingle roofs.

The early settler only had modest tools and labour so he built in the first instance the most modest dwelling.

The average settler's tool consisted of perhaps an adze, several sizes of augurs and the like, a hand-made driving maul and a set of splitting wedges, an axe, a broad or squaring axe, several hammers, a crosscut saw and possibly a shovel, crowbar and pick or mattock.

Possibly among the greater skills was the selection and preparation of the materials.

Stringy bark was the preferred timber for split slabs, or was it because there was a greater abundance of that timber?

Not only did the selected wood split straight but it was among the most durable of timber.

The discriminating timber worker was particularly fussy about selecting his trees.

It was generally accepted that either the white or red stringy bark was suitable but the tree that grew in the valley or creek beds was the best to split.

A chip would be struck off a tree under selection and the chip split readily in the hand it followed the tree would be a splitter.

Trees off the higher ground were generally the last choice, and if possible were to be avoided for this purpose.

The bark would be used for the roof and again called for some skill in its preparation.

The length would be cut around the top and bottom and then a zig-zag cut would be made from top to bottom and the whole sheet of bark peeled off in one piece. The art of preparing the bark for the roof so that it would not split was often a guarded secret by some.

The Coble family home at Yass in the 1860s (the author's paternal grandmother's family). Often the new house beside the older one and the other was used for other purposes.

It consisted of keeping it rolled up and almost immediately stood over a small fire so that it was virtually a chimney.

According to the condition of the bark it would be roasted, so to speak, for perhaps half-an-hour and then probably turned end for end to complete the process.

The sheets were then carefully laid out on the ground and weighted down flat before being placed on the roof.

It was generally conceded that this heating process also increased its waterproof qualities.

When the bark was placed in position it was generally held down by further timber placed on top of it and dowel pegged to keep it together.

Later, of course, both wire and nails were often used.

The tree was felled by either axe or cross-cut saw.

The slabs were split with maul and wedges.

As regards early huts etc. nails were virtually unprocurable and all jointing was either by mortice or with tenon or dowel pegs.

Yet another variation of the slab hut was the 'drop hatch' construction.

Much more demanding in skill than its more common vertical slab brother, it was considered a more substantial construction, though in actual fact it has not really proved to be. Slabs were mostly adzed both inside and outside.

Continued page 3

‘Another era of an early colonial dwelling has passed…’

All posts, door and window openings were usually channelled down each side.

The specially prepared slabs were then dropped into their correct recesses from the top of the wall and thus laid horizontally one over the other.

More often than not the fireplace was externally of slab with an interior of clay and stone.

Some refinements included the caulking between the slabs with clay mortar generally mixed with animal urine or ox blood.

Later strips of zinc or galvanised iron were tacked between the slabs.

Very often in the primitive huts the earthen floors were of clay, cow dung and urine, which made a fine hard floor.

A hut is generally considered to be a dwelling of two rooms – one portion the living quarters and the other the sleeping area.

On the other hand there have been and still are some quite substantial homes of slab.

Many of these larger slab homes provided comfortable living.

Many had wooden floors and often plaster-lined and offered many refinements.

Such places are to be seen still in use in many areas of eastern Australia.

The earlier dwellings were often lined with newspapers which were continually added to, eventually getting quite thick.

The ceiling was often just suspended hessian or calico.

A somewhat later development many of these dwellings had all refinements including glass windows.

In the primitives the windows were just small opening doors suspended on leather or green hide to act as hinges.

Often the split inside of the slab was adzed to smooth it down and often a verandah was attached over the one end and only door entrance.

It is a tribute to the builders and their selection of timbers that their durability is responsible for their continued use today.

They have outlived their bark or shingle roof and are to be seen with replaced galvanised iron.

Many of them owe the change to iron for the inclusion of an additional verandah or so.

Another era of an early colonial dwelling has passed with the advancement of time.

Those amazing slab huts

Continued from page 3

Building implements and their meanings :

Adze: An ancient type of edge tool dating back to the stone-age. Used for smoothing or carving wood in hand working, similar to an axe but with the head mounted perpendicular to the handle.

Augur: A drilling device, or drill bit, that usually includes a rotating helical screw blade called a 'flighting' to act as a screw conveyor to remove the drilled out material. The rotation of the blade causes the material to move out of the hole being drilled.

Broadaxe: A large broad headed axe used for shaping logs by hewing.

Maul: A large hammer, heavy wood splitting tool resembling both axe and hammer.

ABOUT THE AUTHOR

PAUL WHEELDON the author of *HERITAGE*'s front page story, *Those amazing slab huts* is a member of the Nepean District Historical Society and a committee member of the Nepean Family History Society.

Other memberships include the Goulburn and District Historical Society, the Goulburn District Family History Society also the Collector and District Historical Association. He has contributed articles to a number of these societies.

Paul spent almost all his working career in the University sector, mostly at the University of Sydney and the University of London. He also had some memorable years as Secretary to the Anglican Bishop of Southwark in London.

Recently he was made redundant from the University of Sydney. This has now allowed him to concentrate his time on his passion for family history and local history.

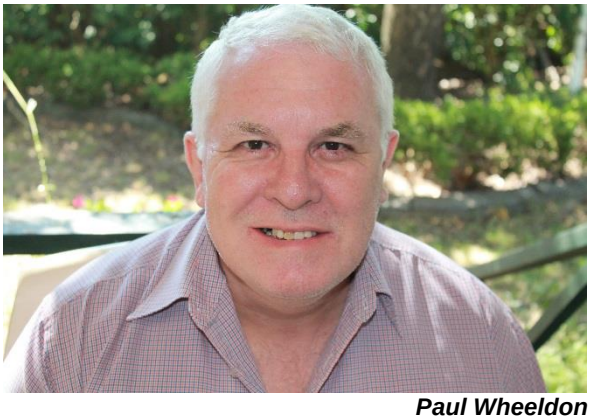
In 1988, the bicentenary year, he organised a family reunion for the Wheeldon family at Collector, releasing a book, *Another Time, Another Place* to coincide with that reunion.

Under the direction of the Anglican Diocese of Canberra and Goulburn, Paul will be releasing a book on St. Matthias' *Currawang* (near Lake George). This will be a history of the church and those who are interred in the cemetery. It is to be released in February 2015 to coincide with the 140th Anniversary of the church.

Following this another publication of *Currawang* local history will be released. The area covered will be Tirranna, Komungla (previously Bangalore), Thornford, Spring Valley and Currawang through to Collector.

A feature of this local history will be the Currawang. copper mines, the largest copper producer in New South Wales from 1866 to 1872.

This article has previously appeared in Nepean District Historical Society's newsletter, *The Arms Chronicle* No. 64 February 2014.



Paul Wheeldon

Oldest known piece of Earth

Scientists using two different age-determining techniques have shown that tiny zircon crystal found on a sheep station in Western Australia is the oldest known piece of our planet, dating back 4.4 billion years. In a recent edition of the journal *Nature Geoscience,* researchers have reported that the discovery indicates that Earth's crust formed relatively soon after the planet formed and the gem was a remnant of it. John Valley a University of Wisconsin geoscience professor who led the research, said the findings suggest the Earth was not as harsh a place as many scientists have thought. The finding supports the notion of a "cool early Earth" where temperatures were low enough to sustain oceans, and perhaps life, earlier than previously thought.

An opinion from the editor…

Western crossing has combined commemoration and celebration

In an address I gave at the recent annual general meeting of BMACHO and circulated to members, I may have given the impression that the activities so far in the Western Crossings 2013-15 program were more celebration and little commemoration.

On reflection it is probably fair to state that In fact there was considerable commemoration as well as celebration.

Although individuals and bodies such as National Trust and the RAHS had been floating ideas for the bicentenary celebrations, the Western Crossings commemoration had its genesis with BMACHO.

However, it was quickly and correctly recognised that this organisation did not have the resources to manage such a venture. BMACHO's committee asked the then long serving president of the Royal Australian Historical Society Associate Professor Ian Jack to explore with the RAHS Council, the idea of co-ordinating the project.

It was pleasing when the RAHS quickly took up the challenge and Professor David Carment, AM very ably took on the role of the first Western Crossings Committee chairman which he continued to do when he became the president of the RAHS.

I recall soon after David took on the task of chairman he, Ian Jack (then the president of the RAHS) and I (then president of BMACHO) met one Sunday afternoon in my home to look at objectives and parameters for the Western Crossings Committee as it was to become known.

From that informal meeting there came a strong recommendation that the commemoration of the bicentenary should be from the period 2013 – 2015 embracing the anniversary of a series of inter – related events after the 1813 exploration by Blaxland, Wentworth and Lawson. George William Evans began his survey for a roadway across the Blue Mountains in November 1813 and went as far as the future Bathurst; William Cox then supervised the construction of the road from July 1814 to January 1815 and then Governor Lachlan Macquarie accompanied by Mrs Elizabeth Macquarie travelled along the new road in April and May 1815 and selected the site of Bathurst.

There is no doubt all those who attended the Western Crossings Committee meetings from the very earliest meeting, were in agreement, time and time again, that the Crossings was a commemoration of all who had crossed, from the very earliest Aboriginal crossings to the crossing by Governor Lachlan Macquarie and Mrs Elizabeth Macquarie and party in 1815.

The European crossings from 1813 are not a celebration for the Aboriginal people and there were many commemorations of Indigenous crossings held during 2014, like the Ancestral Pathways walks organised by Auntie Sharyn Halls , the official opening of The Gully at Katoomba with interpretive signage, the commemoration walk 'Jummangunda Ngunninga' walk from Bardens Lookout to Mt York.

The excellent exhibition in Hartley *A Moment in Time* curated by Joan Kent starting with a very comprehensive history of the Wiradjuri people, through to Governor Lachlan Macquarie is one of the lasting commemorations as is the Western Crossing room at the Mt Victoria Museum and there are others.

As I stated in my annual report,… 'Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

'Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

'The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between Professor David Carment and the then Premier of NSW Barry O'Farrell.'

A knighted architect and patron of the arts, his wife a renowned community worker and photographer, and their family from the 18th century to today …
the Sulmans in the Blue Mountains

By Emeritus Professor of History, Charles Darwin University
David Carment, AM.

Introduction

Thank you for the invitation to speak. I am pleased to be here as I have a longstanding interest in the Blue Mountains and support the work of the Blue Mountains Association of Cultural Heritage Organisations.

My mother's family, the Sulmans, first became associated with the Blue Mountains during the late nineteenth century and with Woodford Academy in the early twentieth century.

Today I want to explain why that association commenced through regular long summer visits and developed after the family acquired Kihilla in Lawson as their Mountains residence before focussing on three family members: my great grandfather the architect, town planner and patron of the arts Sir John Sulman; his wife the community worker and photographer Annie, Lady Sulman; and their son, my grandfather the racing car driver Tom Sulman.

All lived for long periods in the Blue Mountains. I briefly conclude by showing how the family connection continues through to the present.

A summer retreat from the city

The historian Julia Horne explains that from the 1880s the Blue Mountains came 'to be seen as restorative for those seeking peace and quiet from the daily grind, as well as those recuperating from a range of illnesses'.

Late nineteenth century discussion 'focused on the beneficial effects of a dry inland climate at altitudes higher than sea level'. By the end of the century the Blue Mountains were particularly valued 'for their pure air and cool climate during summer months, a retreat from the hot and tiring life of the city'.[1]

These were the principal motivations for John Sulman's migration to Australia and his discovery of the Blue Mountains. Born in England in 1849, he was a successful architect there but migrated to Australia

Ernest Brougham Decker, *The Three Sisters, Katoomba, Blue Mountains NSW,* 1898 (Macleay Museum, The University of Sydney

with his invalid first wife Sarah Clark Sulman, formerly Redgate, and young son Arthur in 1885 after receiving medical advice that Sarah's tuberculosis was so serious that she could only survive in a warm climate.

They decided to settle in Sydney, where John quite quickly became a prominent architect and began his concerns with town planning and the arts. His other two children, Florence (known as Florrie) and Edith (known as Edie), joined John, Sarah and Arthur from England in 1886.[2]

Sarah's condition, unfortunately, deteriorated. She died at the end of 1888.

Continued From page 7
Before then, in searching for a location that would improve her health, John first encountered the Blue Mountains.

In a letter of November 1885, he notes that 'the chief objection to Sydney is the moist enervating climate of the summer months and the more or less moisture laden sea breeze which blows all year round'.

It was necessary for the '4 hot months' that 'my wife must move to a place in the hills'.[3] Initially they preferred the New South Wales Southern Highlands but John also went to the Blue Mountains and writes of its 'bracing' climate.[4]

In summer 1886 he rented a cottage at Lawson, not far from the railway station.[5]

The summer of 1887-1888 was spent in Springwood, where John and Sarah made good friends. Florrie and Edie had school lessons in nearby Falconbridge with the children of a solicitor. It was during this period that John designed the Springwood Anglican church that I discuss later.[6]

The Sulmans, Sydney, 1900.

Back row Florence (Florrie) (1876 - 1965), Arthur (1882 – 1971), front row Edith (Edie) (1878 – 1907), John (later Sir John Sulman) (1849 – 1935), Dorothy Joan (Joan) (1896 – 1973), Thomas Noel (Tom) (1899 – 1970), Annie Elizabeth (later Lady Sulman) (1864 – 1949), Geoffrey (1894 – 1916). Not present John Masefield (Jack) (1906 – 1959). **(Sulman Family Archives).**

John was married again in 1893 to the Sydney born Annie Elizabeth Masefield, who while a young child was adopted into the wealthy and prominent Walker family as a companion for Eadith (later Dame Eadith) Walker, later a well-known philanthropist.

Between 1894 and 1906 John and Annie had four children: Geoffrey, Dorothy Joan (known as Joan), Thomas Noel (known as Tom) and John Masefield (known as Jack).[7]

Annie quickly became fond of the Blue Mountains so regular trips to them continued. Each summer was spent in one or other of the mountain resorts to save the children, John writes, 'from the enervating effects of the moist heat of Sydney'[8]. One year's summer stay was in a large cottage in Katoomba.

John describes a memorable walk then with some of his children and a local doctor as involving a route by: *the Narrow Neck to the State Mine under the Ruined Castle… and* [Arthur's] *refusal to return by the same route because of its length and insistence on making the direct cut across the valley via the wire rope trollies which carried the shale to Katoomba. It looked much shorter but was far more arduous and we had to descend quite a thousand feet to the creek and then climb two thousand to reach the Katoomba look-out where fortunately I found a buggy for hire and we drove home. It almost finished the Doctor who was short and rather stout*.[9]

Other locations visited during the late 1890s were Jenolan Caves and Mount Solitary.

It was also at this time that John and Annie began their interests in photography, in which Annie developed particular expertise.[10]

On Christmas Day 1899 their son Tom was born at the Chalet in Wentworth Falls.[11] The regular long summer stays in the Blue Mountains went on during the early twentieth century.

Kihilla

To alleviate Geoffrey's digestive problems and Annie's rheumatism,[12] in October 1909 the Sulmans arranged to occupy Kihilla, sometimes called Kihilla Park, in Lawson with what a *Blue Mountains Echo* report describes as 'further improvements' being planned there under John's oversight.[13]

In February the following year he successfully applied to have a telephone service installed.[14] Some sources indicate that John purchased Kihilla in 1913 so until then he may have leased it.

While the Sulmans also had a home in Sydney, Kihilla was where the younger children mainly lived with servants and other staff for about 10 years. John and especially Annie were also quite frequently in residence.[15]

Continued from page 8

By this time Edie had died and Arthur, a pastoralist in North Queensland, was only an occasional visitor. The unmarried Florrie came more regularly.

In 1914 she published her much read two volumed *Popular Guide to the Wildflowers of New South Wales,*[16] which she later told me was inspired by her Blue Mountains experiences.

The Sulmans, Kihilla about 1913.Back row Joan, Jack and Tom Back, front row Geoffery, John and Annie. **Sulman Family Archive.**

Tom writes of Kihilla as: *an old mansion with verandahs all around it, big high ceilinged-rooms, standing in 22 acres of land a mile out of Lawson. There were stables, coach houses, and several outbuildings, a large orchard, and bushland – a kid's paradise.*[17]

Kihilla was built in 1883. Largely unchanged since the Sulmans' time, it is a complex of structures set in extensive landscaped grounds overlooking bushland to the north.

The principal house with its former stables and a small cottage are at the site's north end. The former gardener's cottage, now under separate ownership, is close to the Great Western Highway.

Kihilla's attraction to the Sulmans must have been enhanced by its proximity to Lawson, one of the Blue Mountains' most prosperous towns. It had a railway station, good shops, hotels, a post office, and, from 1918, electric power.

The Sulman family owned Kihilla until 1953 but ceased using it after John's death in 1934. It was then leased out to a series of guesthouse proprietors.[18]

Following Annie's death in 1949, it was bequeathed to her grandchildren, the oldest of whom was my mother Diana aged only 22. They could not afford to keep the house and it was sold for what my father described as a pittance.[19] The Church Army Australia now uses it as a retreat and conference centre.[20]

Life at Kihilla was very varied. Although busy with a range of activities in Sydney, John got back as often as he could. Zeny Edwards's biography describes him as having a 'patriarchal disposition' and being 'a strict disciplinarian' but 'loving and fair in his duties as a father'.[21] He did not provide the children with pocket money but allowed them to earn as much as possible by cutting firewood, weeding the orchard and numerous other chores.

'The more we earned', Tom recalls, 'the better pleased father was'.[22]

There were frequent family picnics in the nearby bush. They involved large wicker baskets full of food, rugs and other utensils. Outdoor meals also sometimes occurred under a shelter.

Until 1912, Geoffrey, whose poor health prevented regular school attendance, and Tom shared a tutor at Kihilla.[23] Tom, and later Jack, then attended Woodford Academy, about which I later say more.

Geoffrey loved building model aeroplanes and steam engines in his Kihilla workshop and was fascinated by motor vehicles. On one occasion he and Tom secretly built a full-sized glider, which crashed and disintegrated with Tom as its pilot. He luckily escaped with only a few bruises.[24]

Unable for health reasons to enlist in the Australian Imperial Force after the First World War started and unsuccessful in his attempts to work in the munitions industry, as an unmatriculated student Geoffrey attended engineering classes at the University of Sydney but was often at Kihilla until in 1916 he went to England. There he became an officer in the Royal Flying Corps before dying in an aircraft accident the following year.[25]

It was a tragedy from which Annie never fully recovered.

Joan was dux of the Blue Mountains Girls School at Lawson in 1910.[26] She later married Tom's Woodford Academy friend Dr Bruce Shallard, the medical practitioner son of a well-known Glenbrook apiarist.[27]

In 1912 John bought a family car. Tom describes it as: *a 35 horse power seven-seater SPA, a 4-cylinder, 4-speed Italian car weighing about two tons. It was a beautiful job and quite fast for that period – 65 mph – and very up-to-date with electric side and tail lights and a siren, though it had no generator to keep the battery charged. Unluckily it had loads of brass work which was my special responsibility – no shiny brass, no ride – still, we were all very proud of it.*[28]

With Geoffrey as driver, it took them all over the Mountains on many enjoyable outings. In December 1913 a fire menaced Kihilla until a combination of volunteers and rain put it out.[29]

***A Blue Mountain outing in the family car about 1912. Back seat – Joan, Tom, Annie, Florrie; front seat – Geoffrey, Jack, John. (*Sulman Family Archive).**

Another fire came close to the main house in February 1926. The Katoomba Fire Brigade was called and a 'difficult fight ensued', *The Blue Mountains Echo* reports, 'before it was beaten out'.[30]

After John's death, the President of the Blue Mountains Shire Council, Councillor Percy Wilson, remarked that he was 'very generous to us on the Mountains, and at Lawson especially…that fine property of his is a credit to the place'.[31] There is now a Sulman Road close to Kihilla.

John Sulman's Blue Mountains designs

John's most permanent contributions to the Blue Mountains were the structures he is known to have designed there, all still standing and all with recognised heritage significance.

The first was Christ Church Anglican Church in Springwood, constructed in 1888 and 1889. Now a landmark on the Great Western Highway, it is a fine sandstone building with a simple but sensitively designed interior.

The sandstone is local and the roof is slate. Later extensions to the church to create the chancel, north transept and tower are in keeping with John's original design.

The New South Wales Office of Environment and Heritage Statement of Significance notes that the church's interior 'has an unusually peaceful atmosphere created by the use of pale sandstone and stained timber and restrained detailing'. John's original conception as seen from his drawings, though, was never finished. This included an eastern and a western transept at the church's rear and a large crowning tower between the two.[32]

Another John Sulman church in the Blue Mountains is the former Holy Trinity Anglican Church at Wentworth Falls, also constructed in 1888 and 1889. The Office of Environment and Heritage does not acknowledge him as the architect but Zeny Edwards's carefully researched biography does. It is a well-built wooden structure with a steeply pitched corrugated galvanised steel roof. There are a side entry porch and a single bay sanctuary. The building is now used as a hall.[33]

Perhaps the grandest of John's Blue Mountains designs is Khandala, also known as Kardinia Park, in Katoomba, completed in 1898. A picturesque house in the Federation Queen Anne style, it is situated above a terraced garden where it has uninterrupted views over the Jamison Valley to Mount Solitary, the Ruined Castle and Narrow Neck.

The house is timber framed on a brick base and clad with wide rusticated weatherboards on the ground floor. Some chimneys are topped with corbels incorporating bricks and terracotta pots. A verandah is on the house's southeast corner.

To the north of the house is the original coach house, a large gabled structure.
Ernest and Margaret Young engaged John to design their Katoomba retreat in 1897. By the end of 1898 the house was ready.

Continued from page 10

In the original plan a drawing room, dining room and nursery were on the ground floor.

Before the house was completed, the Youngs had another child with a further baby expected, so a playroom was added to the original design.

More than most late nineteenth and early twentieth century retreats in the Blue Mountains, Khandala represents, according to the Office of Environment and Heritage, 'many of the attributes sought out by those who could afford to develop a summer home in the mountains'. It is also 'a particularly fine example of the Federation Queen Anne style'.[34]

Former Holy Trinity Church Rectory, Wentworth Falls. No date. **(pigott-gorrie.blogspot.com)**

Former Holy Trinity Church, Wentworth Fall about 2013. (pigott-gorrie.blogspot.com)

Very different is the smaller and far simpler former Holy Trinity Rectory in Wentworth Falls erected in 1906, still extant but no longer on its original site. Limited funds only allowed for a quite basic timber structure and there was a delay of six years between John doing the plans and the Rectory being built.[35]

The Honour Gardens in Lawson are most recent of John's Blue Mountains designs.

They were partly a labour of love in memory of Geoffrey. He and Annie also endowed in Geoffrey's name a memorial prize, later converted into a memorial lectureship, at The University of Sydney. From 1919 John chaired the New South Wales War Memorials Advisory Board, whose name was changed in 1921 to the Public Monuments Advisory Board.

[35] *Ibid.,* p 179.

Continued from 11
The state's Local Government Act required its approval of design and site before any monument could be erected in a public space.

As the historian Ken Inglis writes, John 'put much energy into the job of influencing how other people commemorated their war dead'.[36]

The First World War had a major impact on Lawson as it did on other Australian small towns. Many memorial gardens were planted across Australia but Lawson's are now unusual in retaining their original form.

Working closely with the Blue Mountains Shire Engineer, John initially created the gardens in 1918 and 1919. The layout shows his love of order and symmetry.

Permission to erect a substantial archway at the Avenue's entrance was granted in 1920. Improvements John proposed to the Shire Council, including the stonewalling on the Gardens' western side, were implemented in 1928.

John supervised this work without a fee. Geoffrey's name is inscribed on the stone arch war memorial at the gardens' entrance that was designed by Sir Charles Rosenthal and completed in 1923.[37]

Annie Sulman: community worker and photographer

Annie's early life was tragic.

The granddaughter of an Irish convict and the daughter of an insolvent Sydney schoolteacher who died in an asylum for the insane, before she was 12 years old her parents and both her siblings were all dead, and the Walker family adopted her.[38]

Her difficult early years combined with the Walkers' strong belief that wealthy people like them had a duty to help the less fortunate and participate in community activities, led to her active support of a range of worthy causes.

She took a quite prominent part in the 1913 celebrations at Lawson to mark the centenary of the first known European crossing of the Blue Mountains. At a ceremony in Lawson on May 28, 1913, she drove a peg on the spot where an obelisk to the explorer William Lawson was to be erected.[39]

For many years she served as President of the Lawson Branch of the Red Cross. In April 1915 she presided at a successful Red Cross fund raising concert in Lawson, at the end of which she strongly appealed to Lawson's women to join the 40 already engaged there in Red Cross work.[40]

At about the same time, the Red Cross published her poem *The Call of the Red Cross* that revealed intense wartime patriotism but not any noticeable poetic skills. It begins:

For the Love of King and Country!
There cometh oe'r the sea,
The call to Every Woman
In our land so wide and free

And finishes:

Oh! Britain, grand old Britain,
We send across the sea,
Our kitchens, lorries, motors,
And all for love of thee.[41]

So far as I am aware, it does not appear in any poetry anthology. In an address to the Lawson and District Horticultural Show in February 1922, she expressed particular concern for the returned soldiers whose nerves were shattered at the front, strongly recommending gardening as an activity that would restore their mental well-being.[42]

Annie 1931. **(National Library Australia)**

A *Sydney Morning Herald* report of March 1925 in commenting on what it called Annie's 'unfailing service' to the Red Cross in Lawson and elsewhere remarks that no one 'has done more in quiet service to invalid retired nurses'.[43]

Another passion was photography, a skill that she developed during the 1880s and 1890s. In addition to taking numerous photographs of relations, friends and

Continued from page 12
places, she was expert in photographing Australian wildflowers, many of which were in bush near Kihilla.

The major Australian publisher Angus and Robertson produced her two books of photographs *Some Familiar Wild Flowers* and *Australian Wild Flowers*.[44] Both were well received and reprinted.

In their prefaces she states her modest purposes. The first book's preface reads in part: *This small collection of wild flower photographs was originally started entirely for my own use and pleasure; but finding many others similarly interested, I am making this attempt to share it with them.*[45]

The second says: *As one flower-lover to others, I offer some more photographs of our most familiar and easily-found wild flowers, hoping that among them they may find some old friends and that, in looking for those unknown to them, a fresh interest may be added to their rambles in the bush. In no sense of the word am I a botanist, hence the flowers in my book are simply arranged as fancy dictated, without regard to order or family.*[46]

Tom Sulman: the beginnings of a life with motor vehicles and his education at Woodford Academy

From an early age Tom was obsessed with motor vehicles. The sections of his autobiography dealing with life in the Blue Mountains discuss little else.

He recalls in some detail how in about 1908 he had his first ride in a motorcar, which the family hired for a journey from Katoomba to Jenolan Caves.

'The trip', he writes: *was very little faster than the usual transport – a coach and four – but what a thrill!. Even though it boiled furiously and numerous stops had to be made to cool down and refill the radiator, and we had to get out and walk up Victoria Pass on the return run.*[47]

When he was about 10 Tom decided to become a racing car driver. He built a billycart with pram wheels, a steering wheel cut out of the side of a butter box, and cable and bobbin steering.

He then constructed a track down the slope of Kihilla's orchard with various types of corners, a hard surface of rolled cinders and a fairly steep gradient. He practised for hours on this.

At weekends Geoffrey timed him with a stopwatch and started him off with a homemade flintlock pistol.

***Tom on is billy cart, Kihilla, about 1910*. (Sulman Family Archive).**

Later Tom built what he called a 'de luxe' model with pushbike wheels that he used to go down a steep hill on the main road. This proved his undoing. The steering failed and as there were no brakes the billycart went over a cliff and was destroyed. Tom only just managed to jump clear.[48]

He entered Woodford Academy as its 83rd enrolment on February 2, 1912. The school was then only five years old.

Located in a former inn built during the early 1830s, with John McManamey as owner and rector it offered a curriculum based on the liberal arts. Commercial subjects were also available.

Rather oddly, the admissions register describes Tom as a Congregationalist[49] although John had abandoned Congregationalism for Anglicanism shortly after arriving in Australia, he and Annie were married in an Anglican church, and Tom described himself as Church of England when he enlisted in the Australian Imperial Force in 1918.[50]

Tom's autobiography says very little about his schooling and does not even directly mention Woodford Academy. 'I am afraid', he observes, *I could never boast of my scholastic ability, the main trouble being that most of my schooldays were during the war and my ambition was to follow in Geoffrey's footsteps and enlist in the Royal Flying Corps, beyond this I could not think*.[51]

That, however, is something of an exaggeration, as Geoffrey did not join the Flying Corps until 1916. Tom's best subject was mathematics.[52]

Continued from page 13

He also performed quite well in athletics events.[53] He finished school at the end of 1917[54] but left a permanent legacy in the form of his name prominently carved into a desk.[55]

By October 1918 he was studying engineering at the University of Sydney but that may have been, like Geoffrey, as an unmatriculated student.[56] He maintained contact with the school, in 1922 being elected to the committee of the Woodford Old Boys' Union.[57]

Immediately after leaving school he worked on his brother Arthur's North Queensland station.[58] On November 5, 1918, just before the First World War ended and with his parents' reluctant agreement, he enlisted in the Australian Imperial Force. He was discharged in early January 1919.[59]

During the years at Woodford Academy, Tom continued to spend as much time as he could with motor vehicles. His main reading was motorcar and motorcycle magazines.

At the age of 15 he resurrected Geoffrey's old two and a quarter horsepower motorcycle from the scrap heap. After fitting it with a magneto and carburettor, he took it out on surreptitious rides until he got his licence and had the motorcycle registered at the end of 1916.

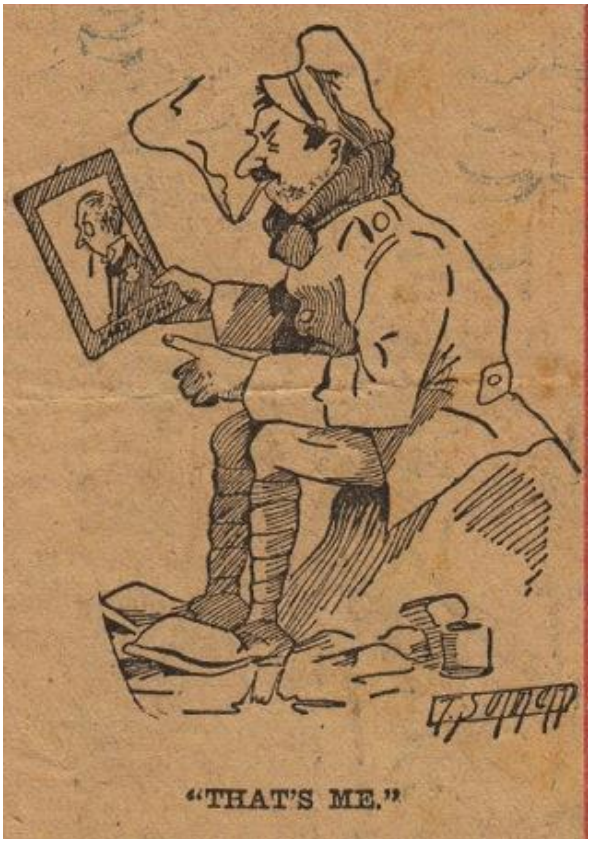
Because he could not afford much petrol, he ran the vehicle on kerosene taken from the household supply with a bottle of petrol in his pocket to start it up. The motorcycle broke down so frequently that Tom believed he must have pushed it further than he rode it.

Eventually it fell apart, sending Tom into a ditch as it did so. This was, he writes, 'the first time I broke my nose and had concussion, not the last by any means'. With John's financial help, he then bought a six horsepower racing motorcycle that proved more reliable.[60]

An accomplished pen and ink artist, Tom covered the costs of running this vehicle by regularly publishing cartoons in the Sydney newspaper *The World's News.*[61]

Geoffrey taught Tom to drive the family S.P.A. car around Kihilla's grounds in about 1914. Following Geoffrey's departure for England, John decided that once Tom got his licence he could take over Geoffrey's driving responsibilities.

Before then, because the car had been unused for quite a long time, Tom had to do a lot of mechanical work on it.



***Tom Sulman, "That's Me", cutting from "The World's News" 1917*. (Sulman Family Archive)**

He then for about a year from the beginning of 1917 drove the family in the car every weekend. The first journey proved a disaster as the tyres were perished, resulting in five punctures.[62]

One journey involved, Tom recalls: *a 1000-mile tour, quite a major undertaking in those days as all roads were un-Macadmised outside the major cities and garages few and far between.*

Luckily we had a practically no-trouble run, except for several punctures and a couple of broken springs which were expected with the bad roads, cart springs and no shock absorbers.

My father used to tell me to 'steady down' if the speed exceeded 40 mph, except when we were overtaking another car when he would cast a blind eye on the speedometer until we passed, explaining to my mother that the dust was not good for her.[63]

Before Tom departed for North Queensland he taught Joan to drive the car. Because she was unable to start it, which required using a large handle, John replaced the S.P.A. with a 20 horsepower Dodge that was started more easily.[64]

Continued from page 14

Although mostly based in Sydney, Tom's participation in motor vehicle races and trials between 1919 and his death while racing at Bathurst in 1970 sometimes brought him back to the Blue Mountains.

He also until the late 1920s quite regularly stayed with the family at Kihilla. It was there during 1920 in Geoffrey's old workshop that he built a prototype of the Sulman Simplex cycle car that John financed.

This was a two-seater, light tourer powered by a 12 horsepower, twin-cylinder, air-cooled engine. Despite a solid rear axle, it had a sporty performance. Tom found business interests prepared to provide further finance and by 1923 had in Sydney built three more of the cars that were well received.

As the motoring journalist Pedr Davis tells the rest of the story: *Orders for the light car were most impressive and Tom stood by, ready to launch a public company and enter the production field with gusto. Unfortunately, Lord Austin chose that precise moment to invade the Australian market with his diminutive "Seven". Tom's backers panicked and cooled off abruptly. Plans for the public company disintegrated and Tom was left with a bundle of parts and a flattened bank balance.*[65]

David Sulman Carment, AM

The author of this article Emeritus Professor of History, Charles Darwin University David Carment is the great grandson of Sir John Sulman and Lady Sulman who followed by their descendants have lived and/or been associated with the Blue Mountains for more than a century.

David a former president of the Royal Australian Historical Society and the inaugural president of the Western Crossings committee set up to coordinate the bicentenary of the first European crossing of the Blue Mountains activities, presented this paper at the 9th annual general meeting of BMACHO. David has had a distinguished career in academia and as the director of National Trust (Northern Territory).

He was recognised in the Order of Australia for services to the community as an advocate for the protection of Northern Territory cultural heritage, and to the scholarship and dissemination of knowledge of Northern Territory history.

An enduring connection

Even after the Sulmans stopped using Kihilla in 1934, various family members in addition to Tom travelled to the Blue Mountains.

From the 1950s my own family went there quite frequently.

In 1957, for example, we stayed in a rented house on Cliff Drive in Katoomba, enjoying walks, picnics and car trips to various beauty spots that the Sulmans first saw during the late nineteenth century.

My mother Diana from time to time told stories of Kihilla, which she and her younger cousins once briefly owned.

Tom's daughter Diana Inglis Carment (1927 – 2005) on holiday in the Blue Mountains,1957. **(Carment Family Archive)**

A few years ago I followed in my great grandmother Annie's footsteps by becoming involved in commemoration of the Blue Mountains' first European crossings.

A permanent family connection was re-established in 1987 when my sister Annie and her partner Vittorio Cintio bought a house in Wentworth Falls, the town where Tom Sulman was born. They have lived there ever since.

My now deceased parents regularly went to see them. My brother Tom and his family and I have done the same.

Three of Annie's five children, all educated at Korowal School in the Blue Mountains, have now left home but two live in other parts of the Mountains.

Her daughter Talulah's house is very close to Woodford Academy. They often return to Wentworth Falls, particularly for the lunches that Vittorio now organises on most Sundays where family and friends get together.

As frequently as possible these are outdoors, continuing the tradition established at Kihilla so many years ago.

[65] Pedr Davis, 'The Tom Sulman Story', in *Sports Car World*, December 1957, p 59.

New faces on BMACHO management committee

There are three new faces on the management committee following the 9th annual general meeting of the association held recently a Woodford Academy recently.

They are Richard Woolley (Blue Mountains Historical Society), Suzanne Smith (Kurrajong-Comleroy Historical Society) and Roy Bennett (Mt Victoria & District Historical Society).

They replace Jean Winston (Mt Victoria and District Historical Society) Kevin Frappell (Glenbrook & District Historical Society who did not seek re-election and Doug Knowles (Glenbrook & District Historical Society who resigned late last year to devote more time to his society of which he has been the president for several years.

John Leary, OAM the inaugural president of BMACHO now in his 7th year at the helm returned to the office last year after a 2 year break due to ill health.

John welcomed the new committee members and congratulated those who were re-elected.

Those re-elected are Associate Professor Ian Jack (individual member) as vice president for the 9th year, Jan Koperberg (Blue Mountains Family History) as secretary/acting treasurer, Dick Morony (Springwood Historical Society) as membership officer, Scott Pollock (Everglades Historic House and Garden), Wendy Hawkes (Lithgow City Council's cultural heritage officer and manager of Eskbank House).

In welcoming them to office John said that present and past committee members had a wealth of knowledge and experience right across the heritage sector.

These committees had available to them members including those from academia, the heritage/history professionals, and the amateur enthusiasts all of whom had proved to be invaluable.

BMACHO president John Leary has said the 2014 – 15 management committee will face many new and continuing challenges.

Among these issues will be the effect of anticipated government funding cuts, development of the proposed heritage trail promotion, the adequacy of and ability to sustain the level of service to members, a review of the association's constitution and vision, assistance to member societies in recruiting and retaining volunteers, further engagement with the Indigenous peoples and their cultural heritage and many more.

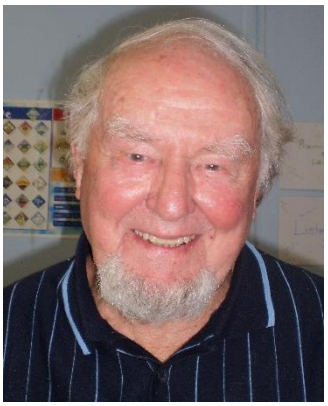
There will be many more activities associated with the 2013 – 15 Western Crossing Bicentenary commemorations in which individuals and various societies as well as BMACHO will support as the 3 year event moves further westward to Bathurst.

In presenting the president's report, John Leary praised the most improved professionalism of museum exhibits by organisation.

"I watch very little television. However, I do try to stay awake for any of David Attenborough's documentaries", Mr Leary said.

"Recently, I was enthralled when the wizardry of computer graphics, manipulated remnant fossilised bones to bring alive priceless but normally stuffy skeletal exhibits at the British Natural History Museum.

"When the museum closed for the night out came the creatures of the Jurassic era. Like the fabled wooden soldiers in the toy shop strutting their stuff as the clock struck midnight.



Roy Bennett

Richard Woolley

Suzanne Smith

"Instead of towering and fearsome reconstructed skeletons of dinosaurs bolted to the floor and wired to the roof, the giant brontosaurus roamed the galleries of this great museum, while menacing pterodactyls, the winged lizards flew above the exhibits and the Yeti humorously taunted the viewer from behind columns of the magnificent building.

Continued from page 16
"I thought wouldn't it be great if local museums could produce computer graphic enhanced exhibits like those in the documentary.

"Then I was jolted out of my reverie.

"Wait a minute, I thought -- what about the Governor Macquarie Room and the dramatically improved curating of living history at the Mt Victoria Museum sufficient to attract a substantial grant from the National Library of Australia?

"What about the fabulous 'Red Admiral' exhibition on the life of Patrick White at Mt Wilson?

…the awesome exhibit acclaimed by the Governor of NSW

"What about the awesome exhibit acclaimed by none other than the Governor of NSW, at Hartley Vale, the Joan Kent curated exhibit, 'A moment in time'?

"What about the innovative miners' bath house conversion into an auditorium media presentation at the Lithgow State Mines including the telling of the Fire in the Mine story which recently won two Museums & Galleries NSW awards?

"What about the ongoing first class exhibits at Norman Lindsay Gallery at Faulconbridge and 'Tarella in the grounds of the Blue Mountains Historical Society's property at Wentworth Falls?

"And how can anyone forget the visual delights of the Blue Mountains Botanic Garden at Mt Tomah and the spectacular all seasons gardens of Everglades.

"Then there is the intrigue of the Turkish Bath House again at Mt Wilson.

Turkish Bath House at Mount Wilson

"A century ago in 1914 a locomotive depot was established at Valley Heights and here we find perhaps not a living history but the actual locomotives that climbed the Blue Mountains in those early days of rail --- all steamed up and on show; while over Kurrajong way undergoing transformation is a spectacular collection of exhibits at the Transport Signal and Communication Museum.

"The Kurrajong-Comleroy Historical Society, Blue Mountains Historical Society, and the local studies units in the municipal libraries at Penrith, Springwood and Lithgow have well over 10,000 images catalogued and much of this now digitally archived.

"At Emu Plains there are thousands of photographs and local artefacts collected and curated by the Nepean & District Historical Society housed in the former Arms of Australia Inn built in 1893.

Woodford Academy

"Here at Woodford Academy we have a property that goes back to the 1830s as a wayside inn.

"At Scenic World in Katoomba, the Hammon family have done a fantastic job retracing and preserving the early mining cultural heritage of Jamison Valley combining it with a world class tourist attraction.

"And there's a lot more heritage sites, all of which are part of our cultural heritage, set in the wonderful UNESCO World Heritage listed Blue Mountains National Park.

"In commerce jargon we have the product let's go market it. And market it is what we are about to do.

"A bloke named Richard Woolley from Blue Mountains Historical Society attended one of our workshops in the Western Crossing Room at the Mount Victoria Museum earlier this year and in his own words came away inspired to do something about marketing a Heritage Trail and that very night e-mailed me his idea about marketing heritage throughout the region.

"I asked him to head up a working party comprising Wendy Hawkes from Lithgow's Eskbank House, Scott Pollock from Everglades and Lynn Collins BMCC museums adviser. Richard has some expertise in the field of marketing, Wendy could sell refrigerators to Eskimos, and Scott is Mr Can-do in all he aspires to do while Lynn brings a wealth of experience in museums and heritage.

SOME OF THE HIGHLIGHTS OF THE YEAR

"In this annual report from the president, I do not propose to go into detail on everything with which BMACHO and its constituent societies has been involved for the past 12 months, as most of it has been reported in the association's

Continued from page 17
newsletter *HERITAGE* and other regular e-mailed bulletins. Rather I will only touch on one or two significant issues.

THE FIRES

"The year 2013 will be remembered sadly as the year that nature in all her fury swept through the Blue Mountains, Lithgow and neighbouring districts destroying property including more than 200 homes. Fortunately, no lives were lost and this was in no small way due to the dedication and bravery of the volunteer firemen who often put their lives on the line to fight the insatiable monster. The fires brought out the best in people and this in itself is part of the cultural heritage of this region and in the years to come will become part of history.

"A number of our members were badly affected by the fires, Rob Cameron a former president of Mt Victoria & District Historical Society was one of those to lose his home while the Zig Zag Railway Co-op Ltd lost a great deal or had damaged a great deal of its rolling stock and equipment while the State Mines Museum at Lithgow was in direct line of the fires.

"The irreplaceable art collection at Norman Lindsay Galleries was hastily moved to safe storage and other individuals were evacuated for their own safety.

THE WESTERN CROSSINGS 1813-1815 BICENTENARY CELEBRATIONS

"In the first year of the Western Crossings celebrations there were numerous activities to mark many aspects of the western crossing and many of these have been reported in the media and various newsletters.

"Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

"Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

"The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between our guest speaker at today's meeting Professor David Carment and the then Premier of NSW, Barry O'Farrell.

Phil Hammon and Tom Colless celebrate the bicentenary

"Measured in many regards the commemoration and celebration rather than commemoration could be judged as a success. However, with the lack of substantial funding many believe the event missed its much wider potential including that of leaving a lasting commemoration.

BMACHO MEMBERSHIP

"In the past 12 months membership has increased with the Nepean District Historical Society and the Paragon Restaurant coming on board and as I understand it the Hawkesbury Historical Society is about to apply for membership.

"It is pleasing that at the two general meetings held in this period that members considered that BMACHO was both relevant and apart from several minor administrative issues sought no change in the management committee's direction.

PLANNING AND ADVOCACY

"BMACHO has continued to be affiliated with the Better Planning Network which was principally set up to oppose much of the proposed legislation by the NSW government which leaves heritage even more exposed to threat of destruction by developers.

"A major submission by BMACHO supported much of Blue Mountains City Council's response to the mandatory 'one size – fits all' planning instrument in preparing the city's Local Environment Plan 2013 for the NSW government's planning department.

"BMACHO's support for deviances from the standard instrument recognised the city's unique and special characteristics.

"BMACHO's submission drew attention to the nature of the villages and townships coupled with the renowned natural beauty of the mountains and the abundant reminders of Australia's early history and cultural heritage which allows local residents to experience a state of satisfaction with 'their

Continued from page 18
lot' and helps create a feeling of personal wellbeing.

"BMACHO became aware towards the end of last year that Blue Mountains City Council was about to seal parts of Old Bathurst Road, (formerly Cox's Road), Woodford including some of the original construction by William Cox.

Stone wall part of the original Cox's Road under threat

"In collaboration with local residents, in a very short time an argument was put together, against the sealing and damage to the remnants of one of the oldest roads in Australia. A strong protest was put before council about this proposed heritage vandalism by local government. Jan Koperberg, Ian Harmon Juliana Swatko a local resident, and I addressed a meeting of the full Blue Mountains City Council objecting to the proposal last year.

"As a result council agreed to have a professional heritage archaeologist investigate the damage already done and the value of the road as a heritage site. The matter has been stalled in council for almost 6 months.

"Blue Mountains City Council has consulted BMACHO on a number of issues and most recently the future of the Stationmaster Cottage at Lawson. There has been a close relationship between BMACHO and council's heritage adviser Christo Aitkin and Museums Adviser Lynn Collins.

"BMACHO's representative on BMCC heritage advisory committee has had input in numerous issues and was on the panel which allocated funds from the Local Heritage Fund.

FUNDING

"In the past 8 years BMACHO has been reasonably able to fund much of its activity including workshops, from government grants, and public authorities but for various fiscal reasons these sources are expected to be less forthcoming in the immediate future. BMACHO in the year ahead will need to look to some belt-tightening and find alternative sources for funding.

THANKS TO MANY

"Finally, I thank our member organisations and individual members for the support, encouragement and trust they have placed in the association's committee. It has again been my great pleasure to work with a quite unique body of people who have led and directed the association for another year. This committee has a great mix of personnel from academia, professionals and dedicated volunteers bringing to the committee a very experienced and balanced approach in regard to cultural heritage.

'Once again this report does not allow for the real appreciation I feel for the members of the committee to be expressed. However, I know that most will be aware I trust, the few words I have to say about them now, are accepted as a mere modicum of the real esteem in which I hold them, for the invaluable work they are doing within the heritage sector.

"In previous annual reports in thanking our vice president Ian Jack I have touched on his lifetime of involvement in cultural heritage and Australian history and as each year comes and goes I wonder how Ian is able to provide an ever increasing support for the heritage movement.

"To list Ian's achievements, the organisations he supports and the bodies which seek his professional advice would take pages. Ian your involvement as vice president for the past 8 years has been exceptional and I thank you so very much for this and for what you have helped me achieve and learn in the heritage sector.

"Our secretary Jan Koperberg never ceases to amaze me for her capacity to achieve. I have said it before but it is worth repeating:

"I have worked with many secretaries and few have come anywhere near the excellence that Jan has exhibited.

"She is on the ball all the time, her minuting of meetings leaves no doubt as to the decisions and why they were made and which appear in easy to read documents.

"Jan is not only an extremely able and efficient administrator but she also is in her own right a keen explorer of history and our heritage, contributing a great deal to this and other organisations.

"Jan's energy is also incredible and I am not sure just how many groups she belongs to or supports but I do know how much time she gives to BMACHO and this is quite staggering. Jan you are great to work with and Nanette and I enjoy your company.

"Dick Morony has again kept our membership records in a good condition and it is always a pleasure to have him along at our meetings contributing the benefit of his long experience in the heritage sector.

"Doug Knowles, Kevin Frappell and Jean Winston brought to the management committee not only a vast expertise of local history but also have a good

Continued from page 19
understanding of what the smaller historical societies need and limitations are within the heritage sector and to them. I am grateful and will miss them on the committee in the coming year.

"Patsy Moppett has continued to provide a valuable contribution to the committee. Her knowledge of local government planning is extremely valuable I and others also value the work she has done with National Trust and others to preserve the western end of the iconic Cox's Road. Thank you Patsy for your involvement.

"Scott Pollock and Wendy Hawkes have brought to our management committee not only the expertise they have built up with the properties they so ably manage in the case of Scott, Everglades and Wendy Eskbank at Lithgow but also a vibrant enthusiasm of younger people. They both have a keen interest in cultural heritage and have been a great asset to our deliberations.

"I am delighted they will stay on the committee. Thank you Wendy and Scott.

"Most will be aware of Nanette's ill fortune and the frustrations she is still experiencing but as she has done so lovingly for more than 60 years, 57 as my wonderful wife, she is still supportive of my involvement in activities and I am delighted she is with us today.

A clever illusion: a real table and glassware in front of the graphics of Governor Lachlan and Elizabeth Macquarie drawn by Clive Jones

"Thank you one and all for the support you have given us during yet another year as president of the Blue Mountains Association of Cultural Heritage Organisations Inc."

John Leary, OAM

THE GREAT WAR THEME FOR HISTORY WEEK 2014

The Great War will be the theme of the History Council of NSW History Week, which this year runs from September 6-14.

It was to be "the war that will end war" as H.G. Wells commented in August 1914. From the heights of hope to the horror of the trenches, the Great War changed the world irrevocably.

It separated families and lovers, turned young men into soldiers and young women into nurses, converted friends and neighbours into enemies.

The unusual circumstances of warfare intervened with each aspect of life. In which ways did the conduct of war shape, change and inform those fighting and those remaining on the home front?

How have historians approached complex topics surrounding it, such as the scale of violence, women's involvement in war, forced migration? What impact did the Great War have on the cultural memory of those involved – allies and enemies?

In the aftermath of 1915 Australians elevated the Gallipoli landing into a foundation story, which claims that the nation was born on this battlefield, but there are more layers of remembrance yet to be uncovered and examined. History Week 2014 will explore the impact of World War 1 abroad and at home.

Sydney University historian Julia Horne to open Blue Mountains History Conference

Pursuing Wonder in the Blue Mountains'' is the title of the keynote address to be delivered by Sydney University Associate Professor Julia Horne at the Blue Mountains History Conference to be held at the heritage listed Carrington Hotel, Katoomba on Saturday May 10.

Dr Horne (pictured right) has taught history at UNSW, worked as a curator in social history at the Powerhouse Museum, pioneered local history outreach programs and spent hundreds of hours interviewing people about their lives as Head of the Oral History Program in the UNSW Archives.

She has been a member of the Council of the Royal Australian Historical Society since 2007, and in 2009, was appointed member of the governing council of the Australian National Maritime Museum

Dr Julia Horne's research interest include: The public university in Australasia 1850-1918; various aspects of oral history including memory, biography, 'the interview', and oral history as a form of modern personal papers; overseas students in Australia in the 1950s and 1960s and history of travel, tourism and natural landscapes.

At the University of Sydney, the role of University historian is as public historian responsible for various university history-related tasks such as maintaining the university's oral history program and developing strategies to promote the university, its heritage and history to the wider community.

After morning tea Associate Professor Ian Jack will speak about 'The Heritage of Education in the Blue Mountains' followed by heritage architect, Hector Abrahams who has chosen as a title for his paper, 'The Heritage of Religious buildings in the Blue Mountains'.

Ian Jack is no stranger to most who have an interest in Australian history and the nation's heritage.

Often described as a consummate scholar, Ian has been associated with local history groups throughout the region and in fact throughout NSW and farther afield in Australia, providing the benefit of his well versed advice freely to those many historians and others who frequently seek his assistance.
Ian has the greatest respect for the army of volunteers who research material, and work with collections in towns and villages around the country.

Ian Jack (pictured right) was president of the Royal Australian Historical Society for 11 years, is president or a senior member of many historical and heritage groups including being president of the Hawkesbury Historical Society and for the past 8 terms vice president of BMACHO.

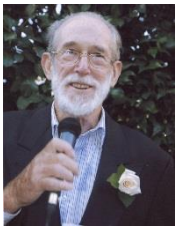
The last speaker before lunch, Hector Abrahams (pictured below), also a former president of the RAHS has brought to his firm a philosophy that old buildings have to be understood, kept well and made liveable and workable for people in today's world.

Hector has said: "Churches are for the long-term, and faith communities have such different needs from decade to decade. It is most important to recognise this.

"A good church has to be able to withstand the vicissitudes of church life, and to have an enduring aesthetic."

Lunch will be served in the heritage dining room of The Carrington and this will be followed by a musical interlude by Christine Wheeler and Friends with songs from "Rain in the Mountains – Songs of Henry Lawson".

Ms Robyn Parker, proprietor, The Paragon Restaurant Katoomba and Dr Ian Jack will conduct a question and answer segment about this iconic restaurant



The final speaker for the day will be Doug Knowles, whose subject is the Great Western Railway – Lapstone Hill, the first challenge.

31 sculptures set among an ancient rainforest

Featuring Ken Unsworths Harlequin's shuttle

Thirty new sculptures framed by Blue Mountains ancient rainforest, artist led workshops for children, and an 8 metre commissioned artwork by renowned Australian sculptor, Ken Unsworth AM, are part of Sculpture a Scenic World 2914 now on until May 18, 2014.

Blue Mountains Gazette review reports, Ken Unsworth has fond memories of the Blue Mountains and has made many journeys Scenic World's rainforest during the seven day process to install Harlequin's Shuttle beneath the majestic canopy.

The8 metre sculpture will remain in situ for the duration of the exhibition.

Two years in the waiting Harlequin's Shuttle is the first time iconic sculptor Ken Unsworth has exhibited in the Blue Mountains within his illustrious career spanning over four decades

The Jurassic landscape and mining relics at Scenic World create a unique setting for the exhibition featuring sculptures from the People's Republic of China, Hong Kong, 17 from NSW,10 from the Blue Mountains and one from Tasmania.

David Hammon, joint managing director said Scenic World is thrilled to deliver the third annual exhibition. "Ëach year the artists continue to surprise and inspire us with their vision, as they collectively transform our rainforest into a stunning outdoor gallery for our visitors to enjoy," said Mr Hammon.

Exhibition manager Lizzie Marshall, said , "This exhibition is an exceptional showcase of Australia's sculptural scene and the Blue Mountains as the City of the Arts. The artists have developed different frameworks to respond to the natural environment.

"Key themes include absorptive black, reflective surfaces and architectural responses to the rainforest," Ms Marshall said.

Participating artists will also have the opportunity through a new partnership between *Sculpture at Scenic World* and the Blue Mountains Cultural Centre to exhibit at the Cultural Centre from June 9 to July 7.

Katoomba's unique World War 1 memorial

By Joan Edwards – member, Blue Mountains Historical Society and former president Blue Mountains Family History Society

While Blue Mountains has many World War 1 memorials, Katoomba's is unique, namely the Blue Mountains District Anzac Memorial Hospital, the only World War 1 memorial hospital in Australia.

The 1914-1918 war had come and gone and still there was no hospital between Penrith and Lithgow.

Some locals thought there should be a community hospital while others opposed the idea as there were already large sanatoria and smaller care homes.

It would be disadvantageous to be known for hospitals instead of guesthouses in the great holiday location.

In 1919 Gearin's Hotel was being refurbished when carpenter, Ted Stratford, was knocked unconscious when struck on the head by falling timber and had to be transported to Penrith.

Fellow workers passed the hat around and collected 6/6. Stratford's accident became the catalyst for a local hospital.

The following day, contractor Fred Johnson, began organising a football match to raise funds. Leura station master, a keen footballer, organised an opposing team.

It was to be fancy dress with a procession from Leura Baths to Katoomba Falls football ground. Collections were made along the route and raised £162 to add to the 6/6.

We owe thanks to Dean Piryak, director of nursing, for early research presented as Foundation Day Speech in October 1995.

Unfortunately he found no record of which team won the match, but hopefully, it will not be too long before the local newspapers are digitised and we will be able to imagine the colour, noise, events and excitement of that day.

The original frontage of the Blue Mountains District ANZAC Memorial Hospital

The momentum slowed when work was completed at Gearin's until Mr Edward Booth suggested that money raised should fund a lottery which was set up as 'Katoomba Thousand Lottery'.

The funds grew rapidly and Mr Booth formed the Blue Mountains District Hospital and Peace Memorial Committee with Dr John Allan as chairman.

The committee met solidly for a week to plan and set goals to be achieved. They decided to complete all preliminary work before petitioning the government.

The committee decided that it should be a peace memorial.

In the wording of the original committee's minutes, "No more fitting memorial to our gallant citizens who have fallen for us could be devised and we contend that a united effort to secure for us this communal blessing is much more desirable than that each township should erect drinking fountains and such like street obstructions".

The energetic and enterprising Mr Booth is credited as being the driving force that kept all working toward the final goal.

Presumably there were the card parties, fancy dress balls and so on with celebrities pressed into promotions.

Sir Ross Smith sent a notice by 'Aeroplane Post' Advice from the Clouds of a Race Meeting to be held at Medlow Bath Racecourse on Wednesday, February 25th. £50 prize money was offered.

It took a further six years fundraising that is to 1925, before they were ready to proceed.

The foundation stone was laid by the New South Wales Governor, Sir Dudley de Chair, on October 6, 1925.

Building work proceeded fairly rapidly, as did the fundraising, in spite of some opposition from residents who thought it would be filled with TB sufferers and others with long term illnesses.

As the building work neared completion, the committee thought the name should include ANZAC and the names of the fallen should be on marble tablets in the vestibule of the main entrance, in all 139 names.

They hoped, wished, that the tablets would be unveiled by the Duke and Duchess of York (later King George V1 and Queen Elizabeth).

After the usual negative responses, the authorities controlling the royal tour said they would consider the request.

It was approved with restrictions such as it was not to be included in the royal itinerary, the ceremony must *not* be advertised, and only hospital committee members and hospital management could attend. In addition it must be a very brief stop.

Mr Booth stepped out when the motorcade stopped, approached the Duke and Duchess and requested they perform the unveiling ceremony.

They agreed, alighted and the Duchess of York performed the ceremony. The Duke and Duchess inspected the hospital and signed the visitor's book before continuing their journey to Blackheath.

It was late May, 1927, just three weeks before the first patients were admitted in June.

Initially the hospital had two wards, one male, one female, with a total of 22 beds under the control of Matron E Richards, six nurses and local medical officers.

It was gazetted as a public hospital on August 5, 1927. The rather grand official opening was conducted on October 3, 1928 by Lieutenant Governor of New South Wales, Sir William Cullen.

Katoomba's Blue Mountains District Anzac Memorial Hospital is far from a drinking fountain or other street obstruction and stands today as a testament to the driving force and dedication of a community.

Indeed it is the community's ongoing good fortune that Ted Stratford was knocked unconscious at Gearin's Hotel all those years ago!

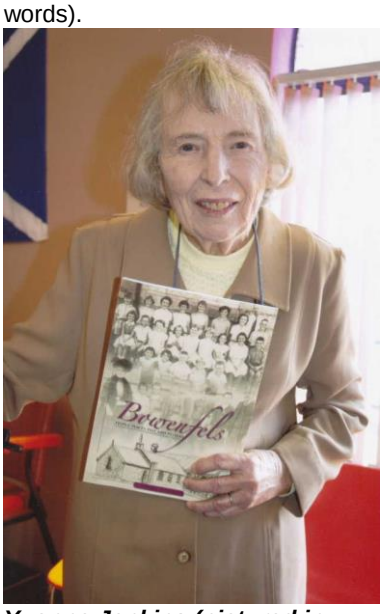
'My ancestor was…'

YVONNE JENKINS of Rydal was a well-known family history and author of several books of family historian in the Bowenfels, Rydal and surrounding areas.

She was the convenor of the Lithgow and District Family History Society in 1986 and encouraged members to write stories about their ancestors.

The Lithgow and District Family History Society has chosen to commemorate Ms Jenkins memory each year by conducting the Yvonne Jenkins Memorial Award.

Entry is open to members and non-members of the society and is in the form of a short essay (1000 words).



Yvonne Jenkins (pictured in 2008)

The topic for the 2014 award is "My Ancestor was a…..".

The winner will receive a certificate and one year's membership of the society.

Entries close on April 30 and must be accompanied by an entry form, available on the society's websitewww.lisp.com.au/ldfhs.

Have you booked your seat for the Blue Mountains History Conference on 10 May 2014?

A VERY SIGNIFICANT COLLECTION

Recently the Blue Mountains Historical Society was given a very significant collection of books by one of its members, Malcolm Ferguson.

Former president and the society's librarian Judy Barham said, "The Society is indeed so fortunate and we are extremely grateful.

"Malcolm has been collecting books on all aspects of the Blue Mountains since the 1960s. The collection is very comprehensive and many of the books are no longer in print.

When one goes with John Low to look at it and he picks up a book and says, "I have heard of this and never seen a copy", you know that there are some important and rare books in the collection.

There are not only books but also maps, pamphlets and other small items relating to the area.

"The society cannot thank Malcolm enough for his very generous donation. We will value it very highly" said Mrs Barham.

Blue Mountains History Conference

On Saturday, 10 May 2014 at the heritage listed Carrington Hotel, Katoomba

Opening up the Route to the West ... Architecture and the Railway

The conference is being organised by the Blue Mountains Association of Cultural Heritage Organisations Inc. (BMACHO)

For 2014, the keynote speaker, Associate Professor Julia Horne, will speak about 'Pursuing Wonder in the Blue Mountains'

Associate Professor Ian Jack will give a presentation about the early educational architecture

Hector Abrahams will give a presentation on the early religious architecture.

After lunch Christine Wheeler and Friends will present "Rain in the Mountains – Songs of Henry Lawson", singing Henry Lawson poems.

This recital will be followed by a Question and Answer half hour, when Dr Ian Jack will ask questions of the proprietor of the Paragon Restaurant, Mrs Robyn Parker.

The last speaker will be Doug Knowles and his presentation will be 'The Great Western Railway – Lapstone Hill, the first challenge".
In addition there will be an optional afternoon tea served at an extra charge at the Paragon, which includes a tour of the Paragon, including upstairs where the chocolates are made. Conference, including morning tea and lunch at The Carrington $50 per head and optional afternoon tea and tour of The Paragon an extra $10

For registration form go to bluemountainsheritage.com.au 'Events and Activities' and click on the link or use the form attached to the email.

Funds for restoration at four heritage properties

Blue Mountains Council has recently instigated a local heritage fund with the assistance of the newly established heritage committee. This is a long awaited and very welcome initiative of the council and an initiative of BMACHO.

One of the beneficiaries of this inaugural local heritage grant has been the lych gate on Falls Road, Wentworth Falls at Holy Trinity Anglican Church (photograph this page courtesy Margi Fallon, Heritage Consultant, Integrated Design Associates).

The gate was built in 1921 in memory of Douglas Gillfillan, who with his wife built “Gwandalan” in 1910 – 12 at the junction of Henderson Road (then Government Road) and Blaxland Road, Wentworth Falls.

At that time it was known as 7 Government Road. The Gillfillans built a magnificent garden on their property.

The property remained within the Gillfillan family until 1989. Mr Gillfillan died of tuberculosis in 1921, after a long illness and it is said that the room that he was in was burnt as a sterilization measure as was common at the time.

The gate at Holy Trinity is constructed of a sandstone base, with beautifully crafted timbers for the roof, which have been dowelled and pegged together.

The gate uses no nails in the main structure, with only the small nails to tack down the cedar shakes, and the timber lining boards.

There is an art nouveau styled bronze plaque placed in memory of Mr Gillfillan located on the inside.

This beautifully crafted gate will be carefully restored by the replacement of the shakes which have well and truly lived out their life, and provide for the ongoing protection of the crafted structure beneath. The sandstone base will be repointed.

The gate will then be able to continue to contribute to the visually significant streetscape of Falls Road, taking its place among the pine trees, the heritage listed 1890 Anglican Church building, and the similarly styled Presbyterian Church opposite.

The lych gate was one of four projects selected to receive assistance from this year’s funding.

The other three projects were to the Paragon Restaurant for design, construction and installation of lighting to the front awning and other work to return this iconic restaurant and chocolate factory; the gatekeepers cottage at Valley Heights and restoration of sandstone footings of a building at 112 Katoomba Street, Katoomba which has heritage significance.

The funded work at the Paragon and at 112 Katoomba Street will further enhance what is substantially intact streetscape of heritage shops and residence.

The building’s originality and classic façade is notable and often photographed by tourists and students of architecture.

The property at 110-114 Katoomba Street is a fine and intact example of Federation free classical commercial. The intact copper clad shopfronts add particular interest to the streetscape at pedestrian level

The work on the gatekeeper cottage at 4 Great Western Highway, Valley Heights will include replacing two timber windows to restore external character as shown in the 1867 original drawings.

The building which is listed on the State Heritage Inventory, is being considered for adaption by its owners to provide heritage tourism accommodation.

The sandstone cottage has strong links to the Valley Heights Railway Heritage Museum.

Because the railway shared a narrow ridge with existing road systems from the 1860s onwards, there was need of numerous level crossings.

Twelve of these were guarded by gates controlled from a gatekeeper’s cottage.

Six of the original stone cottages of 1867 survive, but only four of them are habitable and on their original sites.

There were two such cottages in Valley Heights. One, no. 5, was just east of the railway station and was demolished after 1902. The other, no. 4, survives on its original site, although its stone privy has been demolished.

It remained in railway ownership until 1950, then fell into disrepair, but was reroofed in 1984 and is now a residence once again.

Editors note: A lychgate, also spelled lichgate, lycugate, or as two separate words lych gate, is a gateway covered with a roof found at the entrance to a traditional English or English-style churchyard.

TomahROMA autumn food and wine fair showcases regional producers

A celebration of nature's bounty set against the spectacular deciduous colours of the cool climate gardens at the Blue Mountains Botanic Garden, Mt Tomah .

TomahROMA promises an enjoyable experience all day as local produce, gourmet delights, wine tasting, music, free guided walking tours and plant sales will all be part of this event

Lovers of local produce and crafts shouldn't miss TomahROMA, the annual autumn food and wine fair at the Blue Mountains Botanic Garden on Saturday May 3, from 9 am to 4 pm. For enquiries 4567 3000

This year the Garden is hosting around 30 stallholders from the Blue Mountains and Hawkesbury regions.

A stallholder at a previous TomahROMA.

The garden's annual blaze of autumn colour.

Fresh juice and cider from local Bilpin apples, wine from Mudgee, handmade bags from Woodford, cupcakes from Penrith and plants propagated by the Growing Friends, volunteers at the Garden, just a small taste of the variety of lovingly made regional produce visitors will be able to sample and buy.

Coffee and hot food stalls add to a lively vibe and fun day out for all. Perfect for finding a unique gift!

Discover the many horticultural delights within the 252 hectare grounds on a free guided tour departing regularly from the visitor centre.

Run by volunteer guides, the tours will focus on the seasonal autumn highlights of the Garden.

The fair will be set against the bright autumnal colours of the turning garden, which in itself attracts thousands of visitors throughout autumn.

This is the best time to see the garden in its annual blaze of colour, which is a sight not to be missed.

TomahROMA has built a strong following with food and garden lovers alike and is now in its 11th year!

Blue Mountains Botanic Garden, Mount Tomah is an inaugural member of the Blue Mountains Association of Cultural Heritage Organisations Inc.

Make your Mark in History

To commemorate the Centenary of the ANZAC, the Woodford Academy Management Committee (WAMC) is undertaking extensive research on the Academy boys' who fought in the Great War and the impact that this had on their lives. Over 300 students were educated at the Woodford Academy between 1907 and 1925.

Fifty three of these students served in World War 1. The research being undertaken is informing the preparation of a secondary school program and new interpretive material for the Academy's museum.

'Make your Mark in History' is the first in a series of interpretive presentations developed by the WAMC that provide a glimpse into these boy's experiences. For further information: woodfordacademy@gmail.com

This work has been made possible with the assistance of a NSW Department of Communities – Veteran Affairs grant.

Bicentenary of the building of Cox's Bathurst Road to be celebrated at Hartley

The Hartley District Progress Association as trustee of the Western Crossings Trust, has announced its intention to mark the bicentenary of the building of Cox's Road through the launch of its exhibition *A Moment in Time II* and by conducting an enhanced series of guided walks on Cox's 1814 road.

Some 3000 visitors attended the Trust's 2013 projects, many, who were disappointed by the short run of the 2013 program, have already pre-booked for this year's event.

A Moment in Time II will be conducted at the Historic Hartley Schoolhouse, 10am-4pm on weekends from Saturday, September 13, to Sunday October 12, 2014 and by appointment, for large groups, on any week day in that period.

Cox's Road walks will be conducted on Sunday September 14, Sunday September 21, Thursday October 2, Saturday October 4, Sunday October 12 ; with bookings accepted for large parties on any day between September 14 and October 12.

The exhibition *A Moment in Time*, curated by professional historian Joan Kent, captures what existed before and what came shortly after the 1813 crossing of the Blue Mountains by Europeans.

It begins with a consideration of the rich and ancient geology of the landscape into which the explorers intruded, before exploring many aspects of the crossing story from the indigenous peoples whose country was being traversed, through the explorers, the road building and early settlement west of the Blue Mountains

'A Moment in Time II' builds on the original exhibition drawing widely on the contemporary Cox's Road research to present a comprehensive vision of 'the road'.

Pictured above: Her Excellency Professor Marie Bashir, Governor of NSW with her aide examining an exhibit after opening Á Moment in Time's 2013 season.

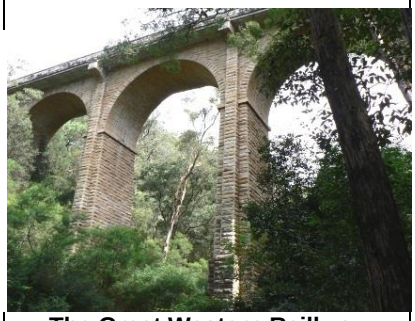
The Cox's Road walks, run in conjunction with the exhibition, represent a unique opportunity to walk some of the country traversed by Blaxland Lawson and Wentworth 1813, Evans 1813 – 14, Cox 1814 – 15 and Macquarie 1815.

Led by informed local guides, these walks offer a great opportunity to learn about the early traverses, the rich colonial heritage of the Hartley Valley and the array of heritage assets the valley harbours.

Bookings for walks and arranged openings of the exhibition will be taken from August 1. Early enquiries and pre bookings can be addressed to Barbara Johnson on 0458 552 017.

For further information contact Tom Kent, president Hartley District Progress Association (02) 6355 2393 e-mail: joankent@bigpond.com or Ramsay Moodie,(02) 6355 2259 or (02) 9983 0134 e-mail: ramsaymoodie@bigpond.com

GLENBROOK HISTORY WALKS



The Great Western Raillway 1867 Lapstone Hill Zig Zag and Knapsack Gulley Viaduct will be the destinations on Sunday, May 25 walk and talk series.

Adults $10 children free

Bookings essential to Doug Knowles 4751 3275

Crossing the play 2014 season

Plans are well underway for presentation of Wendy Blaxland's play *Crossing* to children during the 2014 season in Term 3 2014, mid-July to mid-September.

Crossing will play to schools in Sydney, the Blue Mountains and Bathurst, with a short public season for families in Sydney at Brush Farm House.

Thousands of schoolchildren saw the play during 2013 as part of the Western Crossing celebration in 2013. Schools booking forms are available.

For bookings Wendy Blaxland phone 9489 4955 m 0411 071 273

wendyblaxland@optusnet.com.au www.blaxlandanddaughter.com or Jessica Blaxland Ashby phone 0438 241 126 or 9489 4955 jessica@blaxlandanddaughter.com

Crossing was the brainchild of Wendy Blaxland who gatherered around her a talented experienced team of theatrical artists and production people to produce this memorable play. The 2014 budget is leaner, but there is still a $25,000 shortfall for pre-production costs. Another play is planned for 2015. *Pioneers in Petticoats* will be a one-woman show looking at the women who crossed the mountains.

Pictured are Wendy Blaxland and Jess Blaxland Ashby at Brush Farm House, Eastwood, the restored original home of explorer Gregory Blaxland.'

Rain in the Mountains

Rain in the Mountains - Songs from Henry Lawson' is a unique musical performance of poems from Australia's iconic poet.

Featuring the classic folk voice of Blue Mountains resident Christine Wheeler, the CD also features a number of exceptional local musicians with backgrounds from classical to jazz and world music. Influences from Celtic music underpin the whole sound.

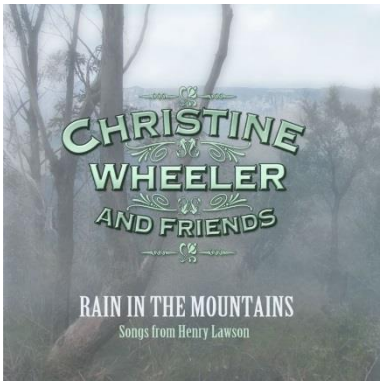
The title track is derived from two poems written by Henry Lawson aged 21, when he lived and worked at Mt Victoria.

His gift for conveying powerful feelings in the straightforward language of ordinary people is highlighted by the varied musical settings on this album - writers as diverse as Slim Dusty, John Schumann, jazz composer Ade Monsbourgh and folk icon Chris Kempster, as well as several of Christine's originals.

The CD has received considerable airplay on ABC Classic Drive FM and on ABC Local Radio's Australia All Over.

For information about performances or to purchase the CD, contact Christine www.christinewheeler.net.au

Graham McDonald, Recorded Sound Archivist, National Film and Sound Archive of Australia has said of the CD: "There are subtleties, skill and impressive musicianship in the way these songs have been put together. I suspect the CD and the live shows which Christine is planning will become a landmark in the interpretation of Australian folk song."



What happened here 4,000 years ago?

The Sydney Morning Herald of 16/1/2013 carries this news item:

> A genetic study has found ancestors of modern Indians may have come to Australia about 4,000 years before Europeans colonised the continent . . .
>
> A genetic analysis of more than 300 Aborigines, Indians and people from Papua New Guinea and island south-east Asia has found a "significant gene flow" from India to Australia about 4,230 years, or 141 generations, ago.
>
> The study's lead researcher, Irina Pugach, from the Max Planck Institute for Evolutionary Anthropology in Leipzig, Germany, said the arrival of these people during the period known as the Holocene coincided with many changes in Australia's archaeological record.
>
> "[There was] a sudden change in plant processing and stone tool technologies, with microliths appearing for the first time, and the first appearance of the dingo in the fossil record," Dr Pugach said.
>
> "Since we detect inflow of genes from India into Australia at around the same time, it is likely that these changes were related to this migration". . .
>
> The Aboriginal DNA used in the study comprised more than 10 per cent Indian genetic markers, which suggested there had been substantial interbreeding between the groups. "[The Indians] could have been sea traders," said Professor Allan Cooper, Director of the Australian Centre for Ancient DNA at the University of Adelaide.
>
> The researchers said it was possible Indian ancestry came to Australia indirectly, through south-east Asian populations that had trade links with northern Australia and Indonesia. But the analysis found no evidence of this in the genes of the island south-east Asian populations. . .

This paper by Father Eugene Stockton proposes a possible scenario. It is known that about this time there was a highly developed civilisation in the Indus Valley, centred on the large settlements of Mohenjo Daro and Harappa.[1] The economy was based on mixed agriculture. The technology included well-established painted pottery, incipient metallurgy (simple copper and bronze objects) and the manufacture of stone tools. Such an assemblage is familiar to me from the excavation of the Chalcolithic site of the Teleilat Ghassul in the lower Jordan Valley.[2] Other Chalcolithic sites have been found east of the Indus Valley.

The stone tool technology included the mass production of chert blades, ground stone tools, beads (of lapis lazuli and carnelian) and pre-eminently inscribed square seals of steatite. The beads and seals were traded over long distances to the Persian Gulf, Mesopotania, Iran, Afghanistan and Turkmenia, offset by imports of lapis lazuli, turquoise and jade. Trade was conducted both overland and by sea. Models exist of both carts and boats.

This civilisation was eventually eclipsed by the Aryan invasion in the second millenium BC.

The possible scenario proposed here is that a trading vessel ventured or drifted far to the east and was shipwrecked on the coast of North Australia. The survivors lacked the means to return home, perhaps lacking the skills and resources for ship-building, pottery and metallurgy. Settling down and interbreeding with the local inhabitants, they were able to pass on the finer techniques of working stone current in their homeland. Aborigines have shown that in matters of interest to them, such as religion and art, they are very receptive of new ideas and ready to pass them on to other communities. As long time workers in stone they would have welcomed the skill and artistry of the new technology.

Archaeological excavation at six Blue Mountain sites, and particularly at Shaws Creek, shows a sudden change in stone tool making at about 4,000 years ago. The relevant strata show a remarkable increase in the amount of flaked stone, a corresponding decrease in flake size, new techniques to control flaking to the desired shape and the production of exquisite small tools.[3] Although differences in tool type occurred from region to region, throughout Australia at about this time there was a similar intensification of flaking stone and the production of small tools (which may have been hafted).

I have suggested that such tools did not offer notable economic advantage, but were rather the expression of skill and artistry, a leisure time activity.[4] What spread quickly was not so much a useful addition to the tool kit as an *idea*, a *fashion*, that was quickly copied and taken up by neighbouring groups. The north-western expression was the surface-flaked point and adze, while the south-eastern expression was the backed-blade implement (for which there were already rough antecedents). I have suggested that this intense activity was conducted around the campfire and was the accompaniment of intense social intercourse, out of which developed the complexities of religion, ceremony, law and kinship relationships for which Aborigines were renowned.

Hartley District Progress Association has new president, Tom Kent

'…a strong feeling in the community that the enthusiasm generated by our 1813 commemoration activities should be maintained and enhanced…'

TOM KENT (pictured below has been elected as president of the Hartley District Progress Association and at the request of *HERITAGE* has outlined in this article some of the objectives of the group in coming years.

He writes: 'After two years of intense organisation and activity focussing on the 200th anniversary of the crossing of the Blue Mountains by Europeans, and in response to its constitutional requirements, a number of new faces have appeared on the executive of the Hartley District Progress Association, including myself as president for 2014.

Tom Kent

'Although I grew up in a small rural community in the Wagga area, the lifestyle at Hartley is a far cry from my subsequent career in accountancy and ultimately petroleum marketing for a large international oil company, leading to postings across Australia and then to responsibility for Europe and Asia, based in Central Offices in London.

'Retirement in Hartley with my wife Joan and a small herd of alpacas is an appropriate episode in an interesting life's journey.

'Apart from the natural beauty of the area, Hartley has a sadly unappreciated heritage of its' crucial role in the expansion of European settlement and an impressive array of nineteenth century buildings and road construction relics.

'I believe the Hartley District Progress Association has a responsibility to make this irreplaceable heritage known and appreciated by the wider community.

'Drawing upon my previous life experience, I envisage the HDPA expanding its activities beyond the financial requirements necessary for its continuation.

'There is a strong feeling in the community that the enthusiasm generated by our 1813 commemoration activities should be maintained and enhanced, adding to the existing social events such as the children's Christmas treat and the annual Boot Sale - projects such as the completion of the 'Signing Our Heritage Places' initiative, the ongoing restoration and internal painting of the 1881 Old School House, the conservation of the old school map and the completion of the Honour Rolls acknowledging the service and sacrifice of local servicemen and women and their families since the Great War of 1914 -18.

'Following the acclamation which followed our 1813 commemoration activities we are now planning our future activities – revisiting the popular Cox's Road walks and the companion horse trail rides which had to be abandoned last year for veterinary reasons.

'We anticipate further heritage seminars and a possible extension of the 'A Moment in Time' exhibition to include the subsequent history of the Hartley Valley as a centre of administration and education, its' shale and coalmining and apple growing industries and the rich family history of the early settlers in the district.

'Initially a 200th-year commemoration of the vice regal progress through Hartley to Bathurst is also contemplated for 2015.

'In an immediate sense it is imperative that we find a permanent 'home' in the Valley for our exhibition - which raises a number of issues - it requires 90 square metres of floor space and the security and management of such a venture poses problems for such a small albeit dedicated group.

'I believe that these are worthy ambitions for the Progress Association and look forward to the challenges ahead with optimism and enthusiasm.

The church that helped the Chinese Revolution

By Ray Christison

The construction of St Mary's Presbyterian Church in Lithgow had quite unforeseen consequences for the son of its builder George Donald, and for the development of China in the 20th century.

George McGarvie Donald was a master stonemason and builder who helped to create the City of Lithgow.

He was born at Paddington, Sydney in 1846[1], the son of Scottish stonemason George Donald. George senior had been encouraged to migrate to New South Wales by Governor Lachlan Macquarie who wished him to assist with government building works[2].

After completing a basic education young George McGarvie Donald was apprenticed as a stonemason to his father and uncle.

After completing his apprenticeship George was engaged on the railway construction projects undertaken by Thomas Higgins in the Bowenfels district during the late 1860s.

He worked on the stone railway bridges at the Great Zig Zag and at Marrangaroo, and married Marion Miles, daughter of one of the construction foremen.

Following completion of the railway contract George moved to Hill End where he worked on a number of construction projects.

Among these was the Hill End Methodist church, which was constructed using basalt rubble from the gold mines.

Church of St John the Evangelist at Wallerawang

This building is currently used as the Hill End Anglican Church.

After the failure of the deep lead gold boom of the 1870s George returned to the Lithgow Valley and established a construction business with Thomas Crowe.

In the early 1880s George constructed St Mary's Presbyterian Church for Thomas Brown. The church was built as a memorial to Brown's wife Mary.

He also constructed Cooerwull Academy for Andrew Brown and the Church of St John the Evangelist at Wallerawang

Other projects included Lithgow Town Hall, Wallerawang Public School, the Lithgow Oddfellows Hall and many residences. Donald & Crowe also built Mort's freezing works.

George Donald was extremely active in community affairs and had a great sense of social justice. He was a founding member of the GUIOOF Lily of the Valley Lodge and the Good Templars Lodge.

Popular amongst his fellow citizens he was elected the first mayor of Lithgow after the establishment of the Municipality of Lithgow in 1889.

[1] Reid, W., 1973 George Donald, First Mayor of Lithgow

[2] Thompson, P., 2011. *Shanghai Fury.* p.82

Continued from page 32

George Donald held the seat of Hartley in the New South Wales Legislative Assembly jointly with Joseph Cook from 1891.[1]

Donald was at times invited to address the celebration dinners held by the Coal Miners' Mutual Protective Association and other public meetings dealing with contentious labour issues.

In early 1893 he and Joseph Cook were responsible for arranging assistance for miners and their families made destitute by the closure of the Katoomba Colliery[2].

As magistrate he presided over the case brought against fifteen Zig Zag colliery miners for working on the Sabbath.

In administering penalties he fined the miners and their employer, indicating that all of the fines should be paid by the mine manager who had instructed the men to work.[3]

George died at Marrickville on May 30, 1930 aged 84, his wife Marion having died three years earlier. He was buried at Woronora Cemetery.[4]

William Donald was born to George and his wife Marian in 1875. It was intended that he follow his father into the building trade until an accident at St Mary's Presbyterian Church left him with a permanent impairment:

> *… Bill, always a boisterous boy, joined other young parishioners in jumping from a platform in the bell tower and swinging on the bell rope. One day he missed the rope and fell heavily, breaking his collarbone. … the fracture left him with a permanent weakness in his left arm.*[5]

William's injury precluded him from following his father's vocation and he was apprenticed into the printing trade at the Lithgow Mercury.

St Mary's Presbyterian Church, Lithgow

Under the mentorship of Lithgow Mercury editor James Ryan he learned the craft of journalism and eventually moved to Sydney where he worked as a court reporter.

Through various contacts he obtained the position of sub-editor of the China Mail in Hong Kong in 1903.[6]

This move launched William on a trajectory that placed him at the heart of the Chinese revolutionary movements of the early 20th century.

After the 1911 Revolution William provided some advice to the government of Sun Yat-sen and during the 1920s he became the personal confidante of 'Young Marshall' Chang Hsueh-liang in Manchuria.[7]

From the mid 1930s William became the personal confidante of Madame Chiang Kai-shek. His career at the heart of the Chinese revolution earned him the title "Chinese" Donald.

About the author

The author of this article Ray Christison of Lithgow is a regular contributor to *HERITAGE*

He is another contributor who can turn an otherwise story about the history of a couple of churches into an interesting heritage piece which readers will enjoy reading avidly from the opening sentence to mystery connection revealed in the last couple of paragraphs.

Ray was invited to become an inaugural individual member of BMACHO and served on the management committee for several terms.

Ray Christison is an archaeologist who conducts a heritage consultancy business High Ground Consulting, based in Lithgow.

He is president of the City of Greater Lithgow Mining Museum Inc and has served on the Board of this organisation since 1992.

Ray won the coveted 2013 IMAGinE award for individual achievement for its the exhibit *Fire in the Mine.*

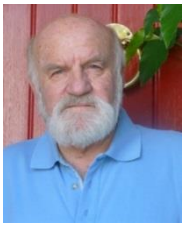
The built heritage of Kurrajong-Comleroy

By Steve Rawling AM



Some time ago (2009 in fact), I wrote a piece in the *Millstone* which was then republished in *HERITAGE* about the various levels of "heritage listing" pointing out that while all such lists are of interest, most of them do not confer any real protection for heritage buildings or other material items. To summarise them again:

Council lists items of heritage interest in its local environment plan (LEP), which then requires council to consider heritage factors when assessing development applications.

The State Heritage Office has a State Heritage Inventory, which draws on council's list (but does not include all items) and is again simply "items of interest".

For an item to be strongly protected, it must be chosen to be listed on the State Heritage Register, as being of "State significance".

Then there is the National Heritage List, which contains only a small number of items, but is gradually being added to.

The World Heritage List of course contains the Greater Blue Mountains, close to us, but that is a natural rather than a built item.

Perhaps the best known of all is the listing by the National Trust. It is certainly the longest-established, and it is often thought to confer protection on items it contains, but again it doesn't – it simply identifies important buildings and natural areas which are of genuine heritage interest, judged by people with expertise.

So how does our area – Kurrajong-Comleroy, fare in all of this? The sad fact is that very little in our area appears on any list which would confer real protection.

There are 99 Hawkesbury items on the State Heritage Inventory, and 51 on the State Heritage Register. Of the latter, only half a dozen are in our area, mostly in Wilberforce and Ebenezer.

But we should start at the beginning, with council's LEP which is fairly inclusive, containing over 600 items in the Hawkesbury, about 120 of which appear to be in our area.

Notable inclusions, which everyone would expect to appear, are Westbury at Grose Vale, Reibycroft at Freeman's Reach, Goldfinders in Kurrajong Village, Lochiel at Kurrajong Heights, St John of God at North Richmond, Sunnyside at North Richmond, Rose Cottage, Stannix Park and Australiana Pioneer Village at Wilberforce, and of course the church and former school house at Ebenezer.

There are also various other churches, cemeteries, substantial early houses, and quite a few smaller houses and cottages.

When the Kurrajong-Comleroy Historical Society Society was first formed, I attempted to locate all items on the list, but was frustrated by the fact that the old street numbering was used.

The current version of the LEP can be accessed on the Web by googling Hawkesbury Local Environment Plan 2012.

It has to be said that the original compilers of the list did a pretty comprehensive job. However, what is most surprising and disturbing is what is not on the list.

Two items in particular, of great significance to anyone interested in the history of our area, are conspicuously absent. They are the Comleroy Road School of Arts and the Singleton's Mills sites. How these were overlooked is hard to understand.

The School of Arts has of course a special place in our society's history and is a significant element in early twentieth century social history of the area.

It is to be hoped that it can be rescued from its present poor state, whether or not the society can be involved that process.

The Mill sites on the other hand are almost 100 years older, and were central in the thinking of the founders of our society – hence the logo - representing as they do the earliest history of the Kurrajong, and a vanished industry of grain growing and milling.

The proposal to apply for State Heritage listing, which is being co-ordinated by Frank Holland, will leapfrog other levels and, if successful, guarantee future protection of the remains of what we believe is of genuine state significance.

Any member with an interest in or knowledge of our built heritage is very welcome to contact the committee to discuss any action we might take on this front. For example, a project involving a photographic record of the items on the LEP could be of interest for someone with a camera!

In this article Steve Rawling, AM president of Kurrajong-Comleroy Historical Society debunks some of the myths built up about the protection (or lack of it) afforded the state's built heritage. Although he deals specifically with the Hawkesbury City Council's LEP the matter in principle is generic and can be applied to any local government area in NSW.

LATE NEWS

ELECTION TO RAHS COUNCIL

BMACHO's hardworking, efficient, popular and effective secretary, Jan Koperberg has been elected as a councillor of the Royal Australian Historical Society with a very large percentage of the vote.

The election was for four councillors, with the president Dr Anne-Maree Whitaker and Hazelbrook heritage archaeologist Dr Siobhan Lavelle, OAM being re-elected and Chris Maxworthy filling the fourth position up for election.

Treasures from home

Do you have a treasure at home ?

The Museums of Lithgow would like to learn about individual's treasure and help the owners work out its significance.

As a part of International Museums Day 2014 *ABC Open* will be joining staff and volunteers to photograph treasure, write up its history an upload it to their Object Stories online Museum.

Treasures should be brought to Eskbank House, Lithgow on Sunday, May 18, 10am to 2pm.

For further information telephone 6351 3557 or www.lithgow.com/esbank/.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place**, Springwood 2777 (02) 4751 5834. E-mail:** committee@blumountainsheritage.com.au or j.koperberg@big.com Website: www.bluemountainsheritage.com.au
ABN 53 994 839 952

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are i. to raise public consciousness of the value of cultural heritage; ii. to encourage and assist cultural heritage; iii. to initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

PUBLICATIONS BMACHO's official newsletter *HERITAGE* is edited by John Leary, OAM; the annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden - Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc. Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc., Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc., Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) – Blue Mountains Branch, National Trust of Australia (NSW) – Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant – Katoomba, Scenic World Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE: The management committee for 2013-14 is: John Leary OAM (president), Ian Jack (vice president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes, Patsy Moppett, Dick Morony (public officer), Scott Pollock, Suzanne Smith and Richard Woolley.

DISCLAIMER Views and opinions expressed in *HERITAGE* originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

Those Amazing Slab Huts

by Paul Wheeldon

Our earliest pioneers became renowned for their building expertise in the construction of their dwellings.

The Australian outback settler was also famous for his versatile use of the closest materials at hand.

If he had easily quarried stone and little timber, even if he had only the most elementary idea of masonry, he would probably build his habitation in stone, either in perhaps a two room hut or, if his family requirements called for greater accommodation, he would construct a cottage of several rooms.

If he was somewhat of a tradesman at all he would build a pitched roof and if it were to be a better class dwelling he would roof it in split shingles in preference to perhaps a bark roof.

By comparison the majority of outback huts or small cottages were of wooden or slab construction. The early settler learnt quickly that the old English 'wattle and daub' construction was not in any way suitable for the Australian climate.

The most common early constructions were of the 'vertical slab' type.

There were of course a considerable number of variations in their construction in this type alone.

Wingebelaley formerly Cullenbenbong, a slab hut built by Bernard O'Reilly in the Kanimbla Valley and immortalised in his son's book named like the hut. Photograph courtesy Ian Jack 1997

Primarily the frame of the building was erected, commencing with the corner posts, good solid logs of the desired height were let into the ground at least a half metre.

According to the degree of performance required they were either left round or adzed or broad axed into square shape.

Door openings and window outlets were generally indicated by posts.

In the more permanent buildings a base and top plate were prepared again not necessarily squared, by cutting a channel of perhaps 1 ½ inches wide and two inches deep in which to set the adzed and squared ends of the split up-right slabs.

Very often the based ends of the slabs were merely let into the ground, where, of course, they ultimately rotted.

The discriminating builder always used a good base plate set up off the ground on a foundation of stones and lime mortar to prevent rotting.

Stringy bark was the preferred timber for split slabs

The split edges of the slabs were nearly always adzed or squared off to ensure the best possible fit between slabs.

The roof frame was constructed from round timber 'saplings' (small young trees). It was a pitched roof often with 'hip' ends.

In an ordinary dwelling it was invariably roofed with stringy bark, or perhaps, if it was a fair size better class cottage, it may have used a wooden shingle roof requiring very much more roofing battens which has to be sawn.

Hence we do not find any real early primitive huts or houses with shingle roofs.

The early settler only had modest tools and labour so he built in the first instance the most modest dwelling.

The average settler's tool consisted of perhaps an adze, several sizes of augurs and the like, a hand-made driving maul and a set of splitting wedges, an axe, a broad or squaring axe, several hammers, a crosscut saw and possibly a shovel, crowbar and pick or mattock.

Possibly among the greater skills was the selection and preparation of the materials.

Stringy bark was the preferred timber for split slabs, or was it because there was a greater abundance of that timber?

Not only did the selected wood split straight but it was among the most durable of timber.

The discriminating timber worker was particularly fussy about selecting his trees.

It was generally accepted that either the white or red stringy bark was suitable but the tree that grew in the valley or creek beds was the best to split.

A chip would be struck off a tree under selection and the chip split readily in the hand it followed the tree would be a splitter.

Trees off the higher ground were generally the last choice, and if possible were to be avoided for this purpose.

The bark would be used for the roof and again called for some skill in its preparation.

The length would be cut around the top and bottom and then a zig-zag cut would be made from top to bottom and the whole sheet of bark peeled off in one piece. The art of preparing the bark for the roof so that it would not split was often a guarded secret by some.

The Coble family home at Yass in the 1860s (the author's paternal grandmother's family). Often the new house beside the older one and the other was used for other purposes.

It consisted of keeping it rolled up and almost immediately stood over a small fire so that it was virtually a chimney.

According to the condition of the bark it would be roasted, so to speak, for perhaps half-an-hour and then probably turned end for end to complete the process.

The sheets were then carefully laid out on the ground and weighted down flat before being placed on the roof.

It was generally conceded that this heating process also increased its waterproof qualities.

When the bark was placed in position it was generally held down by further timber placed on top of it and dowel pegged to keep it together.

Later, of course, both wire and nails were often used.

The tree was felled by either axe or cross-cut saw.

The slabs were split with maul and wedges.

As regards early huts etc. nails were virtually unprocurable and all jointing was either by mortice or with tenon or dowel pegs.

Yet another variation of the slab hut was the 'drop hatch' construction.

Much more demanding in skill than its more common vertical slab brother, it was considered a more substantial construction, though in actual fact it has not really proved to be. Slabs were mostly adzed both inside and outside.

Continued page 3

‘Another era of an early colonial dwelling has passed…’

All posts, door and window openings were usually channelled down each side.

The specially prepared slabs were then dropped into their correct recesses from the top of the wall and thus laid horizontally one over the other.

More often than not the fireplace was externally of slab with an interior of clay and stone.

Some refinements included the caulking between the slabs with clay mortar generally mixed with animal urine or ox blood.

Later strips of zinc or galvanised iron were tacked between the slabs.

Very often in the primitive huts the earthen floors were of clay, cow dung and urine, which made a fine hard floor.

A hut is generally considered to be a dwelling of two rooms – one portion the living quarters and the other the sleeping area.

On the other hand there have been and still are some quite substantial homes of slab.

Many of these larger slab homes provided comfortable living.

Many had wooden floors and often plaster-lined and offered many refinements.

Such places are to be seen still in use in many areas of eastern Australia.

The earlier dwellings were often lined with newspapers which were continually added to, eventually getting quite thick.

The ceiling was often just suspended hessian or calico.

A somewhat later development many of these dwellings had all refinements including glass windows.

In the primitives the windows were just small opening doors suspended on leather or green hide to act as hinges.

Often the split inside of the slab was adzed to smooth it down and often a verandah was attached over the one end and only door entrance.

It is a tribute to the builders and their selection of timbers that their durability is responsible for their continued use today.

They have outlived their bark or shingle roof and are to be seen with replaced galvanised iron.

Many of them owe the change to iron for the inclusion of an additional verandah or so.

Another era of an early colonial dwelling has passed with the advancement of time.

Those amazing slab huts

Continued from page 3

Building implements and their meanings :

Adze: An ancient type of edge tool dating back to the stone-age. Used for smoothing or carving wood in hand working, similar to an axe but with the head mounted perpendicular to the handle.

Augur: A drilling device, or drill bit, that usually includes a rotating helical screw blade called a 'flighting' to act as a screw conveyor to remove the drilled out material. The rotation of the blade causes the material to move out of the hole being drilled.

Broadaxe: A large broad headed axe used for shaping logs by hewing.

Maul: A large hammer, heavy wood splitting tool resembling both axe and hammer.

ABOUT THE AUTHOR

PAUL WHEELDON the author of *HERITAGE*'s front page story, *Those amazing slab huts* is a member of the Nepean District Historical Society and a committee member of the Nepean Family History Society.

Other memberships include the Goulburn and District Historical Society, the Goulburn District Family History Society also the Collector and District Historical Association. He has contributed articles to a number of these societies.

Paul spent almost all his working career in the University sector, mostly at the University of Sydney and the University of London. He also had some memorable years as Secretary to the Anglican Bishop of Southwark in London.

Recently he was made redundant from the University of Sydney. This has now allowed him to concentrate his time on his passion for family history and local history.

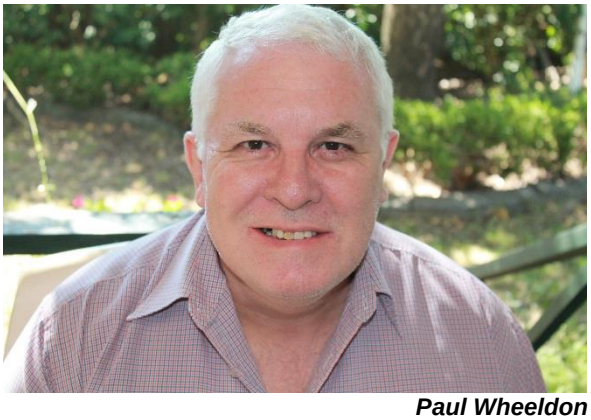
In 1988, the bicentenary year, he organised a family reunion for the Wheeldon family at Collector, releasing a book, *Another Time, Another Place* to coincide with that reunion.

Under the direction of the Anglican Diocese of Canberra and Goulburn, Paul will be releasing a book on St. Matthias' *Currawang* (near Lake George). This will be a history of the church and those who are interred in the cemetery. It is to be released in February 2015 to coincide with the 140th Anniversary of the church.

Following this another publication of *Currawang* local history will be released. The area covered will be Tirranna, Komungla (previously Bangalore), Thornford, Spring Valley and Currawang through to Collector.

A feature of this local history will be the Currawang. copper mines, the largest copper producer in New South Wales from 1866 to 1872.

This article has previously appeared in Nepean District Historical Society's newsletter, *The Arms Chronicle* No. 64 February 2014.



Paul Wheeldon

Oldest known piece of Earth

Scientists using two different age-determining techniques have shown that tiny zircon crystal found on a sheep station in Western Australia is the oldest known piece of our planet, dating back 4.4 billion years. In a recent edition of the journal *Nature Geoscience,* researchers have reported that the discovery indicates that Earth's crust formed relatively soon after the planet formed and the gem was a remnant of it. John Valley a University of Wisconsin geoscience professor who led the research, said the findings suggest the Earth was not as harsh a place as many scientists have thought. The finding supports the notion of a "cool early Earth" where temperatures were low enough to sustain oceans, and perhaps life, earlier than previously thought.

An opinion from the editor…

Western crossing has combined commemoration and celebration

In an address I gave at the recent annual general meeting of BMACHO and circulated to members, I may have given the impression that the activities so far in the Western Crossings 2013-15 program were more celebration and little commemoration.

On reflection it is probably fair to state that In fact there was considerable commemoration as well as celebration.

Although individuals and bodies such as National Trust and the RAHS had been floating ideas for the bicentenary celebrations, the Western Crossings commemoration had its genesis with BMACHO.

However, it was quickly and correctly recognised that this organisation did not have the resources to manage such a venture. BMACHO's committee asked the then long serving president of the Royal Australian Historical Society Associate Professor Ian Jack to explore with the RAHS Council, the idea of co-ordinating the project.

It was pleasing when the RAHS quickly took up the challenge and Professor David Carment, AM very ably took on the role of the first Western Crossings Committee chairman which he continued to do when he became the president of the RAHS.

I recall soon after David took on the task of chairman he, Ian Jack (then the president of the RAHS) and I (then president of BMACHO) met one Sunday afternoon in my home to look at objectives and parameters for the Western Crossings Committee as it was to become known.

From that informal meeting there came a strong recommendation that the commemoration of the bicentenary should be from the period 2013 – 2015 embracing the anniversary of a series of inter – related events after the 1813 exploration by Blaxland, Wentworth and Lawson. George William Evans began his survey for a roadway across the Blue Mountains in November 1813 and went as far as the future Bathurst; William Cox then supervised the construction of the road from July 1814 to January 1815 and then Governor Lachlan Macquarie accompanied by Mrs Elizabeth Macquarie travelled along the new road in April and May 1815 and selected the site of Bathurst.

There is no doubt all those who attended the Western Crossings Committee meetings from the very earliest meeting, were in agreement, time and time again, that the Crossings was a commemoration of all who had crossed, from the very earliest Aboriginal crossings to the crossing by Governor Lachlan Macquarie and Mrs Elizabeth Macquarie and party in 1815.

The European crossings from 1813 are not a celebration for the Aboriginal people and there were many commemorations of Indigenous crossings held during 2014, like the Ancestral Pathways walks organised by Auntie Sharyn Halls , the official opening of The Gully at Katoomba with interpretive signage, the commemoration walk 'Jummangunda Ngunninga' walk from Bardens Lookout to Mt York.

The excellent exhibition in Hartley *A Moment in Time* curated by Joan Kent starting with a very comprehensive history of the Wiradjuri people, through to Governor Lachlan Macquarie is one of the lasting commemorations as is the Western Crossing room at the Mt Victoria Museum and there are others.

As I stated in my annual report,… 'Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

'Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

'The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between Professor David Carment and the then Premier of NSW Barry O'Farrell.'

A knighted architect and patron of the arts, his wife a renowned community worker and photographer, and their family from the 18th century to today …
the Sulmans in the Blue Mountains

By Emeritus Professor of History, Charles Darwin University
David Carment, AM.

Introduction

Thank you for the invitation to speak. I am pleased to be here as I have a longstanding interest in the Blue Mountains and support the work of the Blue Mountains Association of Cultural Heritage Organisations.

My mother's family, the Sulmans, first became associated with the Blue Mountains during the late nineteenth century and with Woodford Academy in the early twentieth century.

Today I want to explain why that association commenced through regular long summer visits and developed after the family acquired Kihilla in Lawson as their Mountains residence before focussing on three family members: my great grandfather the architect, town planner and patron of the arts Sir John Sulman; his wife the community worker and photographer Annie, Lady Sulman; and their son, my grandfather the racing car driver Tom Sulman.

All lived for long periods in the Blue Mountains. I briefly conclude by showing how the family connection continues through to the present.

A summer retreat from the city

The historian Julia Horne explains that from the 1880s the Blue Mountains came 'to be seen as restorative for those seeking peace and quiet from the daily grind, as well as those recuperating from a range of illnesses'.

Late nineteenth century discussion 'focused on the beneficial effects of a dry inland climate at altitudes higher than sea level'. By the end of the century the Blue Mountains were particularly valued 'for their pure air and cool climate during summer months, a retreat from the hot and tiring life of the city'.[1]

These were the principal motivations for John Sulman's migration to Australia and his discovery of the Blue Mountains. Born in England in 1849, he was a successful architect there but migrated to Australia

Ernest Brougham Decker, *The Three Sisters, Katoomba, Blue Mountains NSW,* 1898 (Macleay Museum, The University of Sydney

with his invalid first wife Sarah Clark Sulman, formerly Redgate, and young son Arthur in 1885 after receiving medical advice that Sarah's tuberculosis was so serious that she could only survive in a warm climate.

They decided to settle in Sydney, where John quite quickly became a prominent architect and began his concerns with town planning and the arts. His other two children, Florence (known as Florrie) and Edith (known as Edie), joined John, Sarah and Arthur from England in 1886.[2]

Sarah's condition, unfortunately, deteriorated. She died at the end of 1888.

Continued From page 7
Before then, in searching for a location that would improve her health, John first encountered the Blue Mountains.

In a letter of November 1885, he notes that 'the chief objection to Sydney is the moist enervating climate of the summer months and the more or less moisture laden sea breeze which blows all year round'.

It was necessary for the '4 hot months' that 'my wife must move to a place in the hills'.[3] Initially they preferred the New South Wales Southern Highlands but John also went to the Blue Mountains and writes of its 'bracing' climate.[4]

In summer 1886 he rented a cottage at Lawson, not far from the railway station.[5]

The summer of 1887-1888 was spent in Springwood, where John and Sarah made good friends. Florrie and Edie had school lessons in nearby Falconbridge with the children of a solicitor. It was during this period that John designed the Springwood Anglican church that I discuss later.[6]

The Sulmans, Sydney, 1900.

Back row Florence (Florrie) (1876 - 1965), Arthur (1882 – 1971), front row Edith (Edie) (1878 – 1907), John (later Sir John Sulman) (1849 – 1935), Dorothy Joan (Joan) (1896 – 1973), Thomas Noel (Tom) (1899 – 1970), Annie Elizabeth (later Lady Sulman) (1864 – 1949), Geoffrey (1894 – 1916). Not present John Masefield (Jack) (1906 – 1959). **(Sulman Family Archives).**

John was married again in 1893 to the Sydney born Annie Elizabeth Masefield, who while a young child was adopted into the wealthy and prominent Walker family as a companion for Eadith (later Dame Eadith) Walker, later a well-known philanthropist.

Between 1894 and 1906 John and Annie had four children: Geoffrey, Dorothy Joan (known as Joan), Thomas Noel (known as Tom) and John Masefield (known as Jack).[7]

Annie quickly became fond of the Blue Mountains so regular trips to them continued. Each summer was spent in one or other of the mountain resorts to save the children, John writes, 'from the enervating effects of the moist heat of Sydney'[8]. One year's summer stay was in a large cottage in Katoomba.

John describes a memorable walk then with some of his children and a local doctor as involving a route by: *the Narrow Neck to the State Mine under the Ruined Castle… and* [Arthur's] *refusal to return by the same route because of its length and insistence on making the direct cut across the valley via the wire rope trollies which carried the shale to Katoomba. It looked much shorter but was far more arduous and we had to descend quite a thousand feet to the creek and then climb two thousand to reach the Katoomba look-out where fortunately I found a buggy for hire and we drove home. It almost finished the Doctor who was short and rather stout*.[9]

Other locations visited during the late 1890s were Jenolan Caves and Mount Solitary.

It was also at this time that John and Annie began their interests in photography, in which Annie developed particular expertise.[10]

On Christmas Day 1899 their son Tom was born at the Chalet in Wentworth Falls.[11] The regular long summer stays in the Blue Mountains went on during the early twentieth century.

Kihilla

To alleviate Geoffrey's digestive problems and Annie's rheumatism,[12] in October 1909 the Sulmans arranged to occupy Kihilla, sometimes called Kihilla Park, in Lawson with what a *Blue Mountains Echo* report describes as 'further improvements' being planned there under John's oversight.[13]

In February the following year he successfully applied to have a telephone service installed.[14] Some sources indicate that John purchased Kihilla in 1913 so until then he may have leased it.

While the Sulmans also had a home in Sydney, Kihilla was where the younger children mainly lived with servants and other staff for about 10 years. John and especially Annie were also quite frequently in residence.[15]

Continued from page 8

By this time Edie had died and Arthur, a pastoralist in North Queensland, was only an occasional visitor. The unmarried Florrie came more regularly.

In 1914 she published her much read two volumed *Popular Guide to the Wildflowers of New South Wales,*[16] which she later told me was inspired by her Blue Mountains experiences.

The Sulmans, Kihilla about 1913.Back row Joan, Jack and Tom Back, front row Geoffery, John and Annie. **Sulman Family Archive.**

Tom writes of Kihilla as: *an old mansion with verandahs all around it, big high ceilinged-rooms, standing in 22 acres of land a mile out of Lawson. There were stables, coach houses, and several outbuildings, a large orchard, and bushland – a kid's paradise.*[17]

Kihilla was built in 1883. Largely unchanged since the Sulmans' time, it is a complex of structures set in extensive landscaped grounds overlooking bushland to the north.

The principal house with its former stables and a small cottage are at the site's north end. The former gardener's cottage, now under separate ownership, is close to the Great Western Highway.

Kihilla's attraction to the Sulmans must have been enhanced by its proximity to Lawson, one of the Blue Mountains' most prosperous towns. It had a railway station, good shops, hotels, a post office, and, from 1918, electric power.

The Sulman family owned Kihilla until 1953 but ceased using it after John's death in 1934. It was then leased out to a series of guesthouse proprietors.[18]

Following Annie's death in 1949, it was bequeathed to her grandchildren, the oldest of whom was my mother Diana aged only 22. They could not afford to keep the house and it was sold for what my father described as a pittance.[19] The Church Army Australia now uses it as a retreat and conference centre.[20]

Life at Kihilla was very varied. Although busy with a range of activities in Sydney, John got back as often as he could. Zeny Edwards's biography describes him as having a 'patriarchal disposition' and being 'a strict disciplinarian' but 'loving and fair in his duties as a father'.[21] He did not provide the children with pocket money but allowed them to earn as much as possible by cutting firewood, weeding the orchard and numerous other chores.

'The more we earned', Tom recalls, 'the better pleased father was'.[22]

There were frequent family picnics in the nearby bush. They involved large wicker baskets full of food, rugs and other utensils. Outdoor meals also sometimes occurred under a shelter.

Until 1912, Geoffrey, whose poor health prevented regular school attendance, and Tom shared a tutor at Kihilla.[23] Tom, and later Jack, then attended Woodford Academy, about which I later say more.

Geoffrey loved building model aeroplanes and steam engines in his Kihilla workshop and was fascinated by motor vehicles. On one occasion he and Tom secretly built a full-sized glider, which crashed and disintegrated with Tom as its pilot. He luckily escaped with only a few bruises.[24]

Unable for health reasons to enlist in the Australian Imperial Force after the First World War started and unsuccessful in his attempts to work in the munitions industry, as an unmatriculated student Geoffrey attended engineering classes at the University of Sydney but was often at Kihilla until in 1916 he went to England. There he became an officer in the Royal Flying Corps before dying in an aircraft accident the following year.[25]

It was a tragedy from which Annie never fully recovered.

Continued from page 9

Joan was dux of the Blue Mountains Girls School at Lawson in 1910.[26] She later married Tom's Woodford Academy friend Dr Bruce Shallard, the medical practitioner son of a well-known Glenbrook apiarist.[27]

In 1912 John bought a family car. Tom describes it as: *a 35 horse power seven-seater SPA, a 4-cylinder, 4-speed Italian car weighing about two tons. It was a beautiful job and quite fast for that period – 65 mph – and very up-to-date with electric side and tail lights and a siren, though it had no generator to keep the battery charged. Unluckily it had loads of brass work which was my special responsibility – no shiny brass, no ride – still, we were all very proud of it.*[28]

With Geoffrey as driver, it took them all over the Mountains on many enjoyable outings. In December 1913 a fire menaced Kihilla until a combination of volunteers and rain put it out.[29]

***A Blue Mountain outing in the family car about 1912. Back seat – Joan, Tom, Annie, Florrie; front seat – Geoffrey, Jack, John. (*Sulman Family Archive).**

Another fire came close to the main house in February 1926. The Katoomba Fire Brigade was called and a 'difficult fight ensued', *The Blue Mountains Echo* reports, 'before it was beaten out'.[30]

After John's death, the President of the Blue Mountains Shire Council, Councillor Percy Wilson, remarked that he was 'very generous to us on the Mountains, and at Lawson especially…that fine property of his is a credit to the place'.[31] There is now a Sulman Road close to Kihilla.

John Sulman's Blue Mountains designs

John's most permanent contributions to the Blue Mountains were the structures he is known to have designed there, all still standing and all with recognised heritage significance.

The first was Christ Church Anglican Church in Springwood, constructed in 1888 and 1889. Now a landmark on the Great Western Highway, it is a fine sandstone building with a simple but sensitively designed interior.

The sandstone is local and the roof is slate. Later extensions to the church to create the chancel, north transept and tower are in keeping with John's original design.

The New South Wales Office of Environment and Heritage Statement of Significance notes that the church's interior 'has an unusually peaceful atmosphere created by the use of pale sandstone and stained timber and restrained detailing'. John's original conception as seen from his drawings, though, was never finished. This included an eastern and a western transept at the church's rear and a large crowning tower between the two.[32]

Another John Sulman church in the Blue Mountains is the former Holy Trinity Anglican Church at Wentworth Falls, also constructed in 1888 and 1889. The Office of Environment and Heritage does not acknowledge him as the architect but Zeny Edwards's carefully researched biography does. It is a well-built wooden structure with a steeply pitched corrugated galvanised steel roof. There are a side entry porch and a single bay sanctuary. The building is now used as a hall.[33]

Perhaps the grandest of John's Blue Mountains designs is Khandala, also known as Kardinia Park, in Katoomba, completed in 1898. A picturesque house in the Federation Queen Anne style, it is situated above a terraced garden where it has uninterrupted views over the Jamison Valley to Mount Solitary, the Ruined Castle and Narrow Neck.

The house is timber framed on a brick base and clad with wide rusticated weatherboards on the ground floor. Some chimneys are topped with corbels incorporating bricks and terracotta pots. A verandah is on the house's southeast corner.

To the north of the house is the original coach house, a large gabled structure.
Ernest and Margaret Young engaged John to design their Katoomba retreat in 1897. By the end of 1898 the house was ready.

Continued from page 10

In the original plan a drawing room, dining room and nursery were on the ground floor.

Before the house was completed, the Youngs had another child with a further baby expected, so a playroom was added to the original design.

More than most late nineteenth and early twentieth century retreats in the Blue Mountains, Khandala represents, according to the Office of Environment and Heritage, 'many of the attributes sought out by those who could afford to develop a summer home in the mountains'. It is also 'a particularly fine example of the Federation Queen Anne style'.[34]

Khandala (also known as Kardinia Park) Katoomba 2011. **(Century 21)**

Former Holy Trinity Church Rectory, Wentworth Falls. No date. **(pigott-gorrie.blogspot.com)**

Former Holy Trinity Church, Wentworth Fall about 2013. (pigott-gorrie.blogspot.com)

Very different is the smaller and far simpler former Holy Trinity Rectory in Wentworth Falls erected in 1906, still extant but no longer on its original site. Limited funds only allowed for a quite basic timber structure and there was a delay of six years between John doing the plans and the Rectory being built.[35]

The Honour Gardens in Lawson are most recent of John's Blue Mountains designs.

They were partly a labour of love in memory of Geoffrey. He and Annie also endowed in Geoffrey's name a memorial prize, later converted into a memorial lectureship, at The University of Sydney. From 1919 John chaired the New South Wales War Memorials Advisory Board, whose name was changed in 1921 to the Public Monuments Advisory Board.

[35] *Ibid.,* p 179.

Continued from 11
The state's Local Government Act required its approval of design and site before any monument could be erected in a public space.

As the historian Ken Inglis writes, John 'put much energy into the job of influencing how other people commemorated their war dead'.[36]

The First World War had a major impact on Lawson as it did on other Australian small towns. Many memorial gardens were planted across Australia but Lawson's are now unusual in retaining their original form.

Working closely with the Blue Mountains Shire Engineer, John initially created the gardens in 1918 and 1919. The layout shows his love of order and symmetry.

Permission to erect a substantial archway at the Avenue's entrance was granted in 1920. Improvements John proposed to the Shire Council, including the stonewalling on the Gardens' western side, were implemented in 1928.

John supervised this work without a fee. Geoffrey's name is inscribed on the stone arch war memorial at the gardens' entrance that was designed by Sir Charles Rosenthal and completed in 1923.[37]

Annie Sulman: community worker and photographer

Annie's early life was tragic.

The granddaughter of an Irish convict and the daughter of an insolvent Sydney schoolteacher who died in an asylum for the insane, before she was 12 years old her parents and both her siblings were all dead, and the Walker family adopted her.[38]

Her difficult early years combined with the Walkers' strong belief that wealthy people like them had a duty to help the less fortunate and participate in community activities, led to her active support of a range of worthy causes.

She took a quite prominent part in the 1913 celebrations at Lawson to mark the centenary of the first known European crossing of the Blue Mountains. At a ceremony in Lawson on May 28, 1913, she drove a peg on the spot where an obelisk to the explorer William Lawson was to be erected.[39]

For many years she served as President of the Lawson Branch of the Red Cross. In April 1915 she presided at a successful Red Cross fund raising concert in Lawson, at the end of which she strongly appealed to Lawson's women to join the 40 already engaged there in Red Cross work.[40]

At about the same time, the Red Cross published her poem *The Call of the Red Cross* that revealed intense wartime patriotism but not any noticeable poetic skills. It begins:

For the Love of King and Country!
There cometh oe'r the sea,
The call to Every Woman
In our land so wide and free

And finishes:

Oh! Britain, grand old Britain,
We send across the sea,
Our kitchens, lorries, motors,
And all for love of thee.[41]

So far as I am aware, it does not appear in any poetry anthology. In an address to the Lawson and District Horticultural Show in February 1922, she expressed particular concern for the returned soldiers whose nerves were shattered at the front, strongly recommending gardening as an activity that would restore their mental well-being.[42]

Annie 1931. **(National Library Australia)**

A *Sydney Morning Herald* report of March 1925 in commenting on what it called Annie's 'unfailing service' to the Red Cross in Lawson and elsewhere remarks that no one 'has done more in quiet service to invalid retired nurses'.[43]

Another passion was photography, a skill that she developed during the 1880s and 1890s. In addition to taking numerous photographs of relations, friends and

Continued from page 12
places, she was expert in photographing Australian wildflowers, many of which were in bush near Kihilla.

The major Australian publisher Angus and Robertson produced her two books of photographs *Some Familiar Wild Flowers* and *Australian Wild Flowers*.[44] Both were well received and reprinted.

In their prefaces she states her modest purposes. The first book's preface reads in part: *This small collection of wild flower photographs was originally started entirely for my own use and pleasure; but finding many others similarly interested, I am making this attempt to share it with them.*[45]

The second says: *As one flower-lover to others, I offer some more photographs of our most familiar and easily-found wild flowers, hoping that among them they may find some old friends and that, in looking for those unknown to them, a fresh interest may be added to their rambles in the bush. In no sense of the word am I a botanist, hence the flowers in my book are simply arranged as fancy dictated, without regard to order or family.*[46]

Tom Sulman: the beginnings of a life with motor vehicles and his education at Woodford Academy

From an early age Tom was obsessed with motor vehicles. The sections of his autobiography dealing with life in the Blue Mountains discuss little else.

He recalls in some detail how in about 1908 he had his first ride in a motorcar, which the family hired for a journey from Katoomba to Jenolan Caves.

'The trip', he writes: *was very little faster than the usual transport – a coach and four – but what a thrill!. Even though it boiled furiously and numerous stops had to be made to cool down and refill the radiator, and we had to get out and walk up Victoria Pass on the return run.*[47]

When he was about 10 Tom decided to become a racing car driver. He built a billycart with pram wheels, a steering wheel cut out of the side of a butter box, and cable and bobbin steering.

He then constructed a track down the slope of Kihilla's orchard with various types of corners, a hard surface of rolled cinders and a fairly steep gradient. He practised for hours on this.

At weekends Geoffrey timed him with a stopwatch and started him off with a homemade flintlock pistol.

***Tom on is billy cart, Kihilla, about 1910*. (Sulman Family Archive).**

Later Tom built what he called a 'de luxe' model with pushbike wheels that he used to go down a steep hill on the main road. This proved his undoing. The steering failed and as there were no brakes the billycart went over a cliff and was destroyed. Tom only just managed to jump clear.[48]

He entered Woodford Academy as its 83rd enrolment on February 2, 1912. The school was then only five years old.

Located in a former inn built during the early 1830s, with John McManamey as owner and rector it offered a curriculum based on the liberal arts. Commercial subjects were also available.

Rather oddly, the admissions register describes Tom as a Congregationalist[49] although John had abandoned Congregationalism for Anglicanism shortly after arriving in Australia, he and Annie were married in an Anglican church, and Tom described himself as Church of England when he enlisted in the Australian Imperial Force in 1918.[50]

Tom's autobiography says very little about his schooling and does not even directly mention Woodford Academy. 'I am afraid', he observes, *I could never boast of my scholastic ability, the main trouble being that most of my schooldays were during the war and my ambition was to follow in Geoffrey's footsteps and enlist in the Royal Flying Corps, beyond this I could not think*.[51]

That, however, is something of an exaggeration, as Geoffrey did not join the Flying Corps until 1916. Tom's best subject was mathematics.[52]

Continued from page 13

He also performed quite well in athletics events.[53] He finished school at the end of 1917[54] but left a permanent legacy in the form of his name prominently carved into a desk.[55]

By October 1918 he was studying engineering at the University of Sydney but that may have been, like Geoffrey, as an unmatriculated student.[56] He maintained contact with the school, in 1922 being elected to the committee of the Woodford Old Boys' Union.[57]

Immediately after leaving school he worked on his brother Arthur's North Queensland station.[58] On November 5, 1918, just before the First World War ended and with his parents' reluctant agreement, he enlisted in the Australian Imperial Force. He was discharged in early January 1919.[59]

During the years at Woodford Academy, Tom continued to spend as much time as he could with motor vehicles. His main reading was motorcar and motorcycle magazines.

At the age of 15 he resurrected Geoffrey's old two and a quarter horsepower motorcycle from the scrap heap. After fitting it with a magneto and carburettor, he took it out on surreptitious rides until he got his licence and had the motorcycle registered at the end of 1916.

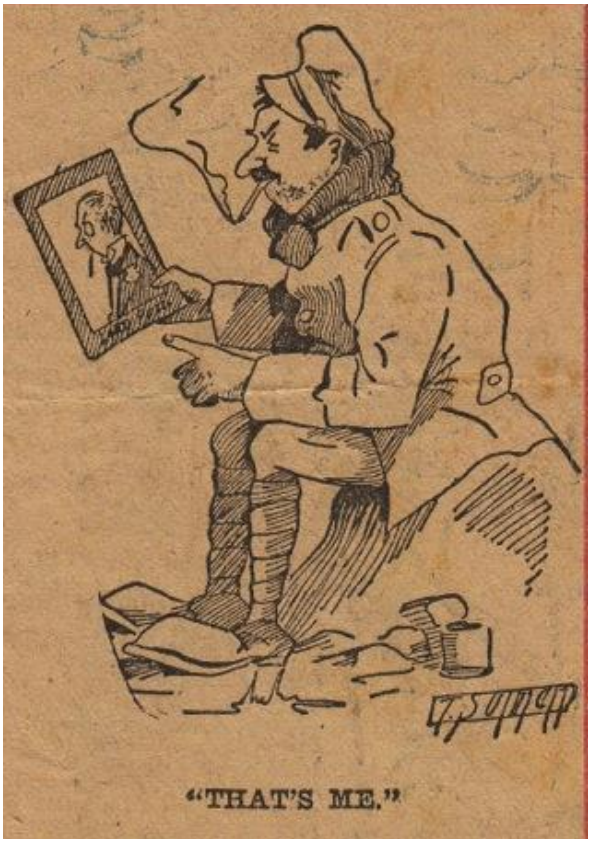
Because he could not afford much petrol, he ran the vehicle on kerosene taken from the household supply with a bottle of petrol in his pocket to start it up. The motorcycle broke down so frequently that Tom believed he must have pushed it further than he rode it.

Eventually it fell apart, sending Tom into a ditch as it did so. This was, he writes, 'the first time I broke my nose and had concussion, not the last by any means'. With John's financial help, he then bought a six horsepower racing motorcycle that proved more reliable.[60]

An accomplished pen and ink artist, Tom covered the costs of running this vehicle by regularly publishing cartoons in the Sydney newspaper *The World's News.*[61]

Geoffrey taught Tom to drive the family S.P.A. car around Kihilla's grounds in about 1914. Following Geoffrey's departure for England, John decided that once Tom got his licence he could take over Geoffrey's driving responsibilities.

Before then, because the car had been unused for quite a long time, Tom had to do a lot of mechanical work on it.



***Tom Sulman, "That's Me", cutting from "The World's News" 1917*. (Sulman Family Archive)**

He then for about a year from the beginning of 1917 drove the family in the car every weekend. The first journey proved a disaster as the tyres were perished, resulting in five punctures.[62]

One journey involved, Tom recalls: *a 1000-mile tour, quite a major undertaking in those days as all roads were un-Macadmised outside the major cities and garages few and far between.*

Luckily we had a practically no-trouble run, except for several punctures and a couple of broken springs which were expected with the bad roads, cart springs and no shock absorbers.

My father used to tell me to 'steady down' if the speed exceeded 40 mph, except when we were overtaking another car when he would cast a blind eye on the speedometer until we passed, explaining to my mother that the dust was not good for her.[63]

Before Tom departed for North Queensland he taught Joan to drive the car. Because she was unable to start it, which required using a large handle, John replaced the S.P.A. with a 20 horsepower Dodge that was started more easily.[64]

Continued from page 14

Although mostly based in Sydney, Tom's participation in motor vehicle races and trials between 1919 and his death while racing at Bathurst in 1970 sometimes brought him back to the Blue Mountains.

He also until the late 1920s quite regularly stayed with the family at Kihilla. It was there during 1920 in Geoffrey's old workshop that he built a prototype of the Sulman Simplex cycle car that John financed.

This was a two-seater, light tourer powered by a 12 horsepower, twin-cylinder, air-cooled engine. Despite a solid rear axle, it had a sporty performance. Tom found business interests prepared to provide further finance and by 1923 had in Sydney built three more of the cars that were well received.

As the motoring journalist Pedr Davis tells the rest of the story: *Orders for the light car were most impressive and Tom stood by, ready to launch a public company and enter the production field with gusto. Unfortunately, Lord Austin chose that precise moment to invade the Australian market with his diminutive "Seven". Tom's backers panicked and cooled off abruptly. Plans for the public company disintegrated and Tom was left with a bundle of parts and a flattened bank balance.*[65]

David Sulman Carment, AM

The author of this article Emeritus Professor of History, Charles Darwin University David Carment is the great grandson of Sir John Sulman and Lady Sulman who followed by their descendants have lived and/or been associated with the Blue Mountains for more than a century.

David a former president of the Royal Australian Historical Society and the inaugural president of the Western Crossings committee set up to coordinate the bicentenary of the first European crossing of the Blue Mountains activities, presented this paper at the 9th annual general meeting of BMACHO. David has had a distinguished career in academia and as the director of National Trust (Northern Territory).

He was recognised in the Order of Australia for services to the community as an advocate for the protection of Northern Territory cultural heritage, and to the scholarship and dissemination of knowledge of Northern Territory history.

An enduring connection

Even after the Sulmans stopped using Kihilla in 1934, various family members in addition to Tom travelled to the Blue Mountains.

From the 1950s my own family went there quite frequently.

In 1957, for example, we stayed in a rented house on Cliff Drive in Katoomba, enjoying walks, picnics and car trips to various beauty spots that the Sulmans first saw during the late nineteenth century.

My mother Diana from time to time told stories of Kihilla, which she and her younger cousins once briefly owned.

Tom's daughter Diana Inglis Carment (1927 – 2005) on holiday in the Blue Mountains,1957. **(Carment Family Archive)**

A few years ago I followed in my great grandmother Annie's footsteps by becoming involved in commemoration of the Blue Mountains' first European crossings.

A permanent family connection was re-established in 1987 when my sister Annie and her partner Vittorio Cintio bought a house in Wentworth Falls, the town where Tom Sulman was born. They have lived there ever since.

My now deceased parents regularly went to see them. My brother Tom and his family and I have done the same.

Three of Annie's five children, all educated at Korowal School in the Blue Mountains, have now left home but two live in other parts of the Mountains.

Her daughter Talulah's house is very close to Woodford Academy. They often return to Wentworth Falls, particularly for the lunches that Vittorio now organises on most Sundays where family and friends get together.

As frequently as possible these are outdoors, continuing the tradition established at Kihilla so many years ago.

[65] Pedr Davis, 'The Tom Sulman Story', in *Sports Car World*, December 1957, p 59.

New faces on BMACHO management committee

There are three new faces on the management committee following the 9th annual general meeting of the association held recently a Woodford Academy recently.

They are Richard Woolley (Blue Mountains Historical Society), Suzanne Smith (Kurrajong-Comleroy Historical Society) and Roy Bennett (Mt Victoria & District Historical Society).

They replace Jean Winston (Mt Victoria and District Historical Society) Kevin Frappell (Glenbrook & District Historical Society who did not seek re-election and Doug Knowles (Glenbrook & District Historical Society who resigned late last year to devote more time to his society of which he has been the president for several years.

John Leary, OAM the inaugural president of BMACHO now in his 7th year at the helm returned to the office last year after a 2 year break due to ill health.

John welcomed the new committee members and congratulated those who were re-elected.

Those re-elected are Associate Professor Ian Jack (individual member) as vice president for the 9th year, Jan Koperberg (Blue Mountains Family History) as secretary/acting treasurer, Dick Morony (Springwood Historical Society) as membership officer, Scott Pollock (Everglades Historic House and Garden), Wendy Hawkes (Lithgow City Council's cultural heritage officer and manager of Eskbank House).

In welcoming them to office John said that present and past committee members had a wealth of knowledge and experience right across the heritage sector.

These committees had available to them members including those from academia, the heritage/history professionals, and the amateur enthusiasts all of whom had proved to be invaluable.

BMACHO president John Leary has said the 2014 – 15 management committee will face many new and continuing challenges.

Among these issues will be the effect of anticipated government funding cuts, development of the proposed heritage trail promotion, the adequacy of and ability to sustain the level of service to members, a review of the association's constitution and vision, assistance to member societies in recruiting and retaining volunteers, further engagement with the Indigenous peoples and their cultural heritage and many more.

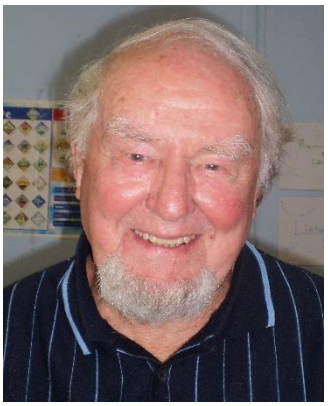
There will be many more activities associated with the 2013 – 15 Western Crossing Bicentenary commemorations in which individuals and various societies as well as BMACHO will support as the 3 year event moves further westward to Bathurst.

In presenting the president's report, John Leary praised the most improved professionalism of museum exhibits by organisation.

"I watch very little television. However, I do try to stay awake for any of David Attenborough's documentaries", Mr Leary said.

"Recently, I was enthralled when the wizardry of computer graphics, manipulated remnant fossilised bones to bring alive priceless but normally stuffy skeletal exhibits at the British Natural History Museum.

"When the museum closed for the night out came the creatures of the Jurassic era. Like the fabled wooden soldiers in the toy shop strutting their stuff as the clock struck midnight.



Roy Bennett

Richard Woolley

Suzanne Smith

"Instead of towering and fearsome reconstructed skeletons of dinosaurs bolted to the floor and wired to the roof, the giant brontosaurus roamed the galleries of this great museum, while menacing pterodactyls, the winged lizards flew above the exhibits and the Yeti humorously taunted the viewer from behind columns of the magnificent building.

Continued from page 16
"I thought wouldn't it be great if local museums could produce computer graphic enhanced exhibits like those in the documentary.

"Then I was jolted out of my reverie.

"Wait a minute, I thought -- what about the Governor Macquarie Room and the dramatically improved curating of living history at the Mt Victoria Museum sufficient to attract a substantial grant from the National Library of Australia?

"What about the fabulous 'Red Admiral' exhibition on the life of Patrick White at Mt Wilson?

…the awesome exhibit acclaimed by the Governor of NSW

"What about the awesome exhibit acclaimed by none other than the Governor of NSW, at Hartley Vale, the Joan Kent curated exhibit, 'A moment in time'?

"What about the innovative miners' bath house conversion into an auditorium media presentation at the Lithgow State Mines including the telling of the Fire in the Mine story which recently won two Museums & Galleries NSW awards?

"What about the ongoing first class exhibits at Norman Lindsay Gallery at Faulconbridge and 'Tarella in the grounds of the Blue Mountains Historical Society's property at Wentworth Falls?

"And how can anyone forget the visual delights of the Blue Mountains Botanic Garden at Mt Tomah and the spectacular all seasons gardens of Everglades.

"Then there is the intrigue of the Turkish Bath House again at Mt Wilson.

Turkish Bath House at Mount Wilson

"A century ago in 1914 a locomotive depot was established at Valley Heights and here we find perhaps not a living history but the actual locomotives that climbed the Blue Mountains in those early days of rail --- all steamed up and on show; while over Kurrajong way undergoing transformation is a spectacular collection of exhibits at the Transport Signal and Communication Museum.

"The Kurrajong-Comleroy Historical Society, Blue Mountains Historical Society, and the local studies units in the municipal libraries at Penrith, Springwood and Lithgow have well over 10,000 images catalogued and much of this now digitally archived.

"At Emu Plains there are thousands of photographs and local artefacts collected and curated by the Nepean & District Historical Society housed in the former Arms of Australia Inn built in 1893.

Woodford Academy

"Here at Woodford Academy we have a property that goes back to the 1830s as a wayside inn.

"At Scenic World in Katoomba, the Hammon family have done a fantastic job retracing and preserving the early mining cultural heritage of Jamison Valley combining it with a world class tourist attraction.

"And there's a lot more heritage sites, all of which are part of our cultural heritage, set in the wonderful UNESCO World Heritage listed Blue Mountains National Park.

"In commerce jargon we have the product let's go market it. And market it is what we are about to do.

"A bloke named Richard Woolley from Blue Mountains Historical Society attended one of our workshops in the Western Crossing Room at the Mount Victoria Museum earlier this year and in his own words came away inspired to do something about marketing a Heritage Trail and that very night e-mailed me his idea about marketing heritage throughout the region.

"I asked him to head up a working party comprising Wendy Hawkes from Lithgow's Eskbank House, Scott Pollock from Everglades and Lynn Collins BMCC museums adviser. Richard has some expertise in the field of marketing, Wendy could sell refrigerators to Eskimos, and Scott is Mr Can-do in all he aspires to do while Lynn brings a wealth of experience in museums and heritage.

SOME OF THE HIGHLIGHTS OF THE YEAR

"In this annual report from the president, I do not propose to go into detail on everything with which BMACHO and its constituent societies has been involved for the past 12 months, as most of it has been reported in the association's

Continued from page 17
newsletter *HERITAGE* and other regular e-mailed bulletins. Rather I will only touch on one or two significant issues.

THE FIRES

"The year 2013 will be remembered sadly as the year that nature in all her fury swept through the Blue Mountains, Lithgow and neighbouring districts destroying property including more than 200 homes. Fortunately, no lives were lost and this was in no small way due to the dedication and bravery of the volunteer firemen who often put their lives on the line to fight the insatiable monster. The fires brought out the best in people and this in itself is part of the cultural heritage of this region and in the years to come will become part of history.

"A number of our members were badly affected by the fires, Rob Cameron a former president of Mt Victoria & District Historical Society was one of those to lose his home while the Zig Zag Railway Co-op Ltd lost a great deal or had damaged a great deal of its rolling stock and equipment while the State Mines Museum at Lithgow was in direct line of the fires.

"The irreplaceable art collection at Norman Lindsay Galleries was hastily moved to safe storage and other individuals were evacuated for their own safety.

THE WESTERN CROSSINGS 1813-1815 BICENTENARY CELEBRATIONS

"In the first year of the Western Crossings celebrations there were numerous activities to mark many aspects of the western crossing and many of these have been reported in the media and various newsletters.

"Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

"Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

"The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between our guest speaker at today's meeting Professor David Carment and the then Premier of NSW, Barry O'Farrell.

Phil Hammon and Tom Colless celebrate the bicentenary

"Measured in many regards the commemoration and celebration rather than commemoration could be judged as a success. However, with the lack of substantial funding many believe the event missed its much wider potential including that of leaving a lasting commemoration.

BMACHO MEMBERSHIP

"In the past 12 months membership has increased with the Nepean District Historical Society and the Paragon Restaurant coming on board and as I understand it the Hawkesbury Historical Society is about to apply for membership.

"It is pleasing that at the two general meetings held in this period that members considered that BMACHO was both relevant and apart from several minor administrative issues sought no change in the management committee's direction.

PLANNING AND ADVOCACY

"BMACHO has continued to be affiliated with the Better Planning Network which was principally set up to oppose much of the proposed legislation by the NSW government which leaves heritage even more exposed to threat of destruction by developers.

"A major submission by BMACHO supported much of Blue Mountains City Council's response to the mandatory 'one size – fits all' planning instrument in preparing the city's Local Environment Plan 2013 for the NSW government's planning department.

"BMACHO's support for deviances from the standard instrument recognised the city's unique and special characteristics.

"BMACHO's submission drew attention to the nature of the villages and townships coupled with the renowned natural beauty of the mountains and the abundant reminders of Australia's early history and cultural heritage which allows local residents to experience a state of satisfaction with 'their

Continued from page 18
lot' and helps create a feeling of personal wellbeing.

"BMACHO became aware towards the end of last year that Blue Mountains City Council was about to seal parts of Old Bathurst Road, (formerly Cox's Road), Woodford including some of the original construction by William Cox.

Stone wall part of the original Cox's Road under threat

"In collaboration with local residents, in a very short time an argument was put together, against the sealing and damage to the remnants of one of the oldest roads in Australia. A strong protest was put before council about this proposed heritage vandalism by local government. Jan Koperberg, Ian Harmon Juliana Swatko a local resident, and I addressed a meeting of the full Blue Mountains City Council objecting to the proposal last year.

"As a result council agreed to have a professional heritage archaeologist investigate the damage already done and the value of the road as a heritage site. The matter has been stalled in council for almost 6 months.

"Blue Mountains City Council has consulted BMACHO on a number of issues and most recently the future of the Stationmaster Cottage at Lawson. There has been a close relationship between BMACHO and council's heritage adviser Christo Aitkin and Museums Adviser Lynn Collins.

"BMACHO's representative on BMCC heritage advisory committee has had input in numerous issues and was on the panel which allocated funds from the Local Heritage Fund.

FUNDING

"In the past 8 years BMACHO has been reasonably able to fund much of its activity including workshops, from government grants, and public authorities but for various fiscal reasons these sources are expected to be less forthcoming in the immediate future. BMACHO in the year ahead will need to look to some belt-tightening and find alternative sources for funding.

THANKS TO MANY

"Finally, I thank our member organisations and individual members for the support, encouragement and trust they have placed in the association's committee. It has again been my great pleasure to work with a quite unique body of people who have led and directed the association for another year. This committee has a great mix of personnel from academia, professionals and dedicated volunteers bringing to the committee a very experienced and balanced approach in regard to cultural heritage.

'Once again this report does not allow for the real appreciation I feel for the members of the committee to be expressed. However, I know that most will be aware I trust, the few words I have to say about them now, are accepted as a mere modicum of the real esteem in which I hold them, for the invaluable work they are doing within the heritage sector.

"In previous annual reports in thanking our vice president Ian Jack I have touched on his lifetime of involvement in cultural heritage and Australian history and as each year comes and goes I wonder how Ian is able to provide an ever increasing support for the heritage movement.

"To list Ian's achievements, the organisations he supports and the bodies which seek his professional advice would take pages. Ian your involvement as vice president for the past 8 years has been exceptional and I thank you so very much for this and for what you have helped me achieve and learn in the heritage sector.

"Our secretary Jan Koperberg never ceases to amaze me for her capacity to achieve. I have said it before but it is worth repeating:

"I have worked with many secretaries and few have come anywhere near the excellence that Jan has exhibited.

"She is on the ball all the time, her minuting of meetings leaves no doubt as to the decisions and why they were made and which appear in easy to read documents.

"Jan is not only an extremely able and efficient administrator but she also is in her own right a keen explorer of history and our heritage, contributing a great deal to this and other organisations.

"Jan's energy is also incredible and I am not sure just how many groups she belongs to or supports but I do know how much time she gives to BMACHO and this is quite staggering. Jan you are great to work with and Nanette and I enjoy your company.

"Dick Morony has again kept our membership records in a good condition and it is always a pleasure to have him along at our meetings contributing the benefit of his long experience in the heritage sector.

"Doug Knowles, Kevin Frappell and Jean Winston brought to the management committee not only a vast expertise of local history but also have a good

Continued from page 19
understanding of what the smaller historical societies need and limitations are within the heritage sector and to them. I am grateful and will miss them on the committee in the coming year.

"Patsy Moppett has continued to provide a valuable contribution to the committee. Her knowledge of local government planning is extremely valuable I and others also value the work she has done with National Trust and others to preserve the western end of the iconic Cox's Road. Thank you Patsy for your involvement.

"Scott Pollock and Wendy Hawkes have brought to our management committee not only the expertise they have built up with the properties they so ably manage in the case of Scott, Everglades and Wendy Eskbank at Lithgow but also a vibrant enthusiasm of younger people. They both have a keen interest in cultural heritage and have been a great asset to our deliberations.

"I am delighted they will stay on the committee. Thank you Wendy and Scott.

"Most will be aware of Nanette's ill fortune and the frustrations she is still experiencing but as she has done so lovingly for more than 60 years, 57 as my wonderful wife, she is still supportive of my involvement in activities and I am delighted she is with us today.

A clever illusion: a real table and glassware in front of the graphics of Governor Lachlan and Elizabeth Macquarie drawn by Clive Jones

"Thank you one and all for the support you have given us during yet another year as president of the Blue Mountains Association of Cultural Heritage Organisations Inc."

John Leary, OAM

THE GREAT WAR THEME FOR HISTORY WEEK 2014

The Great War will be the theme of the History Council of NSW History Week, which this year runs from September 6-14.

It was to be "the war that will end war" as H.G. Wells commented in August 1914. From the heights of hope to the horror of the trenches, the Great War changed the world irrevocably.

It separated families and lovers, turned young men into soldiers and young women into nurses, converted friends and neighbours into enemies.

The unusual circumstances of warfare intervened with each aspect of life. In which ways did the conduct of war shape, change and inform those fighting and those remaining on the home front?

How have historians approached complex topics surrounding it, such as the scale of violence, women's involvement in war, forced migration? What impact did the Great War have on the cultural memory of those involved – allies and enemies?

In the aftermath of 1915 Australians elevated the Gallipoli landing into a foundation story, which claims that the nation was born on this battlefield, but there are more layers of remembrance yet to be uncovered and examined. History Week 2014 will explore the impact of World War 1 abroad and at home.

Sydney University historian Julia Horne to open Blue Mountains History Conference

Pursuing Wonder in the Blue Mountains'' is the title of the keynote address to be delivered by Sydney University Associate Professor Julia Horne at the Blue Mountains History Conference to be held at the heritage listed Carrington Hotel, Katoomba on Saturday May 10.

Dr Horne (pictured right) has taught history at UNSW, worked as a curator in social history at the Powerhouse Museum, pioneered local history outreach programs and spent hundreds of hours interviewing people about their lives as Head of the Oral History Program in the UNSW Archives.

She has been a member of the Council of the Royal Australian Historical Society since 2007, and in 2009, was appointed member of the governing council of the Australian National Maritime Museum

Dr Julia Horne's research interest include: The public university in Australasia 1850-1918; various aspects of oral history including memory, biography, 'the interview', and oral history as a form of modern personal papers; overseas students in Australia in the 1950s and 1960s and history of travel, tourism and natural landscapes.

At the University of Sydney, the role of University historian is as public historian responsible for various university history-related tasks such as maintaining the university's oral history program and developing strategies to promote the university, its heritage and history to the wider community.

After morning tea Associate Professor Ian Jack will speak about 'The Heritage of Education in the Blue Mountains' followed by heritage architect, Hector Abrahams who has chosen as a title for his paper, 'The Heritage of Religious buildings in the Blue Mountains'.

Ian Jack is no stranger to most who have an interest in Australian history and the nation's heritage.

Often described as a consummate scholar, Ian has been associated with local history groups throughout the region and in fact throughout NSW and farther afield in Australia, providing the benefit of his well versed advice freely to those many historians and others who frequently seek his assistance.
Ian has the greatest respect for the army of volunteers who research material, and work with collections in towns and villages around the country.

Ian Jack (pictured right) was president of the Royal Australian Historical Society for 11 years, is president or a senior member of many historical and heritage groups including being president of the Hawkesbury Historical Society and for the past 8 terms vice president of BMACHO.

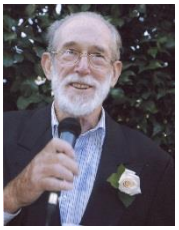
The last speaker before lunch, Hector Abrahams (pictured below), also a former president of the RAHS has brought to his firm a philosophy that old buildings have to be understood, kept well and made liveable and workable for people in today's world.

Hector has said: "Churches are for the long-term, and faith communities have such different needs from decade to decade. It is most important to recognise this.

"A good church has to be able to withstand the vicissitudes of church life, and to have an enduring aesthetic."

Lunch will be served in the heritage dining room of The Carrington and this will be followed by a musical interlude by Christine Wheeler and Friends with songs from "Rain in the Mountains – Songs of Henry Lawson".

Ms Robyn Parker, proprietor, The Paragon Restaurant Katoomba and Dr Ian Jack will conduct a question and answer segment about this iconic restaurant



The final speaker for the day will be Doug Knowles, whose subject is the Great Western Railway – Lapstone Hill, the first challenge.

31 sculptures set among an ancient rainforest

Featuring Ken Unsworths Harlequin's shuttle

Thirty new sculptures framed by Blue Mountains ancient rainforest, artist led workshops for children, and an 8 metre commissioned artwork by renowned Australian sculptor, Ken Unsworth AM, are part of Sculpture a Scenic World 2914 now on until May 18, 2014.

Blue Mountains Gazette review reports, Ken Unsworth has fond memories of the Blue Mountains and has made many journeys Scenic World's rainforest during the seven day process to install Harlequin's Shuttle beneath the majestic canopy.

The8 metre sculpture will remain in situ for the duration of the exhibition.

Two years in the waiting Harlequin's Shuttle is the first time iconic sculptor Ken Unsworth has exhibited in the Blue Mountains within his illustrious career spanning over four decades

The Jurassic landscape and mining relics at Scenic World create a unique setting for the exhibition featuring sculptures from the People's Republic of China, Hong Kong, 17 from NSW,10 from the Blue Mountains and one from Tasmania.

David Hammon, joint managing director said Scenic World is thrilled to deliver the third annual exhibition. "Ëach year the artists continue to surprise and inspire us with their vision, as they collectively transform our rainforest into a stunning outdoor gallery for our visitors to enjoy," said Mr Hammon.

Exhibition manager Lizzie Marshall, said , "This exhibition is an exceptional showcase of Australia's sculptural scene and the Blue Mountains as the City of the Arts. The artists have developed different frameworks to respond to the natural environment.

"Key themes include absorptive black, reflective surfaces and architectural responses to the rainforest," Ms Marshall said.

Participating artists will also have the opportunity through a new partnership between *Sculpture at Scenic World* and the Blue Mountains Cultural Centre to exhibit at the Cultural Centre from June 9 to July 7.

Katoomba's unique World War 1 memorial

By Joan Edwards – member, Blue Mountains Historical Society and former president Blue Mountains Family History Society

While Blue Mountains has many World War 1 memorials, Katoomba's is unique, namely the Blue Mountains District Anzac Memorial Hospital, the only World War 1 memorial hospital in Australia.

The 1914-1918 war had come and gone and still there was no hospital between Penrith and Lithgow.

Some locals thought there should be a community hospital while others opposed the idea as there were already large sanatoria and smaller care homes.

It would be disadvantageous to be known for hospitals instead of guesthouses in the great holiday location.

In 1919 Gearin's Hotel was being refurbished when carpenter, Ted Stratford, was knocked unconscious when struck on the head by falling timber and had to be transported to Penrith.

Fellow workers passed the hat around and collected 6/6. Stratford's accident became the catalyst for a local hospital.

The following day, contractor Fred Johnson, began organising a football match to raise funds. Leura station master, a keen footballer, organised an opposing team.

It was to be fancy dress with a procession from Leura Baths to Katoomba Falls football ground. Collections were made along the route and raised £162 to add to the 6/6.

We owe thanks to Dean Piryak, director of nursing, for early research presented as Foundation Day Speech in October 1995.

Unfortunately he found no record of which team won the match, but hopefully, it will not be too long before the local newspapers are digitised and we will be able to imagine the colour, noise, events and excitement of that day.

The original frontage of the Blue Mountains District ANZAC Memorial Hospital

The momentum slowed when work was completed at Gearin's until Mr Edward Booth suggested that money raised should fund a lottery which was set up as 'Katoomba Thousand Lottery'.

The funds grew rapidly and Mr Booth formed the Blue Mountains District Hospital and Peace Memorial Committee with Dr John Allan as chairman.

The committee met solidly for a week to plan and set goals to be achieved. They decided to complete all preliminary work before petitioning the government.

The committee decided that it should be a peace memorial.

In the wording of the original committee's minutes, "No more fitting memorial to our gallant citizens who have fallen for us could be devised and we contend that a united effort to secure for us this communal blessing is much more desirable than that each township should erect drinking fountains and such like street obstructions".

The energetic and enterprising Mr Booth is credited as being the driving force that kept all working toward the final goal.

Presumably there were the card parties, fancy dress balls and so on with celebrities pressed into promotions.

Sir Ross Smith sent a notice by 'Aeroplane Post' Advice from the Clouds of a Race Meeting to be held at Medlow Bath Racecourse on Wednesday, February 25th. £50 prize money was offered.

It took a further six years fundraising that is to 1925, before they were ready to proceed.

The foundation stone was laid by the New South Wales Governor, Sir Dudley de Chair, on October 6, 1925.

Building work proceeded fairly rapidly, as did the fundraising, in spite of some opposition from residents who thought it would be filled with TB sufferers and others with long term illnesses.

As the building work neared completion, the committee thought the name should include ANZAC and the names of the fallen should be on marble tablets in the vestibule of the main entrance, in all 139 names.

They hoped, wished, that the tablets would be unveiled by the Duke and Duchess of York (later King George V1 and Queen Elizabeth).

After the usual negative responses, the authorities controlling the royal tour said they would consider the request.

It was approved with restrictions such as it was not to be included in the royal itinerary, the ceremony must *not* be advertised, and only hospital committee members and hospital management could attend. In addition it must be a very brief stop.

Mr Booth stepped out when the motorcade stopped, approached the Duke and Duchess and requested they perform the unveiling ceremony.

They agreed, alighted and the Duchess of York performed the ceremony. The Duke and Duchess inspected the hospital and signed the visitor's book before continuing their journey to Blackheath.

It was late May, 1927, just three weeks before the first patients were admitted in June.

Initially the hospital had two wards, one male, one female, with a total of 22 beds under the control of Matron E Richards, six nurses and local medical officers.

It was gazetted as a public hospital on August 5, 1927. The rather grand official opening was conducted on October 3, 1928 by Lieutenant Governor of New South Wales, Sir William Cullen.

Katoomba's Blue Mountains District Anzac Memorial Hospital is far from a drinking fountain or other street obstruction and stands today as a testament to the driving force and dedication of a community.

Indeed it is the community's ongoing good fortune that Ted Stratford was knocked unconscious at Gearin's Hotel all those years ago!

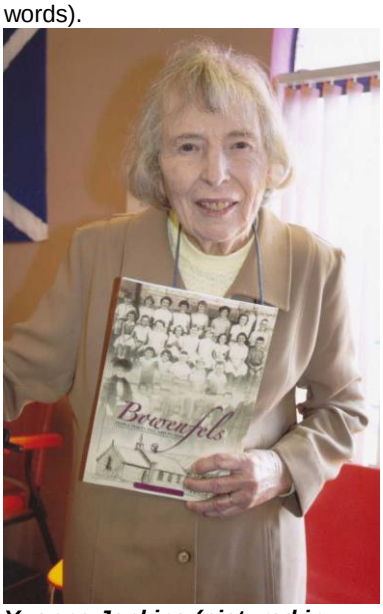
'My ancestor was…'

YVONNE JENKINS of Rydal was a well-known family history and author of several books of family historian in the Bowenfels, Rydal and surrounding areas.

She was the convenor of the Lithgow and District Family History Society in 1986 and encouraged members to write stories about their ancestors.

The Lithgow and District Family History Society has chosen to commemorate Ms Jenkins memory each year by conducting the Yvonne Jenkins Memorial Award.

Entry is open to members and non-members of the society and is in the form of a short essay (1000 words).



Yvonne Jenkins (pictured in 2008)

The topic for the 2014 award is "My Ancestor was a…..".

The winner will receive a certificate and one year's membership of the society.

Entries close on April 30 and must be accompanied by an entry form, available on the society's websitewww.lisp.com.au/ldfhs.

Have you booked your seat for the Blue Mountains History Conference on 10 May 2014?

A VERY SIGNIFICANT COLLECTION

Recently the Blue Mountains Historical Society was given a very significant collection of books by one of its members, Malcolm Ferguson.

Former president and the society's librarian Judy Barham said, "The Society is indeed so fortunate and we are extremely grateful.

"Malcolm has been collecting books on all aspects of the Blue Mountains since the 1960s. The collection is very comprehensive and many of the books are no longer in print.

When one goes with John Low to look at it and he picks up a book and says, "I have heard of this and never seen a copy", you know that there are some important and rare books in the collection.

There are not only books but also maps, pamphlets and other small items relating to the area.

"The society cannot thank Malcolm enough for his very generous donation. We will value it very highly" said Mrs Barham.

Blue Mountains History Conference

On Saturday, 10 May 2014 at the heritage listed Carrington Hotel, Katoomba

Opening up the Route to the West ... Architecture and the Railway

The conference is being organised by the Blue Mountains Association of Cultural Heritage Organisations Inc. (BMACHO)

For 2014, the keynote speaker, Associate Professor Julia Horne, will speak about 'Pursuing Wonder in the Blue Mountains'

Associate Professor Ian Jack will give a presentation about the early educational architecture

Hector Abrahams will give a presentation on the early religious architecture.

After lunch Christine Wheeler and Friends will present "Rain in the Mountains – Songs of Henry Lawson", singing Henry Lawson poems.

This recital will be followed by a Question and Answer half hour, when Dr Ian Jack will ask questions of the proprietor of the Paragon Restaurant, Mrs Robyn Parker.

The last speaker will be Doug Knowles and his presentation will be 'The Great Western Railway – Lapstone Hill, the first challenge".
In addition there will be an optional afternoon tea served at an extra charge at the Paragon, which includes a tour of the Paragon, including upstairs where the chocolates are made. Conference, including morning tea and lunch at The Carrington $50 per head and optional afternoon tea and tour of The Paragon an extra $10

For registration form go to bluemountainsheritage.com.au 'Events and Activities' and click on the link or use the form attached to the email.

Funds for restoration at four heritage properties

Blue Mountains Council has recently instigated a local heritage fund with the assistance of the newly established heritage committee. This is a long awaited and very welcome initiative of the council and an initiative of BMACHO.

One of the beneficiaries of this inaugural local heritage grant has been the lych gate on Falls Road, Wentworth Falls at Holy Trinity Anglican Church (photograph this page courtesy Margi Fallon, Heritage Consultant, Integrated Design Associates).

The gate was built in 1921 in memory of Douglas Gillfillan, who with his wife built “Gwandalan” in 1910 – 12 at the junction of Henderson Road (then Government Road) and Blaxland Road, Wentworth Falls.

At that time it was known as 7 Government Road. The Gillfillans built a magnificent garden on their property.

The property remained within the Gillfillan family until 1989. Mr Gillfillan died of tuberculosis in 1921, after a long illness and it is said that the room that he was in was burnt as a sterilization measure as was common at the time.

The gate at Holy Trinity is constructed of a sandstone base, with beautifully crafted timbers for the roof, which have been dowelled and pegged together.

The gate uses no nails in the main structure, with only the small nails to tack down the cedar shakes, and the timber lining boards.

There is an art nouveau styled bronze plaque placed in memory of Mr Gillfillan located on the inside.

This beautifully crafted gate will be carefully restored by the replacement of the shakes which have well and truly lived out their life, and provide for the ongoing protection of the crafted structure beneath. The sandstone base will be repointed.

The gate will then be able to continue to contribute to the visually significant streetscape of Falls Road, taking its place among the pine trees, the heritage listed 1890 Anglican Church building, and the similarly styled Presbyterian Church opposite.

The lych gate was one of four projects selected to receive assistance from this year’s funding.

The other three projects were to the Paragon Restaurant for design, construction and installation of lighting to the front awning and other work to return this iconic restaurant and chocolate factory; the gatekeepers cottage at Valley Heights and restoration of sandstone footings of a building at 112 Katoomba Street, Katoomba which has heritage significance.

The funded work at the Paragon and at 112 Katoomba Street will further enhance what is substantially intact streetscape of heritage shops and residence.

The building’s originality and classic façade is notable and often photographed by tourists and students of architecture.

The property at 110-114 Katoomba Street is a fine and intact example of Federation free classical commercial. The intact copper clad shopfronts add particular interest to the streetscape at pedestrian level

The work on the gatekeeper cottage at 4 Great Western Highway, Valley Heights will include replacing two timber windows to restore external character as shown in the 1867 original drawings.

The building which is listed on the State Heritage Inventory, is being considered for adaption by its owners to provide heritage tourism accommodation.

The sandstone cottage has strong links to the Valley Heights Railway Heritage Museum.

Because the railway shared a narrow ridge with existing road systems from the 1860s onwards, there was need of numerous level crossings.

Twelve of these were guarded by gates controlled from a gatekeeper’s cottage.

Six of the original stone cottages of 1867 survive, but only four of them are habitable and on their original sites.

There were two such cottages in Valley Heights. One, no. 5, was just east of the railway station and was demolished after 1902. The other, no. 4, survives on its original site, although its stone privy has been demolished.

It remained in railway ownership until 1950, then fell into disrepair, but was reroofed in 1984 and is now a residence once again.

Editors note: A lychgate, also spelled lichgate, lycugate, or as two separate words lych gate, is a gateway covered with a roof found at the entrance to a traditional English or English-style churchyard.

TomahROMA autumn food and wine fair showcases regional producers

A celebration of nature's bounty set against the spectacular deciduous colours of the cool climate gardens at the Blue Mountains Botanic Garden, Mt Tomah .

TomahROMA promises an enjoyable experience all day as local produce, gourmet delights, wine tasting, music, free guided walking tours and plant sales will all be part of this event

Lovers of local produce and crafts shouldn't miss TomahROMA, the annual autumn food and wine fair at the Blue Mountains Botanic Garden on Saturday May 3, from 9 am to 4 pm. For enquiries 4567 3000

This year the Garden is hosting around 30 stallholders from the Blue Mountains and Hawkesbury regions.

A stallholder at a previous TomahROMA.

The garden's annual blaze of autumn colour.

Fresh juice and cider from local Bilpin apples, wine from Mudgee, handmade bags from Woodford, cupcakes from Penrith and plants propagated by the Growing Friends, volunteers at the Garden, just a small taste of the variety of lovingly made regional produce visitors will be able to sample and buy.

Coffee and hot food stalls add to a lively vibe and fun day out for all. Perfect for finding a unique gift!

Discover the many horticultural delights within the 252 hectare grounds on a free guided tour departing regularly from the visitor centre.

Run by volunteer guides, the tours will focus on the seasonal autumn highlights of the Garden.

The fair will be set against the bright autumnal colours of the turning garden, which in itself attracts thousands of visitors throughout autumn.

This is the best time to see the garden in its annual blaze of colour, which is a sight not to be missed.

TomahROMA has built a strong following with food and garden lovers alike and is now in its 11th year!

Blue Mountains Botanic Garden, Mount Tomah is an inaugural member of the Blue Mountains Association of Cultural Heritage Organisations Inc.

Make your Mark in History

To commemorate the Centenary of the ANZAC, the Woodford Academy Management Committee (WAMC) is undertaking extensive research on the Academy boys' who fought in the Great War and the impact that this had on their lives. Over 300 students were educated at the Woodford Academy between 1907 and 1925.

Fifty three of these students served in World War 1. The research being undertaken is informing the preparation of a secondary school program and new interpretive material for the Academy's museum.

'Make your Mark in History' is the first in a series of interpretive presentations developed by the WAMC that provide a glimpse into these boy's experiences. For further information: woodfordacademy@gmail.com

This work has been made possible with the assistance of a NSW Department of Communities – Veteran Affairs grant.

Bicentenary of the building of Cox's Bathurst Road to be celebrated at Hartley

The Hartley District Progress Association as trustee of the Western Crossings Trust, has announced its intention to mark the bicentenary of the building of Cox's Road through the launch of its exhibition *A Moment in Time II* and by conducting an enhanced series of guided walks on Cox's 1814 road.

Some 3000 visitors attended the Trust's 2013 projects, many, who were disappointed by the short run of the 2013 program, have already pre-booked for this year's event.

A Moment in Time II will be conducted at the Historic Hartley Schoolhouse, 10am-4pm on weekends from Saturday, September 13, to Sunday October 12, 2014 and by appointment, for large groups, on any week day in that period.

Cox's Road walks will be conducted on Sunday September 14, Sunday September 21, Thursday October 2, Saturday October 4, Sunday October 12 ; with bookings accepted for large parties on any day between September 14 and October 12.

The exhibition *A Moment in Time*, curated by professional historian Joan Kent, captures what existed before and what came shortly after the 1813 crossing of the Blue Mountains by Europeans.

It begins with a consideration of the rich and ancient geology of the landscape into which the explorers intruded, before exploring many aspects of the crossing story from the indigenous peoples whose country was being traversed, through the explorers, the road building and early settlement west of the Blue Mountains

'A Moment in Time II' builds on the original exhibition drawing widely on the contemporary Cox's Road research to present a comprehensive vision of 'the road'.

Pictured above: Her Excellency Professor Marie Bashir, Governor of NSW with her aide examining an exhibit after opening Á Moment in Time's 2013 season.

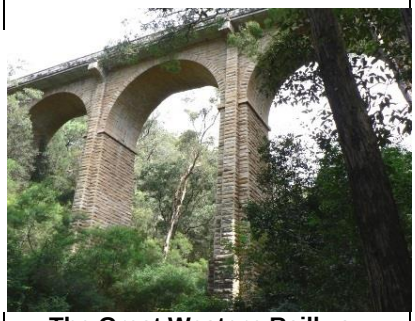
The Cox's Road walks, run in conjunction with the exhibition, represent a unique opportunity to walk some of the country traversed by Blaxland Lawson and Wentworth 1813, Evans 1813 – 14, Cox 1814 – 15 and Macquarie 1815.

Led by informed local guides, these walks offer a great opportunity to learn about the early traverses, the rich colonial heritage of the Hartley Valley and the array of heritage assets the valley harbours.

Bookings for walks and arranged openings of the exhibition will be taken from August 1. Early enquiries and pre bookings can be addressed to Barbara Johnson on 0458 552 017.

For further information contact Tom Kent, president Hartley District Progress Association (02) 6355 2393 e-mail: joankent@bigpond.com or Ramsay Moodie,(02) 6355 2259 or (02) 9983 0134 e-mail: ramsaymoodie@bigpond.com

GLENBROOK HISTORY WALKS



The Great Western Raillway 1867 Lapstone Hill Zig Zag and Knapsack Gulley Viaduct will be the destinations on Sunday, May 25 walk and talk series.

Adults $10 children free

Bookings essential to Doug Knowles 4751 3275

Crossing the play 2014 season

Plans are well underway for presentation of Wendy Blaxland's play *Crossing* to children during the 2014 season in Term 3 2014, mid-July to mid-September.

Crossing will play to schools in Sydney, the Blue Mountains and Bathurst, with a short public season for families in Sydney at Brush Farm House.

Thousands of schoolchildren saw the play during 2013 as part of the Western Crossing celebration in 2013. Schools booking forms are available.

For bookings Wendy Blaxland phone 9489 4955 m 0411 071 273

wendyblaxland@optusnet.com.au www.blaxlandanddaughter.com or Jessica Blaxland Ashby phone 0438 241 126 or 9489 4955 jessica@blaxlandanddaughter.com

Crossing was the brainchild of Wendy Blaxland who gatherered around her a talented experienced team of theatrical artists and production people to produce this memorable play. The 2014 budget is leaner, but there is still a $25,000 shortfall for pre-production costs. Another play is planned for 2015. *Pioneers in Petticoats* will be a one-woman show looking at the women who crossed the mountains.

Pictured are Wendy Blaxland and Jess Blaxland Ashby at Brush Farm House, Eastwood, the restored original home of explorer Gregory Blaxland.'

Rain in the Mountains

Rain in the Mountains - Songs from Henry Lawson' is a unique musical performance of poems from Australia's iconic poet.

Featuring the classic folk voice of Blue Mountains resident Christine Wheeler, the CD also features a number of exceptional local musicians with backgrounds from classical to jazz and world music. Influences from Celtic music underpin the whole sound.

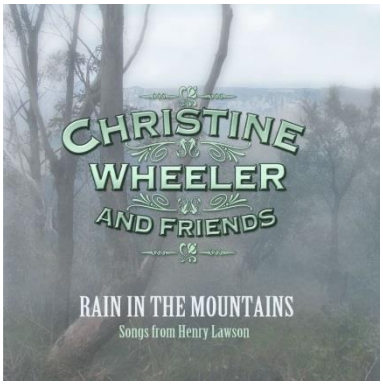
The title track is derived from two poems written by Henry Lawson aged 21, when he lived and worked at Mt Victoria.

His gift for conveying powerful feelings in the straightforward language of ordinary people is highlighted by the varied musical settings on this album - writers as diverse as Slim Dusty, John Schumann, jazz composer Ade Monsbourgh and folk icon Chris Kempster, as well as several of Christine's originals.

The CD has received considerable airplay on ABC Classic Drive FM and on ABC Local Radio's Australia All Over.

For information about performances or to purchase the CD, contact Christine www.christinewheeler.net.au

Graham McDonald, Recorded Sound Archivist, National Film and Sound Archive of Australia has said of the CD: "There are subtleties, skill and impressive musicianship in the way these songs have been put together. I suspect the CD and the live shows which Christine is planning will become a landmark in the interpretation of Australian folk song."



What happened here 4,000 years ago?

The Sydney Morning Herald of 16/1/2013 carries this news item:

> A genetic study has found ancestors of modern Indians may have come to Australia about 4,000 years before Europeans colonised the continent . . .
>
> A genetic analysis of more than 300 Aborigines, Indians and people from Papua New Guinea and island south-east Asia has found a "significant gene flow" from India to Australia about 4,230 years, or 141 generations, ago.
>
> The study's lead researcher, Irina Pugach, from the Max Planck Institute for Evolutionary Anthropology in Leipzig, Germany, said the arrival of these people during the period known as the Holocene coincided with many changes in Australia's archaeological record.
>
> "[There was] a sudden change in plant processing and stone tool technologies, with microliths appearing for the first time, and the first appearance of the dingo in the fossil record," Dr Pugach said.
>
> "Since we detect inflow of genes from India into Australia at around the same time, it is likely that these changes were related to this migration". . .
>
> The Aboriginal DNA used in the study comprised more than 10 per cent Indian genetic markers, which suggested there had been substantial interbreeding between the groups. "[The Indians] could have been sea traders," said Professor Allan Cooper, Director of the Australian Centre for Ancient DNA at the University of Adelaide.
>
> The researchers said it was possible Indian ancestry came to Australia indirectly, through south-east Asian populations that had trade links with northern Australia and Indonesia. But the analysis found no evidence of this in the genes of the island south-east Asian populations. . .

This paper by Father Eugene Stockton proposes a possible scenario. It is known that about this time there was a highly developed civilisation in the Indus Valley, centred on the large settlements of Mohenjo Daro and Harappa.[1] The economy was based on mixed agriculture. The technology included well-established painted pottery, incipient metallurgy (simple copper and bronze objects) and the manufacture of stone tools. Such an assemblage is familiar to me from the excavation of the Chalcolithic site of the Teleilat Ghassul in the lower Jordan Valley.[2] Other Chalcolithic sites have been found east of the Indus Valley.

The stone tool technology included the mass production of chert blades, ground stone tools, beads (of lapis lazuli and carnelian) and pre-eminently inscribed square seals of steatite. The beads and seals were traded over long distances to the Persian Gulf, Mesopotania, Iran, Afghanistan and Turkmenia, offset by imports of lapis lazuli, turquoise and jade. Trade was conducted both overland and by sea. Models exist of both carts and boats.

This civilisation was eventually eclipsed by the Aryan invasion in the second millenium BC.

The possible scenario proposed here is that a trading vessel ventured or drifted far to the east and was shipwrecked on the coast of North Australia. The survivors lacked the means to return home, perhaps lacking the skills and resources for ship-building, pottery and metallurgy. Settling down and interbreeding with the local inhabitants, they were able to pass on the finer techniques of working stone current in their homeland. Aborigines have shown that in matters of interest to them, such as religion and art, they are very receptive of new ideas and ready to pass them on to other communities. As long time workers in stone they would have welcomed the skill and artistry of the new technology.

Archaeological excavation at six Blue Mountain sites, and particularly at Shaws Creek, shows a sudden change in stone tool making at about 4,000 years ago. The relevant strata show a remarkable increase in the amount of flaked stone, a corresponding decrease in flake size, new techniques to control flaking to the desired shape and the production of exquisite small tools.[3] Although differences in tool type occurred from region to region, throughout Australia at about this time there was a similar intensification of flaking stone and the production of small tools (which may have been hafted).

I have suggested that such tools did not offer notable economic advantage, but were rather the expression of skill and artistry, a leisure time activity.[4] What spread quickly was not so much a useful addition to the tool kit as an *idea*, a *fashion*, that was quickly copied and taken up by neighbouring groups. The north-western expression was the surface-flaked point and adze, while the south-eastern expression was the backed-blade implement (for which there were already rough antecedents). I have suggested that this intense activity was conducted around the campfire and was the accompaniment of intense social intercourse, out of which developed the complexities of religion, ceremony, law and kinship relationships for which Aborigines were renowned.

Hartley District Progress Association has new president, Tom Kent

'…a strong feeling in the community that the enthusiasm generated by our 1813 commemoration activities should be maintained and enhanced…'

TOM KENT (pictured below has been elected as president of the Hartley District Progress Association and at the request of *HERITAGE* has outlined in this article some of the objectives of the group in coming years.

He writes: 'After two years of intense organisation and activity focussing on the 200th anniversary of the crossing of the Blue Mountains by Europeans, and in response to its constitutional requirements, a number of new faces have appeared on the executive of the Hartley District Progress Association, including myself as president for 2014.

Tom Kent

'Although I grew up in a small rural community in the Wagga area, the lifestyle at Hartley is a far cry from my subsequent career in accountancy and ultimately petroleum marketing for a large international oil company, leading to postings across Australia and then to responsibility for Europe and Asia, based in Central Offices in London.

'Retirement in Hartley with my wife Joan and a small herd of alpacas is an appropriate episode in an interesting life's journey.

'Apart from the natural beauty of the area, Hartley has a sadly unappreciated heritage of its' crucial role in the expansion of European settlement and an impressive array of nineteenth century buildings and road construction relics.

'I believe the Hartley District Progress Association has a responsibility to make this irreplaceable heritage known and appreciated by the wider community.

'Drawing upon my previous life experience, I envisage the HDPA expanding its activities beyond the financial requirements necessary for its continuation.

'There is a strong feeling in the community that the enthusiasm generated by our 1813 commemoration activities should be maintained and enhanced, adding to the existing social events such as the children's Christmas treat and the annual Boot Sale - projects such as the completion of the 'Signing Our Heritage Places' initiative, the ongoing restoration and internal painting of the 1881 Old School House, the conservation of the old school map and the completion of the Honour Rolls acknowledging the service and sacrifice of local servicemen and women and their families since the Great War of 1914 -18.

'Following the acclamation which followed our 1813 commemoration activities we are now planning our future activities – revisiting the popular Cox's Road walks and the companion horse trail rides which had to be abandoned last year for veterinary reasons.

'We anticipate further heritage seminars and a possible extension of the 'A Moment in Time' exhibition to include the subsequent history of the Hartley Valley as a centre of administration and education, its' shale and coalmining and apple growing industries and the rich family history of the early settlers in the district.

'Initially a 200th-year commemoration of the vice regal progress through Hartley to Bathurst is also contemplated for 2015.

'In an immediate sense it is imperative that we find a permanent 'home' in the Valley for our exhibition - which raises a number of issues - it requires 90 square metres of floor space and the security and management of such a venture poses problems for such a small albeit dedicated group.

'I believe that these are worthy ambitions for the Progress Association and look forward to the challenges ahead with optimism and enthusiasm.

Hartley court house. Photography John Leary OAM

The church that helped the Chinese Revolution

By Ray Christison

The construction of St Mary's Presbyterian Church in Lithgow had quite unforeseen consequences for the son of its builder George Donald, and for the development of China in the 20th century.

George McGarvie Donald was a master stonemason and builder who helped to create the City of Lithgow.

He was born at Paddington, Sydney in 1846[1], the son of Scottish stonemason George Donald. George senior had been encouraged to migrate to New South Wales by Governor Lachlan Macquarie who wished him to assist with government building works[2].

After completing a basic education young George McGarvie Donald was apprenticed as a stonemason to his father and uncle.

After completing his apprenticeship George was engaged on the railway construction projects undertaken by Thomas Higgins in the Bowenfels district during the late 1860s.

He worked on the stone railway bridges at the Great Zig Zag and at Marrangaroo, and married Marion Miles, daughter of one of the construction foremen.

Following completion of the railway contract George moved to Hill End where he worked on a number of construction projects.

Among these was the Hill End Methodist church, which was constructed using basalt rubble from the gold mines.

Church of St John the Evangelist at Wallerawang

This building is currently used as the Hill End Anglican Church.

After the failure of the deep lead gold boom of the 1870s George returned to the Lithgow Valley and established a construction business with Thomas Crowe.

In the early 1880s George constructed St Mary's Presbyterian Church for Thomas Brown. The church was built as a memorial to Brown's wife Mary.

He also constructed Cooerwull Academy for Andrew Brown and the Church of St John the Evangelist at Wallerawang

Other projects included Lithgow Town Hall, Wallerawang Public School, the Lithgow Oddfellows Hall and many residences. Donald & Crowe also built Mort's freezing works.

George Donald was extremely active in community affairs and had a great sense of social justice. He was a founding member of the GUIOOF Lily of the Valley Lodge and the Good Templars Lodge.

Popular amongst his fellow citizens he was elected the first mayor of Lithgow after the establishment of the Municipality of Lithgow in 1889.

[1] Reid, W., 1973 George Donald, First Mayor of Lithgow

[2] Thompson, P., 2011. *Shanghai Fury.* p.82

Continued from page 32

George Donald held the seat of Hartley in the New South Wales Legislative Assembly jointly with Joseph Cook from 1891.[1]

Donald was at times invited to address the celebration dinners held by the Coal Miners' Mutual Protective Association and other public meetings dealing with contentious labour issues.

In early 1893 he and Joseph Cook were responsible for arranging assistance for miners and their families made destitute by the closure of the Katoomba Colliery[2].

As magistrate he presided over the case brought against fifteen Zig Zag colliery miners for working on the Sabbath.

In administering penalties he fined the miners and their employer, indicating that all of the fines should be paid by the mine manager who had instructed the men to work.[3]

George died at Marrickville on May 30, 1930 aged 84, his wife Marion having died three years earlier. He was buried at Woronora Cemetery.[4]

William Donald was born to George and his wife Marian in 1875. It was intended that he follow his father into the building trade until an accident at St Mary's Presbyterian Church left him with a permanent impairment:

> *… Bill, always a boisterous boy, joined other young parishioners in jumping from a platform in the bell tower and swinging on the bell rope. One day he missed the rope and fell heavily, breaking his collarbone. … the fracture left him with a permanent weakness in his left arm.*[5]

William's injury precluded him from following his father's vocation and he was apprenticed into the printing trade at the Lithgow Mercury.

St Mary's Presbyterian Church, Lithgow

Under the mentorship of Lithgow Mercury editor James Ryan he learned the craft of journalism and eventually moved to Sydney where he worked as a court reporter.

Through various contacts he obtained the position of sub-editor of the China Mail in Hong Kong in 1903.[6]

This move launched William on a trajectory that placed him at the heart of the Chinese revolutionary movements of the early 20th century.

After the 1911 Revolution William provided some advice to the government of Sun Yat-sen and during the 1920s he became the personal confidante of 'Young Marshall' Chang Hsueh-liang in Manchuria.[7]

From the mid 1930s William became the personal confidante of Madame Chiang Kai-shek. His career at the heart of the Chinese revolution earned him the title "Chinese" Donald.

About the author

The author of this article Ray Christison of Lithgow is a regular contributor to *HERITAGE*

He is another contributor who can turn an otherwise story about the history of a couple of churches into an interesting heritage piece which readers will enjoy reading avidly from the opening sentence to mystery connection revealed in the last couple of paragraphs.

Ray was invited to become an inaugural individual member of BMACHO and served on the management committee for several terms.

Ray Christison is an archaeologist who conducts a heritage consultancy business High Ground Consulting, based in Lithgow.

He is president of the City of Greater Lithgow Mining Museum Inc and has served on the Board of this organisation since 1992.

Ray won the coveted 2013 IMAGinE award for individual achievement for its the exhibit *Fire in the Mine.*

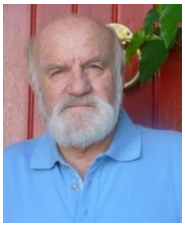
The built heritage of Kurrajong-Comleroy

By Steve Rawling AM



Some time ago (2009 in fact), I wrote a piece in the *Millstone* which was then republished in *HERITAGE* about the various levels of "heritage listing" pointing out that while all such lists are of interest, most of them do not confer any real protection for heritage buildings or other material items. To summarise them again:

Council lists items of heritage interest in its local environment plan (LEP), which then requires council to consider heritage factors when assessing development applications.

The State Heritage Office has a State Heritage Inventory, which draws on council's list (but does not include all items) and is again simply "items of interest".

For an item to be strongly protected, it must be chosen to be listed on the State Heritage Register, as being of "State significance".

Then there is the National Heritage List, which contains only a small number of items, but is gradually being added to.

The World Heritage List of course contains the Greater Blue Mountains, close to us, but that is a natural rather than a built item.

Perhaps the best known of all is the listing by the National Trust. It is certainly the longest-established, and it is often thought to confer protection on items it contains, but again it doesn't – it simply identifies important buildings and natural areas which are of genuine heritage interest, judged by people with expertise.

So how does our area – Kurrajong-Comleroy, fare in all of this? The sad fact is that very little in our area appears on any list which would confer real protection.

There are 99 Hawkesbury items on the State Heritage Inventory, and 51 on the State Heritage Register. Of the latter, only half a dozen are in our area, mostly in Wilberforce and Ebenezer.

But we should start at the beginning, with council's LEP which is fairly inclusive, containing over 600 items in the Hawkesbury, about 120 of which appear to be in our area.

Notable inclusions, which everyone would expect to appear, are Westbury at Grose Vale, Reibycroft at Freeman's Reach, Goldfinders in Kurrajong Village, Lochiel at Kurrajong Heights, St John of God at North Richmond, Sunnyside at North Richmond, Rose Cottage, Stannix Park and Australiana Pioneer Village at Wilberforce, and of course the church and former school house at Ebenezer.

There are also various other churches, cemeteries, substantial early houses, and quite a few smaller houses and cottages.

When the Kurrajong-Comleroy Historical Society Society was first formed, I attempted to locate all items on the list, but was frustrated by the fact that the old street numbering was used.

The current version of the LEP can be accessed on the Web by googling Hawkesbury Local Environment Plan 2012.

It has to be said that the original compilers of the list did a pretty comprehensive job. However, what is most surprising and disturbing is what is not on the list.

Two items in particular, of great significance to anyone interested in the history of our area, are conspicuously absent. They are the Comleroy Road School of Arts and the Singleton's Mills sites. How these were overlooked is hard to understand.

The School of Arts has of course a special place in our society's history and is a significant element in early twentieth century social history of the area.

It is to be hoped that it can be rescued from its present poor state, whether or not the society can be involved that process.

The Mill sites on the other hand are almost 100 years older, and were central in the thinking of the founders of our society – hence the logo - representing as they do the earliest history of the Kurrajong, and a vanished industry of grain growing and milling.

The proposal to apply for State Heritage listing, which is being co-ordinated by Frank Holland, will leapfrog other levels and, if successful, guarantee future protection of the remains of what we believe is of genuine state significance.

Any member with an interest in or knowledge of our built heritage is very welcome to contact the committee to discuss any action we might take on this front. For example, a project involving a photographic record of the items on the LEP could be of interest for someone with a camera!

In this article Steve Rawling, AM president of Kurrajong-Comleroy Historical Society debunks some of the myths built up about the protection (or lack of it) afforded the state's built heritage. Although he deals specifically with the Hawkesbury City Council's LEP the matter in principle is generic and can be applied to any local government area in NSW.

LATE NEWS

ELECTION TO RAHS COUNCIL

BMACHO's hardworking, efficient, popular and effective secretary, Jan Koperberg has been elected as a councillor of the Royal Australian Historical Society with a very large percentage of the vote.

The election was for four councillors, with the president Dr Anne-Maree Whitaker and Hazelbrook heritage archaeologist Dr Siobhan Lavelle, OAM being re-elected and Chris Maxworthy filling the fourth position up for election.

Treasures from home

Do you have a treasure at home ?

The Museums of Lithgow would like to learn about individual's treasure and help the owners work out its significance.

As a part of International Museums Day 2014 *ABC Open* will be joining staff and volunteers to photograph treasure, write up its history an upload it to their Object Stories online Museum.

Treasures should be brought to Eskbank House, Lithgow on Sunday, May 18, 10am to 2pm.

For further information telephone 6351 3557 or www.lithgow.com/esbank/.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place**, Springwood 2777 (02) 4751 5834. E-mail:** committee@blumountainsheritage.com.au or j.koperberg@big.com Website: www.bluemountainsheritage.com.au
ABN 53 994 839 952

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are i. to raise public consciousness of the value of cultural heritage; ii. to encourage and assist cultural heritage; iii. to initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

PUBLICATIONS BMACHO's official newsletter *HERITAGE* is edited by John Leary, OAM; the annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden - Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc. Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc., Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc., Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) – Blue Mountains Branch, National Trust of Australia (NSW) – Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant – Katoomba, Scenic World Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Leary OAM, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE: The management committee for 2013-14 is: John Leary OAM (president), Ian Jack (vice president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes, Patsy Moppett, Dick Morony (public officer), Scott Pollock, Suzanne Smith and Richard Woolley.

DISCLAIMER Views and opinions expressed in *HERITAGE* originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Ali Khan the trader…and Indian Hawker

Ali Khan the trader pictured in the driving seat of his cart, was one of many to travel around the Hawkesbury and other regions of Australia selling his wares.

This photograph courtesy of Kathie McMahon was taken from the McMahon's guest house in 1905 on the Bells Line of Roads, Kurrajong North.

The Indian community has a long and rich history in Australia, with immigration beginning quite early in Australia's colonial history.

The earliest Indians came as convicts or as servants of British subjects who had been living in India.
Many Indian immigrants to Australia in the late 19th to early 20th centuries sought employment in rural areas as labourers or itinerant hawkers.
These hawkers traversed rural parts of Australia, moving from town to town in their covered wagons.
The hawkers sold a diverse range of products, including food, books, pots and pans and jewellery, as well as products from India, such as silks and spices.

Many sources indicate that these hawkers provided a lifeline to the rural towns and more isolated farms by providing a large range of products, as well as a diversion from the everyday[1].

There is enough anecdotal evidence from local Australians that the Sikh hawkers were much loved members of the community.

The womenfolk loved them because they provided a welcome break from their mundane existence - the hawkers brought beautiful clothes, goods, all things exotic, and a fleeting glimpse of the big wide world beyond their farmlands.

The Australian men liked the hawkers because they were tough - they knew how to survive in difficult bush land and, more importantly, they played cricket!

The Aussie kids adored the hawkers because of the stories they told of another world, because of their playful spirit and their wonderfully aromatic curries.

There must have been a great sense of excitement when the hawker came to town bearing new merchandise, both every day and exotic, which might otherwise not be seen outside the big cities.

The National Library of Australia holds images of Indian hawkers and have done research into the lives of specific individuals [1.]

There were concerted attempts in the early 1900s to establish a discourse about Indian Hawkers that conformed to the framework of the White Australia Policy.

Numerable editorials and feature articles complained of the Indian hawker in the Australian landscape as a redundant nuisance pushing shoddy goods, or as a pernicious threat to the fabric of rural society, harassing Australian women in their homes.

It is surprising, therefore, that hawkers feature in so many photographs of the period, and yet they do. Many images of the hawker signal his difference, as a lone and somewhat alienated figure in the Australian landscape, often mis-captioned, stereotyped and misunderstood.[2]

End notes

EDITORIAL NOTE: As many of you will be aware, the passing of BMACHO President John Leary, OAM, on 10 July 2014, has left a void in the heritage community, as well as being a tragic loss to all his family and friends.
John was the Editor of this Newsletter from its inception in 2006. The Committee intend to maintain his good work and will ensure that the Newsletter is able to continue to reach the high expectations that he had in getting spreading the heritage word.
John was midway through creating the May-June Newsletter when he fell ill. Due to the passing of time, the Committee have moved the May-June Newsletter over to July-August 2014, thus there will be no May-June Newsletter this year.
John's Editorial has been retained in his memory as follows, as his parting thoughts to you.

Patsy Moppett – BMACHO Committee member and Acting Newsletter Editor.

An opinion from the editor…

Western crossing has combined commemoration and celebration

In an address I gave at the recent annual general meeting of BMACHO and circulated to members, I may have given the impression that the activities so far in the Western Crossings 2013-15 program were more celebration and little commemoration.

On reflection it is probably fair to state that In fact there was considerable commemoration as well as celebration.

Although individuals and bodies such as National Trust and the RAHS had been floating ideas for the bicentenary celebrations, the Western Crossings commemoration had its genesis with BMACHO.

However, it was quickly and correctly recognised that this organisation did not have the resources to manage such a venture. BMACHO's committee asked the then long serving president of the Royal Australian Historical Society Associate Professor Ian Jack to explore with the RAHS Council, the idea of co-ordinating the project.

It was pleasing when the RAHS quickly took up the challenge and Professor David Carment, AM very ably took on the role of the first Western Crossings Committee chairman which he continued to do when he became the president of the RAHS.

I recall soon after David took on the task of chairman he, Ian Jack (then the president of the RAHS) and I (then president of BMACHO) met one Sunday afternoon in my home to look at objectives and parameters for the Western Crossings Committee as it was to become known.

From that informal meeting there came a strong recommendation that the commemoration of the bicentenary should be from the period 2013 – 2015 embracing the anniversary of a series of inter – related events after the 1813 exploration by Blaxland, Wentworth and Lawson. George William Evans began his survey for a roadway across the Blue Mountains in November 1813 and went as far as the future Bathurst; William Cox then supervised the construction of the road from July 1814 to January 1815 and then Governor Lachlan Macquarie accompanied by Mrs Elizabeth Macquarie travelled along the new road in April and May 1815 and selected the site of Bathurst.

There is no doubt all those who attended the Western Crossings Committee meetings from the very earliest meeting, were in agreement, time and time again, that the Crossings was a commemoration of all who had crossed, from the very earliest Aboriginal crossings to the crossing by Governor Lachlan Macquarie and Mrs Elizabeth Macquarie and party in 1815.

The European crossings from 1813 are not a celebration for the Aboriginal people and there were many commemorations of Indigenous crossings held during 2014, like the Ancestral Pathways walks organised by Auntie Sharyn Halls , the official opening of The Gully at Katoomba with interpretive signage, the commemoration walk 'Jummangunda Ngunninga' walk from Bardens Lookout to Mt York.

The excellent exhibition in Hartley *A Moment in Time* curated by Joan Kent starting with a very comprehensive history of the Wiradjuri people, through to Governor Lachlan Macquarie is one of the lasting commemorations as is the Western Crossing room at the Mt Victoria Museum and there are others.
As I stated in my annual report,… 'Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee

brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

'Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

'The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between Professor David Carment and the then Premier of NSW Barry O'Farrell.'

John Leary, OAM – president, Blue Mountains Association of Cultural Heritage Organisations Inc and editor of *HERITAGE.*

The Heritage of Education in the Blue Mountain

By Ian Jack

At the Blue Mountains History Conference 2014, held at the Carrington Hotel, Katoomba Associate Professor Ian Jack delivered a most interesting address titled: *The heritage of education in the Blue Mountains.* Space in this edition of *HERITAGE* will not allow for the full text to be published and at the editor's request, Ian has produced an abridged version which appears on this and following pages. A biography of the author appears at the end of this article.

In my conference paper I explored the surviving tangible heritage related to education in the Blue Mountains and the Hartley/Bowenfels area over the past 160 years.

Many of the establishments were private schools. Most of these adapted pre-existing buildings, which in turn later reverted to other uses and are not readily identifiable as schools today.

State schools, on the other hand, almost always had custom-made buildings, but the earliest schoolhouses have often been demolished or moved elsewhere and what we see today in the public schools in every village along the Great Western Highway is a long but incomplete sequence of attempts to provide for an expanding population of children in the 20th century.

National School at Bowenfells

Public education began exceptionally early, with the National School at Bowenfels, erected in 1851. It was built by local people to a local design.

It contained three rooms originally, one the schoolroom, the other two the living space for the schoolteacher, John Edhouse.

The schoolhouse opened without furniture, water supply or toilet but the local 'patrons', mainly Scottish farmers, paid for improvements in 1852 and 1853.

In 1866 a new separate schoolroom was constructed and all three rooms of the 1851 building became the schoolmaster's residence.

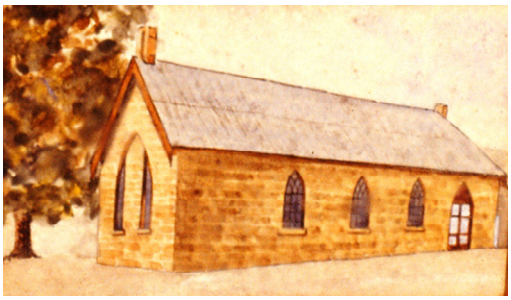
The stonemason was James Connor, an innkeeper who lived nearby in Umera, itself later a private school. Connor was a gifted craftsman and was responsible for some of the finest grave markers in the local cemeteries. The 1866 building remained in use as a primary school for an extraordinarily long time, over a century, until the end of 1969.

Since then the Bowenfels complex has been privately owned. For a time the 1866 school was used as an artist's studio, while the artist lived in the 1855 building.

Once the railway came over the mountains in the later 1860s, there was, of course, a new need for schools. The first public school was in Mount Victoria, opened in 1868, not for local residents, who were still few, but for the education of the children of workmen engaged on the construction of the railway and the Zig Zag. That 1868 building was, however, replaced in 1877.

The education of railway children also prompted the building of the first private school. Andrew Brown, a wealthy Scots Presbyterian grazier at Cooerwull in Bowenfels, had bitterly opposed the building of the Lithgow Zig-Zag in the 1860s, because he did not want the Bathurst railway to cut through his estates.

But once the decision was taken, he accepted the inevitable and allowed a semi-permanent camp for railway construction workers to be located on Cooerwull estate, near the present Bowenfels railway station.



Cooerwull stone school - a painting by John Sands & Co.

The workers were accompanied by their womenfolk and children, as they had been at Mount Victoria in 1868. Genuinely distressed at the plight of the children, Andrew Brown made land available to them and built a slab building, roofed with bark.

Then in 1873-1874 he built a sandstone school for the railway children and other local children, with a stone residence for a schoolteacher. All the stone came from a quarry on the estate. The schoolhouse was also used on Sundays for services, both Presbyterian and Anglican.

When the present Cooerwull Public School was built by the government in 1906-1907, the building became solely a Presbyterian Church and Sunday School. Later secularised, the lovely little building is now the centre-piece of a car-yard on the highway, but it is still externally as it was in 1874.

But the connection of the Brown family with Cooerwull School continued. A bell is still rung daily in the playground of the modern state school. It originally hung in the belfry of the 1848 stables at Cooerwull House, where it summoned employees back at the end of the working day. It had been brought out from Scotland along with Andrew Brown's bride in 1841.

In 1930 it was given to Cooerwull School by one of Andrew's heirs and it has been there ever since.
You can compare it to the old bell hanging in the playground of Blackheath Public School. That has been there since 1888, but has no story attached comparable to the Cooerwull bell. It is good, however, to see that it is still there
.
The school at Blackheath had opened in 1885, three years before the bell was installed, but the earliest surviving building was erected in 1896 right on the highway. In December 1884 the parents of Blackheath had applied to the Department of Education for the establishment of a public school in the village. The application was approved and the department's inspector and the residents decided on a two-acre site bisected by Leichhardt Street.
Two acres was the standard size of a school site.

The site that was chosen was part of the eastern edge of the Blackheath Stockade, which was established in 1844 and was in operation until 1849, so the school grounds have quite a lot of archaeological potential.
The history of the site explains why what was once the schoolmaster's residence is separated from the school by a busy street.

The Department of Education still owns the old residence, since local residents demonstrated loudly against its proposed demolition some years ago and it is now sensibly used as a community centre, a Cyber-Shed in front and Before and After School Care behind.

Before any custom-made school buildings were erected in any of the Mountains villages, other than Mount Victoria, Springwood and Katoomba, the same private philanthropist who had built the school for the railway children erected entirely at his own expense a major Great Public School for country boys on a different part of his estate at Bowenfels.

Andrew Brown's concern for education led him to found a boarding school, particularly, but never exclusively, for Scottish families on country properties. In 1881 he engaged George Donald, the principal Lithgow building contractor, to erect the spacious stone buildings of Cooerwull Academy which still stand.

The school was intended to provide an Australian equivalent to Edinburgh Academy, where Brown's two boys had spent two years from 1858 to 1860 and for 34 years an interesting and often distinguished staff taught boys

from many of the élite grazing families and also from the professional families in country towns, including Lithgow.

The ablest boys went on, through Brown scholarships, to St Andrew's College and the University. In 1892 Brown gave the school to St Andrew's which ran it until in 1916 the school was obliged to close, when most of the staff left to serve in World War I.

By 1907 the Academy was larger than any of the colleges at the University of Sydney, with 65 rooms accommodating up to 40 boarders, set in 7 hectares of land. There was an extensive library; art was taught by Arthur and George Collingridge, science by the Antarctic explorer Borchegrevink.

The school had excellent sports fields and played not only other major schools but also the local Lithgow industrial football and cricket teams. It was both élite and inclusive.

In 1953 the De La Salle Brothers purchased the derelict property and opened a Catholic school, La Salle Academy.

La Salle Academy still flourishes as a co-educational school and has maintained the old buildings in use. But Cooerwull Academy and its aspirations did not die in 1916. The rector appointed in 1903 had been a man called John McManamey. McManamey was a Scottish policeman's son from Wellington, educated at an Anglican boarding school, All Saints at Bathurst, and then at the University of Sydney where he lived in St Andrew's College . At University and College he was enabled to indulge his passions for classical literature, and extended it into English literature, while living a vigorous outdoor and sporting life.

After graduation he was the founding headmaster of Dr Aspinall's Scots College in Sydney. He left to found his own school, The Australian College, and then went off to Queensland to be senior classics master at the renowned Ipswich Grammar School.

In 1903 he returned to the Central West of NSW to be rector of Cooerwull Academy, but again ventured out to create a school of his own in 1907. And this, of course, was Woodford Academy, directed, like Cooerwull, towards the University entry examination and élite learning generally.

Woodford is a classic case of adapting much older buildings to school use, while supplementing the old with a custom-made wing. Built on the site of an early road gangs' encampment, Michael Pembroke's weatherboard Woodmans Inn in 1832 was developed into a stone inn, the Kings Arms, under Michael Hogan in 1842 (the present west wing).

By 1862, during William Buss's occupancy, the kitchen wings were added. From 1867 until 1897 it was a private country retreat, owned by Alfred Fairfax, and from 1897 to 1907 it was a boarding house.

Finally, from 1907 to 1934, it became a significant school, Woodford Academy, in competition and then in succession to Cooerwull Academy.

After Woodford Academy closed in 1934, the McManamey family lived privately in the house until Miss Gertrude McManamey gave the property to the National Trust of Australia (NSW) in 1978.

An unfamiliar heritage aspect of Woodford Academy is the engraving of boys' names on the massive outcrop of rock just to the east of the school. There are many initials carved, such as RSBS, who was Ralph Sanders Barclay Sillar. Sillar was a student at Woodford in 1909, and after WWI, a successful lawyer, who lived on until 1970. I find this a very human part of school heritage.

I went on to discuss a dozen other schools, public and private, and noted the variety of heritage values among surviving places.

Sometimes the school as at the Victoria and Albert was only a wartime emergency. Sometimes the schools were small dame-schools which flickered for a while and went out. Sometimes they were grand custom-built schools like Cooerwull Academy or Mount St Marys. Sometimes, as with Coorah at the Blue Mountains Grammar School, a major historic homestead remains the heart of a much larger modern complex.

Education is a fundamental need and finds many expressions through the private and the public purse. The heritage of education in the Mountains area is in need of more exhaustive evaluation and conservation.

About the author ---

Associate Professor R Ian Jack

Ian Jack was born and educated in Scotland at two of its oldest schools and at a university which had just celebrated its 500th anniversary.

Like most Scots graduates, he was obliged to find suitable employment elsewhere. He came to Australia to re-establish medieval European history in the curriculum of the University of Sydney, but in the 1970s the influences of an archaeologist and the burgeoning heritage movement made him more and more involved with the development of the Australian rural scene and its physical remains.

Although he gave up a decade to serve as the Head of the Department of History and as Dean of the Faculty of Arts, he was also co-founder of the new inter-disciplinary course in Historical Archaeology and became a member of the Heritage Council.

He was also chair of its State Heritage Register Committee, its History Panel and its Religious Properties Panel.

Ian was inevitably involved in consultancy work and among his various commissions was the full revision of the Heritage Study of the Blue Mountains City Council area.

As a result, he got to know in some measure some 900 sites the length and breadth of the Mountains and has continued to write report, give lectures and publish articles on aspects of Mountains history and heritage.

Other works in the Central West, on rural, industrial educational and Scottish themes have supplied a useful context to understanding the Mountains better.

He retired from the Department of History 10 years ago, but he has kept a toe hold on the University campus as resident Senior Fellow at St Andrew's College.

While serving 8 years as the longest-serving president of the Royal Australian Historical Society, he established the Western Crossings Committee which has been so useful a coordinating body for the bicentenary commemorations in this area.

Ian supported the foundation of the Blue Mountains Association of Cultural Heritage Organisations Inc (BMACHO), has been its vice president from the outset more than 8 years ago and has been delighted to see the society blossom.

The Witche's Leap

For over a century guidebooks and commentators, occasionally pointing out that 'leap' is "an old Scottish word for waterfall"[i], have generally associated the name 'Witches Leap' (sometimes spelt 'Witch's Leap') with a small waterfall that pours into a cool, forested gully bounded by cliffs on the 'Round Walk' at Katoomba Falls.[ii] In this article, however, I want to suggest that the waterfall might not, in fact, have been foremost in the minds of those who originally conferred the name.

The 'Round Walk' is alive with echoes from the earliest days of Katoomba and, when the name 'Witches Leap' was first described in a guidebook in the early 1880s, JB North's coal mine had not long begun operations and miners were already tramping to work down a steep access path which passed through here. "The Witch's (sic) Leap, wrote JEM Russell in his *Pictorial Guide to the Blue Mountains*, is easily found by the winding path which leads to the foot of the fall, with perpendicular cliffs on each side towering up to a height of 150 feet; and here will be seen one of the prettiest dells or gullies of the mountains."

The special significance given to the "perpendicular cliffs" is noteworthy and can similarly be seen in *A Tourist Guide to the Blue Mountains,* published in 1887 by the Penrith printer Alfred Colless. Under the heading "The Witches Leap", while describing the "spray of water [falling] into the charming Fern Gully", the striking image again is of finding "yourself hemmed in on two sides by gigantic walls of rock …"[iii] While the name had shifted focus to the falls by the end of the nineteenth century, the sense in both these early descriptions is of it being used more to identify a *place* encompassing a number of natural features but dominated by those enormous rock walls.

Australian topography is littered with names derived from the folklore of fairies, witches etc. though generally these are merely descriptive or, at most, expressions of cultural memory and are not deeply rooted in the long traditions of place that exist in countries like Great Britain. Nevertheless, cultural associations can genuinely enhance a relationship with a new place and this, I think, is what might have occurred in the naming of Katoomba's 'Witches Leap'.

In Scotland's North Esk River Valley, south-west of Edinburgh and east of the Pentland Hills, is the small village of Carlops which came into being in the late 18th century as a cotton weaving centre also possessing resources of coal and limestone. Its name derived from an old folk tradition known as the 'Carline's Loup' ('Witches Leap'), a tale of two local 'carlines' (Jenny and Mause) who would meet of an evening at the edge of the village and leap between two rock outcrops in a kind of aerial dance.[iv]

Though coal mining as a Carlops industry was still listed in gazetteers of the 1880s[v], all the town's industries were in decline by the late nineteenth century, the village ultimately reinventing itself as a holiday and health resort and promoting itself as a literary tourist site through its associations with the Scottish writer John Ramsay (1686-1758).[vi]

With North's newly opened Katoomba Coal Mine attracting employees from near and far, is it possible that miners from the Scottish Borders tramped down through Fern Gully and were reminded of their home and its two carlines? While the gully and its waterfall may have triggered a memory of the dell in Ramsay's famous play *The Gentle Shepherd* (set near Carlops) - where "the water fa's and maks a singan din"[vii] - it would have been those "perpendicular cliffs" facing each other across the gully that particularly caught their imagination and made the 'Witches Leap' the bearer of a rich cultural memory and a link between two towns on opposite sides of the world.

This article has previously been published in Hobby's Outreach March – April 2014 edition

As illustrated above, courtesy of the Power House Museum, *HERITAGE* used the image of a glass negative, full plate, 'Path to the Witche's Leap', Kerry and Co, Sydney, Australia, c. 1884-1917

This photographic negative was published by the Sydney firm Charles Kerry & Co. and is part of the Powerhouse Museum's Tyrrell collection which contains over 2900 glass plate negatives by Kerry & Co.

Although a few appear to be from the 1880s most were produced between 1892 and 1917.

Over this period, and well into the early 1900s, prints from these negatives appeared in many Australian publications and albums of views.

In 1903 the company began producing postcards from these negatives, further establishing the images as some of the most significant and best known early views of New South Wales.

Some of the more significant themes covered by the collection include; views of New South Wales, Queensland, country towns, Sydney, indigenous Australians, the South Pacific, rural life, native flora and fauna, and sentimental views.

In addition a number of significant events from the 1900s are covered by the collection including; embarkation of troops for the Boer War, Hordens fire, the Inauguration of the Commonwealth in 1901, the arrival of the Great White Fleet and the Burns verses Johnson boxing match at Rushcutters Bay in 1908.

Charles Kerry was born in 1858 and by 1885 was running a studio in partnership with CD Jones. This partnership lasted until 1892, when Charles became sole owner and
changed the studio's name to Kerry and Co.

By 1890 the company was employing a number of photographers who would become famous in their own right. George Bell who covered rural New South Wales was employed in 1890 and Harold Bradley was doing outdoor work and covering events around Sydney by 1899.

Kerry continued to work in the field and in 1895 he took photographs of Royal National Park for New South Wales Government, photographed Queensland artesian bores and was employed by the New South Wales Government to travel the state and photograph indigenous Australians. In 1897 Kerry led the first party to reach the summit of Mt Kosciuszko in winter conditions and photographed the Jenolan caves.

By 1900 Kerry had turned his studio into one of the largest and most respected photographic establishments in the colony. His new four story premises at 310
George Street Sydney were designed by the architect HC Kent and the third floor studios alone could accommodate 70 people wanting their portraits taken.

In 1913 Kerry retired leaving the running of the studio to his nephew, unfortunately the business did not do well and Kerry and Co. closed its doors in 1917. Kerry himself died in 1928.

Blue Mountains History Conference success

The Blue Mountains History Conference 2014 held in heritage listed Carrington Hotel has been acclaimed a success by feedback from participants in the event on May 10.

The keynote address titled, *A behind the scenes look at pursuing wonder in the Blue Mountains* presented by Associate Professor Julia Horne.

Associate Professor Julia Horne is University Historian and Principal Research Fellow at the University of Sydney where she works on the University's history & heritage.
Professor Horne's address was a most interesting expose of the social experience of guest houses in the late 19th century as an important part of the Blue Mountains heritage and in particular the development of early tourism.

She cleverly wove the story which demonstrated the importance of preserving travel letters. She presented an alternate aspect of the history of the Blue Mountains, introducing the social experience of guest houses in particular.

Dr Ian Jack then spoke about educational architecture, "The Heritage of Education in the Blue Mountains", as previously covered in the pages of this Newsletter, covering the Cooerwul Academy, St Andrews College and De La Salle College, all at Lithgow, and some connections to the Woodford Academy.

Hector Abrahams, BSc (Arch) (Hons), BArch, ARAIA then addressed the group. Hector has established his own practice, Hector Abrahams Architects, and specialises in the design of new buildings within a historic precinct, with a passion for church architecture.

Hector spoke about the heritage of religion in the Blue Mountains, including in particular the Baptist Church and the Gospel Hall at Katoomba.

After the luncheon break the attendees were entertained by **Christine Wheeler and Friends**, "Rain in the Blue Mountains", songs of Henry Lawson.

Christine joined with skilled musicians Leigh Birkett and Rebecca Daniel, in a unique musical performance of poems from the iconic Henry Lawson.

Dr Ian Jack then joined Robyn Parker of the Paragon Restaurant at Katoomba, in discussion about the current status of the conservation of this iconic heritage building.

Doug Knowles, President of the Glenbrook and District Historical Society, delivered the final address. Doug is also an active member of the Springwood Historical Society.

Doug has been interested in the railway across the Blue Mountains for some years and in particular that part of the Great Western Railway which posed the first challenge to establishing the rail likn across the Mountains and beyond, that of the Lapstone Hill.

The day concluded with a Devonshire tea and an optional tour of the Paragon Restaurant, including upstairs where the chocolates are made.

William Cox Historical Festival at the Arms of Australia

The William Cox Festival on July 20, 2014 will celebrate one of the most important achievements in early colonial history – the building of a road across the Blue Mountains

Construction of the road built by William Cox started in July 1814 at Emu Plains and finished at Bathurst in March 1815.

With a working party of 32 convicts, four free persons and a handful of guards, Cox completed the 101 mile (163km) road over the mountains in seven months.

The road opened up inland New South Wales to European settlement. Cox's bullock cart was the first wheeled vehicle to pass over the Blue Mountains and down over Mt. York.

To mark the bicentenary, the Nepean District Historical Society with the support of Penrith City Council will re-enact the start of Cox's journey from Regatta Park, Emu Plains at 10.30 am on July 20 to the Arms of Australia Inn Museum for the William Cox Festival and formalities.

The NSW Corp of Marines will be in charge, with displays, drills, and re-enactments from the life and times of the early colony. Members of the 1st Windsor Light Horse Regiment will help keep order.

There will be plenty of food, stalls and entertainment. Tall Timbre Country and Western Band will provide music along with the Penrith City Show Band. Students from the Nepean Creative and Performing Arts High School will perform songs and poetry readings.

Children can enjoy old fashioned games, write on slates in the old school room, ride a pony, pet animals in the animal farm, jump to their heart's desire in the jumping castle try trampoline bungee jumping and join in the ever popular, tug of war and lots more.

The William Cox Festival and Open Day is at the Arms of Australia Inn Museum on the corner of Great Western Highway and Gardenia Avenue, Emu Plains from 9am. Admission is free.

Australian Navy Submarines Centenary

A little remembered centenary is that of the first two submarines AE1 and AE2 arriving in Sydney in May 1914 to join the Australian Navy.

The AE2, the Royal Australian Navy's second submarine, was built in the United Kingdom and commissioned there on February 28, 1914 After commissioning, AE2 accompanied by AE1, sailed to Australia crewed jointly by British and Australian sailors, arriving at Sydney in May 1914.

Following the outbreak of war in August, both submarines proceeded to New Guinea for operations against the German colonies. AE2 was subsequently based in Suva, Fiji, and returned to Sydney in November 1914.

In the following month she joined the second AIF convoy at Albany, Western Australia for passage to European waters and was towed across the Indian Ocean by the former auxiliary cruiser Berrima.

Upon arrival in the Mediterranean, AE2 was assigned to operations off the Gallipoli Peninsula. She was ordered to penetrate the Dardanelles on April 25,1915. AE2 entered the Dardanelles at 2.30 am. After torpedoing and damaging the Turkish gunboat Peykisevket, she passed through the Narrows, pursued by surface vessels. She ran aground twice beneath the guns of the Turkish forts along the shore, but these guns could not be depressed low enough to fire on her.

Shaking off her pursuers, the submarine entered the Sea of Marmara on April 26. For the next four days she attacked Turkish shipping with her torpedoes, but without success. Nevertheless, her presence was a nasty shock to the Turks.

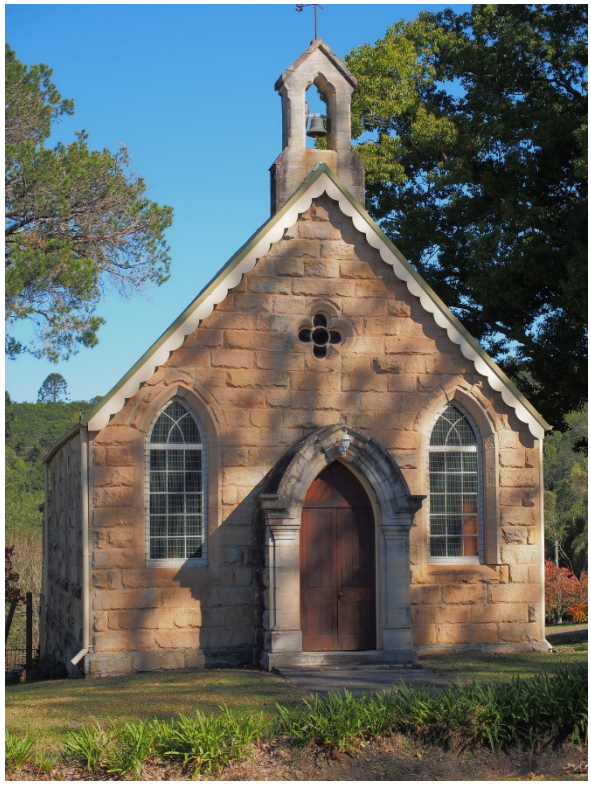
On April 29, AE2 met the British submarine E14 and the two vessels arranged to rendezvous the next day. E14 was the first of a number of submarines that were to follow AE2 into the Sea of Marmara and effectively close it to Turkish shipping bound for the battlefields of the Gallipoli Peninsula.

As AE2 surfaced at the rendezvous point on 30 April, the Turkish torpedo boat Sultan Hissar approached.

AE2 immediately dived, but she lost trim and went out of control, broaching the surface twice. AE2 was hit in the engine room by Sultan Hissar's guns and the crew had no choice but to abandon ship. Although none of the submarine's complement were lost in the sinking, four were to die in captivity

Project aims at photographing all heritage items in Hawkesbury region

In a previous isue, president of Kurrajong-Comleroy Historical Society Steve Rawling wrote about the vulnerability of heritage items, even if they were identified in Council LEPs, listed by the National Trust, or were otherwise noted as being of interest.



Unless formally listed on the State Heritage Register, there is no full protection, and their preservation depends on the goodwill of owners, councils, developers, and their ability to withstand the ravages of time and demolition by neglect.

The Kurrajong-Comleroy Historical Society decided recently to ensure a current record of all items on Hawkesbury City Council's LEP. Many items have numerous historical photographs, but the intention is to create a comprehensive contemporary record.

There can be real challenges in identifying and accessing some items, especially private houses. Other historical societies have, undertaken similar projects. Just how vulnerable are heritage buildings?

The photograph here of St David's Church in Kurrajong Heights illustrates the issue. This splendid photograph was taken by one of our members Paul Hulbert in 2004, who is an experienced photographer. We are fortunate to have him leading the project, assisted by Chris Upton, Steve Rawling advises.

St David's, originally a Presbyterian, now a Uniting Church, is one of a group of buildings in Kurrajong Heights which includes the building now known as the restaurant Lochiel, which was built 40 years earlier than St David's, in the 1820's.

Even Lochiel has no absolute protection, despite being the oldest building between Richmond and Bathurst, and pre-dating some other buildings which are on the State Heritage Register.

A proposal some years ago by the Hawkesbury Branch of the National Trust for it and St David's to be included got nowhere.

St David's was built in 1867, and I was surprised and pleased to learn at the recent BMACHO Conference that this pre-dates any churches on "the other side", the Blue Mountains plateau.Despite the significance of this group of buildings, when the ill-fated proposal for Bells Line Expressway was prepared by the then RTA, the proposed route went straight through the centre of Kurrajong Heights, requiring demolition of the whole group.
While that was rejected, there is still a risk that future road upgrades could threaten.

Contributed by Steve Rawling AM, FAICD

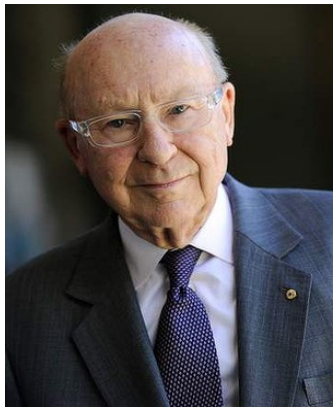
Barry O'Keefe (1933-2014)

Distinguished jurist, ICAC chief, mayor, defender of heritage - a man decent in all things

It is difficult for obituary writers to adequately prepare a definitive but brief biography of Barry O'Keefe, QC, AM - a distinguished jurist, barrister, Queen's Counsel the state's second ICAC commissioner, long term councillor and mayor of Mosman, president of the Local Government Association and president of National Trust of Australia (NSW) among the many roles he performed in a lifetime of service to the community.

He was an absolute gentleman, courtesy and decent in all things. He understood people and appreciated all they did to make this a better world.

Barry Stanley John O'Keefe was born on May 20, 1933, the first of three children to Ray O'Keefe and his wife Thelma (nee Kennedy). Ray owned a furniture store on Pitt Street and was later mayor of Waverley, while Thelma was reputedly the first woman to surf at Bondi Beach. For the rest of his life, Barry talked to Thelma almost every day, no matter where in the world he was, and always cited Ray's gentleness as a model for how a man could be.



His generous support for the work of National Trust has meant that many sectors of Australia's heritage have benefitted.

Barry served on the board of National Trust Australia (NSW) as a member, vice president and then from 1991 to 2006 as president. Under his leadership, the Trust emerged from bankruptcy and built up a large and active membership of heritage defenders.

As former president of the Friends of Woodford Academy, John Leary, OAM and a friend of the deceased remembers well the regular visits of Barry 'Keefe to the iconic sandstone former inn, later gentleman's resident and educational facility.

Barry loved the property and had great respect and affection for those volunteers who maintained the heritage site. He often would arrive unannounced just for a cup of tea and a chat and always a thank you to the volunteers

It was Barry who first considered the value of this 1830s property when it was falling down around the then owner, Gertrude McManamey the sole surviving daughter of the academy foundation John McManamey.

Barry using his own money spent a substantial amount to restore parts of the building particularly the eastern part of the main building. He did this unheralded and in the manner which marked his ethos of service.

Woodford Academy was donated to the National Trust in 1979 by Miss McManamey with an agreement that she be allowed to continue living there until her death. She died in 1988 having left the house 2 years before to be cared for at the Queen Victoria Homes, Wentworth Falls.

Barry had a major part in obtaining a $1 million Centenary of Federation grant from the Federal Government to help restore the property. He seldom missed a fund raising function at Woodford Academy and made sure that the day after the event there was a thank you note to the president and volunteers of the Friends accompanied by a donation of several hundred dollars.

The National Trust was not the only organisation to benefit from this generous benefactor. His interests were wide and diverse and ever thing he did was with a vibrant energy

O'Keefe went to the bar in 1957 and at about the same time started lecturing at the University of Technology, Sydney where he was popular with the law students. There is a story that students dubbed him "the Mild One", in contrast with his brother Johnny O'Keefe, "the Wild One" OF Australian rock-n-roll.

He took silk in 1974 and as a formidable cross examiner was renowned for his ability to manage and analyse masses of complex facts. He appeared frequently before the NSW Supreme Court, the High Court of Australia and the Privy Council.

He served as president of the NSW Bar Council from 1990 to 1991 and sat on the executive of the Law Council of Australia from 1992 to 1993.In 1993 he was appointed as Chief Judge of the Commercial Division of the NSW Supreme Court. In 1994 he accepted a five-year appointment as commissioner of NSW's Independent Commission against Corruption

In 1989, Barry O'Keefe, QC was made a Member of the Order of Australia for service to local government.

Although terminally ill in 2013 O'Keefe agreed to the request of the Australian Catholic bishops to chair the Truth, Justice and Healing Council, established to co-ordinate the church's submission to the royal Commission on Institutional Responses to Child Sexual Abuse.

Two days before Barry O'Keefe's death, Pope Francis created him Knight Grand Cross (First Class) of the Order of St Gregory the Great – the highest papal honour an ordinary layperson can receive.

Barry is survive by Janette (Jan) his wife of 52 years, children Phillip, Vanessa, Andrew and Sophie an seven grandchildren and sister Anne.

Barry O'Keefe Photograph: Justin McManus

This is an abridged version of an obituary by Philip O'Keefe and Kevin McCann which appeared in the Sydney Morning Herald on May 24-25, 2014 with anecdotes from John Leary.

Bits and Pieces

Gallery thanks Faulconbridge firies

A $7000 cheque has been presented to the Faulconbridge Rural Fire Service as a thank you for their efforts to protect Norman Lindsay Gallery during last year's bushfires.
The donation was made possible after Helen Glad, Norman Lindsay's granddaughter generously gave an original Lindsay artwork to be sold with the proceeds to go towards the local fire brigade for the purchase of equipment.

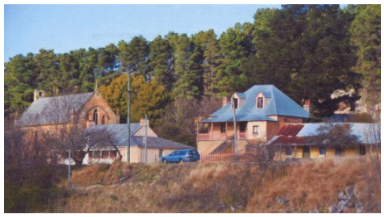
Descendant of John Britty North entertained at BM history conference

Singer and instrumentalist Christine Wheeler one of the three performers who presented the musical interlude *Rain in the Mountains --- Songs of Henry Lawson* at the Blue Mountains History conference at The Carrington Hotel, Katoomba turns out to be the great, great grand daughter of John Britty North.
JB North was leading force in developing oil shale resources of Megalong Valley and by 1877 in partnership with RH Reynolds was developing Katoomba and the coal outcrops in the Jamison Valley. In 1880 he claimed the oil shale resources in the Ruined Castle area. Source: Pells, Phillip J and Hammon Phillip J, *The Burning Mist of Time,* 2009

National Trust Heritage Award – Hartley Revitalisation Project

The National Trust Heritage Awards for 2014 were announced on May 14 and Hartley figured highly amongst the achievements. The Hartley Project won the category for Adaptive Reuse – Government Corporation, for work at the Hartley Historic Site. The assessors declared that although the project was a long time in coming, it led to many effective decisions being made, which followed on from the Conservation Management Plan for the Historic Site, in the various proposals to relocate an intrusive amenities block to a discrete location.
The Awards followed the theme this year of "Journeys", and this was referring to the "journeys that the Australia made from indigenous walkabout to the immigrants' tale."
The National Trust spokesman Brian Scarsbrick, declared that the winners in several categories have helped provide the nation with a "wonderful gift for the future".
The National Trust Awards honour communities and individuals for their outstanding contributions to Australia's heritage landmarks, saving our past for future generations.

The Hartley project was managed by Steve Ring, Hartley Historic Site NSW NPW, with input from Jum Stephany, Truman Zaniol and Associates.



Has Columbus's ship been found?

A shipwreck found off the north coast of Haiti could be the 500-year-year old remains of the Santa Maria which led Christopher Columbus' voyage to the New World.

Al the geographical, underwater topography and archaeological evidence strongly suggests this wreck is Columbus famous flagship according to Marine investigator Barry Clifford. But Haitian officials said it was unlikely anything remained of the wreck.The wreck was discovered in about three to five metres of water and matches the length of the Santa Maria's 35-metre keel.

Between 1492 and 1503, Columbus completed four round-trip voyages between Spain and the Americas, all of them under the sponsorship of the Crown of Castile. These voyages marked the beginning of the European exploration and colonization of the American continents, and are thus of enormous significance in Western history.

Columbus always insisted, in the face of mounting evidence to the contrary, that the lands that he visited during those voyages were part of the Asian continent, as previously described by Marco Polo and other European travelers.

Columbus' refusal to accept that the lands he had visited and claimed for Spain were not part of Asia might explain, in part, why the American continent was named after the Florentine explorer Amerigo Vespucci and not after Columbus.

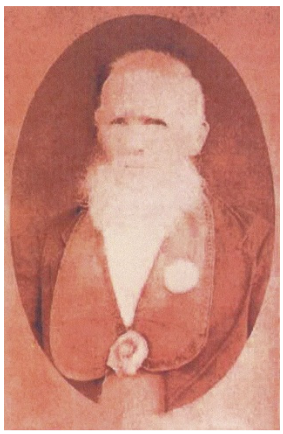
Restoration Project - Second Fleeter, Paul Bushell

The main transport route of choice from Sydney through the Blue Mountains is the Great Western Highway, via Penrith, but everyone has at least tried Bells Line of Road via Windsor and Richmond. Driving through those towns, how could you not absorb the historic ambience of the Hawkesbury, the district which saved the first European settlers of Australia from starvation? How could you not enjoy the views from Kurrajong?

It's easy to understand, then, the passion that's driving descendants of two of the earliest settler families of the Hawkesbury to 'do something' about restoring a historic grave at Wilberforce.

Wilberforce Cemetery is the last resting place for 34 people who arrived on the First, Second and Third Fleets and being so historic, it has Heritage listing. Agitation from the Friends of Wilberforce Cemetery has led to major drainage works at the Cemetery, and the erection of a protective security fence. This provides a better guarantee that restoration efforts will not be wasted.

One of the Cemetery's Second Fleeters is Paul Bushell. Arriving in 1790, from 1798 to his death in 1853 he lived at Wilberforce. Here he married Isabella Brown, eldest daughter of David Brown (a convict who arrived in 1792) and Eleanor Fleming (a Third Fleeter who arrived in 1791 as a child with her NSW Corps father). All four, along with six other members of their family) were buried at Wilberforce Cemetery in an impressive double gravesite featuring two altar monuments.



Paul Bushell

These had collapsed by 1990, due to weathering, erosion and vandalism. Government grants are not available for private headstones where a descendant family exists but, when individuals visit the cemetery, the organisational task and high cost of restoring them seems overwhelming as a private venture. The widespread use of the internet created new opportunities for coordinated action.

It's now much easier to find and communicate with the right people. Readers of Louise Wilson's book *Paul Bushell, Second Fleeter* (published in 2010, advertised on the internet and Highly Commended in a recent national family history award), were galvanised to 'do something'. A committee of people living in NSW, Victoria, Queensland and WA was formed in 2013 and a Community Facebook page https://www.facebook.com/BushellBrownGraveProject was set up.

Another hurdle was the difficulty of locating any stonemasons, let alone masons with the necessary skills. The committee eventually found a team of two, based at Rookwood Cemetery, who were prepared to work at Wilberforce.

The hassles for a volunteer Committee of establishing, maintaining and eventually closing down a Trust Fund when the task was complete (what would we do with the money?) were overcome by building up a good working relationship with the Hawkesbury City Council. The Council has legal responsibility for everything that happens at the Cemetery and has generously agreed to act as our 'banker' by establishing a special account into which funds collected for our project will be paid. Council, being fully across the Heritage issues, will manage the construction phase, pay the contractors out of our account, accept the public liability risk and retain any funds left over as a contribution to the next grave restoration project.

The advent of crowd funding dealt with the legalities of soliciting the public for funds, especially beyond state borders. We hope you'll check out our trail-blazing fund-raising project on http://www.pozible.com/project/177971 , watch our video, read our story and make a contribution.

If we don't meet our fund-raising target of $16,000 the whole project will lapse. We're hoping to zoom past the target, as people recognise this project's capacity to help restore other historic graves in the Hawkesbury, so please tell your friends and family. And we hope we've given you a 'template' for restoring historic graves in your area and have inspired you to begin.
Louise Wilson, Project Co-ordinator

The Blue Labyrinth

For anyone who likes bushwalking and good books, this second edition by Bruce Cameron is a must have item! Hard covered and 350 glossy pages long, it is packed with information, history, maps, with most of the text illustrated by adjacent, clear photographs.It is worth every cent in your bookcase for the good reading, entertainment and many, many references. *Allan Walsh.*

THE BLUE LABYRINTH is the tract of land between the Blue Mountains townships of Wentworth Falls and Glenbrook, stretching south almost to the stored water of Warragamba Dam, and then east to the Nepean Gorge. It is part of the Blue Mountains National Park, which in total covers almost 216 000 hectares of mountain plateau between the coastal lowlands and the Great Dividing Range. The Blue Labyrinth is included in the Greater Blue Mountains World Heritage Area. The eastern edge of the Blue Labyrinth is on the suburban fringe of Sydney, and is around 50 kilometres from the centre of the city. *Bruce Cameron*

This is a place forgotten to many, hovering vaguely on the edge of perception for some, known and loved by a few. But it was not always so. Thousands of years before the Blue Labyrinth was bypassed by suburbia, it was roamed by the first Australians: the land was a larder, a hardware store, a school, a cathedral … and a home. In what seems to us today a difficult landscape, more than a thousand sites prove that Aboriginal people knew

every rocky knoll, every pool, creek and crevice. The many strands of human endeavour explored in this book lie like morning mist across the maze of valleys, but add immeasurable layers of meaning to the beautiful, intriguing Blue Labyrinth. We desperately need such places for nourishment and renewal … and redemption. *Ian Brown*

Bruce Cameron's book is a work of love. Its trove embraces the broad sweep of the Labyrinth. Not just as you would see laid out on a map: the prose hints at the butcherbird's song beyond the fence, and from that moment back, to ancient floods from melting ice that scoured distant lands long since displaced, laying down the matrix of sandstone at our feet. But the strength of Bruce's book lies in its sympathetic view of human movement across the Labyrinth, where black and white gain complex shades of meaning and interaction. Read this book and look up, find a place within the horizon it describes. *Tom Williams*

Offshoots: A Florilegium from Cairns Botanical Gardens coming to Mount Tomah

Offshoots is a vibrant exhibition of contemporary botanical illustrations by Cairns artist Julie McEnerny, who uses a variety of techniques to document the extraordinary plant collection of the Cairns Botanic Gardens.

The exhibition will go on show at the Blue Mountains Botanic Garden, Mt Tomah from June 29 until August 31

Julie McEnerny's technical skills as a botanical illustrator are matched only by her insight into the cultural and ecological significance of her subject matter and by her sheer dedication to her role as Cairns Botanic Gardens illustrator in residence.

After five years on the *Offshoots* project, the body of work is substantial, fascinating and worthy of representing the diverse collection of plants at the Cairns Botanic Gardens.

The exhibition will be open daily from 9.30am to 5pm in the Visitor Centre at the Blue Mountains Botanic Garden with entrance to the garden and exhibition being free of charge.

For further information telephone: 4567 3000.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

REGISTERED OFFICE 1/19 Stypandra Place**, Springwood 2777 (02) 4751 5834. E-mail:** committee@blumountainsheritage.com.au or j.koperberg@big.com Website: www.bluemountainsheritage.com.au

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are i. to raise public consciousness of the value of cultural heritage; ii. to encourage and assist cultural heritage; iii. to initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

PUBLICATIONS BMACHO's official newsletter *HERITAGE* is edited by Patsy Moppett; the annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden - Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc. Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc., Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc., Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) – Blue Mountains Branch, National Trust of Australia (NSW) – Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant – Katoomba, Scenic World Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE: The management committee for the remainder of 2013-14 is: Ian Jack (vice president and acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes, Patsy Moppett, Dick Morony (public officer), Scott Pollock, Suzanne Smith and Richard Woolley.

Ali Khan the trader…and Indian Hawker

Ali Khan the trader pictured in the driving seat of his cart, was one of many to travel around the Hawkesbury and other regions of Australia selling his wares.

This photograph courtesy of Kathie McMahon was taken from the McMahon's guest house in 1905 on the Bells Line of Roads, Kurrajong North.

The Indian community has a long and rich history in Australia, with immigration beginning quite early in Australia's colonial history.

The earliest Indians came as convicts or as servants of British subjects who had been living in India.
Many Indian immigrants to Australia in the late 19th to early 20th centuries sought employment in rural areas as labourers or itinerant hawkers.
These hawkers traversed rural parts of Australia, moving from town to town in their covered wagons.
The hawkers sold a diverse range of products, including food, books, pots and pans and jewellery, as well as products from India, such as silks and spices.

Many sources indicate that these hawkers provided a lifeline to the rural towns and more isolated farms by providing a large range of products, as well as a diversion from the everyday[1].

There is enough anecdotal evidence from local Australians that the Sikh hawkers were much loved members of the community.

The womenfolk loved them because they provided a welcome break from their mundane existence - the hawkers brought beautiful clothes, goods, all things exotic, and a fleeting glimpse of the big wide world beyond their farmlands.

The Australian men liked the hawkers because they were tough - they knew how to survive in difficult bush land and, more importantly, they played cricket!

The Aussie kids adored the hawkers because of the stories they told of another world, because of their playful spirit and their wonderfully aromatic curries.

There must have been a great sense of excitement when the hawker came to town bearing new merchandise, both every day and exotic, which might otherwise not be seen outside the big cities.

The National Library of Australia holds images of Indian hawkers and have done research into the lives of specific individuals [1.]

There were concerted attempts in the early 1900s to establish a discourse about Indian Hawkers that conformed to the framework of the White Australia Policy.

Numerable editorials and feature articles complained of the Indian hawker in the Australian landscape as a redundant nuisance pushing shoddy goods, or as a pernicious threat to the fabric of rural society, harassing Australian women in their homes.

It is surprising, therefore, that hawkers feature in so many photographs of the period, and yet they do. Many images of the hawker signal his difference, as a lone and somewhat alienated figure in the Australian landscape, often mis-captioned, stereotyped and misunderstood.[2]

EDITORIAL NOTE: As many of you will be aware, the passing of BMACHO President John Leary, OAM, on 10 July 2014, has left a void in the heritage community, as well as being a tragic loss to all his family and friends.
John was the Editor of this Newsletter from its inception in 2006. The Committee intend to maintain his good work and will ensure that the Newsletter is able to continue to reach the high expectations that he had in getting spreading the heritage word.
John was midway through creating the May-June Newsletter when he fell ill. Due to the passing of time, the Committee have moved the May-June Newsletter over to July-August 2014, thus there will be no May-June Newsletter this year.
John's Editorial has been retained in his memory as follows, as his parting thoughts to you.

Patsy Moppett – BMACHO Committee member and Acting Newsletter Editor.

An opinion from the editor…

Western crossing has combined commemoration and celebration

In an address I gave at the recent annual general meeting of BMACHO and circulated to members, I may have given the impression that the activities so far in the Western Crossings 2013-15 program were more celebration and little commemoration.

On reflection it is probably fair to state that In fact there was considerable commemoration as well as celebration.

Although individuals and bodies such as National Trust and the RAHS had been floating ideas for the bicentenary celebrations, the Western Crossings commemoration had its genesis with BMACHO.

However, it was quickly and correctly recognised that this organisation did not have the resources to manage such a venture. BMACHO's committee asked the then long serving president of the Royal Australian Historical Society Associate Professor Ian Jack to explore with the RAHS Council, the idea of co-ordinating the project.

It was pleasing when the RAHS quickly took up the challenge and Professor David Carment, AM very ably took on the role of the first Western Crossings Committee chairman which he continued to do when he became the president of the RAHS.

I recall soon after David took on the task of chairman he, Ian Jack (then the president of the RAHS) and I (then president of BMACHO) met one Sunday afternoon in my home to look at objectives and parameters for the Western Crossings Committee as it was to become known.

From that informal meeting there came a strong recommendation that the commemoration of the bicentenary should be from the period 2013 – 2015 embracing the anniversary of a series of inter – related events after the 1813 exploration by Blaxland, Wentworth and Lawson. George William Evans began his survey for a roadway across the Blue Mountains in November 1813 and went as far as the future Bathurst; William Cox then supervised the construction of the road from July 1814 to January 1815 and then Governor Lachlan Macquarie accompanied by Mrs Elizabeth Macquarie travelled along the new road in April and May 1815 and selected the site of Bathurst.

There is no doubt all those who attended the Western Crossings Committee meetings from the very earliest meeting, were in agreement, time and time again, that the Crossings was a commemoration of all who had crossed, from the very earliest Aboriginal crossings to the crossing by Governor Lachlan Macquarie and Mrs Elizabeth Macquarie and party in 1815.

The European crossings from 1813 are not a celebration for the Aboriginal people and there were many commemorations of Indigenous crossings held during 2014, like the Ancestral Pathways walks organised by Auntie Sharyn Halls , the official opening of The Gully at Katoomba with interpretive signage, the commemoration walk 'Jummangunda Ngunninga' walk from Bardens Lookout to Mt York.

The excellent exhibition in Hartley *A Moment in Time* curated by Joan Kent starting with a very comprehensive history of the Wiradjuri people, through to Governor Lachlan Macquarie is one of the lasting commemorations as is the Western Crossing room at the Mt Victoria Museum and there are others.
As I stated in my annual report,… 'Credit must go to the Royal Australian Historical Society for its role in overseeing through the Western Crossings Committee the co-ordination of the celebration. This committee

brought together organisations from Blacktown to Bathurst; descendants of those involved with what has been described as the first crossing of the Blue Mountains by Europeans; local Indigenous groups; as well as others to promote and co-ordinate this part of the celebration and will continue to do so until 2015.

'Unfortunately, the celebration has not yet attracted major financial support from government with most of the events being funded by local organisations and sponsorship from local business and individuals.

'The State government did provide a grant of $80,000 to the Royal Australian Historical Society and this was distributed to various groups and activities involved in the centenary. This grant was negotiated between Professor David Carment and the then Premier of NSW Barry O'Farrell.'

John Leary, OAM – president, Blue Mountains Association of Cultural Heritage Organisations Inc and editor of *HERITAGE.*

The Heritage of Education in the Blue Mountain

By Ian Jack

At the Blue Mountains History Conference 2014, held at the Carrington Hotel, Katoomba Associate Professor Ian Jack delivered a most interesting address titled: *The heritage of education in the Blue Mountains.* Space in this edition of *HERITAGE* will not allow for the full text to be published and at the editor's request, Ian has produced an abridged version which appears on this and following pages. A biography of the author appears at the end of this article.

In my conference paper I explored the surviving tangible heritage related to education in the Blue Mountains and the Hartley/Bowenfels area over the past 160 years.

Many of the establishments were private schools. Most of these adapted pre-existing buildings, which in turn later reverted to other uses and are not readily identifiable as schools today.

State schools, on the other hand, almost always had custom-made buildings, but the earliest schoolhouses have often been demolished or moved elsewhere and what we see today in the public schools in every village along the Great Western Highway is a long but incomplete sequence of attempts to provide for an expanding population of children in the 20th century.

National School at Bowenfells

Public education began exceptionally early, with the National School at Bowenfels, erected in 1851. It was built by local people to a local design.

It contained three rooms originally, one the schoolroom, the other two the living space for the schoolteacher, John Edhouse.

The schoolhouse opened without furniture, water supply or toilet but the local 'patrons', mainly Scottish farmers, paid for improvements in 1852 and 1853.

In 1866 a new separate schoolroom was constructed and all three rooms of the 1851 building became the schoolmaster's residence.

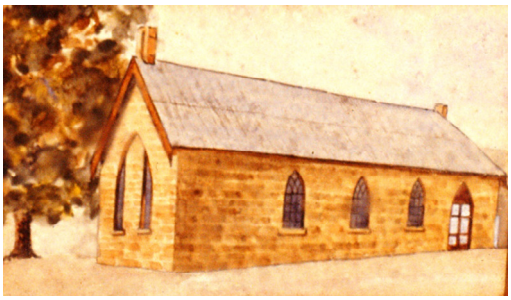
The stonemason was James Connor, an innkeeper who lived nearby in Umera, itself later a private school. Connor was a gifted craftsman and was responsible for some of the finest grave markers in the local cemeteries. The 1866 building remained in use as a primary school for an extraordinarily long time, over a century, until the end of 1969.

Since then the Bowenfels complex has been privately owned. For a time the 1866 school was used as an artist's studio, while the artist lived in the 1855 building.

Once the railway came over the mountains in the later 1860s, there was, of course, a new need for schools. The first public school was in Mount Victoria, opened in 1868, not for local residents, who were still few, but for the education of the children of workmen engaged on the construction of the railway and the Zig Zag. That 1868 building was, however, replaced in 1877.

The education of railway children also prompted the building of the first private school. Andrew Brown, a wealthy Scots Presbyterian grazier at Cooerwull in Bowenfels, had bitterly opposed the building of the Lithgow Zig-Zag in the 1860s, because he did not want the Bathurst railway to cut through his estates.

But once the decision was taken, he accepted the inevitable and allowed a semi-permanent camp for railway construction workers to be located on Cooerwull estate, near the present Bowenfels railway station.



Cooerwull stone school - a painting by John Sands & Co.

The workers were accompanied by their womenfolk and children, as they had been at Mount Victoria in 1868. Genuinely distressed at the plight of the children, Andrew Brown made land available to them and built a slab building, roofed with bark.

Then in 1873-1874 he built a sandstone school for the railway children and other local children, with a stone residence for a schoolteacher. All the stone came from a quarry on the estate. The schoolhouse was also used on Sundays for services, both Presbyterian and Anglican.

When the present Cooerwull Public School was built by the government in 1906-1907, the building became solely a Presbyterian Church and Sunday School. Later secularised, the lovely little building is now the centre-piece of a car-yard on the highway, but it is still externally as it was in 1874.

But the connection of the Brown family with Cooerwull School continued. A bell is still rung daily in the playground of the modern state school. It originally hung in the belfry of the 1848 stables at Cooerwull House, where it summoned employees back at the end of the working day. It had been brought out from Scotland along with Andrew Brown's bride in 1841.

In 1930 it was given to Cooerwull School by one of Andrew's heirs and it has been there ever since.
You can compare it to the old bell hanging in the playground of Blackheath Public School. That has been there since 1888, but has no story attached comparable to the Cooerwull bell. It is good, however, to see that it is still there
.
The school at Blackheath had opened in 1885, three years before the bell was installed, but the earliest surviving building was erected in 1896 right on the highway. In December 1884 the parents of Blackheath had applied to the Department of Education for the establishment of a public school in the village. The application was approved and the department's inspector and the residents decided on a two-acre site bisected by Leichhardt Street.
Two acres was the standard size of a school site.

The site that was chosen was part of the eastern edge of the Blackheath Stockade, which was established in 1844 and was in operation until 1849, so the school grounds have quite a lot of archaeological potential.
The history of the site explains why what was once the schoolmaster's residence is separated from the school by a busy street.

The Department of Education still owns the old residence, since local residents demonstrated loudly against its proposed demolition some years ago and it is now sensibly used as a community centre, a Cyber-Shed in front and Before and After School Care behind.

Before any custom-made school buildings were erected in any of the Mountains villages, other than Mount Victoria, Springwood and Katoomba, the same private philanthropist who had built the school for the railway children erected entirely at his own expense a major Great Public School for country boys on a different part of his estate at Bowenfels.

Andrew Brown's concern for education led him to found a boarding school, particularly, but never exclusively, for Scottish families on country properties. In 1881 he engaged George Donald, the principal Lithgow building contractor, to erect the spacious stone buildings of Cooerwull Academy which still stand.

The school was intended to provide an Australian equivalent to Edinburgh Academy, where Brown's two boys had spent two years from 1858 to 1860 and for 34 years an interesting and often distinguished staff taught boys

from many of the élite grazing families and also from the professional families in country towns, including Lithgow.

The ablest boys went on, through Brown scholarships, to St Andrew's College and the University. In 1892 Brown gave the school to St Andrew's which ran it until in 1916 the school was obliged to close, when most of the staff left to serve in World War I.

By 1907 the Academy was larger than any of the colleges at the University of Sydney, with 65 rooms accommodating up to 40 boarders, set in 7 hectares of land. There was an extensive library; art was taught by Arthur and George Collingridge, science by the Antarctic explorer Borchegrevink.

The school had excellent sports fields and played not only other major schools but also the local Lithgow industrial football and cricket teams. It was both élite and inclusive.

In 1953 the De La Salle Brothers purchased the derelict property and opened a Catholic school, La Salle Academy.

La Salle Academy still flourishes as a co-educational school and has maintained the old buildings in use. But Cooerwull Academy and its aspirations did not die in 1916. The rector appointed in 1903 had been a man called John McManamey. McManamey was a Scottish policeman's son from Wellington, educated at an Anglican boarding school, All Saints at Bathurst, and then at the University of Sydney where he lived in St Andrew's College . At University and College he was enabled to indulge his passions for classical literature, and extended it into English literature, while living a vigorous outdoor and sporting life.

After graduation he was the founding headmaster of Dr Aspinall's Scots College in Sydney. He left to found his own school, The Australian College, and then went off to Queensland to be senior classics master at the renowned Ipswich Grammar School.

In 1903 he returned to the Central West of NSW to be rector of Cooerwull Academy, but again ventured out to create a school of his own in 1907. And this, of course, was Woodford Academy, directed, like Cooerwull, towards the University entry examination and élite learning generally.

Woodford is a classic case of adapting much older buildings to school use, while supplementing the old with a custom-made wing. Built on the site of an early road gangs' encampment, Michael Pembroke's weatherboard Woodmans Inn in 1832 was developed into a stone inn, the Kings Arms, under Michael Hogan in 1842 (the present west wing).

By 1862, during William Buss's occupancy, the kitchen wings were added. From 1867 until 1897 it was a private country retreat, owned by Alfred Fairfax, and from 1897 to 1907 it was a boarding house.

Finally, from 1907 to 1934, it became a significant school, Woodford Academy, in competition and then in succession to Cooerwull Academy.

After Woodford Academy closed in 1934, the McManamey family lived privately in the house until Miss Gertrude McManamey gave the property to the National Trust of Australia (NSW) in 1978.

An unfamiliar heritage aspect of Woodford Academy is the engraving of boys' names on the massive outcrop of rock just to the east of the school. There are many initials carved, such as RSBS, who was Ralph Sanders Barclay Sillar. Sillar was a student at Woodford in 1909, and after WWI, a successful lawyer, who lived on until 1970. I find this a very human part of school heritage.

I went on to discuss a dozen other schools, public and private, and noted the variety of heritage values among surviving places.

Sometimes the school as at the Victoria and Albert was only a wartime emergency. Sometimes the schools were small dame-schools which flickered for a while and went out. Sometimes they were grand custom-built schools like Cooerwull Academy or Mount St Marys. Sometimes, as with Coorah at the Blue Mountains Grammar School, a major historic homestead remains the heart of a much larger modern complex.

Education is a fundamental need and finds many expressions through the private and the public purse. The heritage of education in the Mountains area is in need of more exhaustive evaluation and conservation.

About the author ---

Associate Professor R Ian Jack

Ian Jack was born and educated in Scotland at two of its oldest schools and at a university which had just celebrated its 500th anniversary.

Like most Scots graduates, he was obliged to find suitable employment elsewhere. He came to Australia to re-establish medieval European history in the curriculum of the University of Sydney, but in the 1970s the influences of an archaeologist and the burgeoning heritage movement made him more and more involved with the development of the Australian rural scene and its physical remains.

Although he gave up a decade to serve as the Head of the Department of History and as Dean of the Faculty of Arts, he was also co-founder of the new inter-disciplinary course in Historical Archaeology and became a member of the Heritage Council.

He was also chair of its State Heritage Register Committee, its History Panel and its Religious Properties Panel.

Ian was inevitably involved in consultancy work and among his various commissions was the full revision of the Heritage Study of the Blue Mountains City Council area.

As a result, he got to know in some measure some 900 sites the length and breadth of the Mountains and has continued to write report, give lectures and publish articles on aspects of Mountains history and heritage.

Other works in the Central West, on rural, industrial educational and Scottish themes have supplied a useful context to understanding the Mountains better.

He retired from the Department of History 10 years ago, but he has kept a toe hold on the University campus as resident Senior Fellow at St Andrew's College.

While serving 8 years as the longest-serving president of the Royal Australian Historical Society, he established the Western Crossings Committee which has been so useful a coordinating body for the bicentenary commemorations in this area.

Ian supported the foundation of the Blue Mountains Association of Cultural Heritage Organisations Inc (BMACHO), has been its vice president from the outset more than 8 years ago and has been delighted to see the society blossom.

The Witche's Leap

For over a century guidebooks and commentators, occasionally pointing out that 'leap' is "an old Scottish word for waterfall"[i], have generally associated the name 'Witches Leap' (sometimes spelt 'Witch's Leap') with a small waterfall that pours into a cool, forested gully bounded by cliffs on the 'Round Walk' at Katoomba Falls.[ii] In this article, however, I want to suggest that the waterfall might not, in fact, have been foremost in the minds of those who originally conferred the name.

The 'Round Walk' is alive with echoes from the earliest days of Katoomba and, when the name 'Witches Leap' was first described in a guidebook in the early 1880s, JB North's coal mine had not long begun operations and miners were already tramping to work down a steep access path which passed through here. "The Witch's (sic) Leap, wrote JEM Russell in his *Pictorial Guide to the Blue Mountains*, is easily found by the winding path which leads to the foot of the fall, with perpendicular cliffs on each side towering up to a height of 150 feet; and here will be seen one of the prettiest dells or gullies of the mountains."

The special significance given to the "perpendicular cliffs" is noteworthy and can similarly be seen in *A Tourist Guide to the Blue Mountains,* published in 1887 by the Penrith printer Alfred Colless. Under the heading "The Witches Leap", while describing the "spray of water [falling] into the charming Fern Gully", the striking image again is of finding "yourself hemmed in on two sides by gigantic walls of rock …"[iii] While the name had shifted focus to the falls by the end of the nineteenth century, the sense in both these early descriptions is of it being used more to identify a *place* encompassing a number of natural features but dominated by those enormous rock walls.

Australian topography is littered with names derived from the folklore of fairies, witches etc. though generally these are merely descriptive or, at most, expressions of cultural memory and are not deeply rooted in the long traditions of place that exist in countries like Great Britain. Nevertheless, cultural associations can genuinely enhance a relationship with a new place and this, I think, is what might have occurred in the naming of Katoomba's 'Witches Leap'.

In Scotland's North Esk River Valley, south-west of Edinburgh and east of the Pentland Hills, is the small village of Carlops which came into being in the late 18th century as a cotton weaving centre also possessing resources of coal and limestone. Its name derived from an old folk tradition known as the 'Carline's Loup' ('Witches Leap'), a tale of two local 'carlines' (Jenny and Mause) who would meet of an evening at the edge of the village and leap between two rock outcrops in a kind of aerial dance.[iv]

Though coal mining as a Carlops industry was still listed in gazetteers of the 1880s[v], all the town's industries were in decline by the late nineteenth century, the village ultimately reinventing itself as a holiday and health resort and promoting itself as a literary tourist site through its associations with the Scottish writer John Ramsay (1686-1758).[vi]

With North's newly opened Katoomba Coal Mine attracting employees from near and far, is it possible that miners from the Scottish Borders tramped down through Fern Gully and were reminded of their home and its two carlines? While the gully and its waterfall may have triggered a memory of the dell in Ramsay's famous play *The Gentle Shepherd* (set near Carlops) - where "the water fa's and maks a singan din"[vii] - it would have been those "perpendicular cliffs" facing each other across the gully that particularly caught their imagination and made the 'Witches Leap' the bearer of a rich cultural memory and a link between two towns on opposite sides of the world.

This article has previously been published in Hobby's Outreach March – April 2014 edition

As illustrated above, courtesy of the Power House Museum, *HERITAGE* used the image of a glass negative, full plate, 'Path to the Witche's Leap', Kerry and Co, Sydney, Australia, c. 1884-1917

This photographic negative was published by the Sydney firm Charles Kerry & Co. and is part of the Powerhouse Museum's Tyrrell collection which contains over 2900 glass plate negatives by Kerry & Co.

Although a few appear to be from the 1880s most were produced between 1892 and 1917.

Over this period, and well into the early 1900s, prints from these negatives appeared in many Australian publications and albums of views.

In 1903 the company began producing postcards from these negatives, further establishing the images as some of the most significant and best known early views of New South Wales.

Some of the more significant themes covered by the collection include; views of New South Wales, Queensland, country towns, Sydney, indigenous Australians, the South Pacific, rural life, native flora and fauna, and sentimental views.

In addition a number of significant events from the 1900s are covered by the collection including; embarkation of troops for the Boer War, Hordens fire, the Inauguration of the Commonwealth in 1901, the arrival of the Great White Fleet and the Burns verses Johnson boxing match at Rushcutters Bay in 1908.

Charles Kerry was born in 1858 and by 1885 was running a studio in partnership with CD Jones. This partnership lasted until 1892, when Charles became sole owner and
changed the studio's name to Kerry and Co.

By 1890 the company was employing a number of photographers who would become famous in their own right. George Bell who covered rural New South Wales was employed in 1890 and Harold Bradley was doing outdoor work and covering events around Sydney by 1899.

Kerry continued to work in the field and in 1895 he took photographs of Royal National Park for New South Wales Government, photographed Queensland artesian bores and was employed by the New South Wales Government to travel the state and photograph indigenous Australians. In 1897 Kerry led the first party to reach the summit of Mt Kosciuszko in winter conditions and photographed the Jenolan caves.

By 1900 Kerry had turned his studio into one of the largest and most respected photographic establishments in the colony. His new four story premises at 310
George Street Sydney were designed by the architect HC Kent and the third floor studios alone could accommodate 70 people wanting their portraits taken.

In 1913 Kerry retired leaving the running of the studio to his nephew, unfortunately the business did not do well and Kerry and Co. closed its doors in 1917. Kerry himself died in 1928.

Blue Mountains History Conference success

The Blue Mountains History Conference 2014 held in heritage listed Carrington Hotel has been acclaimed a success by feedback from participants in the event on May 10.

The keynote address titled, *A behind the scenes look at pursuing wonder in the Blue Mountains* presented by Associate Professor Julia Horne.

Associate Professor Julia Horne is University Historian and Principal Research Fellow at the University of Sydney where she works on the University's history & heritage.
Professor Horne's address was a most interesting expose of the social experience of guest houses in the late 19th century as an important part of the Blue Mountains heritage and in particular the development of early tourism.

She cleverly wove the story which demonstrated the importance of preserving travel letters. She presented an alternate aspect of the history of the Blue Mountains, introducing the social experience of guest houses in particular.

Dr Ian Jack then spoke about educational architecture, "The Heritage of Education in the Blue Mountains", as previously covered in the pages of this Newsletter, covering the Cooerwul Academy, St Andrews College and De La Salle College, all at Lithgow, and some connections to the Woodford Academy.

Hector Abrahams, BSc (Arch) (Hons), BArch, ARAIA then addressed the group. Hector has established his own practice, Hector Abrahams Architects, and specialises in the design of new buildings within a historic precinct, with a passion for church architecture.

Hector spoke about the heritage of religion in the Blue Mountains, including in particular the Baptist Church and the Gospel Hall at Katoomba.

After the luncheon break the attendees were entertained by **Christine Wheeler and Friends**, "Rain in the Blue Mountains", songs of Henry Lawson.

Christine joined with skilled musicians Leigh Birkett and Rebecca Daniel, in a unique musical performance of poems from the iconic Henry Lawson.

Dr Ian Jack then joined Robyn Parker of the Paragon Restaurant at Katoomba, in discussion about the current status of the conservation of this iconic heritage building.

Doug Knowles, President of the Glenbrook and District Historical Society, delivered the final address. Doug is also an active member of the Springwood Historical Society.

Doug has been interested in the railway across the Blue Mountains for some years and in particular that part of the Great Western Railway which posed the first challenge to establishing the rail likn across the Mountains and beyond, that of the Lapstone Hill.

The day concluded with a Devonshire tea and an optional tour of the Paragon Restaurant, including upstairs where the chocolates are made.

William Cox Historical Festival at the Arms of Australia

The William Cox Festival on July 20, 2014 will celebrate one of the most important achievements in early colonial history – the building of a road across the Blue Mountains

Construction of the road built by William Cox started in July 1814 at Emu Plains and finished at Bathurst in March 1815.

With a working party of 32 convicts, four free persons and a handful of guards, Cox completed the 101 mile (163km) road over the mountains in seven months.

The road opened up inland New South Wales to European settlement. Cox's bullock cart was the first wheeled vehicle to pass over the Blue Mountains and down over Mt. York.

To mark the bicentenary, the Nepean District Historical Society with the support of Penrith City Council will re-enact the start of Cox's journey from Regatta Park, Emu Plains at 10.30 am on July 20 to the Arms of Australia Inn Museum for the William Cox Festival and formalities.

The NSW Corp of Marines will be in charge, with displays, drills, and re-enactments from the life and times of the early colony. Members of the 1st Windsor Light Horse Regiment will help keep order.

There will be plenty of food, stalls and entertainment. Tall Timbre Country and Western Band will provide music along with the Penrith City Show Band. Students from the Nepean Creative and Performing Arts High School will perform songs and poetry readings.

Children can enjoy old fashioned games, write on slates in the old school room, ride a pony, pet animals in the animal farm, jump to their heart's desire in the jumping castle try trampoline bungee jumping and join in the ever popular, tug of war and lots more.

The William Cox Festival and Open Day is at the Arms of Australia Inn Museum on the corner of Great Western Highway and Gardenia Avenue, Emu Plains from 9am. Admission is free.

Australian Navy Submarines Centenary

A little remembered centenary is that of the first two submarines AE1 and AE2 arriving in Sydney in May 1914 to join the Australian Navy.

The AE2, the Royal Australian Navy's second submarine, was built in the United Kingdom and commissioned there on February 28, 1914 After commissioning, AE2 accompanied by AE1, sailed to Australia crewed jointly by British and Australian sailors, arriving at Sydney in May 1914.

Following the outbreak of war in August, both submarines proceeded to New Guinea for operations against the German colonies. AE2 was subsequently based in Suva, Fiji, and returned to Sydney in November 1914.

In the following month she joined the second AIF convoy at Albany, Western Australia for passage to European waters and was towed across the Indian Ocean by the former auxiliary cruiser Berrima.

Upon arrival in the Mediterranean, AE2 was assigned to operations off the Gallipoli Peninsula. She was ordered to penetrate the Dardanelles on April 25,1915. AE2 entered the Dardanelles at 2.30 am. After torpedoing and damaging the Turkish gunboat Peykisevket, she passed through the Narrows, pursued by surface vessels. She ran aground twice beneath the guns of the Turkish forts along the shore, but these guns could not be depressed low enough to fire on her.

Shaking off her pursuers, the submarine entered the Sea of Marmara on April 26. For the next four days she attacked Turkish shipping with her torpedoes, but without success. Nevertheless, her presence was a nasty shock to the Turks.

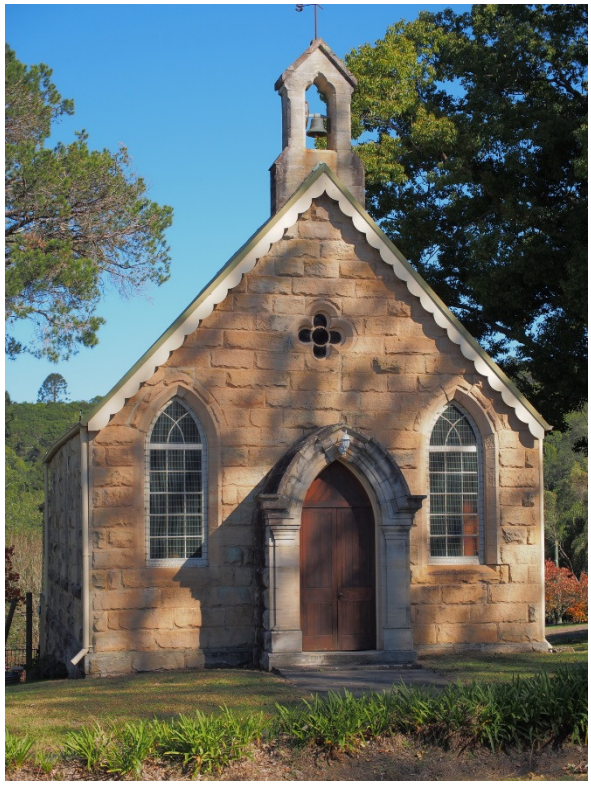
On April 29, AE2 met the British submarine E14 and the two vessels arranged to rendezvous the next day. E14 was the first of a number of submarines that were to follow AE2 into the Sea of Marmara and effectively close it to Turkish shipping bound for the battlefields of the Gallipoli Peninsula.

As AE2 surfaced at the rendezvous point on 30 April, the Turkish torpedo boat Sultan Hissar approached.

AE2 immediately dived, but she lost trim and went out of control, broaching the surface twice. AE2 was hit in the engine room by Sultan Hissar's guns and the crew had no choice but to abandon ship. Although none of the submarine's complement were lost in the sinking, four were to die in captivity

Project aims at photographing all heritage items in Hawkesbury region

In a previous isue, president of Kurrajong-Comleroy Historical Society Steve Rawling wrote about the vulnerability of heritage items, even if they were identified in Council LEPs, listed by the National Trust, or were otherwise noted as being of interest.



Unless formally listed on the State Heritage Register, there is no full protection, and their preservation depends on the goodwill of owners, councils, developers, and their ability to withstand the ravages of time and demolition by neglect.

The Kurrajong-Comleroy Historical Society decided recently to ensure a current record of all items on Hawkesbury City Council's LEP. Many items have numerous historical photographs, but the intention is to create a comprehensive contemporary record.

There can be real challenges in identifying and accessing some items, especially private houses. Other historical societies have, undertaken similar projects. Just how vulnerable are heritage buildings?

The photograph here of St David's Church in Kurrajong Heights illustrates the issue. This splendid photograph was taken by one of our members Paul Hulbert in 2004, who is an experienced photographer. We are fortunate to have him leading the project, assisted by Chris Upton, Steve Rawling advises.

St David's, originally a Presbyterian, now a Uniting Church, is one of a group of buildings in Kurrajong Heights which includes the building now known as the restaurant Lochiel, which was built 40 years earlier than St David's, in the 1820's.

Even Lochiel has no absolute protection, despite being the oldest building between Richmond and Bathurst, and pre-dating some other buildings which are on the State Heritage Register.

A proposal some years ago by the Hawkesbury Branch of the National Trust for it and St David's to be included got nowhere.

St David's was built in 1867, and I was surprised and pleased to learn at the recent BMACHO Conference that this pre-dates any churches on "the other side", the Blue Mountains plateau.Despite the significance of this group of buildings, when the ill-fated proposal for Bells Line Expressway was prepared by the then RTA, the proposed route went straight through the centre of Kurrajong Heights, requiring demolition of the whole group.
While that was rejected, there is still a risk that future road upgrades could threaten.

Contributed by Steve Rawling AM, FAICD

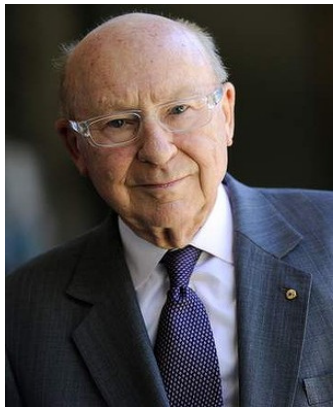
Barry O'Keefe (1933-2014)

Distinguished jurist, ICAC chief, mayor, defender of heritage - a man decent in all things

It is difficult for obituary writers to adequately prepare a definitive but brief biography of Barry O'Keefe, QC, AM - a distinguished jurist, barrister, Queen's Counsel the state's second ICAC commissioner, long term councillor and mayor of Mosman, president of the Local Government Association and president of National Trust of Australia (NSW) among the many roles he performed in a lifetime of service to the community.

He was an absolute gentleman, courtesy and decent in all things. He understood people and appreciated all they did to make this a better world.

Barry Stanley John O'Keefe was born on May 20, 1933, the first of three children to Ray O'Keefe and his wife Thelma (nee Kennedy). Ray owned a furniture store on Pitt Street and was later mayor of Waverley, while Thelma was reputedly the first woman to surf at Bondi Beach. For the rest of his life, Barry talked to Thelma almost every day, no matter where in the world he was, and always cited Ray's gentleness as a model for how a man could be.



His generous support for the work of National Trust has meant that many sectors of Australia's heritage have benefitted.

Barry served on the board of National Trust Australia (NSW) as a member, vice president and then from 1991 to 2006 as president. Under his leadership, the Trust emerged from bankruptcy and built up a large and active membership of heritage defenders.

As former president of the Friends of Woodford Academy, John Leary, OAM and a friend of the deceased remembers well the regular visits of Barry 'Keefe to the iconic sandstone former inn, later gentleman's resident and educational facility.

Barry loved the property and had great respect and affection for those volunteers who maintained the heritage site. He often would arrive unannounced just for a cup of tea and a chat and always a thank you to the volunteers

It was Barry who first considered the value of this 1830s property when it was falling down around the then owner, Gertrude McManamey the sole surviving daughter of the academy foundation John McManamey.

Barry using his own money spent a substantial amount to restore parts of the building particularly the eastern part of the main building. He did this unheralded and in the manner which marked his ethos of service.

Woodford Academy was donated to the National Trust in 1979 by Miss McManamey with an agreement that she be allowed to continue living there until her death. She died in 1988 having left the house 2 years before to be cared for at the Queen Victoria Homes, Wentworth Falls.

Barry had a major part in obtaining a $1 million Centenary of Federation grant from the Federal Government to help restore the property. He seldom missed a fund raising function at Woodford Academy and made sure that the day after the event there was a thank you note to the president and volunteers of the Friends accompanied by a donation of several hundred dollars.

The National Trust was not the only organisation to benefit from this generous benefactor. His interests were wide and diverse and ever thing he did was with a vibrant energy

O'Keefe went to the bar in 1957 and at about the same time started lecturing at the University of Technology, Sydney where he was popular with the law students. There is a story that students dubbed him "the Mild One", in contrast with his brother Johnny O'Keefe, "the Wild One" OF Australian rock-n-roll.

He took silk in 1974 and as a formidable cross examiner was renowned for his ability to manage and analyse masses of complex facts. He appeared frequently before the NSW Supreme Court, the High Court of Australia and the Privy Council.

He served as president of the NSW Bar Council from 1990 to 1991 and sat on the executive of the Law Council of Australia from 1992 to 1993.In 1993 he was appointed as Chief Judge of the Commercial Division of the NSW Supreme Court. In 1994 he accepted a five-year appointment as commissioner of NSW's Independent Commission against Corruption

In 1989, Barry O'Keefe, QC was made a Member of the Order of Australia for service to local government.

Although terminally ill in 2013 O'Keefe agreed to the request of the Australian Catholic bishops to chair the Truth, Justice and Healing Council, established to co-ordinate the church's submission to the royal Commission on Institutional Responses to Child Sexual Abuse.

Two days before Barry O'Keefe's death, Pope Francis created him Knight Grand Cross (First Class) of the Order of St Gregory the Great – the highest papal honour an ordinary layperson can receive.

Barry is survive by Janette (Jan) his wife of 52 years, children Phillip, Vanessa, Andrew and Sophie an seven grandchildren and sister Anne.

Barry O'Keefe Photograph: Justin McManus

This is an abridged version of an obituary by Philip O'Keefe and Kevin McCann which appeared in the Sydney Morning Herald on May 24-25, 2014 with anecdotes from John Leary.

Bits and Pieces

Gallery thanks Faulconbridge firies

A $7000 cheque has been presented to the Faulconbridge Rural Fire Service as a thank you for their efforts to protect Norman Lindsay Gallery during last year's bushfires.
The donation was made possible after Helen Glad, Norman Lindsay's granddaughter generously gave an original Lindsay artwork to be sold with the proceeds to go towards the local fire brigade for the purchase of equipment.

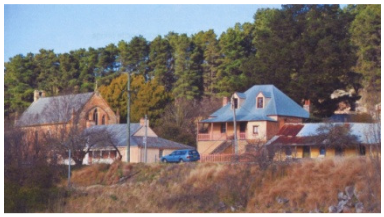
Descendant of John Britty North entertained at BM history conference

Singer and instrumentalist Christine Wheeler one of the three performers who presented the musical interlude *Rain in the Mountains --- Songs of Henry Lawson* at the Blue Mountains History conference at The Carrington Hotel, Katoomba turns out to be the great, great grand daughter of John Britty North.
JB North was leading force in developing oil shale resources of Megalong Valley and by 1877 in partnership with RH Reynolds was developing Katoomba and the coal outcrops in the Jamison Valley. In 1880 he claimed the oil shale resources in the Ruined Castle area. Source: Pells, Phillip J and Hammon Phillip J, *The Burning Mist of Time,* 2009

National Trust Heritage Award – Hartley Revitalisation Project

The National Trust Heritage Awards for 2014 were announced on May 14 and Hartley figured highly amongst the achievements. The Hartley Project won the category for Adaptive Reuse – Government Corporation, for work at the Hartley Historic Site. The assessors declared that although the project was a long time in coming, it led to many effective decisions being made, which followed on from the Conservation Management Plan for the Historic Site, in the various proposals to relocate an intrusive amenities block to a discrete location.
The Awards followed the theme this year of "Journeys", and this was referring to the "journeys that the Australia made from indigenous walkabout to the immigrants' tale."
The National Trust spokesman Brian Scarsbrick, declared that the winners in several categories have helped provide the nation with a "wonderful gift for the future".
The National Trust Awards honour communities and individuals for their outstanding contributions to Australia's heritage landmarks, saving our past for future generations.

The Hartley project was managed by Steve Ring, Hartley Historic Site NSW NPW, with input from Jum Stephany, Truman Zaniol and Associates.



Has Columbus's ship been found?

A shipwreck found off the north coast of Haiti could be the 500-year-year old remains of the Santa Maria which led Christopher Columbus' voyage to the New World.

Al the geographical, underwater topography and archaeological evidence strongly suggests this wreck is Columbus famous flagship according to Marine investigator Barry Clifford. But Haitian officials said it was unlikely anything remained of the wreck.The wreck was discovered in about three to five metres of water and matches the length of the Santa Maria's 35-metre keel.

Between 1492 and 1503, Columbus completed four round-trip voyages between Spain and the Americas, all of them under the sponsorship of the Crown of Castile. These voyages marked the beginning of the European exploration and colonization of the American continents, and are thus of enormous significance in Western history.

Columbus always insisted, in the face of mounting evidence to the contrary, that the lands that he visited during those voyages were part of the Asian continent, as previously described by Marco Polo and other European travelers.

Columbus' refusal to accept that the lands he had visited and claimed for Spain were not part of Asia might explain, in part, why the American continent was named after the Florentine explorer Amerigo Vespucci and not after Columbus.

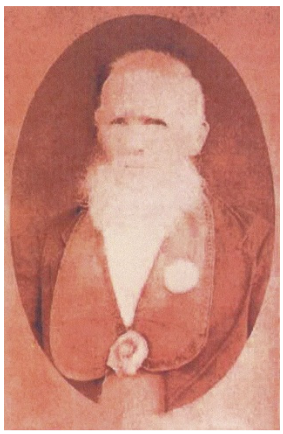
Restoration Project - Second Fleeter, Paul Bushell

The main transport route of choice from Sydney through the Blue Mountains is the Great Western Highway, via Penrith, but everyone has at least tried Bells Line of Road via Windsor and Richmond. Driving through those towns, how could you not absorb the historic ambience of the Hawkesbury, the district which saved the first European settlers of Australia from starvation? How could you not enjoy the views from Kurrajong?

It's easy to understand, then, the passion that's driving descendants of two of the earliest settler families of the Hawkesbury to 'do something' about restoring a historic grave at Wilberforce.

Wilberforce Cemetery is the last resting place for 34 people who arrived on the First, Second and Third Fleets and being so historic, it has Heritage listing. Agitation from the Friends of Wilberforce Cemetery has led to major drainage works at the Cemetery, and the erection of a protective security fence. This provides a better guarantee that restoration efforts will not be wasted.

One of the Cemetery's Second Fleeters is Paul Bushell. Arriving in 1790, from 1798 to his death in 1853 he lived at Wilberforce. Here he married Isabella Brown, eldest daughter of David Brown (a convict who arrived in 1792) and Eleanor Fleming (a Third Fleeter who arrived in 1791 as a child with her NSW Corps father). All four, along with six other members of their family) were buried at Wilberforce Cemetery in an impressive double gravesite featuring two altar monuments.



Paul Bushell

These had collapsed by 1990, due to weathering, erosion and vandalism. Government grants are not available for private headstones where a descendant family exists but, when individuals visit the cemetery, the organisational task and high cost of restoring them seems overwhelming as a private venture. The widespread use of the internet created new opportunities for coordinated action.

It's now much easier to find and communicate with the right people. Readers of Louise Wilson's book *Paul Bushell, Second Fleeter* (published in 2010, advertised on the internet and Highly Commended in a recent national family history award), were galvanised to 'do something'. A committee of people living in NSW, Victoria, Queensland and WA was formed in 2013 and a Community Facebook page https://www.facebook.com/BushellBrownGraveProject was set up.

Another hurdle was the difficulty of locating any stonemasons, let alone masons with the necessary skills. The committee eventually found a team of two, based at Rookwood Cemetery, who were prepared to work at Wilberforce.

The hassles for a volunteer Committee of establishing, maintaining and eventually closing down a Trust Fund when the task was complete (what would we do with the money?) were overcome by building up a good working relationship with the Hawkesbury City Council. The Council has legal responsibility for everything that happens at the Cemetery and has generously agreed to act as our 'banker' by establishing a special account into which funds collected for our project will be paid. Council, being fully across the Heritage issues, will manage the construction phase, pay the contractors out of our account, accept the public liability risk and retain any funds left over as a contribution to the next grave restoration project.

The advent of crowd funding dealt with the legalities of soliciting the public for funds, especially beyond state borders. We hope you'll check out our trail-blazing fund-raising project on http://www.pozible.com/project/177971 , watch our video, read our story and make a contribution.

If we don't meet our fund-raising target of $16,000 the whole project will lapse. We're hoping to zoom past the target, as people recognise this project's capacity to help restore other historic graves in the Hawkesbury, so please tell your friends and family. And we hope we've given you a 'template' for restoring historic graves in your area and have inspired you to begin.
Louise Wilson, Project Co-ordinator

The Blue Labyrinth

For anyone who likes bushwalking and good books, this second edition by Bruce Cameron is a must have item! Hard covered and 350 glossy pages long, it is packed with information, history, maps, with most of the text illustrated by adjacent, clear photographs.It is worth every cent in your bookcase for the good reading, entertainment and many, many references. *Allan Walsh.*

THE BLUE LABYRINTH is the tract of land between the Blue Mountains townships of Wentworth Falls and Glenbrook, stretching south almost to the stored water of Warragamba Dam, and then east to the Nepean Gorge. It is part of the Blue Mountains National Park, which in total covers almost 216 000 hectares of mountain plateau between the coastal lowlands and the Great Dividing Range. The Blue Labyrinth is included in the Greater Blue Mountains World Heritage Area. The eastern edge of the Blue Labyrinth is on the suburban fringe of Sydney, and is around 50 kilometres from the centre of the city. *Bruce Cameron*

This is a place forgotten to many, hovering vaguely on the edge of perception for some, known and loved by a few. But it was not always so. Thousands of years before the Blue Labyrinth was bypassed by suburbia, it was roamed by the first Australians: the land was a larder, a hardware store, a school, a cathedral … and a home. In what seems to us today a difficult landscape, more than a thousand sites prove that Aboriginal people knew

every rocky knoll, every pool, creek and crevice. The many strands of human endeavour explored in this book lie like morning mist across the maze of valleys, but add immeasurable layers of meaning to the beautiful, intriguing Blue Labyrinth. We desperately need such places for nourishment and renewal … and redemption. *Ian Brown*

Bruce Cameron's book is a work of love. Its trove embraces the broad sweep of the Labyrinth. Not just as you would see laid out on a map: the prose hints at the butcherbird's song beyond the fence, and from that moment back, to ancient floods from melting ice that scoured distant lands long since displaced, laying down the matrix of sandstone at our feet. But the strength of Bruce's book lies in its sympathetic view of human movement across the Labyrinth, where black and white gain complex shades of meaning and interaction. Read this book and look up, find a place within the horizon it describes. *Tom Williams*

Offshoots: A Florilegium from Cairns Botanical Gardens coming to Mount Tomah

Offshoots is a vibrant exhibition of contemporary botanical illustrations by Cairns artist Julie McEnerny, who uses a variety of techniques to document the extraordinary plant collection of the Cairns Botanic Gardens.

The exhibition will go on show at the Blue Mountains Botanic Garden, Mt Tomah from June 29 until August 31

Julie McEnerny's technical skills as a botanical illustrator are matched only by her insight into the cultural and ecological significance of her subject matter and by her sheer dedication to her role as Cairns Botanic Gardens illustrator in residence.

After five years on the *Offshoots* project, the body of work is substantial, fascinating and worthy of representing the diverse collection of plants at the Cairns Botanic Gardens.

The exhibition will be open daily from 9.30am to 5pm in the Visitor Centre at the Blue Mountains Botanic Garden with entrance to the garden and exhibition being free of charge.

For further information telephone: 4567 3000.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

THE ORGANISATION Blue Mountains Association of Cultural Organisations Inc (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are i. to raise public consciousness of the value of cultural heritage; ii. to encourage and assist cultural heritage; iii. to initiate and support cultural heritage activities not already covered by member organisations. One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

AFFILIATIONS BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

PUBLICATIONS BMACHO's official newsletter *HERITAGE* is edited by Patsy Moppett; the annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

MEMBERSHIP The following organisations are members of BMACHO: Blue Mountains Botanic Garden - Mount Tomah, Blue Mountains City Library, Blue Mountains Cultural Heritage Centre, Blue Mountain Education and Research Trust, Blue Mountains Historical Society Inc., Blue Mountains Family History Society Inc. Blue Mountains World Heritage Institute, Eskbank Rail Heritage Centre, Everglades Historic House & Gardens, Friends of Norman Lindsay Gallery, Glenbrook & District Historical Society Inc., Hartley Valley District Progress Association, Kurrajong-Comleroy Historical Society Inc., Lithgow and District Family History Society Inc., Lithgow Mining Museum Inc., Lithgow Regional Library – Local Studies, Lithgow Small Arms Factory Museum Inc., Mt Victoria and District Historical Society Inc., Mt Wilson and Mt Irvine Historical Society Inc. (including Turkish Bath Museum), Mudgee Historical Society Inc., National Trust of Australia (NSW) – Blue Mountains Branch, National Trust of Australia (NSW) – Lithgow Branch, Nepean District Historical Society Inc., Paragon Restaurant – Katoomba, Scenic World Blue Mountains Limited, Springwood & District Historical Society Inc., Springwood Historians Inc., Transport Signal and Communication Museum Inc., The Darnell Collection Pty Ltd, Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

COMMITTEE: The management committee for the remainder of 2013-14 is: Ian Jack (vice president and acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes, Patsy Moppett, Dick Morony (public officer), Scott Pollock, Suzanne Smith and Richard Woolley.

DISCLAIMER Views and opinions expressed in *HERITAGE* originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

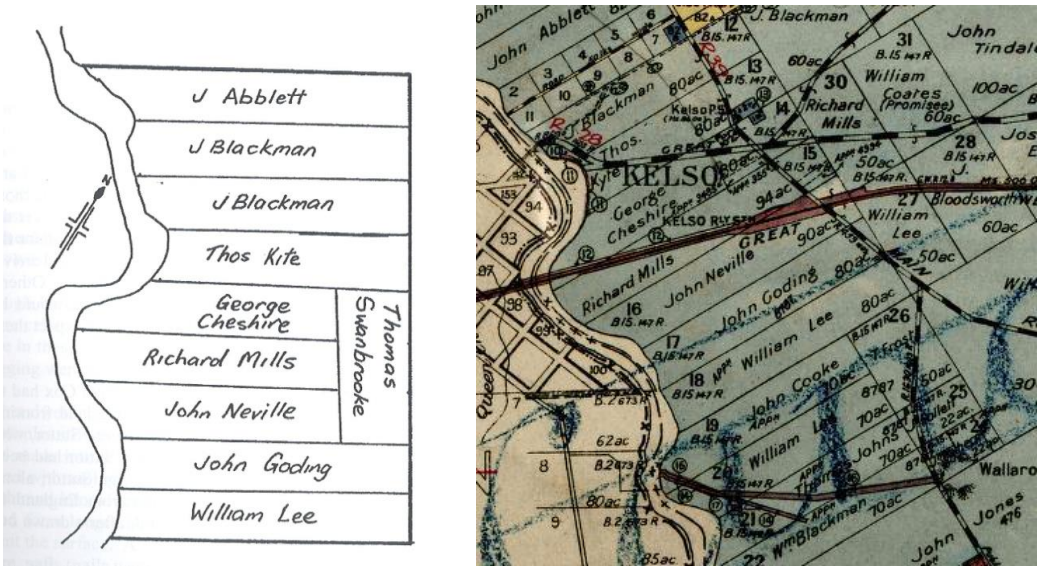
The King William Inn 1870, known by then as the Carriers' Arms

King William IV Inn, Lee Street, Kelso

In 1828 the settlement of Sydney was governed for a short time by Major-General Stewart. Bathurst was growing strongly under the squatters who took the leading life in the colonial times, and development of self government was carefully managed by them. In 1828 a council formed from this powerful squatting class and was empowered to even veto the Governor's decisions, if they so wanted. With this background it was natural that it was the squatters who were the principal builders of the buildings that have survived from that period in Bathurst.

Before this, Governor Lachlan Macquarie was recognized as a man who gave credit to settlers for their hard work, and the part they played in opening up the new settlement. He often rewarded their good conduct with tickets-of-leave and free pardons, and Governor Brisbane had followed his example. During the rule of Governor Brisbane, Charles William Wall was appointed to manage the settlement at Bathurst. (1827-28). Governor Wall continued to govern the settlement until the arrival of Major General Stewart of Mount Pleasant, Bathurst, two years later (1828).

The diary of Governor Macquarie records on 2 February 1818, that he had inspected ten settlers for Bathurst, and that he had agreed to grant each 50 acres of land, a servant, a cow, four bushels of wheat, and an allotment in the new town, and to provide them for twelve months from the King's stores. These men were William Lee, Richard Mills, Thomas Kite, Thomas Swanbrooke, George Cheshire, John Abbott, John Blackman and his brother James, John Neville and John Goding.



Original land grants – Parish of Kelso

Early buildings of the period included the original portions of the 1830's homesteads of Walmer, Westbourne, Blackdown, Alloway Bank, Ardsley, Mount Pleasant, Rainham (1833), and closer to the urban centre: Kelsoville, the Holy Trinity Church (1835), and the King William Inn (1835) at Kelso.

The original King William IV Inn building was constructed in 1831 by Richard Mills as an inn, the third licensed hotel on the Bathurst Plains. The first was Thomas Kite's "Dun Cow Inn" near Woolstone House, from 1828 to 1835. Mills' inn is situated on Lee Street at Kelso on what was originally the main approach road to Bathurst, the Lockyer's Line of Road, which came in from O'Connell and Lagoon. This road was surveyed by Major Edmund Lockyer, the principal surveyor of roads and bridges under Governor Darling. Major Thomas Mitchell's road, now the Great Western Highway, superseded this road in the 1830s. Kelso was also the initial settlement area.

Richard Leveret Mills was born in Wales in 1780. He was transported to Australia as a convict in 1800 on the "Royal Admiral" and became a servant to David Langley of Richmond. Langley had come to Australia with his wife and three daughters in 1803, and Mills was assigned in 1804. Langley was superintendent of blacksmiths in the colony from 1806. In 1811 his daughter Ann Bella married their convict servant. Richard Mills successfully managed the Langley estate in Richmond while Langley managed other business in Sydney.

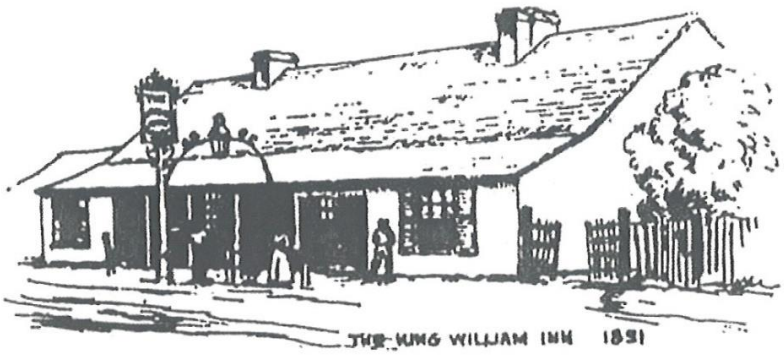
His skills as a farmer were recognized in the land grant from Governor Macquarie. He had married Ann Langley in Sydney in 1811, and in all they had nine children between 1807 and 1830. Ann was born in London in 1792. The Mills family came to Bathurst at a time when

times were extremely difficult as there were few tracks, no shops and businesses and little labour available.

Soon after settling in the Bathurst district Ann Mills had given birth to her sixth child, George Bathurst Mills, in 1819. He was the first white child born west of the mountains. In 1823 Sir Thomas Brisbane had, upon application from Richard Mills, granted this child a block of land in the new settlement to commemorate the occasion. This land extended to the east from the top of Richard Mills' original grant. By 1844 Mills owned 144 acres of land.

Richard and Ann Mills were in turn themselves assigned convicts to work for them. This included one Edward Gates, who was given the job of painting the inn. Edward Gates later established the first coach building works in the area in 1840, having married Mills' daughter Nancy in 1839. Mills always showed great compassion for many of the convict workers, having been one himself. He assisted Gates with finance and allowed the construction of his daughter's first home on his land.

The Mills' had been quite progressive in support they gave to the establishment of a Bathurst Independent Academy school in Kelso around 1927. Mills had offered to rent land for the school, and was a subscriber, wanting a better education for his children. He was concerned about the education of children of convicts, ex-convicts and orphans. It is unsure whether the school was ever established.



By 1831 Richard and his wife Ann lived in a thatched sod construction house, on the Kelso side of the Macquarie River, and were growing wheat. The house design was based on Ann Mills' parents home in England. The original structure of four rooms was constructed of local clay, with the walls about eighteen inched thick. A fire place was constructed in one of the back rooms, probably Ann's kitchen. A bricked bread oven was constructed at some stage. A well had been dug near the building which supplied all the water that the family required, and later for the guests at the inn. The roof was constructed of saplings and wood shingles. They extended the cottage over the next few years and a separate laundry was added. A wood shed was erected at the rear. By 1828 Mills had 95 acres. In 1831 he decided to convert part of the house into a wattle and daub, shingle roofed inn, the King William Inn, the licensee being Richard Mills. Part of Richard Mills' land was also offered for auction adjacent to the newly established Kelso Railway Station in 1875. Mills was licensed to sell wines, malt and spirituous liquors, the license costing 25 pounds.

Gable additions were made at each end in the Federation period. The building was a single storey colonial Georgian inn of stuccoed brick under a hipped and gabled iron roof, somewhat altered from its original form in Victorian times. The recessed bull nose verandah is set between gabled wings with segmented arched easement windows. It was 40 feet wide across the front, excluding the wings on either side. The main door opened onto a narrow hallway, with a room leading off either side. The room to the left was the parlour which also had a fireplace for the comfort of patrons. The ceilings were quite high. The additions and alterations were done by James Vincent, the brother in law of John Neville, also an original settler in the area. Vincent had been involved in building at the Langley's estate at Richmond.

The two long wings, extending a few feet beyond the front of the original house, required the roof to be altered to accommodate the water shed. A verandah extended over the front of the original home. The extension roofs were shingled, and constructed of locally made bricks. Several six paned windows were used, probably with shutters. The wing on the right was probably initially, the children's bedroom.

A large rectangular two storey brick coach house and barn with shingle roof and window arches and doorways was constructed for use by the Mills family, as well as patrons of the inn. The ground floor held the carriages and horses and the top floor held the fodder and the coachman's quarters. This building was demolished in 1962.

Mills sold the inn and moved to Mudgee in 1835, where his sons had inns. Richard Mills died in 1850 and is buried in the Holy Trinity Church cemetery in Kelso. Ann died in 1875 is buried at Mudgee, where they had the property "Enfield", in later years.

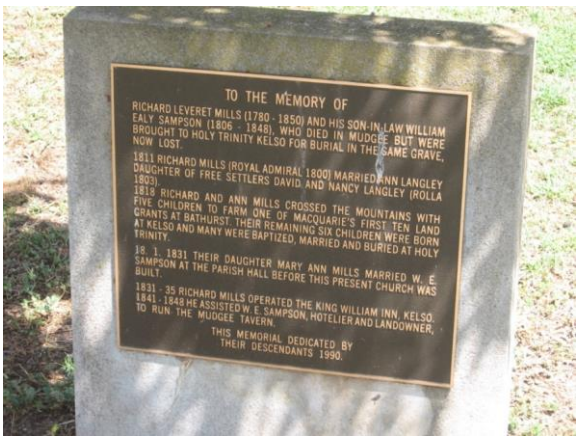
Assembled at Bathurst
on the 2d Day of June 1831

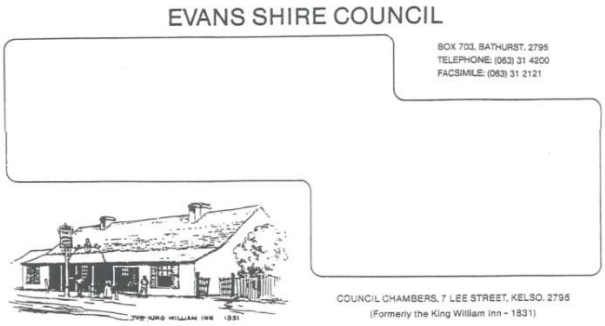


Richard Mills' liquor license 1834 *Grave of Richard Mills at Kelso*

When Richard Mills moved to Mudgee, the inn was purchased by William Boyles, and renamed the Traveller's Inn. Boyles left the district in 1840, and the building was not licensed for some years. In about 1865 William Conwell was the publican until the inn was bought by George Robert Matthews 1869. By this time a number of shops were established between the inn and the railway line, and there were five small cottages at the rear of the inn.

Matthews changed the name of the premises to the Carrier's Arms in 1870. In 1872 the place was known as the Sportsman's Arms Hotel. Although Matthews was bankrupt in 1879 he retained the hotel until 1882. He died in 1902.

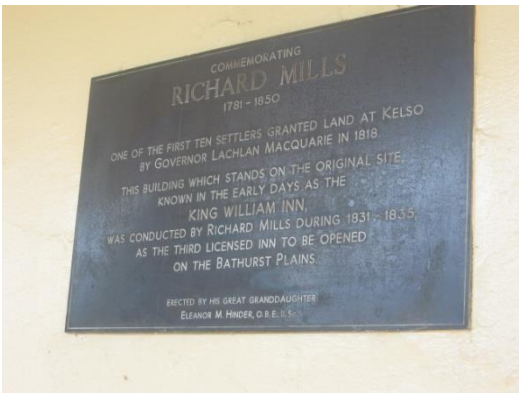
From 1883 to 1885 the hotel was run by licensee Robert Norris. From 1886 Thomas Brewer took it over. By 1891 the hotel was run by Robert McCleery, leasing it from Brewer. In 1892 William Sims Peers leased the business from Brewer. In 1894 the Sportsman's Arms was destroyed by fire. Repairs were carried out and the premises reopened in 1895 by W G Mitten as the Royal Hotel. Mitten retired in 1899 and the hotel was then run by Archibald Wells until 1902. The last publican was William Baker IN 1903. The property was auctioned in 1906, and in 1908 the Turon Shire opened their office there, holding their first meeting in May.



ESC letterhead

In 1977 a local government amalgamation took place and the Turon Shire was amalgamated with the Abercrombie Shire to form the Evans Shire Council, which retained the building as its offices. During this period a number of extensions were carried out to the northern end of the building to accommodate office space, and the various engineering depot buildings were constructed at the rear. The image of the old inn was used on the Evans letter head. The building was shared by the Rural Fire Service and the Upper Macquarie County Council weeds authority. The Evans Arts Council has utilized the building for storage and meetings, exhibitions and workshops since the 1980s.

Former Evans Shire Council Chambers



Plaque on front of building *Former ESC building showing office extensions*

A further local government amalgamation occurred in 2004, when Evans Shire Council was dissolved and the majority of the Shire came under the Bathurst Regional Council. The former council chambers were no longer required.

Today the building is still occupied by the RFS and the Upper Macquarie in the older section. The more recent northern section is now occupied by Bathurst Family Day Care.

Family History Month, Lithgow

Family History Month in Lithgow was celebrated in August by an interesting day in August at the Lithgow Library Learning Centre when four local historians talked about their own families.

Christison

Ray Christison is an archaeologist and heritage consultant in rural and regional NSW. He is also an author and museum director, and is an individual member of BMACHO.

Ray related details about his great grandfather, John Hampton Christison. John was born in Scotland in 1858. He trained as a dancer from the age of 7. He valued the arts and travelled widely, being renowned for his dancing prowess and his teaching skill. He went to sea in 1875, working for the Commission Agent and making his way to Australia. He married Sophia in Maitland in 1880, and ran dance classes in Clarence Town.

He ran into financial difficulties in 1883 and returned alone to Scotland, where he entered and won several dancing contests, thereby re-establishing himself financially. He returned to Australia but continued living the high life, falling bankrupt again in 1889. He returned to Scotland again, this time with Sophia and their five children.

Sophia then stumbled upon information relating to John's numerous extra marital affairs and they were subsequently divorced. He moved to Mittagong, acquiring property. In 1900 he joined the NSW Mounted Rifles and went to South Africa, where he was wounded and

returned home. He was not able to dance for some time, and remarried Mary Moore in 1909. By 1914 he was back in Sydney and dancing, where he held classes until 1923, when he died of a cerebral haemorrhage aged 63. *Ray Christison*

JH Christison

Francis Langdon

Langdon

Mark Langdon described three brothers who joined up for World War II at the same time and place and did their training in three different countries. Mark is a regular participant in the Lithgow Library Learning Centre's activities and is an accomplished author.

His father Lesley trained in Darwin as a gunner but flew in 11th Squadron in Catalina aircraft, doing operations and mine laying. He finished up a wireless leader in 1943, and in air sea rescue from 1945. He was discharged in 1945 as a flying officer.

His uncle Norman entered the RAAF in 1940. He went to Rhodesia and then the UK following operations training. He entered 210 squadron, flying Catalinas in the Battle of the Atlantic. In 1945 he was in Darwin in air sea rescue, and then in administration.

Mark's uncle Francis (Frank) also entered the RAAF in 1942. He entered the militia as an anti tank gunner, but was removed to the RAAF as a navigator in Lancaster's. He went to Canada and the UK, and then into 463 Squadron in a Lancaster in 1944. He was shot down and killed flying the Bergen Uboat pens in late 1944, and has no grave. *Mark Langdon*

Griffiths/Carroll

Tony Griffiths is a retired Engineer with an interest in Australian and family history. He commenced his family history research in the 1960s. The family was found to be involved in the trade union movement, in the internal employees union at the Lithgow Small Arms Factory. He has written several books on the SAF.

Tony elaborated on his research into his Griffiths/Carroll heritage from Ireland, always being told there were no convicts!

The Carroll family came from near Tipperary in Ireland and on a trip to the UK Tony managed to track down some distant cousins. He also met his wife Lilian!

The Griffiths were traced back to a Michael Griffin and his wife Ellenor. He found that Michael and Ellenor were actually transported for 7 years in 1827 for stealing furniture from their employer, John Gibbs, as the man owed them money. Michael was assigned to Archibald Bell at Windsor, and Ellenor and her sister Mary joined him there in 1828. In time Michael changed their name to Griffiths.

Whilst in Ireland, Tony managed to locate the prison where Ellenor and Mary were detained whist awaiting transportation, and even the cell where they were held, evidenced by their names scratched in the wall!

The family was traced back to Kurrajong, and also to the Sodwalls/Hartley area, where they found the family farm and family graves at Rydal cemetery. The gravestone of Ellenor Griffiths was found and restored.

Tony also played a moving video re-enactment of Michael and Ellenor's story by a group of primary school students from North Cork. *Tony Griffiths*

Griffiths family 1916

Sarah Ann King 1862

Hillier/King/Osborn/Frankcom

Vicki Hartley is a Lithgow local with a strong interest in her family history, and also assists others in discovering their own ancestors and stories. This only commenced in 2000 when her father passed away. By googling all four family names in the one search Vicki unearthed a treasure of research already carried out by a family member in the UK. The investigation took her to the tiny village of West Littleton in Gloucestershire, which it was found had not changed much in over 400 years. The area consisted of mainly eight families, and Vicki is descended from four of those.

Excavations in 1968 found skeletons on the site dating back to 977BC, together with bronze spearheads dating to 1200 and 1000 BC, They were best examples of pre historic skeletons ever found in Britain.The local church of St James and its churchyard contain memorials to the Frankom, Hillier and Osborne families.

Through the research Vicki managed to trace her great great grandmother Sarah Ann King, nee Hillier. The research showed that Sarah's lineage could be traced back to Francis Francombe, Vicki's eight times great grandfather, whose money saved William of Cavendish, the Duke of Newcastle, from bankruptcy around 1637!

Combined with other research, Vicki can now trace 15 generations of her family! *Vicki Hartley*

For further information regarding events at the Lithgow Library Learning Centre see www.lithgow.nsw.gov.au

Food for thought ..... Editor's note

Carpe diem - literally speaking - "seize the day"! Take every opportunity, and don't put all your trust in tomorrow.

Do we really realise how lucky we are in the opportunities that avail us to experience history today? Everywhere we turn, there are community groups and individuals offering experiences through seminars, collections, tours and publications about our past.

Family history groups and historical societies, museums individuals and tourist organisations abound throughout the country, where dedicated members "work" to collect, store and disseminate information about where we came from, how we reached these shores and how Australia developed from a simple colony to the nation we know today. I say "work" because to them it is often not work but a labour of love.

With the passing of John Leary OAM, it would seem timely to look back and see where we of BMACHO have come from in fostering these opportunities. BMACHO commenced in 2006 with the aim to foster and support cultural heritage activities related to the Blue Mountains. To revisit the Objects of the Constitution:

1. To raise public consciousness of the value of cultural heritage.
2. To encourage and assist the cultural heritage activities of member organisations.
3. To initiate and support cultural heritage activities not already covered by member organisations.

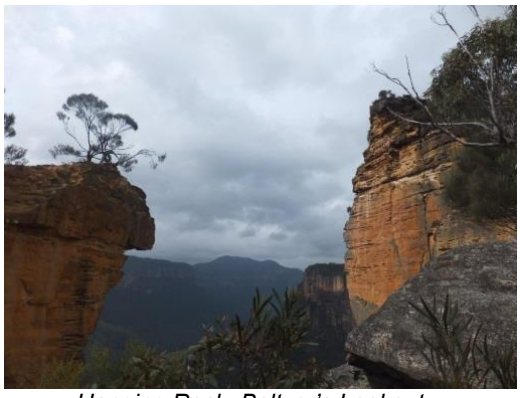
BMACHO seeks to take every opportunity to bring together many groups to share information and promote culture and heritage throughout the greater Blue Mountains area and beyond. In light of this the most current initiative is our Heritage Trail project. Our diverse membership uniquely blends the skills and resources of historical, cultural and heritage groups, major tourist attractions, gardens and galleries. We need to promote our collective skills and assets to the widest possible audience.

BMACHO is taking up the challenge and is producing a high quality Heritage Trail leaflet and trail map for distribution through Visitors' Centres, historical societies, family history societies and museums, with contribution from BMACHO members. In addition, a dedicated website which presents the map and detailed contacts, for all BMACHO members, is also envisaged, in due course.

The Heritage Trail would incorporate open days for BMACHO member groups perhaps quarterly, proceeding along the Great Western Highway from Emu Plains to Lithgow, and up the Bells Line of Road from the Hawkesbury to Lithgow. If visitors can see the premises open on the Common Open Days, they can plan a trail that is comfortable for them to travel in a day.

Not every member group has premises, but those without may be able to use a hall or library to facilitate visitors. Even if a member is not able to participate in the Common Open Days, they can list their opening hours on the leaflet.

View from top of Six Foot Track



Hanging Rock, Baltzer's Lookout

A local along Jamison Creek

Darks Cave

Funding is to be generated through corporate sponsorship and through participant's participation fees. The launch of the project should be later in early 2015.

In the meantime, BMACHO will continue to collect and share information and events through this Newsletter. News items are always welcome, from the smallest note to articles in the order of 1500 words. Photographs will always help to illustrate the story and should be sent as separate files. Please direct any items to the editor *pmoppett@gmail.com* or to the secretary *jkoperberg@bigpond.com*

John Kenneth Leary OAM (1934-2014)

The BMACHO group and the wider community is morning the loss of John Kenneth Leary, OAM, former President and *Heritage* Editor. Under his chairmanship of BMACHO (the Blue Mountains Association of Cultural and Heritage Organisations), he has steered this Association into maturity, but he has also initiated, edited and produced the magazine *Heritage*. *Heritage* has been a remarkable achievement, each new issue being eagerly awaited by the community and now being read by a thousand and more readers.

John Leary served in the 1960s on the Berrima Court House Trust that was responsible for the restoration of this historic property and which later became a major tourist attraction for the Southern Highlands.

John had wide ranging experience and an impact on local heritage and community matters in various districts; a fact that was recognized by the award of the Order of Australia Medal (OAM) in 2003 for community service in particular to the agricultural movement and the various exchanges including recognizing two multi-million dollar cultural 'cultural exchanges' between Australia and Japan through the sister cities movement.

John Leary's career as a professional journalist meant he had worked on metropolitan daily newspapers, and as managing editor on several regional and country newspapers including the Berrima District Post which then had a tri weekly publication; the Goulburn Evening Post, a daily; and Gilgandra newspapers which produced a number of regional papers. He at one time owned a small Sydney based suburban newspaper and publisher of magazines.

John Leary served as an elected member of Campbelltown City Council including a term as Mayor, and member of a Regional Council; senior member of Council staff and a consultant in the field of corporate, government and community relations to two major metropolitan local government units.

John Leary always presented a balanced view over a wide range of subjects after careful consideration and appreciation of conflicting differing points of view. He was able to summarise concisely and with positive strength of feeling in a manner that did not offend.

His additional experience includes 25 years as the president of Campbelltown City Show Society, one of the four largest agricultural shows in Australia outside a capital city. John was a member for nearly 10 years of the Agricultural Societies Council of NSW, the peak umbrella recognizing 204 agricultural shows in NSW.

Since the 1940s he was interested in the heritage walking tracks in the Blue Mountains and Middle Harbour areas. His exploration of these between the 1940s and early 1960s led to an association with the National Trust (NSW). More recently he was Chair of the Friends of Woodford (over four years) and was awarded the Trust's meritorious service for volunteers medal.

John Leary was recognized by the NSW government, in 2007 by being given a certificate of appreciation, “recognizing outstanding contribution to heritage conservation in NSW”.

His ability to communicate was evidenced by his large number of friends of sometimes opposing views and his skill in distilling a problem into one or more practical solutions.

John was a consummate speaker and his presentations were listened to with rapt attention.

As President of BMACHO, and their representative on the BMCC heritage committee, he readily understood Council’s points of view, those of the heritage community and those expressed, sometimes somewhat obliquely, by the general members of the public.

John leaves behind wife Nanette, and children Richard, Tanya and David Leary and their families.

AE1 and AE2 Australia Navy Submarines

Further to the article on the AE1 and AE2 in the July-August issue of *Heritage*, Steve Norton of the Canal Reserve Action Group at Prospect/Holroyd has offered to share his family connections to the event, as follows.

This is a story that begins in 1764....

Thomas Kidner who was born in the year 1764 in Bristol, Somerset, England. When Thomas was eighteen he stole 4 pieces of Irish Linen. He was tried and convicted in the Bristol Court on the 30 October 1782 and sentenced to transportation to Australia for seven years. He was kept in gaol until early 1786 when he was transferred to the prison hulk “Censor”. He spent a number of years on this ship before he was transferred to the “Alexander” on the 6th January 1787. The “Alexander” sailed for Botany Bay on the 13 May 1787 and arrived on the 26 January 1788.

So began Thomas’s life in Australia. A life that would see him transported to Norfolk Island on the 11 November 1789, where he met a convict named Jane Whiting. Jane was born in 1755 in Westminster Middlesex England. Thomas and Jane married on the 5 November 1791 on Norfolk Island.

Thomas and Jane had two children, Thomas and Ann. Thomas was born on the 30 May 1795 on Norfolk Island. Ann was born on Norfolk Island on the 14 October 1798. The family sailed to Van Diemens Land (later named Tasmania) on the 15 October 1805 on the ship “Lord Nelson”.

Thomas jnr. married Elizabeth Burkett in Van Diemens Land on the 7 January 1822 in Hobart Van Diemens Land. Thomas and Elizabeth had eight children, all born in Van Diemens Land. Their second child, Elizabeth was born on the 26 October 1824.

Elizabeth Kidner married Francis Bidelph (Biddulph)on the 6 August 1842 in Van Diemens Land. Elizabeth and Francis Bidelph had 11 children, all born in Van Diemens Land.

Their sixth child, David Bidelph was born on the 14 April 1853 in Van Diemens land.

David Bidelph married Mary Ann Driscoll on the 10 June 1879 in Tasmania. David and Mary Bidelph had eight children, all born in Tasmania.

Their sixth child, Henry Thomas Bidelph, was born in Park Street Hobart Tasmania on the 3rd October 1893.

On the 12 July 1912, at the age of 18 he enlisted in the Royal Australian Navy in Melbourne Victoria under the name Thomas Henry Bidelph for a 5 year stint. Thomas Henry was Steve Norton's grandfather.

In 1909 the English Admiralty had proposed the creation of a Pacific fleet consisting of three fleet units to be operated by imperial forces in the pacific region. Each fleet unit would be built around a battle-cruiser, supported by several light cruisers. One of these fleets would comprise the Royal Australian Navy (RAN). With the Australian Government agreeing to this concept, work commenced on the ships.

The destroyers, HMA Ship's "Yarra" and "Parramatta" reached Australian waters in November 1910 and on the 10th July 1911 His Majesty King George V granted the title Royal Australian Navy to the Commonwealth Naval Forces.

In June 1912 a third destroyer, HMAS "Warrego" was commissioned at Sydney and in 1913 the battle cruiser HMAS "Australia" and the light cruisers HMAS "Melbourne" and "Sydney" arrived in Australian waters.

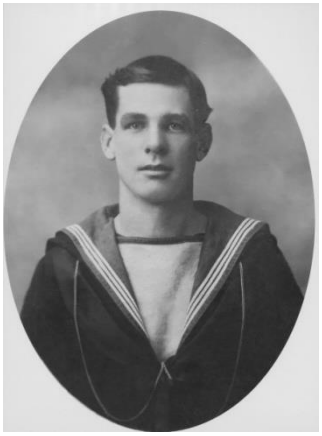
He was onboard HMAS "Sydney" on the 4 October 1913 when the Australian Fleet entered Sydney Harbour for the first time.

His service record shows that on the 2/10/1913 he was now an able bodied seaman and retained that rank until he left the RAN. His service record also shows that on the 31/12/1913 his character was deemed "very good" and his ability was "satisfactory". His service record further shows that on the 31/12/1914 his character was still deemed "very good" and his ability was "superior". On the 18/04/1915 his service record was still deemed "very good" and his ability was still "superior".

During his RAN service over the next three years he served on five ships, as well as in the London Depot in Great Britain.

While in the London Depot he underwent training and returned to Australia as a crew member of HMAS "Sydney". He took part in two events that are now part of Australia's naval history.

Firstly, he was on board HMAS "Sydney" when it and the other six ships of the RAN entered Sydney Harbour for the first time on the 4th October 1913. This was the birth of the Royal Australian Navy. A 100 year celebration occurred on the 4th October 2013 when 7 ships sailed into Sydney Harbour to commemorate the first entry.
(Stephen Norton and his wife Judy were guests of Vice Admiral Ray Griggs at the celebrations on Garden Island).



Thomas Henry Bidelph

"Sydney" escorts AE1 and AE2 into Cairns 14 May 1915

Secondly he was on HMAS "Sydney" when she escorted two submarines from Singapore to Garden Island. At 7.30am on 2nd March 1914 Australia's first submarines, HMA AE1 and HMA AE2 left Portsmouth U.K. for Sydney with the escort ship HMS "Eclipse". The "Eclipse" escorted both submarines to Colombo, arriving on the 9th April 1914. AE1 & AE2 left Colombo with HMS "Yarmouth" at 6pm on the 14th April 1914 for the voyage to Singapore, arriving on the 21st April 1914.

AE1& AE2 left Singapore on the 25th April 1914 with their escort HMAS "Sydney", stopping in Cairns on the 14th May 1914 before travelling to Sydney Harbour, arriving in Garden Island on the 24 May 1914. HMAS "Sydney" (1) escorted both submarines from Singapore to Sydney, stopping in Cairns. The NSW State library has a wonderful photograph on display of Sydney and both submarines. *Stephen Norton*

*****

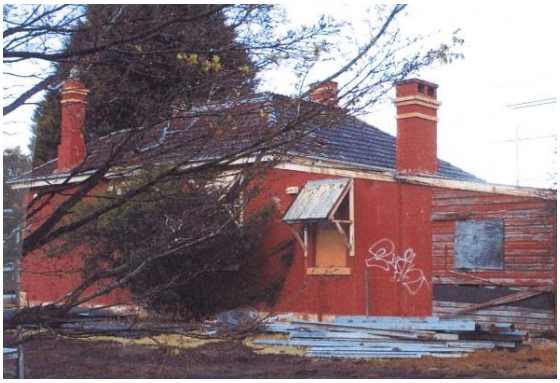
Lawson Station Master's Residence

The former Lawson station master's residence adjacent to Lawson Railway Station has been given a reprieve. It was scheduled for demolition, along with a number of fomer railway workshops and ancillary buildings at the site on Loftus Street.

The brick & tile residence was constructed in 1896. Sydney Rail was refused a S60 application under the Heritage Act to the NSW Heritage Council to demolish the building. The rail depot site is under redevelopment to construct a new depot building, incorporating landscaping and more car parking. The refusal included recommendations to relocate the new maintenance depot and car park further west, thus saving the residence.

2009

2014



2014

2014

The residence is one of the last original elements of the railway precinct, from the days when Lawson was a railway town. It was occupied until the mid 1990s when it was abandoned due to cracking in the brickwork caused by vibration from major track work at the time.

In 2008 the buildings on the site included the District Engineers' Office and the associated stores and sheds, the station building (1902) and signal box (1921), out-of shed (1902), island platform (1902), side platform (c1879), pedestrian subway 91944), station master's residence (1896), electrical depot site, former District Engineer's Office (1956), workshops (1957), signals and earthworks depots, substation (1956), numerous water columns and tanks, many moveable items and landscape features. The site was noted with significant potential for archaeological investigation.

Numerous modifications have occurred to various aspects of the station and depot, some resulting from the substation fire in 2003. The original roof of the Station Master's residence, with an ornate ridge, was replaced at an unknown date. Internally all original fabric has been removed.

There was a halt at Lawson dating back to the beginning of the railway through the mountains in 1867. It bore the name "Blue Mountain" initially after Wilson's Blue Mountain Inn, 400m away. In 1879 when the station's name was changed, a brick platform and station building were added and this remained unchanged until 1902. Duplication of the line in 1902 brought a new island platform and station buildings in the Federation style.

Lawson became a significant stop over as locomotives took on water there.

The original station master's dwelling was constructed in 1880, and the current residence replaced it in 1896. The residence, many of which were built at this time, reflected the status of the proposed occupant. The Lawson residence is an example of the largest type that was used in the 1890-1914 period. It contained three bedrooms and the asymmetrical plan of the structure predates the wave of new residence, being first used in 1885.

The overall site is historically significant due to its continued rail use since 1880, with the Station Master's cottage demonstrating the custom of providing accommodation for railway staff and the importance of the station as a key terminus for locomotive facilities with its large number of water columns and tanks.

The residence has an unusual architectural style as it does not conform to any standard design, although it has similarities to a standard "J3" design. It is an excellent example of

simple architectural forms of other similar railway residences. With the loss of interior fabric the integrity is only moderate.

The rail authority indicates that they have no further need of the building at this stage. Therefore it remains for another use to be found for the building. It has been suggested that BMACHO or some similar organisation might utilise the building, together with other societies or organisations looking for permanent home, if a reasonable contract could be developed. This may give those groups a permanent premises to store archives, records and equipment, to hold meetings, seminars and workshops. If BMACHO were involved it would not mean that BMACHO would not continue to travel around to the members premises for committee meetings.

The site has had a statutory listing under the NSW Heritage S170 State agency heritage register as the Lawson Railway Station group, and footbridge, as updated in 2009, and was recognised within the Heritage and Conservation Register of the State Rail Authority of NSW 1993, and the State Rail Authority Heritage Register Study 1999.

At present BMACHO are considering it only as an option, and any other member groups within the community are encouraged to consider the possibility of some kind of sharing arrangement to provide an appropriate adaptive reuse for the building, to conserve its remaining integrity and retain the building in its historical context. *Complied by Patsy Moppett*

*****

The Technical Side

Heritage Curtilage – what is it and why is it needed?

Curtilage means “the area of land (including land covered by water) surrounding an item or area of heritage significance which is essential for retaining and integrating its heritage significance”. *Heritage Curtilages – NSW Heritage Office 1996.*

It is often defined by a site diagram, and it enables the community to retain, identify and interpret significance. It varies depending upon the purpose for which the place was established.

It could be a visual zone or a cultural landscape (which may contain many elements), and it enables management controls to be established specific to the place.

The diagram identifies lot boundaries, and can be used to reduce heritage curtilages, extend heritage curtilages, and to explain composite heritage curtilages such a heritage conservation areas.

The Patrick House, Athol Street, Blayney

This locally significant dwelling at Blayney, a two storey building with a northerly aspect over the town, now faces the prospect of a new dwelling next door. Although the new building will be cut into the site, views from and to the heritage premises will be compromised. The problem has arisen as not sufficient land was reserved around the heritage building when the subdivision was done. Although the significance of the heritage dwelling itself remains intact, its context and setting are compromised by surrounding contemporary residential development.

In the consideration of defining a curtilage a number of matters require consideration:

- Has the significance of the original relationship of the heritage item to its site and locality been conserved?
- Has an adequate setting for the heritage item been provided, enabling its heritage significance to be maintained?
- Have adequate visual catchments or corridors been provided to the heritage item from major viewing points and from the item to outside elements with which it has important visual or functional relationships?
- Are buffer areas required to screen the heritage item from visually unsympathetic development or to provide protection from vibration, traffic noise, pollution or vandalism

Specific matters which must be considered by heritage planners include historical allotments; design, style and taste; functional uses and interrelationships; visual links; scale; significant features; vegetation; archaeological features.

A number of statutory controls can be utilised to protect and manage the curtilage. This includes listing in a local environmental plan or development control plan using zoning or nomination of heritage conservation areas, or via an order under the Heritage Act 1977. There are various other pieces of legislation which afford protection such as the Local Government Act 1993, local policies and State ownership protection under the Heritage Act.

Non statutory controls such as conservation management plans specific to the site can also define a curtilage.

The High Court of Australia *(Royal Sydney Golf Club v Federal Commissioner of Taxation 1955)* defined curtilage as:

Any building, whether it is a habitation or has some other use, may stand within a larger area of land which subserves the purpose of the building. The land surrounds the building because it actually or supposedly contributes to the enjoyment of the building or the fulfilment of its purposes.

Of course curtilage applies not only to buildings, but heritage places in general. It is also to be balanced by the value of the land for other purposes. Sometimes the curtilage is defined by demand pressures for housing, and the attempt to fit as many dwelling lots into a subdivision as possible, leaving the heritage building isolated on a block of land ultimately located amongst contemporary housing.

Carrington House

Tarella

Sufficient curtilage has been retained around Carrington House at Katoomba to define its significance in the gardens in the forecourt area. The hilltop location assists in this regard.

The garden setting at Tarella at Wentworth Falls enables experience of the space to appreciate the original garden location and scale of the development. Although the meeting hall is located on the site, it is sufficiently removed to allow appreciation of the Tarella precinct.

Woodford Academy

With increasing encroachment from the Great Western Highway in front of the Woodford Academy, management of the building is still able to hang onto the surrounding garden setting. Together with suitable adaptive reuse of the place, little new building work has been required which might have compromised the heritage significance. Even cobbled walkways and garden features remain, together with the views into the bush at the rear of the precinct. *Compiled by Patsy Moppett*

Community events & updates

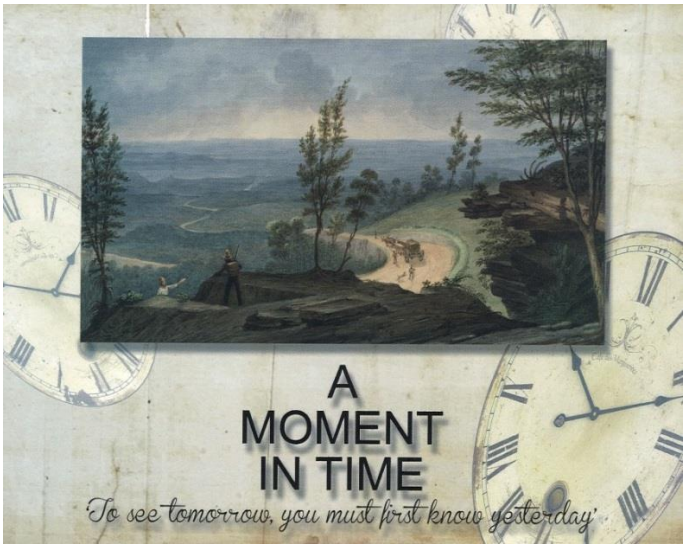
"A Moment in Time II" Exhibition

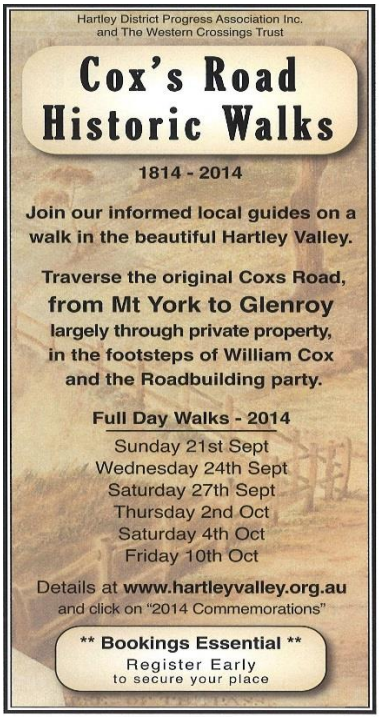
The Exhibition returns to Hartley from 13 September to 12 October 2014. This exhibition by local historian Joan Kent is a "must see"!

The exhibition, curated by retired local historian Joan Kent, captures what existed before and what came shortly after the 1813 crossing of the Blue Mountains by Europeans.

It begins with a consideration of the rich and ancient geology of the landscape into which the explorers intruded, before exploring many aspects of the crossing story from the indigenous peoples whose country was being traversed, through the explorers, the road building and early settlement west of the Blue Mountains.

"A Moment in Time "builds on the original exhibition drawing widely on contemporary Cox's Road research to present a comprehensive vision of 'the road'".





The exhibition was mounted by the Western Crossings Trust and attracted hundreds of visitors a day last year. It promises to be even more popular this year with its insightful look into the miracle of Cox's road to Bathurst.

The "A Moment in Time II" exhibition will be open on weekends between **13th September and 12th October** 10am to 4pm Mid Hartley Road, Hartley(just follow the signs).

In addition, there will be guided walks in the Hartley Valley in the footsteps of William Cox, as per the above flyer.

See the associated website www.hartleyvalley.org.au

2014 RAHS State Annual History Conference

This year the Conference will be held at Mittagong RSL, examining how history evolves over time and is always moving as we respond to new information that changes our understanding of the past.

Day one - learn about the histories of Mittagong and successful fund raising campaigns that will resonate with the broader history community.

Day two – hear advice on future directions for historical societies including developing advocacy, technology and collection management skills.

Directions for historical societies, especially in succession planning is a timely theme in these days of falling patronage for some organisations, with all the work being left to a few.

See the RAHS web site for bookings. www.rahs.org.au

*****

Ali Khan Trader ..... and Indian Hawker

Further to the article in the July-August edition of Heritage, Kathie McMahon-Nolf advises some additional information.

The photograph of Ali Khan was taken from the other side of the Bells Line of Road in 1905, but the guest house "Bellbird Echo" was not built until 1929. The McMahons did live opposite on the same spot as the guest house was built, in their house called "Luchenough".

Although the article refers to Indian Traders, the gypsy Ali Kahn was probably from Afghanistan, or that is how the oral history goes. *Kathie McMahon-Nolf*

*****

Hobby's Reach-Weatherboard-Wentworth Falls

The community is invited to the 200th anniversary of the naming of Hobby's Reach (now part of Blaxland Road). The anniversary occurs on 3 October 2014, and it will be celebrated on 4th October at Tarella, 99 Blaxland Road, Wentworth Falls, by the Blue Mountains Historical Society.

Thomas Hobby was in charge of this section of the 170km Cox's Road from Emu Plains to Bathurst.

The celebration will include:

- A special display about Thomas Hobby
- A talk at the BMHS Meeting on the part that Hobby played in the epic endeavour to build Cox's Road over the mountains.
- An open day at Tarella, the Society's 1890s cottage museum.
- Colonial music to match.

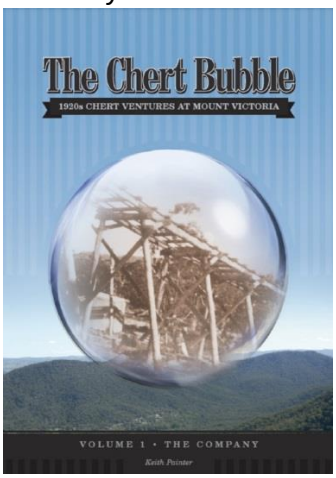
Join them to learn more about the village and the extensive variety of resources at the Blue Mountains Historical Society that are available to all with an interest in local history. Admission is free to all residents and refreshments will be on sale.

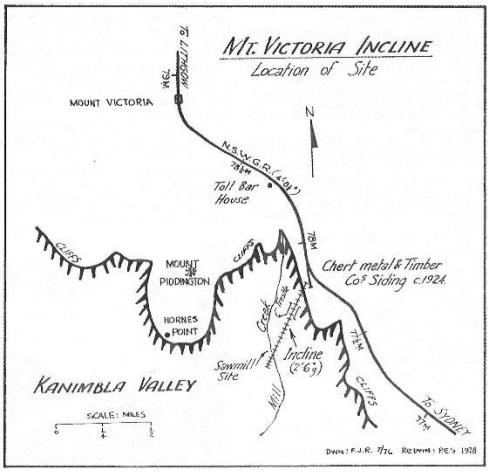
Enquiries to Ph: 02 4757 3824 or www.bluemountainshistory.com

*****

The Chert Bubble

The Chert Incline Railway at Mt Victoria was built in the 1920s to haul chert from the Kanimbla Valley. Chert is a sedimentary rock used in road construction. The whole venture lasted less than 10 years from inception to closure, and very little can be seen today in the vicinity of the railway incline down on the Blackheath side of Mt Victoria.





The fascinating history of this little known venture has been brought to life by Bathurst author and guide Keith Painter, in his book "The Chert Bubble – 1920s Ventures at Mount Victoria".

Volume 1 is available from selected bookshops or from the publisher, Mountain Mist Books, at www.mountainmistbooks.com

Volume 2 will follow in time, detailing the Blue Mountains Shire Council chert quarry above the lower part of Victoria Pass and the steam wagons they used to move the rock to their siding near Mt Victoria Station. A must read!

Paragon Cafe, Katoomba

This widely renowned cafe at Katoomba has received a significant boost to its future success with a funding grant under the Blue Mountains City Council's local heritage assistance fund program. This year Council has continued to support the restoration of

heritage properties, seeking to preserve these places which help to define the character and history of the Blue Mountains area and its people.

Robyn Parker, manager of this iconic property, has advised the Blue Mountains Gazette that she is putting the finishing touches on the restoration work to the historic Paragon Cafe in Katoomba Street. She has been able to replace lighting and curtains, restore the front tiles, and repaint the ceiling in parts of the building.

With the application for listing of the Paragon on the State Heritage Register currently underway, the work can only contribute to the integrity of the fabric of the place.

Cox's Road – Taylor Road, Woodford roadworks
The saga of Taylor Road is almost passed, with a solution which reaches a compromise between the purists wishing to retain the road in its original unsealed state, and the sealing of the road to reduce the impact of dust and road maintenance.

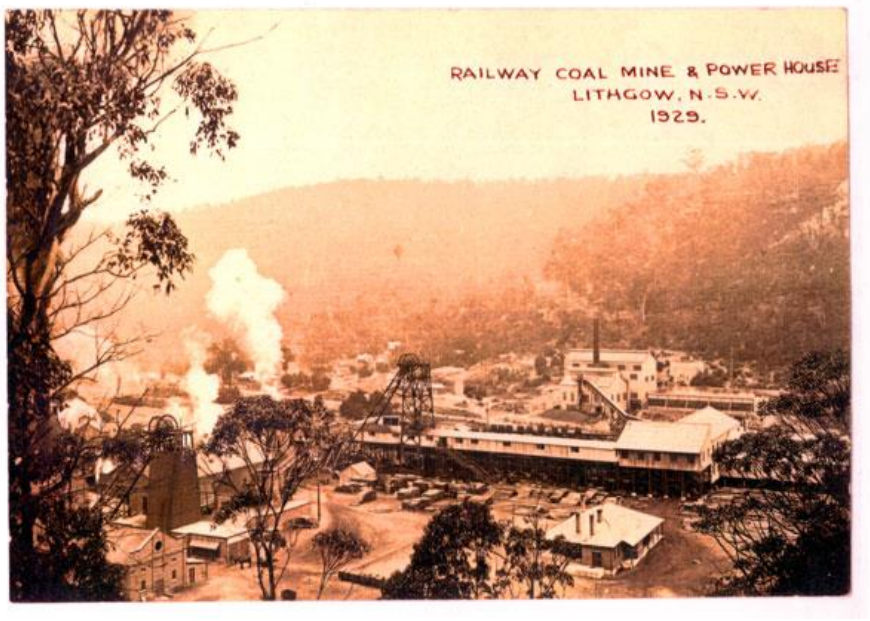
The sealed Taylor Road in August 2014

The maintenance of a 600m section this road became an issue in 2013 when Council scheduled the road to be sealed. The road is the route of one of the last remaining accessible remnants of the route of William Cox's 1814 road in this vicinity. The road verges contain many intact stone retaining walls and drains, which had already been partially covered or displaced by previous regular maintenance of the road.
Council sought to extend its works program, proposing sealing of the road for the health and safety of residents along the sometimes dusty road, to incorporate drainage measures. The works were paused to allow the community and archaeologists to investigate the condition and integrity of the road features.
With the advice of Council's Heritage Advisor and the archaeologist, the road was sealed with a light coloured seal, and now at first glance appears as a gravel road.

*****

Lithgow State Coal Mine
On 13th October 1964 the Downcast Shaft of the Lithgow State Coal Mine was sealed permanently. This marked the end of an enterprise that had operated since the dark years of the Great War.

The mine is significant as it was the first government coal mine opened in New South Wales in the 20th century and it also has an important place in industrial relations history of the Australian coalfields.



To recognise 50 years since the closure of the mine the City of Greater Lithgow Mining Museum Inc is hosting an informal luncheon in the State Mine Bath House from 11.30am on Saturday 18 October 2014.

Guests of honour will include Paul Toole, MLA for Bathurst and Minister for Local Government, Maree Statham, Mayor of Lithgow, and Wayne McAndrew, General Vice-President, CFMEU Mining and Energy Division.

Former State Mine workers and their families are invited to attend. Entry would be by donation. Notification of attendance should be through the Mine's Facebook page, Lithgow State Mine Museum, or by contacting the museum on 02 6353 1513. *Ray Christison*

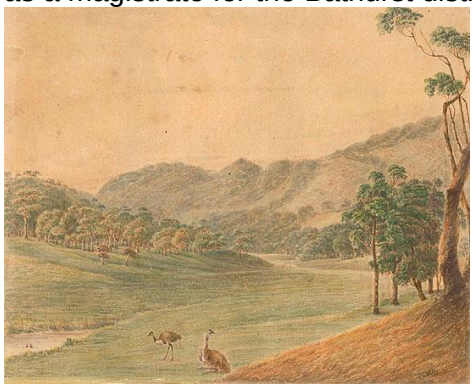
Sydmouth Valley Homestead

The Homestead was built in 1826 by Robert Lowe in the Sydmouth Valley through which William Cox constructed his road to Bathurst. Robert Lowe received the grant of 2,000 acres of land and the service of 20 convicts by Governor Macquarie in recognition of his services as a magistrate for the Bathurst district.



John Lewin's painting of the Valley

Sydmouth Valley homestead

Ann Webb purchased the property in 1871 for her youngest son, Thomas Bernard Webb, and the Webb family descendants have continued to occupy the property ever since.

The Lithgow & District Family History Society Inc has arranged for the current owners Kevin Webb and Lynne Woods to conduct a tour of inspection of the handmade brick homestead and the old world cottage garden on Saturday 11 October 2014, be followed by Devonshire Morning tea.

The tour group will meet at the Tarana Hotel at 9 a.m. and following the tour there is an option to return to the Tarana Hotel for lunch, at your own expense.

The cost of the tour and morning tea is $15 which must be paid before 5 October 2014 at Lithgow & District Family History Society Inc, Ewen Smith Memorial Hall, Cnr Tank & Donald Streets, Lithgow during the Resource Centre opening hours or by post to The Secretary, PO Box 516, Lithgow.

Repairs and Restorations to Heritage Properties

Blue Mountains City Council with the aid of the NSW Heritage Division is offering funding to owners of heritage listed places to carry out sympathetic repairs or restorations. A total fund of approximately $20,000.00 may be shared amongst a number of small eligible projects.

Applications are invited from owners of individual heritage buildings or buildings within a Heritage Conservation Area or Period Housing Area. Priority will be given to the repair and restoration of stonework, particularly sandstone, and to conservation works for historic buildings within the Central Katoomba Urban Conservation Area. However, a range of other projects will also be considered.

Grants are offered on a dollar for dollar basis with the successful applicants and must be completed by April 2015. For full details download the Local Heritage Places Fund Guidelines and Application Form. From http://www.bmcc.nsw.gov.au/sustainableliving/bluemountainslocalheritage/bluemountainslocalheritageplacesfund

or contact Council on 02 4780 5740. On completion, email or post the applications to Council via the following contacts:

Email: council@bmcc.nsw.gov.au or Annalisse Bentley abentley@bmcc.nsw.gov.au

Post: Locked Bag 1005, Katoomba NSW 2780

Fax: 02 4780 5555

Applications close 5pm, Friday 26th September 2014.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsherieteg.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Historical Society Inc; Blue Mountains World Heritage Institute; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); Mudgee Historical Society Inc; National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Restaurant, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd;
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2014-2015 (from July 2014) is: Ian Jack (vice president & acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes and Scott Pollock (web site), Patsy Moppett (***Heritage*** Newsletter editor), Dick Morony (public officer), Suzanne Smith, Richard Woolley (heritage trail co-ordinator).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributers. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

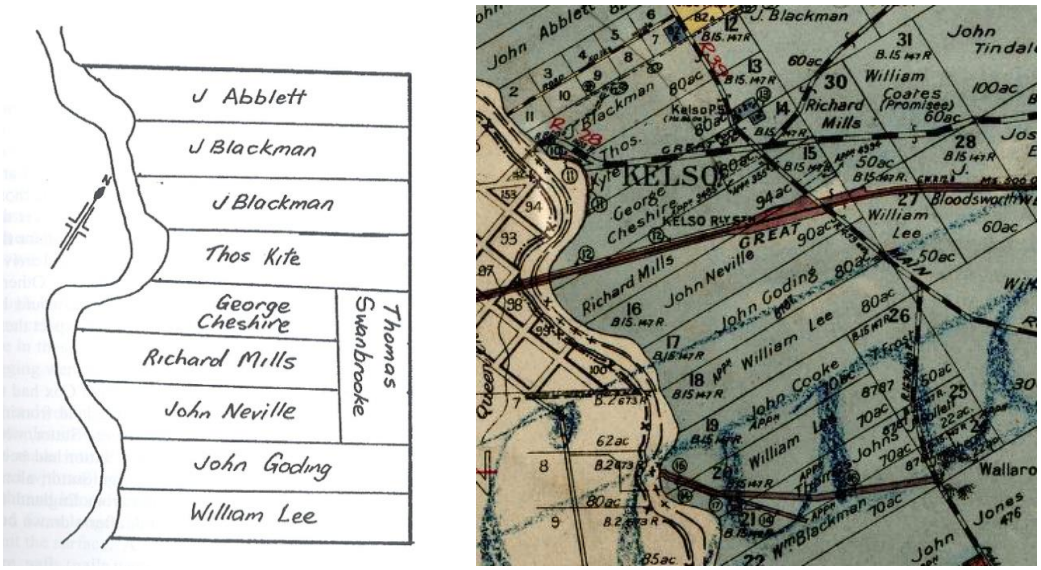
The King William Inn 1870, known by then as the Carriers' Arms

King William IV Inn, Lee Street, Kelso

In 1828 the settlement of Sydney was governed for a short time by Major-General Stewart. Bathurst was growing strongly under the squatters who took the leading life in the colonial times, and development of self government was carefully managed by them. In 1828 a council formed from this powerful squatting class and was empowered to even veto the Governor's decisions, if they so wanted. With this background it was natural that it was the squatters who were the principal builders of the buildings that have survived from that period in Bathurst.

Before this, Governor Lachlan Macquarie was recognized as a man who gave credit to settlers for their hard work, and the part they played in opening up the new settlement. He often rewarded their good conduct with tickets-of-leave and free pardons, and Governor Brisbane had followed his example. During the rule of Governor Brisbane, Charles William Wall was appointed to manage the settlement at Bathurst. (1827-28). Governor Wall continued to govern the settlement until the arrival of Major General Stewart of Mount Pleasant, Bathurst, two years later (1828).

The diary of Governor Macquarie records on 2 February 1818, that he had inspected ten settlers for Bathurst, and that he had agreed to grant each 50 acres of land, a servant, a cow, four bushels of wheat, and an allotment in the new town, and to provide them for twelve months from the King's stores. These men were William Lee, Richard Mills, Thomas Kite, Thomas Swanbrooke, George Cheshire, John Abbott, John Blackman and his brother James, John Neville and John Goding.



Original land grants – Parish of Kelso

Early buildings of the period included the original portions of the 1830's homesteads of Walmer, Westbourne, Blackdown, Alloway Bank, Ardsley, Mount Pleasant, Rainham (1833), and closer to the urban centre: Kelsoville, the Holy Trinity Church (1835), and the King William Inn (1835) at Kelso.

The original King William IV Inn building was constructed in 1831 by Richard Mills as an inn, the third licensed hotel on the Bathurst Plains. The first was Thomas Kite's "Dun Cow Inn" near Woolstone House, from 1828 to 1835. Mills' inn is situated on Lee Street at Kelso on what was originally the main approach road to Bathurst, the Lockyer's Line of Road, which came in from O'Connell and Lagoon. This road was surveyed by Major Edmund Lockyer, the principal surveyor of roads and bridges under Governor Darling. Major Thomas Mitchell's road, now the Great Western Highway, superseded this road in the 1830s. Kelso was also the initial settlement area.

Richard Leveret Mills was born in Wales in 1780. He was transported to Australia as a convict in 1800 on the "Royal Admiral" and became a servant to David Langley of Richmond. Langley had come to Australia with his wife and three daughters in 1803, and Mills was assigned in 1804. Langley was superintendent of blacksmiths in the colony from 1806. In 1811 his daughter Ann Bella married their convict servant. Richard Mills successfully managed the Langley estate in Richmond while Langley managed other business in Sydney.

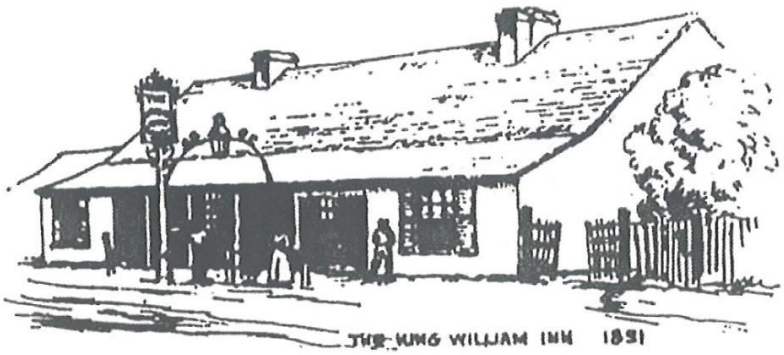
His skills as a farmer were recognized in the land grant from Governor Macquarie. He had married Ann Langley in Sydney in 1811, and in all they had nine children between 1807 and 1830. Ann was born in London in 1792. The Mills family came to Bathurst at a time when

times were extremely difficult as there were few tracks, no shops and businesses and little labour available.

Soon after settling in the Bathurst district Ann Mills had given birth to her sixth child, George Bathurst Mills, in 1819. He was the first white child born west of the mountains. In 1823 Sir Thomas Brisbane had, upon application from Richard Mills, granted this child a block of land in the new settlement to commemorate the occasion. This land extended to the east from the top of Richard Mills' original grant. By 1844 Mills owned 144 acres of land.

Richard and Ann Mills were in turn themselves assigned convicts to work for them. This included one Edward Gates, who was given the job of painting the inn. Edward Gates later established the first coach building works in the area in 1840, having married Mills' daughter Nancy in 1839. Mills always showed great compassion for many of the convict workers, having been one himself. He assisted Gates with finance and allowed the construction of his daughter's first home on his land.

The Mills' had been quite progressive in support they gave to the establishment of a Bathurst Independent Academy school in Kelso around 1927. Mills had offered to rent land for the school, and was a subscriber, wanting a better education for his children. He was concerned about the education of children of convicts, ex-convicts and orphans. It is unsure whether the school was ever established.



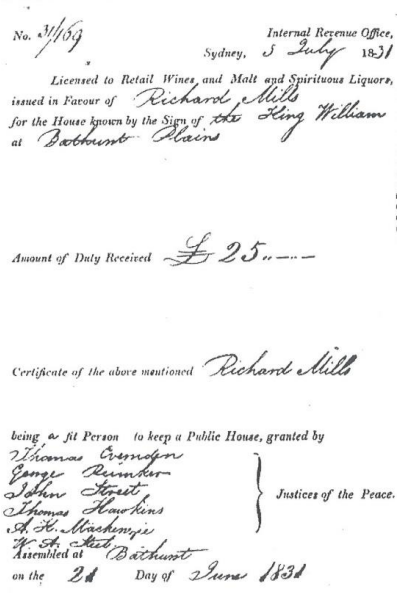
By 1831 Richard and his wife Ann lived in a thatched sod construction house, on the Kelso side of the Macquarie River, and were growing wheat. The house design was based on Ann Mills' parents home in England. The original structure of four rooms was constructed of local clay, with the walls about eighteen inched thick. A fire place was constructed in one of the back rooms, probably Ann's kitchen. A bricked bread oven was constructed at some stage. A well had been dug near the building which supplied all the water that the family required, and later for the guests at the inn. The roof was constructed of saplings and wood shingles. They extended the cottage over the next few years and a separate laundry was added. A wood shed was erected at the rear. By 1828 Mills had 95 acres. In 1831 he decided to convert part of the house into a wattle and daub, shingle roofed inn, the King William Inn, the licensee being Richard Mills. Part of Richard Mills' land was also offered for auction adjacent to the newly established Kelso Railway Station in 1875. Mills was licensed to sell wines, malt and spirituous liquors, the license costing 25 pounds.

Gable additions were made at each end in the Federation period. The building was a single storey colonial Georgian inn of stuccoed brick under a hipped and gabled iron roof, somewhat altered from its original form in Victorian times. The recessed bull nose verandah is set between gabled wings with segmented arched easement windows. It was 40 feet wide across the front, excluding the wings on either side. The main door opened onto a narrow hallway, with a room leading off either side. The room to the left was the parlour which also had a fireplace for the comfort of patrons. The ceilings were quite high. The additions and alterations were done by James Vincent, the brother in law of John Neville, also an original settler in the area. Vincent had been involved in building at the Langley's estate at Richmond.

The two long wings, extending a few feet beyond the front of the original house, required the roof to be altered to accommodate the water shed. A verandah extended over the front of the original home. The extension roofs were shingled, and constructed of locally made bricks. Several six paned windows were used, probably with shutters. The wing on the right was probably initially, the children's bedroom.

A large rectangular two storey brick coach house and barn with shingle roof and window arches and doorways was constructed for use by the Mills family, as well as patrons of the inn. The ground floor held the carriages and horses and the top floor held the fodder and the coachman's quarters. This building was demolished in 1962.

Mills sold the inn and moved to Mudgee in 1835, where his sons had inns. Richard Mills died in 1850 and is buried in the Holy Trinity Church cemetery in Kelso. Ann died in 1875 is buried at Mudgee, where they had the property "Enfield", in later years.



No. 3/169 Internal Revenue Office,
Sydney, 5 July 1831

Licensed to Retail Wines, and Malt and Spirituous Liquors, issued in Favour of Richard Mills for the House known by the Sign of the King William at Bathurst Plains

Amount of Duty Received £25.---

Certificate of the above mentioned Richard Mills

being a fit Person to keep a Public House, granted by
Thomas Evernden
George Rumker
John Street

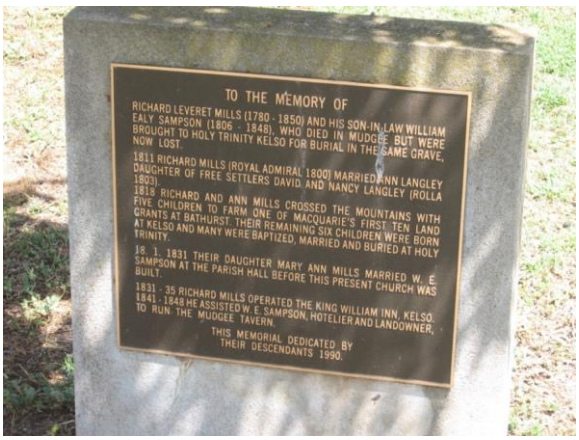
A. H. Mackenzie
W. H. Steel } Justices of the Peace.
Assembled at Bathurst
on the 2d Day of June 1831

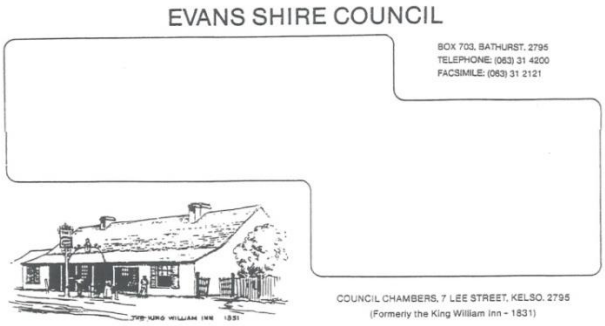


Richard Mills' liquor license 1834 *Grave of Richard Mills at Kelso*

When Richard Mills moved to Mudgee, the inn was purchased by William Boyles, and renamed the Traveller's Inn. Boyles left the district in 1840, and the building was not licensed for some years. In about 1865 William Conwell was the publican until the inn was bought by George Robert Matthews 1869. By this time a number of shops were established between the inn and the railway line, and there were five small cottages at the rear of the inn.

Matthews changed the name of the premises to the Carrier's Arms in 1870. In 1872 the place was known as the Sportsman's Arms Hotel. Although Matthews was bankrupt in 1879 he retained the hotel until 1882. He died in 1902.

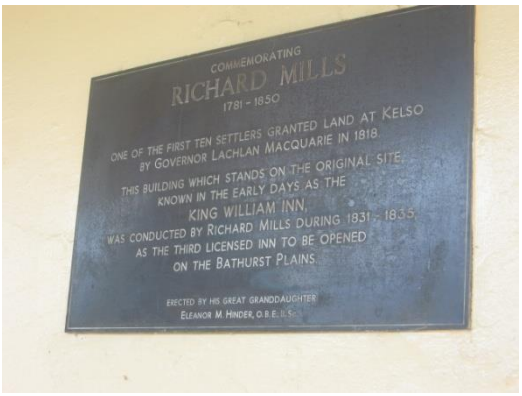
From 1883 to 1885 the hotel was run by licensee Robert Norris. From 1886 Thomas Brewer took it over. By 1891 the hotel was run by Robert McCleery, leasing it from Brewer. In 1892 William Sims Peers leased the business from Brewer. In 1894 the Sportsman's Arms was destroyed by fire. Repairs were carried out and the premises reopened in 1895 by W G Mitten as the Royal Hotel. Mitten retired in 1899 and the hotel was then run by Archibald Wells until 1902. The last publican was William Baker IN 1903. The property was auctioned in 1906, and in 1908 the Turon Shire opened their office there, holding their first meeting in May.



ESC letterhead

In 1977 a local government amalgamation took place and the Turon Shire was amalgamated with the Abercrombie Shire to form the Evans Shire Council, which retained the building as its offices. During this period a number of extensions were carried out to the northern end of the building to accommodate office space, and the various engineering depot buildings were constructed at the rear. The image of the old inn was used on the Evans letter head. The building was shared by the Rural Fire Service and the Upper Macquarie County Council weeds authority. The Evans Arts Council has utilized the building for storage and meetings, exhibitions and workshops since the 1980s.

Former Evans Shire Council Chambers



Plaque on front of building *Former ESC building showing office extensions*

A further local government amalgamation occurred in 2004, when Evans Shire Council was dissolved and the majority of the Shire came under the Bathurst Regional Council. The former council chambers were no longer required.

Today the building is still occupied by the RFS and the Upper Macquarie in the older section. The more recent northern section is now occupied by Bathurst Family Day Care.

Family History Month, Lithgow

Family History Month in Lithgow was celebrated in August by an interesting day in August at the Lithgow Library Learning Centre when four local historians talked about their own families.

Christison

Ray Christison is an archaeologist and heritage consultant in rural and regional NSW. He is also an author and museum director, and is an individual member of BMACHO.

Ray related details about his great grandfather, John Hampton Christison. John was born in Scotland in 1858. He trained as a dancer from the age of 7. He valued the arts and travelled widely, being renowned for his dancing prowess and his teaching skill. He went to sea in 1875, working for the Commission Agent and making his way to Australia. He married Sophia in Maitland in 1880, and ran dance classes in Clarence Town.

He ran into financial difficulties in 1883 and returned alone to Scotland, where he entered and won several dancing contests, thereby re-establishing himself financially. He returned to Australia but continued living the high life, falling bankrupt again in 1889. He returned to Scotland again, this time with Sophia and their five children.

Sophia then stumbled upon information relating to John's numerous extra marital affairs and they were subsequently divorced. He moved to Mittagong, acquiring property. In 1900 he joined the NSW Mounted Rifles and went to South Africa, where he was wounded and

returned home. He was not able to dance for some time, and remarried Mary Moore in 1909. By 1914 he was back in Sydney and dancing, where he held classes until 1923, when he died of a cerebral haemorrhage aged 63. *Ray Christison*

JH Christison

Francis Langdon

Langdon

Mark Langdon described three brothers who joined up for World War II at the same time and place and did their training in three different countries. Mark is a regular participant in the Lithgow Library Learning Centre's activities and is an accomplished author.

His father Lesley trained in Darwin as a gunner but flew in 11th Squadron in Catalina aircraft, doing operations and mine laying. He finished up a wireless leader in 1943, and in air sea rescue from 1945. He was discharged in 1945 as a flying officer.

His uncle Norman entered the RAAF in 1940. He went to Rhodesia and then the UK following operations training. He entered 210 squadron, flying Catalinas in the Battle of the Atlantic. In 1945 he was in Darwin in air sea rescue, and then in administration.

Mark's uncle Francis (Frank) also entered the RAAF in 1942. He entered the militia as an anti tank gunner, but was removed to the RAAF as a navigator in Lancaster's. He went to Canada and the UK, and then into 463 Squadron in a Lancaster in 1944. He was shot down and killed flying the Bergen Uboat pens in late 1944, and has no grave. *Mark Langdon*

Griffiths/Carroll

Tony Griffiths is a retired Engineer with an interest in Australian and family history. He commenced his family history research in the 1960s. The family was found to be involved in the trade union movement, in the internal employees union at the Lithgow Small Arms Factory. He has written several books on the SAF.

Tony elaborated on his research into his Griffiths/Carroll heritage from Ireland, always being told there were no convicts!

The Carroll family came from near Tipperary in Ireland and on a trip to the UK Tony managed to track down some distant cousins. He also met his wife Lilian!

The Griffiths were traced back to a Michael Griffin and his wife Ellenor. He found that Michael and Ellenor were actually transported for 7 years in 1827 for stealing furniture from their employer, John Gibbs, as the man owed them money. Michael was assigned to Archibald Bell at Windsor, and Ellenor and her sister Mary joined him there in 1828. In time Michael changed their name to Griffiths.

Whilst in Ireland, Tony managed to locate the prison where Ellenor and Mary were detained whist awaiting transportation, and even the cell where they were held, evidenced by their names scratched in the wall!

The family was traced back to Kurrajong, and also to the Sodwalls/Hartley area, where they found the family farm and family graves at Rydal cemetery. The gravestone of Ellenor Griffiths was found and restored.

Tony also played a moving video re-enactment of Michael and Ellenor's story by a group of primary school students from North Cork. *Tony Griffiths*

Griffiths family 1916

Sarah Ann King 1862

Hillier/King/Osborn/Frankcom

Vicki Hartley is a Lithgow local with a strong interest in her family history, and also assists others in discovering their own ancestors and stories. This only commenced in 2000 when her father passed away. By googling all four family names in the one search Vicki unearthed a treasure of research already carried out by a family member in the UK. The investigation took her to the tiny village of West Littleton in Gloucestershire, which it was found had not changed much in over 400 years. The area consisted of mainly eight families, and Vicki is descended from four of those.

Excavations in 1968 found skeletons on the site dating back to 977BC, together with bronze spearheads dating to 1200 and 1000 BC, They were best examples of pre historic skeletons ever found in Britain.The local church of St James and its churchyard contain memorials to the Frankom, Hillier and Osborne families.

Through the research Vicki managed to trace her great great grandmother Sarah Ann King, nee Hillier. The research showed that Sarah's lineage could be traced back to Francis Francombe, Vicki's eight times great grandfather, whose money saved William of Cavendish, the Duke of Newcastle, from bankruptcy around 1637!

Combined with other research, Vicki can now trace 15 generations of her family! *Vicki Hartley*

Food for thought ..... Editor's note

Carpe diem - literally speaking - "seize the day"! Take every opportunity, and don't put all your trust in tomorrow.

Do we really realise how lucky we are in the opportunities that avail us to experience history today? Everywhere we turn, there are community groups and individuals offering experiences through seminars, collections, tours and publications about our past.

Family history groups and historical societies, museums individuals and tourist organisations abound throughout the country, where dedicated members "work" to collect, store and disseminate information about where we came from, how we reached these shores and how Australia developed from a simple colony to the nation we know today. I say "work" because to them it is often not work but a labour of love.

With the passing of John Leary OAM, it would seem timely to look back and see where we of BMACHO have come from in fostering these opportunities. BMACHO commenced in 2006 with the aim to foster and support cultural heritage activities related to the Blue Mountains. To revisit the Objects of the Constitution:

1. To raise public consciousness of the value of cultural heritage.
2. To encourage and assist the cultural heritage activities of member organisations.
3. To initiate and support cultural heritage activities not already covered by member organisations.

BMACHO seeks to take every opportunity to bring together many groups to share information and promote culture and heritage throughout the greater Blue Mountains area and beyond. In light of this the most current initiative is our Heritage Trail project. Our diverse membership uniquely blends the skills and resources of historical, cultural and heritage groups, major tourist attractions, gardens and galleries. We need to promote our collective skills and assets to the widest possible audience.

BMACHO is taking up the challenge and is producing a high quality Heritage Trail leaflet and trail map for distribution through Visitors' Centres, historical societies, family history societies and museums, with contribution from BMACHO members. In addition, a dedicated website which presents the map and detailed contacts, for all BMACHO members, is also envisaged, in due course.

The Heritage Trail would incorporate open days for BMACHO member groups perhaps quarterly, proceeding along the Great Western Highway from Emu Plains to Lithgow, and up the Bells Line of Road from the Hawkesbury to Lithgow. If visitors can see the premises open on the Common Open Days, they can plan a trail that is comfortable for them to travel in a day.

Not every member group has premises, but those without may be able to use a hall or library to facilitate visitors. Even if a member is not able to participate in the Common Open Days, they can list their opening hours on the leaflet.

Hanging Rock, Baltzer's Lookout

A local along Jamison Creek

Darks Cave

Funding is to be generated through corporate sponsorship and through participant's participation fees. The launch of the project should be later in early 2015.

In the meantime, BMACHO will continue to collect and share information and events through this Newsletter. News items are always welcome, from the smallest note to articles in the order of 1500 words. Photographs will always help to illustrate the story and should be sent as separate files. Please direct any items to the editor *pmoppett@gmail.com* or to the secretary *jkoperberg@bigpond.com*

John Kenneth Leary OAM (1934-2014)

The BMACHO group and the wider community is morning the loss of John Kenneth Leary, OAM, former President and *Heritage* Editor. Under his chairmanship of BMACHO (the Blue Mountains Association of Cultural and Heritage Organisations), he has steered this Association into maturity, but he has also initiated, edited and produced the magazine *Heritage*. *Heritage* has been a remarkable achievement, each new issue being eagerly awaited by the community and now being read by a thousand and more readers.

John Leary served in the 1960s on the Berrima Court House Trust that was responsible for the restoration of this historic property and which later became a major tourist attraction for the Southern Highlands.

John had wide ranging experience and an impact on local heritage and community matters in various districts; a fact that was recognized by the award of the Order of Australia Medal (OAM) in 2003 for community service in particular to the agricultural movement and the various exchanges including recognizing two multi-million dollar cultural 'cultural exchanges' between Australia and Japan through the sister cities movement.

John Leary's career as a professional journalist meant he had worked on metropolitan daily newspapers, and as managing editor on several regional and country newspapers including the Berrima District Post which then had a tri weekly publication; the Goulburn Evening Post, a daily; and Gilgandra newspapers which produced a number of regional papers. He at one time owned a small Sydney based suburban newspaper and publisher of magazines.

John Leary served as an elected member of Campbelltown City Council including a term as Mayor, and member of a Regional Council; senior member of Council staff and a consultant in the field of corporate, government and community relations to two major metropolitan local government units.

John Leary always presented a balanced view over a wide range of subjects after careful consideration and appreciation of conflicting differing points of view. He was able to summarise concisely and with positive strength of feeling in a manner that did not offend.

His additional experience includes 25 years as the president of Campbelltown City Show Society, one of the four largest agricultural shows in Australia outside a capital city. John was a member for nearly 10 years of the Agricultural Societies Council of NSW, the peak umbrella recognizing 204 agricultural shows in NSW.

Since the 1940s he was interested in the heritage walking tracks in the Blue Mountains and Middle Harbour areas. His exploration of these between the 1940s and early 1960s led to an association with the National Trust (NSW). More recently he was Chair of the Friends of Woodford (over four years) and was awarded the Trust's meritorious service for volunteers medal.

John Leary was recognized by the NSW government, in 2007 by being given a certificate of appreciation, “recognizing outstanding contribution to heritage conservation in NSW”.

His ability to communicate was evidenced by his large number of friends of sometimes opposing views and his skill in distilling a problem into one or more practical solutions.

John was a consummate speaker and his presentations were listened to with rapt attention.

As President of BMACHO, and their representative on the BMCC heritage committee, he readily understood Council’s points of view, those of the heritage community and those expressed, sometimes somewhat obliquely, by the general members of the public.

John leaves behind wife Nanette, and children Richard, Tanya and David Leary and their families.

AE1 and AE2 Australia Navy Submarines

Further to the article on the AE1 and AE2 in the July-August issue of *Heritage*, Steve Norton of the Canal Reserve Action Group at Prospect/Holroyd has offered to share his family connections to the event, as follows.

This is a story that begins in 1764....

Thomas Kidner who was born in the year 1764 in Bristol, Somerset, England. When Thomas was eighteen he stole 4 pieces of Irish Linen. He was tried and convicted in the Bristol Court on the 30 October 1782 and sentenced to transportation to Australia for seven years. He was kept in gaol until early 1786 when he was transferred to the prison hulk “Censor”. He spent a number of years on this ship before he was transferred to the “Alexander” on the 6th January 1787. The “Alexander” sailed for Botany Bay on the 13 May 1787 and arrived on the 26 January 1788.

So began Thomas’s life in Australia. A life that would see him transported to Norfolk Island on the 11 November 1789, where he met a convict named Jane Whiting. Jane was born in 1755 in Westminster Middlesex England. Thomas and Jane married on the 5 November 1791 on Norfolk Island.

Thomas and Jane had two children, Thomas and Ann. Thomas was born on the 30 May 1795 on Norfolk Island. Ann was born on Norfolk Island on the 14 October 1798. The family sailed to Van Diemens Land (later named Tasmania) on the 15 October 1805 on the ship “Lord Nelson”.

Thomas jnr. married Elizabeth Burkett in Van Diemens Land on the 7 January 1822 in Hobart Van Diemens Land. Thomas and Elizabeth had eight children, all born in Van Diemens Land. Their second child, Elizabeth was born on the 26 October 1824.

Elizabeth Kidner married Francis Bidelph (Biddulph)on the 6 August 1842 in Van Diemens Land. Elizabeth and Francis Bidelph had 11 children, all born in Van Diemens Land.

Their sixth child, David Bidelph was born on the 14 April 1853 in Van Diemens land.

David Bidelph married Mary Ann Driscoll on the 10 June 1879 in Tasmania. David and Mary Bidelph had eight children, all born in Tasmania.

Their sixth child, Henry Thomas Bidelph, was born in Park Street Hobart Tasmania on the 3rd October 1893.

On the 12 July 1912, at the age of 18 he enlisted in the Royal Australian Navy in Melbourne Victoria under the name Thomas Henry Bidelph for a 5 year stint. Thomas Henry was Steve Norton's grandfather.

In 1909 the English Admiralty had proposed the creation of a Pacific fleet consisting of three fleet units to be operated by imperial forces in the pacific region. Each fleet unit would be built around a battle-cruiser, supported by several light cruisers. One of these fleets would comprise the Royal Australian Navy (RAN). With the Australian Government agreeing to this concept, work commenced on the ships.

The destroyers, HMA Ship's "Yarra" and "Parramatta" reached Australian waters in November 1910 and on the 10th July 1911 His Majesty King George V granted the title Royal Australian Navy to the Commonwealth Naval Forces.

In June 1912 a third destroyer, HMAS "Warrego" was commissioned at Sydney and in 1913 the battle cruiser HMAS "Australia" and the light cruisers HMAS "Melbourne" and "Sydney" arrived in Australian waters.

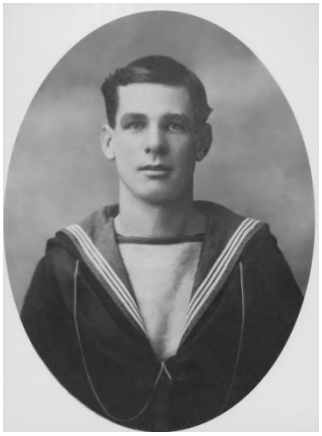
He was onboard HMAS "Sydney" on the 4 October 1913 when the Australian Fleet entered Sydney Harbour for the first time.

His service record shows that on the 2/10/1913 he was now an able bodied seaman and retained that rank until he left the RAN. His service record also shows that on the 31/12/1913 his character was deemed "very good" and his ability was "satisfactory". His service record further shows that on the 31/12/1914 his character was still deemed "very good" and his ability was "superior". On the 18/04/1915 his service record was still deemed "very good" and his ability was still "superior".

During his RAN service over the next three years he served on five ships, as well as in the London Depot in Great Britain.

While in the London Depot he underwent training and returned to Australia as a crew member of HMAS "Sydney". He took part in two events that are now part of Australia's naval history.

Firstly, he was on board HMAS "Sydney" when it and the other six ships of the RAN entered Sydney Harbour for the first time on the 4th October 1913. This was the birth of the Royal Australian Navy. A 100 year celebration occurred on the 4th October 2013 when 7 ships sailed into Sydney Harbour to commemorate the first entry.
(Stephen Norton and his wife Judy were guests of Vice Admiral Ray Griggs at the celebrations on Garden Island).



Thomas Henry Bidelph

"Sydney" escorts AE1 and AE2 into Cairns 14 May 1915

Secondly he was on HMAS "Sydney" when she escorted two submarines from Singapore to Garden Island. At 7.30am on 2nd March 1914 Australia's first submarines, HMA AE1 and HMA AE2 left Portsmouth U.K. for Sydney with the escort ship HMS "Eclipse". The "Eclipse" escorted both submarines to Colombo, arriving on the 9th April 1914. AE1 & AE2 left Colombo with HMS "Yarmouth" at 6pm on the 14th April 1914 for the voyage to Singapore, arriving on the 21st April 1914.

AE1& AE2 left Singapore on the 25th April 1914 with their escort HMAS "Sydney", stopping in Cairns on the 14th May 1914 before travelling to Sydney Harbour, arriving in Garden Island on the 24 May 1914. HMAS "Sydney" (1) escorted both submarines from Singapore to Sydney, stopping in Cairns. The NSW State library has a wonderful photograph on display of Sydney and both submarines. *Stephen Norton*

*****

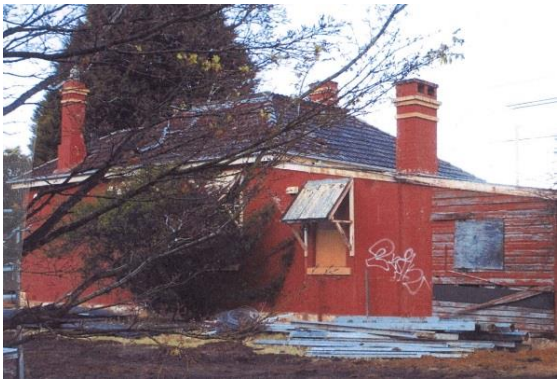
Lawson Station Master's Residence

The former Lawson station master's residence adjacent to Lawson Railway Station has been given a reprieve. It was scheduled for demolition, along with a number of fomer railway workshops and ancillary buildings at the site on Loftus Street.

The brick & tile residence was constructed in 1896. Sydney Rail was refused a S60 application under the Heritage Act to the NSW Heritage Council to demolish the building. The rail depot site is under redevelopment to construct a new depot building, incorporating landscaping and more car parking. The refusal included recommendations to relocate the new maintenance depot and car park further west, thus saving the residence.

2009

2014



2014

2014

The residence is one of the last original elements of the railway precinct, from the days when Lawson was a railway town. It was occupied until the mid 1990s when it was abandoned due to cracking in the brickwork caused by vibration from major track work at the time.

In 2008 the buildings on the site included the District Engineers' Office and the associated stores and sheds, the station building (1902) and signal box (1921), out-of shed (1902), island platform (1902), side platform (c1879), pedestrian subway 91944), station master's residence (1896), electrical depot site, former District Engineer's Office (1956), workshops (1957), signals and earthworks depots, substation (1956), numerous water columns and tanks, many moveable items and landscape features. The site was noted with significant potential for archaeological investigation.

Numerous modifications have occurred to various aspects of the station and depot, some resulting from the substation fire in 2003. The original roof of the Station Master's residence, with an ornate ridge, was replaced at an unknown date. Internally all original fabric has been removed.

There was a halt at Lawson dating back to the beginning of the railway through the mountains in 1867. It bore the name "Blue Mountain" initially after Wilson's Blue Mountain Inn, 400m away. In 1879 when the station's name was changed, a brick platform and station building were added and this remained unchanged until 1902. Duplication of the line in 1902 brought a new island platform and station buildings in the Federation style.

Lawson became a significant stop over as locomotives took on water there.

The original station master's dwelling was constructed in 1880, and the current residence replaced it in 1896. The residence, many of which were built at this time, reflected the status of the proposed occupant. The Lawson residence is an example of the largest type that was used in the 1890-1914 period. It contained three bedrooms and the asymmetrical plan of the structure predates the wave of new residence, being first used in 1885.

The overall site is historically significant due to its continued rail use since 1880, with the Station Master's cottage demonstrating the custom of providing accommodation for railway staff and the importance of the station as a key terminus for locomotive facilities with its large number of water columns and tanks.

The residence has an unusual architectural style as it does not conform to any standard design, although it has similarities to a standard "J3" design. It is an excellent example of

simple architectural forms of other similar railway residences. With the loss of interior fabric the integrity is only moderate.

The rail authority indicates that they have no further need of the building at this stage. Therefore it remains for another use to be found for the building. It has been suggested that BMACHO or some similar organisation might utilise the building, together with other societies or organisations looking for permanent home, if a reasonable contract could be developed. This may give those groups a permanent premises to store archives, records and equipment, to hold meetings, seminars and workshops. If BMACHO were involved it would not mean that BMACHO would not continue to travel around to the members premises for committee meetings.

The site has had a statutory listing under the NSW Heritage S170 State agency heritage register as the Lawson Railway Station group, and footbridge, as updated in 2009, and was recognised within the Heritage and Conservation Register of the State Rail Authority of NSW 1993, and the State Rail Authority Heritage Register Study 1999.

At present BMACHO are considering it only as an option, and any other member groups within the community are encouraged to consider the possibility of some kind of sharing arrangement to provide an appropriate adaptive reuse for the building, to conserve its remaining integrity and retain the building in its historical context. *Complied by Patsy Moppett*

The Technical Side

Heritage Curtilage – what is it and why is it needed?

Curtilage means “the area of land (including land covered by water) surrounding an item or area of heritage significance which is essential for retaining and integrating its heritage significance”. *Heritage Curtilages – NSW Heritage Office 1996.*

It is often defined by a site diagram, and it enables the community to retain, identify and interpret significance. It varies depending upon the purpose for which the place was established.

It could be a visual zone or a cultural landscape (which may contain many elements), and it enables management controls to be established specific to the place.

The diagram identifies lot boundaries, and can be used to reduce heritage curtilages, extend heritage curtilages, and to explain composite heritage curtilages such a heritage conservation areas.

The Patrick House, Athol Street, Blayney

This locally significant dwelling at Blayney, a two storey building with a northerly aspect over the town, now faces the prospect of a new dwelling next door. Although the new building will be cut into the site, views from and to the heritage premises will be compromised. The problem has arisen as not sufficient land was reserved around the heritage building when the subdivision was done. Although the significance of the heritage dwelling itself remains intact, its context and setting are compromised by surrounding contemporary residential development.

In the consideration of defining a curtilage a number of matters require consideration:

- Has the significance of the original relationship of the heritage item to its site and locality been conserved?
- Has an adequate setting for the heritage item been provided, enabling its heritage significance to be maintained?
- Have adequate visual catchments or corridors been provided to the heritage item from major viewing points and from the item to outside elements with which it has important visual or functional relationships?
- Are buffer areas required to screen the heritage item from visually unsympathetic development or to provide protection from vibration, traffic noise, pollution or vandalism

Specific matters which must be considered by heritage planners include historical allotments; design, style and taste; functional uses and interrelationships; visual links; scale; significant features; vegetation; archaeological features.

A number of statutory controls can be utilised to protect and manage the curtilage. This includes listing in a local environmental plan or development control plan using zoning or nomination of heritage conservation areas, or via an order under the Heritage Act 1977. There are various other pieces of legislation which afford protection such as the Local Government Act 1993, local policies and State ownership protection under the Heritage Act.

Non statutory controls such as conservation management plans specific to the site can also define a curtilage.

The High Court of Australia *(Royal Sydney Golf Club v Federal Commissioner of Taxation 1955)* defined curtilage as:

Any building, whether it is a habitation or has some other use, may stand within a larger area of land which subserves the purpose of the building. The land surrounds the building because it actually or supposedly contributes to the enjoyment of the building or the fulfilment of its purposes.

Of course curtilage applies not only to buildings, but heritage places in general. It is also to be balanced by the value of the land for other purposes. Sometimes the curtilage is defined by demand pressures for housing, and the attempt to fit as many dwelling lots into a subdivision as possible, leaving the heritage building isolated on a block of land ultimately located amongst contemporary housing.

Carrington House

Tarella

Sufficient curtilage has been retained around Carrington House at Katoomba to define its significance in the gardens in the forecourt area. The hilltop location assists in this regard.

The garden setting at Tarella at Wentworth Falls enables experience of the space to appreciate the original garden location and scale of the development. Although the meeting hall is located on the site, it is sufficiently removed to allow appreciation of the Tarella precinct.

Woodford Academy

With increasing encroachment from the Great Western Highway in front of the Woodford Academy, management of the building is still able to hang onto the surrounding garden setting. Together with suitable adaptive reuse of the place, little new building work has been required which might have compromised the heritage significance. Even cobbled walkways and garden features remain, together with the views into the bush at the rear of the precinct. *Compiled by Patsy Moppett*

Community events & updates

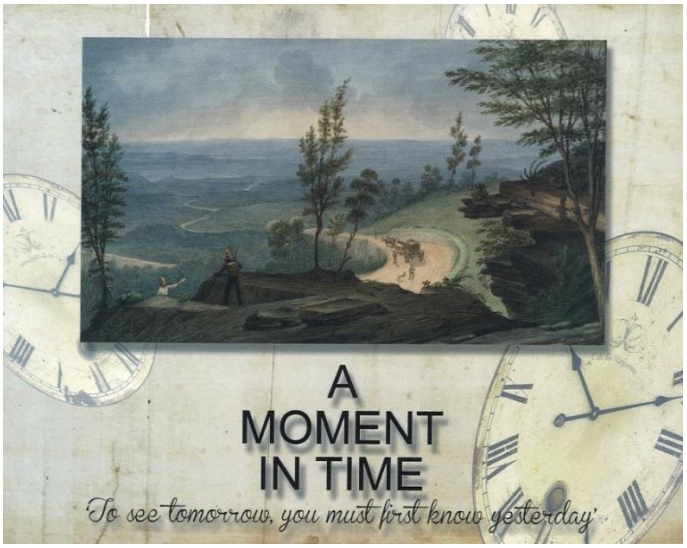
"A Moment in Time II" Exhibition

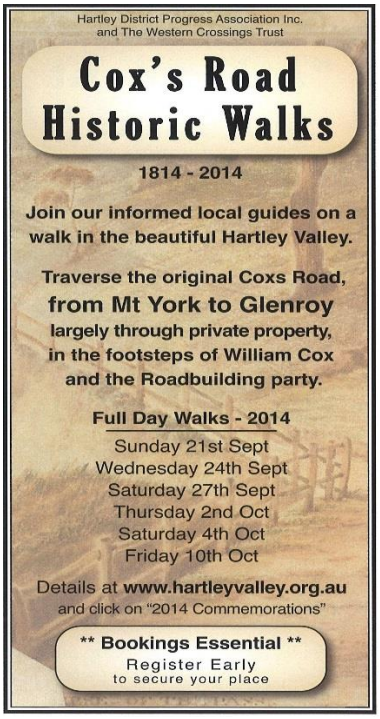
The Exhibition returns to Hartley from 13 September to 12 October 2014. This exhibition by local historian Joan Kent is a "must see"!

The exhibition, curated by retired local historian Joan Kent, captures what existed before and what came shortly after the 1813 crossing of the Blue Mountains by Europeans.

It begins with a consideration of the rich and ancient geology of the landscape into which the explorers intruded, before exploring many aspects of the crossing story from the indigenous peoples whose country was being traversed, through the explorers, the road building and early settlement west of the Blue Mountains.

"A Moment in Time "builds on the original exhibition drawing widely on contemporary Cox's Road research to present a comprehensive vision of 'the road'".





The exhibition was mounted by the Western Crossings Trust and attracted hundreds of visitors a day last year. It promises to be even more popular this year with its insightful look into the miracle of Cox's road to Bathurst.

The "A Moment in Time II" exhibition will be open on weekends between **13th September and 12th October** 10am to 4pm Mid Hartley Road, Hartley(just follow the signs).

In addition, there will be guided walks in the Hartley Valley in the footsteps of William Cox, as per the above flyer.

See the associated website www.hartleyvalley.org.au

2014 RAHS State Annual History Conference

This year the Conference will be held at Mittagong RSL, examining how history evolves over time and is always moving as we respond to new information that changes our understanding of the past.

Day one - learn about the histories of Mittagong and successful fund raising campaigns that will resonate with the broader history community.

Day two – hear advice on future directions for historical societies including developing advocacy, technology and collection management skills.

Directions for historical societies, especially in succession planning is a timely theme in these days of falling patronage for some organisations, with all the work being left to a few.

See the RAHS web site for bookings. www.rahs.org.au

Ali Khan Trader ..... and Indian Hawker

Further to the article in the July-August edition of Heritage, Kathie McMahon-Nolf advises some additional information.

The photograph of Ali Khan was taken from the other side of the Bells Line of Road in 1905, but the guest house "Bellbird Echo" was not built until 1929. The McMahons did live opposite on the same spot as the guest house was built, in their house called "Luchenough".

Although the article refers to Indian Traders, the gypsy Ali Kahn was probably from Afghanistan, or that is how the oral history goes. *Kathie McMahon-Nolf*

Hobby's Reach-Weatherboard-Wentworth Falls

The community is invited to the 200th anniversary of the naming of Hobby's Reach (now part of Blaxland Road). The anniversary occurs on 3 October 2014, and it will be celebrated on 4th October at Tarella, 99 Blaxland Road, Wentworth Falls, by the Blue Mountains Historical Society.

Thomas Hobby was in charge of this section of the 170km Cox's Road from Emu Plains to Bathurst.

The celebration will include:

- A special display about Thomas Hobby
- A talk at the BMHS Meeting on the part that Hobby played in the epic endeavour to build Cox's Road over the mountains.
- An open day at Tarella, the Society's 1890s cottage museum.
- Colonial music to match.

Join them to learn more about the village and the extensive variety of resources at the Blue Mountains Historical Society that are available to all with an interest in local history. Admission is free to all residents and refreshments will be on sale.

Enquiries to Ph: 02 4757 3824 or www.bluemountainshistory.com

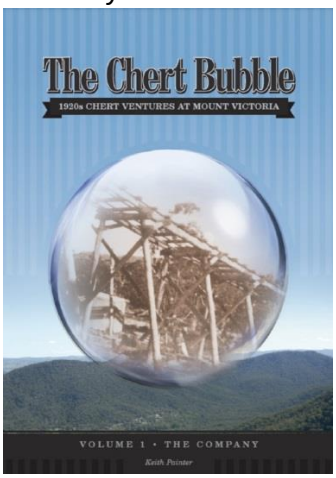
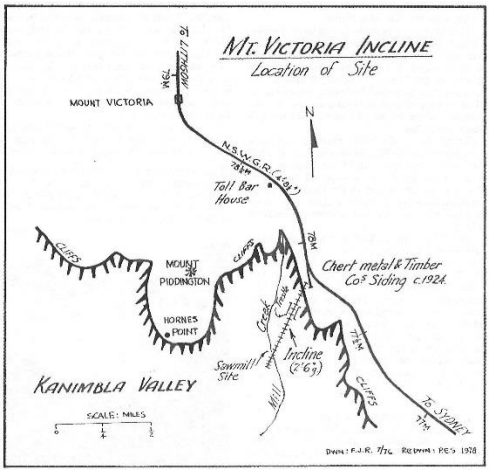
The Chert Bubble

The Chert Incline Railway at Mt Victoria was built in the 1920s to haul chert from the Kanimbla Valley. Chert is a sedimentary rock used in road construction. The whole venture lasted less than 10 years from inception to closure, and very little can be seen today in the vicinity of the railway incline down on the Blackheath side of Mt Victoria.





The fascinating history of this little known venture has been brought to life by Bathurst author and guide Keith Painter, in his book "The Chert Bubble – 1920s Ventures at Mount Victoria".

Volume 1 is available from selected bookshops or from the publisher, Mountain Mist Books, at www.mountainmistbooks.com

Volume 2 will follow in time, detailing the Blue Mountains Shire Council chert quarry above the lower part of Victoria Pass and the steam wagons they used to move the rock to their siding near Mt Victoria Station. A must read!

Paragon Cafe, Katoomba

This widely renowned cafe at Katoomba has received a significant boost to its future success with a funding grant under the Blue Mountains City Council's local heritage assistance fund program. This year Council has continued to support the restoration of

heritage properties, seeking to preserve these places which help to define the character and history of the Blue Mountains area and its people.

Robyn Parker, manager of this iconic property, has advised the Blue Mountains Gazette that she is putting the finishing touches on the restoration work to the historic Paragon Cafe in Katoomba Street. She has been able to replace lighting and curtains, restore the front tiles, and repaint the ceiling in parts of the building.

With the application for listing of the Paragon on the State Heritage Register currently underway, the work can only contribute to the integrity of the fabric of the place.

Cox's Road – Taylor Road, Woodford roadworks
The saga of Taylor Road is almost passed, with a solution which reaches a compromise between the purists wishing to retain the road in its original unsealed state, and the sealing of the road to reduce the impact of dust and road maintenance.

The sealed Taylor Road in August 2014

The maintenance of a 600m section this road became an issue in 2013 when Council scheduled the road to be sealed. The road is the route of one of the last remaining accessible remnants of the route of William Cox's 1814 road in this vicinity. The road verges contain many intact stone retaining walls and drains, which had already been partially covered or displaced by previous regular maintenance of the road.
Council sought to extend its works program, proposing sealing of the road for the health and safety of residents along the sometimes dusty road, to incorporate drainage measures. The works were paused to allow the community and archaeologists to investigate the condition and integrity of the road features.
With the advice of Council's Heritage Advisor and the archaeologist, the road was sealed with a light coloured seal, and now at first glance appears as a gravel road.

*****

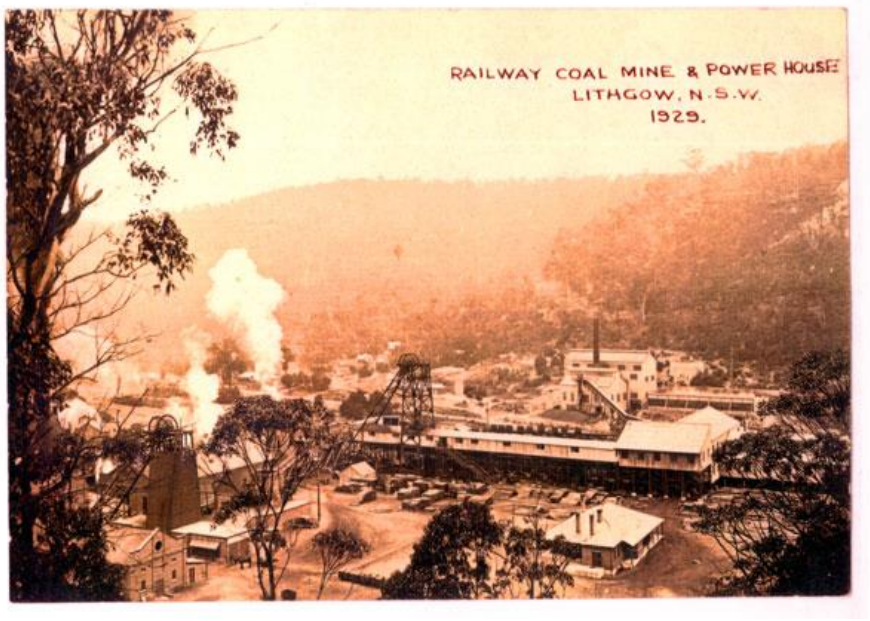
Lithgow State Coal Mine
On 13th October 1964 the Downcast Shaft of the Lithgow State Coal Mine was sealed permanently. This marked the end of an enterprise that had operated since the dark years of the Great War.

The mine is significant as it was the first government coal mine opened in New South Wales in the 20th century and it also has an important place in industrial relations history of the Australian coalfields.



To recognise 50 years since the closure of the mine the City of Greater Lithgow Mining Museum Inc is hosting an informal luncheon in the State Mine Bath House from 11.30am on Saturday 18 October 2014.

Guests of honour will include Paul Toole, MLA for Bathurst and Minister for Local Government, Maree Statham, Mayor of Lithgow, and Wayne McAndrew, General Vice-President, CFMEU Mining and Energy Division.

Former State Mine workers and their families are invited to attend. Entry would be by donation. Notification of attendance should be through the Mine's Facebook page, Lithgow State Mine Museum, or by contacting the museum on 02 6353 1513. *Ray Christison*

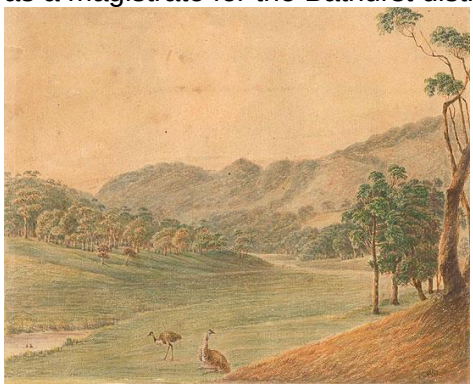
Sydmouth Valley Homestead

The Homestead was built in 1826 by Robert Lowe in the Sydmouth Valley through which William Cox constructed his road to Bathurst. Robert Lowe received the grant of 2,000 acres of land and the service of 20 convicts by Governor Macquarie in recognition of his services as a magistrate for the Bathurst district.



John Lewin's painting of the Valley

Sydmouth Valley homestead

Ann Webb purchased the property in 1871 for her youngest son, Thomas Bernard Webb, and the Webb family descendants have continued to occupy the property ever since.

The Lithgow & District Family History Society Inc has arranged for the current owners Kevin Webb and Lynne Woods to conduct a tour of inspection of the handmade brick homestead and the old world cottage garden on Saturday 11 October 2014, be followed by Devonshire Morning tea.

The tour group will meet at the Tarana Hotel at 9 a.m. and following the tour there is an option to return to the Tarana Hotel for lunch, at your own expense.

The cost of the tour and morning tea is $15 which must be paid before 5 October 2014 at Lithgow & District Family History Society Inc, Ewen Smith Memorial Hall, Cnr Tank & Donald Streets, Lithgow during the Resource Centre opening hours or by post to The Secretary, PO Box 516, Lithgow.

Repairs and Restorations to Heritage Properties

Blue Mountains City Council with the aid of the NSW Heritage Division is offering funding to owners of heritage listed places to carry out sympathetic repairs or restorations. A total fund of approximately $20,000.00 may be shared amongst a number of small eligible projects.

Applications are invited from owners of individual heritage buildings or buildings within a Heritage Conservation Area or Period Housing Area. Priority will be given to the repair and restoration of stonework, particularly sandstone, and to conservation works for historic buildings within the Central Katoomba Urban Conservation Area. However, a range of other projects will also be considered.

Grants are offered on a dollar for dollar basis with the successful applicants and must be completed by April 2015. For full details download the Local Heritage Places Fund Guidelines and Application Form. From http://www.bmcc.nsw.gov.au/sustainableliving/bluemountainslocalheritage/bluemountainslocalheritageplacesfund

or contact Council on 02 4780 5740. On completion, email or post the applications to Council via the following contacts:

Email: council@bmcc.nsw.gov.au or Annalisse Bentley abentley@bmcc.nsw.gov.au

Post: Locked Bag 1005, Katoomba NSW 2780

Fax: 02 4780 5555

Applications close 5pm, Friday 26th September 2014.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsherieteg.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Historical Society Inc; Blue Mountains World Heritage Institute; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); Mudgee Historical Society Inc; National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Restaurant, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd;
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2014-2015 (from July 2014) is: Ian Jack (vice president & acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes and Scott Pollock (web site), Patsy Moppett (***Heritage*** Newsletter editor), Dick Morony (public officer), Suzanne Smith, Richard Woolley (heritage trail co-ordinator).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributers. Every effort is taken to ensure accuracy of material. Flora in the Cemetery

It has been said that biodiversity lives where the dead people go, that a cemetery may be the last place you would think to look for something alive. Very often it is the vegetation that adds the charm and ambience, to the sense of peace and tranquillity we experience in a graveyard.

Many cemeteries are found in association with a church or chapel, a lawn cemetery and a columbarium or a crematorium. Many more are isolated entities, with difficulty of access and no longer in use.

St David's, Kurrajong Heights

Some cemeteries are elaborately landscaped with the botanical elements impacting upon the overall atmosphere and design, such as cemeteries in an urban setting. Other burial grounds are void of design, and run to natural landscape features of native vegetation in a remnant woodland or grassland setting.

Natural vegetation

Cemeteries are often life-saving refuges for many of the most endangered native plants and on occasions for entire ecosystems. Some cemeteries contain significant remnants or indications of the original native vegetation. This can be quite significant within an urban situation where development has covered up the majority of natural areas, or in rural areas where agriculture has disturbed the majority of the landscape through cropping and grazing. Cemeteries, along with stock reserves, road and rail reserves can harbour good quality woodland.

Many areas have been cleared for grazing, and only the understorey remains. This can be a very valuable factor in the maintenance of genetic diversity, in the preservation of the original species from when the country was settled. Although small and disjointed, the remnants may contain high species diversity, and could form the core of say a “Grassy White Box Woodlands” community. This community was found widely across the slopes and ranges of eastern Australia from QLD down to central Victoria. Agriculture has played a large part in the reduction of its extent to 0.01% of its former distribution.

Katoomba General Cemetery

Large expanses of intact White box (*Eucalyptus alba*) woodland are rare and any remnants are significant. They comprise a well spaced canopy of Eucalypts, few shrubs, but a diverse collection of ground-covering wild flowers and grasses, such as the native Yam Daisy *(Microseris scapigera),* which was once abundant aboriginal food. It is now only found in un-grazed woodlands. The White box community is usually found in a wider community associated with Yellow box and Blakely’s Red Gum.

Mowing of native grasses and groundcovers may be required less often than for exotic grasses, however access to the grave sites should be maintained in a safe condition. A balance must be achieved between the protection of the native plant community and the protection of the cemetery visitor.

As the species in a natural area may be a part of a well preserved example of a wider ecosystem, their value may also relate to the birds or other fauna they attract, and therefore add to the value of the cemetery.

Exotic vegetation

Early burial grounds often contain a variety of plantings which are no longer evident elsewhere. They also present an over view of historical vegetation, species often planted upon the burial plot of a loved one, planted within the cemetery grounds to represent family ties and traditions, or simply to beautify the hallowed grounds. The arrangement of burial areas, alignment of driveways and paths, avenues of trees and massing of shrubs add significance to the cemetery design.

The grounds can still illustrate a continuing tendency for the use of plantings that relate to the particular person buried there, a family property, the religious denomination, the land of birth and so on, and has always been a socially accepted way of dealing with bereavement. Exotic evergreen trees, bulbs, roses and other original grave or landscape plantings contribute to the cemetery’s visual and nostalgic quality. Plantings are often chosen for their

symbolic meanings, such as rosemary. Even for exotics therefore, cemeteries may provide a valuable resource as a botanical collection or as a source of unusual or rare specimens. Mowing and slashing of lawn grasses will be required regularly, to maintain visual amenity and safe passage throughout the graveyard. In lawn cemeteries and war graveyards of course, it is a given that mowing occurs.

Blackheath General

Wentworth Falls General

The wider landscape

Often, both formal landscaping and natural areas lend themselves to ease of maintenance, with decoration and enhancement limited to the burial mounds themselves, or the massing of shrubs and trees to achieve screening and protection.

A cemetery within an urban environment will also be required to address amenity from a visual perspective for the visitor. The care and maintenance of a cemetery that has regular visitation will have a higher community expectation in regard to the upkeep of the site, quite apart from the safety aspects of increased requirements for access and safety for family, visitors and tourists.

Mt Victoria General

Wentworth Falls General

A rural cemetery or isolated grave site will have less demand for the formal features of a burial ground, and the level of maintenance expectation is often formulated by the groups of families and local people who carry out the maintenance and care of the place.

A cemetery can often become a place of repose for visitors, to rest a while and reflect on life and family, which would entail the inclusion of park furniture in a landscaped setting. The placement of vegetation and furniture must be carried out around trails and pathways, driveways and other ornaments, commemorative walls and columbarium, lawn burial areas and chapels, and of course the grave markers and site signage. It really does become quite a complex site, especially within an urban setting.

Management should have regard for the possibility of the graveyard being a harbour for populations of rare or endangered species, botanical rarities both introduced and local, and

they can become a valuable resource for horticultural and botanical research and conservation.

Threats to integrity

Weeds are also found in cemeteries. With a weed being commonly defined as a plant growing somewhere where it is not wanted, the interpretation of what is a weed may vary from landscape to landscape. Many exotic plants have become weeds over time, becoming invasive, such as vines like *vinca major* and ivy, seeding shrubs like cotoneaster and suckering shrubs like some wattles, and trees like *robinia.*

Weed control is preferred to be via manual removal, use of selective herbicides and careful trimming and mowing.

Emu Plains General

The native understorey plants are extremely sensitive to disturbances such as grazing, ploughing and fertilizing, and if these disturbances occur, most native species are replaced by weeds, pasture legumes and exotic grasses, and in extreme cases only a few tough native species remain. Exclusion of livestock is imperative to limit the spread of weed seed and the compaction of soils and vegetation.

Roots of trees can threaten the stability of monuments, and the removal of suckers and seedlings may be required to reduce the possibility of further damage. Diseased branches and limbs require removal and periodic inspections carried out to monitor further damage, decay or intrusion. The type of soil and bedrock will impact upon this aspect of deterioration.

Vandalism is known to cause damage to grave markers and cemetery furniture, but it can also impact upon vegetation, through compaction and destruction, theft and fire.

Rabbits can undermine monuments, and allow other vermin and wildlife access to further exacerbate the situation. Their tendency is to dig under a solid object such as a log or in some cases, a grave marker. The type of vegetation will also provide dietary requirements, and rabbits tend to seek out exotic species, particularly tubers and bulbs in the winter season, creating uneven ground, erosion and soil accumulation against grave markers.

Bushfire risk can be exacerbated with the growth of vegetation, and therefore control of growth becomes a balance to retain the species diversity whilst at the same time enabling the protection of adjoining properties through control of bushfire risk and fuel reduction.

Even cemetery maintenance can be a threat, through misuse of machinery, slashing and the over enthusiastic use of clearing practices and herbicides.

Management

The Cemetery Conservation Management Plan has a large role to play in biodiversity conservation, to observe and record the vegetation within a graveyard area, and formulate measures for the preservation and conservation of the existing species.

Priorities for maintenance can be categorized into the most immediate or urgent work, through to necessary activities, and down to the desirable work which can be carried out subject to resources. This program would then be followed up by a monitoring program.

A number of measures can be incorporated to assist site managers in biodiversity conservation, including guidelines for:

- Fencing and stock exclusion
- Seed collection
- Survey and monitoring
- Regeneration
- Propagation and revegetation
- Maintaining tree cover
- Limit consideration of new species
- Mowing and slashing
- Signage
- Weed and sapling control
- Feral animal control
- Grave maintenance
- Consultation and cooperation with adjoining landholders
- Land tenure arrangements
- Driveway/pathway maintenance, including drainage

Blackheath General

Hartley General

Compromise

The conservation and management of cemeteries will often involve compromise. The need to conserve the cemetery as a place of historical, botanical and scientific significance should be balanced with the need for the provision of safe access and interpretation opportunities. Some of the areas where this will occur are:

- Mosses and lichens are vegetation, but suggest damp problems, adversely impacting upon the longevity of grave markers and their inscriptions;
- Rabbits help with vegetation control, but undermine graves and other infrastructure;
- Climatic changes will affect survival of some species, and efforts to retain some species may be in vain;
- Native grasses may be important to biodiversity, but long grass creates fire and safety risks
- Mature trees should be retained and preserved, but suckers need removal for stability of grave markers and other infrastructure;
- Cemetery management should be in secure hands, but this may limit access arrangements.

Emu Plains General

Mt Victoria General

Conclusion

The initial step undertaken in the preservation and conservation of vegetation in a cemetery is to record the species present. This may need to be undertaken on a number of occasions throughout the year to establish seasonal variations in species and their occurrence.

The existence of large or unusual trees or plants should be noted, along with the stories behind the use of particular species, if available. A site plan should be drawn up showing the location of pathways, structures, interesting monuments or plantings, graveyard furniture, and of course the grave markers themselves.

The assistance of your local Greening Australia, Conservation Volunteers or other Landcare or green group can often be enlisted to assist with identification, care and control.

The Conservation Management Plan can pull all this together in an orderly fashion, and ensure thorough documentation and conservation is carried out for the benefit of the community, families, tourists, visitors and property managers. *Patsy Moppett*

Food for thought ..... Editor's note

Having touched on heritage listing in a previous issue of *Heritage*, it is worth considering further when a heritage listing may be too hastily applied.
Industrial heritage, like any heritage sites, are an important part of our built environment and landscape. They provide tangible and intangible links to our past and can have great potential to play significant roles in the future of our towns and rural environments.
Industrial remains can include dramatic buildings, landscapes and precincts which can give character to our environments. If adaptive reuse is an option for the place, it can contribute to the building of social and cultural capital, environmental sustainability and urban regeneration.

The problem for small isolated rural communities is that of where are the investors (both government and private sector) who will invest in reuse projects for large scale industrial sites? Opportunities for reuse of these sites is hampered as industrial practices and areas continue to change.
No one would deny that the remains of industrial complexes demonstrate industrial cultures of historical, technological, social, architectural or scientific value. They link the present world to the work of the past, recalling the industrial processes and social structures and the work of those who laboured in such places. Industrial sites may be held dear by the community in which they are located, or dismissed as unsightly signs of dilapidation and decay. Their history and significance can continue to be recorded on an inventory sheet indefinitely.
Industrial activities and processes undergo constant change and development, so the history of industrial sites is often one of continual change and adaptation. Changes in products and technology mean that it is not easy to keep using purpose built industrial places for their original function. Adaptive reuse of places that have been heritage listed through Burra Charter principles could convert a site to another use. Its reuse can provide understanding and interpretation of the history of the place, and provide another layer in its history.
It is not always possible to find a long term reuse that is financially viable and appropriate to the heritage context, when an industrial site is heritage listed. Abandoned (if they are really abandoned) or even simply vacant buildings are subject to decay and vandalism, and can be subject to contamination, outdated infrastructure and regional isolation. All of which contribute to discourage investors. Such conditions will even preclude demolition on economic grounds. Vacant, unused industrial sites, particularly in the vicinity of urban areas, will contribute to loss in property value, loss of jobs and tax revenue, a threat to public health and the environment, and potential liability for contamination issues. We should not be too

quick to apply a heritage listing to an industrial site when its industrial purpose is simply in a state of flux.
To propose listing of an industrial site may assume that the industrial site is abandoned with no potential for rejuvenation as an industry. However, the landowner may have long term plans as yet not revealed.
Heritage places in rural areas and urban redevelopment zones are at the greatest risk, and when private owners are faced with heritage listing and the associated costs the reactions are frequently negative, which often explains unauthorized building demolitions. One of the most problematic reasons for loss of heritage also arises from demolition by neglect in rural areas and communities.

Council would always like to see a building use recommenced with an employment generating facility to aid with growth and development of the town, in conjunction with associated existing and proposed freight/infrastructure development. To add a heritage "burden" to a site may be inappropriate on an economic basis, the economics of the town being significant to its future.
Council may not be in a position to offer incentives to support investment on a heritage basis at the level of support which would be required to redevelop the site. It is still potentially a functional site, capable of update and rejuvenation as a fully operational industrial site. To heritage list a building or site may suggest that it has no further purpose in its original function, and Council should not pre-empt abandonment through heritage listing of the site. Although listing is not specifically advised against, and heritage listing is often seen as the preferred way to preserve industrial heritage, we should not be too hasty in establishing a listing due to the economic implications. Economic incentives may be more appropriate in order to allow the industry to continue.
Having said that, an inventory sheet should still be maintained for the site, and be revised with accurate information to reflect the changing site circumstances. It should be regularly reviewed and updated, with the history of the construction and occupation of the site being further investigated. *Patsy Moppett*

Santa Maria Convent, Lady of the Nativity Church, Lawson

This site on the Great Western Highway at Lawson comprises a complex of buildings with a significant history of a multitude of uses over time. Currently the site includes the Our Lady of the Nativity Church, school and presbytery, and the Santa Maria Convent and

Conference Centre. It is set in attractive gardens off the edge of the highway, still retaining an ability to be a place of peace and solitude.

Our Lady of the Nativity Church

School

"Dalmeny" cottage was erected in the late 1880s by John & Hannah Wheeler. In 1919 it was loaned by the Wheelers as a home to the Red Cross Society for military nurses and influenza victims. In 1920 it was bought by the firm Farmer & Co as a holiday centre for its female shop assistants until 1928. The new owner, Richard Meagher, gave the building to the Good Samaritan Sisters in 1929.

The Good Samaritan Sisters had arrived in Lawson in 1919, residing at "Cabra" a dwelling on the highway near Ridge Street, adjacent to the original Our Lady Help of Christians Church (Lawson Catholic Church). Upon the establishment of the new Church of Our Lady of the Nativity on its current site, the sisters were asked to staff a school and commence a girls' boarding school at "Dalmeny". The Ridge Street weatherboard church was dismantled and transferred behind "Dalmeny" and the new church, and used as a library for the school. The boarding school was named "Santa Maria" Good Samaritan Convent Boarding School for Girls, with accommodation on the western side of 'Dalmeny". The boarding school operated for 42 years, closing its doors in 1981. The school premises was then used for school and youth camps, retreats and prayer groups. Holiday accommodation for disabled persons commenced in 1983 in the convent, a new wing was added in 1995, and continued until 2002. A sensory garden was established on the slopes behind the convent, giving inmates opportunity for peace and solitude. The Santa Maria Conference Centre opened in 2003 and continues today, with a number of fibro and portable shed buildings associated with the centre included in the complex. A small chapel also now graces the rear garden. The Santa Maria Convent is an important Victorian Regency style residence which survives in a fairly intact condition with some of its original gardens.

The stone cottage known as "Durham Lodge" was built about 1900 as a country retreat, "Yarrowee", by the prominent journalist Watkin Wynne. Wynne revived the ailing Sydney Daily Telegraph in 1879, continuing his association with the paper until his death in 1921. He was also a prominent Freemason. He sold the premises to Richard Meagher in 1920, who renamed the residence. Meagher had bought the premises as a retreat for his sick wife. After her death in 1924, there being no children of the marriage and as a memorial to his wife, he gave "Durham Lodge" to the Catholic Church, which became the presbytery. The Presbytery is a substantial Federation bungalow style residence in a prominent position.

Durham Lodge

Dalmeny

School bell & sensory garden gate

Quiet corner

The new brick Our Lady of the Nativity Church was built by Meagher in 1929, and he also financed the move of the Ridge Street church to the site. The old Our Lady of the Nativity Church became a parish school, with boarders until 1979. The new Our Lady of the Nativity Church is a fine Inter-War Catholic Church featuring sandstone detailing and statuary in the north gable. A brick annex was built off the side of the church building in 1965, incorporating offices, sacristy, meeting room and amenities.

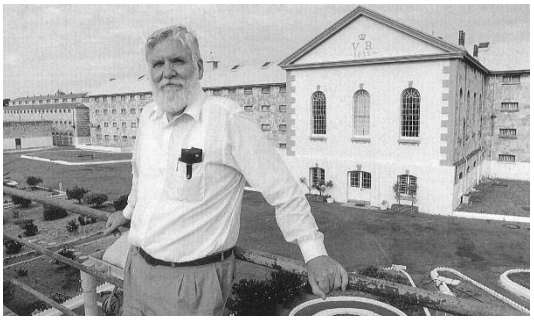
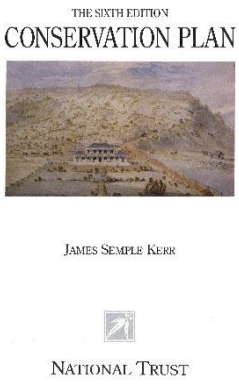
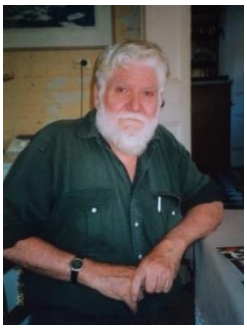
Santa Maria Convent and Durham Lodge, NSW Heritage Inventory Sheet

James Semple Kerr (6 July 1932 - 15 October 2014)

The Sydney Morning Herald stated on 22 November 2014 that James Semple Kerr was "an innovative conservator who strove to connect the past with the future…….. [his] legacy is worldwide".
James Semple Kerr passed away on 15 October 2014. He was an architectural historian and heritage practitioner in Australia, who was an early member of Australia ICOMOS, being a major contributor to the drafting of the Burra Charter, and developing standards for conservation practice such as conservation management plans. His publication *Conservation Plan: A guide to the preparation of conservation plans for places of European cultural significance (1982)* has guided building conservation in Australia and around the world. The SMH added that *Conservation Plan* "…..showed a generation of people how to read the fabric of historic buildings, and to use that understanding to inform decisions not only about what was important, but how best to change it….". The







publication was in its 13th Edition at his death.
His works were influenced by his studies in London with architectural historian Sir Nikolaus Pevsner, and by his wife, historian Joan Kerr (nee Lyndon), an expert in her own right. He was an established writer and publisher, photographer and draftsman. He documented the many sites that he studied in intricate detail, and had a wicked and irreverent sense of humour.

The Conservation Plan

"At its simplest a conservation plan is a document which sets out what is significant in a place and, consequently, what policies are appropriate to enable that significance to be retained in its future use and development. For most places it deals with the management of change."
The document sets out how to go about understanding the heritage place, what is cultural significance and how to gather and document evidence, how to co-ordinate and analyze that evidence, and assessing cultural significance. It sets out the information needed for policy development, actually developing the policy, its flexibility and use, and maintenance and supervision of the heritage works.
The Glossary deals with issues and questions that have been brought up by readers over recent years, and is intended to aid clear thinking. These issues include agreements, boundaries, confidentiality, charters, copyright, curtilage, fabric, facades, finding, gardens and landscapes, maintenance and preservation, reconstruction and restoration, setting and vulnerability.
In the Appendices Kerr documents detail relating to several projects in which he was involved such as Goulburn Correctional Centre, Sydney Opera House and Sydney Observatory.

Legacy

In addition to *Conservation Plan* his final legacy was to catalogue both his and his wife's archives as an important record of Australian heritage and a period of creative innovation in heritage thinking.

The Technical Side

Storm damage and repair

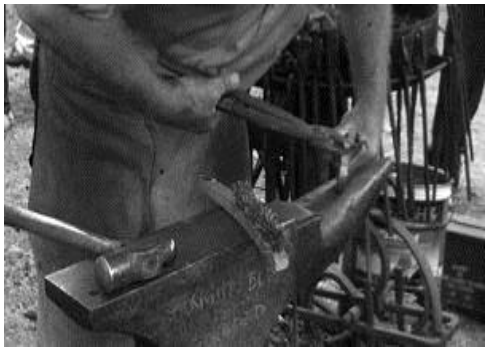
Every year natural disasters such as storms, earthquakes and other extreme weather conditions cause extensive and costly damage to historic buildings and structures, landscapes and places of heritage significance. Too often the urgency to repair such

damage due to public health and safety leads to further loss of building materials, roofs and other architectural features through removal of material and replacement with inappropriate materials.
Conservation of heritage places under the Burra Charter is generally a process of caring for heritage properties through maintenance, preservation, restoration, reconstruction or adaptation. Although approaches can vary the overall aim is to protect the heritage values of the property.
The Burra Charter states that it is acceptable conservation methodology and reconstruction is appropriate "where a place is incomplete through damage or alteration and where it is necessary for its survival, or where it reveals the cultural significance of the place as a whole".
When storm damaged materials are replaced with dissimilar materials, it can often decrease some of the physical heritage significance of a place. Reconstruction projects are encouraged to reproduce the materials that existed in the building or place.
Heritage professionals and experts will always encourage the retention of original fabric of a place and replacement with similar materials in order to complement and enhance the structure as a whole.
It is imperative during and after a storm to limit damage to interiors and to secure the building from loss of important architectural elements or features, with damaged elements being collected for repair or reuse.

Earthquake damage

Christchurch Cathedral

Although experts will call for repair of storm damage as quickly as possible following storm damage, this is not always possible. Interim protection and security measures are usually required to prevent further loss and/or damage, often whilst insurance claims are processed, Council applications made, funding sources, tradesman sought etc.



Blacksmithing

Dry stone walling

It is usually recommended to place the works into the hands of a professional, obtaining a written scope of works and schedule of conservation measures before taking on a

contract. A Conservation Management Plan may already existing under which emergency works can be carried out. Alternatively a new CMP may be required. Opportunities for recovery funding should be investigated.
General principles include:

- Wherever possible the original materials/elements should be retained, repaired and reused.
- Where new material is necessary, the replacement materials should match the original as close as possible.
- Replacement of traditional details should be of a typical or sympathetic form, suited to the original period of construction.
- Where entire replacement is required, an attempt should be made to retain samples of the original fabric within the structure of the place.
- Seek expert advice in the preparation of documentation and assessment.
- An integral part of the repair of traditional structures is the sourcing of traditional trades, techniques and skills.
- Repair should be carried out in a manner that does not detract from the cultural significance of the place.
- Ensure ongoing monitoring and maintenance after repair.
- Establish a list of emergency contacts.

Patsy Moppett

Community events & updates

State Heritage Register

The Heritage Council of NSW has advertised its intention to consider whether to recommend the places below for listing on the State Heritage Register in acknowledgement of their heritage significance.

Cox's Road (1814-15) and Early Deviations (1820s), including the following six separate precincts:

- Mount York, Cox's Pass Precinct, Mount York
- Sodwalls, Fish River Descent Precinct, Sodwalls
- Woodford, Old Bathurst Road Precinct, Woodford
- Linden Precinct, Linden
- Woodford with inappropriate, Appian Way Precinct, Woodford
- Clarence Hilly Range, Mount Blaxland Precinct, Hartley

Mt York/Woodford/Mt Blaxland Precincts

Written submissions on the abovementioned listing are invited from any interested person by 31 January 2015. Enquiries should be directed to Dr Siobhan Lavelle OAM, on (02) 9873 8546 or siobhan.lavelle@environment.nsw.gov.au

Paragon Café, Katoomba

Written submissions on the abovementioned listing are invited from any interested person by 31 January 2015. Enquiries should be directed to Gary Escourt, on (02) 9873 6546 or gary.escourt@environment.nsw.gov.au

Further details on the nominated places can be viewed at:
www.environment.nsw.gov.au/heritageapp/NominationsofStateHeritageRegister.aspx
Please direct submissions to: Heritage Council of NSW, Locked Bag 5020, PARRAMATTA NSW 2124 or heritage@heritage.nsw.gov.au

Succession Planning

Opportunities exist for organisations to find out the many ways to make their job easier and more effective and ensure their volunteers get the most out of their roles. So why does succession planning seem so hard? Why do we still fail to fill positions on committees and a handful of “old faithfuls” carry on the work of many.

On 13 May 2013 the Minister for Citizenship and Communities, The Hon. Victor Dominello MP, released a Statement of seven Principles for the Recognition of Volunteers. Organisations that adopted the principles would be sending out a clear signal to current and potential volunteers that their contributions are valued. (see www.volunteering.nsw.gov.au). Statistics show that 95% of Australia’s not for profit organisations are run by volunteers. The NSW Department of Environment and Community’s web site provides much information in regard to working with corporations, supporting volunteers, running an organisation, and promoting an organisation.
BMACHO invites you to a **Succession Planning Workshop** on Saturday 21 February 2015 from 2pm to 4.30pm ta the City of Greater Lithgow Mining Museum, State Mine Gully Road (off Atkinson Street), Lithgow.
The speakers will be:

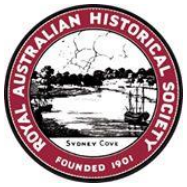
- Emeritus Professor David Carment AM, Past President of the Royal Australian Historical Society, current RAHS Councillor and author.

- Ray Christison, President of the City of Greater Lithgow Mining Museum, Consultant in Cultural Heritage Management and author.

Both David and Ray will speak about their failures and successes and there will be question time after each speaker.
Other attendees include Lynn Collins, Museums and Galleries Advisor for Blue Mountains and Lithgow City Councils, and Tamara Lavrencic, a Museums & Galleries of NSW senior staff member.
Up to three (3) members are invited to attend from each society/organisation/museum.
Please RSVP, for catering purposes by 21 January 2015, to Jan Koperberg (02) 4751 5834 or by emailing committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com

RAHS, Western Crossings Committee

Dr Anne-Maree Whitacker, Chair of the Western Crossings Committee of the Royal Australian Historical Society, made a presentation to their Committee on 24 November 2014 in regard to the completion of works by the Committee to date.



She advised that the Committee was established by the RAHS in 2010 at the suggestion of then President Dr R Ian Jack, to bring together everyone planning activities for 2013-2015 to mark the bicentenaries of Blaxland, Lawson & Wentworth's "first" crossing of the Blue Mountains, George Evans' survey of a western route, William Cox's western road and the founding of Bathurst.
The Committee was not set up to organize events or even to direct the activities of groups and councils. Its primary role was to facilitate networking and linkages and in this it was extremely successful.
"The exchange of information at Western Crossings meetings enabled groups to plan complementary rather than clashing activities. This RAHS role was publically acknowledged on many occasions including the bicentenary launch by the Governor at Echo Point in February 2013 and the civic event at Mount York in May 2013. The Bicentenary website home page is introduced by a message from the RAHS President – http://www.hyperhub.com.au/forto/Crossings_BiCentenary/ "
A grant of $80,000 was achieved which the RAHS partly distributed to community events and partly committed to RAHS legacy projects.
"These RAHS legacy projects were:

- Button badges http://www.rahs.org.au/western-crossings/community-initiatives/
  14,000 badges distributed to schools in Blue Mountains and Emu Plains
- Frank Walker Western Crossings Website http://www.rahs.org.au/western-crossings/
  300 historic photos and six rare publications from RAHS library collection made readily available on the internet, establishing a precedent for further digitisation
- Monument Restoration http://www.rahs.org.au/western-crossings/monuments/
  Four historical monuments in Penrith and Blue Mountains LGAs (at South Creek, Glenbrook, Springwood and Blackheath) restored by qualified heritage stonemasons
- *History* magazine special edition http://www.rahs.org.au/western-crossings/publications/
  Reports on Bicentenary events and funded projects in full colour souvenir issue (including message from Premier)

The Western Crossings Committee built up a list of nearly 150 email contacts who were notified of both meetings and news between meetings.

The networking at Western Crossings meetings also benefited the RAHS when it came to organising the 2013 conference in Katoomba. Welcome to Country, conference satchels, the Friday welcome function, courtesy bus, raffle prizes, walking tours, grants presentation and much more were the outcome of the close linkages made with local groups, businesses and Blue Mountains MP Roza Sage. ”

“The 2013 Blue Mountains Lithgow and Oberon Tourism Awards included an Award of Excellence to the RAHS for its contribution to the Blue Mountains Crossing Bicentenary. Individual awards were also made to RAHS Councillors Emeritus Professor David Carment AM, Dr Anne-Maree Whitaker and Dr Siobhan Lavelle OAM.

The 2014 National Trust Heritage Awards recognised the RAHS Western Crossings Project, which had grown out of the Western Crossings Committee and been funded by the resulting Premier’s grant, as the winner of the Education and Interpretation, Community/Individual category. This was the first time the RAHS has won a National Trust Heritage Award which represents recognition of excellence in the heritage sector throughout New South Wales.

The Western Crossings Committee has greatly enhanced the reputation of the RAHS in regional NSW and within the heritage sector for virtually no cost and no imposition on staff. Thanks are due to the voluntary work of councillors past and present for this extraordinary and highly commendable achievement.” *Patsy Moppett*

Adapted from a presentation to the RAHS Committee on 24 November 2014 by Dr Anne-Maree Whitaker

National Trust Heritage Festival 2015

The National Trust Heritage Festival will take place from 11 April to 26 May 2015, celebrating 35 years as the longest running community festival.

The theme for 2015 is “Conflict and Passion” – those having shaped who we are and helped a new multicultural nation evolve. From our indigenous history to the centenary of WW1, the 2015 National Trust Heritage Festival will explore the human side of war, rebellion, sacrifice and endurance, and the extraordinary stories of courage and compassion that come from the horror of conflict and strife.

It is free to register a heritage related event for the festival and this can be done on-line or by contacting the National Trust. The printed guide will be distributed to libraries, councils, tourist information centres, event participants and to all NT members. The Festival provides free publicity to encourage people to attend the events and to give greater exposure to participants. See www.nationaltrust.org.au

Lithgow Local Studies are planning an event and are currently seeking speakers. Contact Kay Shirt at the Lithgow Library Learning Centre, Ph: 02 6352 9100.

Enlightened Lithgow

In the year just past, the Council of the City of Lithgow wrote some six hundred heritage properties into the heritage listings in its Local Environment Plan. This volume of listings provides a measure of the extraordinary early European and Aboriginal heritage evident in close proximity to this city of some ten thousand people that is located less than two hours drive from Sydney.

Many would recall Lithgow as it's old self, a mining and manufacturing city famous for producing Australia's first iron and steel (much of the Sydney harbour bridge is made of Lithgow steel) Lithgow pottery, heaps of coal . Today it's a far cry from those days, whilst still heavily reliant on mining in the immediate area, the town is now a regular winner of Tidy Town awards, the air is 'Blue Mountains pure' and the town is progressively seeing its future as a tourist mecca. One element of its tourism potential is its wealth of early European heritage properties. Unlike Sydney, where subsequent development saw the destruction of much of the old, the inns and rural houses that were built in Lithgow and the Hartley Valley immediately to its south saw no destructive development and survive to this day.
The most notable early buildings in the area are Moyne Farm 1822, Collits Inn 1823 and Cooerwull House built by Andrew Brown on his 1824 grant of land in the Lithgow Valley.

Moyne

Collits Inn

These buildings are the first, second and third oldest buildings built west of the mountains. In addition, the area boasts some of the best remnant elements of Cox's 1814 road through the Hartley Valley and a wealth of road works culverts, bridge work and a viaduct dating from Mitchell's 1832 upgrade of the Bathurst Road. It also has remnants of three convict stockades, several graveyards tucked away in isolated settings with headstones dating back to the 1830s, the boundary markers of some of the earliest land grants west of the mountains and a host of buildings dating from 1831 that served as inns servicing travellers on Mitchell's Bathurst Road. On top of all this wealth of pre 1850 heritage there is a potpourri of industrial and agricultural built heritage that ranges from Victorian farm buildings to abandoned early mining and industrial machinery.
Whilst Moyne farm and its private graveyard are not accessible to the public, Collits Inn in Hartley Vale is again open to the public, being operated as a restaurant. Cooerwull House, still home to the descendants of its builder, is to be open to the public this year for one day during the 2015 National Trust Heritage Festival.

Graves at Moyne

Cooerwull House c.1880

This jewel in the Lithgow heritage treasury is a most remarkable series of sandstone buildings, the erection of which commenced in 1824. The builder Andrew Brown, a Scottish immigrant, settled in the Lithgow valley on a grant of 200 acres that today is part of West Lithgow. His original simple cottage, built in the 1820's, remains as the western rooms of Cooerwull House, the home of impressive proportions he created with an extension he undertook in the 1830's. Following completion of the house Brown went on to build six other stone buildings to complete the cluster of pre 1850 buildings that we see today. A separate kitchen building, a barn, stables, shearing shed, equipment storage shed, all of a consistent architectural style, creates a stunning building cluster. The remains of a garden bathhouse, fed by a continuous flow of water channelled from nearby Farmers Creek and a Victorian heated glasshouse add further interest to the site. The buildings' original shingles, over-laid with corrugated iron more than a century ago, the tight square cut flagging of courtyards and items of Victorian farm equipment stored in the sheds are just added detail that make access to this set of extraordinary buildings an inspiring heritage experience.
For those interested in joining the Lithgow branch of the National Trust for an opportunity to inspect these buildings and to hear commentary by Dr Ian Jack, who has a deep knowledge of Brown and his accomplishments, call 1300 760 276 to book your attendance. The open day will be held on Saturday 18th April commencing at 10 am.

Ramsay Moodie, Honorary Treasurer, National Trust Lithgow Branch

Former Station Master's Residence, Lawson

An update with regard to this premises – it has been painted!!! BMACHO Secretary,Jan Koperberg, reports that further works have been carried out on this building. The building was painted with a grey undercoat and then the finishing colour of a red/orange colour. The lean-to on the side has been repaired, the windows have been boarded up and there is a concrete path at the back of the building (facing Loftus Street). A security guard mans the premises, and was very interested in Jan's information on the history of the building when she took the following photos. He found it hard to believe the building was built in 1896! There are a number of groups interested in using the building as their home base and the railway authority will be advised of these.

Lawson residence November 29, 2014

Further advice now received says that the cottage has been integrated into the Lawson Depot complex as part of its future operations; the cottage cannot be opened up to the general public as it is not currently habitable together with the operational nature of the Depot. The cottage has, however, had an external makeover (painting, roof tiling) to make the structure safe, and a general makeover.
Sydney Trains will be carrying out an assessment to determine the building condition. It is anticipated that a contractor will be engaged for this purpose for Lawson (and other locations) during February 2015, to be completed by mid to late 2015.

Whether or not the building could be used for adaptive re-use will depend upon what further works are required, together with the costs of those works and any restrictions from heritage and Depot activities. *Jan Koperberg*

NSW, History Week 2015

History Week will be celebrated this year from 5-13 September, with a theme of *"War, Nationalism and Identity"*.

History Week was initiated by the History Council of NSW in 1997 to showcase the rich, diverse history being produced by organisations and individuals across the state. With over 100 events across NSW History Week is about celebrating the best in community and professional history, highlighting its role in our cultural life and inviting people to get involved.

The History Council advises that it is often argued that the Australian was born of war, on the slopes of Gallipoli to be precise. But historians have also argued that the cost of the war was so great that the country was left internally divided, a generation of men was lost on the battlefields of the Western Front and the economy was left shattered. By 1919 Australia was a broken nation.

The Second World War was then seen as a nation building exercise, especially in the dark days of late 1941, early 1942, when invasion seemed imminent and political leaders argued that Australia's capacity for resistance would be a measure of the strength of nationhood. But World War II proved less costly both in economic and human terms, and this time the country was not left divided by sectarian or political issues. In 1945 Australia was better prepared for growth and prosperity than at any time in its history.

How then does war shape ideas of nation and history? Is baptism on the battlefield a prerequisite of nationhood and a sense of national identity? What are the roles of ideas and political movements in creating and shaping nation states? In 2015 the theme of History Week will focus on the history of nation building, nationalism and national identity as the products of both peaceful and violent processes, focusing on generals and politicians, constitution makers and revolutionaries.

It should be noted that in order to host events under the History Week banner your organisation must be a member of the History Council of NSW. For further information contact www.historycouncilnsw.org.au

Engineering Feat, Katoomba – the Bleichert Ropeway

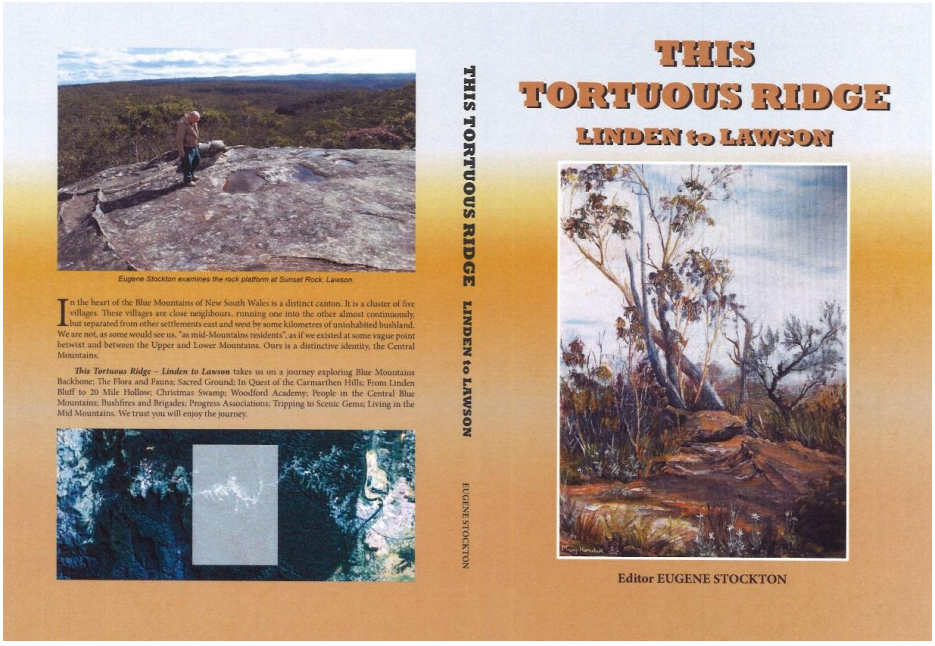
In 1885 an aerial ropeway was constructed to transport mined oil shale across the Jamison Valley. It collapsed after only six months.

Earlier this year the Blue Mountains World Heritage Institute, UNSW, Scenic World, NPWS and experienced bushwalkers conducted a field survey of the ropeway's remaining heritage items in the valley.

The Institute invite you to attend Scenic World, 1 Violet Street, Katoomba on Thursday 12 February 2015 from 5-7pm, to learn about this fascinating and hidden history of Katoomba. They now have a complete and accurate record of what remains from the ropeway, and have produced a report highlighting its cultural significance and recommendations for its conservation. They have also produced a computer simulation of the ropeway to illustrate its operation and how it failed.
Register by contacting Annabel Murray at a.murray@bmwhi.org.au RSVP by 2 February 2015.

Book Review: This Tortuous Ridge – Linden to Lawson

This book takes us on a journey through a cluster of five villages along the Blue Mountains ridge. The villages are close neighbours, running one into the other almost continuously, but separated from other settlements to the east and west by uninhabited bushland. Locals know it as the Central Blue Mountains, between the Upper and Lower regions.
Skillfully edited by Eugene Stockton, the book was launched by the Blue Mountain Education and Research Trust in November 2014, introduced by Grace Karskens, author of *The Colony – A History of Early Sydney.*
The book tells us that the earliest visitor to the region was William Dawes in 1789 when he reached the Lawson ridge, and gives an overview of the geological formations across the Blue Mountains, showing a much weathered landscape.
Gil Jones then takes us through the topography examining bedrock, the dissected sandstone plateau that stretches north from the Great Western Highway, and places where the rock profile can be readily seen.
Chris Whiteman then hones in on the flora of the Central Blue Mountains, highlighting detail that for early travellers may have gone unnoticed. The area contains many rare and endangered plant species, although botanists have been recording these since early settlement. He examines the various ecological communities including heath, cliff face, swamp and lagoon, woodland and communities, open forest, rainforest, riparian and urban, illustrating them with a number of clear and colourful photographs.
Chris goes on to discover the fauna of the area and those most common in each of the same ecological communities. Once again the section is clearly illustrated with a variety of birds and other creatures, and concludes with advice for maintaining a wildlife friendly backyard.
Eugene Stockton then elaborates on the Aboriginal domain, and presents evidence of Aboriginal occupation of the area through rock engravings and stone arrangements.
John Low takes us along with William Dawes and that journey in 1789, when he ventured west of the Nepean River only to be stopped in the vicinity of the Lawson ridge. From Dawes own map compiled in 1891 and other sources, Low gives an account of Dawes' experience, the conditions and landscape features that they experienced, those who travelled with him, and the early routes explored at the time.
John Merriman then takes us along the early western road through the Central area as it was from Cox's construction in 1814 to today in 2014. This explores the significant Woodford and Linden sections of the road where features of construction can still be seen. He covers the works deviations by Mitchell and Bull, looking at Caley's Repulse, convict retaining walls at Woodford, and the various changes in the construction and route of the highway as we see it today.



Eugene Stockton leads us back to ground zero with a walk through Christmas Swamp! This was one of several hanging swamps in the vicinity of Lawson, and Eugene details a number of inns and buildings in the vicinity and where the swamp was mentioned in literature over time.

Elizabeth Burgess and Ken Goodlet describe the history of Woodford Academy and its location along the 1830s road, and through to its significance and use today.

Ken Goodlet then gives us an overview of some of the people of the Central Blue Mountains. He commences with the Aboriginal custodians and the first colonial settlers, and then the tourists of the late 19th and early 20th century, and through to the growth of commuter travel and population growth. He looks at the cultural buildings and homes, memorials, churches and meeting places, and heritage streetscapes and landscapes.

Ken Goodlet goes on to examine the brigades and bushfires of the area, and the fire threat that is a constant for residents of the Central and indeed the wider Blue Mountains. Ken also looks at the various community associations and progress associations along the way who have been so active in achieving recognition for heritage places and people such as the Hazelbrook murals and the naming of the highway bridges.

Julie Stockton treats us to an account of the "scenic gems" to be found in the Central Blue Mountains, such as water falls and walks in the mountain air, and the way that early settlers appreciated the landscape in pools and rainforest trails and other visitor attractions designed for a healthy lifestyle.

Jim Tulip sums up our experiences with a look at living in the Mid Mountains today, and the various experiences of memory and cultural appreciation available to residents.

A list of local amenities is included at the end of the text including bushwalks, churches, community groups, libraries, schools, parks and sporting clubs.

The book presents a very thorough and complete review of the locality, in "living colour", varying from overviews to details of every aspect imaginable. The contributors have painted a picture of a place that is environmentally and culturally special to those who reside there and a place which can provide some very special experiences to both travellers and visitors.

Patsy Moppett

Some glowing comments on the publication have been offered by others as follows:

"The Central Blue Mountains can be our point of reference, but the fabric of which it is a part is as rich and intricate as our curiosity and imagination dare to unravel". *Gil Jones*

"The achievement of a modern stylish and well landscaped four lane highway (The Great Western Highway) is a triumph. It is an event of Australian significance and importance. The road itself tells a story worth the telling". *Jim Tulip*

"Nevertheless, the fact that there have not been and are unlikely to be large towns in the Central Mountains and they are pockets of settlement linked along a narrow ridge means that a discrete sense of identity exists in each town, even in the case of Hazelbrook and Woodford, which have shared so many similar features and facilities and have always been a continuum on the narrow ridge*".* *Ken Goodlet*

The title of this handsome, multi-authored (10 of them), book is attractive but is it accurate? The Editor himself wrote in the Introduction "In the heart of the Blue Mountains of New South Wales is a distinct canton. It is a cluster of five villages." So that means Bullaburra - Lawson - Hazelbrook - Woodford - Linden hence the title should have been Linden to Bullaburra. Dare one suggest that this might have been intentional so as to promote the 'home' village of Lawson? Poor Bullaburra missed out again by being omitted from the collection of photographs of village signs, and indeed it seems to have been disregarded by most of the authors!

Whether this section of the mountains be called the Central Blue Mountains or more commonly the "Mid Blue Mountains" or its contraction the "Mid Mountains" was raised at the launch of this book on 30 November 2014 with the show of hands favouring the use of 'Central' - as does the editor. But there is a considerable amount of published material, and formal names of organisations to overcome to get that nomenclature change accepted.

The publication brings together summaries of previously published material and that these accounts are informative and clear.

Chris Whiteman contributed on the flora and fauna of the area, respectively. His account of the flora gives information that is well presented and his use of the commonly adopted Specht system of plant communities is clear and informative for the non-specialist. The many photographs will be welcomed by newcomers to the area but what a pity that there are so few photographs of the rare plants that are mentioned, and that the colour rendition of both *Grevillea sericea* and the 'Lawson Giant' is rather too mauve. Help from a botanist with proof reading would have been beneficial as there are several spelling and botanical nomenclature errors and the photograph labelled *Isopogon anethifolius* is actually of *Isopogon anemoniafolius*. The inclusion of the historical development of exotic plant gardens is interesting and completes this general account of the flora of the area.

An abbreviated account of his renowned archaeological history of the area has been written by Eugene Stockton, with Kelvin Knox as co-author, and in Chapter 7 Fr Stockton contributes a concise explanation of the swamp that led to the existence of Lawson. John Low has supplied background information on the 1789 Dawes expedition (Chapter 5) which is a most welcome addition to the literature on the Blue Mountains. Also pleasing to find is the comprehensive description of the road, its method of construction and the condition of its surface as felt by travellers that has been written by John Merriman (Chapter 6) and as a bonus he dispels the myths surrounding features at Bulls Camp. I did feel the need of a map to assist the reader to comprehend the locations of the several road realignments that have been made over the years.

About a quarter of this book is the work of Ken Goodlet who contributed Chapters 9 (People & Buildings), 10 (Bushfires & Brigades), 11 (Progress Associations) and co-authored Chapter 8 (Woodford Academy). That significant contribution is hardly surprising for his own extensive book on part of the area was published not so long ago (*Hazelbrook and Woodford*. *A story of two Blue Mountains towns 2006).* Ken manages to make a compelling read out of the data in the rather 'dry' census publications which has resulted in an informative overview of the development of each of the five villages; and yes Bullaburra does feature!

This new book abounds with excellent photographs but I do regret that the waterfalls on pp.32 & 38 are not identified although the latter seems to me to be Terrace Falls. The maps on pp.6, 9 & 17 are uncluttered and clear so surely the cartographer(s) should have been acknowledged? In a similar vein the majority of the many historic photographs are presented without stating where they might be found; although they will be out of copyright, and the collections are credited, it is preferable that this information be more immediate and clear as has been done elsewhere in the book. On p.117 it is stated that the illustration on p.64 is from "Mary Martindale's sketchbook" without the location of that obscure item being indicated yet it was expressly given by John Low not long ago in another publication (*The Martindale Family and the Sketchbook of Mary Elizabeth Martindale*, Blue Mountains Journal 2). The purpose of most illustrations is either stated or is obvious but the photograph on p.51 has neither a date nor a location - a nice image nonetheless!
Modern photographs of village buildings etc. are scattered through the book and are going to become historic snapshots of Lawson, Hazelbrook, Woodford and to a limited extent Linden. But Bullaburra missed out again!
In summary, this is a neat and well presented book that is a credit to the publishers. It has content that will be appreciated by the general public to whom it can be thoroughly recommended. Congratulations Eugene on producing another informative book and how appropriate that it was launched on your 80th birthday!!"

BMACHO Heritage Trail - Natural Disaster Recovery Grant

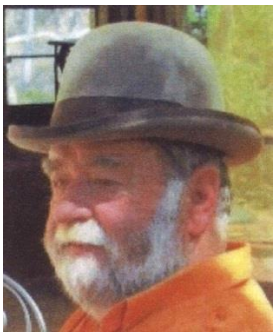
BMACHO has succeeded in obtaining funding for the proposed Greater Blue Mountains Heritage Trail project, thanks to the initiative of Secretary, Jan Koperberg!
BMACHO was one of the successful applicants for the Westpac Group Natural Disaster Recovery Grants. The grants were announced on 11 December 2014, to help fund 12 community projects, providing support and financial assistance to the Blue Mountains region. Recipients will use their funding to launch or expand programs designed to facilitate the social, economic and community recovery of disaster affected areas in the Blue Mountains. Westpac advises that recovery from a natural disaster (last summer's bushfires) takes a long time and they are proud to be able to fund the projects which they know are important to the Blue Mountains community.

Recipients include the Blue Mountains Cultural Centre, Catholic Care Social Services, Mt Victoria Public School P & C Association, Blackheath Area Neighbourhood Centre,

Springwood Neighbourhood Centre Cooperative LTD and the Holy Monastery of St George, to name a few.
BMACHO's grant of $9,000.00 will be used to help develop a brochure and website for the Greater Blue Mountains Heritage Trail, to promote the historical societies, cultural heritage organisations, museums, historic gardens and historic businesses in the Blue Mountains. Work on the project is well underway, but BMACHO cannot announce a launch date just yet due to membership losses on the Committee. *Jan Koperberg*

Richard James Woolley

The BMACHO membership sincerely regrets the passing of Committee Member Richard James Woolley, who passed away on 21 November 2014. Richard was the initiator of the proposed Greater Blue Mountains Heritage Trail and his enthusiasm for the project will be sorely missed.
The Committee's thoughts and prayers are with his family.



BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsherieteg.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Historical Society Inc; Blue Mountains World Heritage Institute; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); Mudgee Historical Society Inc; National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Restaurant, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd;
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2014-2015 (from July 2014) is: Ian Jack (vice president & acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes and Scott Pollock (web site), Patsy Moppett (***Heritage*** Newsletter editor), Dick Morony (public officer) and Suzanne Smith.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributers. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

Some History of Bullaburra

Bullaburra was the last town to be developed in the Blue Mountains, linked to the establishment of the railway. It is located some 97km from Sydney, between Lawson and Wentworth Falls. It began as a tiny settlement consisting of only a few streets on the southern side of the rail line.

Minnatonka Falls

Although the single rail track through Bullaburra was opened in 1867, the station itself did not open at the site until 1924, when the station proper was built to service the land subdivision occurring at that time. Prior to this there was no formal stopping place for the railway at Bullaburra. It is a unique station site as it was financed by a real estate firm. Sydney property developer Arthur Rickard & Co developed a local land subdivision in the vicinity and financed NSWGR to erect a brick shelter shed with awnings, to enhance land values. The Department of Railways did not actually take ownership until 1947. The Dept of Main Roads had its own rail siding, with an associated office building. This building was destroyed in the 1977 bushfires.

The town is 769m above sea level. Much of the land was first owned by Sir Henry Parkes who called it the village of Coleridge after a place in England. Arthur Rickard, land developer and auctioneer, developed a large residential subdivision of the area on three portions

owned by Parkes and applied the Aboriginal name Bullaburra, which was thought to mean "blue sky" or 'fine weather".

Railway platform

Existing railway footbridge

However, opinions vary as to the meaning of the name. It has been translated from the Aboriginal for "twin peaks" or the alternative "blue/clear skies". The twin peaks would refer to Mt Hay and Mt Banks which can be seen from the town. The word is still sounded as it originally would have been, as if from a didgeridoo. Aboriginal relics dating back to 12,000-5,000BC have been found on Kings Tableland so Bullaburra could well be one of the oldest names in Australia still retaining its original sound. The station itself was originally known as "Blue Skies".

The main railway buildings were under construction from 1924 through to 1957, being officially opened on 16th February 1925. At first it was unmanned, and the first attendant was not appointed until 1964 to sell tickets only. In travelling from Penrith in the 1950s one had to consult with the station master at Lawson on the way through, letting them know that the train had to stop at Bullaburra for you. To be collected, one had to flag the train down during the day, or light the station lamp at night to signal the driver. It remained unattended until the 1980s, and is still unmanned.

The station has an island platform accessed from an overhead steel platform, and contains a ticket machine shelter, a modern steel shelter, a 1924 brick waiting shed and the main 1957 brick station building. The buildings do not follow the standard railway building designs used in NSW during the period. A steel footbridge was constructed in 1924 giving access to railway Parade and the highway.

In-ground reservoir

Early Bullaburra residence

The railway having first opened to Wentworth Falls in 1867, was extended to Mt Victoria in 1868. Water supply was critical to steam power and a large earth dam had been built at Lawson. Due to its lack of capacity a further dam was built at Wentworth Falls in 1906. A large octagonal concrete in-ground reservoir (a break pressure tank), part of the supply system between the dams, was built in 1906 at the base of Boddington Hill at Bullaburra.

We are indebted to Una King and Adrian Paul for their thoughts and memories of Bullaburra, Una having arrived there in 1981, and Adrian having holidayed there in the early 1950s. Una tells us that when access through the mountains was still via coach or horseback, a stopping place was established in the 1830s opposite where the current railway station stands. When the railway came though Sir Henry Parkes purchased the property and built a residence there, 'Buena Vista". Parts of the building remain behind a residence in Kalinda Road. The housing area here was gazetted as the "Buena Vista" estate.
The government map of 1879 was the first of the area, which showed the land to the north of the rail line as owned by Joseph Hay. To the south most land belonged to Henry Parkes. West of Genevieve Road belonged to John Graham.
Joseph Hay lived in Hay (formerly Berg) Street, buying land to the north and south of the rail line. His property was called "Lanassa Park".

Bullaburra

The Pick of the Mountains

may become even better than Katoomba.

When Nature made Bullaburra it did a wonderful job, not only in the immediate surroundings, but of such dominating and magnificent peaks as Mount Riey and Mount King George, and others; all to be seen to the greatest advantage in the clear atmosphere which distinguishes Bullaburra.

Auction Sale

Of the First Subdivision of

Bullaburra

will be held on Easter Saturday, April 11 next, on the ground at 3 p.m.

Right at the new Bullaburra Station (recently opened), situate on the Great Western Line, between Lawson and Wentworth Falls, forty-one miles from Sydney, with an

Elevation of 2524 Feet

The key of business sites of the New Township, right opposite the station gates, on both sides of the line. Residence sites with commanding views. Garden and orchard blocks.

The opening sale of a New Township is a rare event, and presents opportunities which seldom occur.

The Vendors have secured large areas at Bullaburra, which will be gradually developed and subdivided so as to make this a model mountain resort.

Every development must add to the value of the land round the station, and this is the land that will be offered at the opening sale.

Glorious views, level building land, good soil, and all so handy to the station.

Easy terms, 5 per cent. deposit, balance, including interest, payable by instalments of 10/ per month for each £25 of purchase money. Lithos now ready.

Torrens Title

Arthur **Rickard** *& Co Ltd*

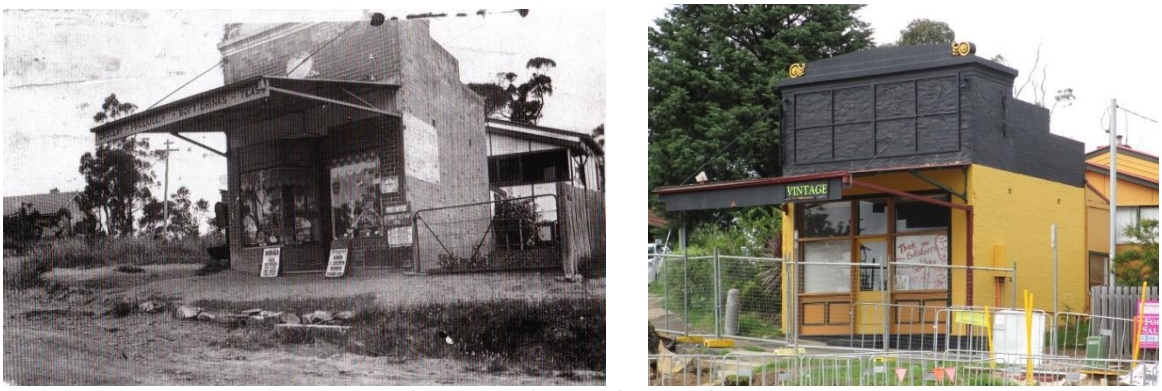
84 Pitt St

Realty Specialists

Rickard House, 84 Pitt Street, Sydney

Arthur Rickard's real estate agency advertised the land as the Lanassa Park Estate. The blocks had a 100 ft frontage and no water or sewer. A shopping centre was to be associated with the estate along with smaller blocks and a car park. None of these other features ever eventuated.
The first industry in the area was timber, cedar and hardwood. Bullaburra cedar was highly sought after. There were also rural industries such as piggeries and poultry farms.
Heather Mollenhauer lists Hay as having a property of 300 acres further along at Lawson that he named San Jose Estate, which was from the current San Jose Avenue right up to Bullaburra. Joseph's wife Mary Anne also had property, 101 acres along Honour Avenue at Lawson, called the Santa Cruz Estate.

There was a store on the main road opposite the railway station, and a roadhouse at the corner of Genevieve Road. The roadhouse was used as tea rooms from the 1930s until 1971, where a private residence now stands.
The former general store on the corner of Cooranga Street and the highway was first occupied by a Mr. Fletcher, a WW1 veteran, who died soon after taking possession. It was then owned by Mr. Wigan from 1929. Even though there was a DMR camp for workers opposite Genevieve Road in Eungella Park, the store never paid very well.
In 1939 the store was taken over by Margery Anderson, who was a community leader and Councillor. Anderson Street is named for her. Subsequent owners were Rodders and Swinbourne amongst others. The store was always the centre of the community, being the post office, grocer, newsagent, greengrocer, and general goods store. Being open from 6am to 8pm every day, one could leave a shopping list, and have the goods delivered, as was often the way in those days. This general use ceased in the 1970s, and it became a takeaway shop with a few groceries. That closed in the early 1980s. Since then it has had a number of uses including crafts, antiques, furniture, second hand goods and Porters Paints. Currently it stands vacant once again, probably due to the impact of the current highway upgrading road works.



The general store then and now

A service station was built in 1950 on the corner of Boronia Road by Arthur Denning of Lawson. The first proprietor was Ken Perkins. It sold many different brands of fuel over the years, and at one stage an unexploded WW2 cannon shell was found on site. During the 1980s it was known as the Grumbling Tum, but was closed down for a time by local health inspectors, before it then reopened. Plans to utilise it as a convenience store and car wash never eventuated. The service station was demolished in 2008. It is currently a works site for the highway roadworks contractors.
At the edge of the village area on the western side of the highway an almost bare site is located, which contains a stone rotunda which originally supported a water tank. This was the site of Cadia Park, the home of Charles Hoskins, owner of the Lithgow Steel Mill, and is marked by a boundary brick fence and mature conifers. It was originally called “Zermatt”, but about 1918 it was renamed for the source of Lithgow’s iron ore at Cadia. Hoskins had moved to Bullaburra for the sake of the health of his daughter Nellie.
The property was originally a grant to James Grieson Wilson, who built a residence on the land called Myrtlebank. When Hoskins purchased 5 acres of the property in 1913 the house was not on this portion. Myrtlebank actually burnt down in 1923. Hoskins built a residence in 1914 although Nellie died the same year. The facilities provided for Nellie included a zoo, well-kept gardens, a large brick well and an oval swimming pool. The private zoo was located between the road and the railway on a leased reserve. Hoskins purchased another 36 acres to the south.

Main highway entrance to Cadia Park

Front fence

The Hoskins family sold the property in 1921, after the steelworks moved to Port Kembla, and moved to Elizabeth Bay in 1922. The property was sold to E & E Davies, and then to Sir Arthur Rickard in 1923. However, Rickard's easy terms landed him in financial difficulties and in 1927 the property was sold to Henry Swain.

The rotunda

In 1930 the Benedictine Order bought the property from Swain and operated it as a monastery. A small cemetery was dedicated at the rear and three members of the Order were buried there, although the cemetery is no longer apparent. In 1949 the property passed to the Sisters of Saint Joseph who ran it as a holiday rest home for the Sisters of the Order. They built a further two cottages (for the chaplain and for the handyman), and the steam laundry. The tall pine trees made the place look dark and foreboding. The bells could be heard when they tolled for prayers, and the nuns worked in vegetable gardens at the rear. The fires of 1977 destroyed the original residence. Sisters from Vietnam were staying there at the time. A convent belonging to various Christian Orders (including Brothers of the Holy Family) remained in the building next door. In 2006 a family lived there and set it up as a ministry called the Father's House. Cadia proper remained in an increasingly derelict condition. Only the rotunda, the 1950s brick steam laundry and some garden remnants and garden edges remain.

Former steam laundry

Garden remnants

A Progress Association was formed in 1942, one of the founders being Margery Anderson, so the meetings were held at the store. One of their principle aims was to establish a vehicular crossing over the rail line to join north and south Bullaburra. Even today only a pedestrian crossing onto the station platform is all that has eventuated. The quest for a pedestrian crossing over the highway began in 1961. As usual it took a fatality to have it carried out, and lights were eventually installed as well. A footway is currently nearing completion over the highway.

The group obtained the land on the corner of Noble Street and the highway in 1949 and constructed a hall using Navy sheds from the depot at Kingswood. Meetings were carefully minuted and the building well managed, being used mostly by the group or its members, or as a polling place, and later the local lapidary club. The activities included games nights and dances. The Ladies Auxiliary met regularly and held bingo nights, and organized street stalls, bus trips and bushwalks for fundraising. Through grants and insurance on vandalism the building has been well maintained. At one time it had a heritage listing.

The community had a wish to establish an Anglican church on the hall site. Home services were being held at the time. By 1928 money had been raised but this was given over to Lawson and even home services ceased in 1939.

Rural fire service

Village hall

At the end of WW2 Arthur Rickard offered the land on the corner of Noble Street to provide a church, which was to be erected within 2 years. Nothing eventuated so Mr. Pressley suggested that a Uniting Church be built behind the store for the use of all denominations. This was built in the early 1950s and the Progress Association's 25th anniversary was celebrated there in 1967. It became a private residence in the 1970s.

The Bullaburra Volunteer Bushfire Brigade was formed in 1955 with 25 members. The first captain was Harry Baker. The first shed was built behind the store so meetings were held at the store. Stan Lattye provided the first tanker, and the Ladies Auxiliary undertook fundraising for equipment. A brick shed was then built at the corner of Kalinda Road in 1955-57. The present shed was built in 1977 on land donated to the brigade.

Nowadays Bullaburra is a quiet residential suburb of the mountains, with an unstaffed railway station, a railway siding, numerous parks including the Village Green, and a number of home businesses.
Bushfires swept through the area from time to time. In December 1977 the fires destroyed many homes and other buildings. This included the “lookshed” on the corner of Cooranga Street and Kalinda Road. The view from this point was said to cover from the sandhills of Kurnell to Mittagong. The amenities in Red Gum Park were also destroyed.
Natural places include Red Gum Park, Sir Henry Parkes Park, the Village Green, Minnatonka Falls, Claire’s Glen and Walkers Glen, and the nearby Blue Mountains National Park.
There used to be a pool in Redgum Park (formerly Bullaburra Park from 1925 to 1964) across Bedford Creek in the 1950s. However pollution from nearby piggeries, poultry farms and septic tanks caused it to be filled in. The park was set aside as a reserve for recreation in the original Village of Coleridge on 13 May 1879, and became a park in 1925 within the Bullaburra Estate.
Eungella Park used to have fencing, play equipment, and seats, which were removed in the 1980s. The tennis courts were replaced with a car park and the tennis shed removed to a park in Lawson.
Sir Henry Parkes Park is a memorial to the great man. A pine grove in the park was donated to the community by Mr. Swain, Forestry Commissioner in South Australia, NSW and Qld, who had retired to Bullaburra.
The Bullaburra Village Green was the result of lobbying by residents for land for community needs in 2003.

Village Green

An entrance to Red Gum Park

The removal of many of these community facilities has also removed much of the locality’s history.
Walkers Glen can be accessed off Essex Street, north of the rail line, and comprises thick dry wetland vegetation, acacia and melaluca, in a small area at the valley bottom.
Claires Glen is accessed off the Kent Street track.
A walking track was constructed through the area in 1937. NSWGR agreed to provide an electrical supply to the Blue Mountains Shire Council from the Lithgow power station and a transmission line was constructed from Blackheath to Lawson with a maintenance track. This track was promoted as a walking trail and a pamphlet produced. The surveyor was Albert Bruce, and the walk became known as Bruce Walk, along the north side of Bullaburra. After WWII the track was forgotten and subsequently the route broken up by Greaves Creek dam in 1942.
In 1980 a bushwalker Dick Rushton found the pamphlet and set about clearing the track. From Wentworth Falls to Bullaburra. He wrote a guide to this section 1983. Other walkers became interested in the track and it was again cleared in 1986 by Jim Smith and Wilf Hilder. They found many artefacts and features, including signs, shelter caves, seats and

picnic tables. The track was officially reopened from Wentworth Falls to Bullaburra in 1986, and other sections to Medlow Bath were cleared the same year. Today the track is still little known and used and does not appear on the topographic map for the area.
Notable properties include:

- Rhodda Valley.
- The former George Haining Coach House and Glencairn, 7-9 Kalinda Street: an original brick cottage with a detached kitchen and coach house, built by George Haining on land purchased from Henry Parkes, on land developed by Arthur Rickard as the Bullaburra Estate. The cottage was later sold off separately. The kitchen wing was developed as a separate cottage. The weatherboard coach house was replaced by a garage.

New highway footbridge under construction

Water reservoir

Bullaburra was first gazetted as a suburb of the Blue Mountains City Council area on 9 January 2004. The 2006 census suggests the population was some 1,236 people.

Food for thought ..... Editor's note

So what about Bullaburra!
In listening to others and after much reading about the Blue Mountains in various resources and publications I felt a sense of tenable history at Bullaburra, a sense of significant things having gone before, coveted things that were hidden and sometimes lost.
In mingling with the community through historical societies, conferences and other events I saw through others eyes a very special corner of the world. A fierce pride in their heritage and history and sense of place illustrated strongly to me that there was a fascinating story to be told.
In my reading of copious references over the years in regard to the Blue Mountains, Bullaburra has often been mentioned but only in passing. All along the mountains numerous small settlements and groups of houses, inns and stores have come and gone since the first colonial settlements, through the heady days when the goldfields were in full swing, right through until today. Bullaburra falls to the east of and below Wentworth Falls and to the immediate west of Lawson.

Track into Red Gum Park

As a historian and writer, and through my many years in local government in a planning & heritage role, I have developed an interest in the history of the mountain areas, and have always felt a need to document the information I come across, where others have not, especially in regard to heritage and history in isolated areas or areas where few tangible features remain of what and who went before.
Bullaburra caught my imagination. Bullaburra has always interested me in that there is little there, but there is evidence of what was, not all of it obvious upon driving through. Many visitors do not even realize that there was ever a village there. Although Bullaburra is given passing mentions in a few local historical works, the particular locality has never been dealt with comprehensively.
I commenced some research into the history of the place and straight away came to realize that there was more there than I first realized. Further reading suggested that Bullaburra was an area which needed exploration, and that its boundaries were not easily defined. Many

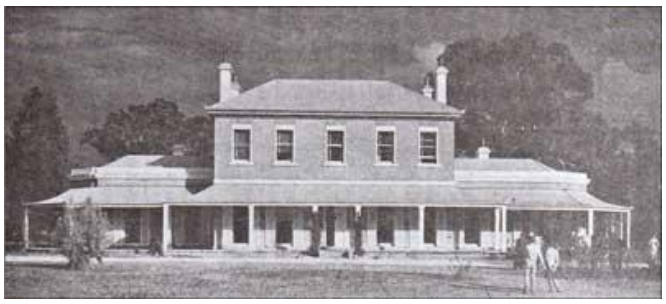
residents spend short periods there in a variety of capacities, but usually moved on to settle in the larger centres of Lawson, Katoomba and beyond.
So recently I took to my bike and spent some time cycling around the village area. The few lines I have penned in this Newsletter are the tip of the iceberg. My hope is that I spark an interest in order that someone will take on the challenge and bring Bullaburra back to life in a written work, bringing together all the various features of a history, to complement the thoughts and memories that have been previously documented by former residents and others.

"Burrundulla" Inn, Mudgee

Many will recall seeing this abandoned building a few kilometres southeast of the Mudgee township, on the corner of Spring Flat Road and the Castlereagh Highway.
The building is the former "Burrundulla" Inn. The current building is the second inn on the site, built by the Murray family during their long association with Mudgee as licencees. However an inn was present on the site as early as the 1860's, on what would have been part of George Cox's extensive property of ""Burrundulla"". The earlier building is said to have burnt down. The current building appears to be dated about the late 19th or early 20th century.
The Cox family is one of considerable historical importance in both Mulgoa and Mudgee for they pioneered both districts and contributed to their development.
William Cox (of Cox's Road fame) and his wife Rebecca arrived in Sydney in 1800, accompanied by their sons James, Charles, George and Henry. After a short stay at Pennant Hills the family settled at Windsor. George and Henry then took up land grants at Mudgee. George's "Burrundulla" was eventually inherited and managed by his son George Henry Cox from 1845.

William Cox *George Cox* *George Henry Cox*

George Henry Cox married his cousin Henrietta Jane, daughter of Henry Cox in 1853. They had five sons and seven daughters. George Henry was well respected in the wool industry and is credited in building the fine, dense and elastic qualities for Mudgee wool, winning many awards in Australia and overseas. For many years he was councilor on the Agricultural Society of NSW and president of the Sheepbreeders' Association.
He conducted a model public school at "Burrundulla" for his tenants, and his consistent principles were free trade and the abolition of state aid to religion and Church schools, proclaiming the befits of public education.
In 1864 he completed a substantial Georgian style two-storey house on "Burrundulla", designed by architect William Weaver, , which replaced the old homestead, which was probably either burnt out or flooded. It is still owned and occupied by his descendants. The ""Burrundulla"" homestead was a large, two storey brick building with a main staircase lit by stained glass window bearing the Cox crest and monogram. Its living rooms were once adorned with prints of Italian renaissance masters collected in Europe and paintings by Conrad Martens. George Henry Cox died at "Burrundulla" on November 28, 1901.



"Burrundulla" 1900

In 1993 grapes were first planted for wine making, and today an extensive vineyard exists on the land. Although the land area is much reduced from the original grant, "Burrundulla" is one of the nation's oldest pastoral properties. A new cellar door opened on the property in 2005.
Although the house was renovated in 1970, part of the ceiling collapsed in 2003 and had to be completely removed and replaced. An old boot was found above the fireplace, almost at the junction of the ceiling. There was a superstition that when the homestead was built that a boot placed in a wall, particularly a chimney wall, would keep out evil spirits.

Former "Burrundulla" Inn, Mudgee

The old inn now sits abandoned and in a state of disrepair due to time and vandalism. It is privately owned, and has been the subject of development applications for redevelopment over the last 15 years or so, none of which have eventuated.
Mr. John Broadley of the Mudgee Historical Society will address the 2015 Penrith City Council's Conference in March on the connections between Penrith and Mudgee as relates to the Cox family, and will elaborate on the history of the "Burrundulla" property and perhaps the status of the former inn.

Farm Magic

Ian Evans, OAM, PhD, advises that ABC-TV's Landline programme did a story in late 2014 about his continuing research into the influence of folk magic on life in Australia in the period before circa 1935. Ian advises that it is now clear that settlers and convicts brought ancient beliefs in evil spiritual beings with them when they came to Australia. Certain rituals involving the concealment of shoes, garments and other artefacts in building voids were thought to provide protection, as did the use of apotropaic marks to avert evil. The Landline programme had a rural emphasis but the fact was that these rituals took place throughout the Australian

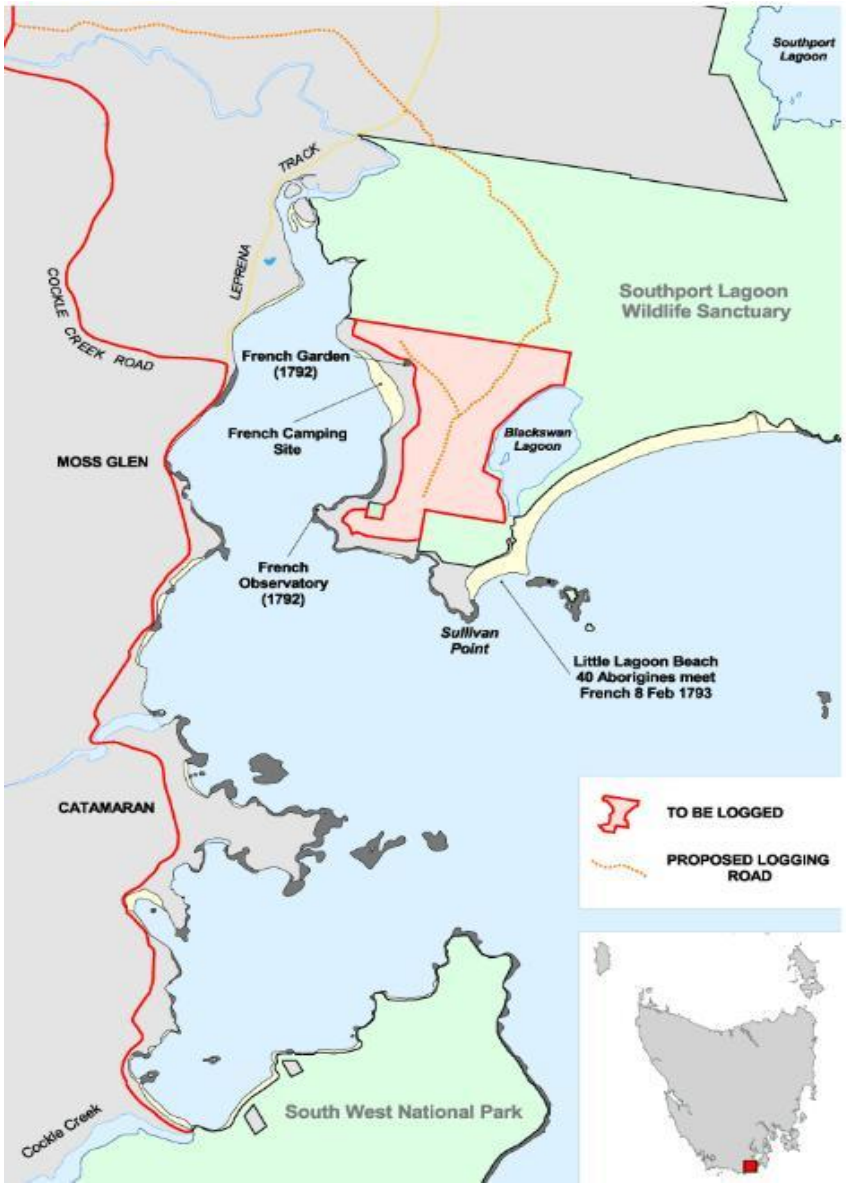
colonies. The evidence of this is slowly coming to light as buildings are being renovated and with new awareness of the material culture of folk magic in this country.
Heritage practitioners should be aware of the possibility of finding concealments or magic marks on their work on old houses and other buildings. Ian asks that he be contacted at www.oldhouses.com.au if either marks or concealments are found.
The Landline episode could be seen at
http://www.abc.net.au/landline/content/2014/s4105115.htm
As renovators are rebuilding and restoring old buildings they are finding secrets hidden from view for nearly 200 years. Fiona Breen reported that a type of folk magic was practised by some early settlers, a desperate ply, perhaps, to protect them in a strange new country where the unexpected lurked.
One such place was Woodbury House in Tasmania, which dated from the early 1800s. Objects such as old shoes, a dead cat, children's toys were found secreted away within walls of the building.
At Willow Farm in Tasmania a number of shoes were found hidden on a ledge near the chimney.
The most common location for concealments are typically around doorways, windows, in chimneys and in roof cavities. Ritual etchings too are common, such as a hexafoil at Shene, Tasmania. The etchings are another ancient practice transplanted into Australia to counter evil spiritual forces.
Ian Evans states that what made it so fascinating was that it gives us an insight into the thought processes of the people in Australia at that time, and despite their various religious persuasions, they were still obsessed with fear of death for themselves and their children and other members of their family, because they were taking precautions against evil spiritual beings who might come into the house and cause illness among their children or other members of the family.

Photographs of concealments and markings from Ian's website

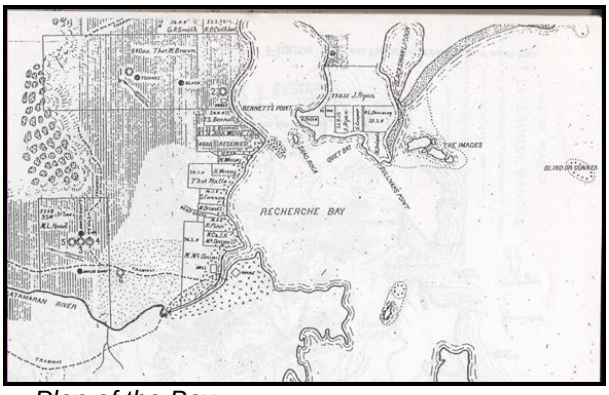
Recherche Bay Gardens

Recherche Bay is on the far southern tip of Tasmania, named for the *Recherche,* one of the ships of Rear Admiral Bruni d'Entrecasteaux, which anchored in the bay in April 1792 with the *Esperance,* following a torrid journey through strong winds and high seas across the Indian and Southern Oceans. D'Entrecasteaux himself broke a rib.
The company had been searching for the lost Frenchman la Perouse. They made a temporary camp inside the north east peninsula of the bay. The group was made up of scientists including botanists and naturalists, artists, a mineralogist, a gardener, two astronomers and a hydrographer, as well as sailors, a few soldiers but no settlers, being given instructions to explore the south coast of Australia from Cape Leeuwin, carry out scientific investigations, learn about the local Indigenous people and then come away. Whilst there they explored the coastline in a long boat, unable to fully complete a survey due to lack of water.
The camp had a bakery, blacksmith, a mess hall, garden, ship repair yards and a scientific observatory. Whilst there they collected many plant and animal, bird and geological specimens, and came to record many aspects of the Aboriginal people whom they encountered.
D'Entrecasteaux himself was much taken with the landscape, describing the perfection of

the harbour, the tall trees, green foliage, and “nature in all its vigour”.
Following ship repairs and caulking of the ships, and reprovisioning with water, firewood and fish, the ships sailed away in January 1793.
In 2003 [Senator] Bob Brown sought to find the French garden of 1792, and discovered some mossy rocks surrounding a garden area, an area of 21 feet by 27 feet (8.8m x 6.8m) divided into 4 sections! The stone “botanic garden” structure had supposedly been established by gardener Felix Delahaye as part of the d’Entrecasteaux expedition.
In April 2002 the bulldozers of a logging operation had commenced construction of a road to log the peninsular. Following extensive protests Brown secured the support of entrepreneur Dick Smith who purchased the peninsular with support from the State government and public subscriptions and gifted it to the Tasmanian Land Conservancy. So the historic landscape was rescued from destruction. Various sections of the peninsular were nominated for entry in the Tasmanian Heritage Register, which were duly registered in 2006.



Recherche Bay observatory site



Plan of the Bay

The garden was planted with onions, cress, chervil, celery, potatoes, cabbages, radishes, chicory and sorrel. It took 3 men more than 3 days to prepare the ground and sow the seed. It was intended to benefit the Aboriginal community as well as provide a future resource for mariners who might visit the area.
However, the listing has always been questioned as archaeological investigation showed that the original garden was probably a little further inland. The garden area found by Bob Brown was probably an uncompleted structure associated with the milling industry in the area about the turn of the 20th Century. The structure is still to be protected. However the location of the original French garden is yet to be finally determined.
Other particular sites part of the nomination included the burial site of gunner Boucher in the Cockle Creek area (first European burial on Tasmanian soil), a forge site at Motts Beach and the observatory site at Bennett's Point.
Heritage Agreements and Management Plans are in place to manage the various sites as long as they remain listed. Investigations across the peninsular also recorded former whaling and timber settlements.
D'Entrecasteaux 's voyage remains significant for the following reasons:

- Scientific observations and experiments carried out, including proving the science of geomagnetism;
- Meetings between the French & Aboriginal people, representing friendly exchanges, and early records of first contact;
- Associations with a number of people involved with the expedition, including d'Entrecasteaux himself, naturalist Labillardiere, scientist Rossel, gardener Delahaye, hydrographer Beautemps-Beapre and artist Piron.

Recherche Bay

Painting presentation in 2014

Brown commissioned a painting by Ian Hansen to be carried out in 2011 of the *Recherche* and *Esperance* under sail in the bay in 1793, which was presented to the Tasmanian Museum & Art Gallery in 2014.

The significance of the sites demonstrates an important episode in the early exploration, discovery and later settlement of Van Diemen's Land. The setting today has changed little from that originally viewed by the French. Many of the sites do not have tangible or physical remains, but this does not lessen their importance.

Historic Alignment Markers in the Blue Mountains

Walking around your Blue Mountains village you may have noticed a broad arrow embossed on a rusty iron plate, about 4 inches (*10 cm*) square that is set into the kerb.

Figure 1 is a photograph of one that has been polished by the shoes of numerous people as they have entered and exited through the main entrance of Gardner's Inn at Blackheath!

Figure 1. *Alignment marker on the kerb outside of the front door of Gardners Inn, Blackheath. Photo: Peter Rickwood Sept. 2005.*

What you were seeing is the top of what, in official documents, has been called both an Alignment Post[1] or an Alignment Pin[2]*, the raised Broad Arrow being on the uppermost horizontal surface. These iron markers are about 100 years old[3] and were installed by surveyors so are nothing to do with the convicts that are usually associated with the broad arrow symbol.
Sometimes a makeshift substitute for the more common embossed broad arrow was formed out of welding rods and an example is shown in Figure 2; that marker is located at Mount Victoria, on the SE corner of Station Street at the intersection with the Great Western Highway.

** To avoid nomenclature confusion I have preferred to call them Alignment Markers.*

Figure 2. *Alignment marker on the kerb of Station Street outside The Imperial Hotel, Mount Victoria. Photo: Peter Rickwood July 2011.*

Installation

The sequence of actions was:

- surveyors determined the precise positions for alignment markers,
- then cast iron markers were installed,
- and finally, if the Local Council could afford to proceed, then kerbs were formed from stone blocks laid between the markers, or more commonly concrete kerbs were cast and sometimes enclosed a marker.

Thus alignment markers were always installed in bare ground such as gravel or soil, and hence can be difficult to locate if kerbs have not been cast (e.g. Figure 3); some may even be partly concealed by grass such as along the Great Western Highway at Blackheath (Figure 4) and formerly at Wentworth Falls[4].

Superficially these markers appear to be rather small but the official description contradicts that impression:

> "ALIGNMENT OF STREETS
> 9.12 Alignment pins used for marking the alignment shall be iron castings, open box style, 4 inches x 4 inches x 18 inches (*10.2 x 10.2 x 45.7 cm*) which should be supplied by the Council, and be in readiness at time of survey. These are available at the Department of Lands as also are castings 24 inches (*61 cm*) long for use in sandy soils."[5]

Thus most of each marker is buried to ensure both stability and durability but their true size can be assessed from a photograph on the internet[6] of one that had been removed from the "WSW corner of Morven Road and Russell Road, Leura" and is claimed to weigh 12 kg. Judging by the stated length it is one of the longer ones; incidentally, a kerb has never been formed at that location!

Figure 3. *Alignment marker in gravel at the NW corner of the Oval in Wentworth Street, Blackheath. Photo: Peter Rickwood August 2010.*

Figure 4. *Alignment marker in grass alongside the Great Western Highway and opposite the north side of Prince George Street, Blackheath. Photo: Peter Rickwood January 2015.*

Re-locating alignment markers.

Alignment markers were most commonly placed at the corners of streets, not precisely at the corner but in line with the portion boundaries. Hence each corner had two such markers (Figure 5), one arm of the broad arrow being approximately parallel to the kerb and as the other is at 75º it pointed in the general direction of the portion boundary that was in the intersecting street; for the surveyor it is the point of the arrow that is the precise location marker. Thus for a cross road intersection there could be eight markers, and at a T junction usually four (Figure 5) but sometimes just two placed opposite the lot

boundaries in the side street (e.g. at Blackheath on the west side of the Great Western Highway at the intersection with Prince George Street). But markers were also installed where a road took a bend, and along some straight sections (e.g. Figure 1) between corner markers that were deemed far apart.

A decade ago, a short account was published[7] concerning the remaining alignment markers in Blackheath. The research for that article involved walking all of the streets that were drawn on the 1913 alignment plan[8] and not only trying to find those markers indicated on the plan but also checking other likely locations. Searching was also carried out along other streets that were thought to have existed pre-WWI. The outcome was that in July 2005 only 50 markers remained in Blackheath yet 256 are shown on that 1913 alignment plan as having been installed. No doubt some were lost when parts of the kerbs were repaired, or replaced, or when ramps and drains were installed at street corners. One instance is known of a marker being removed in 2010 during the widening of Wentworth Street, Blackheath and subsequently being incorporated in the new kerb!

Following the publication of that 2005 article on Blackheath, the research was extended to all of the other villages in the Blue Mountains for which alignment plans were known (and subsequently no more have been discovered). An alignment plan was usually drawn at such a scale that it covers only a few of the streets in a village, hence for some villages there are a number of different plans (e.g. Katoomba) nevertheless coverage of the older streets is usually incomplete.

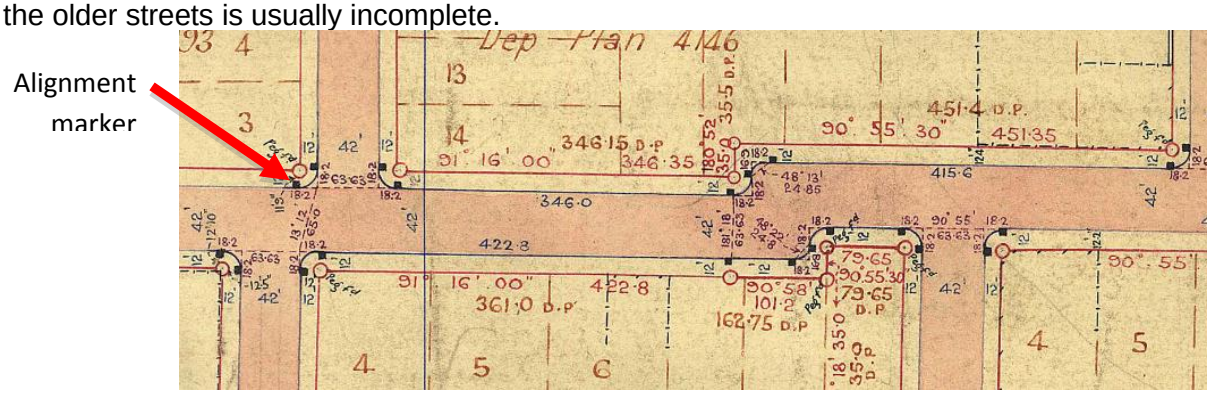

Figure 5. *Part of the alignment map of Leura[9], showing the curious misalignment of Craigend Street between Albert and Holmes Streets. On that plan Surveyor Madsen stated "Alignment Posts fixed as shown in Black ..... ⑤" and a handwritten insertion after "Posts" is "(Cast iron)".*

In 2006 no alignment plans had been located for Bullaburra, Woodford, Linden, Faulconbridge, Coomassie, Valley Heights, Warrimoo, Blaxland, Glenbrook and Lapstone so those villages were not searched, but in hindsight possibly they should have been. Thus both Mount Victoria and Medlow Bath were inspected even though no alignment plans were known; the outcome was that two alignment markers were found in Mount Victoria (e.g. Figure 2) yet the inspection of the streets in Medlow Bath revealed none.

That second phase of searching was completed in 2007 and annotated photocopies of the alignment plans were sent to Land and Property Information NSW from which their staff drew a map of each of eight villages (Mount Victoria, Blackheath, Katoomba, Leura, Wentworth Falls, Lawson, Hazelbrook and Springwood) with all of the markers then existing indicated - Figure 6 is one of these maps. Due to the scale of these maps, and the size of the circles used to indicate the location of markers, it can be difficult to ascertain the precise position of a particular marker which is why I did not call them plans.

But why go to all that bother to find the remaining alignment markers? That was best explained by the then Manager of the Cadastral Management Unit of the Department of

Lands:

> "I am using your good work to communicate to all road and construction utilities (i.e. BMCC, RTA, Sydney Water, Energy Australia, etc) the location of the surviving alignment marks. As they form essential evidence to re-establish the cadastre in these streets and they are our surveying heritage, it is paramount that all marks are preserved wherever possible and every means to protect them must be made."[10].

But why go to all that bother to find the remaining alignment markers? That was best explained by the then Manager of the Cadastral Management Unit of the Department of Lands:

> "I am using your good work to communicate to all road and construction utilities (i.e. BMCC, RTA, Sydney Water, Energy Australia, etc) the location of the surviving alignment marks. As they form essential evidence to re-establish the cadastre in these streets and they are our surveying heritage, it is paramount that all marks are preserved wherever possible and every means to protect them must be made."[10].

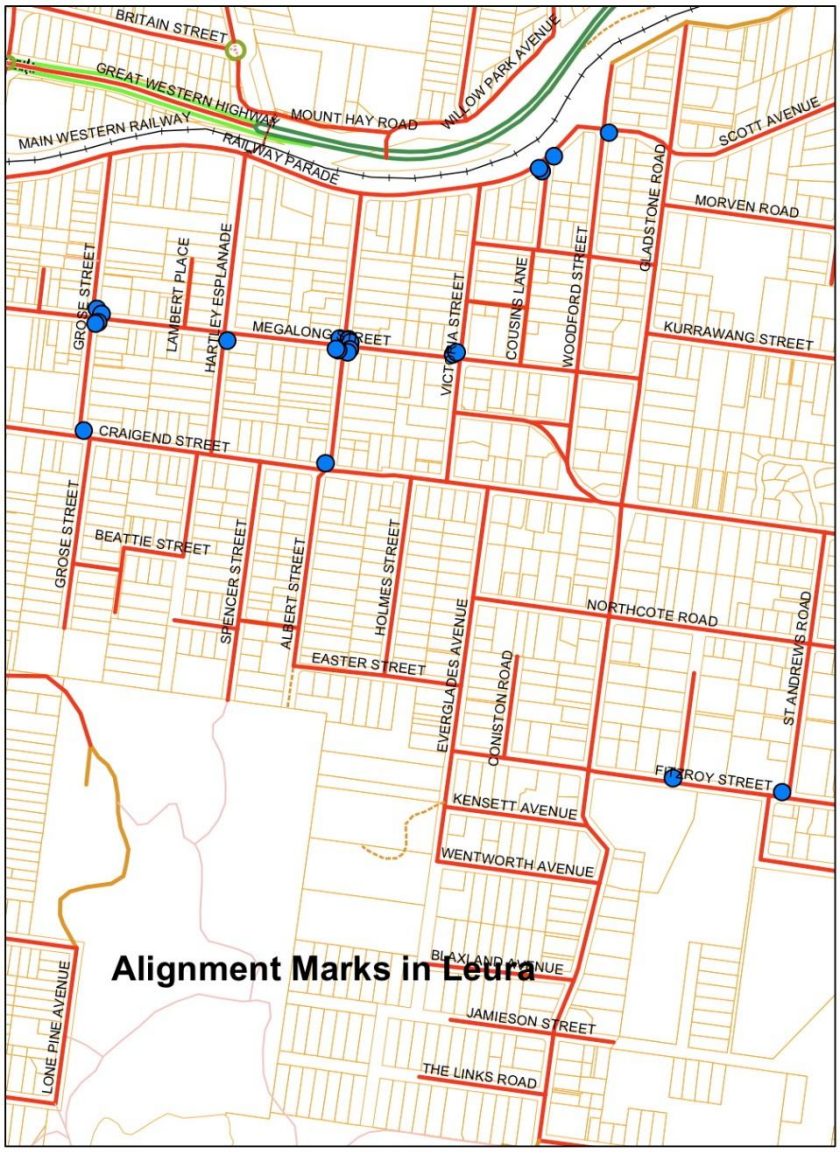

Figure 6. *2007 Map of Alignment Marks in Leura*

But why go to all that bother to find the remaining alignment markers? That was best explained by the then Manager of the Cadastral Management Unit of the Department of Lands:

> "I am using your good work to communicate to all road and construction utilities (i.e. BMCC, RTA, Sydney Water, Energy Australia, etc) the location of the surviving alignment marks. As they form essential evidence to re-establish the cadastre in these streets and they are our surveying heritage, it is paramount that all marks are preserved wherever possible and every means to protect them must be made."[10].

That project ended eight years ago and a lot of road re-construction has taken place since so it is unlikely that all of the markers found between 2005 and 2007 will still be in place; those 2007 maps are merely snapshots of the best knowledge of the situation at that time. It is now known that not all of the existing markers were found during that second phase of research. Thus in 2011 a previously missed alignment marker was located outside of 26 Honour Avenue, Lawson but reports of others in that village have not led to other discoveries. One that was reported to be on the east side of Honour Street to the north-west of Flinders Street (outside of the rear entry to 3 Cascade Street) appears to have been removed when a concrete path was installed, and those on kerbs at the north end of Bass Street[11] were lost when the Great Western Highway was widened.

Peter C Rickwood

Acknowledgement

Mr Les Gardner (now Manager, Survey Infrastructure & Geodesy, Land & Property Management Authority, Bathurst) kindly provided guidance, encouragement and assistance with this project. I am most grateful for his help which has been invaluable.

The Technical Side

Cultural Landscapes

Cultural landscapes are all around us and we hear the term bandied around often enough. Cultural landscapes are the result of the interaction of humans with their environment over many years, and relate to the visual impact and significance of places. It is said that they should be protected for future generations, as they may be valued by the community on a number of levels:

- They may show the evolution of settlement and societies.
- They may hold myths, legends, spiritual and symbolic meanings.
- They may be highly regarded for their beauty.
- They tell us about societies' use of natural resources, past events and sustainable landuse, and/or,
- They may display landscape design and technology achievements.

Some are designed **intentionally** such as gardens, suburbs, landscapes, ornamental lakes, water storages or campuses eg. gardens by Paul Sorensen such as Lidsdale House at Lithgow and gardens such as the Everglades at Leura.

Everglades

Lidsdale House

Some are **evolutions** over time of landuses in their form and features such as relict former mining or rural landscapes, eg. Peelwood, Glen Davis, Adelong and Newnes, or continuing landscapes such as modern active farms like Tocal at Paterson, or Coombing Park at Carcoar, vineyards such as many in the Hunter, Claire and Barossa Valleys, plantations, or mines such as Cadia and those at Broken Hill.

Peelwood mine site

Tocal outbuildings

It may also include natural environments such as coastal landscapes, rainforest remnants and wilderness areas.
Some are also **associativ**e landscapes that are landscapes or landscape features that represent religious, artistic, sacred or other cultural associations to individuals or communities.eg. cemeteries and church landscapes, the Cox's Road and Great North Road remaining colonial road features, the various war sites along the coasts of Australia which represented our defence initiatives during WW II eg. North and South Heads in Sydney, gun emplacements at Lithgow and Port Stevens.

Gun emplacement, Port Stephens

Cox's Road, Mt Blaxland

Threats
Numerous threats exist which may endanger the ongoing appreciation and preservation of these landscapes such as:
Lack of identification and recognition of values.
Large developments such as mining, forestry plantations, new infrastructure and urban expansion.
Incremental detrimental large and small changes.
Natural disasters such as floods, cyclones, bushfires, drought or other disaster.
Man-made erosion, salinity and detrimental weeds.
Protection
Protection is available through local plans and zonings, and other controls such as local, State and Territory, Federal and National heritage listings.
The protection process is not unlike other heritage protection. The important provenance must be recorded, the stories, the physical features, the views, the aesthetic qualities. Record how the landscape has been used, its sustainability and conservation needs. Communities (including indigenous) should be contacted to ascertain meanings, stories

and interpretations associated with the landscape. The landscape should be mapped and photographed, and any potential threats documented. Management guidance should be offered, and the findings should be publicised to relevant authorities who are relevant to the protection process.

Adapted from brochure by Australia ICOMOS www.australia.icomos.org Australia ICOMOS Inc. is the national chapter of ICOMOS (International Council on Monuments and Sites), an international non-government organisation primarily concerned with the philosophy, terminology, methodology and techniques of cultural heritage conservation.

Community events & updates

Loss of significant heritage building near Woodstock

Sunday Telegraph, 15 February 2015

A Royal Easter Show steward has been fined $175,000 after illegally demolishing a 100-year-old homestead to build a new home for his ailing wife.

Gregory Fuller pleaded guilty in the Land and Environment Court of breaching the Environment Planning and Assessment Act for his role in removing the historic Cowra property without council consent.

The Woodstock cattle farmer from the State's central west claimed the homestead had been in poor condition, while his wife was unable to walk up the stairs to the second floor.

Constructed in the 1900s, the Shiel Homestead was built in a late Victorian design before being renovated in the 1920s to a late Federation-style.

The court heard Mr Fuller and his wife Sharon bought the property and surrounding land in 2011 for $6.9 million.

The couple later lodged a development application to erect three sheds on the property, before discussing with Cowra Shire Council of plans to replace the homestead with a new one.

Shortly after the discussions, the court heard the council assessed the property for the purpose of listing it as a heritage item.

"That he was motivated by in part by the desire to provide a suitable residence for his ill wife is not an adequate excuse" - Justice Nicola Pain

In January 2012, the couple spent $600,000 on new sheds and a cattle yard complex.

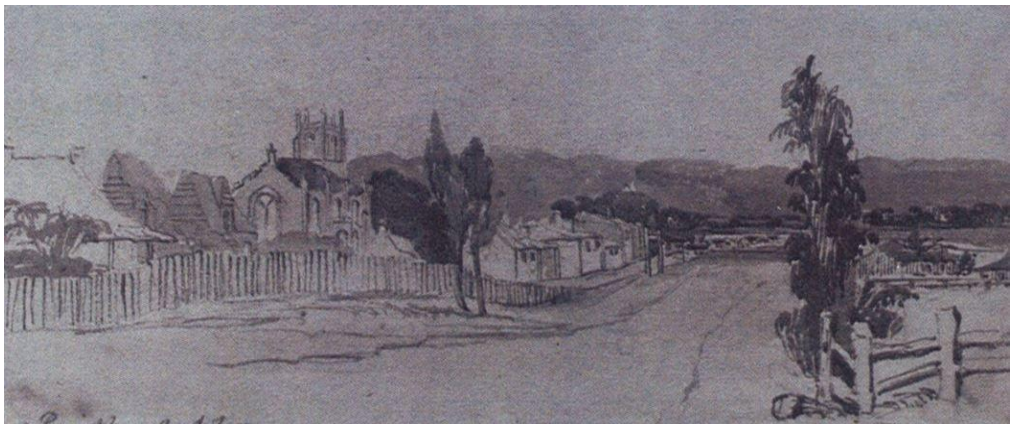
Two months later, the Council wrote a letter to the Fullers indicating that the home was to be included as a "heritage item" in the local environment plan.

In April, while Mr Fuller and his wife were in Sydney exhibiting cattle at the Royal Easter

Show, the homestead was demolished. The court heard the contractors removed the house at the direction of Mr Fuller.
The maximum penalty for the offence committed is $1.1 million.
In handing down the sentence last week, Justice Nicola Pain noted Mr Fuller's claims that he had committed [the breach] as a result of extenuating circumstances, including the ill health of his wife.
However, the demolition still constituted a breach, she said.
"That he was motivated by in part by the desire to provide a suitable residence for his ill wife is not an adequate excuse,…. The state of repair of the Shiel Homestead is irrelevant to lessening the seriousness of the offence…… While it was in poor repair and required significant restoration work … it remained structurally sound."
Mr Fuller was ordered to pay $175,000.

The Makings of a City: From Guard House to Gallipoli
Penrith 14th Annual History Conference

The Penrith City Council and Library's 2015 History Conference will be held this year on Saturday 14 March 2015 at the Bonynge Concert Hall of the Joan Sutherland Performing Arts Centre at 597 High Street, Penrith.
The conference will acknowledge some significant events in the City's history – the 200th anniversary of the construction of the guard house and depot on the new Great Western Road (now the site of Penrith Police Station) and the 100th anniversary on 25th April 2015 of the landing by ANZAC forces on Gallipoli.



Early Penrith Main Street

Guest speakers will include:

- Carol Liston – early days of the settlement that became Penrith.
- John Broadley – the connections between Penrith and Mudgee, following up the families (such as the cox's) who moved across the mountains to settle in the western districts of NSW.
- Lorraine Stacker – the development of the District of Evan and its ultimate demise as a place name.
- Norm Andrews – a history of the RSL – the stories about the creation of the organisation after the war and the establishment of Memory Park.
- Kim Phillips – the Gallipoli campaign and the local men who took part.

To book please contact Alison Spencer on 02 4732 7687 or at alisons@penrithcity.nsw.gov.au
More details and copies of the conference brochure can be found at http://penrithhistory.wordpress.com/home/makings-of-a-city-history-conference/

Yvonne Jenkins Memorial Award 2015

An award to be known as the "Yvonne Jenkins Memorial Award" was launched in 2014 by the Lithgow & District Family History Society and the winner will be announced during Family History Month 2015. The award was prompted by the commemoration of the centenary of ANZAC, and the current topic is "What my ancestor did during World War I". This is not necessarily a serviceman or woman.

The award honours the Society's founder and local and family historian Yvonne Jenkins from Rydal NSW. The Award would be in the form of a certificate and a free membership of the Society for the following year.

Yvonne Jenkins

Entry is open to both members and non-members of the LDFHS, and is to be in the form of a short essay. Entries are not to exceed 1,000 words and must be submitted by 30th April 2015. Full details and the entry form are available from the Society at ldfhs@lisp.com.au or by writing to The Secretary, PO Box 516, Lithgow 2790.

Hartley Australia Day Awards

The Hartley District Progress Association was originally established in 1956 with the aim of improving the living conditions within the Hartley district, along with promotion of cultural, social, sporting and other aspects of the area.

The Hartley valley sits below the western and northern edges of the Blue Mountains plateau, 125km west of Sydney, and has been used by nomadic hunters and gatherers, miners, orchardists and graziers, and more recently is occupied by small holdings and family lifestyle blocks.

Cultural features today include colonial architecture and historic sites, and remnants of the shale oil industry, quite apart from a spectacular landscape.

Recent Australia Day awards recognised two members of the community for their respective community works. Margaret Combs was recognised and awarded an Order of Australia Medal for her services to local history as well as to the local emergency services and local sporting organisations. David Peters received a Volunteer Award for his active membership of eleven community service enterprises.

Congratulations to those Hartley people, and indeed to the Hartley community who would have supported their work!

Hartley valley

RSL Centenary of ANZAC Commemorations

As Australia and New Zealand commemorate the Centenary of ANZAC, the New South Wales Government reiterates its support for our service men and women and the Returned and Services League (RSL) of Australia.

In a recent Ministerial Press Release the NSW government, The Hon Paul Toole MP and the Hon Pru Goward MP, advise that community interest in events in general is already significant and many are led by the RSL. In the lead up to ANZAC Day and more broadly in the planning of other Centenary events, events are being planned in all local government areas in New South Wales, and all local councils are urged to support the events.

The government and the RSL encourage Councils to assist in the preparation of the Centenary of ANZAC services and events, assisting RSL sub-branch representatives with event management in planning and running ANZAC Day and other Centenary services throughout the entire Centenary period.

Councils are also urged to use discretion and remain mindful of the importance of the services when deciding whether or not to impose fees for development applications and other local approvals. It is hoped that due to the local, State and national significance of these events that councils will see fit to waive any fees that may traditionally be imposed, if they able.

For councils requiring further information on community events please refer to *"DEVELOPING A COUNCIL COMMUNITY EVENTS POLICY – A TOOLKIT FOR NSW COUNCILS", NSW Government, 2011.*

Further information regarding RSL events can be found by contacting your local RSL sub-branch in the coming months.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Historical Society Inc; Blue Mountains World Heritage Institute; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); Mudgee Historical Society Inc; National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Restaurant, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd;
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2014-2015 (from July 2014) is: Ian Jack (vice president & acting president), Jan Koperberg (secretary/acting treasurer), Roy Bennett, Wendy Hawkes and Scott Pollock (web site), Patsy Moppett (***Heritage*** Newsletter editor), Dick Morony (public officer), and Suzanne Smith.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributers. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

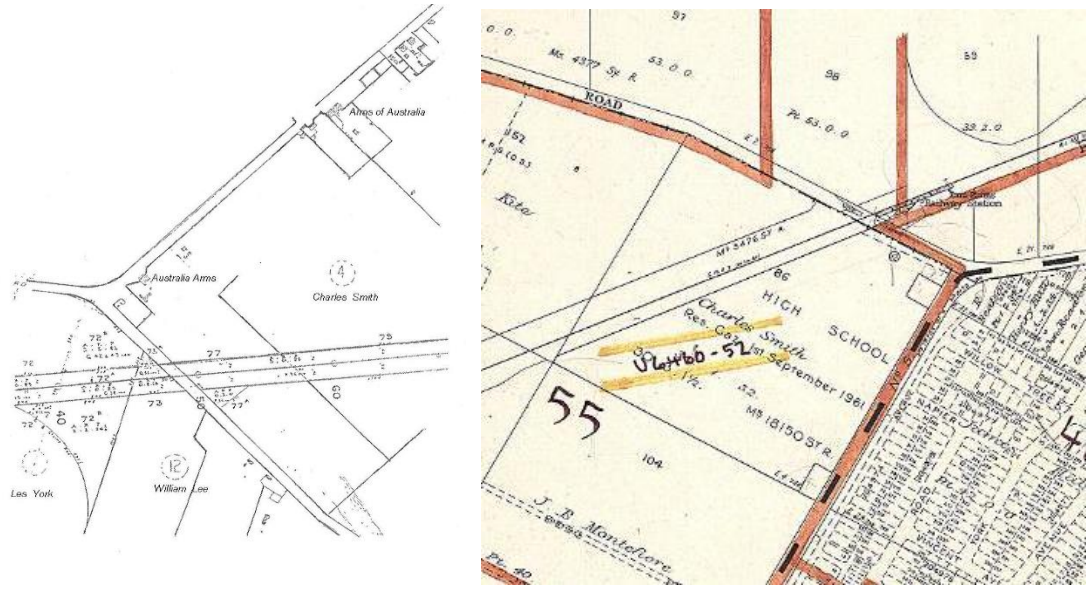
Former Australian Arms Inn, Emu Plains Post Office

The inn is on the corner of the Great Western Highway and the Old Bathurst Road, at Emu Plains. The township of Emu was renamed Emu Plains in 1882. The date of construction of the original building is unknown. However it was the rival of several other inns along the road to Bathurst between the Nepean River and the foot of Lapstone Hill.

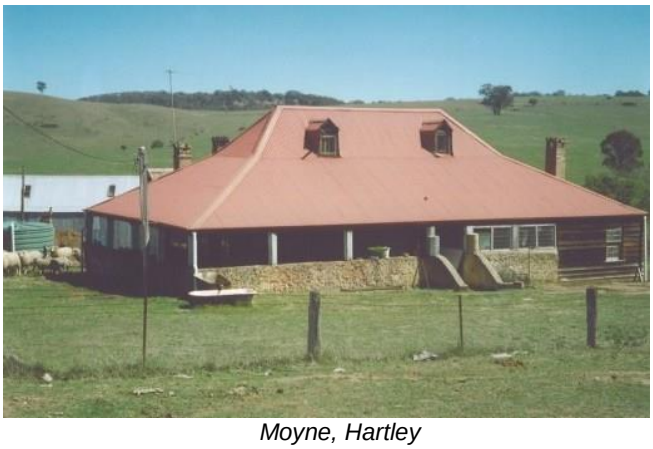


Early plans showing location of the two inns

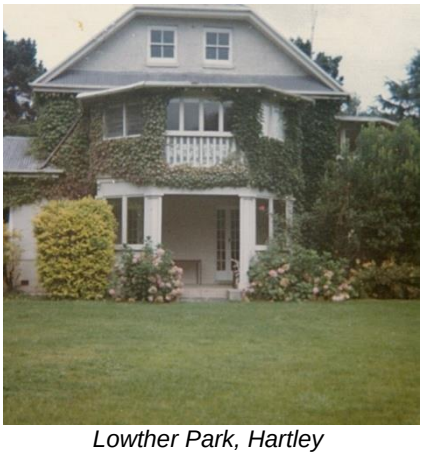
Prior to 1850 the owner was Charles Smith, who bought the property in 1833. Ten months later Smith sold it to John Grant in 1834. The Grants did not live there but leased it out. Neither Smith nor Grant had a publican's license. Little is known about the building before 1850. Maps of the periods show no buildings before 1845, although Grant advertised an inn for lease on the land in 1844, and it was possibly on the site as early as 1841.

Old Post Office, Emu Plains

In 1844 it was known as the Travellers Inn, and was leased by a John Mortimer, rented from John Grant of “Lowther Park”, Hartley.
It is not to be confused with the Arms of Australia Inn (now a museum) built by John Mortimer in 1841, and leased by Robert Beatson from 1850, at the corner of the Great Western Highway and Gardenia Avenue. The original name was the Australian Arms, and when Beatson left he went down the road to the old post office building and it is suggested he took the name and license with him in 1955. A railway map of about 1863 shows both inns.
Beatson leased the second inn from Grant until 1859. He died in 1869 and the inn closed. His family lived on in the building. It was operated as an inn for at least 17 years. There remains some conjecture in regard to the early licensing and operation of the two inns.
The owner of the building, John Grant, was the son of an Irish Catholic tenant farmer. He was convicted of attempted murder in 1810 in Ireland and transported on the ship “Providence” for life to New South Wales in 1811.
He married Jane O’Brien in 1814 and they had three children. He worked for William Redfern, and in 1820 he received his pardon. He commenced applications for land grants, first at Minto and then at the Vale of Clwydd near Mount York. He acquired land on the Cox’s River at Hartley and built his “Moyne” dwelling there in 1823. Sadly Jane died in 1826. That commenced an extraordinary accumulation of land by Grant across the colony, with abundant increases in land, stock and capital over the next few years.



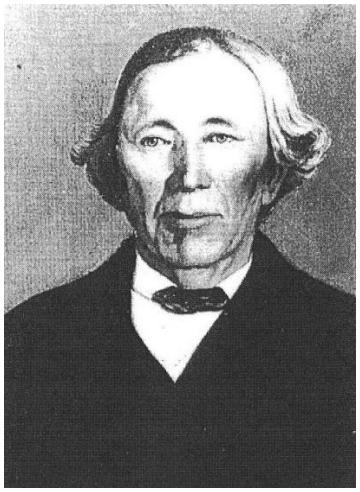
Moyne, Hartley



Lowther Park, Hartley

By 1828 he had more assets that any other Irish Catholic in the colony. During 1833 he began to apply for land to be put up for auction at Emu, Springwood and Blackheath. At Emu he bought allotments 3 and 7, the nearest to the Pilgrim Inn. Grant was also recorded as

having half an acre at Emu. During this period he would have purchased the inn property from Charles Smith.
He married a second time to Elizabeth West in 1833, and bought the property adjoining "Moyne", "Lowther Park", in 1839 from John Wood. Wood had been accused of murdering a female servant and burying her body in the cellar. He sold the property and left the district. Grant lived at "Lowther Park" until 1859, making frequent visits to his considerable holdings on the Belubula, particularly "Merriganowry". He died in 1866 and was buried on the western property.



John Grant (Snr)

Elizabeth Grant (West)

Grave of John Grant (Snr) Merriganowrie

John Grant (Jnr)

Julia Grant (Finn)

Grant had made his will in 1852 when he turned 60. He owned a lot of land, capital and possessions and he wanted to provide for Elizabeth and his ten surviving children. In his will, Grant provided for Elizabeth and seven of the children, the older three being adults and married. His personal possessions were left to Elizabeth, and the lands and capital assets were divided between Elizabeth and the children. One land parcel was 39 ¾ acres at Emu Plains, which would have contained the inn.
The inn site passed to Grant's son John, who retained it until his death in 1906. It was then transferred to his daughter Ellen (Coghlin) who sold it in 1914.
A number of other families have had an association with the building – Beatson, Turnbull and McKellar.

Old Post Office, Emu Plains

The building is described in detail by G. Gyford as having timber floors, three fireplaces on the ground floor, 7 rooms on the ground floor and 6 rooms on the first floor. The core of the ground floor has stone walls, and the remainder, added later in 1880-1890, is mostly weatherboard, with some brick. Further changes were made to the buildings verandahs and chimneys in the 1920s.

Old Post Office sketch by Gifford Eardely 1974

There were also three slab buildings on the site, a well, fodder stores, silos, cow bails and kitchen gardens.
Over time the building has been painted over with stucco and whitewash, operating as a post office for some 53 years. In 1967 it still functioned as a post office, run by Miss McKellar. She still owned the building in 1974. A fire in the building caused damage and although the building has been restored, it has been vacant ever since. It has belonged to Penrith City Council since 1983.

Highway Safety Upgrades – Mount Victoria

BMACHO has recently been approached by a couple of members of the Mount Victoria community in regard to the proposed Roads and Maritime Services (RMS) safety upgrades to the Great Western Highway through the village. These residents request that BMACHO take a stand and make a statement on perceived adverse impacts of the RMS proposals on the village. It has been suggested that we should take an interest and speak out about anything which affects the heritage environs, and that we should, as an entity, register either the urgency of the situation at Mount Victoria, or acknowledge the opportunity presented by a proposed alternate scheme (by a local architect) and other creative ideas advanced by local residents and heritage experts.

The suggestion is made that BMACHO silence to date has made it to some extent party to a collective failure of political will and imagination, and that future generations may well hold BMACHO responsible for it. It is also suggested that had BMACHO joined with Blue Mountains City Council previously, the State government and the RMS may have undertaken a more timely and proper evaluation of this alternate scheme.

Who is BMACHO?

BMACHO is made up of representatives of many local history based organisations. BMACHO seeks to take every opportunity to bring together these member groups to share information and promote culture and heritage throughout the greater Blue Mountains area and beyond. Our diverse membership uniquely blends the skills and resources of historical, cultural and heritage groups, major tourist attractions, gardens and galleries. To quote from the BMACHO website:

"BMACHO, the Blue Mountains Association of Cultural Heritage Organisations Incorporated, was established in 2006 to support the work of the numerous organisations in the cultural heritage field in the Blue Mountains. In recent years, it has expanded to include neighbouring districts such as Lithgow, Penrith and the Hawkesbury.

Our Member Organisations consist of societies, museums, archives, businesses, gardens and institutions. Together, these represent over 1,500-2,000 local residents. In addition there are a limited number of Individual Members to support its work. These are invited professionals who make a significant contribution to the heritage sector in the region. BMACHO provides communication and information across the sector, and training and professional advice for its members. It has its own newsletter, e-journal and website and carries out research on aspects of local heritage, such as its region-wide review of the local heritage sites to document any changes. It is rapidly building effective information heritage services for the benefit of residents and visitors alike.
BMACHO has been a strong and successful advocate on heritage matters at local government level."
Former President, John Leary stated in 2013 that the "Blue Mountains Association of Cultural Organisations Inc (BMACHO) was established in early 2006 following a unanimous response to a proposal from Professor Barrie Reynolds at the 2004 Blue Mountains Local History Conference (sponsored by Blue Mountains City Council) which sought the creation of a local heritage strategy for the city".
The objectives of the organisation include:

- The raising of public consciousness of the value of cultural heritage;
- The encouragement and provision of assistance with cultural heritage activities organised by member organisations;
- The initiation and support of cultural heritage activities not already covered by member organisations;
- To give a combined 'voice' on matters of importance within the heritage sector.

Background

In recent months BMACHO has been made aware of plans by the NSW Roads and Maritime Services to continue the Great Western Highway upgrades towards the west with work commencing at Mount Victoria in mid-2015. Concern has been expressed that BMACHO has not joined with the combined voice of the community in approaches to government that the proposed works may not be appropriate at Mount Victoria in terms of the heritage significance of the village.

Victoria Falls Road to Harley Street

Until this time, BMACHO was not aware of the strong feeling within the village in regard to the proposed changes, and when approached by a member of the community to endorse a petition for a moratorium on the matter, as well as consideration of an alternate scheme by architect Peter Buckwell, BMACHO has issued the following statement:
"The Blue Mountains Association of Cultural Heritage Organisations wishes to remain impartial when there is a difference of opinion amongst bodies within one locality. BMACHO will not, therefore, be a signatory to the proposed petition in relation to the "Buckwell Scheme" in Mount Victoria".
In saying this, BMACHO is still in a position to raise public awareness and provide information to the community in regard to the significant changes which are proposed by the State government, via NSW Roads and Maritime Services (RMS), so that informed decisions can be made by member associations and residents.

Following extensive research by BMACHO on the information available, the following comments are provided to readers.

Mount Victoria

The Federal and State governments have provided some $250 million in funding to improve safety and travel conditions along the Great Western Highway between Katoomba and Lithgow. Originally major works were proposed which included dramatic infrastructure and road construction to bypass the village. However, changes in government and policy, and obviously economics, has resulted in a move for safety upgrades along the highway in the short term.

The RMS sought feedback from the community in 2011 in regard to the formulation of options for treatment of the highway to improve safety for all road users in Mount Victoria and cater for a mix of motorists, cyclists and pedestrians. The solution had to be sensitive to the area's natural and cultural environment and to local communities. And it had to maintain the integrity and qualities of Mount Victoria as a village in the greater Blue Mountains World Heritage Area.

The works would be over a 2.3km section of the Great Western Highway, divided into three distinct sections. Some 21 options were subsequently formulated through community feedback for various works to occur between Katoomba and Lithgow. These were then considered in 2012 against criteria including many factors, and in particular affording protection for heritage items, landscape character and visual impact. It was emphasized that most impact would be temporary.

Darling Causeway/Railway Station

Harley Street/Station Street

The options were displayed from 8 October 2012 until 26 October 2012, staffed displays were held, it was publicised on the RMS website, and some 7,500 residents from Mount Victoria to Lithgow were notified by letter drop. In all 41 responses were received, with none from State agencies, including Blue Mountains City Council.

In early 2013 RMS selected a preferred option which would best meet the proposal objectives in terms of safety and future traffic flows, and the best balance between technical, environmental, social and economic benefits and costs. In November 2013 RMS released a Review of Environmental Factors (REF) under the *Environmental Planning & Assessment Regulation 2000*, for these road safety upgrades through Mount Victoria village.

The REF was placed on public exhibition from 25 November 2013 and 7 February 2014, and comments closed on 7 February 2014, although submissions were received up until 21 February.

It is noted that the document was available in hard copy for viewing at a number of locations, including the Mount Victoria General Store and newsagency. It was also on the RMS website and in the local press.

Following community feedback, some 106 submissions were received, four being from agencies. Two alternate options were developed for the section of the highway from Kanimbla Valley Road to Fairy Dell Road at Mount Victoria. Comments were sought from the community on these options. A Newsletter was issued to residents in July 2014.

It was emphasised that all submissions would go into a submissions report to be placed on the RMS website, and that consultation would be ongoing during the detailed design and construction phases of the proposal.
The Submissions Report was prepared detailing the feedback received and showing how it was addressed in finalising the REF.
These RMS documents are available on the RMS website www.rms.nsw.gov.au , along with regular updates and fact sheets.
The REF documented a number of aspects of the proposal including its need and the options considered, the statutory and planning framework, community and stakeholder consultation processes. It then looked at environmental impacts, including biodiversity, land use, property and socio-economic issues, non-Aboriginal heritage, hydrology and water quality, noise and vibration. It then set down the justification and conclusions for the project. These are standard criteria for an REF to consider.

Great Western Highway/Station Street

Railway bridge

The REF acknowledged the Mount Victoria Urban Conservation Area, and a number of heritage items which may potentially be affected by the proposal. It suggested that the proposal would not have any direct impacts on listed heritage items within the study area. It did suggest indirect visual impacts and impacts from vibration may occur during construction, and that these are not considered to be significant and would be managed during construction through the application of mitigation measures.
Later in the REF it states that the upgraded highway would have no direct impact on heritage items or associated curtilages, and that in general, there would be a visual improvement along most sections of the highway through the village. Environmental safeguards are set down including retaining and/or “replanting” trees, sandstone faces on retaining walls, culvert protection, construction site management, tool box talks to highlight heritage significance, and the salvaging of sandstone kerbing for reuse elsewhere.
It is noted that the submission from the NSW Heritage Council recommended that all recommendations in the RMS report be undertaken.
Blue Mountains City Council submission was partly based upon a report by their Heritage Advisor in regard to heritage considerations. Their concerns related to safety and the status of the highway, clarification of the scope and scale of the development, requests for detailed design plans including intersections, asset maintenance, pedestrian and cyclist access, heritage and landscape character and visual amenity impacts, and vegetation removal.
The design phase has been underway during the second half of 2014, with key changes considered including:

- Reduction in the size of a retaining wall opposite Harley Street.
- Sandstone facing on retaining walls east of Hooper Street.
- Narrowing of the service road.
- Removal of water basins.

The relevance of sections in the BMCC Heritage Advisor’s report therefore, must now be balanced against these changes.

Hooper Street/Great Western Highway

Mt Piddington Road/Great Western Highway

Moving forward

It may be that the alternate plan for Mount Victoria has been around for a year or so. However BMACHO has only recently been made aware of its existence by two local residents, and certainly not by any of its member organisations.

There is no doubt that Mount Victoria is unique in its heritage village character and aesthetic appeal. This is acknowledged by everyone including the RMS. However, it is also acknowledged that the evaluation of visual and heritage character and impact is often a very subjective matter.

It should be remembered when considering the effect of the proposals on creating a physically divided community, that the road came first! William Cox built a road across the mountains for Governor Lachlan Macquarie and the people followed, building either side of the road from day one. What we see today is a further set of "deviations", added to a myriad of changes that have gone before, from Emu Plains through to the Hartley Valley and beyond. To think these changes are different is short sighted. We are still trying to provide access through from Sydney to the west, and in increasing volumes.

How the State government goes about this, the detail, will often come down to community awareness and education. Legislation sets down an authority's responsibilities with regard to community consultation. Above and beyond this is community awareness and the community knowing when and how to respond to matters such as the current situation at Mount Victoria. How that community comes together and presents its case is imperative upon its credibility to authorities in the planning stages of a development or project, and its ability to make itself heard.

BMACHO does not intend to make representations to politicians or authorities on this matter. This is no passive acceptance of the current RMS proposals by BMACHO, as we urge our member organisations and readers to make themselves aware of situations in their respective communities and do the research, to form educated, unbiased and responsible opinions, and have the courage to make informed representation where appropriate.

BMACHO support all efforts to make allowance for heritage significance but acknowledge that compromise is required, evaluation can be subjective, and that hard decisions have to be made on both sides.

We urge our member organisations and readers to attend to the following references for further information on this matter where required.

A Short History of Flower Shows in New South Wales

Blue Mountains people have always been garden lovers – their own and other peoples' – and flower shows were certain to be popular.

On 26th October, 1889, the *Nepean Times* triumphantly announced "*Springwood to the fore. We are going to have a real flower show about the beginning of next month".* The paper also claimed, "*Our climate is well adapted to flower culture. We certainly are a month later with most flowers in the neighbourhood of Sydney, but we make up for it in the vigour of growth with half the attention required for them."*

The organising committee comprised William Rayner, General Store Keeper and owner of the Evandale Nursery; Robert Anderson, School Master; John Illingworth, Policeman; and Lancelot Iredale Brennand, of Valley Heights, Superintendent of the Colonial Stores Department in Sydney. Money raised was to be in aid of the Public School Picnic Fund.

The Show was held on the Prince of Wales' birthday and large numbers of tourists arrived by train to see the school room lavishly decorated with flags and flowers. The little room was somewhat small for such a vast array of floral exhibits.

S.E. Lees, M.L.A. for Nepean and James Inglis, Minister for Public Instruction arrived by train, Mr Inglis bearing a box of roses from his own garden in Strathfield. He was lavish in his praise of the Show and of the wonderful refreshments, including home-made ice cream served in a refreshment tent. Flowers exhibited included wild flowers, roses, lilies, pansies, foxgloves, honeysuckle, ferns and palms and the perfume was wondrous. Stalls displayed bouquets of various kinds. Although the weather was quite hot the flowers were kept fresh into the evening by the use of a large syringe. A profit of £20 was made with £15 worth of expenses.

The organisers were encouraged to stage another Flower Show on the Prince of Wales birthday the following year. This time it was held in one of Mrs John Frazer's paddocks at *Silva Plana*. It was an elevated site and close to the main road. A bush house was erected giving plenty of room to display the exhibits. A large marquee behind the bush house held the refreshments, said by the *Nepean Times* to be "*a tempting assortment of eatables and drinkables - temperance of course*." This time £30 was raised for the Public School Picnic and Library Funds. It is interesting to note that James Clay, gardener to the Hon. Charles Moore, and later head gardener to Sir James Fairfax, was a consistent prize winner.

A FLOWER SHOW
in aid of the
Public School Picnic Fund,
will be held in the
PUBLIC SCHOOL, SPRINGWOOD,
ON
Saturday, Nov. 9th, 1889.

COMMITTEE:
Messrs. W. J. Rayner, L. I. Brennand, J. Illingworth and R. Anderson.

JUDGES:
Messrs. H. C. L. Anderson and Walker.

THE SHOW will be formally opened at noon by MR. JAMES INGLIS, late Minister for Public Instruction, and remain open till 9 p.m.

Admission to Show — One Shilling; Children under 15, Sixpence.

N.B.—Refreshments Provided at Reasonable Rates.

Nepean Times 9/11/1889

R. ANDERSON,
Hon. Sec. Springwood.

Springwood 1889

Chelsea, UK 1931

These Springwood Flower Shows were quite modest compared with one held in Penrith in September, 1887. Money was needed to build a Presbyterian manse and to pay the debt on the Wesleyan Church, and the two parishes formed a committee to organise a wild flower show. This type of show was very popular in Sydney, but more about that later. After much discussion the Penrith Committee decided to show not only wild flowers but every class of flower. Many donations of flowers and fruit were received from every part of the district, but also from Messrs Shepherd & Co. of the Darling Nursery in Sydney and from their growing and cultivation property, *Chatsworth*, situated two miles from Rooty Hill between Eastern Creek and Ropes Creek. Springwood folk also contributed – Mrs Hoare from *Homedale,* the Hon Charles Moore and William Rayner whose family were Penrith residents and devout Wesleyans gave a lovely collection of flowers of every description.

Mrs Squires lent her steam launch to collect flowers from the river and a marquee capable of holding 500 people was hired from Sydney. It must have been a wonderful sight to see being decorated, not only with pot plants, ferns fruit and floral exhibits, but with all manner of exotica. People were thanked for lending or donating the following items:

A ship in a case, shells and curios, statuary, pictures, a rustic moss cottage, a model ship, dried ferns in a case, drawings and memorial of the 1851 Exhibition, picture made from native pine cones, fern gypsy tables, an albatross in a glass case, a pelican, paper flowers, toys, a singing canary, a stag's head, a second stag's head, splashwork, various food stuffs for the refreshments, as well as timber and iron (possibly for the construction of the stalls).

Sir Henry Parkes had been expected to open the Show but had been double booked (he was opening an aquarium at Bondi) so Mr James Inglis, accompanied by Mr S.E. Lees, performed this important duty. Mr Inglis had carried out this task at a large number of functions and, despite being a witty and skilled speaker, referred to them privately as "pestilential bazaars". Entertainment in the evening was provided by the Excelsior String Band and the Juvenile Band. More than £120 was raised.

Kempsey

Sydney Royal

This was the second Penrith Flower Show. Their first ever show was organised by the Penrith Pride of the Forest Lodge, Ancient Order of the Druids, in April, 1887, to raise funds to be shared by the Lodge and the Bulli Relief Fund. There had been a massive gas explosion in a Bulli Colliery earlier in the year killing 81 men.

The Nepean Times was very enthusiastic about the long term benefits of the Shows saying that it "*will likely do more good to horticultural interests of our district than they ever thought of"* and it would have "*the purpose of bringing our farmers and gardners (sic) to vie with each other than they ever thought of.*"

Neither Flower Show had a competitive element with prizes awarded. The display was the thing.

It is interesting to follow the impetus or motivation behind these early flower shows – raising funds for churches and schools, organising a delightful social event in the days when people made their own entertainment, but also having an economic rationale. Another aspect, social welfare, was raised in Parramatta on the occasion of establishing a Horticultural Society, reported by the *Sydney Morning Herald*, 22nd November, 1875. The chairman was the Rev. W.J. Gunther, who had been a curate at St Georges, Bloomsbury, England. There, he said, they had a working man's flower show which was taken up in other areas and had "*proved interesting and beneficial to the people.*" He went on to say "*there were prizes to be competed for by working men, others for the National Schools, the Ragged Schools, and the dwellers in the Mews.*"

In Sydney, the Floral and Horticultural Society organised competitive flower shows in the 1840s as a way of promoting the advancement of horticultural and floricultural skill. The early shows were held in the Market Shed in Sydney and attracted a wide variety of entries of flowers, fruit, vegetables and what was called "colonial manufactures". It is interesting to note what was exhibited.

At this time the well-off citizens of the Colony were building grand homes and employing gardeners to create lovely surroundings to set them in. Flower Shows were very popular. The elite of the Colony, including the Governor and his lady, dressed in their best and enjoyed a social occasion where they could mingle, get inspiration for their gardens and enjoy the entertainment in the form of music provided by various bands.

The *Sydney Morning Herald*, 25th February, 1847, commented "*that a great portion of the really respectable inhabitants never fail to attend. It is one of the social and patriotic duties they can perform, and at the same time enjoy the gratification of a refined taste. Public countenance can never be more appropriately bestowed than in the patronage of those pursuits which develop the resources of the land we live in, contribute to the comfort of our fellow citizens, and which have withal, a humanising and beneficial influence on the character and conduct of the community at large.*"

The successful exhibitors were frequently the proprietors of garden nurseries. The three earliest nurseries in Sydney were established by:

1. Thomas Shepherd, a professional English gardener, who was encouraged to set up a nursery in Chippendale by Governor Ralph Darling and who called it the Darling Nursery. His propagating and growing nursery was *Chatsworth* at Rooty Hill which was mentioned earlier. He died in 1835 but his family continued his work with the help of Robert Henderson, also a nurseryman.
2. Robert Henderson whose Camellia Grove Nursery was in Newtown. One of his specialities was roses.
3. John Baptist, of Portuguese nationality, who did not start out as a gardener, but a servant, arrived in the Colony as a steerage passenger with his wife on the "Swiftsure" in 1829. He came in the employ of Captain Charles Wilson who had been appointed Director of Public Works but lost his position after 18 months. Baptist then opened a butcher's shop with ex-convict, Ned Shackley. They branched out into market gardening and supplying floral arrangements for weddings and funerals. Baptist bought 36 acres in Bourke St, Redfern (where Redfern Police Station now is)

and established a nursery while continuing with the market garden. It was called Baptist's Garden or simply the Gardens – a lovely place with a running stream, a fernery, aviaries and fountains with both imported and locally propagated plants. One of his specialities was camellias. He also propagated native plants and had a thriving export business. The fountain was given to the Trustees of Hyde Park in 1888 and has been recently restored.

William Macarthur, youngest son of John and Elizabeth Macarthur, was also a frequent exhibitor specialising in wines and spirits. He was a botanist and horticulturist credited with introducing camellias into the country and he and his brother, James, established vineyards and made excellent wines and spirits at Camden Park.

Flower Shows continued to flourish, not only in Sydney, but in the suburbs and the country regions, proving to be a delightful way of raising funds for schools and churches. There were changes, of course. Sydney in 1879 hosted a flower, dog and poultry show in the Agricultural Hall. The dogs were exhibited outside but the poultry (including pigeons) shared the hall with the flowers. One wonders what odours assailed the nostrils of the visitors.

In 1894 Camden held a Flower Show in aid of the Carrington Centennial Hospital. It featured Mr F.A. Downes' magnificent collection of chrysanthemums and cyclamens. The same year Queanbeyan held a competitive chrysanthemum show for the Presbyterian Church. Canowindra and Carcoar also held chrysanthemum shows and Carcoar's show was followed by a well-attended "bread-and-butter" dance. Mudgee Horticultural Society staged an autumn show which was judged by Mr T.E. Horton of Sydney. A John Henry Horton was head gardener to Miss Eadith Walker, Concord, Sydney). Deniliquin, Milton, Kiama and Inverell all had Spring Shows, St Marys had a horticultural and art show and Moama staged a rose show.

These shows were still very social occasions, particularly in the city. The *Australian Town and Country Journal*, 21st February, 1897, devoted more space describing the outfits worn by the female visitors than to the exhibits. One outfit took my fancy: "*A very pretty dress was worn by a young lady of striped washing material, the colors – art-green, red and a shade of art-pink; her hat was of the present flat shape, and was trimmed with golden poppies, bows of black velvet, and a little gold tulle.*"

Show organisers were prepared to go to extreme lengths to create beautiful and novel events. Halls were profusely decorated with garlands, grasses, ferns and pot plants and entertainment in the form of bands and vocal presentations were popular. Flowers were not the only exhibits. Gift stalls were set up with posies, baskets of fruit and vegetables, table decorations and gifts to entice visitors to spend their money. The *Australian Town and Country Journal*, 3rd October, 1885, published a "*description of novel attractions*". One idea was to set up a gypsy encampment – perhaps a caravan set up over 4 cart wheels with steps at the entrance. It should, the writer said, be gaudily decorated with the vendors (who should be attractive) dressed as gypsies selling trinkets and cheap toys, telling fortunes and even preparing tea or soup over an outdoor fire. "*Cigars, pipes and tobacco would always find a ready sale among the male visitors who always flock into odd places.*"

Then came the passion for Wild Flower Shows.....

Succession Planning

The Succession Planning Workshop held by BMACHO in February at the Lithgow Mining Museum provided an opportunity for **organisations and committees to find out the many ways to make their tasks easier and more effective and ensure their volunteers get the most out of their roles**. (See *Heritage* January-February p.14). The day commenced with a tour of the museum site.

Lithgow Mining Museum workshops

BMACHO Vice President Ian Jack opened the proceedings. Those few who were able to attend were treated to very worthwhile presentations by the speakers, Emeritus Professor David Carment, Ray Christison, Lynn Collins and Tamara Lavrencic.
Both David and Ray spoke about their experiences in being on committees and their approaches to the success of their various organisations.
David Carment: David reviewed the principles set down by Museums and Galleries of NSW to assist organisations in their operations. He emphasized the importance of valuing the work of volunteers and encouraging their involvement, dealing with aging membership and finding people to fit the committee positions. Inclusion of fixed terms for positions and seeking people who have something to offer, may be key solutions.
Utilization of social media and sharing the load, are also ways to relieve the pressure. People have less and less time to be involved and to carry out the myriad of tasks required in a committee these days.
Ray Christison: Ray cover the topic under five headings, as follows:

- What is succession planning – finding people to fill key positions on a committee to sustain the required functions of the group. In particular, finding a leader who will identify the problems and work to solve them. Ray quoted from Ben Chifley, "Rookwood is full of people who were indispensable".
- Roles – the roles in a committee range from a leader, administration, program management, tour guides, site/building management, museum development. The task is finding suitable people who can do each of these jobs.

BMACHO Vice President Ian Jack addresses the group

- Plan for the future – the problem is broken down, deciding who does what. Divide the position and delegate tasks. The tasks can be carried out by volunteers, casual staff or contractors.
- Attracting volunteers – the vision should be articulated. Sensible business planning should be undertaken, obtaining recognition for the organisation, creating a positive and creative environment for volunteers. Sometimes the facilities can be difficult for volunteers eg. heat/cold. Anticipate the benefits of participation. Network within the community. Keep exhibitions fresh, undertake projects that renew/maintain interest, for both volunteers and visitors.
- Alternatives – use contractors for some tasks if possible. Identify roles and cash flow, sponsors and compliances with legislation. Expand the capabilities of the group and possible use a business model. Make use of existing assets such as publications, local businesses, social media. Decide how to access different sectors of the community and have a clear vision. Have a vision statement, and communicate effectively.

Lyn Collins: Lyn summarised their comments and went on to highlight the salient points relating to continuity, role sharing, rotation of positions, reviewing the provisions of the relevant constitution, employing outside expertise, the importance of having a strategy and undertaking social events, and redefining the tasks and roles required. He emphasised the social benefits and the sustainability of committees.

Tamara Lavrencic: Tamara was visiting from the Museums and Galleries of NSW, and explained the Standards Program. It operates for some 10 months of the year and has a regional bias. It is an opportunity to seek assistance for surveying collections, management, engaging visitors, caring for the collection. An independent reviewer is sent out to each museum. They act as mentor to the museum management. Many resources are available, including risk management, grants, setting up a website, and an advisory service.
It provides an opportunity for self review against the national standard.

***Editor's comment*:** It would appear that we need to take time out of our busy schedules to find the time to help ourselves. It is strongly recommended that all organisations seek out the *Principles for the Recognition of Volunteers* for a review. Organisations that adopt the principles would be sending out a clear signal to current and potential volunteers that their contributions are valued. (www.volunteering.nsw.gov.au). *Patsy Moppett*

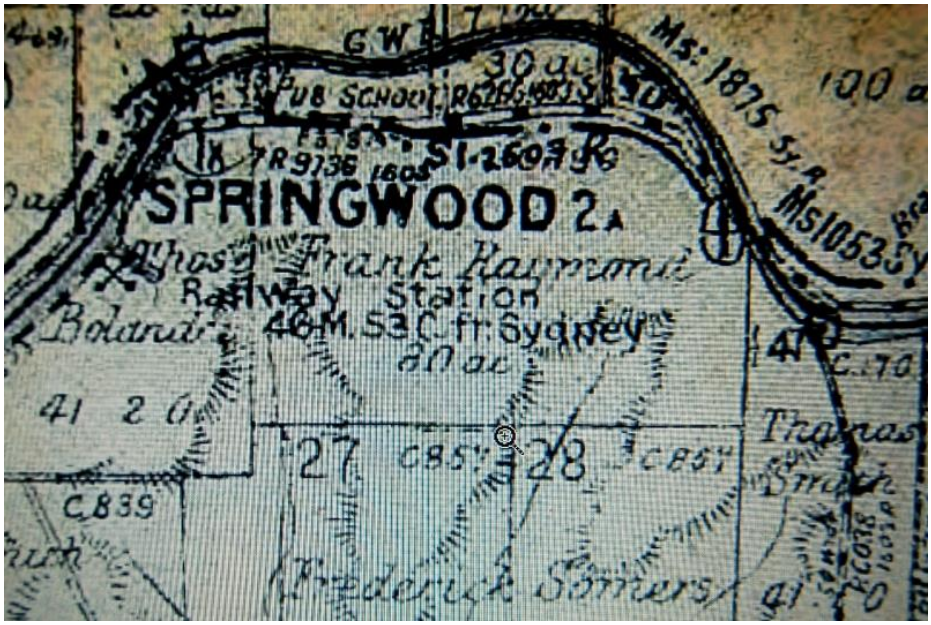
The NSW Department of Environment and Community's web site provides much information in regard to working with corporations, supporting volunteers, running an organisation, and promoting an organisation.
If anyone is interested in repeating this workshop, please contact BMACHO with suggestions for numbers of attendees and venues. (www.bluemountainsheritage.com.au)

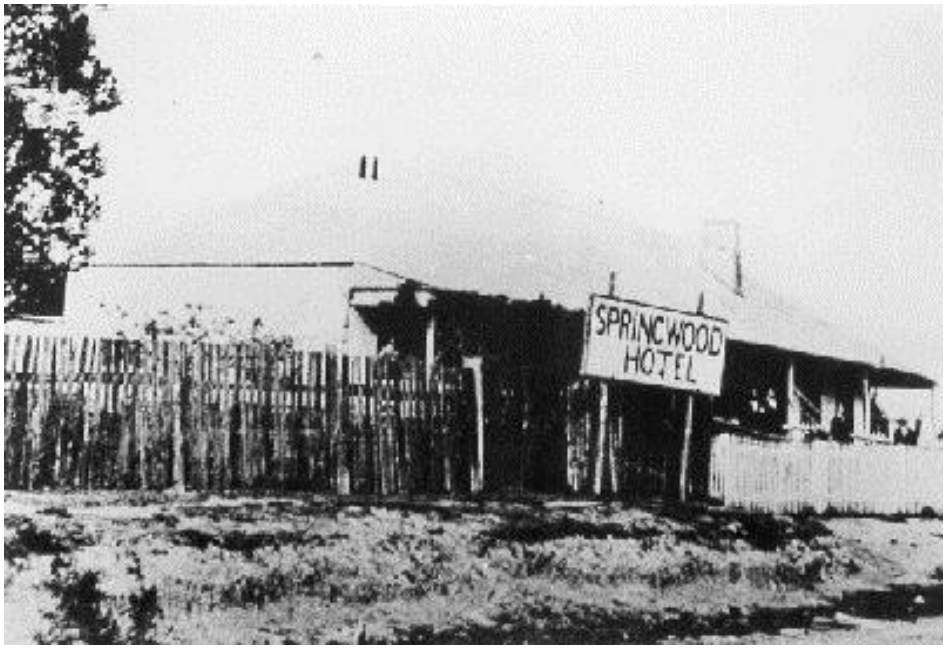
The Oriental Hotel, Springwood, and the Lawson Family

Possible redevelopment of the Oriental Hotel, Springwood, and the adjacent area in Raymond Road is an object of current concern. The entire area south of Macquarie Road to the east of the railway station was originally owned by Frank Raymond, who gained formal title to the 80 acres in 1878, although he had been occupying it since the 1860s.[1]



Parish Map of Magdala, County of Cook, 1909 showing Frank Raymond's grant, Portion 2A (formerly Portion 52)

In the 1870s Raymond built the single storey Springwood Hotel on the site of the later oriental, but left for Sydney in the 1880s to become a professional photographer, in Waterloo and Marrickville[2].
In 1890 the half century of Lawson domination of that end of Springwood began, when James Lawson bought the eastern 60 acres from Raymond. Lawson was a prosperous Scottish cabinet maker and furniture dealer, born in Greenock in 1836, arriving in Australia in 1855. Springwood Hotel and its outbuildings were the only existing buildings on the 60 acres, at its western end. Further east there was a substantial orchard and flower garden. Lawson immediately rebuilt Raymond's hotel and created a grander two storey hotel, with an extensive cellar, and renamed it the Hotel Oriental in 1991, that being the main fabric of the present building.
Between the hotel and the orchard Lawson proceeded to build his own elegant country retreat. This was "Braemar", 102-104 Macquarie Road, now very suitably housing the Local Studies section of the Blue Mountains City Library.
James Lawson and his wife Emma Glen, did not live in "Braemar" for long and by 1895 had built a new retirement residence adjacent to the east, which they wittily called "Glen Lawson", now "Danebury", 100 Macquarie Road. The Lawsons lived at "Glen Lawson" until their deaths in 1926, while "Braemar" was leased for a variety of purposes[3].



Springwood Hotel 1878

The Hotel Oriental in the 1920s,
Blue Mountains City Library, Local Studies, Springwood, photograph 204

Very early in the twentieth century, the Raymond orchard and flower garden were absorbed into new residential blocks for the family of James Lawson. His second son, William Maxwell Lawson, built "The Knoll", 86-88 Macquarie Road, while a widowed daughter of James occupied "Caberfeagh", 94-96 Macquarie Road. The space between "The Knoll" and "Caberfeagf" was filled after James Lawson's death when the land was sold by William Maxwell Lawson and the new owner built "Nirvana". 90-92 Macquarie Road, in 1933[4].
The Oriental remained in Lawson ownership until after World War II. Staunch Presbyterians, the Lawsons made the hotel available to the church's Burnside Homes in North Parramatta as a wartime evacuation centre for 94 of the disadvantaged boys. The licensed premises did not close but moved across to the other side of Macquarie Road.

Oriental Hotel 1960

Oriental Hotel 2015

William Lawson also surrendered his own home, “Glen Lawson”, to the administration of the Burnside evacuees[5].
This eastern end of Springwood ceased to be a Lawson precinct after the war and the hotel and houses were gradually sold off. The alterations to the Oriental which are familiar today were largely done by new owners in the 1960s and again in the mid 1990s[6]. The Lawson houses constitute an outstanding suite in modern Springwood. The enclave, moreover, still looks out to the north over open land, thanks to the other major Presbyterian landholders, the Frazers, who chose not to build on their holdings along the northern side of Macquarie Road.
There are significant environmental and heritage issues to be weighed when decisions about redevelopment of the Oriental site are placed before the Blue Mountains City Council.

The Technical Side

Salt attack & rising damp

This process in heritage buildings must be understood to prevent onset of the problem and to address buildings already affected. The two are separate but interrelated. And both must be dealt with.
Rising damp is caused by capillary suction of water into the fine pores or voids that occur in all masonry materials. Water is drawn from the soil and today we utilise a damp proof course to prevent rising damp. Early masonry buildings were often built directly onto the ground, or on stone footings.
Salt attack is the decay of masonry materials such as stone, brick and mortar by soluble salts forming crystals within the pores of the masonry. The salts come from the soils and as the moisture evaporates salts are left behind. Masonry reacts with the crystals and crumbles away, or “melts”.
Walls must be able to “breathe” with heating and cooling of the surrounding air. In humid conditions condensation can occur within the wall causing moisture to accumulate. If

coatings are applied that prevent breathing, the wall remains damp, even in dry weather, and becomes weak and fragile under the outer coating.

Peeling whitewash on brick wall

Salt rising through floor

Signs of rising damp and salt attack can include blistering of paint, fretting of mortar and or brickwork, decaying plaster and
The problems should be accurately diagnosed. The building should be efficiently and effectively drained to prevent moisture impact, and underfloor ventilation undertaken where possible, particularly in the event of storms, floods, drought etc. Mild damp can be treated by using weak mortars which are replaced regularly. Excessive salt can be removed easily with a brush or vacuum.
It is imperative then to undertake regular monitoring and maintenance to protect a building, and inserting damp proof courses after salt removal where possible.
Although most buildings in Australia are under 200 years old, it is still imperative to assist buildings to last beyond this.

Decimated headstones in rural cemetery

There are many ways of preventing and dealing with rising damp and salt attack, and experts in the field who utilise up to date techniques and equipment. Small changes in management can make a world of difference when teamed with ongoing monitoring. There are numerous technical guides available on the subject which make excellent references when trying to diagnose the problem and seek solutions. *Patsy Moppett*

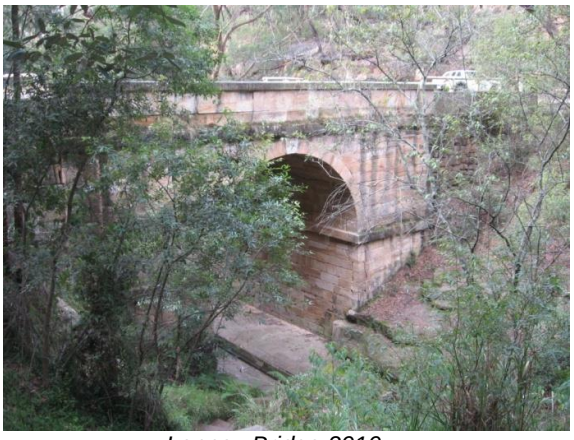
Community events & updates

Lennox Bridge to be refurbished

A State government grant has enabled this significant structure to have a much needed makeover and refurbishment. The funding will enable the removal of graffiti, strengthening of cracking in the stonework, installation of interpretive signage and also CCTV equipment. The works will enable on going conservation of the bridge and greater appreciation by the public of the historical significance of the bridge. The grant was awarded through the State government's Major Works Program, which is designed to assist owners and managers of State Heritage Register listed properties to restore and reuse their properties.

Lennox Bridge 1830s



Lennox Bridge 2010

The bridge is the oldest stone arch bridge on the Australian mainland, being constructed between 1832 and 1833. It was designed by Scottish stone mason David Lennox and constructed by convict labour.

The Paragon SHR Gazettal

The Paragon, 63-69 Katoomba Street, Katoomba, was formally listed on the State Heritage Register on 5 March 2015 in Government Gazette No. 17. It was listed by the Minister for heritage, the Honourable Rob Stokes MP, on the recommendation of the Heritage Council of NSW, pursuant to Clause 37(1)(a) of the *Heritage Act 1977.*

The listing was undertaken due to the item's heritage significance to the people of the State of NSW. The details can be viewed on the State Heritage Register via the Heritage Division, Office of Environment and Heritage (OEH) website at www.heritage.nsw.gov.au

Meeting to celebrate

Drinking straws c. 1940

BMACHO is delighted that the Paragon, the iconic Greek café in Katoomba, was gazetted on 5 March 2015 as an item on the State Heritage Register. Jan Koperberg has been

secretary to the incipient Friends of the Paragon and Ian Jack was a founding member of this group. Very substantial contributions to the nomination to the Heritage Council were made by Roy Lumby, President of the Twentieth-Century Heritage Society and an expert on Art Deco, and, on the historical side, by Ian Jack.
There was a small celebratory lunch at the Paragon on Saturday 28 March 2015 before the Annual General Meeting of BMACHO hosted by Robyn Parker, the dedicated lessee of the Paragon. The photograph shows those attending: from left to right, Fiona Burn (National Archives of Australia), Robyn Parker, David Rozenker (Twentieth-Century Heritage Society), Sara Reilly (Blue Mountains City Council); and on the opposing side of the table, Roy Lumby (Twentieth-Century Heritage Society), Patsy Hollis (editor of book on Paragon) and Jan Koperberg (BMACHO).
At the Annual General Meeting of BMACHO in March, Ian Jack made a presentation to Robyn Parker of two real straws taken from the Paragon in c.1940, which he had recently been given. One straw was still in its original paper wrapping, printed as an advertisement for the café. The inscription is only partly legible in the photograph. The complete text is:

REAL HYGIENIC DRINKING STRAW
MADE IN FRANCE
THE PARAGON, Katoomba, Sole Agents for Australia

The straws will be on display at the Paragon in future. *Associate Professor Ian Jack*

The Cox's Road SHR Gazettal

A number of precincts of the Cox's Road were formally listed on the State Heritage Register on 25 March 2015 in Government Gazette No. 27. The sites were listed by the Minister for heritage, the Honourable Rob Stokes MP, on the recommendation of the Heritage Council of NSW, pursuant to Clause 37(1)(a) of the *Heritage Act 1977.*
The listing was undertaken due to the sites' heritage significance to the people of the State of NSW. The details can be viewed on the State Heritage Register via the Heritage Division, Office of Environment and Heritage (OEH) website at www.heritage.nsw.gov.au
The formal listing was made as follows:
Cox's Road (1814–15) and Early Deviations (1820s) - Four Precincts within the Local Government Areas of Blue Mountains City and Lithgow City:

- Cox's Road and Early Deviations—Woodford, Appian Way Precinct
- Cox's Road and Early Deviations—Mount York, Cox's Pass Precinct
- Cox's Road and Early Deviations—Hartley, Clarence Hilly Range/Mount Blaxland Precinct
- Cox's Road and Early Deviations—Sodwalls, Fish River Descent Precinct

Mount Blaxland track, Hartley

Track below Mount York

The listing is a culmination of the work commenced in 2006 by John Wellings and the Cox's Road Project Committee, together with support from the community and the relevant local government bodies. *Patsy Moppett*

Hartley Commemorates - Correcting the Record

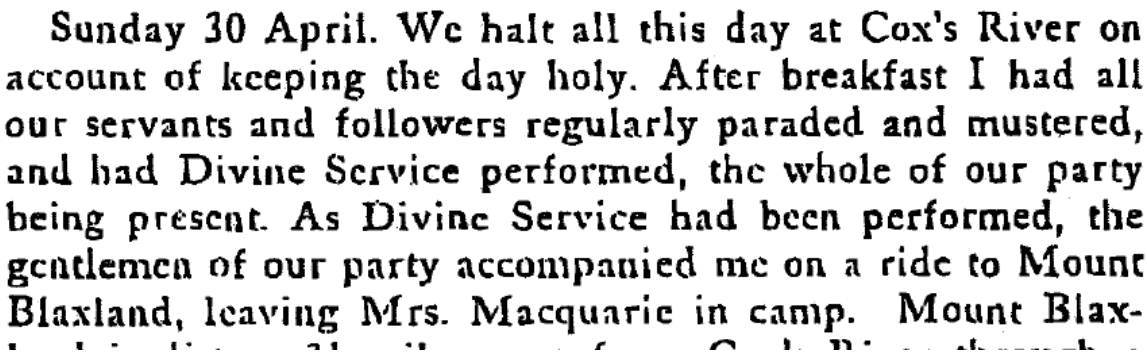
On the South bank of the Macquarie River at Bathurst stands an obelisk bearing an inlaid marble plaque erected in 1930 by the Royal Australian Historical Society. It commemorates Sunday 7th May 1815, when Governor Lachlan Macquarie proclaimed the town of Bathurst. It then goes on to state "after which the first Divine Service west of the Blue Mountains was held". Truth is, it's wrong, Macquarie didn't conduct the first Divine Service west of the mountains in Bathurst. He did that in Hartley.

The Memorial at Bathurst

The Hartley District Progress Association in conjunction with The Macquarie Society is holding an event to commemorate and correct the record on this historical anomaly. On ***Sunday April 26th*** they are expecting a big crowd to see Governor Macquarie's military escort and their entourage, to hear Professor Dame Marie Bashir speak on Macquarie and Tim Mc Iver the Minister of St Johns at Hartley, celebrate Divine Service exactly as Macquarie would have in 1815. "This is an important historic event" said Ramsay Moodie the Chairman of the Hartley District Progress Association's organising committee "we are putting a peg in the ground with a troop of Red Coats to back us up – Hartley is where the first divine service was celebrated".

The Memorial at Glenroy, Hartley

With the day starting at 11 am the main proceedings commence at 2 o'clock sharp. "We are encouraging families to come from 11am so there is time to talk to the soldiers before they deliver their first volley in salute, on the arrival of Professor Dame Marie Bashir" explained Ramsay Moodie " the Hartley Fire brigade will be doing a sausage sizzle for lunch and the formal proceedings will commence at 2pm". They are doing all this in Butlers paddock on Jenolan caves road 4klms from the Great Western Highway junction, as Ramsay added " it's a very historic place, Mt Blaxland in front of us and Macquarie's campsite and Cox's road just below, plus there is lots of room for parking".



Sunday 30 April. We halt all this day at Cox's River on account of keeping the day holy. After breakfast I had all our servants and followers regularly paraded and mustered, and had Divine Service performed, the whole of our party being present. As Divine Service had been performed, the gentlemen of our party accompanied me on a ride to Mount Blaxland, leaving Mrs. Macquarie in camp. Mount Blax-

Extract from Macquarie's Diary

After formal welcomes, Professor Dame Marie Bashir will deliver the 2015 Macquarie Oration, the first of an annual series of talks on the virtues of Governor Macquarie, the fourth governor of New South Wales. Patrick Dodd the president of The Macquarie Society, who are partnering with the Hartley District Progress Association in the delivery of this event, said "Dame Marie is a noted Macquarie Scholar and she graciously accepted the role of Patron of our society when she was still the governor of New South Wales". He went on to explain "At our event in Hartley, I am told, Dame Marie will give us an insight into what she sees in Macquarie's attitudes and behaviour that have contributed to what we would regard today as our Australian Values".

This is an event not to be missed, if you want more information go to www.hartleyvalley.org.au. It's important that you book as this will ensure you get to enjoy a cup of tea with Dame Marie at the end of proceedings. To book call the Lithgow Visitors Information Centre on 1300 760 276.

Glenroy Crossing

Glenroy Bicentenary Commemoration Committee invites you to attend a Divine Service by Reverend Tim McIver, Anglican Minister of St John's Hartley, and Oration on Governor Lachlan Macquarie by Dr Anne-Marie Whitaker, President of the Royal Australian Historical Society, on Thursday the 30th April 2015. The event would be followed by refreshments and site inspection at Glenroy.

The Divine Service and Oration commemorates the bicentenary of the First Divine Service west of the Blue Mountains, held at Glenroy on the 30th April 1815, in the presence of Governor Macquarie and Mrs Macquarie.

The event will take place between 12 noon and 2pm near the existing monument at Glenroy, Hartley.

Eliza Rodd grave

Glenroy Precinct

A site inspection of the location of the first two bridges built west of the Blue Mountains, the location of the Military Depot 1814, and the grave of Eliza Rodd, 1831, will take place after refreshments.
Please bring a chair, your lunch and coin donation to the event. Be prepared for inclement weather.
Bradley and Rosemary Barber,
Glenroy Bicentenary Commemoration Committee

Heritage Roadshow

The Baird government has recently allocated some $28.5 million to conserving and protection local churches, old schools, and industrial and wartime relics. The NSW government will appoint a Heritage Roadshow Team (similar to the BBC series Antiques Roadshow, and Time Team) comprised of experts with skills in archaeology, history, heritage architecture, planning and Aboriginal culture. The Team would tour the State, encouraging residents to seek advice from them on the conservation of historical items and places. The Team would record historical information to protect important places and help local Councils improve skills amongst their heritage staff.
A pool of $8 million for local communities or property owners to restore heritage items that aren't on the State Heritage Register, will be offered. A focus will be making heritage more accessible to the public through adaptive reuse and access/building/efficiency upgrades.
A pool of $2 million will focus on energy efficiency.
A pool of $6 million will be offered to local councils to improve technical advice for conservation.

Patsy Moppett

Flag Staff, Bathurst

A group of local Bathurst people are approaching the completion of a project to erect a new Flag Staff on the spot where Governor Lachlan Macquarie raised the flag to name the town of Bathurst on 7th May 1815. The event marked the earliest gateway to inland NSW and enabled development of the fledgling nation.
The Flag Staff marked the finishing point of the first road over the Blue Mountains built by William Cox, and was the official survey point for laying out the original plans of the Bathurst township.

Governor Lachlan Macquarie

Lewin's depiction of Bathurst

The Bathurst Bicentennial Colonial Fair Committee, under the auspices of the Bathurst District Historical Society, are planning two colonial fairs, one on Thursday 7th May (Proclamation Day) and one on 9th May 2015. A life-size slab hut has been completed and will be relocated to the site on the banks of the Macquarie River. Early costumes have been researched and numerous activities will be included at the fairs. *Patsy Moppett*
Further information is available from the Bathurst Visitors Centre.

Crossing

Bathurst's Bicentenary Celebrations are almost here! And one of the most eagerly awaited is the play CROSSING, a fun romp through the early crossings of the Blue Mountains, written specially for these three years of commemorations. CROSSING follows explorers Blaxland, Wentworth and Lawson, the aboriginals who have crossed the mountains for thousands of years, surveyors, roadbuilders and pioneer families across the mountains. Three energetic actors play forty different parts, and the action is interspersed with traditional and purpose-written songs. It will be performed at Bathurst's well-known Entertainment Centre at 4pm on Saturday 9th May, at the special discount price of $12. Booking details are available at the Bathurst Memorial Entertainment Centre Ph: 6333 6161. Please forward this to anyone who might be interested in coming – and see you at the show!

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Historical Society Inc; Blue Mountains World Heritage Institute; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); Mudgee Historical Society Inc; National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Restaurant, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; Bygone Beautys Tea Pot Museum, Tea Rooms and Antiques.
The following are individual members: Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Fiona Burn, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter editor) ,Ian Jack (vice president), Jan Koperberg (secretary), Ian Hammon (Treasurer), Roy Bennett (Grants Application Officer), Wendy Hawkes and Scott Pollock (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Louise Vining (Events and Venue Co-ordinators).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

Mount Lambie on the Honeysuckle Range

Mount Lambie - John Lambie

The locality we now know as Mt Lambie, some 20km west of Lithgow on the Great Western Highway, has been known in the past as Mt Lambi, and Mt Lambey, Thorpe's Pinch and Warrawang.

Presbyterian Church, Mt Lambie

Former Victoria Inn, Rydal- Mitchell's Line of Road

It was named Mt Lambie after Surveyor John Lambie, who was an overseer and surveyor on the construction of Victoria Pass and the Great Western Road. Thorpes Pinch Road at Mt Lambie is part of the original alignment of the Mitchell's line of road from Sydney to Bathurst.
John Lambie was born in Ayrshire, Scotland in 1793 to John Lambie and Elizabeth. John Lambie Snr was an engineer from Saltcoats, Ayrshire, born in 1833, coming from a railway background. His father had been Traffic Manager of the Wishaw and Coltness Railway until 1848 when it became the Caledonian Railway. John Snr became Locomotive Superintendent of the Caledonian Railway in 1891. He died in 1895, two years after John Jnr was born. He improved conditions for enginemen by fitting cab doors, better handrails and footsteps to locomotives.
John Jnr came to Australia in 1828, some years after his father's death, and worked as a surveyor in the Survey Department in Sydney. He was appointed as a civil officer, an Assistant Surveyor, in the Department of Roads and Bridges on 4 June 1829, when he received a salary of 150 pounds per year. In 1830 he became licensed and an additional allowance of 2/6 per day for his horse. In December of that year he was transferred to the Department of the Surveyor General where his salary rose to 200 pounds per year. He also received rations when in the field.
In 1828 Major Thomas Livingstone Mitchell became the Surveyor-General, replacing John Oxley, recently deceased. He assumed control for the Survey Department, and carried out considerable changes on the roads between Sydney & Parramatta, and out to Liverpool. He turned his attention almost immediately to the improvement of the Great Western Road. He surveyed a route running north west from Hartley via Mt Walker to Meadow Flat, crossing the Honeysuckle Range at the top of Mt Lambie, then running in an almost straight line westward via Browns Hill to Kelso, to meet the pre-existing road. Mt Lambie is located to the south of the current highway alignment.
Edmund Lockyer was in the process of building a new pass down from Mt York, a route suggested by Pierce Collits, a settler of Hartley, when Mitchell ordered a cessation of work, claiming that he had a more suitable route. He established a new descent from the Blue Mountains towards Bathurst in 1830 down what we now know as Victoria Pass, which was completed by 1837, through Rydal (Solitary Creek), over Mt Lambie, and through Yetholme, where it became a main road to Bathurst and the main route for mail.
In 1830 his road was commenced, descending Mt Victoria, crossing the River Lett below Hartley, and above Glenroy. Glenroy had been the site of a military station (stockade) at the confluence of the Cox's River and the River Lett, and took on the name as a rural property in about 1837.
By November work was being carried out on Victoria Pass, where road gangs numbering over 110 men were under the care of Supervisor Elliott. Thorpe was another overseer or ganger on the construction of the road through this area, under Thomas Mitchell. His military camp (stockade) was established at Honeysuckle Hill from 1832-1839.
Discipline was challenging. In 1830 Assistant-Surveyor John Lambie had been in charge of the road parties at Argyle. In January 1831 John Lambie took over as Supervisor from Elliot at the Pass. The pace of work picked up after this, although discipline was still difficult. In 1836 both Lambie and Mitchell were signatories to a submission to the Governor in regard to their exclusion from the Commission of the Peace.
In August 1830 the Campbelltown Assizes heard a matter relating to two prisoners being apprehended for forgery, Jean Herman Maas and Thomas McGibbon. To the Chief Justice, John Lambie swore that he was the Assistant Surveyor of Roads in the Liverpool district and it was his duty to make up the ledgers of the road gangs under his direction, including road gang No. 38, and send them to the Commissariat Office at Liverpool. The ledgers included the names of the men, the number of days each had worked, and the provisions furnished for them. Lambie's signature had been forged on papers, and monies stolen. These two convicts were accused of the forgery. They were tried and Maas found guilty, McGibbon not guilty. Later they were both again placed at the bar, and further witnesses called. The jury returned a verdict of guilty for both, and passed the sentence of death for both prisoners.

Maas in particular had had a colourful past. He was a Dutch-Sinhalese convict from Ceylon, who was sent to Mauritius as an assigned servant to political prisoners in 1818. In 1924 he was sentenced for 7 years for forgery. He was not put on a road gang like most Indian convicts, due to his literacy and his European parentage, but was attached as a personal assistant to the head of the department of roads and bridges, William Staveley. It was considered that he was not of a class accustomed to hard labour, and that he be apprenticed to some trade. Within a year he had been arrested again for trying to spend a forged coin, being caught with forged coins and coinage equipment. He was tried and sentenced to transportation for 15 years to NSW in 1828 on the ship Celia, being age 20 years and of coloured complexion. His privileged background meant he was attached to the Liverpool Commissariat's office as a clerk. Despite being transported twice, he stole the contractor's payments, was tried and found guilty. He was executed with Thomas McGibbon in 1930, they being the last persons hanged for forgery in NSW.

Lambie reported that in February 1832 there were 216 convicts employed in irons and 60 out of irons on Victoria Pass, 21 in irons and 39 out of irons on Honeysuckle Range (Mt Lambie), 43 in irons and 15 out of irons at Stoney Range, and a bridge party of 62 in irons and 33 out of irons was stationed at Mt Victoria. In July 1832 Surveyor John Nicholson replaced Lambie.

Convict stockade at Cox's River crossing near Hartley: artist unknown

Victoria Pass opened in October 1832, and in April 1834 Mitchell visited his new line of road to Bathurst, nearly completed. It was said to be preferable to the former line. With the object of making the western road one of his greatest achievements in the colony, Mitchell urged Nicholson & his successor Dulhunty to proceed expeditiously with the work. The result was that at the close of 1836 the new road to Bathurst was ready for traffic, although ironed gangs were retained in subsequent years to make necessary alterations and repairs.

Convict gangs on Major Mitchell's Pass 1832: unknown artist

Surveyor Thomas Mitchell went on to complete the survey of the town of Cooma in 1849. Lambie also moved to the Monaro region in about 1837, following along Mitchell's work, and became a prominent road builder in his own right. He was subsequently appointed the first Commissioner of Crown Lands for the Monaro (formerly known as Maneroo) District of NSW. The Maneroo extended from Michelago Creek to Ninety Mile Beach, and from the Snowy Mountains to the coast.

He became the first public official in the Maneroo and was the first magistrate to adjudicate in Cooma. When a court of petty sessions was established in 1847 he was appointed Chief Magistrate. For several years he administered all civil work in the district, and was a signatory to a request for a survey for a town at Braidwood.

His returns for livestock, livestock slaughtered, and private schools, were sent to the Commissioner of Crown Lands at Panbula (Pambula). Upon his request, musters for "ticket of leave" men were held each year for many years.

He lived and worked in this district from 1837 to 1852. He lived in Yass and then Braidwood, before settling at Back Creek, that being the original name for Cooma from 1849. In 1848 he acquired a property of 1,280 acres in the vicinity of the village of Cooma, his home and the Commissioner's Office being in the vicinity of Kirwan's Inn. This would have been a part of James Kirwan's "Cooma Run", where the old lock-up and a boarding school were located, in an area called Lambie's paddock. The paddock now contains a large part of what is now the Cooma Showground.

James Kirwan was the principal early settler of the Monaro region, who settled there from 1836, and owned in excess of 50,000 acres in the vicinity of Cooma township. He was killed in 1852, being shot by his groom/gardener, John McSpadden, whilst being the inn keeper at Kirwan's Inn. The matter was reported on numerous occasions in the press, as McSpadden absconded, only to surrender to police in Liverpool. He was tried and sentenced to 15 years on the roads in 1854.

Lambie's position as the Crown Lands Commissioner was terminated in 1856, and John Lambie appeared to retire from all public duties from 1858.

Early Cooma

John Lambie is buried at Cooma

He died in 1862 and is buried at Christ Church Anglican Cemetery, Cooma. Christ Church (built in 1845) is the earliest official cemetery on the Monaro and is the last resting place of many of the districts pioneers and the forebears of many local families. Lambie Street and Commissioner Street led to his home at the southern end of Lambie Street, which was named for Lambie in the original town plan. *Patsy Moppett*

Food for thought ..... Editor's note

The Bicycle goes to war

Most of us have more than one hobby, a number of interests, which can be quite varied. When you receive an opportunity to combine two or more in the one exercise, you grab the opportunity. Recently, after reading a thought provoking article in "Cycling Australia" by Michael Hartman (March-April 2015), it gave me the chance to combine my love of cycling with my historical interests, in particular that of war history.

In this the year of the centenary of Gallipoli, and also the 75th anniversary of the end of World War II, spare a thought for the part that bicycle technology played in the battlefields of France and Belgium and elsewhere across the world. Michael tells us about his uncles from northern NSW, and the part they played, when the ANZAC Cyclist Battalion was established by "hot, bored and eager" Australian soldiers in Egypt in 1915. He poses the idea of how incredible it might be to consider the bicycle as a serious weapon of war. He quotes the British Cycling Magazine in 1914:

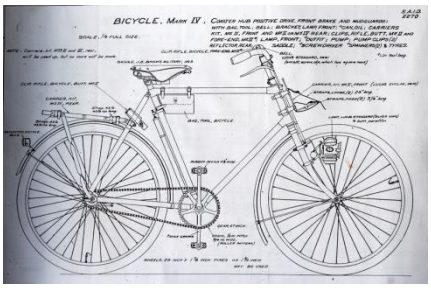
"The reasons of the success of the soldier-cyclist are not far to seek. In the first place it must be realised that his mount, unlike that of the cavalry man, is silent in progress. This gives him an enormous advantage over his noisy foe, whose horse betrays his presence even when galloping over grassland. In short, the cyclist can hear and not be heard. He can approach speedily and noiselessly, and without warning can attack the enemy, who, all unconscious of his presence, often falls an easy prey".

Bicycles were a relatively new invention. No carbon fibre frames or lycra outfits! The AIF had cycling units during many of the early major battles, deployed to the front line as well as undertaking cable burying, traffic control and reconnaissance work. They carried water bottles and rifles, a kitbag with kit and rations, a toolkit and a bedroll on the handlebars. They wore their heavy army issue clothing, although sometimes knee breeches replaced the baggy army trousers. All units had colour patches and badges, square with a white background and a superimposed red middle square Bicycles were fine over firm hard dry ground, but struggled in the muddy conditions and often rubble strewn roads of the Western Front. Even in 2008 in East Timor bicycles were used to improve field patrols.

Bicycle infantry was utilised in the late 19th century by Britain, Europe and the USA. They lessened the need for horses, fuel and vehicle maintenance. They could carry more equipment and travel longer distances than foot soldiers, and could substitute for horses as messengers and scouts. With an ease of economy, simplicity of training, relative silence, ease of support, and being lightweight could be carried over obstructions, they became a logical alternative.

The first known use of the bicycle in combat was during the Jameson Raid, where cyclists carried messages. Even tandem bicycles were used, patrolling railway lines on specially constructed machines fixed to the rails, in the Second Boer War. France and Britain developed a folding bicycle which could be collapsed and carried across the rider's shoulders. A bicycle ambulance carried a stretcher between three bicycles, one in front and two behind.

The USA, France, Italy, Poland, Finland, Switzerland, Denmark, Belgium, the Netherlands, Germany, Japan and Russia all developed a cycling infantry. Cycle-mounted infantry was utilised in both World Wars, with the USA even dropping bicycles from aeroplanes to reach troops behind enemy lines.



During WWI Britain used three types of bicycles – military folding bicycle, military roadster and civilian roadsters. The principle manufacturers were Raleigh, BSA, Royal Enfield,

Rudge-Whitworth, Bianchi and Columbia. AIF bikes were issued from England and manufactured by Birmingham Small Arms Company (BSA). Soldiers usually had a standard military issue machine, with standard tyres with little or no grip.

CYCLISTS! YOUR KING & COUNTRY NEED YOU!

New cyclists battalions to be raised at once

Who will ride in the ranks of the famous Essex regiment?

Unique opportunities for keen, fit wheelmen

How and where to join…

Manpower initially comprised cycling enthusiasts, and they proved their worth. Athletic and cycling clubs were prime candidates for enlistment. The trenches however forced the reassignment of many cyclists from their cycling units to infantry units.

The humble bicycle.....!

Coxs River: a "new" name, two centuries on?

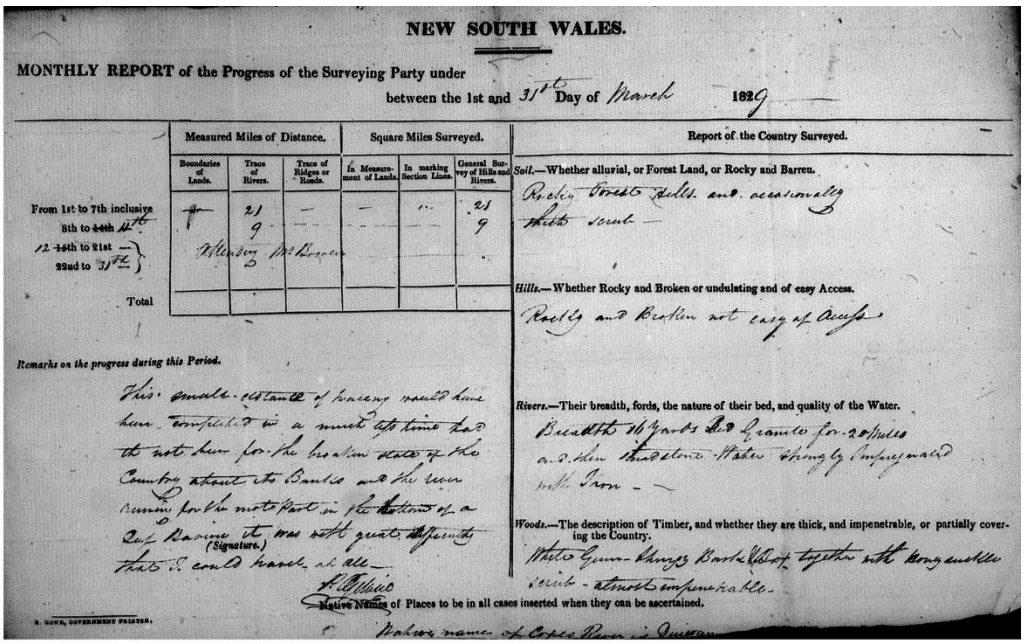
The Coxs River rises near Wolgan Gap, about 22 kilometres north-north-west of Lithgow, and flows southward and eastward to eventually join the Wollondilly River in Lake Burragorang. Rather controversially, it provides an official boundary to the Blue Mountains. (Macqueen 2012)

Governor Macquarie named the river two hundred years ago when he reached it at Glenroy on Saturday April 29 1815, after descending Mount York. (Macquarie 1815) Macquarie assigned many placenames along his journey to Bathurst. None of these was an Aboriginal name, which is not surprising. The act of applying European names was an essential part of taking possession and rendering the alien familiar. Besides, he had no meaningful encounters with Aboriginal people except at Bathurst.

Fortunately, when Major Thomas Mitchell became surveyor general he directed his men to ascertain traditional placenames wherever possible, with the result that many such names are now officially recognised, albeit their relevance and phonetics may be spurious or doubtful. A number of names relevant to the Gundungurra country of the southern Blue Mountains were so-recorded around 1830, but until now no name for the Coxs River has emerged from that era.

As late as 1896 Gundungurra elder Billy Lynch was reported as saying that the Gundungurra group who had lived in the Megalong-Kanimba area were the "Therabulat", and that was also their name for the Coxs River. In presenting this information, historian Jim Smith stated that the name meant "two hills", and suggested that the hills concerned might be Mount Blaxland and the combined Wentworths and Lawsons Sugarloaves. He considered the hills might have constituted some sort of boundary or site of significance. Perhaps complicating matters, and as Smith pointed out, another source gave the name "Tarrapalatt" for the Lett River. (Smith 1990). Recently, Gundungurra language historian Jim Barrett came to the view that the appropriate spelling of "Therabulat" would be "Dhurrabulat", which means "two rivers". He concluded that the two rivers referred to would be Coxs River and River Lett, and that the name properly applied to the Coxs River at, and locally below, the junction. He also concluded that there was no Aboriginal name for the whole river. (Barrett 2015)

I do not have a view on the above interpretations. However, I do wish to put forward a Coxs River name recorded back in the Major Mitchell era.
I have been studying the tragic story of Mitchell's assistant surveyor Peter Grant Ogilvie (c1806-1841). In the course of his work Ogilvie recorded the supposed traditional names of many features. At one stage I noticed that one of his maps indicated that the Aboriginal name "Wollangambe" applied to Mount Irvine rather than to the river which now carries the name. (Macqueen 2014)



NEW SOUTH WALES.

MONTHLY REPORT of the Progress of the Surveying Party under

between the 1st and 31st Day of March 1829

	Measured Miles of Distance.			Square Miles Surveyed.			Report of the Country Surveyed.
	Boundaries of Lands.	Trace of Rivers.	Trace of Ridges or Roads.	In Measurement of Lands.	In marking Section Lines.	General Survey of Hills and Rivers.	
From 1st to 7th inclusive	—	21	—	—	—	21	Soil.—Whether alluvial, or Forest Land, or Rocky and Barren. Rocky Forest Hills and occasionally Scrub
8th to 14th		9				9	
15th to 21st		Wollangambe Mt Boroan					
22nd to 31st							Hills.—Whether Rocky and Broken or undulating and of easy Access. Rocky and Broken not easy of Ascent
Total							

Remarks on the progress during this Period.

This month a distance of twenty would have been completed in a much less time had the not been for the broken state of the Country situate to Banks and the river running for the most part in the bottom of a Deep Ravine it was with great difficulty that I could hawk it all

(Signature.)

Rivers.—Their breadth, fords, the nature of their bed, and quality of the Water. Breadth 40 Yards Bed Granite for 20 Miles and then stone Water strongly impregnated with Iron

Woods.—The description of Timber, and whether they are thick, and impenetrable, or partially covering the Country. White Gum Stringy Bark & Box together with Honeysuckle Scrub - almost impenetrable.

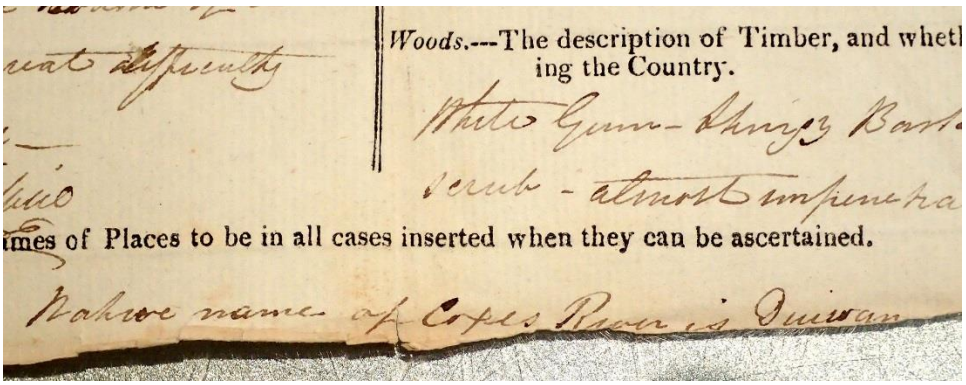
Native Names of Places to be in all cases inserted when they can be ascertained.

Native name of Coxes River is Duiwan

H. GOVT. GOVERNMENT PRINTER.

Figure 1: Peter Ogilvie's monthly report of March 1829

Recently I was studying his monthly report for March 1829. (Ogilvie 1829a)(Figure 1) Under the printed heading "Native Names of Places to be in all cases inserted when they can be ascertained", Ogilvie wrote "Native name of Coxes River is [X]". When I first saw this on the microfilm at State Records I could not interpret the word [X], and I also suspected that the film had not captured all the page. I discussed the matter with Senior Archivist Gail Davis, with the result that the original material was helpfully brought out for examination. The film had indeed captured all the page, the bottom of which has been cut or torn off, but recourse to the original gave a clearer view of what does appear to be the entire word. (Figure 2)



Woods.---The description of Timber, and whetl
ing the Country.

White Gum- Stringy Bark

Scrub - almost impenetra

imes of Places to be in all cases inserted when they can be ascertained.

Native name of Coxes River is Duiwan

Figure 2: Enlarged detail of the March report

After comparing the word [X] with the handwriting in Ogilvie's many other reports and letters, with the assistance of advice from Gail Davis and her colleagues, I have concluded that Ogilvie first wrote "Duivan" but corrected it (by over-writing) to make it "Duiwan".

It might also be noted that the first letter is almost exactly matched by many of Ogilvie's upper-case "D"s, so any temptation to designate it as a "Q" should probably be avoided. I understand that the consonants "q" and "v" were not used in the Gundundurra language. (Barrett 2015)

Exactly what the Scottish Ogilvie heard could be a matter for conjecture. Barratt believes the word would have been "du-wi-wan", Ogilvie not having picked up the soft sound of the first "w". However, I wish to place on record the historical context of Ogilvie's little note. Given that different parts of the river may have had different names, the most important question is: what part of the river did the name apply to?

In the latter half of February 1829 Ogilvie travelled from Sydney to the Coxs River. (Ogilvie 1829a) He was carrying the following instruction from Major Mitchell, dated 3 February:

> *1—You will hold yourself in readiness to accompany Mr Bowen when he arrives at Bathurst, in the meantime I wish to employ you to unite several unconnected portions of Cox's River and the Fish River, as you proceed to the westward.*
> *2—You will therefore halt near the Pulpit Hill in the Blue Mountains and turning to the left you will find your way to Mr Norton's Grant on Cox's River – and from the Eastern boundary of that land you will trace Cox's river downwards until you make twelve miles of direct distance from where you have commenced.*
> *3—You will next proceed from Mr Norton's farm by the most convenient road to where the Mount Blaxland Road crosses Cox's river from which point you will trace that river upwards to its source near Mount Walker.*
> *4—You will advance towards Bathurst by the Mount Blaxland road, until you reach the Fish River when you will again halt your party and turning to the left trace the Fish River upwards as high as you can get.*
> *5—You will transmit the plans of these different portions of rivers as soon as you shall completed the trace of each, with a Report on the nature of the country on their Banks etc.*
> *6—But in the event of Mr Bowen joining you before you can complete this duty it may stand over until you are returning from the Bathurst Country. … (Mitchell 1829)*

Are we to believe that Ogilvie completed all the above? No. Aside from the impossibility that Ogilvie ventured down Blacks Ladder from Pulpit Hill with his men and pack animals, the clumsy arrangement whereby Ogilvie was to take orders from Land Commissioner George Bowen, rather than directly from Mitchell, almost certainly interfered. The arrangement was a matter of much annoyance to Mitchell, and accounts for the poor record that we now have of Ogilvie's precise movements and achievements in the following months. Fortunately however we do have some critical monthly reports and maps to go on.

The only surviving report that apparently alludes to work on the Coxs River is that of March 1829, in which Ogilvie indicated he surveyed 30 miles of river, 20 miles of which was in granite country, and most of which was "in the hollow of a deep ravine". (Figure 1) He did not say where the river was. Then, after a two-week break "attending to Mr Bowen", we find him in April surveying just three miles of a river somewhere, and 35 miles evidently of the Great Dividing Range. By June he was in the Cudgegong country. (Ogilvie 1829a,d)

While most of the maps produced by Mitchell's surveyors survive in State Records, no map in connection with Coxs River has been attributed to Ogilvie. However, on examining two unattributed, undated and adjoining Coxs River maps I discovered they are certainly Ogilvie's work. The faint magnetic-north arrows are in his style and are accompanied by the equally-faint but unmistakable initials "PO".

The first of these maps (Ogilvie 1829b)(Figure 3) covers the part of the river from Glenroy (at the River Lett junction) up to a point just north of Mount Walker, west of Lithgow, and is a fairly accurate representation. The distance along the river is about 25.5 kilometres or 16 miles.

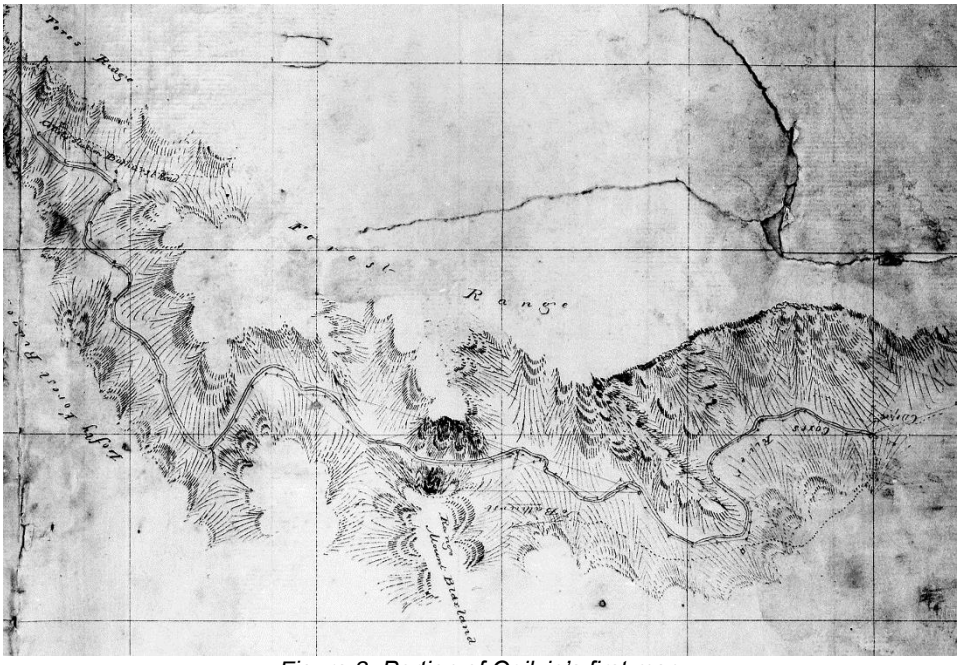


Figure 3: Portion of Ogilvie's first map

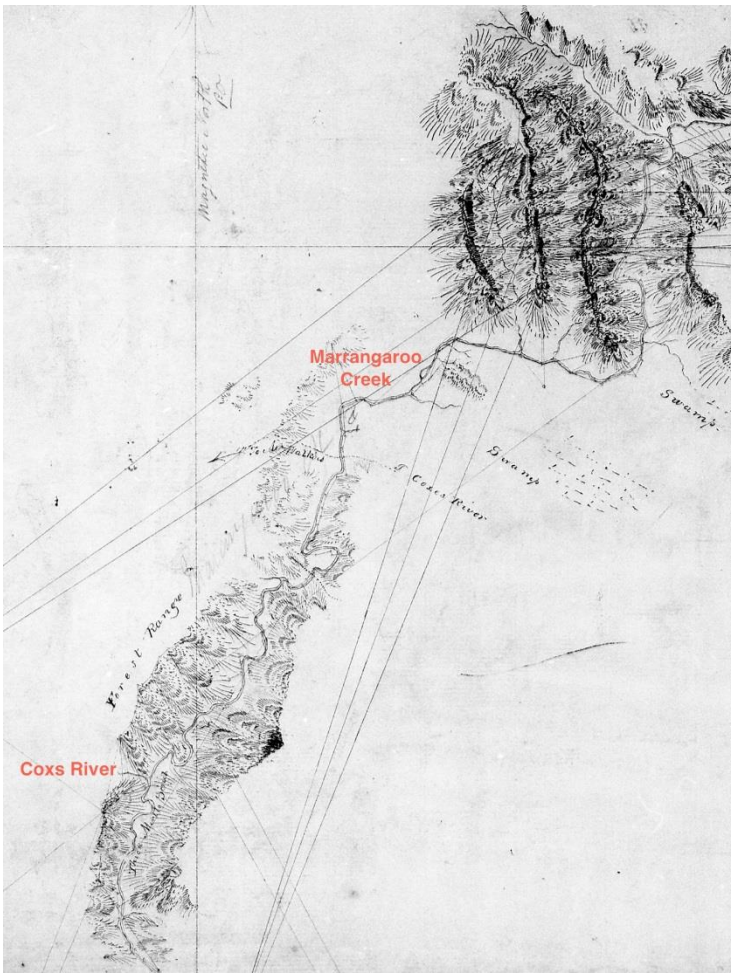

Figure 4: Portion of Ogilvie's second map

The second map (Ogilvie 1829c)(Figure 4) continues upstream, but on reaching the Marrangaroo Creek junction it heads on up that creek to its headwaters north of Lithgow instead of following what we now know as the Coxs. The entry of the latter is indicated but

unlabelled. Moreover, the part of the map in the junction area is quite inaccurate: it appears that Ogilvie did not bother with proper survey there. He was apparently put off by the rough nature of the river which included the "thick mirtle scrub" which he labelled on the map. Marrangaroo Creek and Coxs River are similar in size at their junction. It appears that Ogilvie made a mistake and took the wrong branch, but was set straight before he drew his map. The evidence for this, firstly, is that he did not place any name on the Marrangaroo Creek portion of his work, while clearly labelling Coxs River on the first map. Secondly, the map shows a track crossing Marrangaroo Creek near where today's Great Western Highway crosses, labelling it "To Mr Walkers" to the west and "To Coxes River" to the south east. It would be strange to put the latter label at a watercourse he considered to be part of Coxs River.

The length of watercourse on the second map is around 24 kilometres or 15 miles, so the total over the two maps is about 31 miles. This is consistent with the river distance that Ogilvie said he surveyed in his March report, being 30 miles. It is also consistent with his 20 miles of "granite country", if we take granite as being rock other than sandstone. It appears then, that in doing the work in March he was fulfilling Paragraph 3 of Mitchell's instructions—except that part of the work was on the wrong watercourse.

What about Paragraph 2? The Norton grant to which Mitchell referred was in the Kanimbla Valley, and ran from Grants Creek down to just below Norton's Creek (Dixon 1837). Mitchell presumably meant the "Southern" rather than "Western" boundary when he asked Ogilvie to survey from there down to a point a direct distance of 12 miles (19 kilometres) away. That point would be almost at the Kanangra Creek junction (which is the point below which William Govett roughly mapped in 1833), and would have involved a survey distance of over 20 miles (32 kilometres). Aside from the problem of accessing the Megalong Valley by the route that Mitchell specified, there is simply no space in Ogilvie's time schedule or reported survey distances for him to have surveyed that section in addition to the abovementioned parts upstream. Having said that, I have to acknowledge that I have yet to discover just who did survey the part from Glenroy down to Kanangra Creek, and for that matter the part from Wolgan Gap down to the Marrangaroo junction. Someone did, for the whole river is shown on Mitchell's classic 1834 map. (Mitchell 1834) Andrews (1992) indicates it may have been White or Hoddle. It assuredly wasn't Ogilvie.

So, to return to the question: what part of the river might the name Duiwan have applied to? If we assume that by the time Ogilvie wrote his March report, probably some time in April 1829, he had a clear view as to what was the Coxs River and what wasn't, then in writing that Duiwan was the name for the Coxs River his understanding was presumably that it applied *at the very least* to the part of that river which he had surveyed and where he had presumably met his informant. That is, the part of Coxs River from Glenroy up to around Mount Walker.

That would conveniently fit Barrett's interpretation that the name Dhurrabulat could apply to the part *downstream* from Glenroy. Indeed, Barrett has suggested that Duiwan applied to *all* of the river upstream from Glenroy. (Barrett 2015)

Very likely, as Jim Barrett believes, there never was an Aboriginal name for the whole of Coxs River.

Andy Macqueen

Acknowledgements

I thank Senior Archivist Gail Davis at NSW State Records for assistance in interpreting Ogilvie's handwriting, and for granting permission to publish Mitchell's letter and the documents at Figures 1-4. I owe special thanks to Jim Barrett for the thoughtful advice and opinions he has provided. His new book "Gandangurra: The Language of the Mountain People - and Beyond" is expected to be released late in 2015.

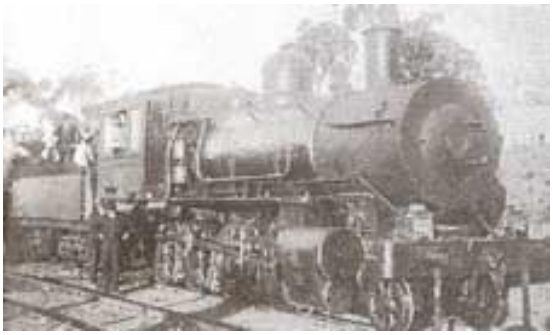
Lapstone – Arthur Hand

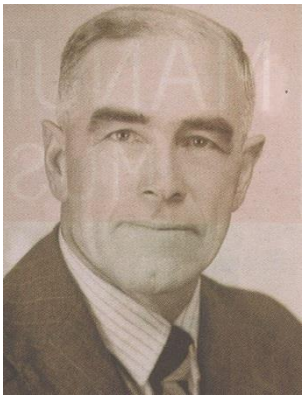
Lapstone is a small village on the eastern escarpment of the Blue Mountains.
The name "Lapstone Hill" was in use from at least the 1820s and derives from the shape of numerous water worn stones in the area which were once a part of the bed of the ancient Nepean River. To road workers and travellers they resembled the lap stones used by cobblers. In 1822 Mrs Elizabeth Hawkins, on her way to Bathurst, wrote: "We now began our ascent up the first Lapstone Hill, so called from all the stones being like a cobbler's lapstone."
Lapstone the village did not come into being until being developed from 1954. The land was originally bought and developed by Mr Arthur J Hand, an Alderman of the Blue Mountains City Council. In 1954, Mr Hand, at age 70, retired to Blackheath from the Sutherland shire where he had been mayor. In October of that year he signed a contract to purchase 116 acres of timbered, but vacant land, in the Lower Mountains known as Stephen's Paddock. He immediately started to subdivide, at up to 20 acres at a time, the area which is now Lapstone.



Lapstone steam

Lapstone Railway Station 2015

Lapstone railway station, which recently celebrated 50 years, was privately funded by Hand, after guaranteeing buyers of the estate he subdivided, that the blocks would have a railway. The station, and much of Lapstone itself, was built by Mr Hand in 1963-64.
It took several years for the Department of Railways to give consent for the construction of Lapstone Railway Station. Negotiations with the railways were finally successful, with the agreement that Hand finance the building of the station. Lapstone station was constructed by Ron McGraw with curb and guttering brickwork by Frank Davis. Mr Hand offered both men their choice of land as a sign of appreciation.



Arthur Hand

Over time the station ownership reverted to the State. The railway played a major role helping the new residential area to Glenbrook's east forge its own identity.
A plaque is being organised to commemorate the 50th anniversary of Lapstone station. Once it is finished, the local community will be invited to attend an event to mark the plaque's unveiling. Mr Hand will be mentioned on the plaque.
Lapstone today is a residential village. The school remains, along with a sporting complex, including a netball centre, a bushfire shed and the station. *Patsy Moppett*

Tremain's Flour Mill, Bathurst

The former Tremain's Flour Mill at Bathurst has recently been sold. The site dates back to 1857 and includes a four storey industrial building, grain silos and associated structures, in-situ machinery and buildings including the Victoria stores and what is now Bedwell's Feed barn. Together with the nearby Crago Mill (1850), these two businesses were major employers in the town, two of five mills in Bathurst by 1883, being located in an area of Bathurst known as Mill Town, where many nearby dwellings were constructed for mill workers.

Tremain's Mill & silos

There was a mill on the site from about 1857, probably built by Chapman Brothers. Chapmans sold to Brown, who leased the site to HS Hayes in 1862. In 1868 the mill manager was Minehan. The Smith brothers ran the mill in 1868, and William Tremain purchased the site in 1874. It was by then known as the Victoria Mills. Tremain had first operated mills at O'Connell, and at "Rainham" at Orton Park. He let these go and moved to operate the Havannah/Keppel Street site. Tremain renamed the mill the Victoria Roller Flour Mill in 1887 when new machinery was installed. A separate rail line was constructed to the site in the 1890s. William Tremain died in 1898 aged 67. He had also been an alderman in Bathurst from 1882 to 1898.

He left the mill to his sons Reuben, John and Edwin. In 1901 the mill burnt down, but was rebuilt. The Tremains had to relocate their business to another mill in town, the Britannia, during the reconstruction. The ownership became Tremain Bros P/L from 1926. Electricity was introduced to the mill in 1953, no longer relying on steam. In 1972 the chimney was demolished, and in 1980 the company sold to George Fielders & Co, who closed the mill later that year. It had been the last operating mill in Bathurst.

Although the mill officially ceased operation in 1980, parts of the site are still in use, accommodating a number of small businesses. The possibilities for the site include adaptive reuse and tourism opportunities. A working group has been established which would seek to have a conservation management plan and a master plan drawn up, to maintain and protect the historical integrity of the site. Any proposals would be in the same vein as the conserved Crago Mill in Bathurst, which remained vacant for many years before being restored and conserved for alternate uses in recent times. *Patsy Moppett*

More on Flowers

Further to the fascinating history of flower shows in NSW provided by Shirley Evans in the previous issue of Heritage, the following list of exhibits of the most popular species is provided by Shirley. Ranging from flowers, vegetables and fruit through to manufactured products, we can see even that the average agricultural shows and markets of today still carry a range of these most popular products for exhibition and competition.

EXHIBITS AT FLOWER SHOWS IN THE 1840S

FLOWERS		VEGETABLES	FRUIT	COLONIAL MANUFACTURES
Clianthus	Cyclamen	Cauliflower	Mandarin orange	Silkworms
Cork bark	Saxifraga	Broccoli	Naval (sic) orange	Silk
Azalea	Bellis perennis	Peas	Apple	Beeswax
Tropelian peregrimon	Thunbergia	Salad	Pineapple	Preserved beef
Pansies	Leptospermum	Cabbage (various types)	Bananas	Glue
Auriculus	Zinnias	Cucumber	Loquat	Neatsfoot oil
Primulas	Sunflower	Asparagus	Strawberries	Bone manure
Polyanthus	Sweet William	Leek	Lemons	Preserved lambskins
Daisies	Convolvulus	Radish	Guavas	Marmalade

Ranunculus	Balsams	Horse radish	Pears	Wines
Anemones	Dahlias	Red and white beet	Grapes	Spirits
Tulips	Hibiscus	Potatoes	Plums	Preserved fruits
Narcissus	Aster	Celery	Rock melons	Dried fruits
Sparaxis	Wisteria	Spinach	Medlars	Rose water
Babianas	Petunia	Turnips	Pomegranates	Gelatine
Ixias	Cheiranthus	Carrots	Quinces	Stearin
Magnolias	Mesembryanthemum	Parsnips (2 kinds)	Peaches	Tallow
Camellias	Ceres	Lettuce (various)	Water Melon	Salt
Ericas	Bouvardias	Rhubarb	Walnuts	Tobacco
Vethelionia	Salvia	Herbs (all kinds)	Shaddocks	Almonds
Geraniums	Lobelia	Spring onions	Citrons	Soap
Polygala cordifolia	Marigolds	Water cress		Hops
Fuchsia	Amaryllis	Parsley		Dressed flax
Pelargonium	Tradescantia	Salsify		Sauces and catsups (sic)
Pittosporum	Haemanthus	Beans		
Japonicum	Cockscombs	Pumpkin		
Peonia	Yucca	Sea kale		
Diplacium	Dianthus	Broad beans		
Wallflower	Begonia	Red celery		
Calceolarias		Potato onions		
Cowslips		Garlic		
Cerceous		Endive		
Cactus		Marrow		
Stock (gillyflower)		Squash		
Roses		Capsicum		
Leucacoryne		Chilli		
Gladiolus		Green shallots		
Mimulus		Egg plants		
Tritonia		Silver beet		
Euphorbia		Mangold-wurtzel		
Verbena		Onions		

In coming issues Shirley hopes to regale us with the history of wild flower shows from the past.

Mangel-wurzel

The Technical Side

Local government heritage conservation and management

Across the State local government areas hold a wide range of heritage features. The history of the districts include aspects of early exploration, agriculture and mining, closer settlement in the towns and villages themselves, together with the influences of the technological revolution which led to the decline of many regional communities.

There remain many fine rural and urban homesteads, on agricultural properties both operational and not. Each urban centre holds some fine public buildings and significant homes, many of which have undergone a range of adaptive reuses to come through the history of the region unscathed.

Mining relics, Quartz Ridge

Remnants of mining remain in some areas, and other industrial heritage abounds in railway infrastructure, large industrial complexes and much moveable heritage (industrial and agricultural) as is displayed within numerous museums.
Each local government area has items listed as locally significant in a Schedule of their local environmental plan, and a scattering of items on the State Heritage Register.
Heritage Conservation Areas are located in many urban areas, and some properties are also listed on the National Trust Register.
The NSW Department of Environment and Heritage, through the NSW Heritage Office, operate a heritage program with a range of resources, funding opportunities and other services to assist the community with heritage conservation. The major elements of the program for local government include the heritage advisory service and the local heritage assistance fund. Each council provides regular feedback to councilors and the community on the results of the program operations in their area.

Heritage Advisory Service

Originally in the 1990s councils took part in heritage week activities, with some State funding, and undertook surveys to establish the first lists of shire/municipal heritage items, undertook numerous history research inquiries, and followed up on significant heritage issues and projects.
Nowadays most councils have a nominated heritage advisor in place, employed by the council (together with funding from the NSW Heritage Office) to advise on new development or redevelopment of existing heritage properties and precincts, among other things. An agreement is usually signed by both council and the consultant, which sets down the terms for the program.

Homestead, Millthorpe

The original agreements required the advisor to visit Council one day every month, although this arrangement can vary from council to council depending upon the funding resources available and the scheduled work load. The standard day for a heritage advisor is often 8 hours.
The major tasks undertaken by the heritage advisor might include:

- Reviewing applications under the Local Heritage Assistance Fund.
- Commenting on development applications.
- Providing heritage advice outside of development applications at pre-DA stage.
- Input upon request into processes such as any landuse strategies, LEP reviews (to make adjustments to the heritage items schedule), community based heritage studies, preparation of development control plans and input into planning proposals.

Local Heritage Assistance Fund

Many local heritage funds were set up in the 1990s. Prior to this, projects received funding via the NSW Heritage Assistance Program, run by the NSW Dept of Planning. Eventually the scheme moved over to utilise the program in the form as we know it today.

In each financial year council budgets for a local heritage fund, with the expectation in the program's early years of grant funding (2:1) from the NSW Heritage Office program. After three years the funding moves over to 3:1. The program results in a range of projects being funded and successfully completed in the local area, including matters such as exterior and interior painting and roof restoration, restoration and maintenance of buildings, stormwater stabilization, fence and window restoration, historic signage renewal, emergency works, and painting of main street commercial premises.

Emergency works – stone wall, Carcoar

The Heritage Office provides a Guideline to the operation of the service, which is available from their website. Each council then has a guideline or policy as to how the program operates in their local government area.

Resources & initiatives

The Heritage Office offers a wide range of publications to assist property owners and heritage professionals in the operation of heritage conservation, which are all available on their website.

There are many levels of heritage management which can be undertaken by local government, with the support of the Heritage Office. Many of these could be undertaken in-house, staff resources permitting, or at least in co-ordination with the heritage advisor position. External funding resources should also be investigated.

Initiatives might include:

- Commence an interpretive signage program and/or heritage trails for urban and rural areas and/or its villages.
- Compilation of a consultants, suppliers and tradesmen directory.
- Establishment of heritage committees under S355 of the Local Government Act 1993.
- Produce a heritage newsletter – perhaps quarterly. Updates are sometimes placed in community newsletters.
- Compile a collection and/or list of history resources available locally.
- Provide listing and best practice information through flyers/ brochures/fact sheets.
- Publicize the local heritage fund and the heritage advisory service through brochures/ flyers/fact sheets, web sites and the local media.
- Schedule the operation of the heritage fund to enable effective use of staff resources and time.
- Commence heritage awards program and publicize heritage success stories.
- Compile Council's heritage assets register (a schedule of council owned heritage properties).

- Promote staff training to raise awareness of heritage issues.
- Review and update the council's heritage inventory, seeking to have the information updated in NSW Heritage Office records accordingly.
- Initiate and seek funding for main street studies.
- Compile advisory information in regard to wider heritage funding opportunities.
- Review all current heritage studies and act on the recommendations.
- Offer periodic heritage review reports to councilors.
- Initiate and maintain a cemetery register – private and public – funding is often available for cataloging cemetery records.
- Hold heritage seminars/workshops for community education.

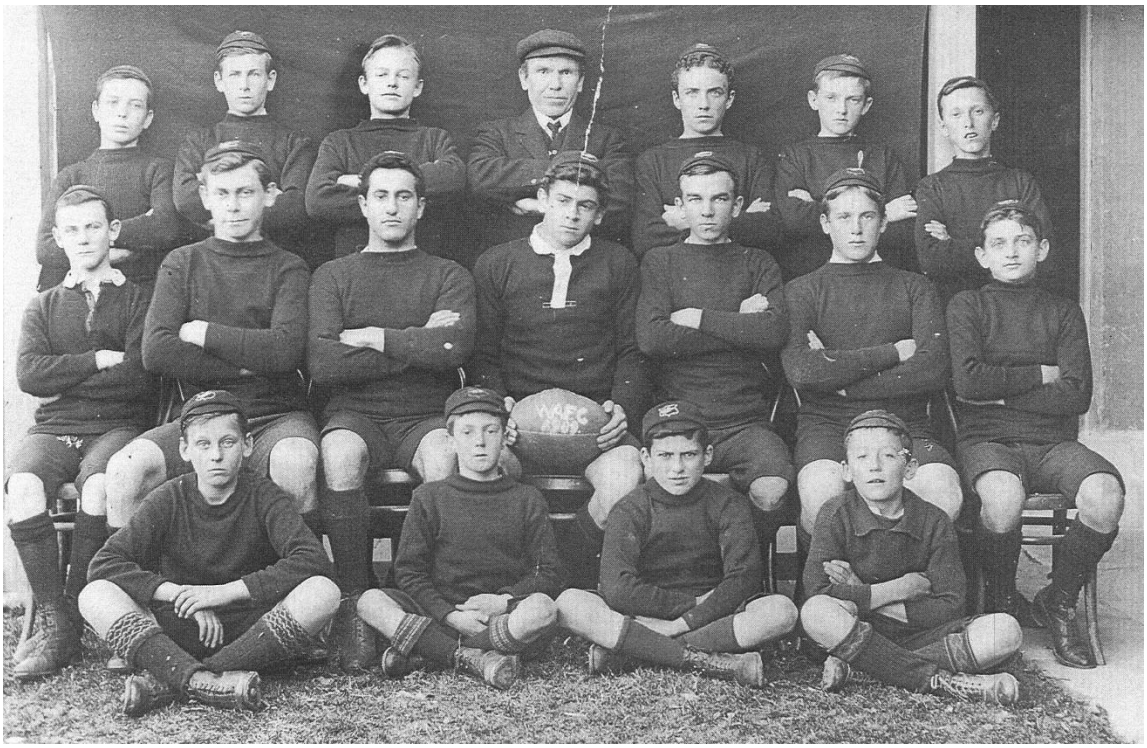
Patsy Moppett

Community events & updates

1909 Woodford Academy Football Team

The Woodford Academy Management Committee is very proud to announce that the Academy has received a 2015 National Trust award for the 'Events & Exhibitions - Community & Individuals' for the 'Make Your Mark In History' interpretive exhibit produced by the WAMC that is currently on display in the museum.

'*The interpretive exhibit features the war and medical records of 12 of the 17 boys who are depicted in the 1909 Woodford Academy Football team photo with their teacher, John McManamey. The historic photo from the property's collection is a powerful visual metaphor for the significant proportion of boys that enlisted from this small school, linking names and war experiences to what were previously anonymous, young, innocent faces. An original musical score composed by WAMC volunteer Noel Burgess, provides a memorable & contemplative mood for visitors to also consider what details the sparse, factual information of the war and medical records do not reveal.*



The research and production of this exhibit involved a number of Woodford Academy volunteers generously donating a wide range of expertise including history, research, education, technology, design& musical composition. In 2012 former WAMC volunteer

Michael Pyne successfully applied for an application for a 'NSW Veteran Affairs ANZAC Community Grant Program' to undertake research on the former Woodford Academy students involved in World War 1. WAMC volunteers Ian & Deidre Harman, Ken Goodlet and Rae Clapshaw undertook the extensive research on these boys. The 'Make Your Mark in History' audio/visual interpretive exhibit was initiated by Noel & Elizabeth Burgess (2000Hz music + audio & 2000ft Design) to present the results of some of this extensive research to museum visitors as a respectful, engaging and contemplative commemoration of the Centenary of World War 1. '
The WAMC dedicate this award to the 54 former Woodford Academy students who served in World War 1, whose courage and sacrifice has inspired this tribute. The award is a wonderful acknowledgement of the positive outcomes that are being achieved with the good will, dedication and skills of the Woodford Academy volunteer community. *Elizabeth Burgess*

2015 Royal Australian Historical Society Conference

The 2015 RAHS Conference will be held on 24-25 October at Bankstown Sports Club. There will also be the customary pre-conference get together on the Friday evening. The Conference will showcase the fascinating and diverse historical and cultural heritage of the Bankstown area.

Opening of Railway 1909, Bankstown

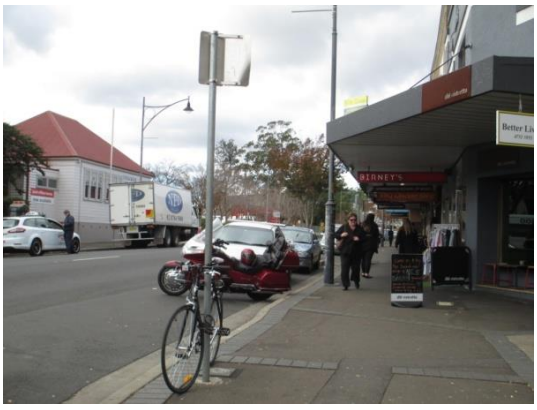
St Felix Cemetery, Bankstown

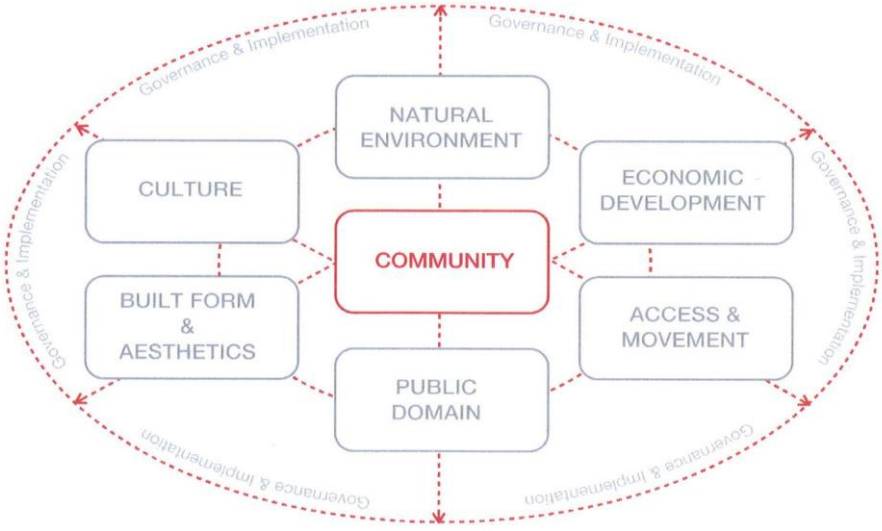
Water Reservoir, Bankstown

The program will be issued in coming months. ***SAVE THE DATE!***

Springwood Town Centre Master Plan

Blue Mountains City Council is to review and update the Springwood Town Centre Master Plan, originally adopted in 1995. The Master Plan will guide the future development of the Springwood town centre, playing an important part in setting a suitable planning framework for the look, feel, vitality, viability, sustainability and accessibility of towns and villages in the town.





The aim of a master plan is to guide the future development of a centre, the management of Council assets and facilities in the public domain, and inform of major projects and initiatives. Under the Plan Council recognises the role Springwood has as a vital district centre providing commercial and community services for the Lower Mountains.
The focus will be to ensure the Springwood town centre remains a vibrant village centre with convenient local services, mixed uses and meeting places, now and into the future.
Blue Mountains City Council has appointed a specialist consultancy service, McGregor Coxall, to review the Springwood Town Centre Master Plan.
Opportunities for community engagement in the Springwood Town Centre Master Plan will be promoted widely.
The Council proposes rigorous community engagement for this strategic process. The Master Plan is proposed for completion towards the end of 2015, and the community should stay in touch with Council updates on this process. *Patsy Moppett*

Waves of Immigration Seminar

The Blue Mountains Family History Society is presenting a seminar on 15 August 2015. The seminar is entitled "Our Heritage", Waves of Immigration – 1830-2000 Building a Nation of Families.

Migrant House, Liverpool

Dutch Migrants 1954

The presentation will be held at the Springwood Presbyterian Church Hall, Macquarie Road, Springwood from 9am to 3.30pm. Speakers will include:

- Ray Thorburn (Kiama Family History Centre): Post Irish famine and industrial revolution migrants.
- Gail Davis (Senior Archivist, State Records): Free Immigration 1845-1868, 1850-1900.
- Fiona Burn (National Archives): Immigration 1922-1960s.
- Lorraine Turtle (Turtle Consolidated Services: Researching immigration records.

Morning tea and lunch are included in the cost of $40.00 per person. Bookings close Friday 8 August 2015, and should be made to PO Box 97 Springwood 2777, pay at a General Meeting, or at the Springwood Library.
Inquiries should be directed to xploretree@yahoo.com.au

William Cox Historical Festival Celebrates bicentenary trilogy on 19 July

This year's William Cox Historical Festival and Open Day at the Arms of Australia Inn Museum, Emu Plains, on Sunday July 19 marks the final chapter in the bicentenary trilogy of the colony's early years.

At 11am on the day, Fiona Scott, Federal MP for Lindsay will unveil a plaque at the museum to commemorate the three bicentenaries, the crossing of the Blue Mountains by Blaxland, Wentworth and Lawson in 1813; the building of the road across the mountains by William Cox in 1814; and Governor Macquarie's trip over the new road to the settlement on the western plains, which he named Bathurst.
Music by Tall Timbre Country and Western Band, with guests Roger Corbett and Clare O'Meara from the Bushwackers, and the Penrith City Band, will entertain visitors. To make sure all goes smoothly, the NSW Corps of Marines will keep order.
As in previous years, the festival will have a host of activities for young and old - including wagon rides, animals and pony rides, the old fashioned school room, merry-go-round and jumping castle, plus plenty of stalls and food.
The William Cox Festival and Open Day is to be at the Arms of Australia Inn Museum on the corner of the Great Western Highway and Gardenia Avenue, Emu Plains from 9am to 3pm. Admission is free.
For more information contact:
Rosemary Weaver 4751 6975 or 0408 416 735
or the museum on opening days 4735 4394

Mount Victoria Road Safety Upgrades

Tenders are now being reviewed for the pending safety upgrading works at Mount Victoria, set to commence later in 2015. The works are part of major highway upgrading by the State government currently underway between Katoomba and Lithgow. The Blue Mountains Gazette reported on 13 May 2015 that the Great Western Highway operates as a key road transport link between Sydney and the Central West, serving numerous regional communities in the west of the State. Works are currently being finalised at Bullaburra. The upgrade at Mount Victoria will include intersections, improvements to road curves and shoulders, pavement surfaces and retaining walls. Tenders closed on 27 May 2015.
On 27 May the Mount Victoria Community Association reported to the Gazette that they welcomed the news that work will soon commence on these safety upgrades. They feel that the works will provide safer conditions for both local residents and tourists alike, whilst still retaining the historical character and social amenity of the village, and having a positive effect on the wider Blue Mountains.
Whilst they said they may not agree with every aspect of the safety upgrade, they believe the Association has worked alongside local residents and business owners, councillors and local members of parliament towards the best outcome for the village. *Patsy Moppett*

Blue Mountains Lithgow & Oberon Tourism (BMLOT)

Blue Mountains Lithgow & Oberon Tourism (BMLOT) is about to be wound up after coming to an agreement with Destination NSW to settle its outstanding debts.

Blue Mountains Tourism Limited, trading as Blue Mountains Lithgow and Oberon Tourism (BMLOT) was the Regional Tourism Organisation responsible for strategic development and overall destination promotion of the region. Businesses were encouraged to become members of BMLOT to play their part in the overall promotion of the destination. Blue Mountains, Lithgow and Oberon Tourism covered the local government areas of Blue Mountains, Lithgow and Oberon. Industry led and membership based, it has strategically marketed the destination since October 1998 as a not-for-profit organisation.
The best of tourism and hospitality businesses in the Blue Mountains, Lithgow and Oberon regions were often revealed at annual Blue Mountains, Lithgow & Oberon Tourism (BMLOT) Awards. These official regional tourism awards recognised and promoted product and service quality in the regional tourism and hospitality industry. The BMLOT regional tourism awards fed into the NSW Tourism Awards and the Qantas Australian Tourism Awards.
In 2013 Blue Mountains Lithgow and Oberon Tourism (BMLOT) completed a major restructure by upgrading the role of its administrative head and appointing a chief executive officer, as the culmination of a four year process of reform, beginning with an independent strategic review commissioned by BMLOT and a board commitment to restructure the organisation, which included an international search for a CEO.

Hartley Valley from Berghoffer's Pass

An industry summit is to decide the shape of a replacement organisation which may see the region reject Lithgow and Oberon and embrace Penrith and Hawkesbury. The chairman Jason Cronshaw advised the Blue Mountains Gazette recently that that there would be a major change in the region's tourism promotion and marketing. The boundaries of the region would be adjusted, and the participant areas were yet to be decided. He was confident that the old organisation would be closing with no debts, due to assistance from Blue Mountains City Council and others. The community forum will involve the Council, the industry and Destination NSW, to find "a model that protects and grows this vital and massive part of our local economy". *Patsy Moppett*

Blue Mountains Gazette 3 June 2015.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains World Heritage Institute; Bygone Beautys Treasured Teapot Museum and Tearooms.
Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; The following are individual members: Fiona Burn, Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor) ,Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Roy Bennett (Grants Application Officer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Louise Vining (Events and Venue Co-ordinators).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Eurama - a special place

"Eurama" slumbers. The cries and screams, smoke and flames have long died away. The people left, taking their lives with them and never returned, almost 50 years ago. The charred remains of flooring supports bear witness to what happened, now rain washed and leached of colour.

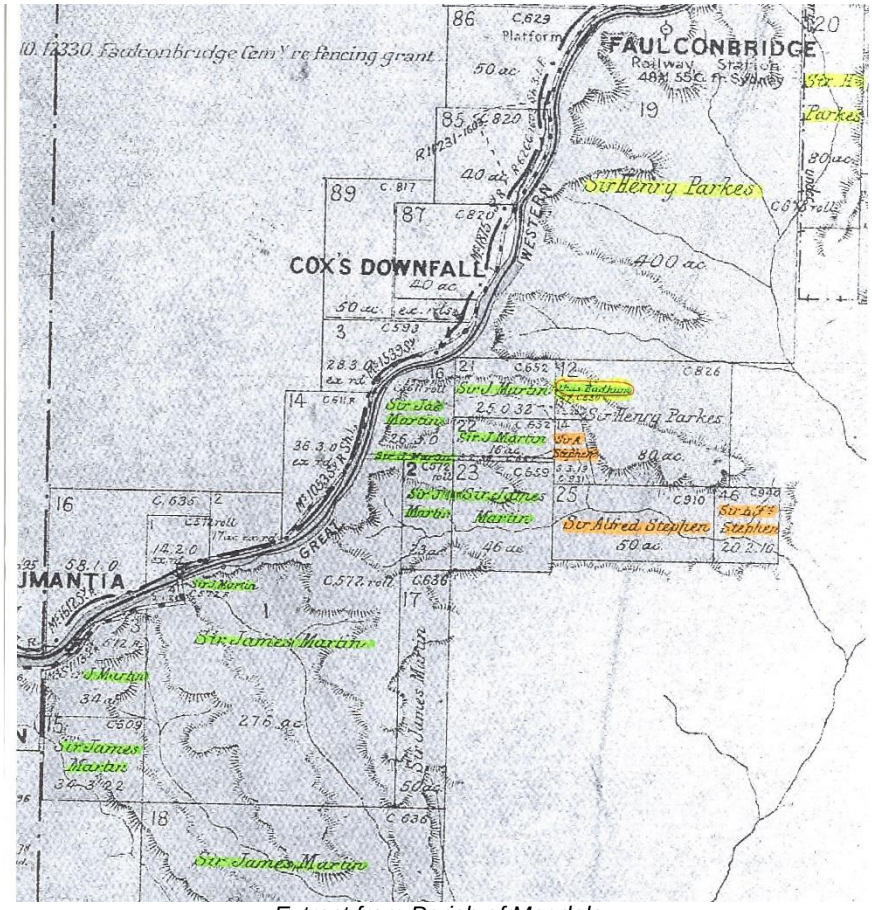
Now the mice and rabbits scuttle around her bones, the bones of a graceful home, now reduced to an empty sandstone shell…..but not so empty. Possums scamper up the slender tree trunks which have grown up in each room where the flooring used to be, rooms now bereft of structure and decoration. They clamber along the top of the sandstone walls and through the ivy which seek to support the structure and perhaps protect it from harm. Or will these vines be the very destruction of the place.

Birds and bats nest in the chimneys and the tower, which reach up into the fading sunlight of a winter's afternoon, calling softly to the world that she was cared for once, and that she lives on.

People have visited since the fire……schemers and dreamers, for mischief or seeking memories. They have taken and given. Relics have gone and some callers have left their marks on the site. Others have taken the wonder of the place and the desire for protection, and left only their footprints, less tangible things, visions and imaginings of what might have been, the wonder of what is now a ghost of times past.
She was a grand lady once. She entertained the rich and celebrated from Sydney town, who wandered her gardens and pathways and bush tracks, past the cairns, the ponds and exotic trees and flower gardens. The wisteria has escaped across the courtyard near the well, with a hint of bloom to come. Freesia carpet the swards about the place, and flower softly in shaded glades. The magnolia still flowers by the front door. The Chinese Fir stands sentinel and the kangaroos graze nearby, noting all who come and go.
It is a romantic, wistful place……..time stands still there, hold its breath in nervous anticipation of the whisperings of the future……. new beginnings or pending destruction……..…

***

The remaining property of “Eurama”, sometimes known as Eurama castle, is located between Linden and Faulconbridge to the south east of the Great Western Highway and the rail line. It was a mountain retreat for several generations of owners with numerous dwellings, significant gardens and landscaping, now in ruins.
Originally there were several 19th Century dwellings, whose property boundaries are now blurred through consolidation into one estate.
Sir Henry Parkes was to acquire land to the north at Faulconbridge in 1875-76 and build a country retreat, nearby at Stonehurst and then Faulconbridge House. Three other men and their families, Sir Alfred Stephen, Professor Charles Badham and Sir James Martin visited the area and chose allotments in the location of present day “Eurama” in 1876, on land including Portions 1, 2, 12, 13, 14, 16, 17, 19, 21, 22, 23, 25 & 46 in the Parish of Magdala. Sir James Martin purchased several portions and then apportioned the land between the three.
Sir James Martin was to build the wooden “Numantia”, named for a region in Spain, near the railway line, which later became known as “Weemala”. Some of “Numantia” ‘s stone work remains, a kitchen, courtyard and other skillion rooms, along with the stone wall which protected their privacy, near the rail line and former siding.
The railway platform was built in 1876 to serve the well-to-do residents. It became the “Numantia” Platform, but ceased use in 1892, being removed in 1897.
In 1898 Adolphus Rogalski purchased “Numantia”, and changed the name to “Weemala”. The timber dwelling was destroyed by fire in 1977.
Sir Alfred Stephen built “Alphington” on the adjoining section in 1877, later buying Portion 46 so that he could also own “Numantia” Falls. He named the place for his childhood home in England.



Extract from Parish of Magdala

Badham then constructed “Metchley” on an adjoining lot in 1877. Badham did not reside at “Metchley” for long, building another dwelling some 300m away to the north east at “Weston”.

Chinese fir

Meat house

Internal hallway

All three ordered their timber homes ready-cut from the catalogue of Hudson Bros in Redfern. “Alphington” and “Numantia” looked almost identical.
Each had large families and the families spent a lot of time together, establishing gardens and planting trees. However their stay was short. The houses were small and all were weatherboard.
For a time “Alphington” was leased in 1914 by Alban Scanlon and William Bailey, who subsequently purchased it and moved it to Faulconbridge in 1921 to its current location at 492 Great Western Highway, Faulconbridge It is now known as Danville.

Badham died in 1884. “Metchley” was burnt down and “Weston” was demolished by a future owner, MacLaurin, due to termites.
In 1882 Andrew McCulloch purchased the entire Stephens property. Some 100m to the east of “Alphington” McCulloch built himself a new expansive sandstone house, which he named “Weemala”, an Aboriginal name meaning “an expansive view”. The architect was George Mansfield and the builder was Patrick (Paddy) Ryan. Ryan had constructed the stonework at “Numantia”, and the stone was locally quarried. The gardens were expanded from then, a tennis court being laid and a dam wall constructed to create a lake.
McCulloch used both houses but suffered financial losses and sold them and the property in 1889 to John Cliff, who had been the Martins’ lessee at “Numantia”. Cliff also had financial difficulties and sold to George Evans in 1896, by which time the property was quite run down. Evans sold off the railway siding, and used the new owners of the station to housekeep at “Weemala”. Evans developed the bush pathway system and rebuilt the dam wall on the lake. He had determined to change the name of the property, and the name “Eurama” came into use in the late 1890s, although Badham had used the name casually before 1884. It had a similar meaning to “Weemala”, with Greek origins.
Evans died in 1910. Evans’ daughter Emily MacLaurin purchased the property. However, due to ill health she left for England in 1920. She sold “Eurama” to her husband’s cousin Gilbert Nathan. It was soon sold to Mr Brown and his wife Daisy. Upon her death in the 1940s the house remained unoccupied for some time, suffering vandalism. A development company “Eurama” Homes bought the property, and then sold it to a Mr Adams. Adams restored the house.
Soon afterwards in November 1968 the impressive sandstone house was gutted by a bush fire. A local timber merchant Mr Watkin purchased the property but was not able to restore the house. He did construct a large steel & stone machinery shed nearby. He undertook extensive tree plantings but these were in turn largely destroyed by the other fire in 1977.
The present owner purchased the property in 2004, with the intention of extensive subdivision, some of which has already been under taken. The names of surrounding streets reflect the various names associated with the property over time: Weemala Avenue, Badham Place, Martin Place and Numantia Road.
Most of the sites and ruins are contained with Portions 16 & 22. “Eurama” itself was a substantial sandstone house. The stone fabric of the building remain intact, coursed stone blocks with dressed stone quoins. A bay window overlooked the main garden, and a square tower with a flat roof and balustrade parapet, overlooked the bush. Verandah tiles and roof slates survived the fire, but have long since been taken away.

Ornamental lake

Escutcheon

Camelia

Over the front door there is a heraldic escutcheon carved for McCulloch bearing the motto “VI ET ANIMA” [By Force & Spirit]. Adjoining is an intact stone meat house, roofed with stone slabs. A domed cistern is nearby. Evidence of the extensive gardens are all about to the east and north. A wisteria pergola once graced the courtyard beside the in-ground well. Vandalism has taken its toll on the place, with the remaining ruin and the large shed being extensively vandalized and scarred by graffiti.

Comment: Upon request to undertake a brief summary of this site and its history proved a daunting task! The history can never be brief, and as can be seen, with many layers of ownership and landuse. The remaining features need to be urgently identified and documented prior to further deterioration.
The main issues which relate to the property include security of the property generally, and security of the remaining relics and remains, the protection of the various significant heritage components, and recognition of the overall heritage significance of the place. A conservation management plan is essential for the future of this site, and any designated curtilage would be extensive. *Patsy Moppett*

Food for thought ..... Editor's note

Why do we do what we do - history & well being

Hope everyone enjoys the wide range of topics covered in this the 40TH issue of *HERITAGE*! A huge milestone in our own story, a tribute to contributors over the years and to the foresight of the former editor John Leary in seeing an opportunity to share history with the wider community!

We who are involved in the heritage world know that visiting heritage sites is good for your happiness & wellbeing, be it a historic town or building, or an archaeological site. However it is often forgotten that heritage also counts for a large sector of the economy in terms of the tourist dollar.

Although Australia's European history is short compared to the rest of the world, it remains to link us to our past in culture, literature and landscape. Our indigenous heritage is even more precious.

The concept of heritage and things that are worth preserving is variable, and although many people undertake the heritage encounter every year, our "young" heritage is still disappearing before our eyes. Its conservation remains under appreciated and under funded by governments and suffering from demolition through neglect by developers who are not encouraged to take up adaptive reuse and tourism opportunities.

Although interest in heritage is slowly spreading, we may lose much of it before we have a chance to grasp the significance of the loss of individual items in a wider heritage landscape. With appropriate maintenance many heritage buildings/precincts can live on indefinitely.

However, too often the significance of a place is much reduced when its curtilage is swallowed up with residential encroachment and other inappropriate landuses.
Studies in the UK have illustrated the vital role heritage plays in our national life by measuring its value and impact on individuals and communities, converting a positive impact into potential community benefit. Participation in heritage projects, be it in visitation, volunteering or conservation works, increases self-esteem, increases skills, forms friendships and connections, and gives a stronger sense of belonging to a community and a source of local pride.

Innisfree Cottage, Katoomba

Innisfree Cottage, 39 Walgett St, Katoomba is, arguably, one of the oldest existing houses in Katoomba. It is currently owned by Innisfree Cooperative Ltd. It was purchased in 1979 to provide affordable accommodation for church and social groups. It continues this purpose still today.
“Shirley”, as the property was originally named, was built in the early 1880s on land originally owned by the “Father of Katoomba” John Britty North. North owned extensive areas of land in Katoomba, but Walgett St with its level aspect, extensive views, and close proximity to the railway station, was where North, and his sister-in-law Mrs Weynton, chose to build their own homes. At the western end of Walgett street, a large cottage was built. Records show that ownership of the land where the cottage is situated, now known as 41, 39 and 37 Walgett St, was transferred to Herbert Weynton, North's nephew, in 1883.

Katoomba Estate 1873

Brochure 1905

Both North and the Weynton family were very heavily involved in the activities of the Congregational Church, and church services were held in their homes, presumably until 1883, when North built the first Congregational Church Building on the Walgett St land. Records show that 'Shirley' was being run as a guest house by the Weyntons. An advertisement in the SMH dated 24th October 1887 stated that 'Shirley' had been “recently enlarged and improved”. In 1901 Mrs Weynton died at home, at 'Shirley'. Not long after records show that Mrs Clarence Linden was the proprietor.

John Britty North

Grave at Gore Hill

It is not certain when Mrs Linden took over the running of 'Shirley'. However an advertisement, with a photograph, appears in a 1905 tourist publication. 'Shirley' offers “superior accommodation to visitors”, with “tennis court and smoking room” for two guineas per week. The photograph shows a remarkable similarity with Innisfree Cottage today. Records show that Mrs Norman and then Mrs Hadden were the guest house proprietors of 'Shirley' until 1917. A SMH advertisement in 1918 advises of new management of 'Shirley', and the lands title records show the ownership of the section of property containing the house was transferred to William Ward in 1919. A further advertisement in the SMH in 1919 advertises rooms at 'Bonnie View' for 35/-. Shirley's time had passed.

'Bonnie View' was apparently named after a real person. Bonnie was the niece of the new owners. The story was told by Bonnie, herself, when she made an impromptu visit to 39 Walgett Street in about 2005. The then very elderly Bonnie told Cindy Howes (President of Innisfree Cooperative) that the house was, indeed, named after herself and, as a school-girl, she attended boarding school in Katoomba. On weekends and holidays Bonnie would come stay at “Bonnie View”.

Shirley 1905

Innisfree Cottage 2015

The property changed ownership again in 1926, and continued to offer accommodation. Several advertisements in the SMH in 1929 show that 'Bonnie View' was being run by a Mrs Lindsay and offered 'board' for 35 shillings. It seems that 'Bonnie View' may have made the transition from 'guest house' to 'boarding house' at this time. A 'Mrs Muir' is also recorded as a proprietor of 'Bonnie View', and there is evidence that it was still being used as a guest house in 1947.

Land title and local government rate records show that 'Bonnie View' change ownership four times between 1944 and 1970. Little other details of those years can be found.

In 1971 the house was bought by Sydney University Settlement. 'Sydney University Settlement was previously known as the Sydney University Womens' Social Service Society.

Sydney University Settlement used the house as a holiday house for women and children's groups.
The house was purchased by Innisfree Cooperative Ltd in 1979 and the name of the house was changed to 'Innisfree Cottage'. At the time of purchase the house was in need of some serious repair, and the volunteers from Innisfree Co-operative have successfully maintained the house in reasonable condition since that time.
Innisfree Cottage continues to be run by Innisfree Cooperative Ltd as a weekend venue for church and social groups, and as holiday accommodation for members.

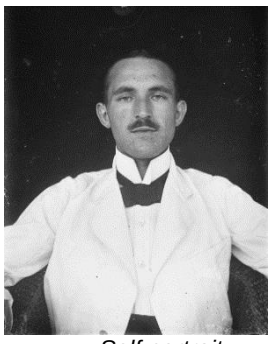
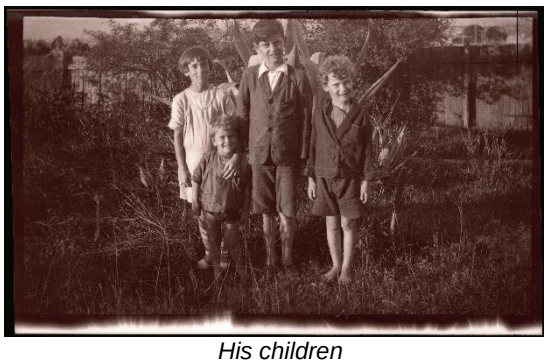
Rodoni Photographic Collection

A fabulous collection of photographs, in the vein of other significant collections such as the Holterman's, has been released to the public in a donation to the University of Newcastle Library, Cultural Collections. The photographic glass and film negatives (over 600) by Thomas James Rodoni (1882-1956) were donated by Rodoni's son Bill, with the assistance of family members. Bill passed away in late 2014. Family members and others have stepped in to assist in donating further negatives, providing family records to assist in the accessioning and description process, and providing important papers to the University Archives.



Self portrait



His children

Self Portrait

Thomas James Rodoni was born in Victoria in 1882, to Irish and Swiss parents. His actual occupation was recorded as a toolmaker, and in 1914 he was living in Sydney and joined the first AIF, sailing to New Guinea. As a photographer, Rodoni was able to capture many aspects of the war in the Pacific region. He also documented life in pre-war Sydney, in candid shots of his family, the people, the places, crowd scenes and parades, military and civilian marches. In 1915 he returned to Australia to work in the small arms factory at Lithgow for a year as a cutter & grinder, and then married Catherine Annie Wilson, settling in Newcastle, where they had four children. Here he worked in the government dockyard as a tradesman on engines for the Commonwealth ships. His love of the camera continued throughout his life, featuring scenes and people of Newcastle and surrounds. He died as a result of a car accident in 1956 at Waratah near Newcastle.

New Guinea

Dock workers

The collection was exhibited at the University of Newcastle in March-April 2015, with a focus on the WW1 photographs. However, the diverse collection also includes industrial works and machinery, his family and friends, and public places. The identification of individual images is ongoing, through associated archivists, historians, and family and community members. The collection is accessible on Flickr, and further information from the global community will assist in building new knowledge about this significant collection. The University advises that the images are available for use for study and personal research purposes, with appropriate acknowledgement. They welcome any further information that anyone can shed on Thomas Rodoni and his collection of glass plate negatives, and comments are invited in the identification of individuals and/or subject matter of the images. *Patsy Moppett*

The Technical Side

Origins of local government & town planning in the Blue Mountains

Within the settlement origins of this country, separate colonies were formed on both the east and western coasts of Australia. During the 19th century the six colonies won self-government, and established local governments. The first local authority was established in Australia in1838 in Perth. The Adelaide Municipal Council was established in 1840.
In NSW it took longer to emerge, with most of the metropolitan councils and larger country towns being established between 1859 and 1900. The Sydney Corporation came in 1842, established to manage primary services such as street lighting and drainage, to be funded by a rate levy. The Sydney City Council dates back to 1848.
The system of district councils was set up in 1842, such councils being for maintenance of gaols outside the convict regime, and civic powers related to roads, bridges, public buildings and schools. Although 28 districts were proclaimed, the system collapsed. In 1858 the first general municipal legislation was proclaimed, the Municipalities Act of 1858 allowing for the creation of municipal councils, which was strengthened by the Municipalities Act of 1867. However, the statutory framework was dismantled in 1906, by which time only 25% of the NSW population was within a municipality. Rural councils were not incorporated until 1906, when the first shires were established. There were 192 units across the state, with only basic functions.
The Local Government Act 1906 was gazetted, providing a statutory foundation, and this was updated by the Local Government Act of 1919, which survives today. Comprehensive building control came into being, becoming a core council function. Rates became an incentive to develop land, and to clear land for agriculture or other commercial but environmentally destructive purposes.

Origins of town planning

Man creates systems for EVERYTHING and always has! Even the early caveman had customs and systems for communication and living. Rules and regulations may seem overwhelming at times, but without them we would have chaos. In the built environment we create systems to manage our environment, such as, transport (of people & goods) – road, rail, air and sea, utilities such as power, sewer, water and gas, communications – telecommunications and IT, housing and accommodation, social - health and other medical, social and community services, cultural features and facilities, and economic - finance, taxation, etc.
Town and rural planning is a process to establish those systems and guide the orderly development of urban and rural settlement, being concerned with the use of land and the design and management of the built environment, including air and water, and the associated infrastructure such as transportation and distribution networks.
The discipline creates plans to direct settlement management, plans which can take a variety of forms including strategic plans, local, State and regional plans, cultural and social

plans. Plans are created under legislation at local, State, Federal level or international level. Planners are responsible for applying and enforcing the plans and any associated policies. Planning of towns was undertaken even as far back as Neolithic times, although not recognised as such. Towns were designed to cater for the immediate needs of the population and were often along trade routes, waterways etc – along lines of transport (ie. infrastructure).

The origin of modern day town planning lay in the need for urban reform that arose as a reaction to the chaos of the industrial revolution in the mid-19th century, when urban growth created massive challenges for housing and provision of infrastructure. The garden city movement was one new innovative design, first set up in the late 1900s in England and the USA. Many different ideas floated around, and everyone thought they had the perfect solution to managing people.

Most Australian towns were designed on a grid pattern, which for the most part worked really well. But the plans were drawn up at a desktop, and often bore no relation to ground-truthing, other than where there was a major landuse feature such as a river.

Designers grew bored with the grid and tried different ideas such as in Canberra, with satellite towns and circular road networks.

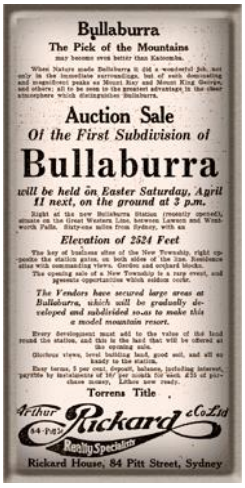
The NSW Parliament introduced a comprehensive land use planning system in 1945 empowering Councils to prepare planning scheme ordinances. Councils commenced preparation of planning schemes under the Local Government Act 1919. In terms of town planning and development prior to 1977, planning assessment was subject to Part XII, and then XIIA, of the Local Government Act 1919, and under numerous Ordinances (policies) including Ordinance 70 for building works, and comprehensive land use planning.

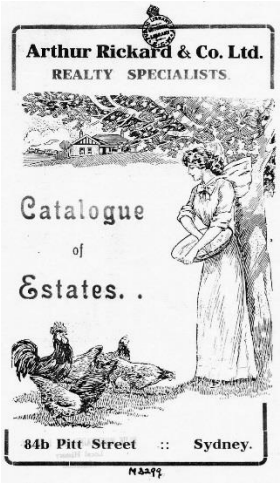
Origins of town planning in the Blue Mountains

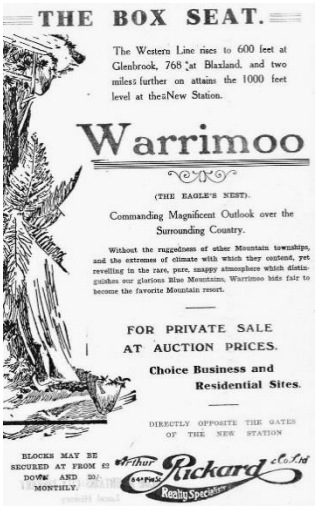
There was a Draft Interim Scheme ordinance for Katoomba dated 1960. A Draft Planning Ordinance Scheme then emerged, dated 1973, adopted in 1958 and 1967 and reissued in 1972. Many other instruments were gazetted until 1980, most of which resulted from rezoning applications. In 1980 Interim Development Order No. 28 was gazetted for the City of Blue Mountains, which rescinded all previous IDOs.

The first Blue Mountains local environmental plan appears to have been BMLEP No. 4, gazetted in 1982, which rescinded IDO No. 28 and LEPs 1, 2, 3, 5, 6 & 7. It was followed by amendments to BMLEP No.4 by BMLEP 1991. Further amendments were made by BMLEP 2005, which operates today. All three LEPs operate together today.

Now of course Blue Mountains is considering its Draft LEP 2013, to replace the three older instruments, currently proceeding through the lengthy process of community consultation, and endorsement from the State government.







The old IDOs and the newer LEPs comprise a written document and a set of zoning maps. The instruments set out provisions for how the local government area is zoned, what is permitted in each zone, and provisions for subdivision, building and other development types. Its provisions are fairly broad. All the current instruments applicable to each council can be viewed on the relevant council's web site.

The Standard Instrument (SI)

In 2008 The State government introduced the Standard Instrument (SI), which was a template for the creation of all planning schemes across the state, to achieve consistency in policy, interpretation and assessment of development. There remain only a couple of local government areas to complete their SI LEPs, one being Blue Mountains.

Many Councils across the State have adopted the SI with adjustments to suit their own particular environments. In addition, the Department of Planning & Environment has worked with those Councils to draft additional clauses into the SI for use by any council eg, for minor boundary adjustments.

Blue Mountains has had their Draft LEP 2013 on exhibition and it lies with the Minister for Planning & Environment at present, for consideration of the final version. Although the area is protected under the Environment Protection and Biodiversity Conservation Act 1999, the Native Vegetation Act 2003, the Heritage Act 1977, the UNESCO World Heritage Area, and other legislations, the Council and the community felt that the area needed a flexible LEP which reinforced these safeguards, and took into account the unique features of the Mountains, in particular stormwater quality management, the protection of significant vegetation communities and protection of period and/or character housing areas. Special provisions were incorporated into the Draft which accounted for these issues. The Draft went to exhibition in early 2014 with the support of Council for the special provisions. However, concern has been expressed by the Department's legal branch with some aspects of these special provisions. The Council claims that although the SI is the minimum, it has gone beyond this to provide added protection. The Council are particularly concerned for the preservation of character housing and other conservation protections in the Draft LEP.

The community is concerned that changes to the Draft LEP resulting from Parliamentary Counsel consideration will not be re-exhibited. However it was stated during the exhibition process:

Please note that following the exhibition, the Department of Planning and Infrastructure [as they were at the time] *have advised that the Draft LEP may be changed to satisfy the legal drafting requirements and amendments to local model clauses.*
The community were possibly not expecting the extent of alteration which may currently be proposed.

The R6 Zone

One particular special provision was the inclusion of a new zone, the R6 Residential Character Conservation Zone. At present this zone had been deferred out of the LEP, and is being considered within a group request from various councils about various proposed new zones. The draft clause currently reads as follows:

> ***Zone R6 Residential Character Conservation - (Living Conservation)***
> ***Notes:*** *The new R6 Residential Character Conservation zone is proposed by the Council to preserve the character attributes of the existing Living Conservation zone. The Department has advised that it should be noted that the R6 zone is not consistent with the Standard Instrument Order and there is a risk that it cannot be supported by the State Government when the plan is finalised.*
> ***Direction.*** *The following must be included as either "Permitted without consent" or "Permitted with consent" for this zone:*
> ***1 Objectives of zone***
> *• To preserve and enhance the character of residential areas that are formed by larger allotments and single dwelling houses within a prominent traditional garden setting.*
> *• To enhance the landscape character and setting along roads of historic significance where the road forms a visually significant entrance to a village or a linkage between visitor destinations*
> *• To ensure development retains the prominence of landscape elements and traditional garden settings.*
> *• To allow for a limited range of non-residential land uses where these are conducted in association with a predominantly residential land use and are consistent with the retention of a residential character based on a landscape or open space setting.*
> ***2 Permitted without consent***
> *Home businesses; Home occupations; Environmental protection works.*
> ***3 Permitted with consent***
> *Bed and breakfast accommodation; Building identification signs; Bush fire hazard reduction work; Business identification signs; Child care centres; Dwelling houses; Environmental facilities; Exhibition homes; Flood mitigation works; Home-based child care; Neighbourhood shops; Respite day care centres; Roads.*
> ***4 Prohibited***
> *Multi-dwelling housing; Residential flat buildings; Seniors Housing; Any development not specified in item 2 or 3.*

The development control plan

It should also be noted that the more specific details of how development is to be carried out such as setbacks, landscaping, parking etc are usually set down in an accompanying Development Control Plan (DCP), relating to heritage areas, residential precincts, industrial, commercial, rural, residential, rural residential, and medium density housing and other land uses. Within the various sections of the DCP, there are objectives set down as to what they are trying to achieve.
Blue Mountains City Council currently has a comprehensive DCP covering most forms of development, and a number of minor ones which relate to specific sites, such as Echo Point and for infrastructure installation. This document will require review once the new LEP is gazetted. The DCP has the ability to identify residential character areas and how each can be protected through development criteria. The DCP is a more flexible document over which Council has more control in terms of development assessment and policy making.
Importantly, much of any perceived adverse impact may actually result from the

thoroughness and the integrity given to the assessment process for development, not in the actual legislation current at the time.

Conclusion

BMACHO made a submission to the Blue Mountains City Council during the Draft exhibition period, in support of the proposed deviations to the planning instrument, emphasizing that heritage protection is not just limited to individual sites or items, but the character and feel of the area as well. Significance was placed on the fact that the Blue Mountains to date has not suffered from urban encroachment such as is seen within the Sydney metropolitan area. BMACHO would reinforce its previous support for the changes to the Blue Mountains Draft LEP, bearing in mind that in terms of residential character conservation, protection is actually provided through other legislative measures at all government levels, including the imposition of heritage conservation areas and residential character areas, which need not necessarily fall within the bounds of, or need to be reinforced by, a local environmental plan.

Community events & updates

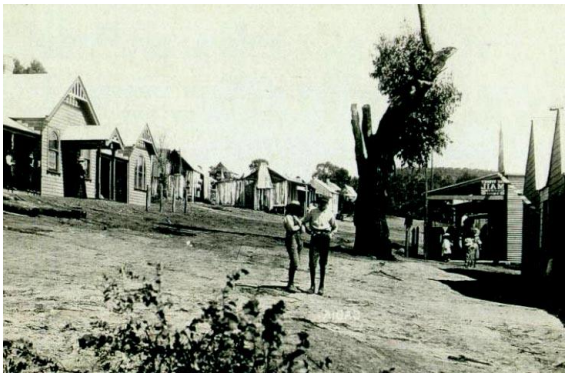
Cadia Valley Heritage

A new website has recently been launched which is the culmination of a detailed historical and archaeological investigation of the mining community of Cadia, 30km south of Orange in the NSW Central West. Mining commenced at Cadia in the 1850s, but really took off in the 1860s with the investment of the Scottish Australian Mining Company. By 1870 the population had declined to about 150. Mining improved in the early 1900s, and the population rose again to some 500 by 1908.

School 1910

School group

Cadia Village survived the ups and downs of mining up to the 1940s. Following this the village declined rapidly, with little to show of the original settlement.



Early Cadia

In 1992 Newcrest Mining discovered the Cadia Hill ore body, which was large enough to secure Newcrest's future in the valley with the final estimate of gold potential for Cadia Hill projecting a 12 year mine life. Cadia Valley Operations currently comprises two underground mines, Cadia East and Ridgeway. These are large scale mining operations using caving mining methods. Production from the Cadia Hill Open Pit was suspended in July 2012 and further development will be assessed in the future. *Patsy Moppett*

Historic Blue Mountains Newspapers – now on line

Blue Mountains City Library, the State Library of NSW and the National Library of Australia have collaborated to deliver online access to surviving historical Blue Mountains newspapers up to 1954, via Trove.
How useful this will be when carrying out searches of your house or your street, or a significant event in the past within the Blue Mountains area. The work was made possible with the help of a State Library of NSW grant, and contributions from the Springwood Historians and Blue Mountains City Council.

Historical newspapers digitized include:

- The Mountaineer (1894-1908)
- The Blue Mountains Gazette (1903-1904)
- The Blue Mountains Echo (1909-1928)
- Katoomba Daily (1920-1939)
- The Blue Mountains Daily (1939)
- The Blue Mountain Star (1921-1931)
- The Blackheath Beacon (1930-1931)
- Blackheath Bulletin (1929-1931)
- The Chronicle (1929)
- The Hospital Saturday News (1930)
- The Independent (1930-1931)
- The Record of the Blue Mountains (1924)
- The Enterprise (1913)
- The Mountain Daily (1919-1920)
- The Blue Mountains Times (1931-1937)

- The Blue Mountains Advertiser (1940-1954)

A pre-generated search can be used to search the records:

- bit.do/HistoricBlueMountainsNewspapers, or
- bit.do/BMnewspapers-on Trove
- www.trove.nla.gov.au

or via the library catalogue. *Patsy Moppett*

Blue Mountains Gazette

Fairfax Media has recently announced plans to restructure its community publishing operations in the greater Sydney area. The overhaul commenced in 2013, and is almost half way through. It includes introducing new technology and training for journalists and sales staff, workforce reductions and some publication changes. Their network covers hundreds of newspapers and web sites serving regional, rural and suburban communities across Australia.
Their claim is that there would be no lessening in Fairfax commitment to providing coverage of local communities, but they wish to better focus their resources and strengthen newspapers and web sites.

BLUE MOUNTAINS Gazette

There are implications for the Blue Mountains Gazette, including staff reductions. Fairfax themselves state that the Blue Mountains Gazette has been serving the district for over 39 years. The key to its success is community involvement, making it one of the leading newspapers serving the outer western region of Sydney.
BMG reports that the newspaper has actually served the community for nearer 52 years, since 1963. The changes will result in a smaller editorial team producing both the BMG and the Penrith City Gazette. The loss of the ability to provide comprehensive coverage and high quality content is of concern. Penrith and the Blue Mountains have vastly different demographics and issues and concerns.
BMG urges the community to contact Fairfax Media in this regard to reconsider the plans, to allow the BMG to continue to serve the community with strength and purpose, as it has in the past.
Without support it may be that readership and advertising will decline and may mean ultimately the demise of the newspaper, which would then enter the realms of the myriad of publications listed in the previous article in this HERITAGE Newsletter.
BMG feel that their newspaper is a well read and respected, financially viable local paper, which needs the support of the community if it is to survive in its current format.
Premier Mike Baird, in a recent address to NewsLocal editors about leadership, commented on the role of community newspapers in NSW. He said that the role of media is changing, but “people are still turning to their local masthead”. “People have a great sense of connection and ownership with their area; and it is the local paper that brings together the different threads and speaks with a united voice”. “Suburban papers will have a key role to

play, because as we increasingly move to global, it is more important than ever to focus on local".
More recently Fairfax have announced that staff will achieve a slight increase in editorial resources for the Blue Mountains/Penrith Gazette merge, being one additional person for two days a week. Voluntary redundancy has been offered. Apparently this decision is final and the outcome for local newspapers has been announced.
The community are urged to contact Fairfax and the BMG to continue to express their concerns. *Patsy Moppett*

Labours of Love: Australian Quilts 1845-2015

The Hazelhurst Regional Gallery and Arts Centre Exhibition Labours of Love: Australian Quilts 1845-2015 is set to stir the imagination of quilters and lovers of beautiful craft everwhere. The exhibition is on from 8 August through to 5 October 2015, and presents some of the finest examples of Australian quilts, including heritage quilts on loan from other State and Federal organisations and select examples from regional museums. They have been created not only for comfort and show, but also to commemorate historical events and family occasions, to reveal social histories and personal stories.

Quilt making and patchworking went into decline following WWII but the traditions have been maintained.
Don't miss these beautiful quilts which demonstrate significant levels of skill, intricate detail and workmanship. *Patsy Moppett*
The Gallery is open 10am to 5pm.

Lawson Shops Interpretive Signage

Following much community concern and consultation over recent years, the makeover for the Lawson Shopping precinct is almost compete. The development was approved by Blue

Mountains City Council in 2010, subject to a large number of conditions. Two sets of shops join the highway strip, a number of which are already occupied on the highway frontage, including the famous Lawson Cake Shop, a pizza shop, a bottle shop and a café.
A developer spokesperson suggested that they were trying to attract tenancies which facilitate and complement the needs of the community, being mindful of the already existing businesses within the village.
The locality appears as an entity as early as 1817 as The Swamp or Christmas Swamp. By the 1830s it was referred to as the 24 Mile Hollow and it became Lawson in 1879, named for the explorer William Lawson. During the mid to late 1900s and into the 21st century the shopping area had become quite degraded, and the opportunity for revitalization came with the highway widening project. Several buildings were burnt and others neglected, and inappropriate alterations made to others.

Blue Mountain Hotel

1920s

1890

The development consent included a condition worded as follows:
Two interpretive panels are required to be deigned in consultation with Council and community representatives for the purpose of highlighting the heritage significance of the previous structures on the site and in the vicinity. One is to be located on the north elevation and the other similarly on the south elevation.
The developer sought input from community groups on the content of signage and the community was encouraged to forward ideas and text to the project. Although responses were due by 7 August or thereabouts, there may still be an opportunity to have a say.

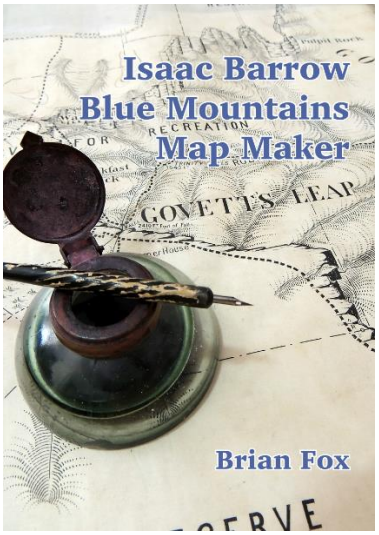
Book Review: Isaac Barrow: Blue Mountains Map Maker

Barrow Lookout at Blackheath stands proudly above the cliff line and looks directly over the waterfall, Govetts Leap and down into Govett Gorge towards the Grose Valley.
Who was this man Barrow? Why was he given the honour to such a prestigious lookout?
Brian Fox's most recent book "Isaac Barrow - Blue Mountains Map Maker" details the life story of this remarkable man. Isaac and his family had moved from Sydney to Yass, where young Isaac the son was born. Moving again, to Gundagai the family survived the greatest loss of life in a flood in Australia's history, (1852). He was educated at the Church of England Grammar School in Melbourne and employed as a surveyor with the Victorian Crown Lands and Survey. One of his assigned projects was to survey the NSW / Victorian border.
He moved to Sydney in 1876 and was employed as a draftsman at the NSW Lands Department, where over the course of his 39 year career, compiled 12 detailed tourist promotion maps of the Blue Mountains.
Isaac's country home at Woodford remained in the family for 56 years.



Cover

Barrow Lookout

Brian Fox's passion for the Blue Mountains and its maps stemmed from being employed as a cartographer by the Lands Department in Sydney 90 years after Isaac Barrow had entered those hallowed doors. In 1976, the Central Mapping Authority (The NSW Lands Department re badged) moved to Bathurst. Brian's 40 year mapping career produced the first map in NSW to be fully computerised in 1998, The Katoomba Topographical Map. Not unreasonably Brian feels a close affinity with the pioneering spirit of Isaac Barrow. *Mike Keats*

72 pages illustrated with colour photos and the maps Isaac drew of the Blue Mountains.

Blaxland, Lawson & Wentworth

Businesses Supporting Bicentenary (BSB) P/L have sought to mark the bicentenary of the first successful European crossing of the Blue Mountains through an artwork by Wentworth Falls sculptor Terrance Plowright. The work was commissioned by founding member Tom Colless in early 2013, and are reaching their final stage.

Phil Hammon at the 2013 launch

The crossing

Lawson

Wentworth

Blaxland

The three busts of Gregory Blaxland, William Charles Wentworth and William Lawson were finished in bronze castings, being on display at the Tourist Information Centre at Glenbrook. Descendants of the explorers, local businesses and the general public were invited to sponsor the project, to be rewarded with their names engraved on the monument of their choice. Lists are being finalized and include many direct and indirect descendants, including convicts. Donations (supply and installation) have been made by Mr Colless and fellow BSB member Phil Hammon, through their company businesses.
The Statues will each be erected in their namesake towns on a sandstone plinth, with the names of donors thereon. The date of installation is as yet unknown. *Patsy Moppett*

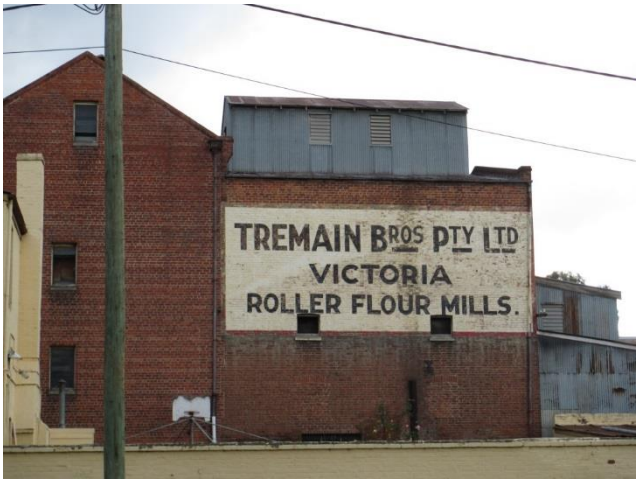
Tremain's Flour Mill, open to public

Further to an article in the BMACHO Heritage Newsletter of July-August 2015, it can now be advised that Bathurst's historic Tremain's Mill is opening its doors to the public, with its new owners inviting the community to an open day at The Mill on Sunday 20 September 2015.
"We are inviting the Bathurst community to see the site and to help us record the history of this important Bathurst icon," new owner Steve Birrell said. "The local memories of Tremain's are an important part of its history, and we are keen to hear from people who worked at The Mill or who have recollections about the place.
"We would love to chat with people and record their Tremain's stories. We'd like to see any photos, documents and other Mill-related objects, so that we can gain a deeper appreciation of the site and the lives of the people who worked there," he added.



"We are developing a Conservation Management Plan for The Mill and its silos. This will inform the development of a Master Plan for the precinct with the help of the heritage groups and Bathurst Council.

"Our vision is for a pedestrian friendly mixed-use precinct that preserves the heritage streetscape and the important historic elements of The Mill and silos, and we are interested in gathering community feedback to help inform that vision," he said.

The Open Day has been planned in partnership with the Tremain's Mill Community Group which includes representatives from Bathurst historical and heritage groups and Keppel Street residents. "The support and input of these local community groups is an important part of the project," Mr Birrell said.

The Open Day will include historic displays and copies of historic and current plans, and free tours of parts of site. There will be food, refreshments and entertainment available.

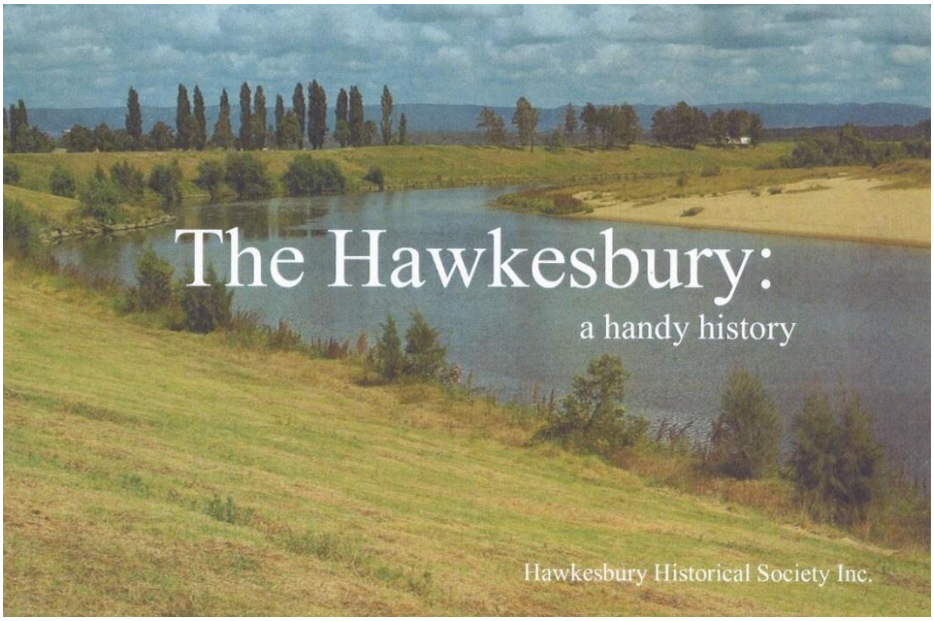
Hawkesbury History



A new booklet is being launched by the Hawkesbury Historical Society, “The Hawkesbury – a handy history”, collated by the Society. It is aimed at young readers and the general public alike. The launch will be undertaken by Professor Ian Jack, President of the Society, at the Hugh Williams Room, Hawkesbury Regional Museum, Baker Street, Windsor, on Friday 4 September 2015. All members and visitors are welcome. The RSVP was due by 21 August, but the booklet will be available from the 4th of September. It will be sold at $5.00 for groups visiting the Museum, or $7.00 to the general public.

Beautiful revamp for treasured teapot collection

Whether you like English or Irish breakfast, Oolong or Russian Caravan, white, green, orange or red, weak, strong or smoky, the long-awaited Bygone Beautys Treasured Teapot Museum & Tearooms revamp has been steeped to perfection and is ready to savour.
The major extensions and renovations of the popular Leura tourist attraction in the Blue Mountains were officially opened at a glittering soiree by former NSW Governor Professor the Honourable Dame Marie Bashir AD CVO on 4 August 2015.
Dennis Barber, who gave an *Acknowledgement to Country* on behalf of the local Gundungurra people, said tea drinking was a great equaliser of class and status and that many problems had been solved over a cuppa.

That theme was expanded by Professor Dame Marie, who said Bygone Beautys was filling an important role in preserving the history and culture of tea, a significant part of Australian ethos and heritage.
She told the gathering about visiting the Blue Mountains as a child, “one of the most beautiful places on the planet”.
The Bygone Beautys revamp includes a new museum space featuring more than 5,500 teapots (some debuting publically for the first time), function room, formal tearoom and retail area specialising in all things tea-related.
It also features a spectacular custom-made Mad Hatter-inspired teapot sculpture by local metal artists Ron Fitzpatrick and Steve Cunningham of Talisman Gallery at Hartley. The creation was made from a salvaged chimney stack from a steam engine, complete with a candy-like decorative steel handle, bow-tie-wearing rabbit and spout.
Resplendent in a magnificent patterned jacket and trademark bowtie, Mr Cooper (aka Mr Teapot) acknowledged partner of 48 years Kerry McKenzie, as well as the efforts of owner of the original Bygone Beautys teapot collection Ron Hooper, who began the collection in 1974 and with whom Mr Cooper went into business in 1992.
“I was thinking about what I was going to do during my retirement, Ron had a teapot collection and I was a compulsive teapot buyer,” Mr Cooper said. “When we took over this premises it was zoned as a tearoom so to comply we had this tiny little tearoom and a huge display of antiques.”

Dame Marie Bashir and Maurice Cooper

Steve Cunningham Ron Fitzpatrick

Twenty-three years later, the teapot collection has grown to more than 5,500 teapots and is the largest of its kind in Australia and one of the largest in the world. It spans five centuries and includes items from all over the world. It also includes 7,000 teaspoons and 3,000 tea towels among other artefacts.
The tearooms are also famous for a decadent Devonshire tea and traditional high tea, served with a degree of pomp and ceremony on fine bone china from a tea trolley to the strains of *Land of Hope & Glory*.
Bygone Beautys is located on the corner of Grose and Megalong Streets in Leura, a short stroll from Leura Mall. Open seven days a week between 10am and 5.30pm, with the last tearoom orders being taken at 5pm. Traditional High Tea is available 10.30am - 4pm weekdays and 10.30am - 4.30pm on weekends. Bookings essential: (02) 4784 3117 or *info@bygonebeautys.com.au*

Seniors Week 2016: Theme – "Healthy Living"

The NSW government has allocated some $200.000 seed funding for community groups, volunteer organisations and local councils to host events during the 2016 Seniors Week, 1 April to 10 April 2016. Funding categories are as follows:

- Tier 1 - grants of up to $1,000 to deliver small local events or activities in the community.
- Tier 2 - grants from $1001 to $5000 for large scale events which focus on this year's theme, "Healthy Living". Please be aware that Tier 2 grants must be matched by at least 50% of your organisation's own resources. This matched amount can include sponsorship, cash or in-kind contributions such as venue hire, catering and administration costs, and money spent by your own organisation.

The object of the events under this theme is to inform seniors to the importance of staying healthy and active, and to provide expert advice surrounding health and wellbeing to address their nutritional, physical and recreational needs, and to empower seniors to lead fulfilling lives and achieve their potential in their communities.
Suggested activities might address healthy living, active living, and intergenerational, technological, creative, recreational and cultural activities. *Patsy Moppett*
Although applications close at 5pm on Friday 4 September 2015, to be submitted on line to: *www.seniorsweek.com.au* ……. if you miss the date be ready for 2017!

Further Cox's Road SHR Gazettal

The final precincts of the Cox's Road were formally listed on the State Heritage Register on 31 July 2015 in Government Gazette No. 64. The sites were listed by the Minister for heritage, the Honourable Mark Speakman SC MP, on the recommendation of the Heritage Council of NSW, pursuant to Clause 37(1)(a) of the *Heritage Act 1977.*
The listing was undertaken due to the sites' heritage significance to the people of the State of NSW. The details can be viewed on the State Heritage Register via the Heritage Division, Office of Environment and Heritage (OEH) website at www.heritage.nsw.gov.au
The formal listing was made as follows:
Cox's Road (1814–15) and Early Deviations (1820s) - Two Precincts within the Local Government Area of Blue Mountains City:

- Cox's Road and Early Deviations—Linden, Linden Precinct
- Cox's Road and Early Deviations—Woodford, Old Bathurst Road Precinct

Linden Precinct

Woodford Precinct

The listing is a culmination of the work commenced in 2006 by John Wellings and the Cox's Road Project Committee, together with support from the community and the relevant local government bodies. *Patsy Moppett*

Cox's Road Dreaming

Greening Bathurst has launched their Flagship Bathurst Bicentennial Project Guide Book "Cox's Road Dreaming, at the Blue Mountains Historical Society, Hobbys Reach, 99 Blaxland Road, Wentworth Falls on Saturday 29th August 2015. A light lunch was provided afterwards. The launch was to be a part of the BMHS's Open Day.
The Guide Book was be available on the day @ $29.95. The illustrated 100 page A4 book comes with eight fold out maps that enable participants to visit 116 sites along the line of William Cox's 1814/15 road to Bathurst, and to engage in its natural history.

Macquarie's Flagstaff, Bathurst

Independent reviews were provided on the publication by historians Christopher Morgan and Andy McQueen, which commented on the impressive scope and quality of the work, and the value as a resource for the wider community. *Patsy Moppett*
For copies of the Guide contact bhms@bluemountainshistory.com or Greening Bathurst.

Vintage Rail Motor Ride, Capertee Valley

A charming deco-style Rail Motor set is making a run between Lithgow and Kandos and return through the spectacular Capertee Valley, on 19 September 2105. The train has just been refurbished and in October is heading up to Byron Bay to work for a resort.
Car-pooling for the return trip from Lithgow to Kandos would be an option for a day out for Central West and Blue Mountains residents. Whilst in Kandos the train will be running down to Carlos Gap so locals can enjoy the tunnel trip.

Capertee Valley, from Pearsons Lookout, by Karon Grant

This event has been organised by the Kandos Museum and State Mine Railways Limited, the enthusiasts who have done the refurbishment. *Fiona McDonald*

Tracing Your Scottish Ancestors

Kurrajong Comleroy Historical Society's Family History Group advises that a talk will be given on 25 November 2015 at Windsor by Duncan Macniven in regard to tracing Scottish ancestors and how to access the records in Scotland. Duncan holds an MA and MLitt from

the University of Aberdeen, Kings College, and was Registrar General for Scotland from 2003 to 2011. He is visiting Australia and this will be his only public appearance.

Register House, Edinburgh

Duncan Macniven

In 2009 Duncan launched images from the Old Parish Register burial and death records dating back to the 16th century on the internet, marking the completion of the digitization project, commenced in 2001, to make available online genealogical records held by his department.
In Scotland he was a familiar figure explaining the census (held every 10 years) and Scotland's demography to a wide audience. In his final year as Registrar General he oversaw the amalgamation of the General Register Office for Scotland and the National Archives of Scotland (responsible for Scotland's historical records), to form the National Records of Scotland in April 2011.
Macniven believes that Scotland is a world leader in genealogical record keeping, maintaining accessible comprehensive resources on the web. *Patsy Moppett*
The talk will commence at 2pm at the Tebbutt Room, Deerubbin Centre, 300 George Street, Windsor.
The cost per head is $5.00 and includes afternoon tea.
Contact: secretary@kurrajonghistory.org.au
RSVP by 20 November 2015, to KCHS, PO Box 174, Kurmond NSW 2757

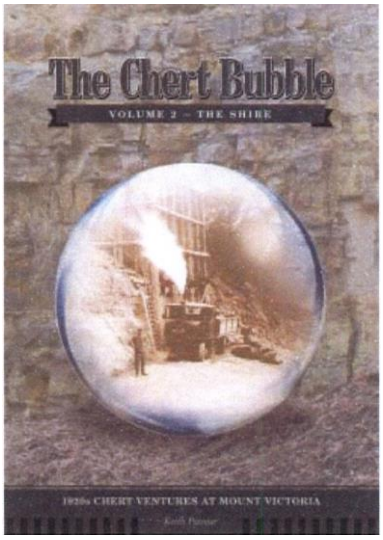
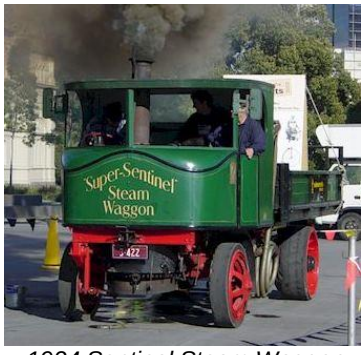
The Chert Bubble, Volume 2 - The Shire

Volume No. 2 in the series on Mount Victoria's chert quarry has arrived from the printers!
The book will be launched By the Mount Victoria & District Historical Society and Mountain Mist Books at Mount Victoria on Saturday 5 September 2015 at 2.30pm at the Refreshment Room, Platform 1, Mount Victoria Railway Station. Mount Victoria.
The book tells the story of the Blue Mountains Shire Council's chert quarry at Victoria Pass (1922-1938) and the Sentinel Steam Waggons which the Council used to truck crushed chert road metal to a siding near Mount Victoria station.
The Special book launch price is $45.00. Normal price will be $49.50.
The day includes the 1924 Super Sentinal Steam Waggon No. 5322 on display near the station and in operation on Mount Victoria's streets, courtesy of Paul, Karen and Emily Dove and Campbelltown Steam & Machinery Museum.
The Mount Victoria Museum is open from 12noon to 3pm, with a display of relics and information on chert, coal and shale mining.





1924 Sentinal Steam Waggon

The launch at 2.30pm will entail a short talk by author Keith Painter "Chert Baby or Skeleton in the Cupboard", followed by the book launch by Michael Neall, former Mayor of Blue Mountains City, and special guests. *Patsy Moppett*
Bookings are essential for the launch, RSVP August 31 to greatguides@mountainmistbooks.com OR Ph: 02 6337 3395.

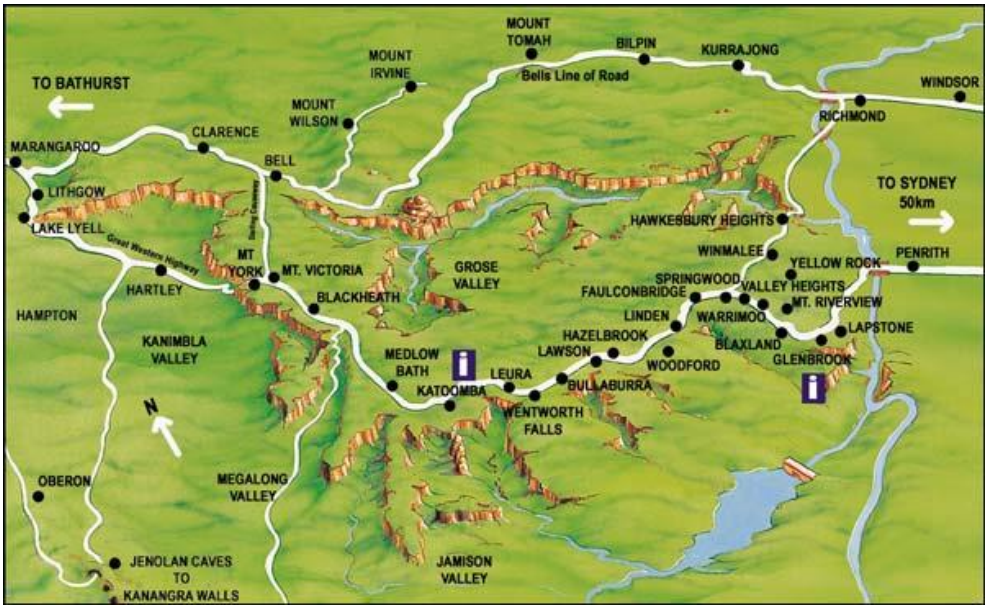
The Greater Blue Mountains Heritage Trail (GBMHT)
Blue Mountains Association of Cultural & Heritage Organisations (BMACHO)

The GBM Heritage Trail was instigated by Richard Woolley in 2013, who was then a member of the Blue Mountains Historical Society. He initiated the idea at a BMACHO workshop at the end of 2013 and the then President, John Leary asked Richard to look into the possibility of promoting an event that would further the interests of BMACHO members. Richard became a committee member of BMACHO in March 2014 and worked on the project. Unfortunately Richard passed away later in 2014, after handing his project work on to fellow BMACHO committee members, who continued with his work.
We originally asked our members if they were interested in participating in four common open days a year, the first Saturday of January, April, July and October even though most are open on a more regular basis. We found those who could and would participate, and those who could participate by appointment only. Initially our participating members and businesses contributed to get the project off the ground.
In mid-November 2014, the Westpac Group was offering funding by way of the Natural Disaster Recovery Grant for not-for-profit organisations on the Mountains, following the disastrous 2013 bushfires at Springwood, Winmalee, Yellow Rock and Mt Victoria, in an effort to bring business and life back into the Mountains. BMACHO Secretary Jan Koperberg applied and BMACHO was granted the funding in December 2014.
The Trail is to be launched at the Cultural Centre at Katoomba at 5.30pm on 22 September 2015.



GBMHT project area – Richard Woolley

Lawson Workshop August 2015

The project is proudly sponsored by Westpac and the Natural Disaster Recovery Fund, for BMACHO Members, and Food & Beverage and Accommodation Businesses. BMACHO are most grateful to the Westpac Group for their confidence in their ability to deliver this project. ***Saturday 3 October 2015 is the first common Open Day.*** The community is welcome to come and enjoy the historical societies, the museums, the heritage properties, the heritage gardens, historical businesses, publishers, exhibitions and a lot more. Visit some of the Hidden Gems along the way, have a picnic. Enjoy the spectacular scenery, have morning tea, lunch, afternoon tea or dinner at one of our heritage businesses. Stay for the day, stay for the weekend.

Jan Koperberg & Patsy Moppett

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains World Heritage Institute; Bygone Beautys Treasured Teapot Museum and Tearooms.
Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; The following are individual members: Fiona Burn, Ray Christison, Associate Professor Ian Jack, Joan Kent, John Low OAM, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor) ,Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Roy Bennett (Grants Application Officer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Louise Vining (Events and Venue Co-ordinators).

The Hydro Majestic Hotel

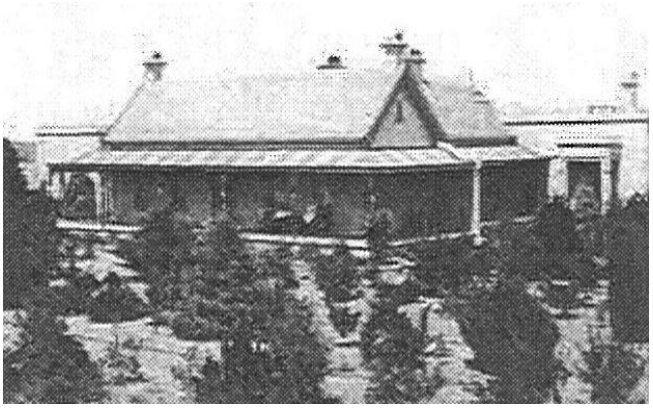
The iconic hotel was created by Mark Foy the Sydney businessman, sportsman and playboy, in 1904. The initial complex comprised three earlier buildings:

- The single storey country retreat of WH Hargraves, son of Edward Hargraves of gold discovery fame. This home had been built in two stages, a Victorian style cottage, followed by a two storey extension which became the Delmonte Hallway. Hargraves land also included 9km of bush walking tracks, available to the public. Foy leased the property in 1902 and purchased it in 1903.
- The existing hotel called the Belgravia, opened in 1891 by Mr & Mrs Ellis.
- Cottage owned by local solicitor Alfred Tucker.

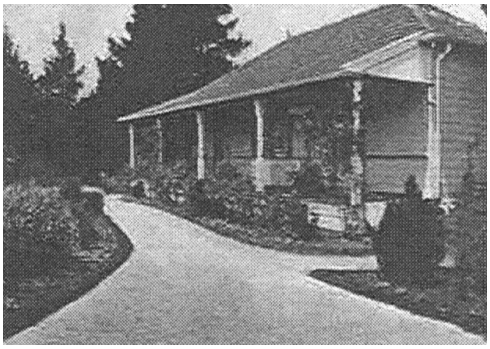
In 1904 Mark Foy created his hydropathic establishment, opening the facility on 4th July to attract American visitors, advertising cures for nervous, alimentary, respiratory and circulatory ailments, but did not include sufferers of infectious diseases and mental illness.

He believed that the land contained mineral springs, although this was probably in error, as Foy was importing mineral water from Germany. The town was then known as Medlow, and Foy petitioned the NSW Government to change the name to Medlow Bath.

Belgravia



Hargraves House



Tucker cottage

Hydro Majestic 1904 - Casino

A striking prefabricated casino was brought in from Chicago, and erected between Hargravia and Belgravia with the picture gallery joining the buildings together. The dome was built to Foy's specifications and dismantled for shipping. Guests enjoyed the magnificent view over the Megalong Valley and a resident Swiss doctor, George Baur, attended to their ailments. Patients were restricted to no alcohol, no tobacco and no discussion of illnesses. However, Baur left after only a year, being replaced by Dr Cale.

Buildings complex 2015

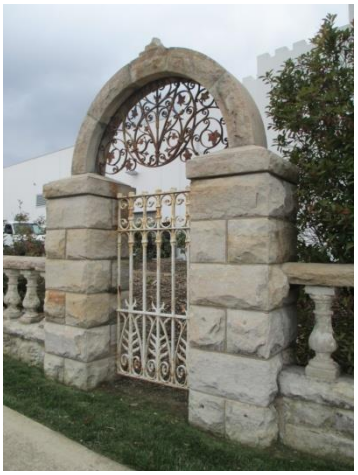
The entire complex was heated and powered by the separate boiler house. It had privately operated electricity, sewer system, freezing works and telephone systems. Foy extended the walking tracks down into the valley, which were popular within the health regime of the hotel. The tracks took one through steep gullies and past waterfalls, caves, the Coliseum and

included Sun Bath. In later years the track down the cliff was closed due to safety, becoming the “forbidden” track. At the base was the Hydro’s farmhouse on a 600 acre farm some 1700 feet below the hotel. Mark Foy named many of the features on his property which included the Coliseum, Sun Bath, Solomon’s Seat and Pulpit Rock.

Casino 2015

Belgravia 2015

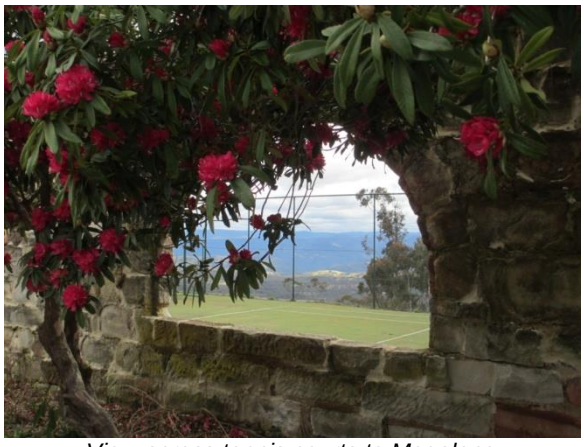
Eventually the hotel prevailed over the clinic in 1906. Entertainment was lavish. Foy’s farm in Megalong Valley supplied the kitchens via flying fox, and a stable of horses allowed guests to explore the valley. The farm provided horse riding, shooting and a tea house, entertainments, art and statuary. He set up numerous sporting facilities, and created the Mountains Motor Car Company, with his fleet of luxurious cars, taking guests on tours to places such as Echo Point and Jenolan Caves almost daily. The cars were readily able to handle the poor conditions of the western road. Many were auctioned in 1910, including Fiats, Daimlers and a De Dion, but they played an important role at the Hydro.
Foy established magnificent gardens, balustrading and the stone fence we see today, tennis courts and promenades, and brought in expensive furnishings, artworks and set up other facilities including golf links, croquet courts and clay pigeon shooting. Many of the waiters who served the hotel were Chinese, and coffee was served by two Turks in national costume. Charlie (Louie) Goh Mong was a favourite of Foy and guests, working there for some 35 years.
Foy bought up other property, including houses on the eastern side of the railway line for staff. Many famous guests stayed at the hotel including Dame Nellie Melba, Edmund Barton and Sir Arthur Conan Doyle.



Features along highway frontage

In 1905 a bushfire destroyed the gallery building. In 1913 Foy had leased the property to business man James Joynton Smith for 60,000 pounds. During this lease period, in August 1922 a bushfire severely damaged both the hotel and the picture gallery, sweeping away up

to 130 of the bedrooms. Loss of life was prevented as the hotel was closed for the winter. The fire also destroyed a section of the Explorers' Tree. The tree had died in 1903 and been lopped. Mark Foy had retrieved the logs and taken them back to the Hydro, where he displayed them on a pedestal for visitors to see.
The buildings were replaced, with the Belgravia completed by 1936. A new wing, which had replaced the old Belgravia, was built in 1938. In WW2 the place was utilized as a convalescent hospital by American servicemen, during which time the condition deteriorated due to vandalism. After it was vacated in 1943 it remained vacant for a time until the government paid compensation for the war contribution, and refurbishment was undertaken. Mark Foy died in 1950.
The Hydro received heritage listing in 1984. By this time the economic burden had taken its toll on the family, and the resort was sold to barrister John North, who under took further upgrades, removing the Lounge bar and introducing the Megalong room. Further refurbishment and alterations were done in the early 1990s. Fire again threatened the hotel in 2002. A Malaysian based group purchased the site from North in 2006, and the place was closed for refurbishment in 2008.



View across tennis courts to Megalong

Garden wall

The Escarpment Group has a deep commitment to preserving, restoring and respecting history as well as delivering world class visitor experiences. The hotel has now reopened in late 2014 with most of the site restored to its former glory at a cost of $35m. In addition the boiler house has been recovered from the blackberries and scrub and converted to a fine restaurant/café. The works included restoration of historic areas, beautification of the gardens, renovation of the hotel's two main façades (east and west), a new lobby to provide dining, conference and function areas, creation of the Mark Foy Pavillion as a providores and history centre, regional tasting centre and an interactive history environment. A hospitality training centre has been established, new accommodation wings and a large spa and treatment room complex.

Boiler House cafe

Hydro Majestic Pavillion

As with many old hotels across the world, there are also the ghost stories!! Ghost tours are still a feature of the place. Apparently one tale details a girl who jumps around the furniture in the guests' lounge. Another tells of a young female who sought to flee a troublesome male suitor in 1912, and boarded a commuter train at Sydney's Central Station, fleeing west to Medlow Bath to find sanctuary, or so she thought, in the hotel's labyrinth of corridors and alcoves. Unfortunately for the lady, her less than chivalrous admirer, devastated by her apparent rejection, pursued her to her room where he strangled her with her favourite silk scarf.

View from Bellevue Crescent 2015

Also meeting a premature end while holidaying at the Hydro Majestic in January of 1920 was Australia's first Prime Minister, Sir Edmund Barton, who passed away of heart failure while taking a bath in a second-floor suite.
There are also the Hydro's more "permanent" occupants. Take a tour of this venerable, eclectic hotel and you're bound to hear the story of its two resident ghosts, a little girl in a blue frock with a white lace collar who likes to run through walls, and the boy who's often seen by staff sitting on the dining room's chandeliers long after the last diners have returned to their rooms*!* *Patsy Moppett*

Food for thought ..... Editor's note

Rare Trades

We are continually able to review and consider research relating to heritage buildings and places in publications such as *Heritage* and other newsletters, books, magazines, journals and on line. We wonder at the architecture and the fabric, the landscaping and the setting. How often though, do we consider the tradesmen who carry out these sometimes basic works, the craftsmen who undertake these "rare trades", the people who make things with their hands. So many works are now carried out by machine that the old manual skills are in danger of being forgotten, but for a very special group of people who remain experienced artisans in their respective trade. This includes dry stone wallers, coopers, shipwrights, bodgers and blacksmiths, quarrymen and stonemasons, engravers, and bullockies, coach builders and farriers, bookbinders and violin makers, weavers and woodcarvers, and many others.

The notion of a Rare Trade, the things they all have in common, are these:

- that the skills they use were the same a hundred and more years ago. Many objects made then are still used for their primary purpose, so the tools, materials and techniques are proven over time.
- that their skills were originally learned as a trade, rather than creative art or home craft. That means the things they make are meant to be functional before they are beautiful. In fact, they are beautiful because they have been made with such care and detail to a custom need.
- that the things they crafted were intended to last, and may well outlive you. They are designed to be repaired and inherited, not replaced and discarded.

Weaver

Stonemason

I would like to undertake a series of articles in *Heritage – The Technical Side,* to look at some of these skilled artisans who still make things the old way. Skilled manual work, the kind that took a real master, is now rare. Some of the rare trades will never really disappear as there will always be a trickle of demand for those services. They come with their own special tools, traditions, language and secrets. These people each have tools specific to their trade, which in themselves are often museum pieces and historical artifacts. They take raw materials and shape them with these few tools and their hands into utensils and furniture, ornaments and buildings. Their patience enables them to extract life and character from these raw materials, the properties of which are in danger of being forgotten. It is said that we are not just losing the skills, but also a sense of attitudes and approaches, how to solve problems, adaptation and invention, curiosity, memory, knowledge and insights. Some of these things are critical to the world's survival and things which a world of technology cannot duplicate.

Stonemason's tools

Carpenter's tools

We cannot deny that in some of these trades getting your hands dirty is not always fun. It can be hard, hot and dirty work (ask a blacksmith). For those who, in a medieval world, made their livelihood from some of these skills, it may not have made for a beautiful life. But the sense of satisfaction at the end of the day, that you have created something beautiful with minimal tools and machines, something which has instilled within in part of yourself, is not something that can be experienced through a world of IT.

Was your council Fit For the Future?

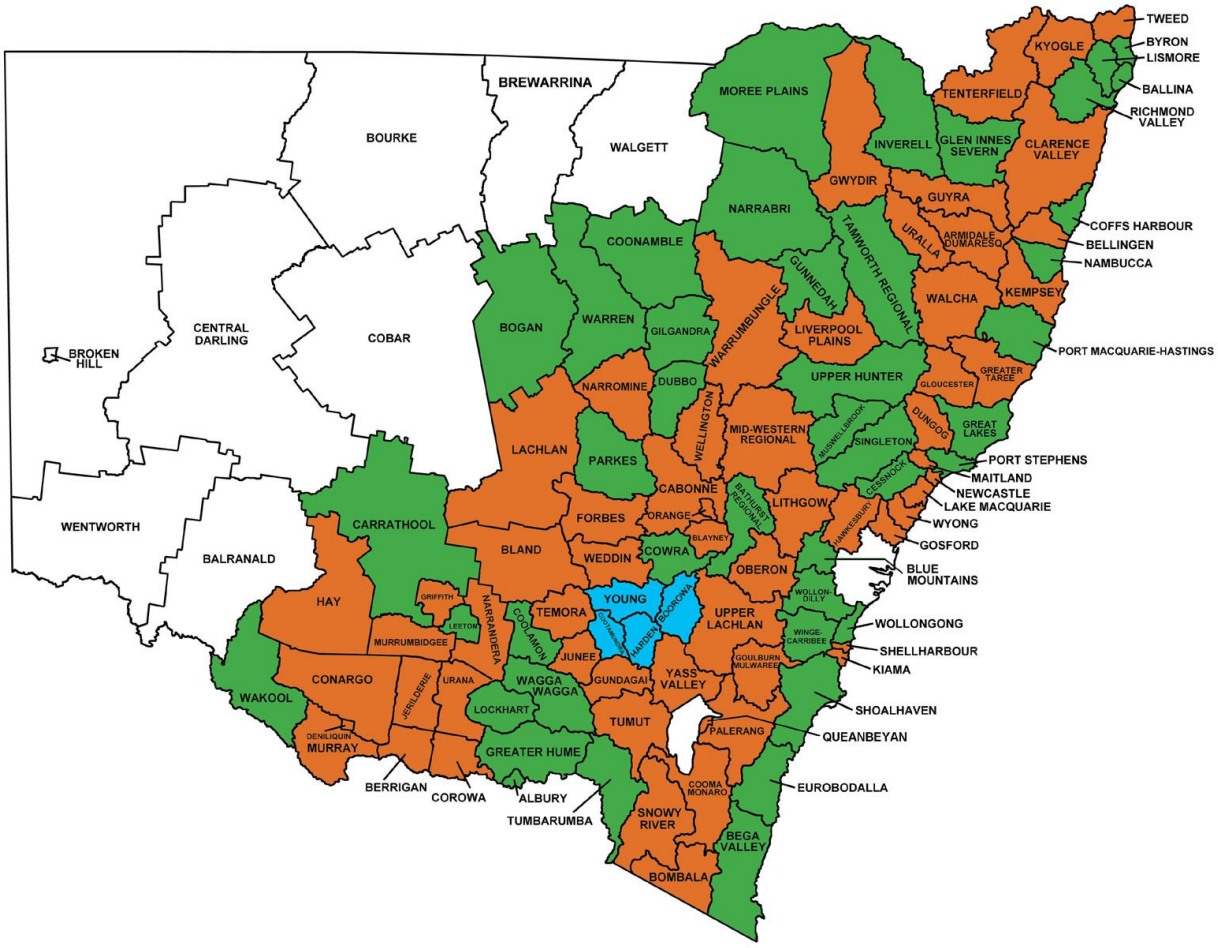
The Independent Pricing & Regulatory Tribunal (IPART) has recently provided the NSW Government with its report card on the assessment of 139 councils across the State, and their ability to be "Fit For the Future" (FFF).

Councils were assessed on:

- Scale & capacity
- Financial criteria (financial, infrastructure and service management and efficiency).

IPART found that only 37% of the State's councils are FFF.

A variety of reconfigurations to local government composition are currently being considered by both metro and regional councils who were deemed not fit, to formulate a preferred solution by 18th November 2015 for presentation to the government.



Green – FFF Brown – Not Fit Blue – Merger proposals

The report card set out the advantages of mergers, and declared how scale and capacity could be improved. In particular, some 34 councils were assessed as having insufficient scale and capacity, because they have declining or static populations, with population forecasts below 10,000 by 2031. It was felt that a population of this size is likely to affect a council's efficiency and strategic capacity to meet the future needs of its community.

Editor's Comment: The report card has only said that a small population was "likely" to affect a council's capacity to perform, and on this basis alone has deemed then unfit, in spite of the fact that many of these smaller councils were financially fit, and have been serving their communities satisfactorily for many years.

Nobody would deny that scale and capacity can be improved, but why go to this expensive extent. These councils could have been given the opportunity to provide evidence of how they could work better with what they already have.
The FFF process has been a major exercise in semantics, with suggestions that voluntary mergers would see a faster progression towards efficiencies. Read – "if you do not do it voluntarily you will be forced to do it our way ie. forced amalgamations". FFF placed the emphasis back on councils to prove their worth, and it is now obvious that government have had preconceived outcomes all along.
(Please note these are the Editor's comments only, and do not necessarily reflect the opinions of all BMACHO members).

Implications for BMACHO members and other heritage and cultural organisations
Amongst BMACHO membership, relevant councils are Blue Mountains, Penrith, Lithgow and Hawkesbury. Lithgow and Hawkesbury fall within the "not fit" category. However, many readers of this newsletter will be located in other local government areas affected by the changes.
Moving forward with the inevitable, it was raised at the recent Royal Historical Society Conference in Bankstown that societies and organisations should look to their constitutions, MOUs and policies to make sure they too, are FFF. Some things to consider include:

- Some organisations have been formed under the auspices of the Local Government Act as a S355 committee and where a new council is formed, may no longer be a valid body.
- More informal committees may exist solely at the behest of the current council. The question should be asked that, if the council is dissolved and a new council formed, where does that leave you?
- Where are your headquarters? What are your storage arrangements? A new council may not be satisfied with the current arrangements in the local hall, library etc.
- What is the name of your organisation? Does it include the words" shire" or "district", and how would this work if the shire no longer existed? How does this affect letterheads, logos etc.

The conference specifically mentioned:

- If a society has generally covered a single LGA this may change.
- Some of your area may be lost to another LGA.
- You may have to work with another society to cover your original area of interest.
- Impacts on support from a new council.
- Local history v. local identity – will this change?
- Will your group be compliant/reactive or active/proactive in moving forward.

Leuralla Sculptures

On a kerb stone on the south side of Hunter Street, opposite the State Library, is an engraving in the form of a Jewish candelabra or menorah (Figure 1).
Being a frequent user of the State Library, and having often crossed Macquarie Street at this corner, this engraving had puzzled me for many years so eventually I asked the RAHS Librarian, Donna Newton, about it. At first she was unable to help but after asking the secretary of a member organisation she was able to solve the puzzle and she wrote a short note for the RAHS Newsletter[1], which was accompanied by my photograph (Figure 1*), and reads:
"After futile searching of the net, I forwarded this query onto another of our affiliated societies who promptly supplied some answers. The carving chiseled into the kerb is a representation of the seven-branched menorah. It is the work of a Saul Munro, sculptor, who worked on the bicentenary project of paving stones along Macquarie Street in 1987. Saul, interested in biblical signs and images loved leaving a Jewish symbol on much of his work. [2]

Figure 1. Kerbstone in Hunter Street at corner with Macquarie Street.
Photo: Peter Rickwood 2015

"The Three Mysteries of Life" sculpture nearly buried amongst the bush in the garden annex of the Leuralla Toy and Train Museum in Leura, NSW was sculpted by him. This interesting display is very overgrown and neglected with a barely visible sign. And that is another mystery!"

Her findings were emailed to me before publication and they came with a photograph of the Leura carvings taken in 2010 before their surroundings became overgrown[3]. Being intrigued about this connection of the Hunter Street engraving with sculptures in the Blue Mountains I went to see for myself.

As was correctly reported, the sculptures are in the garden annexe of the Leuralla Toy and Train Museum, 29 Olympian Parade, and entry to that annexe is by payment to get a turnstile to rotate. It gives access to a well-kept grassed area upslope of the renowned amphitheatre but there are no paths leading to the sculptures. Indeed they are only visible from outside the fence line at the N corner of the property (Figure 2).

* Another photograph of that kerbstone was later found on the internet[4].

Figure 2. Location of sculptures in Olympia Parade, Leura

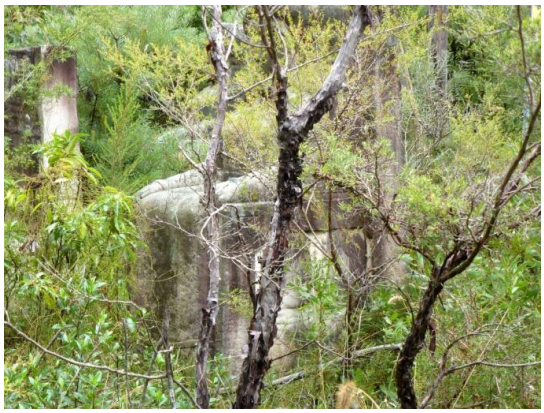

Figure 3. One of three sculptures by SaulMunro
Photo: Peter Rickwood February 2015

Figure 4. Well hidden sculptures.
Photo: Peter Rickwood February 2015

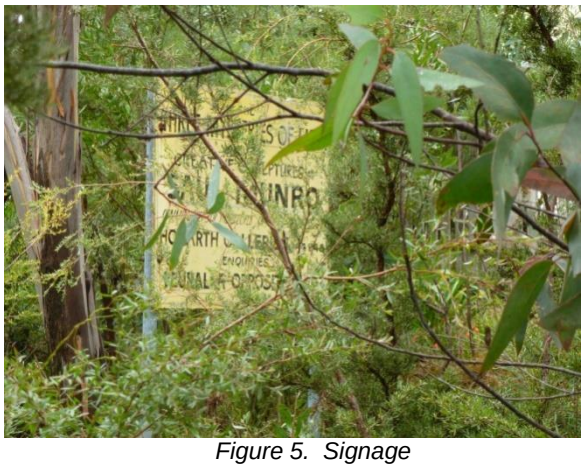

Figure 5. Signage
Photo: Peter Rickwood February 2015

From outside the fence, the sculptures can be partially seen (Figures 3 & 4) amidst a veritable jungle and the signage is just about readable by looking around the sides of trees and shrubs (Figure 5).

Subsequent searching on the internet revealed that there is a warning about the overgrown nature of the area[5] but nothing more about the sculptor and his works.

"The Three Mysteries of the Mountains" are large 'sphinx like' statues, c.2m high, carved from Gosford sandstone[6]. Judge, The Hon. Elizabeth Evatt AC explained that they were commissioned to be created by Saul Munro[7] in memory of her mother-in-law Mrs Marjorie Evatt Andreas. Work started on them in the spring of 1986[8] and by April 1987 they were well advanced toward completion[9]. Even before they were finished an American offered to buy them but they were not for sale[10]. However that offer suffices to indicate that they are of high monetary value. The quality of Munro's work can be better assessed in winter when the foliage decreases to the extent that it is possible to take a photograph that reveals the profile of one of the statues (Figure 6.)

Subsequently, Saul Munro also created a mosaic[11] that is in front of the Leuralla house and several small sculptures that are in the garden[12].

There is not a lot known about Saul Munro who resides near Windsor. A photograph of him working on these sculptures accompanies the article by Bates[13] and two more recent images are also available[14].

When the sculptures were being created some local residents contacted the Evatt family to complain that they were "an eyesore" (Anonymous 1986), but surely those minor protests did not lead to the neglect of the area. And there the story ends for the moment as I have not discovered why the surrounding bush has been allowed to grow and overwhelm the sculptures.

Emu Plains Railway Station and Stationmaster's Residence

When the railway came to Emu Plains the first train crossed the bridge in June 1867. One year later the Emu Plains Railway Station was opened on the south side of the Bathurst Road. Subsequently this building was abandoned and a new railway station building and station master's residence was opened in November 1886. A telegraph office was opened at the station a year later.

Platform facade

Emu Plains is located on the western banks of the Nepean River at the foot of the Blue Mountains. It has many historic buildings and sites, which date back to the first settlement. The river and the mountain range bounded the new colony to the west and a mere trickle of movement ventured beyond these topographical features at first.

The sighting of emus on the river flats may have prompted the name in the late 1700's, and may have originated from Watkin Tench in his early exploration of this part of the region. The name Emu Plains came into use around 1814. The government farm was established here in 1819 by Governor Macquarie, where convicts cleared the land and carried out cultivation of wheat, maize, tobacco and other crops for 13 years. The town of Emu was surveyed for settlers in the early 1830's. By this time a road had been established across the mountains to the Bathurst plains and more land was being sought for expansion of Sydney town. The convict farm was officially closed in 1832 and the land sold.

The river was crossed at first via the ford, and the Emu Ferry. The challenge to bridge the river was thwarted several times by the significant floods which occurred regularly. The final bridge which met the challenge was the Victoria Bridge, a road/rail structure.

The Victoria Bridge was given over to road traffic only in 1907, when a new railway bridge was opened. The line from Penrith was electrified in 1956.

The second railway station building was a two story structure with the stationmaster's residence up stairs. It is one of the oldest railway stations in Australia. A Victorian era Gothic Revival style railway building, it is only one of three remaining metropolitan examples (with Fairfield and Riverstone) of the early custom of providing accommodation for railway staff within the same building as the station facilities, and is the only two storey metropolitan example.

Rear facade

Date panel showing 1863

Bay window

Rear facade

It is constructed of face brick with stone detailed quoins capping and mouldings. The building actually presents two storeys to the platform, and actually three stories to the street frontage. Distinctive features include the steep gabled and parapet slate roof, two medieval style chimneys and fretted motifs on gables. A bay window to the basement and ground levels dominates the eastern facade.
Changes to the building include the incorporation of ticket windows, and door replacements. The stationmaster's residence is accessed from a concrete stairway from the rear.
Inside the original floor layout is retained with minimal changes. Substantial renovation occurred in 2008-2009. Many features were retained such as fire place surrounds, custom orb metal ceiling, lathe and plaster ceilings with ceiling rose, and the timber staircase. Most other original fittings have been removed. *Patsy Moppett*

BMACHO for You

The question has recently arisen as to just what does the Blue Mountains Association of Cultural and Heritage Organisations (BMACHO) have to offer your organisation. An examination of the original aims of the group, as well as a review of activities to date, provides the following:

1. Membership of a well-respected cultural heritage organization.
2. Low membership fees.
3. Opportunities for membership as an organization, or as an individual with particular background/skills/expertise to share.
4. Opportunities for networking through:
    - Workshops and seminars

- Bi-annual Conference
- AGM & Committee meetings (visitors always welcome)
- BMACHO links to outside organizations on the BMACHO database

5. Opportunities to promote your organization as a member of BMACHO:
   - Greater Blue Mountains Heritage Trail, Open Days, brochure and associated web site
   - Regular email distribution from the Committee
   - BMACHO website
   - BMACHO on Facebook
   - The bi-monthly HERITAGE Newsletter
6. Opportunities to read about, research and learn about history and heritage:
   - Publication of the annual Blue Mountains Journal
   - Publication of Occasional Papers
   - The bi-monthly HERITAGE Newsletter
   - Workshops and seminars

Heritage Trail functions

BMACHO is always willing to consider feedback from both member and non-member organisations as to how we can assist your group and your members. If you can add to the above, or would like to join, please do not hesitate to contact the Secretary at: committee@bluemountainsheritage.com.au OR j.koperberg@bigpond.com

The Technical Side

The Bodger

In the first of a Rare Trades series we introduce the **bodger**. What on earth is that you ask? The term first appeared in the late 19th century, and may have come from the Middle English *bocchen* which lends a sense of repairing or mending. The origins of the word are not clear, although the craft dates back to the Egyptions and Vikings. The word was also used to describe a rough sack of corn. It may also have been a corruption of the word badger, the badger having dwelt in the woods and seldom emerging until evening.

Bodgers were itinerant wood turners who worked in the beech wood forests of the Chilterns in Buckinghamshire. As their tools were so easy to move, they moved about the countryside rather than set up a permanent workshop. The bodger sometimes camped out in the open woods in a lean-to structure constructed of forest floor lengths suitable for use as poles, lashed together to form a triangular frame for a water proof thatch. It may have been enclosed in a wicker or wattled manner. More often they lived in the nearby village and made their way each day to the woods to work.

Viking pole lathe

Bodger camp

Medieval lathe worker

Most commonly they made chair legs, which were sold to furniture factories for chair making. They turned timber into chair legs by turning it on a pole lathe, an ancient and very simple tool that uses the spring of a bent sapling to help operate it. They used a variety of chisels, sharpening stones and grinding wheels, the spokeshave-like drawknife, a trestle or saw-horse, a coarse saw, mallets, axes and adzes, and a shave horse.
They also sold their product as waste for kindling, or as exceptionally durable woven baskets.
They were one of the craftsmen associated with the making of the traditional country Windsor chair. English bodgers made chair legs and stretchers for the Windsor chairs, which were assembled at High Wycombe, England.
Bodging was a job of necessity using whatever tools and materials came to hand, which although not necessarily elegant, was nevertheless serviceable.
Today's bodger can be seen demonstrating at fairs and markets, workshops and field days. The skills and tools are retained by a specialised few, who take pride in creating timber objects for practical use and creativity.

Bodger and his tools at recent Yetholme History Day

Pole lathe

Tools of the trade

Spoke-shave

The Leura Bodger, Roy Davi, was recently seen in action at a workshop near Mudgee. Roy is a pole lathe greenwood turner and furniture maker. He conducts weekend courses to share his trade, where you might simply observe the making of wood turned furniture and

utensils, utilise Roy's lathes and tools to make your own pieces, or even attempt to make your own pole lathe.
Roy may be contacted for classes or demonstrations at roy.davi@y7mail.com

Unveiling the Honour Board at Valley Heights

On Wednesday 7 October 2015 the Valley Heights Locomotive Depot Heritage Museum (VHLDhM) held an unveiling of an Honour Board at the Museum, to commemorate railwaymen from the local area who enlisted for World War 1.
A welcome was given by VHLDHM Chairman, Bruce Coxon, who handed over to Keith Ward, the VHLDHM Publicity Officer. Keith had lead a number of volunteers in the research for the Honour Board, with the help of *Remembrance - Springwood and District Honor Roll 1914 – 1919,* by Shirley Evans and Pamela Smith, Springwood Historians, published in 2008. Both Shirley and Pamela were in the audience and their work was acknowledged.

The Honour Board

Keith Ward & Louise Markus MP Macquarie

Keith spoke about the 'Connections' and the families of the men who served. He had researched the men thoroughly, along with other volunteers, and found it quite an emotional experience. He spoke warmly and respectfully about the men. Descendants of Thomas Brett and Albert Honey were present and both families had a representative speak about their ancestor, after the unveiling.
The Honour Board was unveiled by Louise Markus MP Macquarie, with speeches following Louise, by Trish Doyle MP Blue Mountains, Pamela Smith, historian, and the descendants.
A copy of *Remembrance – Springwood and District Honor Roll 1914 – 1919* was made available for signing by all present on the day and is to be kept at the Museum.
After the ceremony, there was a guided tour of the VHLDH Museum , followed by a light lunch.
The Honour Board now hangs proudly in the Museum!

Descendants of Albert Honey with Locomotive 3214

Sculptures at Scenic World

An exhibition is to be held between 8 April and 8 May 2016 at Scenic World, Katoomba, entitled *Sculpture at Scenic World*. This is Australia's only annual rainforest exhibition and incorporates the only prize of its kind in an Australian rainforest. The site is a Jurassic rainforest, part of the World Heritage listed Blue Mountains National Park. The exhibition manager, Justin Morrissey, advises that artists will create work in a very unique environment, to receive significant installation support and advice, and have their work judged by some of Australia's most influential and talented professionals. The exhibition is set to provide an unforgettable experience for visitors, recognizing that artists play the most pivotal part in providing that experience.

The judging panel has been announced, and includes Dr Felicity Fenner, Michael Snelling and Claire Healy. For more information visit www.scenicworld.com.au/sculpture

Museum of Applied Arts and Sciences (MAAS), Regional Stakeholder Forum 2015

This year's forum will provide updates on issues affecting the regional heritage sector, discuss regional tourism and museums, crowdfunding, and the role of consultants, and how the arts can "activate" and energise your museum.

This annual forum is an opportunity for the regional museums and collections sector to get together, discuss current topics and be inspired by new ideas.

The forum will be welcomed by Rose Hiscock, Director of MAASA, and a wide range of speakers will address the forum including Vic McEwan, Andrew Gray, Caroline Downer, Michael Brealey, Harlan Hall, Elliott Bledsoe, Brett Dunlop, Debbie Sommers, Kevin Williams, Marcus Hughes, Fiona McDonald and Jackie Hemsley. Many of these presenters are from regional areas.

Forum 2014

The forum will be held on Friday 13 November 2015, from 9am to 4pm at the Powerhouse Museum, L2 Theatrette, 500 Harris Street, Ultimo. Participation is free, but bookings are essential as places are strictly limited.
Book through www.maas.museum

Cox's Road Walk

The Macquarie Society will be walking a part of the original Cox's Road on Saturday 14 November 2015, as part of their continuing celebrations of Governor Macquarie crossing the Blue Mountains 200 years ago. This is a unique opportunity to walk the road much of it over private property.

Cox's Pass

Mount York Cemetery

Walkers will meet at the old Hartley School, Mid Hartley Road, Little Hartley, at 10am for morning tea, and a bus will then take walkers to the Mount York Lookout. Starting at the top of Mount York you will walk down the original Cox's Pass into the Hartley valley and follow the original road over private property to the Mount York cemetery. The bus will pick you up there for lunch.
In the afternoon you will continue to follow the original road westwards across private property to the River Lett at Glenroy Crossing. Glenroy is where the Cox's River and the River Lett join and where Governor Macquarie held the first church service west of the mountains. The bus will meet you there for transport back to Hartley School.
The first part of this walk is quite steep and rough in spots but is all downhill and then level from the bottom. The morning walk is 6kms taking 2 ½ hours.
The second half, after lunch, follows the original road across private property which is open grazing land with magnificent views of the mountains all around. The afternoon walk is 6kms also taking 2 ½ hours, finishing about 4.30pm.

You will need good walking shoes. Reasonable fitness is all that is required.
This event has been organised by the Hartley Valley Progress Association. Ramsay and Susie Moodie and other locals of the area, will lead the walk.

Don't miss out!

Please confirm your place by sending funds ($65 per person) with your name attached to:

- Bank of New South Wales Lane Cove: BSB 032085 Account Number 408924
- or post by cheque to Hon. Treasurer, Rosemary Taylor, 8 Matthews Avenue, Lane Cove. 2066 rosemarytaylor10@gmail.com Cheques payable to The Macquarie Society Inc.

More Colonial Road Walks

Glenbrook & District Historical Society intend to hold walks on historic sections of the Cox's Road in 2016.

- 26 March 2016: Three short return walks on the three most historic roads to the west, Cox's Pass 1815, Lawson's Long Alley 1822, and Berghofer's Pass 1909. These walks are located at Mount York and the day will commence at 9am. Cost is $12.00 including morning tea, and would be led by Doug Knowles and Frank Bowman.

Lawson's Long Alley

Berghofer's Pass

- 25 June 2016: A walk along a section of the historic Cox's Road following the ridge-top from Linden to Woodford trig. The walk would commence at 1.30pm. The cost is $8.00 per person and the walk would be led by Doug Knowles and Frank Bowman.

Bookings are essential through Doug on P: 02 4751 3275, for details regarding meeting place, time and grade of walk. Good walking shoes are essential, as well as a hat and drinking water.

Source: Glenbrook Points, Glenbrook & District Historical Society, October-November 2015

Volunteers Wanted - Valley Heights Locomotive Depot Heritage Museum

Volunteers are required to work in the Valley Heights Locomotive Depot Heritage Depot Museum Shop. Some experience with cash handling, catering, food handling or customer service would be an advantage but is not essential. All training will be provided.
The role involves ticket sales to customers, retails sales of the Museum's range of souvenirs and memorabilia, as well as refreshments including tea/coffee and light snacks. They are looking for diligent and reliable people with a friendly outgoing nature who like dealing with people.

The Museum is open on the second and fourth Sundays of each month, as well as additional Sundays during public holidays from 10am to 4pm. Volunteers working in the shop would be expected to be available from 8.30am to approximately 4.30pm on open days. They will be expected to be available to be rostered every 2nd or 3rd open day.
If you feel you could fulfil this voluntary opportunity and would be interested in trying something new, please contact their Retail Manager, Steve Corrigan on 4759 1980 or sjc_alco@pnc.com.au

2015 RAHS Conference

The Royal Australian Historical Society Conference was held at the Bankstown Sports Club on 24-25 October with a theme of "Migration Matters".
The Conference explored the importance of migration history, provided skills that will support history projects and provided opportunities to network and share histories with RAHS members and friends.

Families in a new country

Bankstown is one of the most ethnically diverse communities in Australia with over 60 different languages spoken. The Conference made the most of local knowledge by working with Bankstown City Council, Bankstown Historical Society and Bankstown Family History Group.
Heritage awards and grants were presented to a wide range of projects across the State, and a fascinating variety of speakers addressed the group.
Speakers included:

- David Hill, (Director ABC, Chair Australian Football Association, and many other significant executive appointments and chair positions). Hill was also a "Fairbridge kid", coming from England to Australia in 1959 under the Fairbridge Farm School

Child Migrant scheme. He is also an author. David Hill detailed his experiences as a child migrant, in an emotional address to the spell bound audience.

- Sue Rosen: The immigrant experience in Bankstown.
- Tim Carroll: Springboard – oral histories as the base for new projects and new audiences.
- Ann Parry: Connecting your history with local schools.
- Liz Rushen: The government's hand in nineteenth century migration to Australia.
- Bruce Pennay: Seeing migration matter locally.
- Judith Dunn: Every migrant has a story.
- Sarah-Jane Rennie: The importance of heritage significance.
- Paul McPherson: The other side of collecting: refusing, replacing and de-accessioning historical material.
- Jean Winston: Experiences in understanding a significance assessment and its benefits.
- Wayne Peake: The Peake family of Peakhurst and the Georges River district 1811-1996: impressions and sketches.
- Linda Myring & Eleanor Menton: Migrant experience, and an Asian teacher in a new country.
- Ben Mercer: The migrant in all of us – DNA tests.

The Conference provided a view of migration which is demonstrated across many districts in the State, and prompted reflection by all attendees on their own backgrounds and experiences.

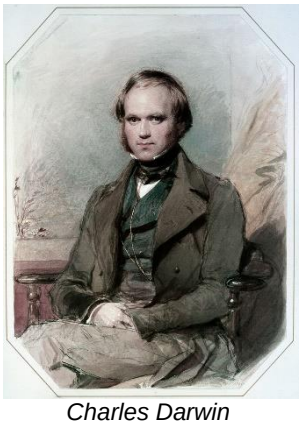
Charles Darwin's Illness – his Wedgewood Family Inheritance

On Saturday, November 7, the Blue Mountains Historical Society monthly meeting and public lecture will be presented by Dr John Hayman. His topic is ***Charles Darwin's Illness-His Wedgewood Family Inheritance****.*

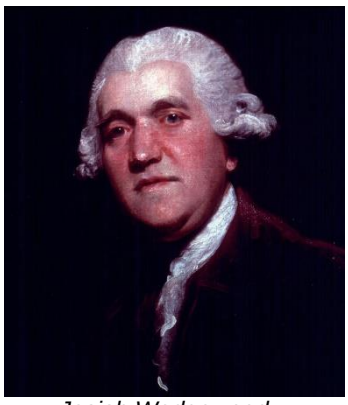
For much of his adult life, Charles Darwin's health was compromised by an uncommon combination of symptoms leaving him severely debilitated for long periods of time. However, in some ways this may have helped his work, and Charles Darwin himself wrote, "Even ill-health, though it has annihilated several years of my life, has saved me from the distractions of society and amusement."

The cause of Darwin's illness has been frequently examined by medical researchers since his death.

Erasmus Darwin



Charles Darwin



Josiah Wedgewood

Dr Hayman, a pathologist from the University of Melbourne, has presented a case that Darwin's symptoms indicate that he suffered from cyclic vomiting syndrome, an illness associated with mitochondrial DNA abnormalities.
Dr Hayman's paper on the topic was accepted by *The BMJ* and the *Medical Journal of Australia*, and was published in December 2009. In a supplement published in February 2012, he proposed that stroke-like episodes of memory loss and partial paralysis which do not occur with CVS are characteristic of the MELAS syndrome.
Dr Hayman's talk will explore the connection between Darwin, his Wedgewood family and this debilitating illness.
Dr Hayman will address society members and interested guests at the Blue Mountains History Association's rooms at 99 Blaxland Rd, Wentworth Falls, on Saturday 7 November 2015 at 10.30 a.m. Ph: 0419 985 546. Morning tea is available from 10.00am.

Standards Program – Lithgow State Mine Heritage Park & Museum

Readers will recall the article on Succession Planning in *Heritage* which referred to the Museums and Galleries' Standards Program, in Issue 38 May-June 2015.
On 7th August 2015, the Lithgow State Mine Heritage Park and Museum availed themselves of the services of the Standards Program and a field visit was undertaken by Reviewers, Sarah Jane Brazil and Sam Malloy. A report was produced on the current operations of the Museum and the initiatives already undertaken by the management committee.

Workshops

Bath House

State Mine Office

The management committee took the Reviewers through the various aspects of the museum including grants secured, interpretive signage, the visitors' centre displays and collections, the bathhouse building space, banner display, spectravision display and the workshops.
The Reviewers' report discussed conservation management, marketing and interpretation, and made a number of recommendations toward the ongoing success of this museum. Such recommendations included matters such as collection management, a Disaster Management Plan, targeting seniors groups, and story boards for the use of the various rooms in the State Mine Office building.

On Thursday 5 November 2015 a planning & feedback session will be held at the Museum to discuss the outcomes of the Report, from 9:30am to 3:30pm. Any key stakeholders in the project are most welcome to attend and participate in planning discussions.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains World Heritage Institute; Bygone Beautys Treasured Teapot Museum and Tearooms.
Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; The following are individual members: Fiona Burn, Ray Christison, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor) ,Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Roy Bennett (Grants Application Officer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Louise Vining (Events and Venue Co-ordinators).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

The Zig Zag Brewery - Part One

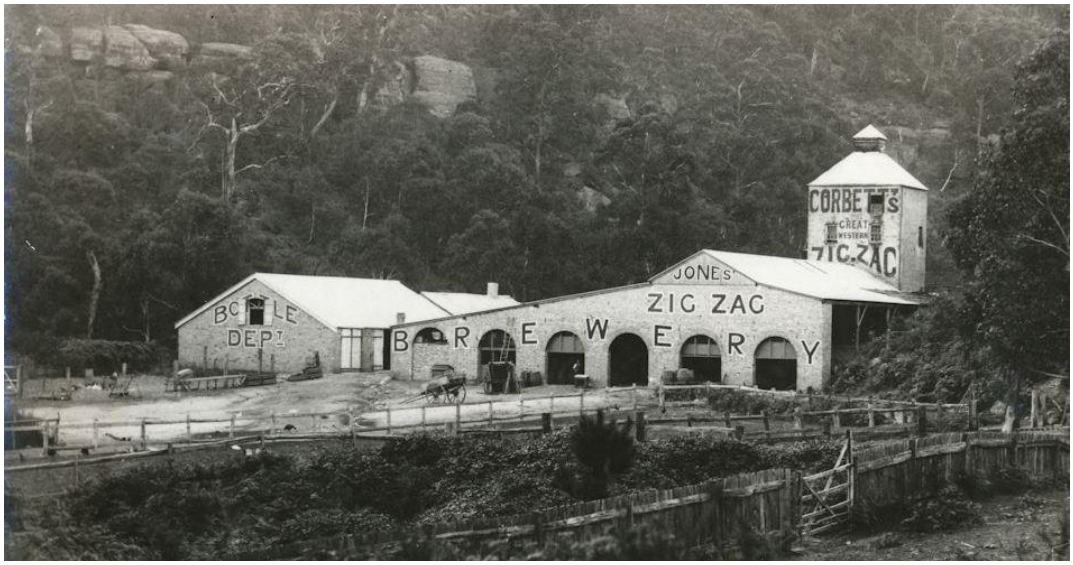
Of all those great industries born in Lithgow's boom years of the 1870s and '80s, only very few survived the repeated shocks of the first half of the 20th Century. Under the economic changes brought about by Federation, the Great Depression and two World Wars, the coal mines and power station of the Farmers Creek valley were superseded by larger, more modern operations to the west; the iron and steel works had transferred to Port Kembla by 1930; and with it, associated industries like coke-making and engineering support all eventually closed.

In this context it is even more remarkable that Lithgow's Zig Zag Brewery (also primarily known as Terry's Brewery in its latter years) survived until as late as 1958. That made it the last country brewery left standing in NSW, and its lifespan of 70 years (with only two short periods of closure during the Depression) also gave it the title of the longest operating country brewery in NSW.

The tale of the brewery contains all the elements of a great story. There are heroes and villains, successes and failures, episodes of great hilarity and tragedies both personal and corporate.

Late 1800s

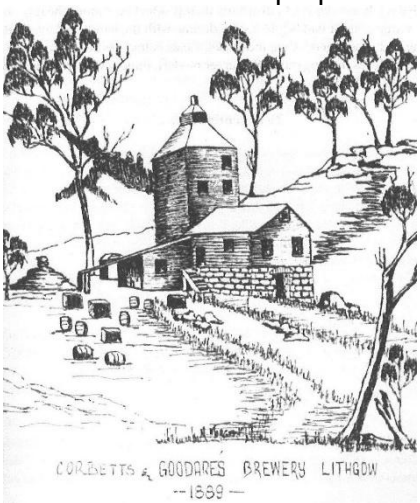
The name associated with its founding is Henry 'Harry' Corbett, but behind him was the support of his wife Eliza and father-in-law, William Mills. It is clearly Mills who had the resources and expertise for this venture and the subsequent record shows that the brewery was a legacy for his daughter and grandchildren. Mills, at age 72, died unexpectedly just six days after the brewing licence was issued on the 25th July 1888.
It came into being in a rush. Brewing began in temporary premises while the impressive (and still standing) brew tower was being built. The Mills family had been in the hotel keeping business in Lithgow for nearly a decade with several licences and their 'flagship' Imperial Hotel, strategically built opposite Eskbank Station (although this was almost immediately wrong-footed by the new Lithgow Station). But in early 1888 the town's brewer, Richard Inch, was in one of his periodic financial crises. He had always managed to overcome these, but this time it was different and his Eskbank Brewery was sold to a consortium of local hoteliers and businessmen in May.
Mills may have made an unsuccessful bid for Inch's brewery or have been in disagreement with his fellows or just thought he could do better; but in any event the race was on. Immediately the site of the new brewery was purchased (in the name of Corbett (2/3) and Alfred Goodare (1/3) and second hand brewing equipment bought for an immediate start before the new plant could be delivered. (Goodare was the fiancé of Mills' grand-daughter, Sarah, and played no part in the subsequent history). Within 10 weeks of the sale of Inch's, beer was beginning to flow from Corbett's vats, two weeks ahead of the new opposition.
And so it began, brewing in a small way in a hastily built shed while the new brewery was built around it, showing from the start the remarkable vigour and intelligence that characterised the first half of the brewery's history and ensured its survival when so many others failed, especially after Federation and the introduction of a new Commonwealth Excise regime which saw hundreds of small local breweries unable to comply.
Right from the start, the 'heir apparent' was William Mills' grandson, James A. S. Jones.



Early 1900s

After he finished school at Cooerwell Academy he was sent for an apprenticeship with Henry Burrows at his Surrey and/or Waverley Breweries in Sydney. Jones was clearly a man of great capacity and character and his years at Burrows' equipped him well in both practical brewing technology and business skills. On returning, he took over the active management from about 1891 and, in 1897 at just 26 years of age, the business was transferred to his name. Harry Corbett, having successfully established the brewery and 'kept the seat warm', was bought out and soon left Lithgow to lead a somewhat itinerant life for his remaining 18 years.
John A. S. (Jackass) Jones is by any measure the greatest of the heroes of this story. His life outside the business of the brewery was outstanding – a horseman of note, bicycle

racing champ, motor sportsman on two wheels and four, socialite and *bon viveur*, town councillor and mayor for a term, universally loved in his town of Lithgow. But of interest here is his drive and intelligence in building up a small-town brewery into a great success.
At the end of his 33 years at the helm, the business comprised a network of about 15 hotels in the district (at least three of which were personally owned), had steadily and regularly upgraded its equipment and techniques and had achieved an output sufficient to supply the Central West with beer at a competitive price to the much larger Sydney breweries.
In 1910, Jones married the charming and feisty Sydney socialite, Nina Harris, and after 1913 took a step back from the day-to-day running of the brewery although very much remaining in active control. As manager and head brewer he appointed Alex Laing whose long and faithful service to the brewery was to keep it running in the difficult years that were ahead. Without Alex Laing it is doubtful that the business would have survived the Great Depression of 1929-33, thus qualifying him as the second of the heroes.
All through the brewery's history, incidents of theft have occurred, but the one of 21st August 1926 had tragic consequences. Two men, Porter and Lyons, having stolen a week or so before, foolishly returned for another go. Sergeant Wallace and Trooper Bell had the scene under surveillance and arrested the pair red-handed. Porter submitted and was handcuffed, but Lyons attempted freedom by attacking the police. In the struggle, he was fatally wounded. The coroner attached no blame on Trooper Bell who was a young and well-regarded man, and the pistol discharge being in the heat of combat rather than premeditated. Still, for Lyons it was a high price for a petty theft. Trooper Bell was reported to have been distressed by the incident all his days.
In 1927, Jones decided to retire and cash in. A company, the Lithgow Brewing Co. Ltd., was floated with Jones retaining a minority share. As history records, this was lucky timing on his behalf. He had left the brewery in excellent shape and was justly remunerated for his nearly 40 years of good management. He was also wise to retain a share-holding because, two years later on the brink of Depression, the speculators moved in and paid almost three times the share price. Jones again received a dividend and severed his connection with the business he had built, although he retained all the property titles to both the brewery itself, three hotels and several properties in and around Lithgow.



1889

Artefacts of the trade

The new company of October 1929, The Sydney Brewing Co. Ltd., was a speculative push out of the Richmond Brewing Co. of Melbourne to expand into NSW. The timing was disastrous. A purchase and capital raising float of £200,000 clearly failed and the new proprietors found themselves with embarrassing debt and falling sales as the Depression hit Lithgow and its industrial base particularly hard. One by one the shareholders bailed out, leaving a few to struggle on and try as best they could to keep the gates open while they waited for better times or a financial saviour. Neither appeared in time and the company was wound up and the receivers were appointed.

And so, in September 1932, when the next company, the Zig-Zag (Lithgow) Brewery Ltd., was floated its capital was a modest £ 10,000. But the low entry price was no help; it too failed, went into receivership again and this time the gates of the brewery were locked.
At a Sheriff's sale in March 1934, the great Zig Zag Brewery was knocked down for a mere £ 1,400 and its darkest hour was nigh. The sale was made to one Valleck Cartwright Mallan, a native of Adelaide and member of a prestigious family with interests in brewing there. But Valleck was clearly skating on thin legal ice. As a string of court cases both before, during and well after his association with Lithgow would attest, he was a con-man, a spiv and a criminal. Mind you, he did get the brewery running again and so played a part.
From his very first day in charge, with faithful Alex Laing back to do the actual work, Mallan decided that paying his excise duty was an option he would forgo. Within four months he was arrested and found himself in Court in what the Sydney Morning Herald reported as the largest-scale customs frauds since Federation. While it is not specifically recorded, there can be little doubt that Laing, disgusted by the turn of events, would have alerted the authorities. Found guilty, somehow Mallan evaded a gaol sentence but was heavily fined and stripped of his directorship and hence ownership. But that chapter was not quite closed.
At the ensuing Sheriff's sale in August 1934 the business interests and plant were knocked down for the token amount of £ 500. To add insult to injury, the purchaser Hyman Wolfensohn, was a business associate of Mallan's and some of the proceeds of the floated Blue Mountains (Lithgow) Brewery Ltd. no doubt found their way back into Mallan's pockets. Wolfensohn himself had no interest in brewing, but one fortuitous event may have justified his otherwise useless ownership. He appointed (or perhaps re-appointed) Walter 'Fred' Lanfear as Head Brewer and Alfred 'Norm' Wyld as Manager. This was to replace Alex Laing who finally had had enough of seeing his life's work being the plaything of petty criminals and took up a well-deserved position with Tooth's Brewery in Sydney. Wolfensohn was the final chapter in the 8 dark years of the brewery's history and Lanfear and Wyld were the new brooms who would bring in the next 20 years of prosperity. *Vaughan Bryers*

Food for thought ..... Editor's note

The Tool Library

The Macquarie Dictionary defines a library as "a place set apart to contain books and other literary material for reading, study or reference, as a room, set of rooms or a building, where books can be read or borrowed".

It is said that this makes the library a tool for literacy. It is a means of sharing knowledge, and of communication between generations.

Libraries have existed since 300BC, with the Great Library of Alexandria, although with limited readership. Their establishment came more into being in the 1800s, when more widespread literacy was on the increase.

Parallel to this now, and in line with Newsletter's current series on Rare Trades, is the establishment of the tool library.

A tool library enables patrons to borrow tools, equipment and "how-to" instructional materials, functioning either as a rental shop, with a charge for borrowing the tools, or more commonly free of charge as a form of community sharing. The tool library can include the following:

- Tool lending: all kinds for use in volunteer projects, facility maintenance and improvement projects, community improvement events, and special events.
- Tool advocacy: for the complete and timely return of all borrowed tools, to guarantee the long-term sustainability of available inventory. Staff also seeks compensation for lost tools and tools returned late.
- Tool maintenance: performing routine maintenance and repairs on all equipment to ensure good condition and to extend the lifespan of the inventory. This function is typically performed by volunteers and community service workers.

In ancient times tools were part of man's few private possessions, which were closely tied to his survival. Nowadays the possession of tools seems far removed from a purpose for survival. The range and ownership of tools is amazing, and the cost is becoming exorbitant.

The nature of shared use and reuse is an increasing one on many levels within the community. We share many items on a daily basis, and the value to socio-economic realities and the strengthening of community capacity cannot be underestimated.
Tool libraries exist all over the world in various concepts. Volume, target audience, financial structure and purpose vary considerably, but they all enable their patrons to use tools without actually owning them.
There are few tool libraries, as such, in Australia. The principle ones are in Melbourne, at Brunswick and at Braybrook. The Brunswick Tool Library (BTL) is intended for people who do occasional home improvement, garden or DIY projects but don't want to buy a tool they might only use once. The BTL offers surrounding area residents and community groups access to hand tools, power tools, garden tools, ladders, etc. for use on their own projects.

In NSW, mens' sheds could be seen to play a role, in that they are places for men to share activities and tools, but without actual formal borrowing services.
These libraries are a way to use resources more efficiently. They make it possible for dozens of people to share one rotary tiller, one drill press, or one extension ladder, or hand tools, instead of each having to buy their own.

Storage

Sharing

When it comes to rare trades, the tools can be more obscure and becoming obsolete. Sourcing or remaking such tools could become expensive. A library of rare tools would enable tradesman of the less practiced trades to source and share relevant tools, and enable those moving away from the trades to part with their previous possessions to the library in the knowledge that the tools will continue to be utilized for the purpose for which they were created. How often do we see old tools for sale at clearing/garage sales, some of which are not even recognizable as to their purpose?

Such libraries must incorporate management regimes for the care of tools, breakages, theft, personal injury, cataloging and sustainability. There is even a short list of tools which no tool library will lend for obvious reasons: left handed hammer, sky hooks, 2-inch hammer screws, electrician's spanner, well ladder (for working in wells) and cans of metal stretcher.
There are many models for these libraries, but are all founded on the concept of community sharing. Should any organization be considering incorporating such a facility into existing operations, or simply starting from scratch, see www.sharestarter.org for a guideline and other resources. *Patsy Moppett*

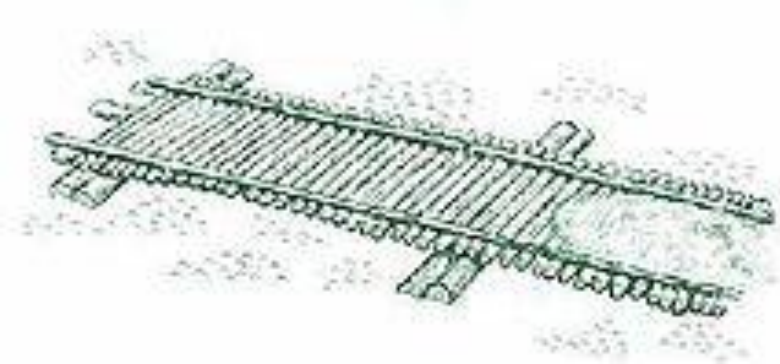
The Corduroy Road

A subject of discussion of late in heritage circles has related to the corduroy road. By definition, this is a road built of logs laid side by side transversely and usually used in low or swampy places. The result is an improvement over traversing muddy or swampy ground, although hazardous to horses and bullocks and vehicles, and subject to frequent disrepair. The contemporary name of course relates to its similarity to the texture of corduroy fabric. Gravel was sometimes used to seal the surface and they were often covered by mud.
They have been used from early times across the world, from as early as 4,000 BC, and were common in Europe by the 18th century. They have been used extensively in various conflict situations such as the American civil war, WW1 and WW2, and across Canada, Europe and the United States. Remains of early colonial examples can be found in Australia, and examples of such roads have been documented at Glastonbury, England, the Alaska Highway in Yukon, and examples on the outskirts of Seattle and Vancouver.
They were and still are used in farming practices to cross wet areas, not as a permanent road but as an adequate temporary solution, at a much lower price than spreading a gravel or sealed surface.
They do not work everywhere and need a solid bed upon which to be laid, rocky soils, hard mineral soils or clays, and areas such as peat are not suited. They should be laid in winter or the driest time of year and the choice of appropriate tree species can become quite technical, including incorporating geotextile. However, usually the early road builders used what was to hand.



In colonial times of Australia, corduroy construction was utilised in particularly difficult areas such as the western plains and the Darling Downs for landholders getting their stock, crops or wool to market, and by companies such as Cobb and Co seeking to traverse the more difficult routes in all weather conditions. They could be constructed as a cheap and simple form of stabilising roadways, and with scarce labour and finances, they were a viable means of dealing with poor road conditions.

Examples include:

- The Toowoomba-Ipswich Road, Laidley Qld: This road is still buried and moves have been made to excavate parts of it for historic research.

Laidley

- The Corduroy Road Historic Site at Armatree: Use of this road technique was common on the black soil plains, as Cobb and Co sought to establish changing stations across the countryside. During the 1960s much of this corduroy road was lifted and trucked to Dubbo to provide fuel for brick kilns.

Armatree

- The old Australian Agricultural Company Road between Tahlee and Karuah: Used from the early 1800s, the corduroy road enabled communication between agricultural enterprises to markets. A guide book now takes walkers along the old 1845 route through both public and private lands.

Tahlee-Karuah

- Remains at Woolgoolga Creek, discovered in 2011 by workers rebuilding the Pacific Highway. The remains were excavated, to be reconstructed elsewhere.

Woolgoolga

Lawson's Long Alley

The writer has also observed the remains of probably a more modern version of a corduroy road adjacent to a board walk on the lower reaches of the Lawson's Long Alley colonial road at Hartley Vale. In an effort to make the track more useable for walkers, reserve management has utilised the technique across a swampy section of the road, prior to construction of the boardwalk.

Dr Grace Karskens outlined that William Cox utilised a variety of simple bridge building techniques, including round beam and slab decks, corduroy crossings and possibly cribwork, to span the various streams along the first western road.
The nature of the materials used in this technique of early road building means of course that most such roads are long gone, timber rotting away in damp conditions. Some sound examples can be found in drier western climates, and there are probably many more out there that we are unaware of, having been subject to subsidence, submersion and simple deterioration over time.
The technique has probably not outlived its usefulness, still being utilised in parks and reserves for traversing boggy and low lying areas. *Patsy Moppett*

Historical Resource: The Aldine Centennial History of New South Wales 1888

In 1888 William Frederic Morrison produced *The Aldine Centennial History of New South Wales* in a two-volume set. Publications were also done for Queensland and South Australia. This work presented to the people of Australia a brief history of its discovery and early settlement, and fully set forth its rise and progress for the previous one hundred years. Each Aldine Centennial History was intended to be artistic, and to represent in its mechanism the perfection of Australian art.

VOL. I.
Sydney:
THE ALDINE PUBLISHING COMPANY,
350 KENT STREET.
[Copyright Secured.]

In the publication for NSW, Volume 1 and the first part of Volume 2 cover the early explorers, geography, aborigines, flora and fauna, governors of NSW as well as the Constitution and more. Volume 2 is devoted to brief biographies of prominent inhabitants and brief descriptions of industries listed under town names within NSW, which were called

Biographical Sketches. As most of the companies listed were family companies, the entries are valuable for their biographical data and the local history of the district. Each entry has at least a paragraph on each person, although some details are quite extensive. Details can include parents' names, emigration details, birth place, education and employment history. The Morrison publications form a major biographical reference source.

William Frederic Morrison, homeopath and publisher, was reputedly born in Australia in about 1837, the son of Captain Robert Morrison. A few months afterwards the family settled in Canada. He graduated as an MD from Victoria College at the University of Toronto, in 1898, and had graduated in 1877 from the Hahnemann Medical and Homeopathic College and Hospital in Chicago.

It is not clear when he returned to Australia but it was recorded in the Sands Directory that in 1885 a Frederic W. Morrison, Bookseller and Stationer, was located at 85 King St., Sydney. He reappeared as Dr Morrison, M.A., Surgeon at 139 Victoria St., Sydney from 1888 to 1890 and again from 1892 at 231 Macquarie St., Sydney. His last listing in the *Directory* is in 1896-1897 at 199 Macquarie St.

Morrison published his *Aldine Histories for N.S.W.* and *Queensland* in 1888 in two volumes at the Aldine Publishing Co., 336 Kent St., Sydney. *The Aldine History of South Australia* was published in 1890. He became involved in lengthy legal proceedings arising out of the publication of these volumes and left South Australia in 1891 after being declared insolvent. In an article in the *Adelaide Advertiser* in August 1890. Morrison stated that he had been a publisher for a number of years having written several books and he had then gone in for historical writing, having come to Australia from America for that purpose. He intended to publish histories of all the colonies of Australia and intended to then leave for the Cape Colony. What became of W.F. Morrison after 1897 is not known but perhaps he followed his intention and left for South Africa.

It is not known whether Morrison married or had issue in Canada. No record has been found of family connections in Australia. *Patsy Moppett*

Note: These resources can be reviewed on line, and can be purchased on CD from various sources.

Investigating the Bleichert Ropeway, Katoomba

In 1888 an aerial ropeway was constructed to transport mined oil shale from the Ruined Castle Mine, across the Jamison Valley. It collapsed after only six months. A small number of features such as the tension pit and tower platforms survive in situ. All other items are movable, and most have been moved some distance (determined by the items' size, shape and weight, as well as by local topography and hydrology).

It is understood that the only section that collapsed in 1889–1890 was the inbound track rope from the cliff top to the tension station. Most of the objects on the ground today originated from this and other operating mishaps, but many items would also have been salvaged. After the catastrophic failure of the inbound rope, many bucket carrier assemblies would still have been recoverable since the break effected less than one quarter of the track-rope system. After the Ropeway was abandoned, the majority remained upright and in situ, slowly deteriorating and collapsing as bush fires, falling trees, erosion and other natural forces prevailed. Buckets and carriers probably tumbled a short distance as they fell. Some heavy items may have also moved due to erosion or vegetation growth, and lighter items have clearly been moved by walkers on the track. Others clearly have not moved for some time.

Most remains were distributed across the area, although there is a concentration of tower poles south of Causeway Creek where the conditions were drier and more remnant timber survived.

The Bleichert Ropeway represented part of an engineering system developed in Germany but exported and adapted for use across the world. The Bleichert Ropeway at Katoomba was the first mine haulage infrastructure in NSW and possibly Australia, and a part of the oil shale industry in the Blue Mountains area during the 1880s. This incredible feat of engineering ran from the top of the cliffs near what is now Scenic World across to Ruined Castle Mine. This infrastructure played a key role in shaping the history of the Katoomba community and the development of the Blue Mountains, yet it is unknown to many parts of the community, particularly the younger generation.

Ropeway tower

Bucket

The Blue Mountains World Heritage Institute (BMWHI), UNSW, Scenic World, NPWS and experienced bushwalkers conducted a field survey of the ropeway's remaining heritage items in the valley in 2014/15 which raised awareness within the local community. Under Stage 1 of the project they undertook a comprehensive field survey documenting over 300 artefacts, to better understand, conserve and celebrate this heritage. A customized smartphone and tablet-based app was developed through the Federated Archaeological Information Management Systems (FAIMS) project. See www.fedarch.org

The work consolidated past voluntary research and recording of artefacts and has significantly advanced the knowledge of the Ropeway. It has also advanced understanding of the conservation and interpretation requirements of the remains of the Ropeway. However, detailed examination of the Tension Pit (a central part of the Ropeway's operation) was unable to be inventoried as it required an archaeological excavation. In addition, some other aspects of the artefact material require further investigation.

An archaeological assessment was carried out by GML Heritage. The conclusions of their report indicated a high potential for structural remains associated with the Ropeway system. Lower potential was indicated with regard to sealed deposits or isolated artifacts. Test excavations are now needed to expose the base of the pit, and enable documentation of the construction and layout of the ropeway function, and its subsequent failure. Remains could demonstrate social, historical and mining/industrial significance.

The Stage 2 proposal outlines work to complete the survey of the tension pit, finalise the survey of artefacts, and accurately map the ground profile of the Ropeway route. The work involves excavating the tension pit in the Jamieson Valley, firstly to ascertain the mass of the tension counterweights still remaining in the pit, so that the correct catenaries and rope tensions can be calculated, and secondly so that any other artefacts that may be in the pit may be recovered, which might tell of the social or construction history of this unique structure. The weights are on the valley floor in the Blue Mountains National Park, covered with about two metres of dirt and leaves.

In addition, a "citizen-science" version of the tablet app will be developed. The additional work aims to support responsible agencies in implementing appropriate conservation policies and management.

The hope is to have the results published in Wire Rope News and Doppelmayr's industry magazine, and maybe NPWS publications.

BMWHI have also been working to have the ropeway State Heritage listed.

However, the cost for the project has blown out to $40,000. Private funding of $10,000 has already been put towards the project, but the group has to find another $30,000, or find another way to conduct the project.
The group are currently publicizing the need for funds from anyone interested in heritage/archaeological engineering and technology. Anyone who would like to be associated with this project can be assured that their name would be included in this resulting publicity and published papers, and should contact BMWHI. *Patsy Moppett*

Archival Records of Blue Mountains Councils

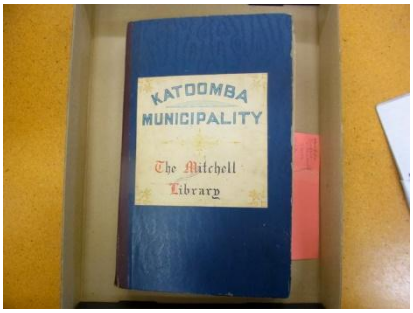
Archival records of the various local government bodies that have existed in the Blue Mountains can be found in a number of locations. This document is an attempt to list these in one place so that researchers will have an easier task finding what you need.
My first aim was to list only Blue Mountains Shire Council records but there are so many links between the councils that I have now produced a combined listing.

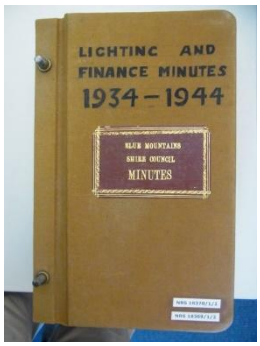
Outline of Blue Mountains Council history

The first local government body on the Blue Mountains was the Municipality of Katoomba, created in 1890. It was preceded by the Katoomba Progress Association. I mention this because Minutes of both organisations can be found in one book covering the period 1885 to 1890 and Letters in a book with dates ranging from March 1887 to March 1893.[1]

- In March 1906 the Kanimbla Shire was established.
- In January 1907 its name was changed to Blue Mountains Shire.
- In December 1919 the shire was divided into the Blue Mountains Shire and the Municipality of Blackheath.
- In 1945 the Blue Mountains County Council (made up of two representatives from each of the Blue Mountains Shire and the Katoomba Municipality, and one from Blackheath Municipality) was formed with responsibility for seven functions: electricity, gas, water, sewerage, road transport, housing and publicity.[2]
- In May 1946 the City of Katoomba was proclaimed.
- In September 1947 the County Council was abolished and the three councils amalgamated to form the Municipality of Blue Mountains, which was then proclaimed a City on the same day, thus becoming the Blue Mountains City Council.

During the life of the various councils there have been more than ten changes to boundaries.[3] For a fuller history go to
http://investigator.records.nsw.gov.au/Entity.aspx?Path=\Organisation\165





The following is a list of council records that I have found:

State Records NSW:

Reading Room, 143 O'Connell St, Kingswood; PO Box 516, Kingswood NSW 2747; phone 02 9673 1788; email srecords@records.nsw.gov.au; website www.records.nsw.gov.au

In the following list KMC = Katoomba Municipal Council; BMC = Blackheath Municipal Council; BMSC = Blue Mountains Shire Council; BMCityC = Blue Mountains City Council; BMCountyC = Blue Mountains County Council; SRNSW = State Records New South Wales; NRS = New South Wales Record Series; Cons = Consignment; Cont = Container, The record item number is in square brackets. (All the listed items are part of Consignment 1 unless otherwise noted.) The records are listed in the order of the NRS numbers.

So:

Blue Mountains Shire Council, Quarry Committee Minutes, NRS 18373, Cont 1, Item [2], 24/04/1923 to 30/07/1924.

becomes:

BMSC, Quarry Committee Minutes, NRS 18373, 1 [2] 24/04/1923 to 30/07/1924.

Katoomba Municipal Council, Minutes, NRS 18362, Cont 1 to 19, [Items 1 to 19] 22/01/1890 to 30/09/1947.

KMC, Business papers and committee meeting notices, NRS 18363, 1 [1] 01/01/1943 to 30/06/1944.

KMC, Finance Committee Minutes, NRS 18364, 1 [1] 10/01/1940 to 30/09/1947.

KMC, Reports of the Works Committee, NRS 18365, 1 [1] 18/07/1945 to 20/08/1947.

Blackheath Municipal Council, Minutes, NRS 18366, 1 to 6 [1 to 6] 10/02/1920 to 29/09/1947.

Kanimbla Shire Council, Minutes, NRS 18367, 1 [1] 13/06/1906 to 18/01/1907.

Blue Mountains Shire Council, Minutes, NRS 18367,

1 [2] 29/01/1907 to 08/02/1909; 2 [3] 22/02/1909 to 30/08/1911;
3 [4] 13/09/1911 to 10/07/1912; 4 [5] 09/01/1924 to 13/12/1933;
5 [6] 24/01/1934 to 13/12/1938; 6 [7] 10/01/1939 to 12/12/1944;
7 [8] 16/01/1945 to 09/09/1947.

Blue Mountains City Council, Minutes, NRS 18367, Cont 8 to 30 [9 to 31] 25/09/1947 to 17/12/1957.

(Note: NRS 18368 is not related to Blue Mountains Councils.)

BMSC, Lighting Committee Minutes, NRS 18369, 1 [1] 1918–33; 2 [2] 1934–44.

BMSC, Finance Committee Minutes, NRS 18370, 1 [2] 1913–33; 2 [1] 1934–44; 3 [1] 1945–47.

BMCityC, Finance Committee Minutes, NRS 18370,

Cons 1, 3–13 [1–11] 1947–57;
Cons 3, 1–5 [1–5] 1958–62;
Cons 2, 1–10 [1–25] 1962–74.

BMSC, Works Committee Minutes, NRS 18371, 1 [1] 1925–33; 2 [2] 1934–40; 3 [3] 1941–44; 4 [4] 1945–47.

BMCityC, Works Committee Minutes, NRS 18371,

Cons 1, 5–10 [5–10] 1950–57;
Cons 3, 1–5 [1–5] 1958–62;
Cons 2, 1–21 [1–43] 1962–74.

BMSC, Subdivision Committee Minutes, NRS 18372, 1 [1] 10/02/1915 to 21/01/1917.

BMSC, Quarry Committee Minutes, NRS 18373, 1 [2] 24/04/1923 to 30/07/1924.

BMSC, Health and Buildings Committee Minutes, NRS 18374, 1 [3] 1913–33; 2 [1] 1934–44; 3 [2] 1945–47.

BMSC, Engineers Report Books, NRS 18375, 1 [1] 1919–20; 2 [2] 1920–21; 3 [3] 1921–22; 4 [4] 1922–23; 5 [5] 1923–25.

BMSC, Correspondence files, NRS 18376, 1 to 14 [1 to 151] 1916–47.[4]

Blue Mountains County Council, Minutes, NRS 18377, 1 to 2 [1 to 2] 25/07/1944 to

29/09/1947.
BMCountyC, Public Vehicles Committee Minutes, NRS 18378, 1 [1] 22/01/1945 to 15/09/1947.
BMCountyC, Finance Committee Minutes, NRS 18379, 1 [1] 08/01/1945 to 29/09/1947.
BMCountyC, Reports of the County Clerk, NRS 18380, 1 [1] 03/08/1944 to 25/09/1947.
BMCountyC, Reports of the Water & Sewerage Engineer, NRS 18381, 1 [1] 16/02/1945 to 25/09/1947.
BMCityC, Business papers of council meetings, NRS 18382, 1 to 7 [1 to 7] 01/10/1947 to 11/12/1962.
BMCityC, Correspondence, NRS 18464, 1 to 87 [1/1 to 2002/18] 1953–64.

Blue Mountains City Library Local Studies, Springwood Library:

Rate books and Valuation books — 1889-1947 on microfiche (incomplete), also held by Blue Mountains Historical Society.
Photos: includes some councillors and staff, various dates — http://www.photosau.com.au/bluemountains/scripts/home.asp
Blue Mountains historic newspapers online: bit.do/BMnewspapers-onTrove.

Blue Mountains Historical Society:

Hobby's Reach Research Centre, 99-101 Blaxland Road, Wentworth Falls; PO Box 17, Wentworth Falls, NSW 2782; phone 02 4757 3824; email bmhs@bluemountainshistory.com; website www.bluemountainshistory.com
Rate books and Valuation books — 1889–1947 on microfiche (incomplete), also held by Blue Mountains City Library Local Studies section at Springwood Library.
The Local Government box in the archives storage area contains:

- Minute Book for the Katoomba Progress Association, 16/12/1885 to 13/12/1889, and Katoomba Municipal Council, 22/01/1890 to 20/03/1890.
- Katoomba Progress Association, Letter Book, March 1887 to November 1889, and Katoomba Municipal Council, Letters, 30/01/1890 to 08/03/1893 (with a gap from February 1890 to April 1891, part of which is covered in the next letter book).
- Katoomba Municipal Council, Letter Book, February 1891 to September 1891.
- Blue Mountains Shire Council, Building Committee Minutes, 1911–1915, and court prosecutions 1915–33 and 1941.
- Seven folders of Blue Mountains City Council newspaper cuttings, 1964–68.
- An undated copy of a Blue Mountains Planning Scheme Ordinance.

In the Compactus, Shelf Bank 3, Shelf 1, Box 14/1 contains:

- Two Newspaper Scrapbooks compiled by Mrs Jessie Pearce for her father Mr Wilson (I'm not sure which Wilson). They contain Katoomba Municipal Council cuttings. Book 1 (blue cover) holds 1931–35; Book 2 (grey cover) holds 1934–35. At the front of both books there are loose sheets containing an index that someone has compiled.

Also in the Compactus, Shelf Bank 4, Shelf 6, Box 13/2 contains:

- Scrapbook of Kanimbla and Blue Mountains Shire Council advertisements from 1906 to 1914. (See Mount Victoria & District Historical Society listing for the next scrapbook in date sequence.)
- Scrapbook of Katoomba Municipal Council publicity articles, 1939–42. These come from newspapers and various magazines, such as "Bank Notes: the monthly staff magazine of the Commonwealth Bank of Australia".

A subject listing of the BMSC Correspondence now held at SRNSW is in Drawer F, Folders 600–601. These folders also contain some historic documents (or copies) relating to BM councils. There's a list of all councillors and alderman who have served on each of the councils. There's an article by John Yeaman on the 1933 appointment of the Katoomba Municipal Council Engineer by the State Government. There are also lots of photocopies of newspaper articles. These files are somewhat mixed up though.
Photos of the Shire chert quarry at Mount Victoria and Sentinel Steam Waggons.

Mount Victoria & District Historical Society:

Railway Station buildings, Station St, Mount Victoria; PO Box 36, Mount Victoria NSW 2786; website
http://mountvictoriamuseum.info/

Original Blue Mountains Shire Council correspondence files can be found in files labelled: Shire chert quarry, Mount Victoria land, Rienits (Henry), Blair Athol coal mine, Hotel Mount Victoria & Lees, Mount Victoria sanitary depot, Mount Victoria Progress Association. There could be more.

Scrapbook of Blue Mountains Shire Council newspaper advertisements, 1914–1941. (The preceding scrapbook in date sequence is held by the Blue Mountains Historical Society.)

Photos of the Shire chert quarry and Sentinel steam waggons.

State Library of NSW:

"The Blue Mountains Shire Council's Chert Metal Quarries", an 8-page brochure published by the Blue Mountains Shire Council, August 1923, printed by "Echo" Print, Katoomba. Call No. Pam file/622.5-629.1, Collection of pamphlets on water, sewerage and drainage and transport.

Cr John McManamey's papers. Call No. MLMSS 1507, John Fraser McManamey family papers, 1889-ca. 1970, with related material, 1863-1976.

"Report of the Special Committee on the administration of the Blue Mountains Shire", 1918, Call No. 91/1117.

Keith Painter

Note: There may be other records in other locations. If anyone knows of such information please contact the author at **greatguides@mountainmistbooks.com** or your local historical society.

Special thanks to Emily Hanna and other staff at State Records NSW for their assistance.

The Technical Side

Wallers and the Dry Stone Wall

The use of stone for building stretches back before recorded time. Some of the earliest buildings were stone, from about 3200BC. Early Australian settlers brought their techniques out to the colony from Britain and Ireland and practiced their trade from the beginning. Back home there had been a proud heritage of wall building in the thousands of miles of dry stone walls in many regions which defined the landscape.

The Irish landscape

The fascination of stone is tangible - how it feels, what kind of stone it is, how it came to be where you have found it. The variety of stone available is large, around which a language

has developed to describe its attributes and uses. There is a joy and creativity in the search for the perfect stone, and in solving what has been described as a three dimensional puzzle. Wood and wire fences can be intimidating and visually intrusive and hedges need a lot of upkeep, but dry stone walls melt into the landscape and require the minimum of maintenance. A dry stone wall speaks of permanence, which may explain the romance of an Irish countryside. Walls are symbolic of diligence, skill, hard work and strength, providing a need from the land, which continues to complement the landscape. The stone wall stands as a beautiful and natural monument, and it was said that the builders forbade the removal of stone from a wall once built.

Harlock family, Pomborneit, Victoria 1902

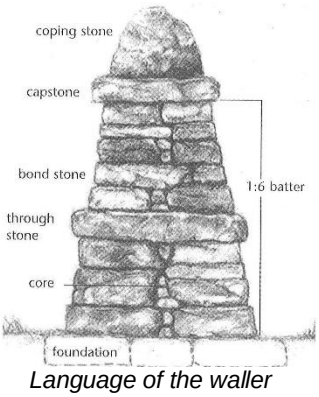
Kentucky 2007

The building of dry stone walls was free, and their use cleared the land. In Britain they incorporated other utilitarian structures such as stiles, water troughs, creep holes and gate openings. In Australia they were not found before about 1826, when stockmen used shepherds to watch flocks and herds and used timber to build brush fences. More permanent fencing was needed after the Lands Act of 1862, to enclose paddocks and clear them of stone. Their use in later years made good fire breaks, sheltered stock from chilly winds and wild weather, and made effective fences also used against the rabbit, built in such a way that the rabbit could climb out of a paddock but not back in, which were ingenious. The building of stone walls was eventually superseded by the use of relatively cheap wire. Wallers became obsolete and few are known to have worked past the mid 1900s. Evidence of their activities remain, particularly in south western Victoria, where the most extensive range of dry-stone walls in Australia can be found, including consumption dykes and rabbit proof fences, retaining walls and water races.

Note: Consumption dykes were created where stone was so plentiful that it was a nuisance and it made sense to stack it into walls that took up less space and served as boundary markers and livestock fences.

Some stone simply is not suitable for walling, like rounded river stone, which can lead to instability. The most common stone sources for stonework today includes basalt, gneiss, granite, limestone, sandstone and slate. Each type of stone has particular characteristics regarding weight, colour, grain, workability and strength, which determine which stone is suitable for each job. The cross section of a wall should be slightly pyramidal for stability through the simple use of gravity. A simple test is to stand on your work! With each course stepped back slightly the wall should withstand your weight and therefore more courses. The only expenses for the purist is time and energy, and of course a good source of stone and some sturdy gloves. You don't need elaborate footings of concrete and steel. The tools and equipment used for dry stone wall work are remarkably simply. They are usually quiet, inexpensive, and low maintenance.

Tools of the trade



Language of the waller

Under construction, Leura

A free standing wall can be built almost anywhere on top of stable soil. They are double sided and are tied together using bond "through" stones, also referred to as ties. The walls upper half will narrow considerably, and bond stones extend into and past the centre, binding the two faces of the wall together. Voids are filled with chink stones. The top of the wall has a cover of capstones, which can be set vertically or horizontally, and limit rainwater from entering the wall's core. They should have an overhang, and may then be topped with coping stones if desired. If need be, one major benefit of a dry stone wall is that it can be easily dissembled and reconstructed.

Today the skills in dry stone walling relate to building or repairing walls, and are passed down from father to son. Many apprentices were restricted to building dry stone walls long before they were permitted to use mortar, with the theory being that they learn the fundamentals of physics and permanent stone placement before they progressed on to more complex tasks.

The writer's efforts, Yetholme 2005

Yetholme 2007

The physical and cultural attributes of the Victorian walls have been identified and, together with grant funding, volunteer wallers and the wider community, ways of protection have been identified and many have been heritage listed. Walls can also be found on the NSW north and south coasts, and in Queensland, Tasmania and South Australia.

The Dry Stone Walls Association of Australia Inc. (DSWAA) is an active volunteer not-for-profit organisation comprising dry stone wall owners and enthusiasts, rural landholders, urban dwellers and practitioners in the craft of dry stone walling.

Their vision is that dry stone walls and dry stone structures are widely accepted for their unique place in the history, culture and economy of the nation and for the legacy they represent. A Directory is currently being prepared and will list people who undertake the craft of dry stone walling on a professional basis. It will be maintained by the DSWAA and expanded as more wallers submit information.

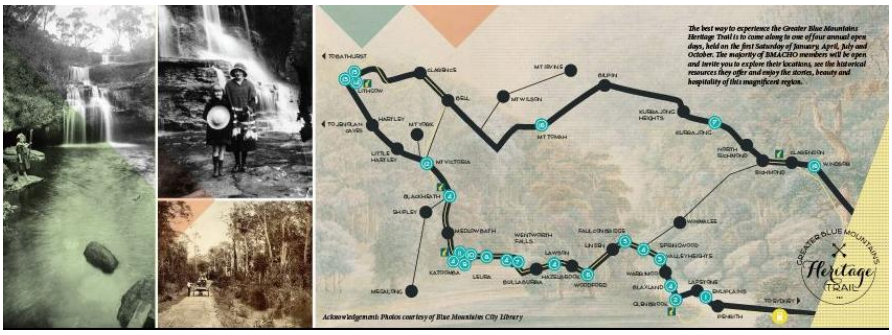
Community events & updates

Greater Blue Mountains Heritage Trail

The next common Open Day is Saturday 2 January 2016



The Greater Blue Mountains Heritage Trail (GBMHT) is a project of BMACHO. There are four common Open Days each year, i.e. the first Saturday of January, April, July and October. The participants include historical societies, family history societies, museums, heritage properties, heritage gardens and heritage businesses in the Greater Blue Mountains, Emu Plains, Lithgow and the Hawkesbury areas. There are also a number of historic "places to eat" and "places to stay" listed on the website and in our brochure. We are also adding "Hidden Gems" in the region to our website, along with photos and links to maps. Brochures are available at Visitor Information Centres in the Blue Mountains, Lithgow and the Hawkesbury, and all the museums in the region. Keep an eye on our website and our Facebook page to see planned events and please subscribe to our GBMHT newsletter, by clicking the link on the bottom of each page of the website. This project was funded by the **Westpac Group.** *Jan Koperberg*

National Heritage Lottery

The federal government is considering introducing a national lottery - similar to the Opera House lotteries of the past - to fund the preservation of Australia's most precious places. It will explore the feasibility of adapting Britain's Heritage Lottery fund. Since it was launched in 1994, this lottery has raised more than $71 billion and funded more than 39,000 projects, that it says "make a lasting difference for heritage, people and communities."
An Australian national heritage lottery is one of a range of funding initiatives that are outlined in the new Australian Heritage Strategy, a five-year plan that was released at the Opera House recently by the Minister for the Environment Greg Hunt. It also includes plans to generate more publicity for nationally listed heritages sites by a more creative use of online storytelling. Mr Hunt said the strategy would explore the potential for a national lottery that would benefit Australia's "magnificent heritage". Heritage management should be a "shared responsibility between national, state and local governments, private owners, businesses and the local community", he said.

Australian icons

Mr Hunt said that “While the Heritage Lottery Fund is a uniquely British institution, and there would be many issues to work through in seeking to establish a fund like this in the Australian federation, it is an example of the potential to harness new sources of funding to support Australian heritage,” the report says. Mr Hunt said he would leave the experts to develop what form the heritage lottery could take, but he envisaged it would be drawn either weekly, fortnightly or monthly.

Frank Howarth, the national president of Museums Australia, welcomed the idea of a lottery. He said the lack of funding at federal, state and local level for cultural and heritage institutions was very concerning. In particular, organisations that relied on local government funding were really "feeling the pinch".

The British lottery had been "immensely successful" in building a large number of cultural facilities that would otherwise not have been built, said Mr Howarth, who was previously director of the National Museum of Australia.

He warned that it was important that there was a strategy so that organisations that received lottery money for capital works also had funding to cover ongoing operational costs. Several projects funded by lottery money in Britain had closed because they didn't have funding for operational costs.

When the Opera House Lottery ended, the then manager of the NSW Lotteries Bryne Smith told the *Herald* that the primary motivation to buy lottery tickets was to win money. "But a secondary reason is often the knowledge that the money spent on the ticket is going to a good cause," he said. *Patsy Moppett*

National Trust Heritage Festival 2016

Registrations for the National Trust Heritage Festival 2016 closed on 13 December 2015. Next year the National Trust will be exploring our regions and rediscovering amazing treasures through the National Trust Heritage Festival.

Discovery & Rediscoveries is the theme for the 2016 National Trust Heritage Festival, defined as:

Discovery can encompass the experience of discovering something for the first time or

rediscovering something that has been lost, forgotten or concealed.
They invite you to be part of their festival by attending one or some of the cultural & heritage related events to be held. In NSW the Festival will be held from 16 April to 29 May.
It is due to participating organisations and visitors that the festival keeps growing, attracting tourists from all over Australia and overseas. It is about sharing our stories and participation will help make it a success.
40,000 copies of the printed guide will be distributed throughout NSW, to libraries, councils, tourist information centres, event participants and to all of our members. The Heritage Festival also provides free publicity to encourage people to attend events and to give participants greater exposure. *Patsy Moppett*

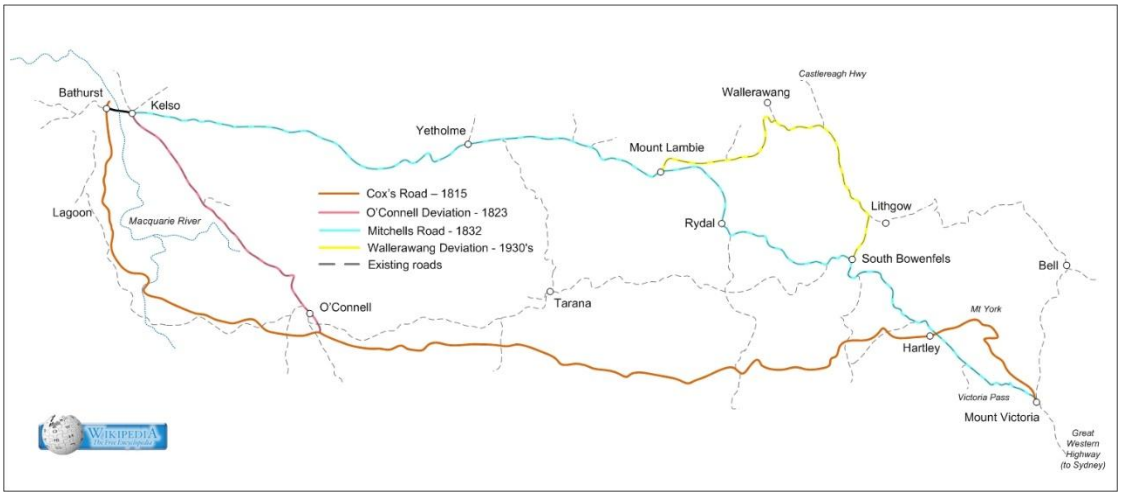
Beyond the Blue Mountains: Following the Road from Bathurst

This year the RAHS completed its "*Beyond the Blue Mountains: Following the Road from Bathurst"* project, which examines the history of New South Wales inland settlement and the ways in which this history is remembered. Historians provide an overview of key themes connected to this important period of NSW history.
There are videos to watch, manuscripts and articles to read and galleries of images to enjoy that provide insights into key aspects of this history. These webpages were launched to coincide with the 200 year anniversary of the proclamation of Bathurst as a town by Governor Lachlan Macquarie. The RAHS wish to thank all the contributors who volunteered their knowledge and time in providing these online resources on this fascinating period of New South Wales history.



They also acknowledge the support of the Office of Environment and Heritage and Heritage Council in providing a generous grant to support this initiative. *Patsy Moppett*

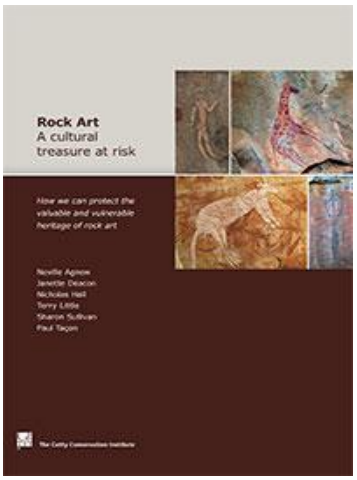
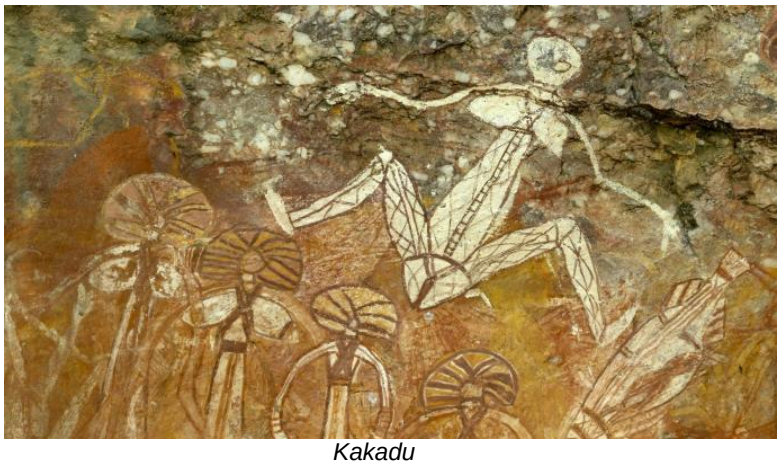
Rock Art Publication

A booklet entitled Rock Art: a cultural treasure at risk, is now available online for comment. It is a culmination of the Getty Conservation Institute's Southern African Rock Art Program that offered courses and workshops between 2005 and 2011, and the subsequent exchange between traditional owners and rock art specialists in Southern Africa and Australia in an exchange program between 2012 and 2014.





Kakadu

The purpose is to raise public awareness about the value of rock art and to encourage best practice in its conservation and management, identifying issues and the foundation principles and actions, based on internationally recognized and well-founded conservation management principles. The document will be finalised in 2016. Comments are welcome to Neville Agnew nagnew@geyy.edu or Tanya Koeneman tlk2146@hotmail.com , or to any of the other authors. *Tanya Koeneman*

Steam Tram Rolling Stock Collection, Valley Heights

The Heritage Council of NSW resolved, at its meeting of 2nd December 2015, to give notice of its intention to consider listing elements of the Steam Tram Rolling Stock Collection on the State Heritage Register in acknowledgement of its heritage significance to the people of New South Wales. This advice is in accordance with section 33(1)(a) of the *Heritage Act 1977 (NSW).*

Any members of the community, owners, managers, organisations or other interested parties are invited to make a written submission regarding the proposed listing and significance of the Steam Tram Rolling Stock Collection. Submissions should be posted or emailed to the Heritage Council of NSW at the following address during the public submission period commencing on 17th December 2015 and closing on 9th February 2016.

Heritage Council of NSW, Locked Bag 5020, PARRAMATTA NSW 2124
heritage@heritage.nsw.gov.au

Please note that the Heritage Council is unable to accept submissions received after the above closing date.

The Steam Tram Rolling Stock Collection has potential state heritage significance as a remnant of the state government-provided steam tram network in NSW which was in operation between the 1880s and the 1930s. This street-based public transport, which

supplemented the rail networks in Sydney and Newcastle, broadened social outlets and employment opportunities, especially for lower income people. The two carriages and one locomotive may have state technical significance as a rare showcase of steam tram rolling stock technology, both imported and locally manufactured. Two of the examples of rolling stock were adaptively designed and manufactured in NSW and thus

demonstrate the design and craft expertise of their Sydney manufacturers. The rolling stock demonstrates construction methods of joinery and fitting from an early stage in the development of public street transport. They form the only operational collection of steam tram engine and carriages in NSW and are among the last remaining representatives of this type of rolling stock in NSW. The collection may be of state social significance to the many enthusiasts of historic train technology and historic steam technology. Riding on these steam tram trailer cars provides a live sensory experience today of what street transport may have been like for people of the late nineteenth and early twentieth centuries.

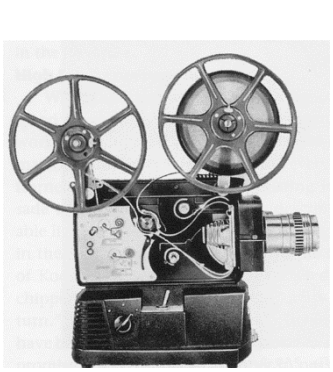
Further details on the nominated item, the State Heritage Register, listing criteria, making a submission and the benefits of listing can be viewed on the Heritage Division, Office of Environment & Heritage (OEH) website at:
http://www.environment.nsw.gov.au/heritageapp/NominationsOfStateHeritageRegister.aspx

If you have any questions, require further information, or if you do not have internet access and would like paper copies of the documents referred to above, please do not hesitate to contact Cliff Daylight, Heritage Officer at the Heritage Division, OEH, on (02) 9585 6167

NSW Heritage

Liven up your presentations!!!

- A picture is worth a thousand words!



BMACHO can help you make presentations to your members or guests more attractive and lively with visual aids which are available for loan, as follows:

- Camera: Nikon P50 digital compact:
  - 8.1 megapixels
  - 3.6 x Zoom wide angle lens
  - Long life rechargeable batteries and charger, user guide, carrying case all included.
- A Laptop computer: to help you prepare your presentations or play DVD's etc.
- A Digital Projector: We can provide the appropriate connection to our own computer or any VGA equipped laptop to show your masterpiece.

(Please note that users of Apple computers will need to provide their own Apple-to-VGA connection).

- A screen: on which to show your masterpiece.

In addition, we can store your masterpiece: **My Book External Hard Drive, 1 TB/To with USB 3.0 + USB 2.0 100% compatible**. This can be used to store your photographs of sites or other items on an external hard drive away from your own premises. *Jan Koperberg*

For details, please contact Jan Koperberg, j.koperberg@bigpond.com

Merry Christmas and a happy and safe New Year to all!

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains World Heritage Institute; Bygone Beautys Treasured Teapot Museum and Tearooms.
Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; The following are individual members: Fiona Burn, Ray Christison, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor) ,Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Roy Bennett (Grants Application Officer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Louise Vining (Events and Venue Co-ordinators).

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Photographers – through their eyes

There is a particular group of people to whom we, as people/organisations interested in our history, owe a huge dept. That is - the photographer. Be it the official or professional or private photographer, they provide us with pictures of both ourselves and our nation, at specific points in time. Their work is a historical record, showing the meaning and intensity of life at the time, and the current social dynamics that accompany them.

The Macquarie Dictionary (1995) defines a photographer as a person who carries out "the art of producing images of objects on sensitized surfaces by the chemical action of light or of other forms of radiant energy, as x-rays, gamma rays, cosmic rays etc". Obviously today in a more modern definition, this would be expanded to include digital experiences.

However, for the recording of historical subjects, this former definition would ring true.

Many photographers in the 19th and 20th centuries sought to celebrate the communities of people who work to lay the foundations of the country, to record specific events, covering both individual stories, and town and rural life.

Incline, Kembla Coal, King

Katoomba clouds, Phillips

Chinese wool wasking, Kerry

When we look at a photo, what are we looking at? Many photos bring us back again and again, and we see something different every time. The photographer may have sought to depict a particular event, person, but inadvertently has recorded a variety of other material, such as fashions and tools, landscapes and buildings, cultures and social customs, techniques and trades.

In *Heritage* Newsletter September-October 2015 we looked at the fabulous Rodoni collection of photographs, recently released to the public in a donation to the University of Newcastle Library, Cultural Collections. This is an exceptional collection of photographs which give a sense of the past, and the patterns and rhythms of the development of Australia and the South Pacific.

In this article I would like to present some other instances where the photographer has shown us (to use that much used phrase) a “moment in time”, through the frame of the photographic window, and given us a glimpse of life as it was then, and an insight into the lives of our forebears and of other cultures.

Holterman, Merlin & Bayliss

Bernard Holtermann was a rogue! Born in Hamburg, and coming to Australia in 1858, he worked at a variety of jobs including a steward, a photographer’s assistant and a groom. He established a friendship with Louis Beyers and the two headed for Tambaroora and Hill End in the Central West to make their fortunes at the goldfields. As their luck was fairly indifferent, Holtermann turned to other occupations such as butcher, bartender, and baker. Holtermann sold his share elsewhere but then Beyers discovered gold. Holtermann sought swiftly to purchase his share back and they two were wealthy men. Holtermann was not a popular person in Hill End, with his restless scheming and wheeling and dealing.
Another of his schemes in 1872, for which the community would one day be glad, was to employ a photographer to establish a studio and set about ….. “picturing the greater cities of Australia’s south-west. He would photograph in the largest possible negative proportions, their public buildings and their industries”, systematically photographing the town.

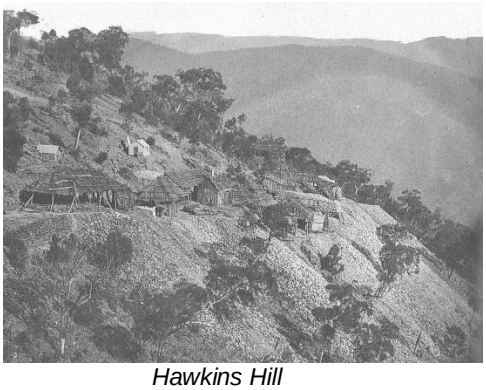
Holtermann

Merlin

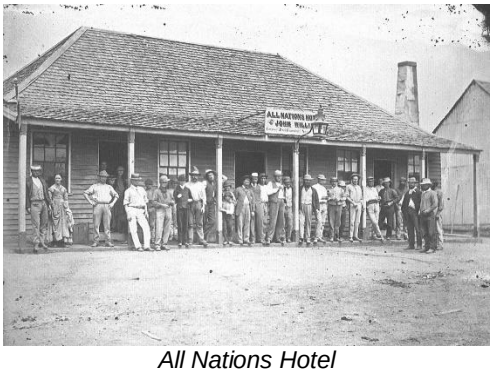
Bayliss & Clark

The person he employed was Henry Beaufoy Merlin, an established photographer, whose firm A & A, was already established in Sydney & Melbourne. Merlin was born in London and came to Australia in 1871. He was ably assisted by Charles Bayliss, and together they provided a wonderful visual record of the period 1872-73, during the greatest part of the gold boom. Bayliss was born in Suffolk and came to Melbourne with his parents in 1854.
Merlin and Bayliss worked on the project for only two years, until Merlin’s death in 1873. The collection of wet-plate negatives numbered in the thousands, was completed by Bayliss. Holtermann then toured the world with the “Holtermann” collection in 1877, 1878 and 1879, and the collection still goes by that name today.

Main Street



Hawkins Hill



All Nations Hotel

Metropolitan Hotel

Holtermann died in 1885. However, the negatives lay forgotten until 1952 when they were discovered in the loft of Holtermann's house at St Leonards, by Mr Burke of Kodak, and were considered the greatest photo-historical find of the time. They were presented to the Mitchell Library by Holtermann's grandson.
The collection defined the town of Hill End as a historic place. The images were often sold as cartes-de-visit, and were collected in family albums or used as postcards. As the photographs were produced in quite a specific period they really were "a moment in time". They depicted the mines and the landscape, the crowds, the stores, the roads, sidewalks and buildings, homes and gardens, people and fashion. It also shows us how much of the landscape and townscape has not survived.

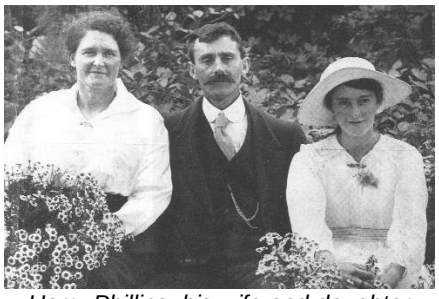
Wikipedia

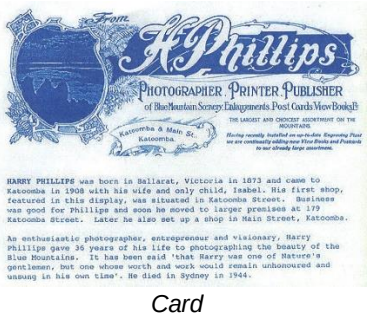
Harry Phillips

Harry Phillips was born in Ballaratt in 1873. He became a printer machinist who moved to Katoomba with his family in 1908 to recover from an injury to his hands. The family decided to settle there and his previous interest in photography came to the fore. He established a small photography and confectionery business and then introduced printing into the business. He is renown for the Blue Mountains viewbooks, which he sent all over the world, and which were even known to be found in the trenches in WWI.

Viewbook Covers



Harry Phillips, his wife and daughter



Card

He loved the mountains and the landscape and would often wait hours to capture the perfect moment, loving clouds and mist, having a particular fascination with clouds.
He was not concerned with profit and often underpriced his books and postcards, being preoccupied with ideas and perfection. His wife Isabel was left to run the business, and she kept the books, ordered stock and handled customer relations.
Few of Phillips' photographic negatives survive, making his books the most comprehensive record of his work. Phillips favoured the popular panoramic format in his photography and many of his books were sized accordingly. More than 80 books have been documented and the subject

matter extends beyond the Blue Mountains to Sydney and surrounds, Canberra and the royal visits.

Jamison Valley clouds

At work

His Katoomba Street studio

He was able through his work to display the natural beauty of the mountains and an awareness of the need for preservation, together with everyday life and street scenes, and at the same time, share the work through his viewbooks to the wider community.
He "…..was one of Nature's gentlemen, but one whose worth and work would remain unhonoured and unsung in his own time." He died in 1944.

Evan Antoni Johann Lumme

Evan Antoni Johann Lumme was born in Estonia in 1865. He arrived in Australia in 1881 and set up business in Ashfield as a photographer during 1993-1897. He then moved to Orange where he established the Orange Art Studios. In 1900 he moved to the Lyndhurst area with his wife Alice Rosina (Rose), south west of Orange in the Central West of NSW, and spent the rest of his life in that area on a farm at Burnt Yards.
He photographed the life and times of the small communities there, including Mandurama and Lyndhurst and the Junction Reefs mining area. He did maintain the Orange Studio for a while, and appears to have been an itinerant photographer as well, travelling around in a covered wagon with his family.

The covered wagon

Lumme & family

Lumme's wife & children

On his death he left a collection of about 3,500 glass negatives, the Mandurama Collection, which formed the basis of a book "Faces of Mandurama", published by the National Library in 1997, introduced by John Thompson.
The Mandurama Collection is an accumulation of photographs taken between 1865 and 1935, unfortunately most of them being uncaptioned. Although some research has been carried out, the identification and date of most of the images is unknown. The full collection comprises copies of letters, personal documents and photographs.

Who were they……?

Many photographs are of the village of Mandurama and its residents but there are images from as far west as Boorowa. Mostly the images are of the residents and areas of, Mandurama, Lyndhurst, Carcoar. Some are from Cowra, Burnt Yards, Garland, Gallymont, Neville, Shaw, Burraga, Blayney and Orange.
The photographs are considered an invaluable resource for seeing country Australia as it was in the Victoria era and the post-federation era.
After Lumme died in 1935 the photographs were forgotten and not re-discovered until 1975, under the old Lumme house at Burnt Yards where Lumme had lived, still owned by his descendants. A local resident contacted the National Library. Through the generosity of Lumme descendants and the local community, the plates were donated to the National Library by RM Hines of Mandurama.

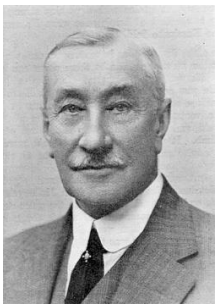
Tyrell Collection – Kerry & King

The Tyrell Collection consists of 7,903 glass-plate negatives, largely from the studios of Charles Kerry (1857-1928) and Henry King (1855-1923), who operated two of Sydney's principal photographic studios in the late 1800s and early 1900s.The collection was bought by Sydney bookseller James Tyrell in 1929 for a floating ethnographic museum moored in Sydney Harbour. The museum never eventuated, although Tyrell kept the collection intact and sold it to Australian Consolidated Press in 1980. They in turn donated it to the Powerhouse Museum in 1985.
The Collection documents a valuable record of town and country life across Sydney, the south coast, the Blue Mountains and country NSW, including transport, shipping, caves, sport, and the indigenous people. Other photos are included in the collection include those of the South Pacific, taken during Kerry's excursions to Tonga, New Guinea, Fiji and other such locations.

Leura Station



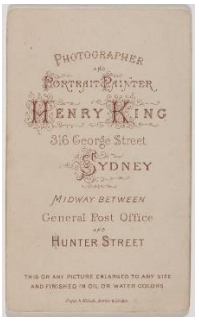
Charles Kerry

Katoomba Station

Charles Kerry was born on Bobundra Station in the Monaro region of NSW. He began working as a photographer in about 1875, working for AH Lamartiniere in George Street, Sydney. By 1884 he had taken over the business as Kerry & Co, and in 1890 was appointed

official photographer to the NSW Governor, Lord Carrington. He turned the business into Australia's largest photographic establishment and continued his traveling about NSW, selling albums of high quality pictures of the countryside.
In 1895 he commenced a squatters' service, travelling around the colony photographing farmers' homesteads, families and livestock. He married Delphine Vivian in 1897 at Darling Point. He also photographed in the Kiandra area, and was the Founding President of the Kosciusko Alpine Club in 1909. He was the founder of the NSW Gun Club, and was interested in cavalry sports and clay pigeon shooting.
In 1913 he retired to take up his mining interests in Malaya. His nephew carried on the business until 1917. Kerry died suddenly in 1928 at Neutral Bay, and was survived by his wife and son. Sir Frank packer named his son after Kerry.

Hyde Park



Farm Cove

Henry King was apprenticed to J Hubert Newman before opening his own studio with William Slade in 1879 in George Street, Sydney. By 1883 he was the sole proprietor. He eventually moved from portraiture to landscape photography, and travelled throughout NSW and Qld in his horse drawn caravan/studio.
King was born in 1855 in Dorset, England, the son of a stonemason. His family emigrated to Australia in 1857, and in 1878 he married Elizabeth Lang.
Much of his early work captured images of indigenous people portrayed against a painted background of the bush. He later turned to landscapes, and provided notable views of NSW including Jenolan Caves, and was held in high esteem by his profession due to his artistic skills.
King died in 1923 following abdominal surgery, leaving his wife, a son and three daughters, and was buried at Waverley.
Some 2,900 of the Tyrell Collection negatives are attributed to Charles Kerry, purchased in 1929. Another 1,300 negatives were done by Henry King. Some 3,000 glass-plates are from unattributed sources from the late 1880s through to about 1930.
James Tyrell used the Kerry-King negatives to produce booklets and views of NSW, but many images were never used. By the time the Museum acquired the Collection, some plates were damaged and a few totally broken.
A selection of 12 photographs of Indigenous Australians was auctioned by Mossgreen in Melbourne in recent years. Eleven of these were studio portraits. They were said to demonstrate that photographs are an important part of Australia's visual history and show the role that photographers played in helping to shape the view of how other societies viewed Australia at the time.

Lost Diggers of Vignacourt

The small French village of Vignacourt was a staging point, casualty clearing station and recreation area for troops of all nationalities moving up to and then back from the battlefields on the Somme. A local enterprising photographer took the opportunity of this passing traffic to establish a business taking portrait photographs.

Captured on glass the photographs made by the Thuillier family enabled many soldiers to maintain a fragile link with loved ones in Australia. The Thuillier collection covers many of the significant aspects of activity on the Western Front, from military life to the friendships and bonds formed between the soldiers and civilians.

The Louis and Antoinette Thuillier Collection contains almost 4,000 glass-plate negatives depicting British, French, Australian, US, and Indian soldiers, Chinese labour corps, and French civilians. More than 800 of these glass-plate negatives feature Australians.

The collection was re-discovered in 2011 after sitting undisturbed for nearly a century in the attic of a farmhouse in the French village of Vignacourt. They were taken by a husband and wife team of Louis and Antoinette Thuillier, who had set up a makeshift studio in their stable yard, just off the main street of the town, to supplement their farm income by selling pictures to passing Allied soldiers.

They set up a courtyard studio to supply their customers with photographic post cards. At some point they introduced a classical painted canvas backdrop that has survived along with the plates.

Vignacourt

They appeared to give up photography after the war. Louis died in 1931, committing suicide.

Journalist Ross Coultardt was part of the team that unearthed the collection through communication with Laurent Mirouze, an amateur French historian. Mirouze said he had seen samples from such a collection back in the 1980s in Vignacourt, and had contacted the Australian embassy in France at the time, who showed little interest.

Coultardt was then introduced to Robert Crognier, a local Vignacourt photographer, who showed him some of the collection. Robert was a relative of the Thuilliers, who had long passed away. Soon Robert himself passed away.

In 2010 Robert's widow was contacted and showed some ammunition cases from her attic. They contained some of the glass plates her husband had made prints from 25 years previously. She insisted the collection be taken back to Australia. She also introduced the team to other Thuillier descendants who agreed to show them the secret location, in the attic

of one of the family farmhouses. They were about to sell the farm and would probably have thrown the glass-plates away.
The collection was donated to the Australian War Memorial by Kerry Stokes AC, Chair of the Seven network, who had lent his personal support to the project in August 2012. The Australian War Memorial's 2013 exhibition *Remember me: the lost diggers of Vignacourt* showcased 74 photographs specially hand-printed in the Memorial's darkrooms from the original glass-plate negatives. *Patsy Moppett*

Food for thought ..... Editor's note

What's in a Name – Browntown – which Mr Brown?

Browntown is located just south east of Mount Victoria on the Great Western Highway. Today all that can be seen is the Browntown Oval, which accommodates sporting events such as football, cricket and archery. There are a clubhouse and amenities on the site, along with another of the George Evans' "Footsteps in Time" obelisks, establishing that the site was on the route of the original western crossing alignment. Evans surveyed this location on 31 December 1813.

In seeking to establish the origins of the name, I find there is little to be discovered. Brian Fox surmises that it is a locality named after a community who lived in the vicinity of Browntown Oval, approximately 2km south east of Mount Victoria Village, being named for a local resident called Brown.
It was known as Brown Town from the late 1880s. The land in the vicinity of Browntown Oval was leased by Nick and Charles Delaney in 1891 for slaughtering cattle for their butchery business.

- The electoral roll in 1902 for Hartley listed a John Brown with the occupation as wheelwright living at Mount Victoria.
- The Greville's Directory for 1872 lists several Browns at Lithgow – Andrew Brown; George Brown, weaver; Samuel Brown, miller; and Thomas Brown.
- In the other direction, Medlow Bath was originally known as Brown's Siding when the railway came through in 1880, as the siding was in the vicinity of Brown's pioneering sawmill, on the eastern side of the rail line on Railway Parade, hence the Brown's Siding Store we know today. Brown's Siding was changed to Medlow in 1883 as there was another Brown's Siding in Lithgow. The Lithgow siding became Eskbank Station, being established by Thomas Brown for his coal transport.
- The Brown of Brown's Siding was a John Harding Brown, who died in Lithgow in 1883 aged 58. His wife was Pricilla nee Richards nee Malloney. They had two sons. Pricilla died in 1920, and she is buried at Lithgow with John. They left Victoria in the 1870s, having sold his share of Laceby Station at King River, to his cousin John Ambrose Brown in 1867.

Associated with the Browntown site is Broughton's Waterholes, which would have been in the proximity of the current Browntown Oval. After the road across the Blue Mountains was constructed, a toll bar was opened about 1 kilometre (0.62 miles) east from the present township of Mount Victoria (then known as One Tree Hill) in 1849 and the area was also known as Broughton's Waterhole Toll Bar. Coaches were charged at the toll according to how well sprung they were, and ones without springs were not charged as it was believed they would help crush the road surface.
After the railway station marking the termination of the Main Western railway line was opened in 1869, One Tree Hill became known as Mount Victoria. The town's name was officially changed after the first Post Office was built in 1876.
In regards to Browntown, there is more research to be done. In setting out the above in *Heritage* it is hoped that more information may come to light which may assist in pinning down where the name has come from, and which Mr Brown we are talking about!!!

A Tragic Price of Beauty

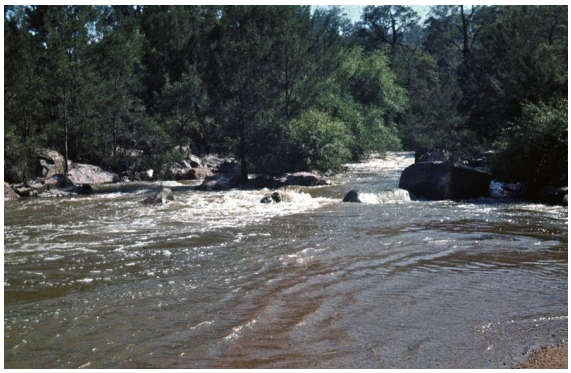
Many of us have enjoyed the natural beauty and heritage of the Blue Mountains through bushwalking and horse riding, and also through a simple scenic drive. The tales of experiences on Blue Mountains tracks and trails are told time and time again, usually

describing the spectacular landscape, flora and fauna, and the special individual experiences had along the way.

Oonagh and friends

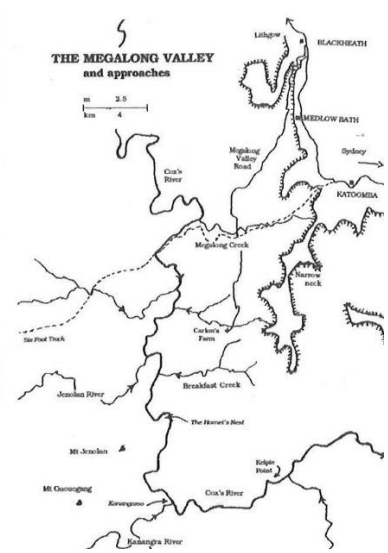
However, few are quite so poignant or tragic as the story of a group of young people who set off on their "adventure" in August 1967.
At that time five experienced bushwalkers set off from Sydney for Blackheath, where they travelled by car to a rural property in Megalong Valley. They had intended to travel down Carlon's Creek and Breakfast Creek on horseback as far as the Cox's River, and from there to the junction with the Kanangra River on the first day. The second day they would return the same way and return to Sydney. Their names were Clem Apted, Oonagh Kennedy, Margaret Figacio, Lynne Robinson and Mark Griggs.

Peaceful river



Cox's River in flood

The weather appeared suitable for their trip, and they set off on horseback from the farm in high spirits. Later they described the magic of the riverine areas, the trees and the ranges in general. However, the weather closed in and the rain began. The river rose alarmingly, and they could not return safely, so they camped the night. The next morning the river was very high and the rain continued. Much as they wanted to return it was almost impossible to cross the river. Margaret managed to cross and Clem followed her progress, walking on the opposite side of the river. Once Margaret became isolated on a high cliff, Clem then rejoined the others. The three had decided to camp a second night, moving to higher ground as the waters continued to rise. The next morning the rain had stopped, and Oonagh decided to try and cross despite the water and debris flowing swiftly past. They never saw her again alive. Although Clem too was washed away trying to cross further along, he managed to reach the farm, and a rescue party was mounted, and the remaining three were saved. Oonagh's body was found wedged between a rock and a log.



A plaque was erected in honour of Oonagh near the junction of Breakfast Creek and the Cox's River. *Patsy Moppett*

Enlightened Lithgow

Discover heritage with the National Trust

Sited on the Great Western Highway only two hours from Sydney, the Central Tablelands city of Lithgow is surrounded by the World Heritage Listed Blue Mountains National Park and the Wollemi National Park where in 1994, the Jurassic-age Wollemi Pine was discovered in a remote canyon.

Lithgow is known to many as a mining and manufacturing city famous for producing Australia's first iron and steel (much of the Sydney Harbour Bridge is made from Lithgow steel). But it is not always appreciated that Lithgow and its surrounds includes an extraordinary wealth of early European and Aboriginal heritage.

Much of it has survived intact thanks to industrial development – coal, steel and pottery - of the 19th and 20th centuries which kept the region off the radar for residential development and change. Unlike Sydney, where much of the old has fallen victim to expansion and modernisation, the inns and rural houses of Lithgow and the Hartley Valley immediately to its south, remain intact today.

There are other reminders of the fortitude and ingenuity of the early colonials as they pushed westwards. They include some of the best remnants of Cox's 1814 road through the Hartley Valley and a wealth of road works, culverts, bridge work, and a viaduct dating from Mitchell's 1832 upgrade of the Bathurst Road. Boundary markers indicate some of the earliest land grants west of the mountains and a host of buildings dating from 1831 that once served as inns servicing travellers on Mitchell's Bathurst Road. Adding another dimension to the pre 1850s heritage in the Hartley Valley is the mix of industrial and agricultural structures ranging from Victorian farms to abandoned early mining and industrial machinery.

In 2014, the Council of the City of Lithgow wrote some 600 of these and other heritage properties into the heritage listings in its Local Environmental Plan. These listings include Cooerwull House (1826) in the Lithgow Valley, Moyne Farm (1822) and Collit's Inn (1823) in the Hartley Valley, the three oldest buildings west of the Blue Mountains, and a host of other pre 1850 buildings scattered across the Hartley Valley.

In this year's Heritage Festival, building on its success with earlier openings of Cooerwull house, the Lithgow Branch of the National Trust will be offering a ***Hartley Valley Secret***

Treasures Tour. The day will commence with an overview of the Valley from the new lookout on the heights of Hassan's Walls, which was named by Governor Macquarie in 1815 as it reminded him of the Walls of Hassan in Southern India.

The group will then descend into the Valley visiting the historic mining town of Hartley Vale & the Comet Inn (C1879), before walking on to visit the picturesque gravestones of Pierce and Mary Collits' of Collits' Inn (1823), which lie in a bush graveyard below Mt York. The group will then view an historic culvert on Mitchell's 1832 road below Hassan's Walls, before enjoying a home cooked lunch in the old Sorensen gardens at the homestead at Forty Bends Farm (1860), site of the original Travellers Inn and post office from 1832 (burnt down 1846).

After lunch they will explore the private Hassans Walls graveyard, the earliest burial dating from 1834. On the return journey the group will visit John Blackman's "Fernhill", licensed as the Australian Arms in 1858, reputed to be one of the finest stopping places on the Bathurst Road. We will have an opportunity to inspect this remarkable sandstone building, now in the good hands of descendants of the original builder, and to view the two story stable building at the rear of the property.

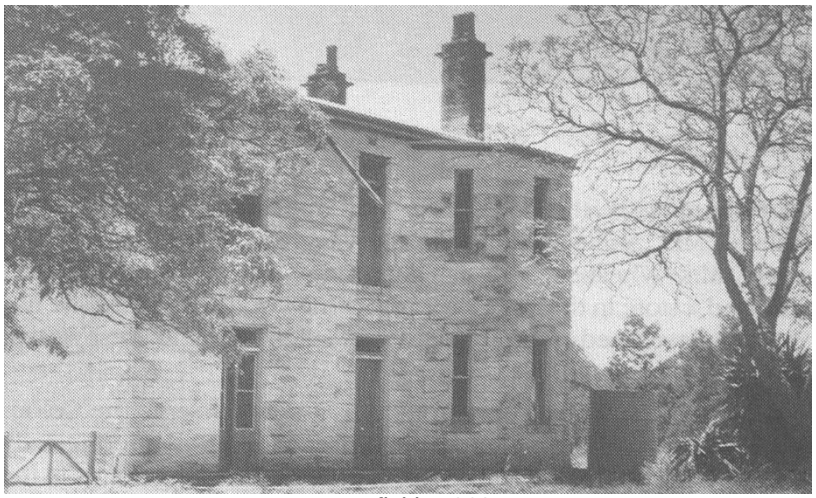
The Branch is promising that this will be a real 'secret treasures' tour providing an intimate insight in to Hartley Valley heritage. See the above Heritage Festival Guide for booking details.

Ramsay Moodie

Ramsay Moodie is Honorary Treasurer of the Lithgow Branch of the National Trust

Hartfields (Hartlands)

Hartfields is a splendid two storey sandstone dwelling on the Hawkesbury Road, at Winmalee. It is constructed of rockfaced random coursed stone, with tall chimneys embellished with scotia cornices. The front verandah is single storey with cast iron columns and a tessilated tile floor, and the roof is corrugated steel. The rear of the building has a broad skillion and a fountain is located in the rear garden.



Hartfields 1962

The year of construction is 1889 and the place was known as Hartlands. A Miss Janet Thetis Hooper conducted a private school for young ladies in Fort Street, Sydney, for some 30 years, from the 1860s until 1889. A friend, Honore Marie, and his wife Camille, had purchased 500 acres on the south side of the Hawkesbury Road at Winmalee. Camille was a French teacher to Miss Hooper, and prompted Miss Hooper to purchase 100 acres on the north side of the road. Janet built the two storey stone house, named Hartlands (named for where she had lived once in England), and moved the school to the site in 1890 with 12 boarding girls, where Camille continued to teach. Its significance lies in being one of the earliest purpose built girls' schools in the colony, and is relevant as a late Victorian Italianate building.

This area of North Springwood was settled by orchardists and timber getters. The sandstone of Hartfields was quarried locally.

Miss Hooper and her niece Florence Earle Hooper, an art teacher, lived at Hartlands and ran the school until Florence went to England in 1897 and Janet returned to Sydney. Camille kept on teaching until then, supporting her ailing husband. She died in 1910. Janet Hooper leased the premises and its orchard but it was frequently untenanted and fell into disrepair, becoming known as "the haunted house". Many features were removed such as the cedar staircase, windows, architraves and doors, and the white ants moved in.

It was finally purchased by Peter McTaggart in 1956, who thoroughly renovated the house, installing the iron lace on the front verandah, obtained from WR Wise's foundry, creating a charming home filled with antique furniture. In 1962 it was still the only building along this stretch of road, some 6km from the highway. The garden was completely dilapidated, with a jacaranda tree in the front garden being the only survivor from the Hooper era. Through some misinformation, McTaggart called the place Hartfields, a name which has remained today. McTaggart sold the property in 2003.

Hartfields 2015

Today the place is surrounded by mature trees and extensive gardens which disguise its architectural appeal. *Patsy Moppett*

Lyttleton Shop and Residence, Lawson

This residence and shops was the first store in Lawson, erected in its prominent position about 1883, on the corner of San Jose Avenue and Badgery's Crescent by John Geggie and his wife Charlotte.

Changes over time

The premises is a rare example of a late Victorian cottage with attached double fronted store, which has continued as a shop/shops for over a century. It retains its shop fronts with their recessed entries. Later development to the site resulted in a third shop front to the east. It is constructed of brick with an iron/corrugated fibro roof and a fibro parapet in three bays. The property was named after Geggie's Irish mother-in-law Bridget Lyttle, daughter of a convict transported to Australia in 1841. Bridget is a legend amongst her descendants, being a considerably wealthy woman through property deals based in Ashfield. She bought 2 ½ acres of the original 3 acres which John Geggie acquired in 1883. Mrs Charlotte Geggie became postmistress there in 1885. Geggie was a founding member of the Progress Association in 1893, and he became a prominent estate agent.
By 1905 WG Staple had taken over the store as The Popular Store, but he moved across the railway line in 1907. By 1910 the premises was the Fairfax Store and later Riordan's. A café and gallery/craft shop used to be Riordan's home. In 1920 it was occupied by Hannah

Hollingsworth. Since the 1970s the store has also been an antique shop, Badgery's Antiques. It was a grocery store, a produce store, and a boarding house for a time, and the first Congregational services were held at this home.

Badgery's Attic

Pantree Produce Staff

It has recently been restored and reopened as Pantree Produce by local sisters Jacinta and Adelina Carmichael-Parissi, as an organic grocery store, also selling artisan made wares, and provides a learning space for workshops. *Patsy Moppett*

Historic Document Awareness – saving our history

Further to the first article in this Newsletter, it is not just such glass-plate negatives that can prove so elusive.

How often have you been flitting through a secondhand book at the op shop or at a second hand book shop, and a slip of paper falls to the ground. Do you dismiss it and throw it into the rubbish? Next time, take a second look. It may be a letter, an old recipe, receipt or any one of a number of other pieces of information related to the person who previously owned or read the book.

Similarly, when purchasing second hand furniture, or moving into a new house and investigating the cupboards/drawers, have you found old papers/documents which on the surface appear inconsequential.

When assisting in sorting through the possessions of a deceased loved one, have you found letters and recipes, notes and other scribblings, inscriptions in books and on pictures, and so on.

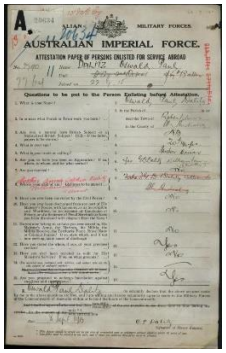
Many is the time that a family tree scrawled on an envelope, or a poem written in an old exercise book, is lost when we do not take the time to check. Even old uncaptioned photos may be significant if passed on to the local historical or family history society for identification.

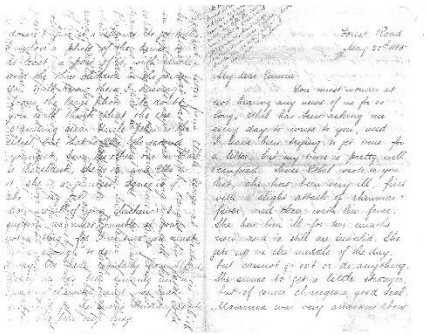
In agreeing to present an article on this subject I found limited information in regard to how to treat this situation, or to advise people who find themselves in possession of possibly significant artefacts.

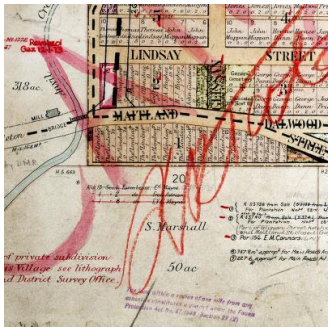
It is imperative that people in our position, as trustees of history and heritage, or simply people with an interest, be aware, particularly in the handling of deceased estates, to carefully go through records and documents, books and cupboards, to ensure that papers and similar items are not left behind. Very often older people tend to forget exactly what they collected years ago and do not have the presence of mind to pass the papers on to family. Years later it is found with no significance attached without that person around to explain it. Antique dealers, and op shops often find such material and too often it is thrown away, with its significance not being clear to the staff member/s.

It may be a responsibility of groups such as historical societies, museums and family history groups, and individuals, to make contact with relevant secondhand outlets to bring to their attention an awareness that such material, when found, can be lodged with the local historical society etc for identification and archiving.

From personal experience. I found a scribbled family tree in my grandmother's belongs many years ago which at the time meant nothing to me. Now I am more aware of my family history I know where it fits in. In later years my family sent some of my father's old books to Lifeline for the Book Fair. Luckily it was my daughter working at the Fair who found a handwritten piece of prose lodged in one of the books and she returned it to me for safe keeping. How easy it would have been to dismiss these things.







The conservation of these materials, letters, legal documents, newspaper cuttings, books, magazines, catalogues, manuals, comics, scrapbooks and photographs are all subject to chemical and physical deterioration due to the materials from which they are made and can be fragile. Their care and conservation should be inclusive of information about the object, its context and nexus. The challenge of preserving these objects, called artefacts, may require an understanding of the value and the development of an effective and efficient strategy for their preservation. Many of these skills are held within BMACHO member groups.

Within the context of the *Heritage* newsletter, BMACHO would bring this matter to the attention of its members, to share the issue, undertake discussion within their groups, and to perhaps develop policies for getting the awareness word out there when material is entrusted to them for safe keeping, and to develop strategies for the most economic and effective preservation technologies to use, if these are not already in place.

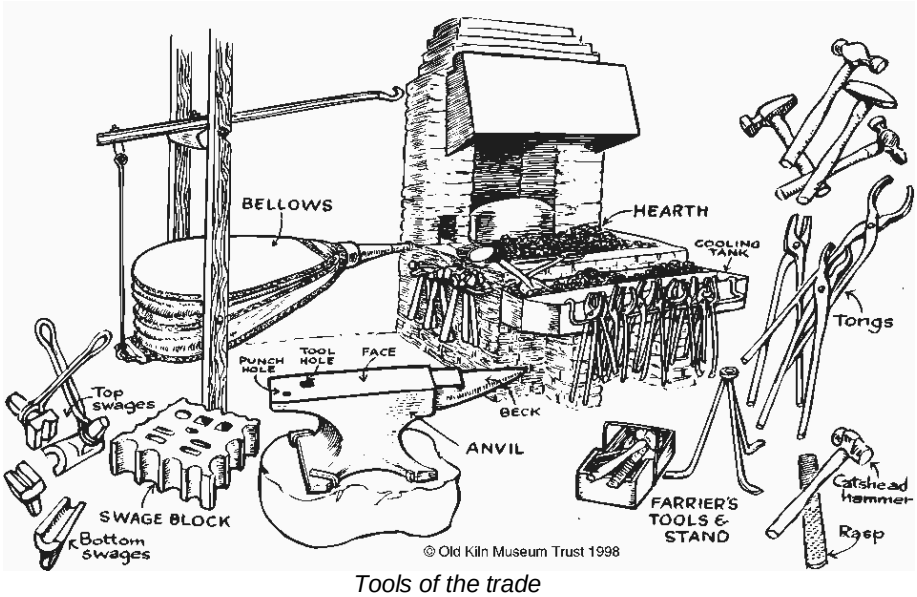
The Technical Side

The Blacksmith

There was a time when every village or town had at least one blacksmith. Although the village blacksmith is an uncommon sight today, blacksmiths can still be found, with many young people continuing to learn the trade. Heating and shaping hot metal continues to attract enthusiasts, although the trade now leans more towards decorative works. However, many heritage properties still require the replacement of gates, fences, doors, domestic items and artistic attachments.

Welding and soldering are relatively recent innovations, but for thousands of years the blacksmith was the metal working jack of all trades.

Blacksmithing provided both economical and interesting solutions to problems, or more complex and delicate solutions. It also addressed the need for tools, and in the agricultural world, the farmer still addresses the necessity to replace items and carries out his own work, smithing and welding.



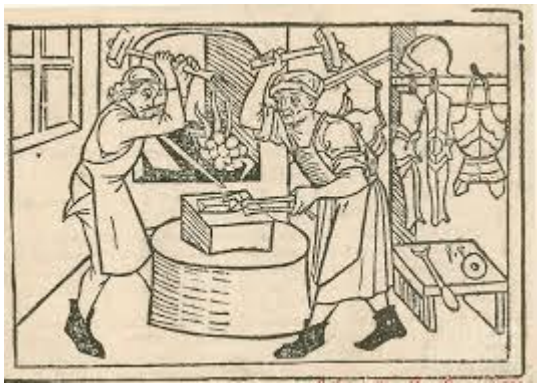
Tools of the trade

Blacksmithing is an ancient trade, with a rich and fascinating history. It is attributed to the making of deadly weapons, ploughs and tools, being identified with power and strength. Almost every culture had a smith, once man found uses for metals, and smithing is the basis for almost every trade that reshapes metal in some form or other.

By definition a blacksmith is a metalsmith who creates objects from wrought iron or steel by manually forging the metal using tools, and the variety of tradesmen who utilize smithing include farriers, wheelwrights and armorers and machinists.

The trade dates back to ancient times, utilized by the Romans and Greeks, the Celts and the Norse people, and many other cultures. The first metals worked were the softer pure metals from before the Iron Age: gold, silver and copper. The development of bronze came later during the Bronze Age, being less susceptive to corrosion.

Iron ores were smelted from as early as 1500 BC by the Hittites, and once their empire collapsed in about 1200BC the skills spread far and wide, and blacksmithing developed from then. Although iron smelting had commenced some 3000 years before, the western world did not develop the ability to make a fire hot enough to melt iron until the 16th century. The Chinese were developing cast iron 1000 years before this. In Europe, larger bellows were eventually produced to generate blast furnace temperatures, which resulted in cast iron.



The medieval blacksmith

In the Medieval world the blacksmith was considered a part of the *seven mechanical arts.* As technology improved, the demand for blacksmiths to make things like wagon/carriage wheels, weapons and tools was gone. More modern methods utilized factories and mass production, lathes, and now laser technology. Gases replaced coal for the forge, and the need for blacksmiths and their tools and hardware was greatly reduced. By the late 19th century the trade was more usually associated with farrier work.

1800s workshop *Workshop in Canada*

In the 1970s interest was renewed through self-sufficiency and home craft trends, and clubs or associations were formed to keep the trade alive.
For example, the Artist Blacksmiths Association of NSW Inc is a group of amateur and professional blacksmiths who meet on a regular basis, for hands on activities shaping hot iron. The aim of the Association is to maintain the traditional skills of blacksmithing and to foster an awareness of this creative craft in Australia. The members' interests range from the preservation and practice of traditional skills to the development of contemporary ironwork using modern materials and equipment.
Another group, the Australian Farriers and Blacksmiths Association Inc is Australia's organisation for men and women who make their living as professional farriers. The AFBA began in 1984 in Victoria with a small group of Australian farriers that wanted to help organise the farrier industry and provide some direction for the future. Ever since, the AFBA has continued to grow into an association of national scope that is continuing to provide direction and growth for the industry.
The AFBA objectives are repeated across many organisations and include:

- To promote interest in farriery and blacksmithing.
- To promote good fellowship amongst those interested in farriery and blacksmithing.
- To educate, train and encourage members of the Association.
- To represent farriers and blacksmiths to governments and industry.
- To do all such other acts and things to promote the furtherance of the objects and interests of the Association

They undertake a number of activities such as farriers' and blacksmiths' competitions, clinics and seminars, promotions and displays and social activities.
Apart from the individuality and aesthetic appeal of hand-wrought metal, the major advantage of blacksmithing over modern techniques is the versatility of this ancient trade. The blacksmith can make all his own tools, such as the forge, the anvil, the tongs and hammers, the chisels and hages, and various fire tools such as pokers, shovels, rakes and swabs.
In our region there remain many opportunities to see these craftsmen at work, experience the techniques yourself and to own the hand wrought metal products of their labours:

- ***Ironfest*** (an arts festival with a metal edge) at Lithgow is held annually, at the former State Mine site, making use of the original mine metal working workshops for a number of artisans to demonstrate and to provide hands on experiences. See *www.ironfest.com.au*

State Mine workshop

- ***Hazelcombe Farm*** at Totness Valley, east of Mudgee, hosts a variety of workshops twice a year through Scythes Australia including blacksmithing, where Peter Birchell's skills can be observed and tried, and useful objects made to serve the workshop site. See *www.scythesaustralia.com.au*

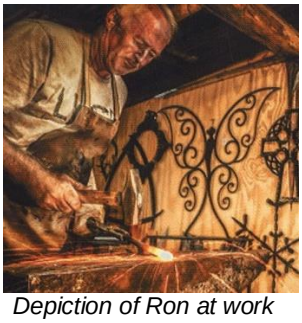
Peter Birchell in his workshop at Totness Valley

- ***Metal as Anything*** at Newbridge has a wonderful outdoor gallery where Tom Miller and his partner Monika display their individual/collaborative abstract home and garden pieces made out of metal and tree stumps, as well as a great range of traditional blacksmith items. Their next open day is 6 March 2016. See the Gallery on Facebook and via the Bathurst Arts Trail. You can contact the gallery on *0415 892 991*.

Tom Miller at work at Newbridge

- ***The Talisman Gallery*** at the Hartley Historic Site displays a fabulous gallery of metal wall art and silver jewelry. Ron Fitzpatrick operates from a converted woolshed at the Historic Site. Visitors to Bygone Beautys Teapot Museum at Leura will have seen the giant teapot in the front garden, which originated from Ron's workshop. See *www.talismangallery.com.au*

Gallery



Depiction of Ron at work

The giant teapot

All these craftsmen invite the visitor to view the items actually being created, and are always willing to share and teach. *Patsy Moppett*

Interesting Objects Exhibition

In late January Hawkesbury Museum announced the official opening of their exhibition "Interesting Objects": 60 years of the Hawkesbury Historical Society Collection".
The official opening was on 26 January, and the exhibition seeks to recognize the Society's efforts in collecting objects significant to the history of the Hawkesbury since 1956, when a group first met to adopt a constitution setting out rules, aims and objectives.

The Museum was first set up in Howe House on Thompson Square, and then moved to a purpose built facility in 2008. The Council then took over the running of the museum using professional staff and volunteers together.
The current display presents a special exhibition of those objects that members and visitors have seen as the most interesting and significant over the years. This includes the Society's first Minute Book, the original deed to the farm of ex-convict Samuel Jackson, issued in 1794, a celestial globe, an exquisite lace collar and black beaded dress, a miner's couch and a model gaff-rigged cutter.

The exhibition will be on for approximately 12 months. The Museum is located at 8 Baker Street, Windsor. The hours are Wednesday to Monday, 10am to 4pm, and Tuesdays by appointment.

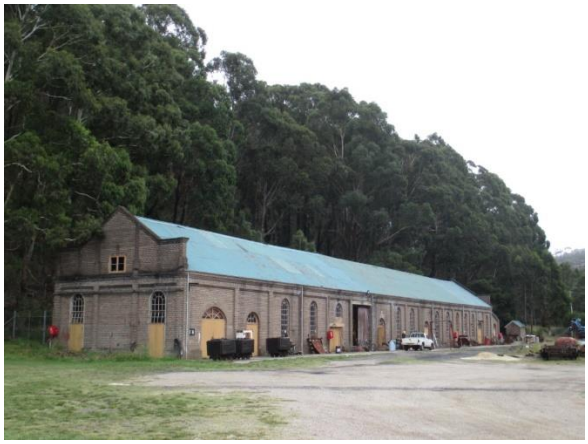
Industrial Cultural Landscape Workshop & Tour

Australia ICOMOS' (National Scientific Committee on Cultural Landscapes and Cultural Routes is holding a workshop and tour at Lithgow from 18-20 March 2016.
Australia ICOMOS (International Council on Monuments and Sites) is a non-government, not-for-profit organisation of cultural heritage professionals formed as a national chapter of ICOMOS International in 1976. Australia ICOMOS' mission is to lead cultural heritage conservation in Australia by raising standards, encouraging debate and generating innovative ideas.

Lithgow Blast Furnace



State Mine Workshops

The Group will attend a dinner on the Friday night at the Lithgow District Workmen's Club, then meet outside the Club on the Saturday to commence a guided tour. Following lunch at the State Mine Museum, talks, workshops and presentations will be held, followed by a self-funded dinner.
On the Sunday the group will undertake a self-drive tour of original sections of Major Mitchell's 1830's road to Bathurst and associated convict and inn sites. The event will conclude with lunch.
Registration should be undertaken by 29 February 2016, to juliet.ramsay@gmail.com or by phone to Juliet Ramsay on 02 6236 3214. There will be a lunch fee of $30.00 for ICOMOC and TICHI members, and $50.00 for non-members lunches.
Various accommodation opportunities are available by visiting http://www.visitnsw.com
Australia ICOMOS – Dr Sue Rosen

Blue Mountains Local Environmental Plan 2015

The new Blue Mountains Local Environmental Plan 2015 has been made, to come into effect on 15 February 2016! The LEP is intended to consolidate and replace all previous LEPs. However, a number of properties across the LGA will continue for a time to operate under earlier controls, sites which have been deferred out of LEP 2015, and generally include land zoned Living Conservation under LEP 2005 (proposed to be R6 Residential Character Conservation under the draft LEP 2013), and other land identified as requiring further review or a change to mapping.

Stair to Pool of Siloam, Leura

Some changes were made to the exhibited draft LEP 2013, both during the review of submissions process and in negotiation with the Department of Planning and Environment. Generally, the changes are a result of standardization in drafting by Parliamentary Counsel's Office, which has led to additional clauses and/or rewording of clauses.
The new LEP is seen to incorporate important provisions, including a recognition of period housing, and greater protection of water quality. Council and the community fought for 3 years to convince the Department that the Blue Mountains' unique world heritage listing gave it credence to vary the standard instrument, resulting in the most customized LEP in the State.
Cr Mark Greenhill has been quoted as saying that the new LEP will "… continue to protect and manage many special characteristics of the natural and built environment of the Blue Mountains, which are clearly valued by the community …. including the preservation of the character of our villages, and the protection of water quality and significant vegetation".

Rylstone History Online

A great online resource for the Rylstone area is Rylstone Online, a blog site for local historians. It provides an opportunity to contribute, communicate, share and make available, information relating to the history of early settlement in the Rylstone district.

Nash's Store 1800's

Historic residence 2010

The blog provides links to other organisations such as BMACHO, details with regard to history, heritage and museums, old images of Rylstone, information with regard to the Rylstone Autograph quilt, and the Rylstone and District Historical Society.
Current posts include historic properties and families, the Bells Line of Road, a Rylstone murder, storms in the Rylstone district and much more. *Wal Pilz*

Penrith City Council 15th Annual History Conference

This year's conference will focus on the Castlereagh, the earliest settlement area in the City of Penrith. In particular, a close community developed amongst the families in the area, resulted in a web of family inter-relationships with scandalous liaisons and flourishing crime. Hence the title of this conference being *The Makings of a City – Sex, Crime and Politics – Castlereagh Connections*.

Speakers will include Grace Karskens, who will speak about the complex family relationships that defined Castlereagh from the early years.

Craig Bratby will be looking at the family connections that tied bushranger Johnny Vane to the Castlereagh. Vane originated in the Castlereagh and then went on to rampage around the Cowra and Blayney areas.

Sir Arthur Rutledge

Castlereagh Cemetery

Johnny Vane

Graham Wilcox will examine the life of Methodist Minister Sir Arthur Rutledge, and his early life as a farmer's son in the Castlereagh.

Ann-Maree Bonner will then explain the value of the local records held in the Research Room for local and family history research.

The conference will also acknowledge the soldiers and local people who "made the supreme sacrifice" and died in 1916.

The conference will be held on 12 March 2016 at the Bonynge Concert Hall, Joan Sutherland Performing Arts Centre, 597 High Street, Penrith.

Conference registration is from 8.30am, and conference commencement is at 9am, with the conclusion at 4pm. *Patsy Moppett*

Bookings may be made to Alison Spencer, alison.spencer@penrith.city or Ph: 02 4732 7687

Lithgow & District Family History Society Celebrates 30 Years

Celebrating their 30th Birthday, the members of the Lithgow & District Family History Society are holding an Open Day at their Resource Centre on the corner of Tank & Donald Streets on ***Saturday 5th March*** 2016 between 10 am and 4pm.

The Society's first meetings were held in 1986, in what was referred to as 'the Dungeon', a small room in the basement of the Charles H Hoskins Memorial Institute, underneath the then Lithgow City Library. The demand for more space saw a relocation to the LINC building on the corner of Padley Street and Railway Parade. Each Friday, members of the committee put out the tables, set up the microfiche readers and 'opened for business'.

The Society's move from the LINC premises to the Ewen Smith Memorial Hall was due to the generosity of the Lithgow City Council. The building was relocated from another site by Apex Club Lithgow for the Civilian Widows Association. The Society was able to obtain a lease when the building became vacant in 1991.

Exclusive use of this Centre has allowed for permanent storage of the Society's collection of books, microfiche, photographs and other resources. A network of computers has allowed the digitisation of and easier access to the Society's many paper records, and to the many web-based records now available.

Donations of photographs, family trees, letters or copies of these items are always welcome and the Open Day provides an opportunity to share family stories or photographs or just check out some of the records in the Resource Centre at no charge.

Basement under Lithgow Library 1986: Left to right: Nancy Draper, Esther Coleman-Hart, Yvonne Jenkins, Scott and Helen Taylor, Thelma Draper. Seated: Helen Tracy and Jan Saundercock.

Lithgow Library 2016. Left to right - Kathy Brennan, Ian Irvine, Laurie Cook, Marcie Farr and Sandy Banks-Smith at the Resource Centre. 2016

BMACHO: Blue Mountains History Conference 2016

The BMACHO conference is held every two years and this year's event will have a museum focus with the theme of ***"Artefact".***

The conference will focus on collections and associated mysteries, and specific items within local collections. The day will also include a look at the Scotch Thistle Inn, now the Gardner's Inn, at Blackheath. Following lunch there will be a medley of speakers from five museum groups who will present an item of interest from their particular collection.

Speakers will include:

- Ray Christison, Lithgow State Mine Heritage Park, will speak about the coal miner's tools of trade, terminology and customs.
- Rebecca Turnbull will discuss items in the current *Interesting Objects* collection at Hawkesbury Regional Museum.
- Peter Rickwood will discuss the Gardners Inn at Blackheath, and the carved keystone which Blue Mountains Historical Society has been entrusted to preserve.

- Philip Hammon will talk about the Bleichert rope joiner, and associations with Adolph Bleichert and Oscar Schultz.

Master of Ceremonies will be Lynn Collins, Museums and Galleries Advisor, to Blue Mountains City and Lithgow City Councils.
The conference will be held on 7 May 2016 at the historic Victoria and Albert Guesthouse, Station Street, Mount Victoria. A hotel has operated from this site since the mid 1860s. The premises has changed hands many times, and has also been a grammar school and a convalescent home. Today it is an architecturally attractive two storey guesthouse located on a prominent corner in the village, with many intact internal and external features.

Late 1800s

2014

Conference registration is from 8.45am, and conference commencement is at 9.15am, with the conclusion at 4.30pm.
Bookings may be made via the Secretary at *committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com , or Ph: 02 4751 5834* *Patsy Moppett*

Yvonne Jenkins Memorial Award

Essay topic: *My favourite grandparent*

Grey hair, spectacles and false teeth may be characteristic of many people's memories of their grand-parents in the past. Today's grand-children may have different memories – smart phone and/or Facebook addict, always on holidays, working or busy looking after grand-children.
How do you remember your grand-parents, great grand-parents, or perhaps your friend's grandparents?
The opportunity to write about your favourite grandparent, their story and perhaps the reason why they are a 'favourite' was the decision behind the topic chosen for the 2016 Yvonne Jenkins Memorial Award Essay.
The Lithgow & District Family History Society Inc runs this annual award as a tribute to its first President, Yvonne Jenkins, who was a prolific author and family historian. Yvonne illustrated many of her books with pencil sketches of the various buildings and houses of the families whose stories she researched and of whom she wrote. Yvonne encouraged members to realise that even a short essay on an individual was an important part of research, as it shared the information with other family members as well as a wider audience when published.
Conducted annually, the essay is limited to 1,000 words and may be accompanied by photos. Entries close on 30 April 2016 and the winner will be announced during August, which is celebrated annually as Family History Month. The winner's prize is a free membership of the Lithgow & District Family History Society Inc for one year and the winning entry will be published in the Society's journal which is distributed to members and over 150 other family history societies across Australia.
The entry form and conditions of entry are published on the Society's website, or may be obtained by contacting the Society by email (ldfhs@lisp.com.au) or from the Society's

Resource Centre on the corner of Tank & Donald Streets, Lithgow on Fridays between 10 am and 4 pm.

Submitted by Jan Saundercock, Publicity Officer.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains World Heritage Institute; Bygone Beautys Treasured Teapot Museum and Tearooms; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Lithgow & District Family History Society Inc; Lithgow Mining Museum Inc; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot and Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd; The following are individual members: Fiona Burn, Ray Christison, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2015-2016 (from April 2015) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor) ,Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Roy Bennett (Grants Application Officer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators).

Chateau Napier

The period from 1910 into the 1920s was a major period of growth in Leura. The town was promoted as a tourist destination and many hotels, guest houses and weekend cottages were established, especially in relation to the development of the railway. One of these guesthouses was Chateau Napier, a magnificent multi storey complex, at the corner of the Great Western Highway and the eastern end of Leura Mall.

Chateau Napier prior to the 1957 fire

The place was owned by the McSweeney family, being opened in 1910. It was extended in 1914 to increase accommodation capacity to 150 people.

Justin McSweeney was a Sydney contractor, railway engineer and developer. He erected Leura House, in 1904 and Chateau Napier in 1910. McSweeney was a prominent figure in the development of significant properties in Leura. He and his wife Emily lived at Rakaia in Railway Parade, Leura, which appears to have been erected about 1904. When McSweeney died, his wife continued to occupy that house until after WWII. Single storey additions were added to Rakaia after her husband's death.

The official opening of Chateau Napier, originally known as "The Napier, Palatial Mountain Resort", was undertaken by the Lord Mayor of Sydney, on 16 December 1910. It was described as one of the largest and best appointed guest houses in the Blue Mountains, and although McSweeney still owned the place, a relative, Mrs McManus, was the proprietor. She operated the guesthouse until 1935, during which time she remarried and became Mrs O'Brien.

In 1912 the building was described as a two and three storey timber building with two chimneys, and a two storey timber framed verandah along the front façade. Wings extended at the rear, and other features included the large masonry retaining wall along the Highway frontage, the fenced tennis court, a promenade roof, and the entry steps from the Highway.
In 1914 another building was added, a two storey brick and rendered structure, along with the rough cast rendered garden entry archway, with curved walls and balustrade, and its associated access path.
In 1915 the more grand name of Chateau Napier was adopted. McSweeney died in 1920 and the property was retained by his widow Emily. After 1935, the manageress, Mrs O'Brien, passed management across to W Brewster, but in the early 40s refugee students from the Sydney Grammar School for Girls were billeted there. After WWII the guesthouse resumed operation, first under a Miss Elliott, and then under Weisman and Born.
A well as being a guesthouse, the centre had a hall which was utilized by the community for functions, meetings and "musicale" occasions.
The gardens complemented the grand guesthouse on its elevated site above Leura and included cypress, cedar and radiata pine.
Just as the Hydro Majestic had its produce farm, the Napier was supplied with dairy, poultry and produce from surrounding properties such as The Braes, in which McSweeneys had an ownership interest, and the adjoining Knight farm, a market garden.

After the fire

However, of all the significant buildings lost to bushfires in the Blue Mountains, the outstanding one must be Chateau Napier. The rough cast rendered archway and associated pathway, the walled tennis court and the large retaining wall fronting the Highway are the most significant remaining features of what was once an impressive complex.
In December 1957 the place was destroyed by fire, with only brick foundations, walls piers, concrete footings remaining. The former tennis court is still obvious, as well as retaining walls, garden walls, paths, steps, and remnant gardens. A number of the original trees are still visible including cypress, pine and cedar. Some of the walling is unstable and steps down to the highway have been blocked off. Graffiti is rife, and rubbish blown in and strewn around, as the site is not secured by fencing.
The bushfire followed the driest season on record for the area, lives were lost, and over 600 left homeless throughout Leura and Wentworth Falls due to the out of control fires. Buildings were exploding like bombs as the fires hit them. Many eyewitness accounts told of the event, and later aerial photographs were able to document the extent of the disaster.
The Chateau ruin is listed in Schedule 5 of Council's LEP 2015, as a locally significant site, although due to demolition of the fire remains, theft and time, the remaining features of the site apparently hold little archaeological research potential. A draft development control plan for the site was never gazetted, although the Heritage Act provisions apply to any relics on the site.

Arched gateway

Retaining wall along Highway

Retaining wall and tennis court

Old steps down to Highway

Council's recently gazetted LEP 2015 has relaxed building height limits and floor space ratios which will possibly assist in the redevelopment of the site in the future. *Patsy Moppett*

Food for thought ..... Editor's note

A year in reflection

In addition to my role as Editor of the *Heritage* Newsletter, I have also been the President of BMACHO. My position has recently been reaffirmed at the BMACHO Annual General Meeting in March, for which I thank those who nominated me, and for the support provided to me during the previous 12 months. My report to the AGM is presented below as a summary of our 2015-2016 year.

How quickly the past year has gone, in my first year as President of this most highly regarded organization! We have picked up the pieces from where the previous President, John Leary, left off, and moved forward with confidence and certainty, in providing to the community what we hope is a valuable service in the promotion of member organisations and their activities and interests. We have also sought to address other matters in a way that has enabled the community to make educated decisions about topical issues.

Meetings

We have taken our meetings to a number of members' premises each month and would like to thank them for their hospitality and sharing of their own local histories. This includes Everglades, Mount Wilson, Windsor, Valley Heights, Bygone Beautys, Hartley, Mount Tomah, Arms of Australia at Emu Plains and Solitary at Leura. Thank you to Committee members Suzanne Smith, Jan Koperberg and Louise Viney for facilitating these events. We hope to touch base with other members in the coming months.

Mount Wilson

Everglades

Membership

This year we welcomed Phil Hammon, of Scenic World origins, into our ranks from within the committee. Phil has ably stepped directly into the role of Treasurer, and has kept tabs on us all year.

We had welcomed Bygone Beautys Treasured Teapot Museum into our membership early in the year, together with their representative Louise Vining coming onto our Committee, only to have to farewell Louise later in the year in her move to Tasmania. We thanked Louise for her input into the marketing of BMACHO and the Heritage Trail, and wished her well. We now have the pleasure of welcoming Laura Stinson into our group, and now onto the Committee.

We also welcome Leurella Toy and Railway Museum as a member.

Fiona Burnn of the RAHS and Wayne Hanley from Blue Mountains Historical Society, have become individual members, and BMACHO has had several expressions of interest from heritage groups and individuals with regard to joining our membership, and we hope to be able to welcome them in the near future.

Finances

It was flagged at the AGM in 2015 that administrative expenses were low and that we needed to seek additional funding. To date we have managed to keep our heads above board, thanks to the scrutiny's of Phil and Jan. However, we are always on the lookout for new funding and grant opportunities. In particular, with the next BMACHO conference due this year, to be held at Mount Victoria, an opportunity is there to boost the coffers.

Greater Blue Mountains Heritage Trail

At last! The launch of the Trail in September 2015 was the culmination of mountains of work by members of the Committee, and a desire to see the project come to fruition, as initiated by Committee member Richard Woolley the previous year, prior to his passing.

Following many subcommittee meetings, emails, phone calls and planning conversations, a workshop was held in August where member groups were invited to have their final input into the final preparations for the first Open Day, which was held the first weekend in October. The brochures came together and were distributed, and the word was spread on Facebook, Twitter, and the special purpose Trail web site.

A second Open Day was held on the first weekend in January 2016, and a third in April. Although progress is slow, and visitor numbers were down on both occasions, members and the Committee are confident that word is spreading and that the teething problems such as clashing with other events and the seasons, will sort themselves out in time!

Blue Mountains History Journal

Once again, ably carried by Dr Peter Rickwood, the 2015 Journal has hit the shelves. The production of the Journal by Peter and his associates is a mammoth task, and its issue can be delayed by many matters beyond their control. However, the articles once again are interesting and thought provoking and well worth their noble efforts!

Heritage Newsletter

The *Heritage* Newsletter has become more popular, with input from both the community and the Editor, which we continue to welcome. We have covered historical places and people, events and topical issues. We have taken a step further and issued a Special Edition in December, which explained the machinations of BMACHO, and another in March on two matters of current community interest. These Special Editions will be issued from time to time on an ad hoc basis.

Cox's Road, Woodford

Springwood Main Street plaza

Specific issues we have covered include the Springwood Master Plan, Cox's Road precinct at Woodford, BMCC LEP 2013, Lawson stationmaster's cottage, Princes Rock, Mount Victoria safety upgrades, the Woodford footbridge, and the Oriental Hotel at Springwood. We have also been asked on a number of occasions to share our articles with other groups for their publications, requests we have happily acceded to.

Constitution

The BMACHO Constitution has had a broom put through it and the Committee has referenced relevant legislation and its own operations to produce a revised and updated

version, considered for endorsement at the AGM. Many thanks to the Secretary, Jan Koperberg, for the hours she has spent producing version after version for our perusal!

Thank you

My thanks go out to the Committee who has supported me in my role as President, and I am proud to have led such a talented and friendly group for the past year.

Thank you to the Vice-President Ian Jack, who has assisted me where he has been needed, in checking my writings and providing advice during meetings.

Thank you to Jan Koperberg for her non-stop work ethic, in spite of a hip operation, in getting through the correspondence she handles (incoming and outgoing) as well as taking minutes and preparing agendas, website operations and grant fund chasing, constitution writing, and many more incidental things which we are probably not even aware of. Every organization needs a "Jan". and we are so lucky to have scored this one!

Thanks to Phil Hammon for stepping up, not just onto the Committee, but for taking on the Treasury role. Your input and experience has been invaluable, as well as your Blue Mountains knowledge and background.

Thanks to the Heritage Trail publicity and website people, Committee members Scott Pollock, Wendy Hawkes, Jan Koperberg, Louise Viney and now Laura Stinson. Without your IT experience and knowledge, we would be lost! As IT is so much a part of today's world, we cannot avoid it, and it is certainly paying off.

Thanks you to Committee member Dick Morony for trying to keep our membership up to scratch, and for the monthly calendar. The calendar is an essential part of the BMACHO aim, to work for our members, and to distribute information about their events.

To Committee members Roy Bennett and Suzanne Smith, thank you for your regular attendance at meetings and the invaluable input you have into discussions on the various topics which we cover. Also to Suzanne for arranging our meeting venues, and for Roy's input into the Mount Victoria issues and events. It is not just the practical skills we need but the minds as well! Many hands/minds make light work.

And thank you also to all BMACHO members for their support, enabling us to carry out our aims and objectives.

The new Committee has been returned as per last year, with the addition of Laura Stinson in place of Louise Viney:

- President: Patsy Moppett (Individual Member BMACHO)
- Vice-President: Ian Jack (Individual Member BMACHO)
- Treasurer: Philip Hammon (Director, Scenic World)
- Secretary: Jan Koperberg (Blue Mountains Family History Society)

Committee:

- Roy Bennett
- Wendy Hawkes
- Dick Morony
- Scott Pollock
- Suzanne Smith
- Laura Stinson

We are looking forward to the next BMACHO year, in whatever roles we fill, in harmony and companionship, working to our common goal of heritage education, appreciation and promotion.

Ephemeral distance measurements on the Blue Mountains

Road Distances

Blaxland, Lawson and Wentworth noted mileages along their route which are inferred to be measured from the Emu Island in the Nepean River, a feature that no longer exists[1]. When Evans[2] surveyed a route for a road he was quite specific about the zero point "From Emu Island," and Cox[3] when making the road wrote on 27th July 1814:

"measured the ground from the ford in the river to the creek leading from Emu Plains to the mountain, three miles. marked the trees at the end of each mile at the left side of the road"[4].

The account by Major General Lachlan Macquarie (Governor of New South Wales, 1810-1821) of the journey his party made when they followed the road that Cox had built also contains a specific starting point viz:

"The commencement of the ascent from Emu Plains to the first Depôt, and thence to resting place, now called "Spring Wood," distant 12 miles from Emu Ford, ..."[5] (no doubt the western bank of the Nepean River).

Subsequently, Governor Macquarie stipulated that distances be measured from a fixed mark (the zero point) which was to be a sandstone obelisk in Sydney (at what became known as Macquarie Place) for which a contract was entered on 19 September 1816[6]; it was designed by Francis Greenway and built in 1818[7].

It did not take long for milestones to be erected along the major routes out of Sydney[8]. They were mostly trimmed sandstone blocks and the distance to Sydney was engraved by masons using Roman numerals[9]. But the distances that they indicated were only valid until the road was either deviated or realigned somewhere along the route back to Macquarie Place.

It would appear that the first set of distance markers in the Blue Mountains were wooden and they were replaced by "conspicuous mile-stones" in about 1904[10].

In the 1930s concrete replaced stone[11], some, and maybe all, being of steel-reinforced concrete[12]. Many were installed long before others reputedly were made at the DMR Depot at Windsor in the early 1950s (pers. comm. Doug Knowles 29.1.16). These concrete milemarkers were made to Imperial measurements and to published specifications[13] - 4' 9" (*144.8 cm*) long and 13" (*33 cm*) across the back; the sides with mileages were to be 9 ins (*22.9 cm*) wide. The amount exposed to view was to have been 2' 9" (*83.8 cm*) and with 2' 0" (*61 cm*) being specified as the length to be buried they were quite stable. But in practice the length buried is likely to have depended on the difficulty of digging the hole in which to place them; thus from the soil staining in Figure 1 it is apparent that this milestone was buried to a lesser depth (c.16 ins (*40.6 cm*)) so stability came from the great weight (by calculation c.90 kg or *c.1.8 cwt*) which was also a deterrent to thieves. [Sandstone milestones were larger, reputedly 1 x 0.5 x 0.5 m and for a density of 2.6g/cm^3 weighed c.0.65 tonnes, and not the 1.5 tonnes as reported[14], yet from a site near Prospect even one of these was stolen!]

Milestones were always situated on the left as you departed Sydney[15] and on the side facing you they showed the mileage to the next town of significance,

"both figures and letters will be incised (into the concrete) and painted in black,"[16].

Where necessary, the distance to Sydney was painted on the top bevel surface thereby being easy to correct when roads were changed[17].

In 1933 the 'mile-stones' were in place along the Main Western Road[18], and many lasted until metrication occurred[19]. Parliament passed the Australian Metric Conversion Act in 1970[20] but conversion of road measurements was delayed until mid 1974. By then the local road realignments had made some of the distances shown on milestones incorrect anyway.

Today the milestones remaining on the Blue Mountains seemingly are few:

- one is in the Mount Victoria & District Historical Society Museum (Figure 1; L14 (*Lithgow*), K10 (*Katoomba*)) - it is in excellent condition.
- a second is adjacent to the letterbox of 16 Coachhouse Lane, Medlow Bath[21]; (Figure 2; L18, K6). But that is not its original position for it is now on the right of the old road, and the back is set more-or-less at right angles to that road. However, it was recovered by the house owner from nearby and the distances shown (Lithgow 18 *miles* - although the 1 is

not clear nowadays; Katoomba 6 *miles*) are said to be right for Medlow Bath (pers. comm. Robyne Ridge 1 February 2016). Sadly, it is in poor condition and is now partly obscured by branches of a tree.

Photo: PCR 2016
Figure 1. Milestone at Mt. Victoria Museum

Photo: Robyne Ridge
Figure 2. Milestone at Medlow Bath

- a third is in a private garden at 49 Railway Parade, Hazelbrook[22] (Figure 3; L10, W42 (*Windsor*), S78 (*Sydney*)) and can be seen clearly from the street and in Google Street View. It is in good condition except for the painted lettering on the top surface.

Photo: PCR 2016
Figure 3. Milestone at Hazelbrook

Photo: Doug Knowles 2016
Figure 4. Milestone at Sun Valley

- a fourth is in a garden at Sun Valley (Figure 4; K20, PN12 (Penrith): S (Sydney) 44 (replacement lettering).
- the fifth is quite different from, and much older than, the previous four, being a carving in the sandstone 500 m east of Lennox Bridge[23] showing “Penrith IV” and “Sydney XXXVII”[24].

A milestone formerly in the garden of 10 Leichhardt Street, Blackheath can still (February 2016) be seen in Google Street View even though it was removed late in 2015 when the land was cleared for a new building.
But maps showing the positions of these milestones in the Blue Mountains were seemingly lacking until Doug Knowles[25] recently compiled one for the Great Western Highway between Valley Heights and Lapstone. Even Gregson's[26] 1894 detailed 4 chains to an inch map of the Main Western Road (Sheet 4) does not have any indication of mileage markers. Sometimes a road map will have a mileage indicated beside a drawn road but that number is actually the distance along the adjacent railway line (e.g. Figure 5).

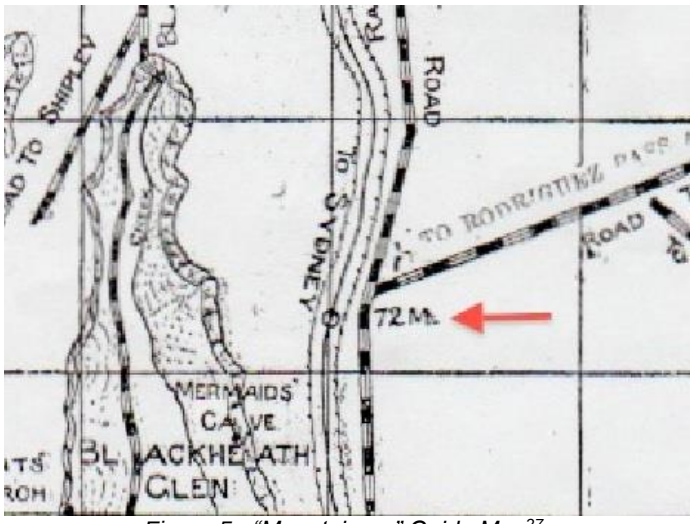

Figure 5. "Mountaineer" Guide Map[27].

There are many variants of that "Mountaineer" Tourist Map - a very amateurish bit of drafting - which seems to indicate that the 72 mile spot was just a short distance S of Grand Canyon Road and the marker on the rail line is at the southern end of a bend that is concave west.

Rail Distances

On his 1877 map, Du Faur[28] marked the 72 mile distance in a small font just south of Evans Lookout Road, Blackheath (Figure 6) and it is similarly sited on the Surveyor Generals Department[29] plan of the railway line (Figure 7). Those are positions towards the northern end of, and in the centre of, a bend that is concave west, respectively, whereas it was placed at the southern end of that bend on the Mountaineer maps (Figure 5) - clearly some inaccuracies in plotting.

Figure 6. Du Faur (1877)[28]

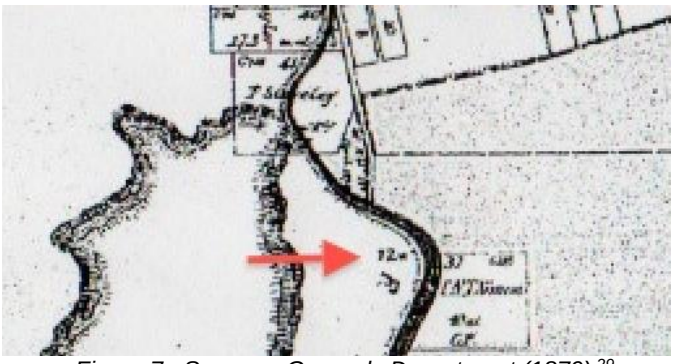

Figure 7. Surveyor Generals Department (1879)[29]

But distances along the railway line have changed over the years:
- by small amounts due to realignments on bends,
- by a moderate amount when the Lapstone Zig-Zags were bypassed by the Lapstone tunnel in 1892[30],
- by another moderate amount in 1913 when the Glenbrook Gorge route was opened[31],

• and by a major amount (c.1.2 km) when the terminus changed from Redfern to Central (opened 4 August 1906[32]).

A complete set of the editions of the Parish of Blackheath map is not available online, however, Editions 3 (1890), 9 (1920), 10 (1926) and 11 (1952) do not show a distance against Blackheath railway station.

But Editions 7 (1909; Figure 8) & 8 (1915) have Blackheath Station marked as being at 72 miles 9 chains (*72.1125 miles or 116.054 km*) which puts the 72 mile location close to, and on the north side of, the railway level crossing. Note that editions 7 and 8 were published after Central Station had been opened, although the increase in distance over that on 1870s maps cannot be attributed to that change of terminus alone.

Figure 8. Parish of Blackheath Edition 7 (1909)[33]

On some subsequent maps that 72 mileage is marked at different locations on different editions. Thus there are several editions of the Robinson 4 chains/inch maps of the Blue Mountains - all undated although the base map seems to have originated in 1915[34]. The 72 mile mark is shown on the railway line either at Medlow Bath Station (Figure 9) or opposite the Blackheath Automotive Services at 215 Great Western Highway, Blackheath (Figure 10) - locations that are c.4.2 km apart and c.2.8 km south and c.1.4 km north, respectively, of the location shown by Du Faur[35].

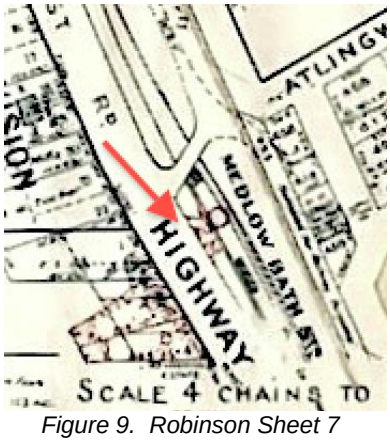

Figure 9. Robinson Sheet 7

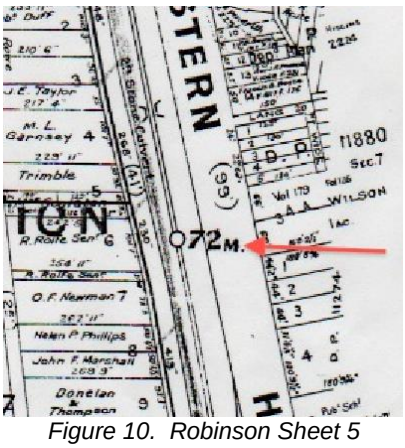

Figure 10. Robinson Sheet 5

In 1957, that very careful Railway historian C.C. Singleton also placed the 72 mile mark at Medlow Bath Station (Figure 11)[36].

Figure 11. Singleton (1957) [36]

Photo: PCR 28 January 2016
Figure 12. Signage at Medlow Bath Station

Nowadays railway distances are measured from a point on Platform 1 at Central Station[37] and in 2016 the distance shown on an enamel notice at Medlow Bath Railway station (Figure 12) is 115.715 km (*71.902 miles*) so the maps in Figures 9 & 11 are essentially correct for the present day rail distance. *Peter C Rickwood*

Acknowledgements
This research arose because of an enquiry from John Low about a location between Medlow Bath and Blackheath that was specified as being between particular milestones. I am grateful to Doug Knowles for a description of the placement of these markers and for providing photographs of one in a private garden at Sun Valley. Keith Painter kindly allowed me to photograph the milestone in the Mount Victoria & District Historical Society Museum and Robyne Ridge sent me better photographs of the Medlow Bath milestone than I had taken and she also obtained the account of salvaging it. Brian Fox is thanked for searching his map collection for one with milestones marked, albeit unsuccessfully.

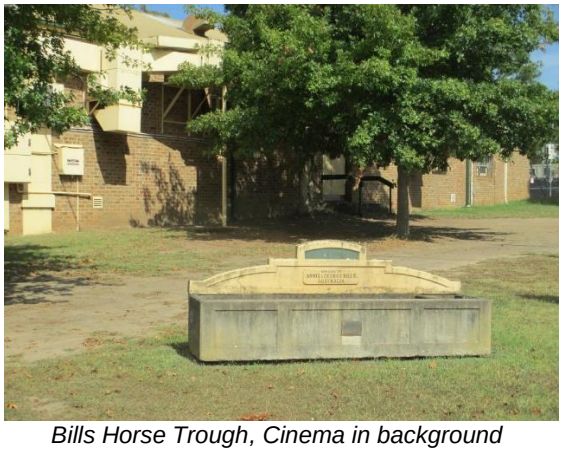
Glenbrook Park

Glenbrook is located in the lower Blue Mountains, some 70km west of Sydney. The place takes its name from Glenbrook Creek, located on the southern side of the village. Within Glenbrook and surrounds can be seen many historical features and places including historic homes, the Lennox Bridge, the old Zig Zag railway, the Glenbrook tunnel, churches and public buildings.

Glenbrook was originally known as “Watertank”, known for the water tank located there which fed the zig zag railway line, filled from Glenbrook Lagoon. When a loop siding was constructed in 1870 it became “Wascoe’s Siding”, connected with the railway stopping point of Wascoe (now Blaxland).

In 1878 Sir Alfred Stephen decided to give the place a “proper” name, and called it Brookdale, but one year later the station became Glenbrook, the village was gazetted in 1884 and took the name in 1885.

Gateway Signage



Bills Horse Trough, Cinema in background

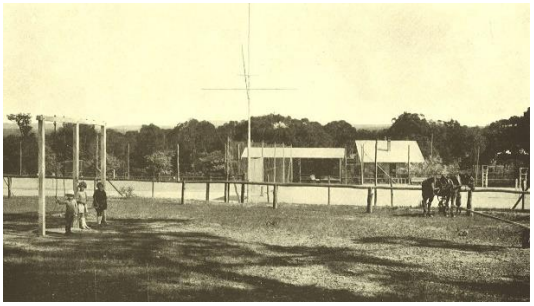
One particular feature of the village which dates from 1884 is Glenbrook Park, just across Ross Street from the shopping centre. The Park and its stone gates are heritage listed within Schedule 5 of the Blue Mountains LEP 2015. Glenbrook Park in its entirety, is listed on the NSW State Heritage Inventory.

Entrance gates

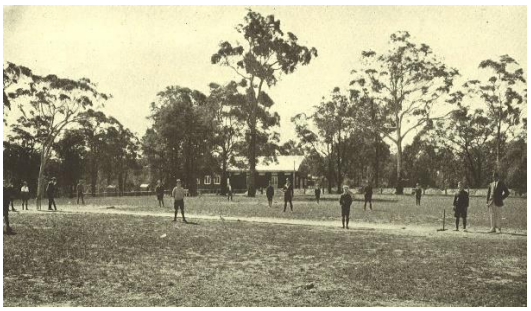
Place name steps

The Park is bounded by Ross, Park and Green Streets, with Highway access via Haymet Street. The whole of the land as far west as Raymond Street was originally reserved for public recreation in 1897, including the station-master’s house and garden. The first public school was built in the north east corner in 1892, and was dismantled and rebuilt in 1903, being supplemented in 1911 by the surviving brick building, in the south west corner. Extensions were carried out in 1936-37, and wooden classrooms relocated to the site in the 1950s. The new primary school was built in 1961, with the old buildings retaining the infants school.

The original School of Arts had been built close by to the west, in the north east corner in 1909. When this School of Arts was burnt down in 1927, the north east corner reverted to parkland.
The Park contains many significant features, including the Glenbrook Visitor Information Centre along the Great Western Highway frontage. Adjacent to the centre is a set of sandstone steps on which are carved the names of the villages of the Blue Mountains as far as Katoomba. The site also contains tennis courts and an associated (1980s) pavilion, the original brick hipped roof pavilion, a football/cricket field, an early childhood health centre (1960), and memorial plaque to the Glenbrook train disaster.



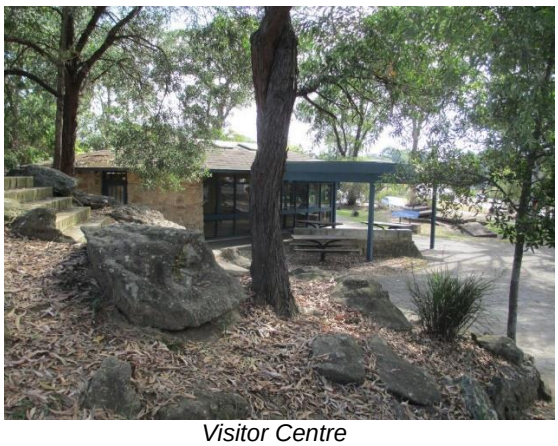
Tennis courts 1983



Cricket, old School of Arts in background

The original Cox's Road passes through the Park, a George Evans monument is located nearby, and an original Bills horse trough is located near the cinema. The trough was donated by George and Annis Bills, erected between 1930 and 1940, *"in memory of those horses which did not return from the First World War, 1914-1918"*. It is not in its original location.

Parklands



Visitor Centre

The park contains public amenities and picnic shelters, a children's playground and parking area. The eastern side of the site is the location of the former public school and the original school of arts, which is now an attractive native vegetation area.
The site contains a sandstone sculpture by the Graystone Carvers. The pair of sandstone pillars on the northern boundary fronting the highway are an early set of gates carved by John Colquhoun Dunn, a stonemason and resident of Glenbrook, erected by him in 1935 as the main entrance to the park. The gates were moved slightly to the south to accommodate widening of the Highway and the construction of the slip road.
The Glenbrook Cinema is also located in the north western corner of the site, which is the second school of arts building. The building's use as a cinema commenced in the 1920s when a travelling showman set up a cinema and came back on a regular basis. The theatre was rebuilt in 1978 and renovations carried out in later years. Plaques along the north wall record that the original School of Arts foundation stone was laid by Mrs. Colin Smith in 1909. Another plaque states that the stone was re-laid by Mrs. WH Williams in 1927.

George Evans Monument

Second School of Arts

Rail disaster plaque

The playing field was used for football until the game was relocated across the Highway to Glenbrook Oval, and the field used to have a cinder running track at the time of the coronation of Elizabeth II.
The Park is, and always has been, used for large community events.

Plan of Management & Master Plan

A Heritage Assessment was carried out in 2000 by Professor Ian Jack for the University of Sydney, and the site is due for reassessment.
Blue Mountains City Council has recently carried out community consultation with regard to formulation of a Plan of Management and a Master Plan for Glenbrook Park, to guide the future use, improvement and management of this significant place.
Council's Principal Landscape Architect, Elizabeth Dudley-Bestow, advises that following the first round of consultation to identify issues and values, the draft Plan of Management and Master Plan are now being developed. The draft documents are currently scheduled to go to the Council Meeting of 24 May, for the Councilors to endorse them for exhibition, although this scheduling has yet to be confirmed.
If and when the Council approves the exhibition material, it is expected that the draft documents would be made available for public comment in the weeks following the Council Meeting. The exhibition time would be six (6) weeks and include information sessions at the Park.
BMACHO will provide updates on this process as they come to hand. *Patsy Moppett*

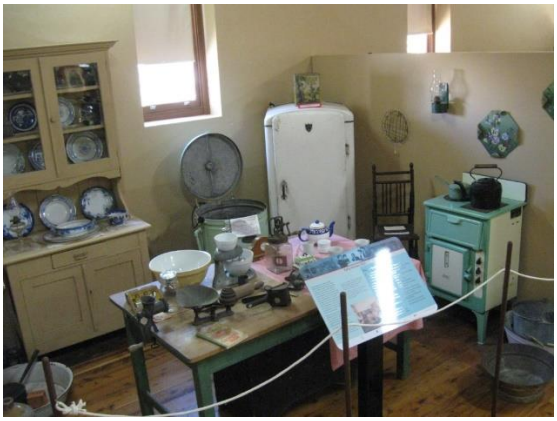
The Technical Side

Mayhem in the museum

In our museums we are all aware of the damage that pests can do, damaging buildings and collections. In the past museums undertook extensive fumigation regimes, which were both costly and potentially damaging to the collection (spray and pray). Many objects are exposed to the internal environment and offer an attractive source of food for pests. Externally, methods of building construction, plants close to buildings, fence posts, open windows and doors can encourage pests.

Carmanhurst Museum, Carcoar



Golden Memories Museum, Millthorpe

Nowadays there remain a series of steps to be taken towards management and monitoring of buildings and collections utilizing a more modern approach, in order to prevent structural damage and loss of significant museum artefacts.

Materials at risk

Organic materials are most at risk from pest infestation – paper, textiles, and objects made of materials such as wood, plant material and fur, cellulose materials, and protein-based materials. Some pests eat anything! Items can also be generally damaged by general dirt and staining resulting from pest activity.

Signs, times and places of activity

- Holes, surface grazing or bite marks, and/or small piles of fresh dust.
- Droppings or eggs.
- Webbing, cases and cocoons from larval stages.
- Live or dead insects, and cast skins.
- Some pests can be heard chewing, or leave distinctive odours.

Spring is the best time to be watchful in the warmer weather, although regular inspections are recommended, such as once per season. Critically, it is important to inspect collections coming into the building before they are placed in storage ie. loaned collections, acquisitions or collections from other institutions.

Places to check include warm areas, dark or undisturbed areas, damp or wet areas, messy spaces, plants and animals, and new collections.

Actions to take

Live insects can be captured, contained and labeled for identification. Identifying the insect will assist with appropriate treatment and control methods.

Quarantine the affected objects by sealing into plastic bags (if small items) or removing the item from the collection space.

Check nearby collections to ensure there is no further infestation. Monitor this area regularly.

Clean the area of dead insects and debris.

Keep a record of the infestation and contact conservators who may be required.

Type of major pests

These include carpet beetle, clothes moth, silverfish, book lice, wood-boring beetles, termites, spider beetles, biscuit beetles, hide and leather beetles. Other pests include millipedes and centipedes, wasps and spiders, ants and cockroaches, birds and rodents, bats, crickets and large moths.

In particular, the *borer* can be the bane of a museum's existence. The wood borers may include the drugstore beetle or powderpost beetle, the Ambrosia or pinhole borer beetle, the dampwood borer, longicorn beetle, particoloured Auger beetle, with the worst ones being woodboring weevil and the furniture beetle. Most lesser borers cause damage usually limited to the first five years after the timber was milled, and repairs are cheaper to carry out. However, it may be much more expensive to repair the damage of the last two species, which can attack hardwood or softwood of any age. They chew through wood, paper, and

books and leave networks of tunnels with perfectly round exit holes. The ubiquitous little pile of dust is often the only way to detect an active infestation. They may also affect building materials, display cases, storage cabinets and other furniture.

Borer damage in wood

Integrated pest management (IPM)

This is defined as a coordinated approach to pest management that does not rely on chemicals and so moves away from the "spray and pray" approach. It focusses on making the museum spaces and the building unattractive to insects and other pests through physical exclusion, good housekeeping and early detection. It also relies on knowledge of the pest's life cycle and habits, and good management and monitoring of the museum environment, inside and out.

The basic components are:

1. *Physical control* – basic hands-on activity.
   - Regular cleaning and housekeeping schedule.
   - Regular building maintenance.
   - Sound storage containers.
   - A safe quarantine area.
   - A regular program of trapping insects.
2. *Cultural control* – changing the mindset, establishing good habits:
   - Regular programmed inspections.
   - Written records of all IPM activities.
   - Awareness.
   - Rigorous programmed housekeeping.
   - Staff training

Borer damage in wood

A range of equipment may be required, some of it quite simple and easily obtained, which should be maintained on site, such as sticky traps, torch, logbook, insect identification kit/manual, small plastic containers, building map, clear polyethylene plastic bags.

Wooden items in particular need regular maintenance, and should be inspected every six months. Look in subfloor spaces for signs of rot and termites in the flooring and framing. In roof spaces, look for evidence of leaks that may promote fungal growth. Any sign of breakage or distortion of roof structures should be investigated by a structural engineer.

Check external paint finishes for splitting or cracking that may indicate water penetration to the wood beneath.

Basic infestation treatment

Often simply cleaning the object or item is enough, such as for flat items such as documents, framed prints and photographs. However, some objects are difficult to clean such as clothing, or books. Regardless of the treatment method chosen it is still imperative to remove as much insect matter as possible.

Modified temperature treatment works to limit with oxygen and a comfortable temperature for pests to survive. 15-25 degrees C is when they are most active. A rapid drop or rise in temperature is required to kill all stages of the insect cycle, from eggs to larvae to adults. These methods amount to freezing and heating.

Freezing – not all items can be frozen. Chest freezers are the most suitable receptacle, and objects need to be packed appropriately and labelled. Treatment is most commonly carried out to -20 degrees C for at least 7 days. Removal of the frozen objects must be undertaken with care, and thawed to room temperature before handling.

Objects which may be frozen include books and coated papers, feathers and newspapers, organic fibres such as basketry and tapa cloth, paper files, records and maps, textiles and soft toys.

Avoid freezing animal mounts and study skins, audio and video tape, bone and ivory, computer disks, CDs and CD-ROMs, ceramic, daguerreotypes, ambrotypes and tintypes, ethnographic items with mud, ochres and other friable materials, film-based material, glass, glass plate negatives and lantern slides, leather, metals (including buttons), paintings, parchment and Vellum, photographic prints, negatives and transparencies, plastic, vinyl/shellac/acetate records, wooden objects, especially if waterlogged, and works of art on paper.

The Australian Museum treats all objects as they arrive into the Museum with low oxygen, freezing or nitrogen gas flushing. It does not use any chemical fumigant.

Interestingly, the Historic Houses Trust has had experience in wrapping pianos and other large furniture for freezing, and they admit getting a piano into a plastic bag is challenging! With the use of Cryovac sheets the bags were constructed around the items and the final join done with the item in place.

Heating **-** items to 52 degrees C for 4 hours is the most effective eradication treatment for insects. The most successful treatment is in the field using simple sunlight heat, where other equipment may not be available. It can be damaging to some items, and care should be taken not to heat items including glass, wax, resins, adhesives and leather.

The treatment is cheap and easy, using black plastic bags, up off the ground.

Chemical control - this is of course the careful application of pesticides as a last resort. Natural pyrethrum and synthetic pyrethoids are usually chosen due to their safety.

The pros and cons of treatment have ever been debated, but the main principles which would guide the appropriate method are guided by:

- Safety – visitors and staff.
- Residual nature of chemicals.
- Level of intervention – impact on the site.
- Effect on building/item fabric.
- Ability to work with other contractors.
- Cost.

Getting help

To discover that there is an insect problem in a collection, and then not know where to turn for help, is not uncommon. However, in this day and age there are many resources and help mechanisms available which are simply based on *planning ahead*.

Some basic steps are needed to begin this process, the first step being to do the research and see who/what is out there:

1. Establish a regional museum network – why try to reinvent the wheel when there are others out there who may have had similar crises such as yours.

2. Contact specific expertise outside the museum – eg. Museums & Galleries NSW.
3. Develop a register of volunteers – undertake some succession planning.
4. Utilise these resources to draw up a disaster preparedness plan.

Planning ahead – the disaster plan is applicable to a range of situations. A disaster may be something large and catastrophic, but it is often the case in museums that it is something relatively small and definitely not catastrophic, but one that can lead to a serious disaster. So a disaster may apply equally apply to — a small leak through the storage area window that has drenched the newspaper collection; a pest invasion; a major flood; a piece of vandalism; an earthquake; theft of your most precious object; a fire; etc. Do not think of a disaster as something that is always large and obvious.

For a document with such a long name, a disaster preparedness plan can really be quite a simple document. The document *Be Prepared, Guidelines for small museums for writing a disaster preparedness plan, Heritage Collections Council 2000* is available on line and is an easy guide to planning for disasters, whether it is insect invasion or a flood.

Standards Program - Museums & Galleries NSW has the Standards Program, an opportunity to seek assistance for surveying collections, management, engaging visitors and caring for the collection. An independent reviewer is sent out to each museum. They act as mentor to the museum management.

Many other resources are available, including risk management, grants, setting up a website, and an advisory service. It provides an opportunity for self- review against the national standard.

M & G NSW also has many publications available on line which can assist museums.

Book Review - Aboriginal Rock Art in the Blue Mountains

Blue Mountain Education and Research Trust, which aims at promoting local research and writing, is proud to bring to the public its latest title ***Aboriginal Rock Art in the Blue Mountains.*** John Van der Have is an architect who specialises in harmonising design with the landscape. Here he has approached the subject of local rock art, not from an anthropological or archaeological view point, but from an artistic and aesthetic one. Over and over again he stresses the sense of place in which the art is found. These artworks are inextricably and forever connected to their location.

These figures, whether painted on rock shelter walls or engraved on open rock platforms, may be presented to the public in isolation from their setting, perhaps framed on gallery walls or photographed in a book such as this. But the author, with sensitive text and superb landscape views, emphasizes that the locations were already in themselves sacred places which made an impact on the soul of the artist. These settings were grand in scale, vast and spectacular – undoubtedly storied places, which the artist has drawn out with a lightness of touch and agility of hand. The artwork is not itself monumental but suggestive of deeper meaning and motivated by the artist's special feeling for the land. Together, artwork and setting constituted what could be termed landscape architecture, an open-air temple.

Fittingly this book has been dedicated to the Aboriginal People of the Blue Mountains, living descendants of those who had been here for thousands of years. It is a warm endorsement and respectful acknowledgement of the treasures which their ancestors bequeathed to them

and which are now given to all to share. It has been estimated that about 1,000 rock art sites are known in the Blue Mountains and undoubtedly many more to be discovered. It is high time to record all we know as some artwork has almost faded away and all are vulnerable to the ravages of time, and even more so to vandalism.

John Van der Have tells the story of the modern Aboriginal art movement which sprang up in the Central Desert in the 1970's.
"There were artworks that drew upon the richness of Aboriginal culture extending back thousands of years. The artistic outpouring that began at Papunya in the early 1970's captivated the world, and within a few years led to passionate worldwide interest . . . These contemporary Aboriginal artworks struck a deep cord with many people, not only in Australia, but also throughout the world."
Art critic for *Time* magazine, Robert Hughes, is quoted as calling it *"the last great art movement of the 20th Century."* John points out the common tradition behind the contemporary art world and the simple figures displayed in this book are sourced from the same feeling of identity with the land. *Eugene Stockton*

Aboriginal Rock Art in the Blue Mountains *- RRP$50 is available from The Turning Page Bookshop, Springwood; Megalong Books, Leura; Lamdha Books, Wentworth Falls; Gleebooks, Blackheath, Glebe.*

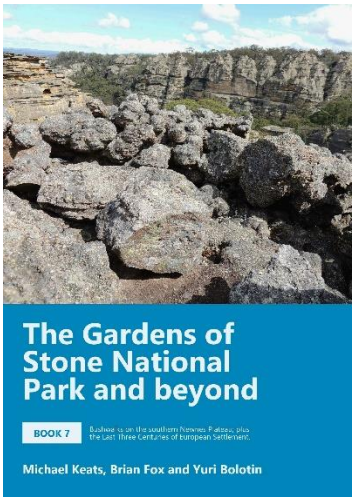
Book Review – Gardens of Stone National Park and Beyond

Book 7 in the 9 book series, The Gardens of Stone National Park and Beyond by Michael Keats, Brian Fox and Yuri Bolotin, is principally about the last three centuries of European occupation of the area. It includes stories of such iconic engineering feats as the Wolgan Valley Railway, The Newnes Industrial Complex as well as follies such as the proposed Wollemi International Airport and a 6000MW power station at Birds Rock.
Previously unpublished historic photos are included together with interviews involving descendants of some of those men and women whose parents and grandparents were directly involved. It is a book of contemporary history, warts and all.
One of the most amazing stories is that of the construction of the dam on the Bungleboori Creek. Although very much of our recent past, the pictures tell stories about changes to Work Place Safety while at the same time revealing just how much of our lauded, second to none, pioneering resilience has been lost.



Perhaps the greatest challenge documented in the book is the story of the telephone services that connected Newnes to the outside world. Michael, Brian and Yuri, along with bushwalking colleagues walked many tens of kilometres following residual evidence of the original poles and wires that have survived the depredations of bushfires, storms and souvenir hunters.
There are also many great walks, principally along the southern escarpment of the Newnes Plateau from the Darling Causeway to Hassans Walls. The case for the entire escarpment to be declared a national park, with its rich natural, Aboriginal and European heritage, should be undertaken as a matter of priority.
Even if you hated history at school, we think you will find these stories and the many hundreds of pictures a compelling read. *Michael Keats, Brian Fox and Yuri Bolotin*

The book can be purchased from Brian Fox for $50.00, free delivery Australia wide.

Community events & updates

Walk – Discovering Linden – Secrets will be Revealed!

Blue Mountains Branch of the National Trust announce a fascinating walk in the Linden area on Saturday 28 May 2016. Both visitors and Blue Mountains residents drive up and down the Great Western Highway, regularly by-passing the township of Linden. The Branch is organizing a walk to discover Linden's secrets. There is a cave, a grave, an old road and a cairn. Join them on a 3-4km walk to find out more about them. Morning tea would be provided.

The cairn

The cave

The grave

The old road

Participants will meet at the corner of Glossop Road and Burke Road at 10am. They can also be picked up from the Linden Railway Station, northern side, from the 9.49am train from Sydney and from the 9.56am train from Mount Victoria.
Cost: $20 for members, $25 for non-members, $5 for children. *Liz van Reyswood*
Enquiries: Rhona Leach, Ph: 02 4757 2424, or email: bmnt1814@gmail.com

Glenbrook Construction Tramway – Walk

The Glenbrook Construction Railway was built c1910 for the duplication of the eastern end of the railway across the Blue Mountains, and opened in 1911. The duplication replaced the single line zig-zag and tunnel and was very important for the expansion to the west.
A walk will be run by the Blue Mountains Branch of the National Trust, and will take place on 18 June 2016. It will take you down the tramway to the overlook of Glenbrook Gorge. Morning tea would be provided at the Gorge, and then you would walk back along Emu Road, where there was a navvies' camp.

Tramway cutting

The group will meet at Lapstone Primary School parking lot at 9.30am for a 10am commencement. The cost is $10, which includes morning tea. *Liz van Reyswood*
Bookings essential: Rhona Leach, Ph: 02 4757 2424, or email bmnt1814@gmail.com

Maitland-Morpeth Tour

The Blue Mountains Branch of the National Trust is holding a small group bus tour to visit Maitland, Morpeth and the surrounding districts on 26 to 28 July 2016.

Walka Water Works

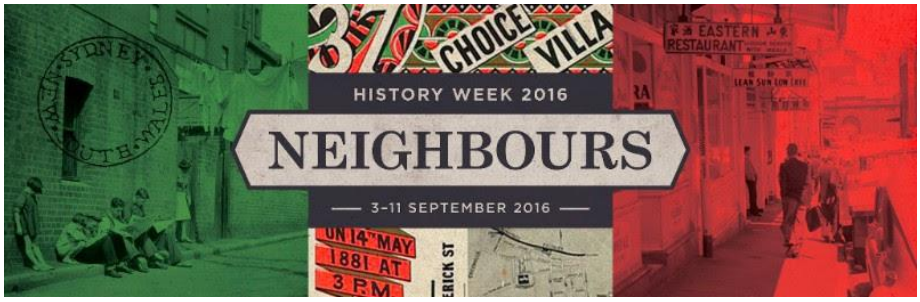
Maitland Gaol Governor's House

Anlaby Inn, Morpeth

The tour will cover a visit to the 1870s Grossman House, Maitland, where lunch would be provided. This would be followed by a tour of Maitland. The following day the group would visit Sir William Clark's Walka Water Works, followed after lunch by a tour of Maitland Gaol. The third day would commence with a visit to historic Morpeth, a colonial river port, before returning home. Accommodation and dinner would be provided in the city each evening. The cost is $450.00 per person (+$40 single supplement), and further information would be provided closer to the day. *Liz van Reyswood*
Bookings are essential. Rhona Leach Ph: 4757 2424, or email bmnt1814@gmail.com

History Week 2016, 3-11 September 2016

Now in its 19th year, the History Council of NSW's History Week has become a significant event in the cultural calendar of NSW. This year's theme "*Neighbours*" includes stories of individuals, families and communities living near one another and links between adjoining suburbs, regions and countries. The concept of neighbours has shaped imaginations and memories, creating identities and has been a source of both conflict and friendship.



As part of History Week, the Annual History Lecture will be held on 7 September delivered by Emeritus Professor Heather Goodall of the University of Technology, regarding Indigenous histories and relationships in Australia, environmental history and intercolonial networks.
Register your event, as a member of the History Council of NSW, or choose to host an event. Events must be relevant to the theme and take place during History Week.
Applications close on 31 May 2016. *History Council NSW*

Mailing address: PO Box R1737, Royal Exchange NSW 1225.
Email: admin@historycouncilnsw.org.au
www.historycouncilnsw.org.au

Oral History NSW Events

Oral History NSW is hosting a workshop and seminar on Saturday 14 May 2016 at History House, 133 Macquarie Street, Sydney – *Capturing Memories: Oral History in the Digital Age*. This is intended to be a practical workshop for all interested in recording the experiences of family, friends, the local community, history of museum items or any other project incorporating memories of the past. The presenters would be Pauline Curby and Andrew Host. Reference notes from each session will be provided. This workshop builds on the OHA Oral History Handbook, available for purchase for $25.00 (normally $35.00).
See http://oralhistorynsw.org.au

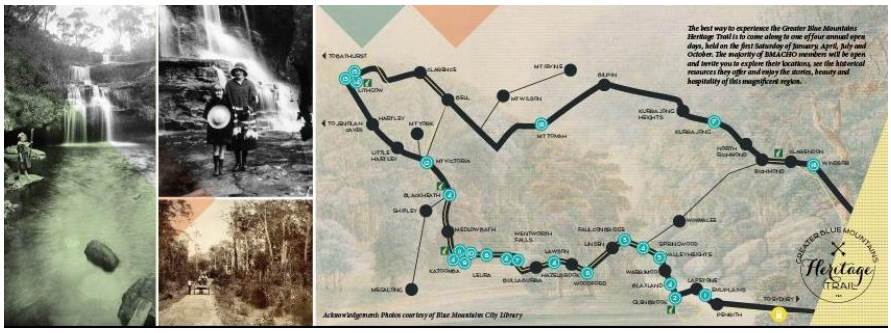
ORAL HISTORY
NSW

Oral History NSW are also holding a joint seminar with the State Library of NSW on Saturday 25 June 2016 at the State Library of NSW – *Those who've come across the seas*: Oral history and migration stories. The session will explore the use of oral history as a means of recording and revealing Australian stories of migration.
See http://oralhistorynsw.org.au

Bookings are essential for these events. Enquiries: Anisa Puri – events@oralhistorynsw.org.au
Ph: 02 8094 1239

Greater Blue Mountains Heritage Trail

The next common Open Day is Saturday 2 July 2016



The Greater Blue Mountains Heritage Trail (GBMHT) is a project of BMACHO. There are four common Open Days each year, i.e. the first Saturday of January, April, July and October. The participants include historical societies, family history societies, museums, heritage properties, heritage gardens and heritage businesses in the Greater Blue Mountains, Emu Plains, Lithgow and the Hawkesbury areas. There are also a number of historic "places to eat" and "places to stay" listed on the website and in our brochure. We are also adding "Hidden Gems" in the region to our website, along with photos and links to maps. Brochures are available at Visitor Information Centres in the Blue Mountains, Lithgow and the Hawkesbury, and all the museums in the region. Keep an eye on our website and our Facebook page to see planned events and please subscribe to our GBMHT newsletter, by clicking the link on the bottom of each page of the website. This project was funded by the **Westpac Group.**

Feedback from the Trail operation to date shows a positive outlook for most operators, although we all acknowledge that there is a long way to go. The timing of the open day events will be reflected in visitor numbers, depending upon the season, publicity and other events which may occur on the same day.

We know the events will gain momentum, and BMACHO and the member organisations will continue to promote the Trail, increasing awareness as much as possible.

Congratulations to the winners of the first Heritage Trail Photo Challenge Competition! Here are our winning photos!

1st Place: Irma Tognotti, teapot photo at Bygone Beautys,

2nd Place: Kel Torrance, photo at the Paragon Cafe,

3rd Place: Neale Bayliss, photo on the train ride at Lithgow State Mine Railway Limited

Thank you to all the entrants and your fantastic photos!

Keep an eye out for the next photo competition, and have a go!!! Great prizes to be won!!

BMACHO Committee

BMACHO: Blue Mountains History Conference 2016

REMINDER: The BMACHO conference "*Artefact",* will be held on 7 May 2016 at the historic Victoria and Albert Guesthouse, Station Street, Mount Victoria.

The conference will focus on collections and associated mysteries, and specific items within local collections. Discussion will include a coal miner's tools of trade, terminology and customs; the current *Interesting Objects* collection at Hawkesbury Regional Museum; the Gardners Inn at Blackheath, and the carved keystone which Blue Mountains Historical Society has been entrusted to preserve; and the Bleichert rope joiner, and associations with Adolph Bleichert and Oscar Schultz.

Master of Ceremonies will be Lynn Collins, Museums and Galleries Advisor, to Blue Mountains City and Lithgow City Councils.

Conference venue

Conference registration is from 8.45am, and conference commencement is at 9.15am, with the conclusion at 4.30pm. The cost is $60.00 per person.

Bookings may be made via the Secretary at *committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com , or Ph: 02 4732 7687* *Patsy Moppett*

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc;; Lithgow Regional Library – Local Studies; Lithgow Small Arms Factory Museum Inc; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett, Professor Barrie Reynolds, Dr Peter Rickwood and Dr Peter Stanbury OAM.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators), Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Laura Stinson, Wendy Hawkes & Jan Koperberg.

Course de Circuit Hartley

Following on from the previous issue of Heritage, another local racing circuit was located in the Hartley Valley, south east of Lithgow. It operated from approximately 1910 to 1938, although these dates are uncertain. It ceased at the beginning of WWII and never restarted, as by then the Mount Panorama circuit had opened. The course was 6.035km (3.75 miles) in length and went in a clockwise direction. Buses conveyed people from Lithgow at a cost of 4/- return. The original racing surface is long gone, the track is now partly bitumen and partly gravel, and the existing roads still follow the original route.

Used mostly for motorbikes and sidecars, it hosted the Tourist Trophy and other events on Anniversary Day January 26 each year. After each event many farm fences required re straining as spectators sat on the fences to watch!

It was a very fast circuit with the Hartley Vale Road and Browns Gap Road sections being reasonably straight, flat and about 2 kilometres in length. The Mid Hartley Road section was somewhat more challenging with blind crests and two very fast sweeping corners. There were three corners that caused more accidents than any other part of the circuit. Mount York Corner, A. Butta's Corner and J. Morris' Corner, being almost hairpins, creating a sudden end to the long straights.

In 1924 the event was reported to have a good attendance and good racing. The events held were the 50 miles under 600cc, 25 miles sidecar handicap, 50 miles handicap all powers, and the 25 miles open championship.

In 1925 Blaxland Shire Council placed a veto on road racing which, if enforced, would have prevented the January carnival from taking place. The Council was approached to have the restriction relaxed. Club representatives met with the Council to discuss the veto, at Mr Bird's shop days before the scheduled carnival, and the carnival was able to go ahead with a record number of entries (83 for the four solo events).

The sidecar event was not held as there were only two competitors. The crowd swelled to 1,500 people, and AJS machines secured first in all events. Other bikes featured included New Imperial, BSA, Douglas, Harley Davidson and Norton.

The 1925 event included the 25 mile State Championship, and the State's best riders were competing. The first race commenced at 9.30am, and the event included luncheon on the grounds. The President of the Lithgow MCC at the time was G Smith, and the Honorary Secretary was PE Farthing. Entrants included Tom O'Dea, Gus Clifton and Stewart Williams. The Lithgow Mercury reported that the course was again very safe and maintained its reputation of not having a serious accident in 15 years. Events included the 25 mile novice handicap, the 25 miles (500cc and under), the 100 mile (all powers) handicap, and the State Championship.

In the State Championship, a novel scheme was introduced to prevent crowding at the start. There were 18 entries, but only nine faced the starter. The first division was allowed halfway around the course before the second was started.

In 1926 the annual carnival was again held, although numbers were affected by big events at Maroubra speedway, and an idea on the part of many metropolitan riders, that the Blaxland Shire would not sanction racing over the course.

The large trees in the vicinity of the starting point at "Stormville", owned by Mr R Jones, afforded shade for spectators and competitors, many picnicing under the trees. Mrs Jones served a nice lunch at the homestead. The president was Mr G Tyrer, and the Honorary Secretary was Mr Roy Boon. Major incidents were avoided other than a few spills which resulted in gravel rash. Unfortunately, the biggest event, the 100 mile handicap, was marred by a large bushfire which developed across a portion of the road. The riders persisted and the event was not cancelled, but reduced in length to 25 miles so the riders did not have to pass through the smoke too often!

The following years would prove just as difficult to organise the event, with the 1927 meet being the last for nine years. In 1936, motorcycles returned to the circuit with the event being eventually discontinued.

The large tree on what is now the corner of Browns Gap Road and Fields Road, was often an obstacle and the route was diverted to the northern side of the tree to minimise mishaps.

Later in 1936, the Tourist Trophy was held on January 27 and attracted several thousand people. Three accidents marred the day but no one was seriously hurt, although hospitalisation was required in all three cases. The Mount York corner claimed one victim, when the chassis of a sidecar collapsed, hurling the rider into the fence. The passenger escaped injury. The events held were the Junior Tourist Trophy (under 350cc), Lightweight Championship Scratch Race (under 250cc), Lithgow Handicap (all powers sidecars), NSW Senior TT Championship (all powers) and the Blaxland Handicap (all power solo).
In 1937 the Blaxland Shire Council refused permission for road closures, and the event was moved to 3 January 1938, with practice held the previous weekend.
Management of the races eventually was given over to the Western Suburbs Club.
One bizarre story reported by Old Bike Australasia involved the Italian man who ran the provisions stall from his front yard. He was found murdered, and several local youths were arrested. They believed that he had a stash of cash in his house, which proved to be quite false.

Food for thought ..... Editor's note

With the Christmas season on us again already, I will not regale you with deep and meaningful philosophical thoughts on history and on heritage conservation! There are too many exciting events coming up over the Christmas break and many intriguing conferences and forums in 2017 to look forward to, which will enable the community to make its own observations on the past, and to make decisions about future directions of heritage.
The BMACHO Committee hope you enjoy the selection of articles in this issue, where a variety of topics has been researched to entertain members and non-members over the Christmas break.

Kamloops Heritage Railway Steam Train, British Colombia

We hope you enjoy the content of *Heritage* No. 47 as much as we enjoy presenting it to you. We always welcome articles from the community, so would encourage these at any time. Merry Christmas and a happy and safe New Year! Looking forward to sharing heritage in 2017!

Centenary of The Paragon

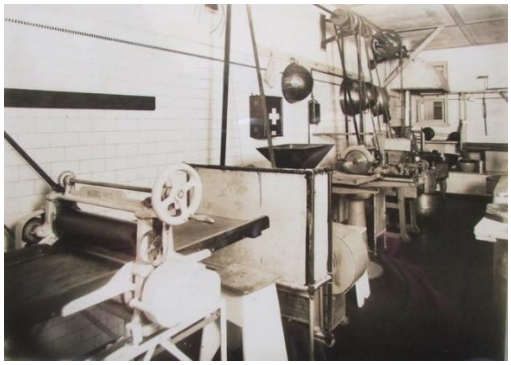
The Blue Mountains Historical Society has joined with lessee Robyn Parker and Friends of the Paragon to celebrate the centenary of this iconic Katoomba business.
Fifteen year old Greek Zacharias Simos arrived in Sydney on 13 May, 1912 per Omrah (Orient Line), worked in a Greek café in Tenterfield for 18 months, then in Sydney for 2½ years[i] before leasing the 1909 Katoomba building housing the "Devonshire Tea Room" in 1916.
He was joined later by brothers Peter, and George, a confectioner. The tea room became The Paragon Café and Oyster Palace, and specialised in late suppers for patrons after evening dances and shows. Patrons included many affluent holiday makers who stayed at The Carrington or The Ritz at Leura. Simos grasped the opportunity to develop the niche market. His first advertisement[ii] was as Z Simos & Co., Proprietors.

Grocers in upper mountains towns delivered locally on set days, but not broadly across the mountains, with perishable goods such as oysters and lobsters. He set a standard, challenging others to follow. Following Simos' business names can be a challenge too. There have been many changes over the past century but The Paragon has continued at the same site. Zacharias, known as Jack, took many risks but seems to have had an uncanny ability to foresee and capitalise on business opportunities. Once he owned the building, he set about fitting out the upstairs area for accommodation, an office, storage area, a bakery, and a chocolate factory, the latter run by brother George. Business expanded rapidly.
In addition to the culinary delights and late night service, Jack enhanced visitors' experience over the years by what could be simply called decorating the walls and developing specialist rooms. He travelled through Europe for a year or so, seeking out the best the world had to offer at that time. Nothing less than the best would do for his business in the relatively small holiday town of Katoomba in the Blue Mountains. One can only wonder what the locals thought of his early endeavours!

The café area

The chocolate selection 2016

In 1921 The Paragon was advertised as a Sundae and Candy Shop by Z Simos, Proprietor. The celebration of the official opening of the dance room in conjunction with the Paragon Sundae Shop was a major event in Katoomba and was highly praised. Guests were delighted by the modern architecture still with the comforts they enjoyed, the decorations, mirrors and the attention to detail. Local Radio 2KA broadcast from The Paragon and The Katoomba Daily[iii] wrote a rave review. In addition, they raised funds for Shuna, the Red Cross Home for Girls.
His promotions emphasised the products made in the store including chocolates, peanut brittle and many other goodies. In 1924 Jack purchased the property freehold[iv] and began the development of accommodation, office, chocolate factory, bakery and storage rooms upstairs.
In 1926 he was ready to refit the Tea Room into a Viennese Style Café. Jack employed the best shop fitting designers available, Harry and Ernest Sidgreaves (Ltd). His focus was on locating the best and latest, so travelled through Europe in 1929.



Machinery upstairs (photo courtesy) Robyn Parker

Banquet hall 2016

He met American born Greek Maria Panaretos in Kythera where she was holidaying with her parents. They married in USA in 1930 and returned to Australia. Maria, (Mary) a calm, very capable lady was an asset to the business with her welcoming manner and practical approach.

Jack employed the creative theatre architect, G N Kenworthy, as designer for the two back rooms. The Banquet Hall, with its Pre-Columbian decoration, was completed in 1934 and the Ocean Liner style Blue Room completed in 1936. Dr Ian Jack's well illustrated article on The Paragon was published by BMACHO and can be accessed online as BMACHO History Journal No. 5, pages 1 to 12.

In 1937 Jack was a foundation member of the Katoomba Rotary Club, the first on the Blue Mountains, and made The Paragon available for meetings. It was just part of his ongoing community service.

The situation was very different with the outbreak of WW2[v] as the whole population was affected and although 70 years have passed many families still live or have connections with mountains residents. In 1939 the Australian Government played down the possibility of war to minimise panic, while at the same time was preparing bills to be introduced immediately if, or when, war was declared. Within a week the Federal Parliament had met and implemented the National Security Bill, imposed censorship of the press, introduced categories of goods to be price controlled and other severe measures. Further restrictions were announced in the following week.

In 1940, at the start of WW2, Jack and Mary Simos selected architect G N Kenworthy to design a home for them at 12 Narrow Neck Road, Katoomba. At the same time Jack was involved in some way with the formation of The Paragon at Goulburn about 1940. Australia was already sending food to Britain as well as to Australian forces overseas, and was increasingly supplying food to the United States, British, Dutch and Free French navies in the Pacific. Australia's population of 7 million was producing food for 13 million … and this continued to 1945 and beyond.

Rationing was introduced to meet the demand as fairly as possible. The term rationing was originally used only for goods for which coupons as well as money were required. Clothing was first, on 24 June 1942, then tea. Australia was a nation of tea drinkers but when the Japanese overran Malaya that source ceased. Neither India nor Ceylon could make up the shortfall and shipping was unavailable even if the tea was. Tea coupon rationing was introduced on 6 July 1942 when the amount set was 1.5 ounces (56g) per person for five weeks. In effect it allowed for 2 or 3 cups of tea per day for all over 9 years of age. There are still locals who remember mother drying used tea leaves in the oven to eke out the tea further. There were relatively minor changes in quantities of rationed foods and drinks at times. This was followed by coupons for sugar and butter – all lasting until after the war was over. Supplies may or may not arrive on time, or even at all.

There were special instructions for registered businesses that provided casual meals such as The Paragon. The coupon system had to be met, not only for tea, but also sugar from 29 August and for butter on 7 June 1943. That was the first Australian produced food to be

rationed, followed by meat on 14 January 1944. Each had to meet the coupon system[vi] and lasted for years after the war.
Yet the family, and their employees, met the challenges through all those years.
In 1947 the Simos employed the Danish sculptor, Otto Steen, to carve 12 alabaster friezes to be attached to the maple-wood walls of the dining room, thus changing to a Greek theme. The Art Deco style classical Grecian figures in bas-relief are just one of the Paragon's treasures.
The Paragon continued to flourish under the Simos family in the ever changing conditions of the post war period. The years were catching up, Jack died in 1976 and Mary carried on. Their son Theodore, a lawyer, was concerned that she was not coping well and approached Stuart Chandler to "run" the business. This he did from 1977 to.1982 and he has generously told us more about her at the time. In Stuart's words: "*My memories of Mary are of a generous and welcoming person who showed great pride in the business and her husband's achievements. Although she left me to manage the day to day operations, she still worked seven days a week, serving chocolates and bakery goods behind the counter. She made coffees and often set up the window display of cream cakes, scones and pastries early each morning. However, Mary was best known for the warm way she greeted customers, personally seating many of them in the café. Even at her age, she rarely stopped for a break and would often be seen sitting near the counter, wrapping the freshly made famous Waratah Chocolate Bars in foil or the individual pieces of nougat in rice paper*."
The Paragon was recognised by The National Trust and placed on the Australian Heritage Commission's 1977 Register of the National Estate.
The Simos era ended with Mary's passing in 2001.
On Sunday 28 August, Sunday 25 September and Saturday 1 October 2016 there was the opportunity to find out more about parts of The Paragon not seen, the industrial activities undertaken upstairs, and further information on both the early Viennese style decoration and the later Art Deco for which the building is renowned. Who were the designers? When and why did they change to Art Deco style? Many changes have occurred over the century including fashions, worn by brides at their weddings at The Paragon. You can follow more of the story on the Facebook sites, Blue Mountains Historical Society, Tarella Cottage Museum and Friends of The Paragon.

Friends of the Paragon meet to celebrate the inclusion of the café on the State Heritage Register in 2015

This was a rare opportunity to find out about the equipment of yesteryear, what they were and how they were used. Friends of the Paragon were present to point out key features and answer questions. The Exhibition was held in the Tarella Cottage Museum, in the grounds of Blue Mountains Historical Society, 99 Blaxland Road, Wentworth Falls from 10am to 4pm.

Mrs. Wilhelmina Dunmore Lang

The number of famous people who have visited the Blue Mountains must be both indeterminable and huge yet few are known to have died there whilst visiting. Just three spring to mind. Sir Edmund Barton, who died of heart failure in the Belgravia wing of the Hydro Majestic Hotel, Medlow Bath, at 9.00 a.m. on 7 January 1920[1] and then almost four decades later there was Professor V. Gordon Childe, who committed suicide by falling from Barrow Lookout, Blackheath on 19 October 1957[2]. But long before those there was Mrs. Wilhelmina Lang, the widow of the Rev. J. Dunmore Lang, who had the misfortune to die at *Heatherton*, Blackheath on Tuesday 6th October 1891 of influenza[3].

Wilhelmina Lang (née Mackie)

Wilhelmina was born in Greenock, Scotland on 24 September 1812[4] (Figure 2) the daughter of William and Mary Mackie and *"when she was eighteen she sailed for Australia, under the care of Dr. Lang, at that time distinguished for his active labours in the interests of religion and civilisation."* [5].

The background to this lady gives an insight to some of the moral standards of 19th Century Presbyterians for 18 year-old Wilhelmina Mackie had left Scotland with her cousin the Rev. Lang (Figure 1) who was 13 years older, and *"Rev. Lang was escorting his cousin Wilhelmina Mackie to Sydney to marry his brother, Andrew. However, he persuaded her to marry him whilst on board the ship 'Stirling Castle' in Simon's Bay, Cape of Good Hope on the 25th August, 1831*." [6].

It is said that she married him at *"Cape Town to avoid opposition from Lang's mother, anticipated because of the difference in their ages."!* [7] The matriarch, Mary Lang (née Dunmore), is said to have *"had formidable powers of moral indignation and such capacity for vituperation that in comparison her son's most savage strictures seemed but a mild remonstrance.*" [9].

Nevertheless, it seems incredible that Wilhelmina's parents (William and Mary Mackie) would have let a teenaged, vulnerable, inexperienced, spinster travel alone with a male

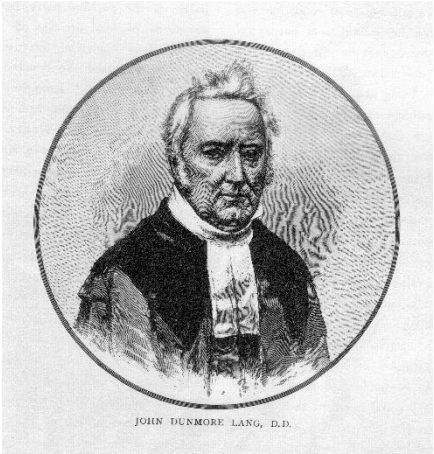

Figure 1. John Dunmore Lang, D.D.[8]

Figure 2. Mrs J. Dunmore Lang, ca 1880s

cousin, albeit that her escort was deeply religious. Seemingly at that time it was not deemed outrageous for young girls to be shipped off to distant parts of the globe to marry cousins but

one has to wonder what Andrew Lang thought of his brother for 'stealing' his bride-to-be. Clearly in the matter of love the Rev. Lang proved to be unscrupulous.
The *Stirling Castle* left Greenock on 1 June 1831 and arrived at Sydney on Thursday 13 October 1831 the couple being correctly listed as "Rev. Dr. Lang and Mrs. Lang" [10]. *"They took up their residence at No.11 Jamieson-street, Sydney, ... and which remained the home of his venerable widow till within four days of the end."*[11].
It was not a long street (now spelled Jamison) so that residence on the southern side was close to his Scots Presbyterian Church. The marriage was long and successful for they produced ten or eleven children (the count varies); two daughters were named Wilhelmina, the first died in 1845 aged just 6 weeks and was replaced by a second Wilhelmina in 1851 although she lasted just 15 months.
The Reverend John D. Lang pre-deceased his wife on 8 August 1878 and Wilhelmina (Figure 2) had been a widow for 13 years when she died on 6 October 1891[12] aged 78 having outlived at least six of her many children. Her body was taken down to Sydney promptly, supposedly on the mid-day train of the following day[13], for her funeral service was at 1.30 p.m. on Wednesday 7 October 1891 at the Scots Church although that cannot be correct; at that time[14] to arrive in Sydney for a 1:30 p.m. funeral it would have been necessary to catch the 8:08 a.m. train which arrived at 11.10 a.m. as the following 1:15 p.m. train did not arrive until 4:30 p.m. Interment followed in the family vault[15] at the Devonshire Street Presbyterian Cemetery[16] but when that ground was reclaimed for the Central Railway Station the remains must have been removed to Rookwood (grave 2307, Presbyterian Section, Rookwood Cemetery[17] (Figure 3).

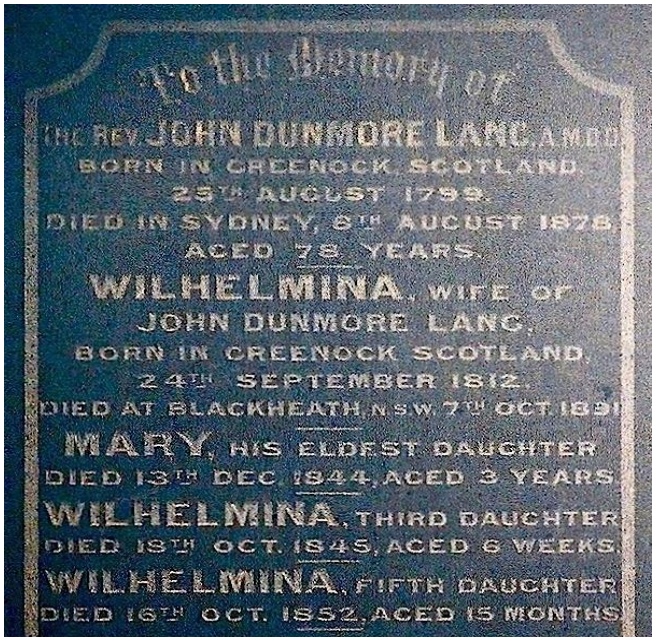

Figure 3. Lang Family, Rookwood Cemetery (Photo Peter Rickwood May 2012)
[The date of death is wrong.]

Heatherton, 47 Leichhardt Street, Blackheath. *(SHI 1170325)*
"A single storey house with a steeply pitched gabled roof with intersecting gables on the north and south sides. The house faces north overlooking a large garden." "Heatherton is a good representative example of a substantial Victorian Rustic Gothic residence. While this style is seen in the Blue Mountains in the extant gatekeeper's cottages, it is less common in privately built residences." [18].

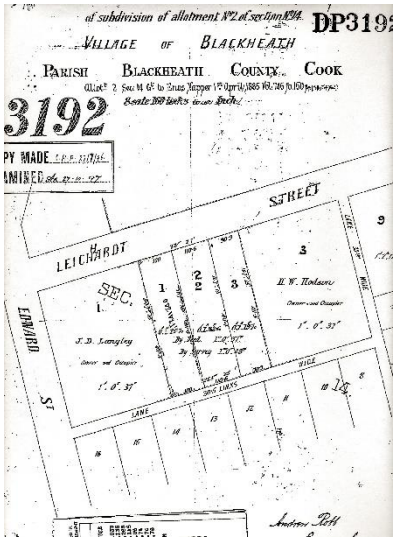

Figure 4. Part of DP 3192[19]

Figure 5. Heatherton[20]

Section 14, Lot 1 (bounded by Leichhardt Street, Prince Edward Street and Prince George Lane; DP3192[21] (Figure 4)) was bought by the Reverend John Douse Langley on 1 April 1885[22] and he had a furnished cottage constructed which was advertised for renting in October 1887[23].

"The house was built as a mountain retreat for the Anglican Bishop of Bathurst. Since St. Aidan's Anglican Church was within the Diocese of Sydney, the Leichhardt Street House was simply a holiday home for the Bathurst Bishop." [24].

With her clerical connections Wilhelmina Lang was almost certainly at Blackheath for a holiday when she died[25].

By the end of 1897 a school known as *Heatherton*[26] was operating in premises at 47 Leichhardt Street, Blackheath. Previously it had been called *Tusculum* a property which had been advertised as a *"large Furn. Cot., 4 min. station"* [27] so the School seems to have relocated further from the village centre to *Heatherton*. The school catered for *"Delicate children will have special attention, and elder girls taught Cookery and other home duties."* [28].

Seemingly, Miss Rebecca Darling, formerly Principal of St Catherine's School Waverley (1891-1895), advertised for the last time in 1900[29] with the enticement *"Bracing climate and thorough education."*

In 1962 the land was subdivided[30], *Heatherton* (Figure 5) being on Lot 1, the largest of seven, and extending from Leichhardt Street to Prince George Lane. *Heatherton* is set close to the middle of the block so from Leichhardt Street it is hidden from view behind a row of high bushes.

Dirk Hartog – 400 Years Celebration 1616 – 2016

The landing of Dutch East India Company (VOC) Captain Dirk Hartog at Cape Inscription WA in his ship the *Eendracht,* on 25 October 1616, sailing from the Dutch port of Texel along the Brouwer route, and making landfall on an island in the mouth of the current-day Shark Bay, marked the first formally recorded European contact with Western Australia.
This event has been celebrated by both the Dutch and Australian communities during 2016 with events taking place all over Australia. This 400 year relationship between the two countries has stretched into a connection that stretches far beyond the close political and economic ties.

Dirk Hartog

DIRK HARTOG
1616 - 2016
Marking our history, celebrating our future.

Anniversary Logo

Pewter plate

The year was launched in January 2016 with a Dutch orchestral performance in Sydney. On 1 October 2016 a seminar was held at History House, Sydney "In the Wake of Dirk Hartog: The Contribution of Dutch Exploration to Australia's History. The keynote speaker was Dr Edward Duyker OAM, and the day's program also included Paul Brunton OAM, Linda Emery, Dr Karen Entwistle, and Professor Adrien Vickers. Other actions included the creation of replicas of the pewter plate, and installation of interpretive panels at Cape Inscription.
The many events culminated in the commemorative function on 25 October 2016 at Cape Inscription on Dirk Hartog Island, hosted by the WA State Government.

Painting of the ship Eendracht & fleet by Willem van de Velde II

When Hartog landed in WA he left behind a pewter plate, realising that it was essential he leave evidence of his visit. He had his crew flatten a pewter dinner plate and engrave details of their trip. This was then nailed to an oak post and set in a rock fissure on the cliff above the beach. This plate is the oldest known European object ever found on Australian soil. The Island was named for Hartog.

Patsy Moppett

Further information with regard to the celebrations can be seen at the purpose-built website www.dirkhartog2016.nl

The Technical Side

Coopers and Hoopers

Cooperage or coopering is the ancient craft of barrel making, a rare trade that results in a water-tight, wooden vessel held together by nothing more than the hoops that surround it. The word cooperage also refers to the place or building where the craft takes place.
The *cooper* is a person in this trade, who makes and/or repairs utensils, casks, buckets, drums and barrels from wood, but occasionally from other materials (plastics, stainless steel, pallets and corrugated cardboard). The cooper usually learned his trade from a master craftsman over several years.

Coopers and hoopers at work

The craft involves making wooden staved vessels, bound together with hoops, and possessing flat ends or heads. The *hooper* was the man who fitted the metal hoops around the barrels or buckets.
Barrels have been used for over 2,000 years, dating back to Roman times, replacing clay pots. The French (the Gauls) claimed to be the first coopers, and there were coopers guilds in the early Middle Ages in France and England.
There were coopers and there were coopers!

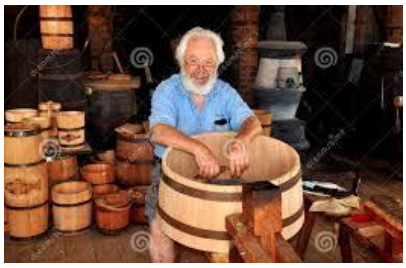
- The “dry” or “slack” cooper made containers for dry goods such as cereals, nails and tobacco, which were varnished.
- The “dry-tight cooper” made casks designed to store dry goods in and moisture out. Such as gunpowder and flour.
- The “white” cooper made straight stave containers like wash tubs and buckets which would hold water.
- The ”wet” or “tight” cooper made vessels for long term storage and transportation of liquids, such as beer.
- The “general” cooper worked on ships, on the docks and in warehouses, being responsible for cargo while in storage or transit.

Coopers guilds were common

Barrels are made much the same as they originally were. Few tools are used, and those included a saw and axe, planes, a croze and knives. Today power tools are sometimes used. Bob Butler worked at the Penfolds Winery back in 2002 in the Barossa Valley. He

explains that they have a great attachment to their tools. They “put them to bed” each night in a pile of wood shavings, so that the wood absorbs any moisture and helps prevent any rust.

The oak wood is carefully chosen and aged, the staves are carefully prepared, and the actual construction quite like the original methods. A skilled cooper could also mend a broken stave without losing the contents.
The choice of wood determined the quality of the end barrel – the age of the trees, the location in which they are grown, and the growing conditions of that area. French, American, Hungarian oaks are mostly used, the choice of which can determine the flavor of the wine, and trees chosen are usually 80-100 years old.
The wood must be straight and knot free, the grain tight and the tannin content high. Once the wood is staved it is stored in tiers exposed to weather and the elements to age and mature for several years.



The art has changed little

Once partly complete the barrel is toasted over an open flame to char the inside of the barrel to whatever level of toasting the client requires, and to enable the remaining iron bands to be attached. All measuring is by hand and eye. A barrel does not contain glue or nails or screws.
The terminology in the craft is quire specific, as with other rare trades:

- *Staves* – are created from oak that must be straight, knot-free, and properly aged, they are shaped and fitted together in a precise pattern that will render the finished barrel water-tight.
- *Hoops* are usually metal – steel, copper or iron. The chime hoop is at the outer edges, the quarter hoop is about ¼ of the way to the centre, French hoops are between the quarter hoop and the bilge hoop. The bilge hoop goes around the widest part of the barrel.
- *Chime* – the beveled edge at the top and bottom of the barrel where the ends of all the staves come together.
- *Croze* – is the groove that is created at the top and bottom of the barrel staves, created to hole the head. The tool used to make this groove is also called a croze.
- *Head* – is the flat circular top or bottom of the barrel. Each barrel is unique, so each head must be measured and created for the barrel it will fit.

Barrels from Spain in use at the Joadja distillery 2016

Today the cooper is mostly engaged in barrel making for the wine and spirits industry. In Medieval times, they were often portrayed as fat people, the story being that they needed a large belly to hold the barrel in place! The talent and skill required however, is unmatched today as a manual art form.
Now also used commonly as a surname, the word was derived from Middle Dutch or Middle Low German, originating from the Latin *cupa*, a tun or barrel. A coffin maker was sometimes known as a cooper as well. The namesake has been based therefore, on an ancient trade and art form.

Mystery photo

BMACHO has been set a challenge to assist the community in identifying some "mystery" photos! The first is a snowman!!! Actually, it is the location of the snowy gent that we need to know!

The writer advises that his mother's first snowman peeps into the photograph, where John Low proposes the location is other than Blackheath. The writer's mother stayed in the mountains for her winter holiday from Adelaide, probably in the early 1940s, and possibly suffering from a broken heart having lost her beau aboard the ill-fated Sydney (sunk 19/11/41).
The photograph is pasted into their family album and captioned in his mother's hand - "*My first & last snowman. Bless him"* and "*Rowena Dunkley's Home, Blackheath, NSW".* (In the 1936 Electoral Roll, Stan & Rona Dunkley lived at Eveleigh Avenue, Blackheath).
Does the building in the background give us any clues? *Patsy Moppett*

Please send any ideas in to BMACHO, to be passed on to the writer.

Email: committee@bluemountainsheritage.com.au or *j.koperberg@bigpond.com*

Community events & updates

Arcadian Artists 2016 – Exhibition & Art Trail

The Arcadian Artists' "Art Trail" takes you through Dural, Galston, Arcadia, Fiddletown and Berrilee and entices the people of Sydney, Blue Mountains, the south and north coast of New South Wales and beyond to experience the special talent exhibited by their Australian artists. All work is handmade by their exhibitors.

This year they are excited to be including two new private Studios along the "Trail". Both these venues are in the Galston area.

On the weekend of November 12th and 13th, bring along family and friends, and drive through the beautiful semi-rural area of Sydney's Hornsby and the Hills Shire's. You will be captivated by the work presented along the trail visiting eight (8) private studios opening for the weekend. There will be over 50 artists exhibiting, many of whom will be demonstrating their skills.

Entry is free. Visitors are given the exclusive opportunity to view and purchase unique artworks from their creators. The works available include such items as paintings, printmaking, sculpture, glass, mosaics, ceramics, textiles, felt work, jewellery, leather, timber work, book making and handmade shoes.

Exhibitors are by invitation only and this year will include our very own Leura bodger, Roy Davi, as featured in *Heritage* November-December 2015. Roy will be wood turning at Pine Valley Studio at 6 Galston Valley Road, Galston.

Roy advises: "*Pole lathe greenwood turning is my passion. My enthusiasm for this ancient craft began many years ago when I first came across 'bodging' – the traditional craft of greenwood turning. Bodging was developed in medieval times and later used for creating fine furniture including the classic Windsor chair. More recently I have broadened my interests and now create my own style of greenwood furniture as well as traditionally crafted wooden household utensils"*.

Royal Australian Historical Society Conference 2016
Times Are A-Changing – History & Innovation

The 2016 RAHS Conference was held at Centro CBD, Wollongong (28 Stewart St. Wollongong NSW) on Saturday 22nd – Sunday 23rd October 2016.

The Conference examined how the digital revolution is impacting the way we research and produce history. There is also an increasing appetite for local and community history that connects people to their identity and place.

Sublime Point Lookout, Wollongong c.1925

The Conference showed how history plays a critical role in advocacy campaigns to ensure that these places remain part of our cultural landscape in this era of widespread urban development. How historical societies engage with these developments is critical to ensure their continued relevancy in 21st century Australia.

Patsy Moppett

Crago Observatory Tour

Commemorate the work of the Hawkesbury's famous astronomer (1834-1916) with a visit to Crago Observatory at Bowen Mountain for a viewing of the night sky, on Saturday 5 November at 5.30pm. Tebbutt's Crater on the moon, as well as Mars, Venus and Saturn (weather obliging) will be visible.

Crago Observatory

John Tebbutt

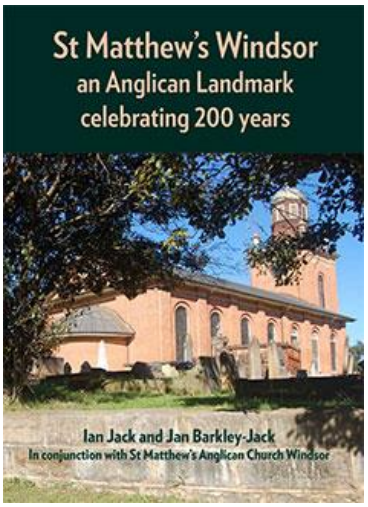
Crago Observatory is the Astronomical Society of NSW (ASNSW)'s "local" dark sky observing site at Bowen Mountain, located a short distance from the northern end of Lt Bowen Road. The Observatory consists of a large rotating dome housing a high class 16" Dobsonian Telescope, fitted with Argo Navis and ServoCAT as well as a wide range of eyepieces and star charts available for use with the telescope. *Patsy Moppett*
Tour participants will meet at the museum. Bookings are essential. Ph: 02 4560 4655.

St Matthews Windsor Celebrates 200 years

St Matthews Anglican Church in Windsor is set to celebrate 200 years with the launch of a new book by Jan Barkley-Jack and Dr Ian Jack on 12 November 2016 on the history of the

church. The launch will be undertaken at the beginning of their Bicentennial Year and will be attended by The Honourable Dame Marie Bashir AD CVO.
Francis Greenway's church has become a landmark, religious, social and architectural, in the town of Windsor and far beyond. Its commanding presence in the upper Hawkesbury valley began early in the European history of the third area farmed on the Australian mainland and is still potent today.

St Mathews, Windsor



The book analyses the architectural heritage within its social context. The orange-pink glow of the bricks, the elegant lines and softly repetitive arched windows tell why St Matthew's has been cited as its ex-convict architect's masterpiece.
This is a new study of St Matthew's first 200 years, told not just as bricks, mortar, sandstone and cedar, but of its people in the river valley. This book recreates the life and aspirations of the Anglican community which has created and preserved this rare, early church.

Patsy Moppett

The book will be available from November from Rosenberg Publishing for $29.95.

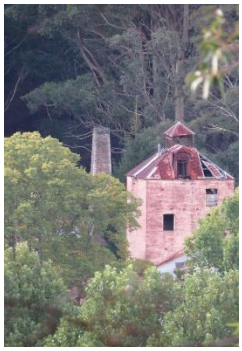
Murder Mystery at the Brewery

On November 4th the Old Zig Zag Brewery at Lithgow (c.1893) will offer the perfect backdrop for a night of mystery and murder hosted by the Lithgow Regional Branch of the National Trust NSW.
"A Chocolate Orange", concerning the mysterious goings-on in the making of a new film is a comedy twist on the name of the seventies-style thriller 'A Clockwork Orange'. It is performed by the Bathurst Theatre Company and Mountain Murder Mysteries. The latter group is well known locally, having previously entertained visitors in the breathtaking setting of Jenolan Caves.



To open the night Vaughan Bryers, official Zig Zag Brewery historian, will link history and whodunit and introduce the villains and heroes in the Brewery's past.
Seventies dress is optional, and if you front up in the flamboyant and colourful clothes of that era worn by men and women alike, prizes are on offer. You could join the characters to track down vital evidence, or just sit back and work out who did it. *Lithgow National Trust*

Show and 2-course dinner:
Brewery Lane, Lithgow, 6.30pm on Friday 4th November.
Tickets: $60 per person from Readers Heaven Books, Lithgow – 0474 957 856 or from Lithgow National Trust branch – 02 6359 3109

Museum of Applied Arts and Sciences (MAAS) Regional Stakeholder Forum

This annual forum is an opportunity for the regional museums and collectors sector to get together, discuss current topics and be inspired by new ideas. It is designed for regional stakeholders, such as;

- Volunteers.
- Arts development officers.
- Museum Advisors.
- Program producers.
- Regional cultural sector advisors.

Speakers include:

- Ray Christison, President, Lithgow State Mine Heritage Park
- Ann Frederick, Transport Heritage NSW
- Michael Rolfe – CEO Museums & Galleries of NSW
- Tamara Hynd & Toni Lindwall – Shellharbour City Council
- Luke Grealy - Museums of the Riverina
- Yvonne Rutledge - Museum Advisor for St John Museum, Unley, SA and Broken Hill Museums NSW
- Kerry-Ann Jones - Executive Director, South West Arts
- Marcus Hughes - Indigenous Program Producer, MAAS
- Elliott Bledsoe - Queensland Writers Group
- Susan Davis - Secretary, Historian & Archivist, The Oaks Historical Society
- Cathy Mann – Holbrook Submarine Museum

The Introduction will be done by Tristan Sharp, MAAS Director, and the Welcome to Country and summing up will be done by Deborah Vaughan.

The Forum will be held on Friday 11 November 2016, from 9am to 3.30pm at the Powerhouse Museum, 500 Harris Street, Ultimo NSW. The event is free but registrations are essential. It includes morning/afternoon tea and a light lunch. The full program can be seen at www.maaas.museum.org.au *Patsy Moppett*

National Trust Heritage Festival 2017 – *Having a Voice*

The National Trust Heritage Festival began back in 1980 and has become Australia's biggest festival of heritage and culture. There is a new name and a new home for event organisers to register their events and join an amazing network of local organisers across the country.

In the last 36 years the Heritage Festival has become the largest and longest running grass roots national festival of its type, with up to 1,400 events bringing together people all over Australia to celebrate what makes their neighbourhood special. Each year stories are told, traditions explored and histories brought to life through activities like guided walks, talks, tours, demonstrations and hands on history experiences for people of all ages.

The time is right for a different approach both to the festival itself and in the way it is marketed and communicated, it in order to secure its sustainability both now and into the future.

Emu Plains

Glenbrook

Windsor

Some things won't change. The NT still want everybody to join them in celebrating Australia's historic, natural and Aboriginal heritage during the months of April and May. The changes they have made are designed to make the festival more exciting and inclusive and are about being part of the community.

The first stage of this new approach is a revised registration process. This will soon be live on their website and you will be able to click on "How to get involved" to be taken to a page full of information on how to register your event. For the first time they have entry criteria so you may be sure that the event you are registering stays true to the ethos of the festival of encouraging different interpretations of heritage and culture around the country.

The 2017 Festival will run from 18th April until May 21st 2017. The theme for 2017 will be *"Having a Voice"* which calls on communities to champion their local heritage and show their support for cultural and historic assets on their doorsteps.

The NT are finalising an exciting new registration portal which will be up and running in the

next few weeks. They will email out to their database again with more details and when registrations are about to open, and BMACHO will publish information as it comes to hand. In addition, there are other exciting initiatives coming up next year which will help make the Festival even bigger and better for all concerned. *Patsy Moppett*

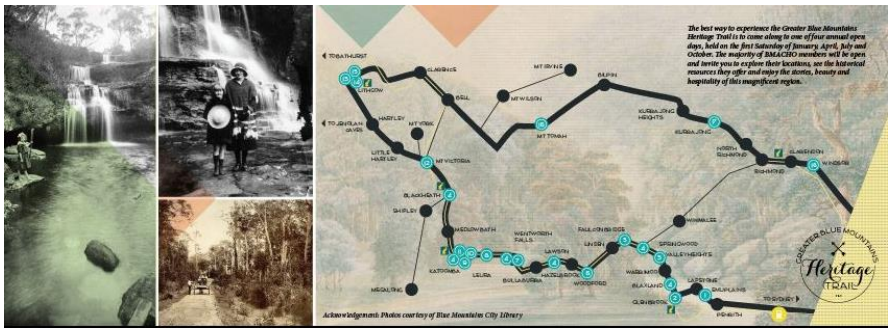
Greater Blue Mountains Heritage Trail



The Greater Blue Mountains Heritage Trail enables travellers to experience the history and landscapes, and the extensive sources of archives, images and stories presented by members of the Trail. In addition, the Trail draws in eateries and accommodation venues along the way. Brochures are available at participating businesses and Visitor Information Centres from Parramatta through to Orange, from Hawkesbury to Wollondilly, and out through Oberon to the Jenolan Caves.

Open Days: Following consideration of feedback from the various member groups over the past year of Open Days held, the BMACHO Committee has decided not to continue with the official Open Days beyond October 2016. For a variety of reasons, weather conditions, clash of events, lack of resources and staff at venues, etc the Open Days could not be further justified.

A number of other options are being considered by the Committee for 2017, when the Trail brochure is due for reprinting.

Feedback from members, however, is always welcome on any aspect of the Trail!

Merry Christmas and a Happy & Safe New Year!

From the BMACHO Committee

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Day Fine Art; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators), Roy Bennett, and Lynn Collins, Museums Advisor.
Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Laura Stinson, Wendy Hawkes & Jan Koperberg.

Course de Circuit Hartley

Following on from the previous issue of Heritage, another local racing circuit was located in the Hartley Valley, south east of Lithgow. It operated from approximately 1910 to 1938, although these dates are uncertain. It ceased at the beginning of WWII and never restarted, as by then the Mount Panorama circuit had opened. The course was 6.035km (3.75 miles) in length and went in a clockwise direction. Buses conveyed people from Lithgow at a cost of 4/- return. The original racing surface is long gone, the track is now partly bitumen and partly gravel, and the existing roads still follow the original route.

Used mostly for motorbikes and sidecars, it hosted the Tourist Trophy and other events on Anniversary Day January 26 each year. After each event many farm fences required re straining as spectators sat on the fences to watch!

It was a very fast circuit with the Hartley Vale Road and Browns Gap Road sections being reasonably straight, flat and about 2 kilometres in length. The Mid Hartley Road section was somewhat more challenging with blind crests and two very fast sweeping corners. There were three corners that caused more accidents than any other part of the circuit. Mount York Corner, A. Butta's Corner and J. Morris' Corner, being almost hairpins, creating a sudden end to the long straights.

In 1924 the event was reported to have a good attendance and good racing. The events held were the 50 miles under 600cc, 25 miles sidecar handicap, 50 miles handicap all powers, and the 25 miles open championship.

In 1925 Blaxland Shire Council placed a veto on road racing which, if enforced, would have prevented the January carnival from taking place. The Council was approached to have the restriction relaxed. Club representatives met with the Council to discuss the veto, at Mr Bird's shop days before the scheduled carnival, and the carnival was able to go ahead with a record number of entries (83 for the four solo events).

The sidecar event was not held as there were only two competitors. The crowd swelled to 1,500 people, and AJS machines secured first in all events. Other bikes featured included New Imperial, BSA, Douglas, Harley Davidson and Norton.

The 1925 event included the 25 mile State Championship, and the State's best riders were competing. The first race commenced at 9.30am, and the event included luncheon on the grounds. The President of the Lithgow MCC at the time was G Smith, and the Honorary Secretary was PE Farthing. Entrants included Tom O'Dea, Gus Clifton and Stewart Williams. The Lithgow Mercury reported that the course was again very safe and maintained its reputation of not having a serious accident in 15 years. Events included the 25 mile novice handicap, the 25 miles (500cc and under), the 100 mile (all powers) handicap, and the State Championship.

In the State Championship, a novel scheme was introduced to prevent crowding at the start. There were 18 entries, but only nine faced the starter. The first division was allowed halfway around the course before the second was started.

In 1926 the annual carnival was again held, although numbers were affected by big events at Maroubra speedway, and an idea on the part of many metropolitan riders, that the Blaxland Shire would not sanction racing over the course.

The large trees in the vicinity of the starting point at "Stormville", owned by Mr R Jones, afforded shade for spectators and competitors, many picnicing under the trees. Mrs Jones served a nice lunch at the homestead. The president was Mr G Tyrer, and the Honorary Secretary was Mr Roy Boon. Major incidents were avoided other than a few spills which resulted in gravel rash. Unfortunately, the biggest event, the 100 mile handicap, was marred by a large bushfire which developed across a portion of the road. The riders persisted and the event was not cancelled, but reduced in length to 25 miles so the riders did not have to pass through the smoke too often!

The following years would prove just as difficult to organise the event, with the 1927 meet being the last for nine years. In 1936, motorcycles returned to the circuit with the event being eventually discontinued.

The large tree on what is now the corner of Browns Gap Road and Fields Road, was often an obstacle and the route was diverted to the northern side of the tree to minimise mishaps.

Later in 1936, the Tourist Trophy was held on January 27 and attracted several thousand people. Three accidents marred the day but no one was seriously hurt, although hospitalisation was required in all three cases. The Mount York corner claimed one victim, when the chassis of a sidecar collapsed, hurling the rider into the fence. The passenger escaped injury. The events held were the Junior Tourist Trophy (under 350cc), Lightweight Championship Scratch Race (under 250cc), Lithgow Handicap (all powers sidecars), NSW Senior TT Championship (all powers) and the Blaxland Handicap (all power solo).
In 1937 the Blaxland Shire Council refused permission for road closures, and the event was moved to 3 January 1938, with practice held the previous weekend.
Management of the races eventually was given over to the Western Suburbs Club.
One bizarre story reported by Old Bike Australasia involved the Italian man who ran the provisions stall from his front yard. He was found murdered, and several local youths were arrested. They believed that he had a stash of cash in his house, which proved to be quite false.

Food for thought ..... Editor's note

With the Christmas season on us again already, I will not regale you with deep and meaningful philosophical thoughts on history and on heritage conservation! There are too many exciting events coming up over the Christmas break and many intriguing conferences and forums in 2017 to look forward to, which will enable the community to make its own observations on the past, and to make decisions about future directions of heritage.
The BMACHO Committee hope you enjoy the selection of articles in this issue, where a variety of topics has been researched to entertain members and non-members over the Christmas break.

Kamloops Heritage Railway Steam Train, British Colombia

We hope you enjoy the content of *Heritage* No. 47 as much as we enjoy presenting it to you. We always welcome articles from the community, so would encourage these at any time. Merry Christmas and a happy and safe New Year! Looking forward to sharing heritage in 2017!

Centenary of The Paragon

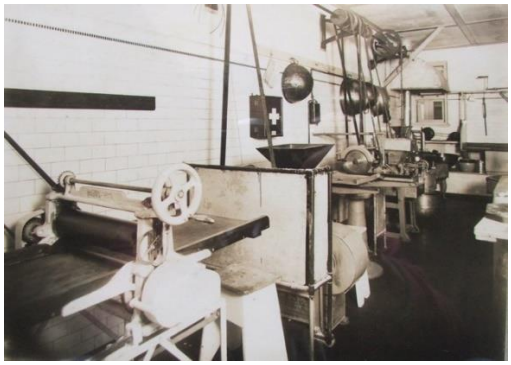
The Blue Mountains Historical Society has joined with lessee Robyn Parker and Friends of the Paragon to celebrate the centenary of this iconic Katoomba business.
Fifteen year old Greek Zacharias Simos arrived in Sydney on 13 May, 1912 per Omrah (Orient Line), worked in a Greek café in Tenterfield for 18 months, then in Sydney for 2½ years[i] before leasing the 1909 Katoomba building housing the "Devonshire Tea Room" in 1916.
He was joined later by brothers Peter, and George, a confectioner. The tea room became The Paragon Café and Oyster Palace, and specialised in late suppers for patrons after evening dances and shows. Patrons included many affluent holiday makers who stayed at The Carrington or The Ritz at Leura. Simos grasped the opportunity to develop the niche market. His first advertisement[ii] was as Z Simos & Co., Proprietors.

Grocers in upper mountains towns delivered locally on set days, but not broadly across the mountains, with perishable goods such as oysters and lobsters. He set a standard, challenging others to follow. Following Simos' business names can be a challenge too. There have been many changes over the past century but The Paragon has continued at the same site. Zacharias, known as Jack, took many risks but seems to have had an uncanny ability to foresee and capitalise on business opportunities. Once he owned the building, he set about fitting out the upstairs area for accommodation, an office, storage area, a bakery, and a chocolate factory, the latter run by brother George. Business expanded rapidly.
In addition to the culinary delights and late night service, Jack enhanced visitors' experience over the years by what could be simply called decorating the walls and developing specialist rooms. He travelled through Europe for a year or so, seeking out the best the world had to offer at that time. Nothing less than the best would do for his business in the relatively small holiday town of Katoomba in the Blue Mountains. One can only wonder what the locals thought of his early endeavours!

The café area

The chocolate selection 2016

In 1921 The Paragon was advertised as a Sundae and Candy Shop by Z Simos, Proprietor. The celebration of the official opening of the dance room in conjunction with the Paragon Sundae Shop was a major event in Katoomba and was highly praised. Guests were delighted by the modern architecture still with the comforts they enjoyed, the decorations, mirrors and the attention to detail. Local Radio 2KA broadcast from The Paragon and The Katoomba Daily[iii] wrote a rave review. In addition, they raised funds for Shuna, the Red Cross Home for Girls.
His promotions emphasised the products made in the store including chocolates, peanut brittle and many other goodies. In 1924 Jack purchased the property freehold[iv] and began the development of accommodation, office, chocolate factory, bakery and storage rooms upstairs.
In 1926 he was ready to refit the Tea Room into a Viennese Style Café. Jack employed the best shop fitting designers available, Harry and Ernest Sidgreaves (Ltd). His focus was on locating the best and latest, so travelled through Europe in 1929.



Machinery upstairs (photo courtesy) Robyn Parker

Banquet hall 2016

He met American born Greek Maria Panaretos in Kythera where she was holidaying with her parents. They married in USA in 1930 and returned to Australia. Maria, (Mary) a calm, very capable lady was an asset to the business with her welcoming manner and practical approach.

Jack employed the creative theatre architect, G N Kenworthy, as designer for the two back rooms. The Banquet Hall, with its Pre-Columbian decoration, was completed in 1934 and the Ocean Liner style Blue Room completed in 1936. Dr Ian Jack's well illustrated article on The Paragon was published by BMACHO and can be accessed online as BMACHO History Journal No. 5, pages 1 to 12.

In 1937 Jack was a foundation member of the Katoomba Rotary Club, the first on the Blue Mountains, and made The Paragon available for meetings. It was just part of his ongoing community service.

The situation was very different with the outbreak of WW2[v] as the whole population was affected and although 70 years have passed many families still live or have connections with mountains residents. In 1939 the Australian Government played down the possibility of war to minimise panic, while at the same time was preparing bills to be introduced immediately if, or when, war was declared. Within a week the Federal Parliament had met and implemented the National Security Bill, imposed censorship of the press, introduced categories of goods to be price controlled and other severe measures. Further restrictions were announced in the following week.

In 1940, at the start of WW2, Jack and Mary Simos selected architect G N Kenworthy to design a home for them at 12 Narrow Neck Road, Katoomba. At the same time Jack was involved in some way with the formation of The Paragon at Goulburn about 1940. Australia was already sending food to Britain as well as to Australian forces overseas, and was increasingly supplying food to the United States, British, Dutch and Free French navies in the Pacific. Australia's population of 7 million was producing food for 13 million … and this continued to 1945 and beyond.

Rationing was introduced to meet the demand as fairly as possible. The term rationing was originally used only for goods for which coupons as well as money were required. Clothing was first, on 24 June 1942, then tea. Australia was a nation of tea drinkers but when the Japanese overran Malaya that source ceased. Neither India nor Ceylon could make up the shortfall and shipping was unavailable even if the tea was. Tea coupon rationing was introduced on 6 July 1942 when the amount set was 1.5 ounces (56g) per person for five weeks. In effect it allowed for 2 or 3 cups of tea per day for all over 9 years of age. There are still locals who remember mother drying used tea leaves in the oven to eke out the tea further. There were relatively minor changes in quantities of rationed foods and drinks at times. This was followed by coupons for sugar and butter – all lasting until after the war was over. Supplies may or may not arrive on time, or even at all.

There were special instructions for registered businesses that provided casual meals such as The Paragon. The coupon system had to be met, not only for tea, but also sugar from 29 August and for butter on 7 June 1943. That was the first Australian produced food to be

rationed, followed by meat on 14 January 1944. Each had to meet the coupon system[vi] and lasted for years after the war.
Yet the family, and their employees, met the challenges through all those years.
In 1947 the Simos employed the Danish sculptor, Otto Steen, to carve 12 alabaster friezes to be attached to the maple-wood walls of the dining room, thus changing to a Greek theme. The Art Deco style classical Grecian figures in bas-relief are just one of the Paragon's treasures.
The Paragon continued to flourish under the Simos family in the ever changing conditions of the post war period. The years were catching up, Jack died in 1976 and Mary carried on. Their son Theodore, a lawyer, was concerned that she was not coping well and approached Stuart Chandler to "run" the business. This he did from 1977 to.1982 and he has generously told us more about her at the time. In Stuart's words: "*My memories of Mary are of a generous and welcoming person who showed great pride in the business and her husband's achievements. Although she left me to manage the day to day operations, she still worked seven days a week, serving chocolates and bakery goods behind the counter. She made coffees and often set up the window display of cream cakes, scones and pastries early each morning. However, Mary was best known for the warm way she greeted customers, personally seating many of them in the café. Even at her age, she rarely stopped for a break and would often be seen sitting near the counter, wrapping the freshly made famous Waratah Chocolate Bars in foil or the individual pieces of nougat in rice paper*."
The Paragon was recognised by The National Trust and placed on the Australian Heritage Commission's 1977 Register of the National Estate.
The Simos era ended with Mary's passing in 2001.
On Sunday 28 August, Sunday 25 September and Saturday 1 October 2016 there was the opportunity to find out more about parts of The Paragon not seen, the industrial activities undertaken upstairs, and further information on both the early Viennese style decoration and the later Art Deco for which the building is renowned. Who were the designers? When and why did they change to Art Deco style? Many changes have occurred over the century including fashions, worn by brides at their weddings at The Paragon. You can follow more of the story on the Facebook sites, Blue Mountains Historical Society, Tarella Cottage Museum and Friends of The Paragon.

Friends of the Paragon meet to celebrate the inclusion of the café on the State Heritage Register in 2015

This was a rare opportunity to find out about the equipment of yesteryear, what they were and how they were used. Friends of the Paragon were present to point out key features and answer questions. The Exhibition was held in the Tarella Cottage Museum, in the grounds of Blue Mountains Historical Society, 99 Blaxland Road, Wentworth Falls from 10am to 4pm.

Mrs. Wilhelmina Dunmore Lang

The number of famous people who have visited the Blue Mountains must be both indeterminable and huge yet few are known to have died there whilst visiting. Just three spring to mind. Sir Edmund Barton, who died of heart failure in the Belgravia wing of the Hydro Majestic Hotel, Medlow Bath, at 9.00 a.m. on 7 January 1920[1] and then almost four decades later there was Professor V. Gordon Childe, who committed suicide by falling from Barrow Lookout, Blackheath on 19 October 1957[2]. But long before those there was Mrs. Wilhelmina Lang, the widow of the Rev. J. Dunmore Lang, who had the misfortune to die at *Heatherton*, Blackheath on Tuesday 6th October 1891 of influenza[3].

Wilhelmina Lang (née Mackie)

Wilhelmina was born in Greenock, Scotland on 24 September 1812[4] (Figure 2) the daughter of William and Mary Mackie and *"when she was eighteen she sailed for Australia, under the care of Dr. Lang, at that time distinguished for his active labours in the interests of religion and civilisation."* [5].

The background to this lady gives an insight to some of the moral standards of 19th Century Presbyterians for 18 year-old Wilhelmina Mackie had left Scotland with her cousin the Rev. Lang (Figure 1) who was 13 years older, and *"Rev. Lang was escorting his cousin Wilhelmina Mackie to Sydney to marry his brother, Andrew. However, he persuaded her to marry him whilst on board the ship 'Stirling Castle' in Simon's Bay, Cape of Good Hope on the 25th August, 1831*." [6].

It is said that she married him at *"Cape Town to avoid opposition from Lang's mother, anticipated because of the difference in their ages."!* [7] The matriarch, Mary Lang (née Dunmore), is said to have *"had formidable powers of moral indignation and such capacity for vituperation that in comparison her son's most savage strictures seemed but a mild remonstrance.*" [9].

Nevertheless, it seems incredible that Wilhelmina's parents (William and Mary Mackie) would have let a teenaged, vulnerable, inexperienced, spinster travel alone with a male

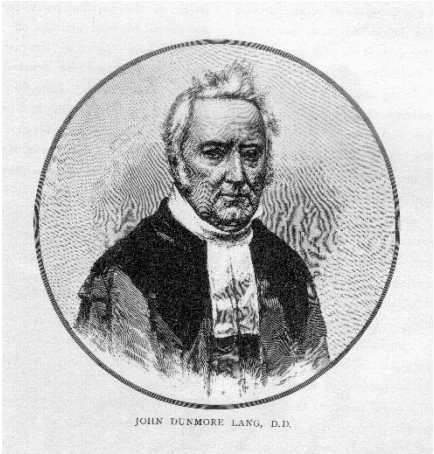

Figure 1. John Dunmore Lang, D.D.[8]

Figure 2. Mrs J. Dunmore Lang, ca 1880s

cousin, albeit that her escort was deeply religious. Seemingly at that time it was not deemed outrageous for young girls to be shipped off to distant parts of the globe to marry cousins but

one has to wonder what Andrew Lang thought of his brother for 'stealing' his bride-to-be. Clearly in the matter of love the Rev. Lang proved to be unscrupulous.
The *Stirling Castle* left Greenock on 1 June 1831 and arrived at Sydney on Thursday 13 October 1831 the couple being correctly listed as "Rev. Dr. Lang and Mrs. Lang" [10]. *"They took up their residence at No.11 Jamieson-street, Sydney, ... and which remained the home of his venerable widow till within four days of the end."*[11].
It was not a long street (now spelled Jamison) so that residence on the southern side was close to his Scots Presbyterian Church. The marriage was long and successful for they produced ten or eleven children (the count varies); two daughters were named Wilhelmina, the first died in 1845 aged just 6 weeks and was replaced by a second Wilhelmina in 1851 although she lasted just 15 months.
The Reverend John D. Lang pre-deceased his wife on 8 August 1878 and Wilhelmina (Figure 2) had been a widow for 13 years when she died on 6 October 1891[12] aged 78 having outlived at least six of her many children. Her body was taken down to Sydney promptly, supposedly on the mid-day train of the following day[13], for her funeral service was at 1.30 p.m. on Wednesday 7 October 1891 at the Scots Church although that cannot be correct; at that time[14] to arrive in Sydney for a 1:30 p.m. funeral it would have been necessary to catch the 8:08 a.m. train which arrived at 11.10 a.m. as the following 1:15 p.m. train did not arrive until 4:30 p.m. Interment followed in the family vault[15] at the Devonshire Street Presbyterian Cemetery[16] but when that ground was reclaimed for the Central Railway Station the remains must have been removed to Rookwood (grave 2307, Presbyterian Section, Rookwood Cemetery[17] (Figure 3).

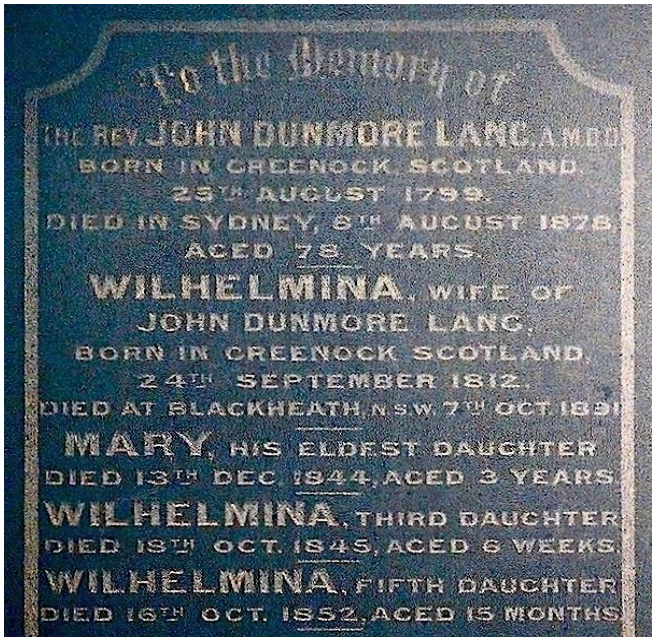

Figure 3. Lang Family, Rookwood Cemetery (Photo Peter Rickwood May 2012)
[The date of death is wrong.]

Heatherton, 47 Leichhardt Street, Blackheath. *(SHI 1170325)*
"A single storey house with a steeply pitched gabled roof with intersecting gables on the north and south sides. The house faces north overlooking a large garden." "Heatherton is a good representative example of a substantial Victorian Rustic Gothic residence. While this style is seen in the Blue Mountains in the extant gatekeeper's cottages, it is less common in privately built residences." [18].

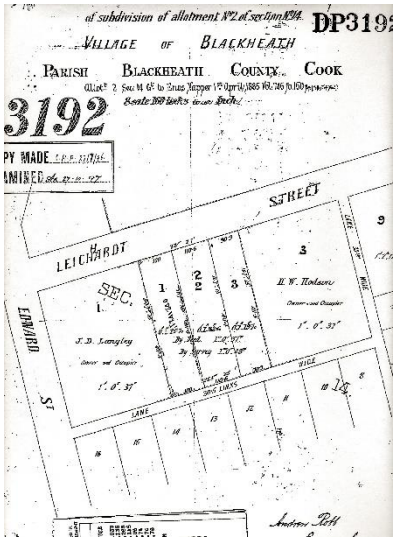

Figure 4. Part of DP 3192[19]

Figure 5. Heatherton[20]

Section 14, Lot 1 (bounded by Leichhardt Street, Prince Edward Street and Prince George Lane; DP3192[21] (Figure 4)) was bought by the Reverend John Douse Langley on 1 April 1885[22] and he had a furnished cottage constructed which was advertised for renting in October 1887[23].

"The house was built as a mountain retreat for the Anglican Bishop of Bathurst. Since St. Aidan's Anglican Church was within the Diocese of Sydney, the Leichhardt Street House was simply a holiday home for the Bathurst Bishop." [24].

With her clerical connections Wilhelmina Lang was almost certainly at Blackheath for a holiday when she died[25].

By the end of 1897 a school known as *Heatherton*[26] was operating in premises at 47 Leichhardt Street, Blackheath. Previously it had been called *Tusculum* a property which had been advertised as a *"large Furn. Cot., 4 min. station"* [27] so the School seems to have relocated further from the village centre to *Heatherton*. The school catered for *"Delicate children will have special attention, and elder girls taught Cookery and other home duties."* [28].

Seemingly, Miss Rebecca Darling, formerly Principal of St Catherine's School Waverley (1891-1895), advertised for the last time in 1900[29] with the enticement *"Bracing climate and thorough education."*

In 1962 the land was subdivided[30], *Heatherton* (Figure 5) being on Lot 1, the largest of seven, and extending from Leichhardt Street to Prince George Lane. *Heatherton* is set close to the middle of the block so from Leichhardt Street it is hidden from view behind a row of high bushes.

Dirk Hartog – 400 Years Celebration 1616 – 2016

The landing of Dutch East India Company (VOC) Captain Dirk Hartog at Cape Inscription WA in his ship the *Eendracht,* on 25 October 1616, sailing from the Dutch port of Texel along the Brouwer route, and making landfall on an island in the mouth of the current-day Shark Bay, marked the first formally recorded European contact with Western Australia.
This event has been celebrated by both the Dutch and Australian communities during 2016 with events taking place all over Australia. This 400 year relationship between the two countries has stretched into a connection that stretches far beyond the close political and economic ties.

Dirk Hartog

DIRK HARTOG
1616 - 2016
Marking our history, celebrating our future.

Anniversary Logo

Pewter plate

The year was launched in January 2016 with a Dutch orchestral performance in Sydney. On 1 October 2016 a seminar was held at History House, Sydney "In the Wake of Dirk Hartog: The Contribution of Dutch Exploration to Australia's History. The keynote speaker was Dr Edward Duyker OAM, and the day's program also included Paul Brunton OAM, Linda Emery, Dr Karen Entwistle, and Professor Adrien Vickers. Other actions included the creation of replicas of the pewter plate, and installation of interpretive panels at Cape Inscription.
The many events culminated in the commemorative function on 25 October 2016 at Cape Inscription on Dirk Hartog Island, hosted by the WA State Government.

Painting of the ship Eendracht & fleet by Willem van de Velde II

When Hartog landed in WA he left behind a pewter plate, realising that it was essential he leave evidence of his visit. He had his crew flatten a pewter dinner plate and engrave details of their trip. This was then nailed to an oak post and set in a rock fissure on the cliff above the beach. This plate is the oldest known European object ever found on Australian soil. The Island was named for Hartog.

Patsy Moppett

Further information with regard to the celebrations can be seen at the purpose-built website www.dirkhartog2016.nl

The Technical Side

Coopers and Hoopers

Cooperage or coopering is the ancient craft of barrel making, a rare trade that results in a water-tight, wooden vessel held together by nothing more than the hoops that surround it. The word cooperage also refers to the place or building where the craft takes place.
The *cooper* is a person in this trade, who makes and/or repairs utensils, casks, buckets, drums and barrels from wood, but occasionally from other materials (plastics, stainless steel, pallets and corrugated cardboard). The cooper usually learned his trade from a master craftsman over several years.

Coopers and hoopers at work

The craft involves making wooden staved vessels, bound together with hoops, and possessing flat ends or heads. The *hooper* was the man who fitted the metal hoops around the barrels or buckets.
Barrels have been used for over 2,000 years, dating back to Roman times, replacing clay pots. The French (the Gauls) claimed to be the first coopers, and there were coopers guilds in the early Middle Ages in France and England.
There were coopers and there were coopers!

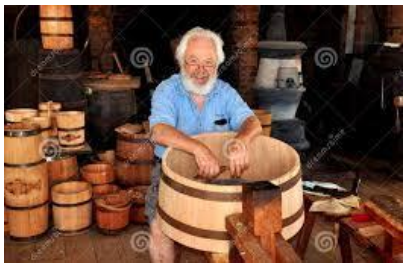
- The “dry” or “slack” cooper made containers for dry goods such as cereals, nails and tobacco, which were varnished.
- The “dry-tight cooper” made casks designed to store dry goods in and moisture out. Such as gunpowder and flour.
- The “white” cooper made straight stave containers like wash tubs and buckets which would hold water.
- The ”wet” or “tight” cooper made vessels for long term storage and transportation of liquids, such as beer.
- The “general” cooper worked on ships, on the docks and in warehouses, being responsible for cargo while in storage or transit.

Coopers guilds were common

Barrels are made much the same as they originally were. Few tools are used, and those included a saw and axe, planes, a croze and knives. Today power tools are sometimes used. Bob Butler worked at the Penfolds Winery back in 2002 in the Barossa Valley. He

explains that they have a great attachment to their tools. They “put them to bed” each night in a pile of wood shavings, so that the wood absorbs any moisture and helps prevent any rust.

The oak wood is carefully chosen and aged, the staves are carefully prepared, and the actual construction quite like the original methods. A skilled cooper could also mend a broken stave without losing the contents.
The choice of wood determined the quality of the end barrel – the age of the trees, the location in which they are grown, and the growing conditions of that area. French, American, Hungarian oaks are mostly used, the choice of which can determine the flavor of the wine, and trees chosen are usually 80-100 years old.
The wood must be straight and knot free, the grain tight and the tannin content high. Once the wood is staved it is stored in tiers exposed to weather and the elements to age and mature for several years.



The art has changed little

Once partly complete the barrel is toasted over an open flame to char the inside of the barrel to whatever level of toasting the client requires, and to enable the remaining iron bands to be attached. All measuring is by hand and eye. A barrel does not contain glue or nails or screws.
The terminology in the craft is quire specific, as with other rare trades:

- *Staves* – are created from oak that must be straight, knot-free, and properly aged, they are shaped and fitted together in a precise pattern that will render the finished barrel water-tight.
- *Hoops* are usually metal – steel, copper or iron. The chime hoop is at the outer edges, the quarter hoop is about ¼ of the way to the centre, French hoops are between the quarter hoop and the bilge hoop. The bilge hoop goes around the widest part of the barrel.
- *Chime* – the beveled edge at the top and bottom of the barrel where the ends of all the staves come together.
- *Croze* – is the groove that is created at the top and bottom of the barrel staves, created to hole the head. The tool used to make this groove is also called a croze.
- *Head* – is the flat circular top or bottom of the barrel. Each barrel is unique, so each head must be measured and created for the barrel it will fit.

Barrels from Spain in use at the Joadja distillery 2016

Today the cooper is mostly engaged in barrel making for the wine and spirits industry. In Medieval times, they were often portrayed as fat people, the story being that they needed a large belly to hold the barrel in place! The talent and skill required however, is unmatched today as a manual art form.
Now also used commonly as a surname, the word was derived from Middle Dutch or Middle Low German, originating from the Latin *cupa*, a tun or barrel. A coffin maker was sometimes known as a cooper as well. The namesake has been based therefore, on an ancient trade and art form.

Mystery photo

BMACHO has been set a challenge to assist the community in identifying some "mystery" photos! The first is a snowman!!! Actually, it is the location of the snowy gent that we need to know!

The writer advises that his mother's first snowman peeps into the photograph, where John Low proposes the location is other than Blackheath. The writer's mother stayed in the mountains for her winter holiday from Adelaide, probably in the early 1940s, and possibly suffering from a broken heart having lost her beau aboard the ill-fated Sydney (sunk 19/11/41).
The photograph is pasted into their family album and captioned in his mother's hand - "*My first & last snowman. Bless him"* and "*Rowena Dunkley's Home, Blackheath, NSW".* (In the 1936 Electoral Roll, Stan & Rona Dunkley lived at Eveleigh Avenue, Blackheath).
Does the building in the background give us any clues? *Patsy Moppett*

Please send any ideas in to BMACHO, to be passed on to the writer.

Email: committee@bluemountainsheritage.com.au or *j.koperberg@bigpond.com*

Community events & updates

Arcadian Artists 2016 – Exhibition & Art Trail

The Arcadian Artists' "Art Trail" takes you through Dural, Galston, Arcadia, Fiddletown and Berrilee and entices the people of Sydney, Blue Mountains, the south and north coast of New South Wales and beyond to experience the special talent exhibited by their Australian artists. All work is handmade by their exhibitors.

This year they are excited to be including two new private Studios along the "Trail". Both these venues are in the Galston area.

On the weekend of November 12th and 13th, bring along family and friends, and drive through the beautiful semi-rural area of Sydney's Hornsby and the Hills Shire's. You will be captivated by the work presented along the trail visiting eight (8) private studios opening for the weekend. There will be over 50 artists exhibiting, many of whom will be demonstrating their skills.

Entry is free. Visitors are given the exclusive opportunity to view and purchase unique artworks from their creators. The works available include such items as paintings, printmaking, sculpture, glass, mosaics, ceramics, textiles, felt work, jewellery, leather, timber work, book making and handmade shoes.

Exhibitors are by invitation only and this year will include our very own Leura bodger, Roy Davi, as featured in *Heritage* November-December 2015. Roy will be wood turning at Pine Valley Studio at 6 Galston Valley Road, Galston.

Roy advises: "*Pole lathe greenwood turning is my passion. My enthusiasm for this ancient craft began many years ago when I first came across 'bodging' – the traditional craft of greenwood turning. Bodging was developed in medieval times and later used for creating fine furniture including the classic Windsor chair. More recently I have broadened my interests and now create my own style of greenwood furniture as well as traditionally crafted wooden household utensils"*.

Royal Australian Historical Society Conference 2016
Times Are A-Changing – History & Innovation

The 2016 RAHS Conference was held at Centro CBD, Wollongong (28 Stewart St. Wollongong NSW) on Saturday 22nd – Sunday 23rd October 2016.

The Conference examined how the digital revolution is impacting the way we research and produce history. There is also an increasing appetite for local and community history that connects people to their identity and place.

Sublime Point Lookout, Wollongong c.1925

The Conference showed how history plays a critical role in advocacy campaigns to ensure that these places remain part of our cultural landscape in this era of widespread urban development. How historical societies engage with these developments is critical to ensure their continued relevancy in 21st century Australia.

Patsy Moppett

Crago Observatory Tour

Commemorate the work of the Hawkesbury's famous astronomer (1834-1916) with a visit to Crago Observatory at Bowen Mountain for a viewing of the night sky, on Saturday 5 November at 5.30pm. Tebbutt's Crater on the moon, as well as Mars, Venus and Saturn (weather obliging) will be visible.

Crago Observatory

John Tebbutt

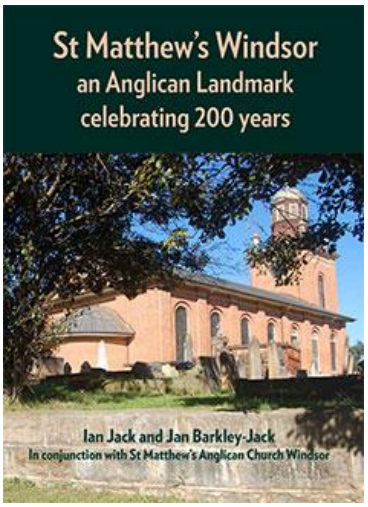
Crago Observatory is the Astronomical Society of NSW (ASNSW)'s "local" dark sky observing site at Bowen Mountain, located a short distance from the northern end of Lt Bowen Road. The Observatory consists of a large rotating dome housing a high class 16" Dobsonian Telescope, fitted with Argo Navis and ServoCAT as well as a wide range of eyepieces and star charts available for use with the telescope. *Patsy Moppett*
Tour participants will meet at the museum. Bookings are essential. Ph: 02 4560 4655.

St Matthews Windsor Celebrates 200 years

St Matthews Anglican Church in Windsor is set to celebrate 200 years with the launch of a new book by Jan Barkley-Jack and Dr Ian Jack on 12 November 2016 on the history of the

church. The launch will be undertaken at the beginning of their Bicentennial Year and will be attended by The Honourable Dame Marie Bashir AD CVO.
Francis Greenway's church has become a landmark, religious, social and architectural, in the town of Windsor and far beyond. Its commanding presence in the upper Hawkesbury valley began early in the European history of the third area farmed on the Australian mainland and is still potent today.

St Mathews, Windsor



The book analyses the architectural heritage within its social context. The orange-pink glow of the bricks, the elegant lines and softly repetitive arched windows tell why St Matthew's has been cited as its ex-convict architect's masterpiece.
This is a new study of St Matthew's first 200 years, told not just as bricks, mortar, sandstone and cedar, but of its people in the river valley. This book recreates the life and aspirations of the Anglican community which has created and preserved this rare, early church.

Patsy Moppett

The book will be available from November from Rosenberg Publishing for $29.95.

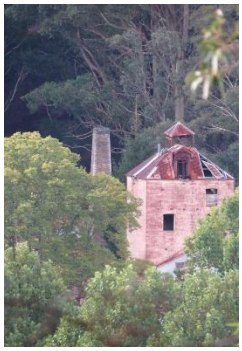
Murder Mystery at the Brewery

On November 4th the Old Zig Zag Brewery at Lithgow (c.1893) will offer the perfect backdrop for a night of mystery and murder hosted by the Lithgow Regional Branch of the National Trust NSW.
"A Chocolate Orange", concerning the mysterious goings-on in the making of a new film is a comedy twist on the name of the seventies-style thriller 'A Clockwork Orange'. It is performed by the Bathurst Theatre Company and Mountain Murder Mysteries. The latter group is well known locally, having previously entertained visitors in the breathtaking setting of Jenolan Caves.



To open the night Vaughan Bryers, official Zig Zag Brewery historian, will link history and whodunit and introduce the villains and heroes in the Brewery's past.
Seventies dress is optional, and if you front up in the flamboyant and colourful clothes of that era worn by men and women alike, prizes are on offer. You could join the characters to track down vital evidence, or just sit back and work out who did it. *Lithgow National Trust*

Show and 2-course dinner:
Brewery Lane, Lithgow, 6.30pm on Friday 4th November.
Tickets: $60 per person from Readers Heaven Books, Lithgow – 0474 957 856 or from Lithgow National Trust branch – 02 6359 3109

Museum of Applied Arts and Sciences (MAAS) Regional Stakeholder Forum

This annual forum is an opportunity for the regional museums and collectors sector to get together, discuss current topics and be inspired by new ideas. It is designed for regional stakeholders, such as;

- Volunteers.
- Arts development officers.
- Museum Advisors.
- Program producers.
- Regional cultural sector advisors.

Speakers include:

- Ray Christison, President, Lithgow State Mine Heritage Park
- Ann Frederick, Transport Heritage NSW
- Michael Rolfe – CEO Museums & Galleries of NSW
- Tamara Hynd & Toni Lindwall – Shellharbour City Council
- Luke Grealy - Museums of the Riverina
- Yvonne Rutledge - Museum Advisor for St John Museum, Unley, SA and Broken Hill Museums NSW
- Kerry-Ann Jones - Executive Director, South West Arts
- Marcus Hughes - Indigenous Program Producer, MAAS
- Elliott Bledsoe - Queensland Writers Group
- Susan Davis - Secretary, Historian & Archivist, The Oaks Historical Society
- Cathy Mann – Holbrook Submarine Museum

The Introduction will be done by Tristan Sharp, MAAS Director, and the Welcome to Country and summing up will be done by Deborah Vaughan.

The Forum will be held on Friday 11 November 2016, from 9am to 3.30pm at the Powerhouse Museum, 500 Harris Street, Ultimo NSW. The event is free but registrations are essential. It includes morning/afternoon tea and a light lunch. The full program can be seen at www.maaas.museum.org.au *Patsy Moppett*

National Trust Heritage Festival 2017 – *Having a Voice*

The National Trust Heritage Festival began back in 1980 and has become Australia's biggest festival of heritage and culture. There is a new name and a new home for event organisers to register their events and join an amazing network of local organisers across the country.

In the last 36 years the Heritage Festival has become the largest and longest running grass roots national festival of its type, with up to 1,400 events bringing together people all over Australia to celebrate what makes their neighbourhood special. Each year stories are told, traditions explored and histories brought to life through activities like guided walks, talks, tours, demonstrations and hands on history experiences for people of all ages.

The time is right for a different approach both to the festival itself and in the way it is marketed and communicated, it in order to secure its sustainability both now and into the future.

Emu Plains

Glenbrook

Windsor

Some things won't change. The NT still want everybody to join them in celebrating Australia's historic, natural and Aboriginal heritage during the months of April and May. The changes they have made are designed to make the festival more exciting and inclusive and are about being part of the community.

The first stage of this new approach is a revised registration process. This will soon be live on their website and you will be able to click on "How to get involved" to be taken to a page full of information on how to register your event. For the first time they have entry criteria so you may be sure that the event you are registering stays true to the ethos of the festival of encouraging different interpretations of heritage and culture around the country.

The 2017 Festival will run from 18th April until May 21st 2017. The theme for 2017 will be *"Having a Voice"* which calls on communities to champion their local heritage and show their support for cultural and historic assets on their doorsteps.

The NT are finalising an exciting new registration portal which will be up and running in the

next few weeks. They will email out to their database again with more details and when registrations are about to open, and BMACHO will publish information as it comes to hand. In addition, there are other exciting initiatives coming up next year which will help make the Festival even bigger and better for all concerned. *Patsy Moppett*

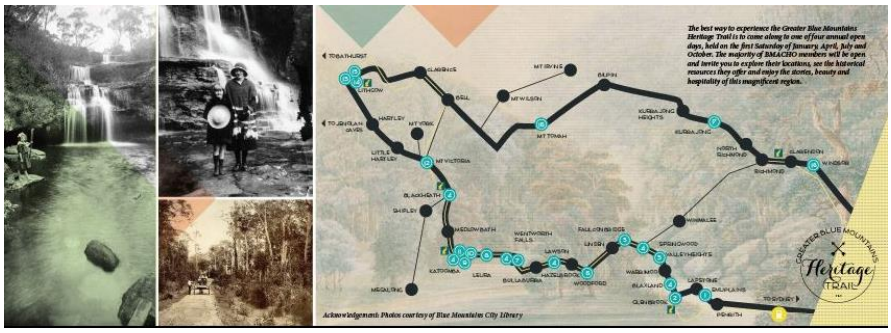
Greater Blue Mountains Heritage Trail



The Greater Blue Mountains Heritage Trail enables travellers to experience the history and landscapes, and the extensive sources of archives, images and stories presented by members of the Trail. In addition, the Trail draws in eateries and accommodation venues along the way. Brochures are available at participating businesses and Visitor Information Centres from Parramatta through to Orange, from Hawkesbury to Wollondilly, and out through Oberon to the Jenolan Caves.

Open Days: Following consideration of feedback from the various member groups over the past year of Open Days held, the BMACHO Committee has decided not to continue with the official Open Days beyond October 2016. For a variety of reasons, weather conditions, clash of events, lack of resources and staff at venues, etc the Open Days could not be further justified.

A number of other options are being considered by the Committee for 2017, when the Trail brochure is due for reprinting.

Feedback from members, however, is always welcome on any aspect of the Trail!

Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Day Fine Art; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators), Roy Bennett, and Lynn Collins, Museums Advisor.
Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Laura Stinson, Wendy Hawkes & Jan Koperberg.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

The Blue Mountains History Journal is published online under the auspices of BMACHO (Blue Mountains Association of Cultural Heritage Organisations Inc.).

It contains refereed, and fully referenced, articles on the human history, and related subjects, of the Greater Blue Mountains and neighbouring areas. Anyone may submit an article which is intermediate in size between a Newsletter contribution and a book chapter.

Hard copies of all issues, and hence of all published articles, are archived in the National Library of Australia, the State Library of NSW, the Royal Australian Historical Society, the Springwood Library, the Lithgow Regional Library and with the Blue Mountains Historical Society Inc.

EDITORIAL

Issue 7 of **The Blue Mountains History Journal** contains six papers.

The first concerns the relationship between some of the indigenous and white people in the Burragorang Valley in the 19th Century. In it Diana Levy reveals some previously unpublished documents that relate to the iniquitous practice of 'dummy purchasing'.

Then come two papers about still extant buildings that have very different origins. Unravelling the history of *Verna*, a Wentworth Falls house that had once been owned by a family member early in the 20th century, has been a remarkable piece of investigative research undertaken by Louise Wilson. About the mid-20th century, the architect H.P. Oser designed a group of houses in Blackheath and Chris Betteridge, the descendant of the owner of one of those houses, *Whispering Pines*, has documented their features, construction and former owners.

Finally a group of three papers have been included that discuss various natural and artificial features in the Blue Mountains. Soldiers Pinch between Blackheath and Mount Victoria has posed a traffic problem for two centuries and the sequence of attempts to fix that problem has been documented. That is followed by John Low's promised Part 2 of his account of the horse troughs existing in the Blue Mountains - mostly are concrete artefacts but this time he has discussed three in the Upper Blue Mountains that were hewn out of sandstone. The final paper is an 'essay' by John Dunkley on some of the sandstone caves of the Blue Mountains, in part a description and documentation of the caves but also evaluating their 'aesthetic, historic, scientific, social and spiritual values'.

For the convenience of readers, at the end of this issue there is a cumulative list of the papers that were published in Issues 1 to 6.

Extracts from this publication may be reproduced provided that the source is fully acknowledged.

JOHN JINGERY, GUNDUNGURRA MAN, AND ROBERT J. O'REILLY, GRAZIER, IN THE BURRAGORANG VALLEY.

Diana Levy,
107 Bee Farm Road,
Springwood, NSW 2777.
diana.r.levy@gmail.com

Abstract
In the settling of the Burragorang Valley, the Gundungurra inhabitants were displaced. Most of the farmers who settled there were Irish, and Catholic. There was a degree of cooperation between these two groups, and it was thought that Robert J. O'Reilly assisted Aboriginal man, John Jingery, to purchase a 40 acre selection, Portion 20, in 1875. Jingery forfeited this land in 1877 - it had in fact been a dummy purchase for his boss, O'Reilly. The thread of John Jingery's life is traced from primary sources and give some idea of how he adapted to Europeans.

Key Words: Gundungurra, Aborigine, Conditional Purchase, Dummy Purchase, Burragorang, Blue Mountains.

INTRODUCTION

The records for Aboriginal people in the nineteenth century are far fewer than for settlers like Robert J. O'Reilly. What follows is but a small window into the adaptation by 'John Jingery, Aboriginal' (all the documentation identifies him in this way) to European settlement of his traditional Gundungurra lands. [Other spellings include Gandangara and Gandanguurra.] These two men lived and worked in the environs of the Burragorang Valley, which is formed by the Coxs and the Wollondilly Rivers (Figure 1).

The traditional country of the Gundungurra is vast (Figure 2) and extends to the southern Blue Mountains, The Oaks, Goulburn, the Abercrombie River, Jenolan Caves, Rydal, Lithgow, the Wolgan

['Burra' means kangaroo in the Gundungurra language (Russell 1914, p.14); 'gurrang' means 'place of' or 'plenty of' (Barrett 2015 p.22)].

Valley and the western Blue Mountains. It borders Tharawal, Darug, Wiradgiri, and Darkinjung country. The Burragorang Valley is in the eastern part of those lands, bordering Tharawal country. With its steep inaccessible sides this valley is now the repository for much of Sydney's water supply (Figure 3).

Figure 2. Aboriginal Lands (CMA 1987).
[Boundaries between these different Aboriginal nations are extremely contentious so although this map is now old it does give a general idea of the terrain, the rivers and the neighbouring nations].

At the time of English colonization in 1788 all land was presumed to be owned by the Crown. Conditional purchase was introduced by the Government in 1861 (State Records 2016) and it was a way of distributing Crown land before it was surveyed. Certain conditions had to be met: the settlers had to pay a deposit, they had to show that they intended to 'improve' the land, and that they intended to live on it. They had three years in which to demonstrate their occupation of the land. Sometimes people would build a shack and string up a washing line, then hang clothing on this line to fool the inspectors into thinking that a little family did live there.

> "The (*Lands*) Department's work was further complicated with the practices of 'dummying', where a person would select an area only to sell by pre-arrangement to another party, ..." (State Records 2016).

The Burragorang Valley

The first encroachment on traditional life in the Burragorang Valley was probably the cattle which escaped from the First Fleet settlers and found their way to Cowpastures - out Camden way. Next the cattle duffers found the Burragorang to be a very suitable hideaway. More respectable settlers began

Photo: Noel Rath, 2014

Figure 3. Coxs River dammed (Lake Burragorang) from Dallawang Ridge (**1** on Figure 1).

taking up tickets of occupation from the 1820s. One such was Robert Bernard O'Reilly (Robert Joseph's father - b. unknown; d. 24/7/1873) who had been transported in 1820 from County Cavan when Ireland was under military occupation by the British, and he and Brian Carolan were convicted of conspiracy to murder. Brian Carolan (family name was shortened to Carlon later on) and Robert B. O'Reilly were in servitude to John Jamison for fifteen years and then their families began the settling process in the Burragorang, as did other Irish Catholic settlers. Later R.B. O'Reilly selected land at the junction of Green Wattle creek and Coxs River (**2** on Figure 1) where there were large flats of good loamy soil. Local historian Jim Barrett stated,

> "Bearing in mind the friction which arose between white man and black man as settlement of the Colony expanded, it is pleasing to record that relationships within the Burragorang Valley were in general quite harmonious." (Barrett 1995, p.112).

The idea that O'Reilly helped Jingery buy land supports this notion.

John Jingery's birth date is not known, so his story as established from primary sources began in 1871 with an English settler, John Grundy, and an Irishman, John Fitzgerald. John Grundy was an English free settler who came out from Yorkshire in 1840 at the age of 15 and worked in Campbelltown for a time. Then he

> "purchased farming and grazing properties at The Oaks (**3** on Figure 1) and Burragorang, and went to live on the former property some 40 years ago." - i.e. 1870 (Anonymous 1910).

He was buried in the Church of England section of The Oaks Cemetery. It is likely that John Jingery was Grundy's stockman. Fitzgerald was charged with

stealing flour, pork and horseshoes from Grundy's house at Coxs River. At the time of the trial the Grundy family was in residence at The Oaks (**2** on Figure 1), so the Burragorang 'dwelling' was vacant or used by employees. At the trial, which took place at the Police Office in Picton, 'Jingray' gave evidence in support of the Grundys and against Fitzpatrick, who had been before the Bench quite often. But the case was dismissed for lack of evidence supporting "the Aboriginal's" testimony.

[See Appendix 1 for an exact transcription of the court record.]

Like most settlers, Grundy's holdings expanded and in the book *Cullenbenbong*, Bernard O'Reilly (1940) (R.J.'s nephew) mentioned that Grundy owned land in the middle section of Coxs River, on the north side of Scott's Main Range (**4** on Figure 1). The 1918 Parish of Speedwell map (Department of Lands 1918) shows substantial holdings by Grundy family members adjacent to the Coxs River. [John Grundy jnr. held Portions 6, 10 & 46 and James Grundy held Portions 18 & 101. Adjoining but away from the river James Grundy also held Portions 59, 68 ,71 & 100 (**4** on Figure 1)] Significantly, W.H. Grundy held Portion 47 on Appletree Flat (**5** on Figure 1) which was a Gundungurra campsite for the very good reason that it is nice macropod grazing country (Barrett 1993, p.87). Appletree Flat is close to the travel route up Black Dog ridge (**6** on Figure 1) and less than half a day's walk from Portion 20 (**7** on Figure 1**)** of which more is to come.

For Aboriginal people being torn from land was akin to being torn from one's relatives.

> "To Aboriginal people, their land is full of their ancestors and when they roam about in it, they are encountering ancestral beings" (pers. comm. Will Moon M.A. archaeologist April 2016).

Prior to 1875 the Catholic Church in NSW had been concerned by the ongoing tragedy of dispossession of Aboriginal lands. [Other local historians such as Jim Barrett (1990) and Jim Smith (1991) have amply documented efforts made by the clergy to find solutions - especially Smith]. The Aborigines lobbied the Government to find them some land and in 1870 Father George Dillon established St. Joseph's farm at the junction of Pocket Creek and Coxs River (**8** on Figure 1**)** to provide a base. Robert J. O'Reilly (b. 1841 d. 28/8/1915) lived directly opposite this (**2** on Figure 1), so had plenty of opportunity to interact with that community.

> "Robert was a good friend of the Aborigines who showed him the route from the Burragorang to Megalong via Black Dog." (Barrett 1993, p.82).

In the 1870s Gundungurra men George Riley, Sammy Hassell, Charley Jellick and Billy Russell (Werriberri) attempted to regain their lands by applying to the Government and in 1875 the lands applied for became Aboriginal Reserves 26 and 27 under a group of trustees (Farnell 1878). It might seem that John Jingery was a part of this reclaiming movement. Not so.

It is documented (Barrett 1990, p.68) that in 1875 John Jingery applied for 40 acres (*16.2 ha*; Portion 20), on Scotts Main Range (**X** to **Y** on Figure 1**),** Parish of Speedwell, County of Westmoreland, through "his agent, Robert O'Reilly" and subsequently made a Conditional Purchase. The deposit was paid, the application was dated 1 July 1875 and it was signed by R. O'Reilly, who was by this stage a postmaster for the lower Coxs River. But Jim Barrett posed the questions:

> "Who was John Jingery, Aboriginal? What were the circumstances of his bid for the land? For what was he going to use it? It should be borne in mind that the blocks around portion 20 had already been acquired by the cattle men." (Barrett 1990, p.70).

In fact, John Jingery was Robert Joseph O'Reilly's stockman, and it was a dummy purchase. As we shall see, it was never intended that Jingery purchase the land for himself, though he put his name to it; the purchase was forfeited and bought at auction by Charles Dunn in 1877 (Department of Lands 1877?). The Shack (Figure 4) stands on Portion 20 (**7** on Figure 1) - a rocky bit of ground on a ridge top above the Kowmung river (**9** on Figure 1), on the old cedar road. Archaeologist Michael Jackson has found a marked tree and many artefacts there, evidence of traditional occupation (pers. comm. 20 November 2016). A side ridge, now called New Yards Ridge (**7**

Photo D. Noble 2015

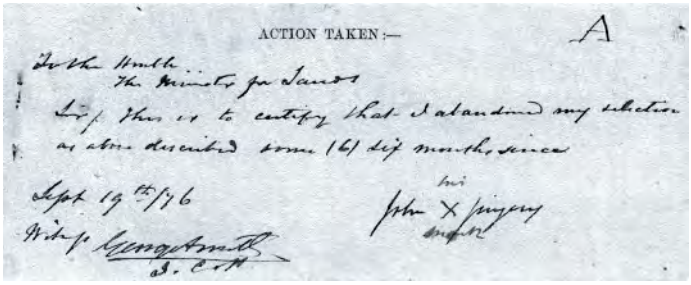
Photo D. Noble 2015

Figure 5. Kowmung River below the Shack (**9** on Figure 1).

on Figure 1) runs down to the river (Figure 5), where trout hide in granite pools.

The sequence of events from conditional purchase to re-sale to Charles Dunn has been traced through primary sources. It is summarised in Table 1.



ACTION TAKEN:— A

Figure 6. John Jingery's signed abandonment of Portion 20 (Jingery 1876).

So it was a dummy purchase, a stratagem Robert O'Reilly used against his rival Charles Dunn.

Unlike other Aboriginal men (Smith 2012), John Jingery is not on any electoral roll and nor is he on the blanket lists (as the last one was in 1842) nor in death notices. After 1875 he disappears from the record, who knows where to.

Anecdote

There is a story about R.B. O'Reilly (Robert Joseph's father) told by Owen Pearce (1991) who grew up in the Burragorang. Owen Pearce's great-grandfather was convict George Pearce, who served out his sentence as a stonemason - hard and heavy work in leg irons. At the age of 30 he went to the Burragorang and joined the cattle-duffers. Using stolen cattle to clear some land, he changed occupations again and took up farming, cultivating the river flats and then selecting it. This was his *modus operandi* and like Patrick Carlon, his holdings grew. [Carlon's grew from 40 acres to 3,000 acres – pers. comm., Carlon descendant 2015] O'Reilly senior was selecting nearby and eventually there was only one parcel of 100 acres between the two of them. The difference though, was that the Irishman always selected first, then cleared, then cultivated.

Pearce was worried that another English settler, Henry Dunn (Charles' father) had his eye on this block and he discussed his fears with O'Reilly, who did not mention that he had already selected it. George Pearce was a man of violent temper who when he found out, stormed over to the O'Reilly place. Robert B. was spading the garden but fled inside. Pearce got the spade and attacked the front door. When that didn't work he climbed on the roof of the house and tried to climb down the chimney. Next he tried to pull a sheet of bark from the roof. Finally he climbed down and sat on the front verandah with the lethal spade. After an hour he gave up and went home.

> "Thankfully the feud ended with their passing and was not continued by succeeding generations" (Pearce 1991, p.302).

It was also said about Pearce, that when an Aborigine speared him in the leg, he and a mate found the man and hanged him.

Photo D. Levy 2011

Figure 7. Kowmung River below the Shack (**10** on Figure 1).

Who then was Charles Dunn? He was the son of Henry Dunn, an English free settler, and he was born at The Oaks in 1843 (d. 1917). Dunn ran cattle with a man called Lakeman and they became known as "the cattle kings" (Barrett 1990, p.52). Charles Dunn, like Grundy, lived in the more convenient location of TheOaks, so maybe the English lived at The Oaks and the Irish in the Burragorang.

Table 1. Timeline for Jacky Jacky /John Jingery

		Born or spirit conception at 'Jingery'
1871	14 April	He gives evidence at Police Office, Picton, in break and enter case Fitzpatrick v. Grundy (Appendix 1).
1875	1 July	He is working for Robert O'Reilly as a stockman and agrees to his name being used in conditional purchase of 40 acres, Portion 20, Parish of Speedwell, County of Westmoreland (Smith 1876 Appendix 2).
	7 August	Portion 20 is surveyed "Applicant was on the ground but residence doubtful. No improvements". Resides on it for a short period while minding cattle for O'Reilly (Inquiry evidence; State Records 1876).
1876	March	He abandons selection (Figure 6) when Dunn and O'Reilly have a 'law suit' and decide that Dunn will take possession (Appendix 2; LTO 1875).
	19 September	Inspector Smith finds Jingery in search of cattle and hears this news. He gets him to 'sign' (put his mark) on a paper (Figure 6) that agrees to relinquish ownership due to having abandoned it (Appendix 2; LTO 1875).
	23 September	Smith's letter to Lands Department setting all this out (Appendix 2) (LTO 1875).
1877	23 April	A letter is written from Whittingdale Johnson, Commissioner of Lands for the Western District, notifying that there will be a court of enquiry into the abandonment (State Records 1876).
	14 May	Senior Constable Moesch serves this notice on Jingery at Courthouse in Picton (State Records 1876).
	29 May	Inquiry held at court House at Camden. Claimant not present. Decides on forfeit (State Records 1876).
	7 August	Portion 20 (in the name of John Jingory) gazetted for auction as a Forfeited Conditional Purchase (Driver 1877).
	14 November	Portion 20 purchased by Charles Dunn at Camden auction (State Records 1877).

Features named Jingery

There are a number of place names around Portion 20 (**7** on Figure 1) that relate to this story, and they are all near the Kowmung River (Figure 7). On Myles Dunphy's 'Gangerang' map (1979) the range running beside the river and up towards Kanangra (**11** on Figure 1) is the 'Gingra (Jingera, Jingery) range' whereas the current topographical map (LPI 2002) has settled on 'Gingra Range'. Both maps show 'Gingra creek', but only 'Little Gingra creek', can be found on the website of the Geographical Names Board of NSW (2016), yet those names are on some 1930s maps (pers. comm. Jim Barrett, 20 November 2016). Did these names apply before 1875? In his latest book Jim Barrett's phonetic spelling of the pre-1788 name is Dyingarii Creek (Barrett 2015, p.20). Barrett shows in this book that there has been considerable slippage between the original Gundungurra naming of places, and what has been sieved out by European ears and inclinations - in spite of best intentions. In addition, both maps show 'Mt. Jingery', which is near Brennan Top at Kanangra. It is an unremarkable hillock that bushwalker Dave Noble observed to be nothing special. However Kanangra has some remarkable ochre drawings.

It is possible that there was a deep connection in the traditional sense, between these places and John Jingery. Certainly it would be better for a mother to give birth by a pool where water is available, than on a rocky ridge. Gundungurra descendant Ivy Brookman recollected that her ancestor Dennis Riley

> "married or had children with a wild Aboriginal lady of the Gingara tribe" (Bookman & Smith 2010, p.1).

Probably a sub-group or clan is what was meant.

Conclusion

Much of the good land in the Burragorang had been selected by the 1870s and there were very many obstacles for the traditional owners as they adapted to this fact. The primary sources are a rich vein to tap, in getting at the true story of how this adaptation took place. Both the Grundy and O'Reilly accounts show an association with the area around Scott's Main Range, the Coxs River and the Kowmung river. In many cases working as a stockman was a great way to continue traditional connections with country while also working for a white boss – a compliant attitude would smooth the way to manage both sets of obligations. This choice of occupation has continued into the twentieth and twenty–first centuries.

The sources cited herein also reveal the attitudes prevailing at the time towards Aboriginal people. Jingery's evidence was only that of a 'native', therefore of lesser value, yet Jingery was judged intelligent by Inspector George Smith – and speaking a second language, English, he understood what was going on between the two graziers. [There is another document from Charles Dunn showing his attitude to the young Aboriginal girls growing up at St. Joseph's farm.]

Like Werriberri, Jingery was a stockman and both would have known that country like the 'back of their hands', and the intimacy of that expression contains within it, a glimmer of what the relationship between country and indigenous people would have been.

There was indeed a level of cooperation between poor Irish settlers in the Burragorang and the Aborigines. But it only went so far.

APPENDIX 2

Letter from Inspector Smith after he met John Jingery (Smith 1876; exactly transcribed):

Lands Office
Sydney Sept 23rd. / 76

To The Honorable
The Minister for Lands

Sir /.

I have the honor to report in the matter of enquiry into the Selection of "John Jingery" alias "Jacky Jacky" of Speedwell, Cox's River.

That I was prevented crossing the River any more times on account of the fresh coming down, but that I succeeded in finding the Selector.

"Jingery" (a name after the place where he was born) I found in the mountains, in search of Cattle, and seeing that he was rather intelligent, I got the following information.

That Robert O'Reilly, a Selector and Grazier on Cox's River, employs "Jingery" as Stockman, that O'Reilly took up this Selection in "Jingery's" name on Chas. Dunn's run, solely to "block" him, being jealous of him in the same avocation -

//Which means buying up poor farmers' calves, and planting them in every available spot in the mountains, until they are fit as store cattle for the market // Eventually O'Reilly & Dunn had a law suit and the price of the settlement of the same, was making "Jingery" abandon the Selection / which was done some months since / leaving Dunn in possession of this secluded spot.

Having received this statement I asked for the..?.? attached marked A.

Knowing therefore that a notice to show cause would follow I deemed it more prudent to ……(pursue? hasten?) my inspection of other spots, than run a risk in crossing the river at this particular period.

I have the honor to be Sir
Your most obedient Servt.
George Smith

Inspector of Purchases
Metropolitan District

There are a number of things in Smith's letter to explain and notice. What Smith meant by a "fresh" is that the river was up, a frequent and dangerous occurrence for the valley residents. How fortunate for the prudent inspector that the Aboriginal was "rather intelligent" – the evolutionary social theory of the time would have had it that Aborigines were mentally inferior and doomed to die out. "My name is Jacky Jacky," he corrected Smith - a generic name for Aboriginal men in those times. "Jingery" is where he was born - or is that "born"? i.e. the place where he was spiritually "born" - where the spirit baby entered his mother's body? Eugene Stockton explains it thus:

> "The land is his mother, common to all other living beings, who are real brothers and sisters to him. Certainly he is born of a natural mother with a father's collaboration, but his origins are deeper still. He has pre-existed as a spirit child since the creative time of the Dreaming when his ancestral hero left him and the spiritual seed of others who share his totem (both human and non-human) in a certain place, the life centre of the totem, until such time as his natural mother passing by allowed him to be incarnated in her womb" (Stockton 2015, p.14).

THE BOULTON FAMILY OF *VERNA*, WENTWORTH FALLS.

Louise Wilson,
PO Box 3055,
South Melbourne,
VIC 3205
louisewilson@tpg.com.au

Abstract
Piecing together the implications of several unaddressed letters, a pencil sketch, a watercolour and a few undated photos of Dora Boulton's family in the years 1895-1906 unexpectedly unravels more of the history of *Verna*, a house at Wentworth Falls that is listed in the NSW State Heritage Inventory.

Key words: *Verna*, *Clunes*, Dora Boulton, Wentworth Falls, Blue Mountains

INTRODUCTION

Philip Boulton left England in 1878 for lack-of-health reasons (ANZ Group Archives 1999) and Dora Mary (Dolly) Flockton left England in 1882 for lack-of-wealth reasons (Wilson 2016, p.41). They met and married in Queensland where their son Nigel Boulton was born in 1888, in the sugar-milling town of Bundaberg (Anonymous 1888).

Bank manager Philip Boulton was promoted in 1889 to a new posting in the gold-mining town of Clunes in Victoria, where Nigel's younger brother Stephen was born in 1890 (Anonymous 1890). A further promotion saw the family move to Brunswick in Melbourne. There, in the manager's residence of the Union Bank of Australia, my grandmother Dorothea (Thea) was born (Anonymous 1895a), five months before her father died there in June 1895 (Anonymous 1895b). Philip Boulton was buried at Melbourne General Cemetery on his 43rd birthday.

A new manager moved into the bank's residence. Where did the Boultons go? The answer has heritage interest.

Clunes 1895 - 1900

A few scraps of family memorabilia marked the Boulton trail. Young Stephen's sketch book contains a pencil outline of a Wentworth Falls landscape dated 26 December 1895. His grandfather Frank Flockton also painted several watercolours of the Blue Mountains (see Figure 1). Why? Because his widowed mother moved with her three young children to New South Wales, closer to her Flockton parents

Photo courtesy Stephanie Arbuthnot.

Figure 1. Blue Mountains, by Frank Flockton (pre 1901).

and her sister. She stayed with them in Sydney for a short while before opting to settle in the Blue Mountains at Wentworth Falls, about 100km west of Sydney. Famed for its fresh, cool air and brisk walks, this was a popular holiday destination easily accessible by train from Sydney.

Dolly had inherited £451 from her husband's Australian assets, enough to purchase a home in New South Wales (Anonymous 1895c). Strangely, there is no record of this purchase in Land Titles records, but read on … all will be explained. Dolly also needed to generate some income to support her children. Her new abode suited as a private guest house, but it was well over a year before the enterprising young mother made her first recorded appearance in this business, in 1897:

> "Mr. and Mrs. Henderson and family, who have been staying for some weeks with Mrs. Boulton, The Clunes, Wentworth Falls, New South Wales, have returned to Marchmont station, near Barcaldine." (Anonymous 1897, col.e).

Nostalgically, she had named her guest house *Clunes* after happy years spent with her husband in that Victorian town. Her early married life in Queensland had taught her that people with money, from places like Barcaldine, were willing to pay for a holiday in a cool climate. She targeted that Queensland market,

helped by her former contacts as a bank manager's wife in that State.

A year later, with Thea past babyhood, Dolly was freer to take on the burdens of caring for children additional to her own three, so she advertised:

> "BLUE MOUNTAINS.—Widow Lady wishes care of Children requiring change to cooler climate, comforts of a happy home, motherly care, and educational advantages. Liberal diet. Cow. References to parents in Queensland and elsewhere. Terms moderate. Mrs. D. M. Boulton, Wentworth Falls, Blue Mountains, N.S.W." (Anonymous 1898a).

Her own children did well at the local public school. In 1898, Nigel and Stephen both won academic and sporting prizes at the annual prize-giving ceremony and school picnic: N. Boulton came second in 3rd class & won second place in the sack race, and S. Boulton came second in 2nd class & earned second prize for sports in 2nd class (Anonymous 1898b). But the extended family felt they had to 'do something' about educating the two boys 'properly'. Schools in England were deemed to be better and English relatives used their influence to get the boys into the British Orphan Asylum at Slough, a school offering free tuition and board to the children of 'gentlemen' where the father had died leaving the family to suffer a declining standard of living (Wilson 2005, p 61). Entry to the school required a student to obtain sufficient 'votes' from the school's financial supporters. The cause of the Boulton boys (see Figures 2 & 3) was promoted well, because both were accepted into the school.

Figure 3.
Stephen Boulton, c 1899.

It might have seemed that Dolly too planned to leave Wentworth Falls, because advertisements like the following ran for several weeks in August and September 1899:

> "BLUE Mountains.–To Let for six months, large comfortably furnished Cottage ; dining and drawing rooms, six bedrooms, kitchen, bath, piano, garden; near station, church, school ; rent, £2 10s. Apply Clunes, Wentworth Falls." (Anonymous 1899).

As will be seen, she had simply moved a short distance. However, that description of the location for *Clunes* proved useful. Local historians up until 2016 were mystified as to how such a substantial building as *Clunes*, clearly much larger than the word 'cottage' implies today, had hitherto escaped their attention. If it was near the station, the church (which stood on the one acre one rood 36 perches block of land donated by Miss Helen Campbell (Anonymous

© *Land and Property Information (2016)*

Figure 4. Map of the southern part of the Village of Wentworth Falls (LPI 1916).

1889) and the school (in Falls Road), all marked on Figure 4, then where was it?

More clues emerged from some letters. Although the entire family eventually sailed to England, Dolly arranged for her ten-year-old son Nigel to travel ahead on his own, by ship from Sydney to London, departing Sydney on 9 September 1899 aboard the *Australia*. Three 'brave' letters written by young Nigel on that journey survive (Boulton 1899a,b,c). Whoever stood *in loco parentis* was not mentioned in his letters, the first of which asked after his friends and family:

> "How are the Cales and Steve and babs, how is Steve getting on with his schooling, does he miss me much. Has Miss Tick left yet, hope not, give my love to her if she has not. Mr Wormley wrote me a Post Card and I wrote to Is and he wrote a Post Card back to me." (Boulton 1899a).

Nigel's references to these people, hitherto mysterious because the three envelopes were discarded, taking with them his mother's address, made sense with the knowledge that she still lived at Wentworth Falls. Thomas Cale has significant heritage interest as a storekeeper at Wentworth Falls (NSWOoEH 2000a); his store was located in the block on the corner of Cascade Street and the main western road to Bathurst. Steve, of course, was his nine-year-old brother and 'babs' was his four-year-old sister Thea (my grandmother). It is possible that Miss Tick (Miss Thickner in the next letter) was a paying guest in the Boulton cottage. Mr. Wormley worked at the Wentworth Falls Railway Station. The identity of 'Is' remains unknown.

His second letter queried the progress on some building works underway at home:

> "Has Denis been yet, has he sold the pie-bald; how is Bill getting on with the painting, has he painted a side yet, and did you get enough paint? How is everybody, all well I suppose. ... Does Babs miss me, does she ever ask of me. Give my love to Miss Thickner." (Boulton 1899b).

The *Australia* docked in London several days before Nigel's 11th birthday on 29 October 1899, a milestone which he celebrated with his English relatives, all strangers to him. After Christmas he wrote from the home of his Doherty cousins to his younger brother Steve, making reference to his school days, past and present:

> "I was so glad to get your letter that you wrote on December the 3rd. You must have been sharp to be top in the Lower Third. You will have your prize when this letter gets to you.
>
> Do I like the English School, I like it pretty well, it is not as nice as Mr Chiplin's. I have to go to School on Saturday. But we have a half-holiday, on Wednesdays, and Saturdays, but I do not come home to Aunties I have to stop and play football. I am doing Fractions now, and Practise with Fractions in them not like Mr Chiplin taught me with Decimals. And I am getting on in French, and Latin. Tell Mr Chiplin I will write soon. Auntie wants to say something on the other side." (Boulton 1900).

Mr. Chiplin was Walter James Chiplin, a gifted teacher at Wentworth Falls who deserved Nigel's praise. Prior to his arrival at Wentworth Falls in 1896, Chiplin had worked for four and a half years as the assistant at the Model School, Fort Street, the leading public school in Australia, and in addition he had university training (Anonymous 1896). Parents at Wentworth Falls appreciated having a teacher of such ability to train their children, before Chiplin was promoted to a new school early in 1900.

A few weeks after Nigel reached London, and four years after the family's arrival at Wentworth Falls, his mother's purchase of a property at Wentworth Falls entered the official records. For £300, on 20 November 1899 Dora Boulton purchased Lot 3 of Brasfort North Subdivision, an area of one acre seven perches bounded on the north by the Western Road (a.k.a. Bathurst Road) (LPI 1899). The property contained a dwelling house and outbuildings. The sellers were two widowed sisters living in Manly, Hannah Martha Malcolm and Mary Jane Malcolm, who had married two brothers.

Dolly's legal documentation of 1899 formalized an existing and perhaps troubled arrangement which had been in place for some time. A later legal battle over another property inherited from their father (John Farrell of Manly, who had died late in 1888 (NSWBDM 1888) alluded to the sisters having fallen out (Anonymous 1903a). The sale of Lot 3 at Wentworth Falls in 1899 hints that Hannah had earlier tried to sell this property, without her younger sister's agreement. Its conveyance document states that nothwithstanding anything 'done, omitted or knowingly suffered' by Hannah Martha Malcolm, she now had full power to grant and release this property, 'now or heretofore used, occupied and enjoyed' by Dora Boulton, with no claim being made for the rents and profits received by Dora Boulton.

In the Yewen's Directory of 1900 (Yewen 1900, p.400), Dolly is listed as the proprietor of *Clunes*, using her land for grazing (previously she had owned a horse and a cow), with an orchard. But early in 1900 it was a Mrs. Edwards, who must have responded to Dolly's earlier advertisement offering *Clunes* 'to let for six months', who briefly ran the residence as a boarding house, charging 25 shillings per week (Anonymous 1900a). We shall see that Dolly had subdivided Lot 3 and had built a new cottage on the back portion behind *Clunes*, where she now lived with Stephen and Thea.

Figure 5. Nigel & Stephen Boulton, England, Dec.1900.

Photo Julia Woodhouse Collection

Figure 6. *Verna*, Wentworth Falls (Anonymous 1955).

After 1900 the name *Clunes* disappeared from the records of Wentworth Falls as the house was about to acquire a new and much more famous identity.

Clunes becomes *Verna*

In the middle of 1900 ten-year-old Stephen was despatched alone (again under an unknown person's watchful eye) on the long sea voyage to join his brother at school in England. (See Figure 5.) Master Stephen Boulton was booked to travel on the P&O vessel *Britannia*, leaving Sydney on 14 July 1900 for London (Anonymous 1900b).

It is known that his mother and sister farewelled him and returned home to their newly-built cottage, because Dolly was one of 33 Wentworth Falls residents contributing to a charity cause around August 1900 (Anonymous 1900c).

Being a keen Anglican churchgoer Dolly had become friendly with the new Rector, Rev Claydon, and in September 1900 she and Claydon did a deal:

> "The Rev. E. Claydon, the rector of Springwood, has arranged to purchase a cottage and furniture at Wentworth Falls, to be called "Holy Trinity Parsonage," for the use of any of the clergy who may officiate there." (Anonymous 1900d, col.c).

The deal was sealed a few weeks later when 'Dora Boulton, widow', sold the front portion of Lot 3 containing a house to 'Ernest Henry Beales Claydon of Springwood, a clerk in holy orders', for £535 (LPI 1900). This house was then used temporarily as the Holy Trinity Parsonage until the foundation stone for

Figure 8. 1943 Aerial Photograph of Wentworth Falls.

a new parsonage was laid in August 1906. It was after this that the temporary parsonage (Figure 6) was renamed *Verna* by Rev. Claydon and it was first mentioned by that name in 1907 when his tenth child, a son, was born there (Anonymous 1907).

The ages of the Boulton children in Figure 7A indicate that the photograph was taken before Nigel left for England in September 1899; significantly it shows a very distinctive fence, the shape of the palings and the toppings of the fence posts being the same as for the original fence at *Verna* (Figure 7B). It follows, then, that *Clunes* and *Verna* were one and the same cottage.

After selling *Clunes*, Dolly continued to live in the back portion of Lot 3. This property was named *Cosy Camp*, recognised by her descendants as the quirky kind of name she would give to a house. Later documentation refers to it having a right-of-way and to Dolly's address as Cascade St, consistent with the

Photo Julia Woodhouse Collection

Figure 9. *Verna* c.1900.

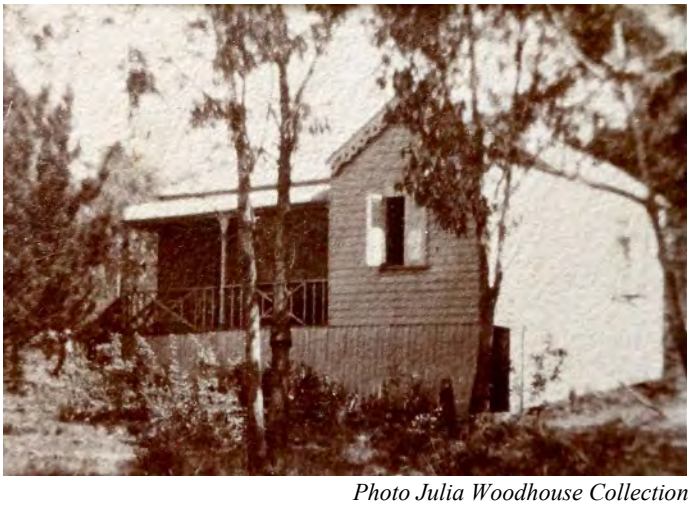

Photo Julia Woodhouse Collection

Figure 10. Probably *Cosy Camp* c.1900.

1943 aerial map (Figure 8) which shows a winding driveway passing through other vacant allotments and leading to Cascade Street.

These conclusions now make perfect sense of several unidentified photos in an old family album recently re-examined by the author. Two old photos are clearly images of *Clunes* a.k.a. *Verna*, taken around 1900 when the house was well set back from the highway (Figure 9) before it was realigned prior to 1943 (Figure 8). On the preceding page is a photo of a small weatherboard cottage which could well be *Cosy Camp* (Figure 10).

Dolly's property ventures at Wentworth Falls had not gone smoothly because by March 1901 a court dispute was underway with the builder of *Cosy Camp*:

> "NO. 2 JURY COURT (Before Mr. Justice Cohen and a jury of four.)
> CLAIM FOR ERECTING A COTTAGE.
> Knox v. Boulton (part heard).
> Mr. Shand and Mr. Teece, instructed by Mr J.W. Abigail, appeared for the plaintiff ; and Dr. Brissendon, instructed by Mr. T.M. Slattery, for the defendant. This was an action brought by Robert William Knox, carpenter and builder, against Dora Boulton, to recover the sum of £65, being balance of account claimed to be due to plaintiff for the building of a weatherboard cottage at Wentworth Falls for the defendant. The original contract was for £95, but extras increased the amount to £135, and £70 had been paid on account, leaving the sum now sued for. Defendant paid into court the sum of £23 15s 6d as being sufficient to satisfy the plaintiff's claim ; and as to the remainder she pleaded, by way of cross action, that the plaintiff did not carry out the work in a skilful, workmanlike, or proper manner, or within a reasonable time. The result was that she was deprived of the use of the premises for a long time and lost the profits which she would otherwise have derived, and this she was willing to set off against the plaintiff's claim. The evidence on both sides having closed, and counsel having addressed the jury, the latter returned a verdict tor £37 18s 6d in addition to the amount paid into court." (Anonymous 1901).

Dolly's stance against the builder proved to be inadvisable: she had to pay £61 14s 0d, most of his claim, plus legal fees.

By October 1901 Dolly and her daughter had departed from Wentworth Falls to share a house with Dolly's widowed sister Phoebe Clarke and her two children, then living at Mosman in Sydney (UK Probate 1901). Philip Boulton's probate in England had at last been granted to her and Dolly began to plan her return to her homeland for the first time in 20 years. First, something had to be done with *Cosy Camp* and its furnishings:

> " "THE COTTAGE", adjoining the Parsonage, on the Bathurst-road 5 minutes from WENTWORTH FALLS Station, and nearly opposite Mr. Pitt's property.
>
> This is for Immediate SALE in consequence of the early departure of the vendor, Mrs. D. Boulton, for England.
> Only £300, INCLUDING FURNITURE.
> To inspect, keys with Mr. Cale, storekeeper
> . PIERCY ETHELL and CO.,
> 3 Moore-street." (Anonymous 1902a).

The interpretation of this advertisement of March 1902 depends entirely on its second comma, a punctuation mark often used sloppily. With that comma, only two cottages adjoined the Parsonage on the Bathurst Road, these being Lots 2 and 4. But without the second comma, the meaning of the sentence was very different, and the cottage would have been *Cosy Camp*, also adjoining the Parsonage but at its rear. As for being 'nearly opposite Mr. Pitt's property', as late as 1943 the land opposite the Parsonage (*Verna*) still was mostly vacant and Mr. Pitt's house was the only structure for some distance. It remained a meaningful landmark in 1943 and back in 1902 would have been an easy way to describe a house anywhere on that section of the Bathurst Road (today's Great Western Highway) at Wentworth Falls.

Dolly (Figure 11) and Thea (Figure 12) Boulton boarded the *Runic* and sailed for London on 24 June 1902 to enjoy a lengthy stay in England as guests of various family members (Figure 13) (Anonymous 1902b). It appears that Dolly's cottage and furniture did not sell before her departure and the property was let out by Mr. Cale during her absence (Anonymous 1903b).

She and Thea returned home to Australia aboard the *Medic* on 28 February 1904, bringing Nigel with them and leaving 13-year-old Stephen behind at school in England (Anonymous 1904). Nigel finished his schooling at The King's School at Parramatta, a school his mother deemed of suitable status, and went on to study medicine at the University of Sydney. When aged 15, Stephen returned alone to Sydney on 22 September 1905, also aboard the *Medic* (Anonymous 1905a). He joined his brother at The King's School

to complete his matriculation studies and went on to work for the Union Bank of Australia and then the new Commonwealth Bank.

Figure 13. Family Group in England, c.1902.
Rear: Two relatives & Dolly Boulton.
Front: Stephen, Thea & Nigel Boulton.

In July 1905 Dolly started to dispose of her remaining property at Wentworth Falls, preparatory to buying in Sydney. The transaction commenced with a notice by Thomas James Cale to bring the following land under the Real Property Act:

> "No. 13807. County of Cook and Parish of Jamieson, 3 roods 33 1/3 perches, situated on the Main Western or Bathurst road, near Wentworth Falls Station, is lot No. 2 of Brasfort North subdivision, and is part of 31 acres 2 roods (portion No. 3 of parish) granted to Edward Dougherty; adjoining the properties of Revd. E. Claydon, Mrs. Dora Boulton, G. M. Hayward, and Louisa Cale." (Anonymous 1905b).

Five months later:

> "Property Sales. — Mr E. H. Green, house and Land agent, of Wentworth Falls, reports having sold that cottage in Pritchard street known as "Littleton Cottage," with two acres of ground, and also in conjunction with Mr T. Cale the cottage lately owned by Mrs Boulton, in Cascade street, both at satisfactory figures." (Anonymous 1905c).

Photo Courtesy Wentworth Falls Realty.

Figure 14. *Verna*, Wentworth Falls, 2016.

The legalities took a few more months to process. Dora Boulton, a widow of Parramatta, sold her house and land with its right-of-way to John J. Shipley on 12 March 1906 for the sum of £170 (LPI 1906). Financially she appeared to come out ahead over the ten year period of her connection with Wentworth Falls. For her original investment of £435 (£300 for *Clunes* (LPI 1899) plus the £135 cost of building the *Cosy Camp* cottage (Anonymous 1901)) she had sold both properties for a total of £705 (£535 for *Verna* plus £170 for *Cosy Camp* cottage). That was the Boulton family's last recorded connection with Wentworth Falls.

However Dolly and her children retained a long-term link with the Blue Mountains via their close friends the Bryant sisters, Judy and Erica, who later lived for many years at *Glenshiel*, Gladstone Road, Leura, a house backing on to the golf course. The author spent several happy holidays at *Glenshiel* as a child.

Verna, at 230-232 Great Western Highway, today is one of a number of sites at Wentworth Falls included on the NSW State Heritage Inventory. The entry for *Verna*, (Wf082), reads as follows:

> "Verna was … built by Mrs. Dora Boulton on the Highway frontage around 1890. In 1900, Mrs. Boulton sold the house and its land to the new Anglican rector of the lower Blue Mountains, whose parish ran from Glenbrook to Wentworth Falls. The Reverend E. H. B. Claydon was rector there from 1899 until 1903 … Claydon clearly did not use Verna as a residence while he was rector, … The Claydon family used Verna as a mountain holiday home when it was not occupied by catechists." (NSWOoEH 2000b).

In truth, *Verna* was most likely built in the late 1880s by John Farrell of Manly or in the early 1890s by his two daughters. After its occupation by Dora Boulton in 1895, the cottage was known as *Clunes* until its sale to Rev Claydon in 1900, then as the Holy Trinity's 'Parsonage' until 1906 and afterwards as *Verna*, the name chosen by Claydon.

The dynamics of kinship become evident, aligning the work of family historians and historical societies to generate a story with a satisfying outcome for both parties! The restored, refurbished and re-fenced *Verna* (Figure 14) is now described as the original landmark cottage in an 'Over 55s' development accessed via Cascade Street, its new address given as 12/11 Cale Lane (Wentworth Falls Realty 2016). *Cosy Camp* appears to have been demolished as part of the re-development of the site.

Postscript

Much more about Dolly Boulton and her sons and daughter is in my book '*Brothers in Arms: The Great War Letters of Captain Nigel Boulton, R.A.M.C., and Lieut Stephen Boulton, A.I.F.'* (Wilson 2005).

Acknowledgements

I am grateful for the extensive assistance provided by Bruce Dunstan of the Blue Mountains Historical Society Inc. in the preparation of this article. My sister, Stephanie Arbuthnot, very kindly provided Figure 1. Until her death in 2015, my mother, Julia Woodhouse, was the faithful custodian of the family's collection of the old family photographs shown in Figures 2, 3, 5, 6, 7A, 9, 10, 11, 12 & 13 (now in my possession).

Whispering Pines – AN H.P. OSER HOUSE WITH A PAUL SORENSEN GARDEN AT BLACKHEATH.

Chris Betteridge
42, Botany Street,
Randwick, NSW 2031
musecape@accsoft.com.au

Abstract
In 1953 the author's parents purchased land in Blackheath and commissioned Austrian-born modernist architect H.P. Oser to design a timber and stone weekender, which they named *Whispering Pines*. The Danish-born landscape designer Paul Sorensen was engaged to design the garden around the house, including a rear lawn bordered with a variety of ornamental conifers and silver birches, a rockery planted with alpine plants and a front garden of azaleas, Japanese maples and a long planter box of daffodils on the terrace. The house is part of a small enclave of mountain retreat weekenders designed by Oser in Blackheath and has one of many Blue Mountains gardens designed or part-designed by Sorensen, widely regarded as one of the foremost landscape designers in NSW in the 20th century.

Key words: Houses, gardens, Oser, Sorensen, Blackheath, Blue Mountains

INTRODUCTION

Both the author's maternal great grandfathers had strong associations with the Blue Mountains. Samuel Edward Lees, a prominent layman in the Wesleyan Methodist Church, was twice elected Member of the Legislative Assembly (MLA) for Nepean, an electorate which included the lower Blue Mountains. He was Mayor of Sydney in 1895 and later, Lord Mayor, when that office was instituted in the early twentieth century. One of Lees' four daughters, the author's grandmother, was Elma Carine Lees. In 1904 she married Congregational minister Reginald Blair Reynolds (1881-1959), a son of Robert Henry Reynolds (1834-1913) who at various times had extensive land holdings at Katoomba and Blackheath and was a one-time partner of John Britty North in mining ventures in the Jamison and Megalong valleys. Welsh-born R.H. Reynolds, a veteran of the Crimean War and one of the Maori Wars, finished his military career as Sergeant Instructor of Musketry at Sydney's Victoria Barracks. Known popularly as "Captain" Reynolds, an honorary rank conferred on him on his retirement from the army, R.H. Reynolds dabbled in many different business activities including coastal shipping, merchandising and mining. He built a semi-detached house *Glen Ayr* (later incorporated with the adjoining *Boronia* and renamed *Braemar* (NSWOoEH 2002)) in Station Street, Blackheath and a row of cottages in Haviland Avenue, one of a number of streets in the town named after Reynolds family members (Yeaman 1976, pp.356-357).

The author's mother, Olive Roberta 'Bobbie' Lees Betteridge (née Reynolds) (1907-1990), started holidaying at Blackheath from the time she was six months old. Until 1916 members of both the Reynolds and Lees families took every opportunity to take holiday breaks at Blackheath and the Reynolds children often spoke of these times with great affection. In 1911 the family was apparently at Blackheath for Elma's birthday. A postcard of a young girl in a flimsy dress with a bunch of flowers titled 'Hearty Birthday Greetings' was addressed to Mrs. R.B. Reynolds, *Beaconsfield*, Blackheath, Blue Mts, with the message:

> "We all wish the dear Elma a happy birthday & many, many more to come. 13/10/1911"

[*Beaconsfield* was a "boarding establishment" at what is now 3 Haviland Street.]

After her marriage in 1931 to Albert Robert 'Bob' Betteridge (1905-1995), Bobbie continued the family tradition of holidaying at Blackheath. Their honeymoon was at *The Carrington Hotel* in Katoomba and included the almost obligatory rail and road trip to Jenolan Caves. For many years the family stayed with their friends, the Partington family in a large house [No. 160] on the Great Western Highway at the Medlow Bath end of Blackheath. The author remembers his own childhood school holidays at rented cottages including *Deloraine* in Station Street [No.163], Miss Pittendrigh's in Clanwilliam Street [No. 80] and at *Castleford*, on the corner of Wentworth Street [No.63], and Prince George Street, Blackheath.

When the author's parents decided to buy a mountain property and build a weekend retreat in the early 1950s, they naturally selected Blackheath and chose a sheltered site on the edge of a pine plantation known

as 'Foy's Paddock' on the eastern side of the village, between the former bowling club and the golf course. Like many streets in Blackheath, Prince Edward Street was continuous on paper but in reality was fragmented into a number of sections, truncated by the steep local topography. 'Bobbie' Betteridge had fallen in love with a group of three houses, *La Cabana* [Lot A DP 354930; was No.9 but now 13 Prince Edward Street], *Lilly Pilly* [Lot B DP 354930; was No.7 but now 9 Prince Edward Street], and *Suvretta* [Lot 1 DP 19071; was No.1 but now 52-54 Hargraves Street], all on the eastern side of Prince Edward Street, between Reynolds Lane and Hargraves Street. These three houses had been designed by Vienna-born Hans Peter Oser (1913-1967), a modernist architect who had fled the Nazi regime in Austria and settled in Sydney. The fear of nuclear conflict at the height of the Cold War led many European migrants to build retreats on the Blue Mountains where they thought they would be safer in the event of a new war and where the climate, conifers and other cool climate plants reminded them of their homelands.

Hans Peter Oser

Born in Vienna on New Year's Day 1913 into a middle-class Jewish family, Hans Peter Oser studied architecture at the University of Vienna although his father wanted him to study interior decorating to continue the family business (Quinton 1997, p.80). Growing up in Austria's capital city, the young Oser was initially influenced by the Secessionist Jugendstil (Art Nouveau) architecture of Josef Maria Olbrich, Josef Hoffmann and Otto Wagner who rebelled against the pomposities of classical architectural design. Another major influence was Adolf Loos and his drastic changes to "simplification and purer rectilinear forms" (Curtis 1996 in Quinton 1997, p.67). Quinton (1997, p.80) argued that "the seeds of modernism were firmly planted in the young Oser". Oser supplemented his university studies with vacation work in architectural practices including that of Josef Hoffmann and Oswald Haerdtl who were both professors at Vienna's equivalent of Sydney's College of Fine Arts. With his family background in interior design, Oser also nurtured his long-standing appreciation of art with regular visits to Vienna's many museums.

In 1937 Oser accompanied Professor Haerdtl to Paris to assist with the design and construction of the Austrian pavilion for the Paris Exposition of 1938. This trip had a profound impact on Oser who developed a desire to move to the French capital. With his increased experience and authority Oser was commissioned to design additions to Vienna's iconic Imperial Hotel which had been an important gathering place for Kaiser Wilhelm II and other dignitaries. Oser's appointment as supervisor for this project ended abruptly in March 1938 with the rise of Nazism in Germany and Austria. Sensing the dangers for Jews staying in Vienna, Oser married and he and his new bride applied for an Australian visa and work permit. Just why they decided to migrate to Australia is not known but perhaps they thought it was a place furthest removed from the impending conflict about to engulf Europe. Oser went back to France briefly but found there were no architectural work opportunities there in the changed environment and uncertain future. He joined his wife in England and in November 1938 the pair sailed for Sydney, arriving the following month and settling into a small apartment in Kirribilli, on the northern shore of Sydney Harbour.

In January 1939 Oser was fortunate to join a large Sydney architectural firm where he mixed with other European émigré architects and was guided by Professor Alfred Hook (1886-1963) who had contributed to the foundation of the Faculty of Architecture at the University of Sydney and the Royal Australian Institute of Architects (Broomham 1996). Oser learned Australian construction techniques and his skills increased rapidly. A director of the firm was a benefactor of the Red Cross and was well connected in the Sydney social scene. Oser was invited to parties and the opera, pleasures denied him in his later years in Europe. During the Second World War, Oser's fortunes varied, including two years working in a Labour Corps torch factory but improving in 1944 when he was appointed chief architect for the Housing Commission of New South Wales, with a good salary and a car. In both his work in the torch factory and at the Housing Commission, Oser also designed furniture for private clients, working from his small apartment (Quinton 1997, p.84).

By 1946, with his growing client list and "firmly entrenched in the social, cultural and architectural scene in Sydney" (Quinton 1997, p.85), the demand for Oser's work was increasing. Designing from his apartment, with his wife doing the office work, soon became impossible and they set up practice in Hosking Place, a narrow laneway between Castlereagh Street and Pitt Street. Oser became a close friend of modernist architect Sydney 'Syd' Ancher (1904-1979) and, like Ancher, tried his hand at the design of project homes. Oser's were two and three-bedroom houses in a residential estate on a hill near Manly golf course which he had purchased with friend Joseph Gervich.

This development proved to be very successful but came to a sudden end with the untimely death of Gervich in 1956. Oser's impressive client list by now included real estate developer L.J. (later Sir Leslie) Hooker (1903-1976) (Spearritt 1996), Vienna -born clothing manufacturer and developer Frank Theeman (1913-1989) (Hawker 2012), as well as the Benjamin family and the German-born Jewish restaurateur Walter Magnus (1903-1954).

In his domestic architectural work, Oser was a champion of the use of timber for house construction, arguing against a prevailing post-World War II view in many local government authorities that houses should be of solid masonry construction and that the use of timber and asbestos would lead to a proliferation of shacks, thereby depreciating property values. Oser challenged the validity of this view in an article in the *Sunday Herald* in July 1950, saying:

> "Councils have wide powers to control design, so why should they not declare 'selective areas,' where timber homes could be built when the design was approved by qualified people? Probably the most workable method would be to refer the applications to a committee composed of councillors, architects nominated by the Royal Australian Institute of Architects, and real estate men." (Newman 1950).

All of Oser's houses in Prince Edward Street, Blackheath are of timber construction, with brick or stone chimneys and terraces.

Walter Magnus & *La Cabana*

Born in Dortmund, Germany, Walter Magnus studied dentistry and practised in his home city and in Berlin (Cunneen 2000, p.284), before escaping the Nazis in 1933 by travelling to Switzerland, Italy and France before setting up as a dentist in Barcelona, Spain. In 1934 he married German-born Hedwig Lisser Zinner and within two years they were driven out by the Spanish Civil War, escaping first to Czechoslovakia, then to Holland and finally to England. With Walter's sister and Hedy's brother the couple sailed for Australia, reaching Sydney on 8 April 1937.

Denied the right to practise dentistry in his new country, Walter Magnus decided to turn his love of food and cooking into a new profession. He had certainly been exposed to a variety of European cuisines in the previous decades. He bought the *Claremont Café* in Kings Cross, then *La Palette*, Double Bay (1940), the catering rights for the Journalists' Club (1941), *Le Coq d'Or* in Sydney's Ash Street (1943), the *Savarin* in George Street, Sydney (1946) and *The Pier*, Rose Bay (1951).

Figure 1. *La Cabana* - front elevation (Norman 1951, p.42). [Chris Betteridge collection].

It is reported (Norman 1951, p.43) that Magnus was riding with friends through the bush at Blackheath when he first saw the land known as 'Foy's Paddock', a clearing in a dense plantation of *Pinus radiata* (Radiata Pine, Monterey Pine), land that had once belonged to Mark Foy, the Sydney retailer who developed the Hydro Majestic Hotel at Medlow Bath. The house that had been on the land had burnt down. Magnus purchased three and half acres (*approx. 1.4 hectares*) of this land and commissioned H.P. Oser to design a three-bedroom holiday home which Magnus named *La Cabana* (Figure 1), the name-board being fixed to a giant pine tree beside the red-painted gates at the western end of the long entrance drive that wound down through the pines.

Oser's aim in designing *La Cabana* was to achieve a rustic retreat in keeping with the forest setting. Sited in a clearing, with a backdrop of tall pines, the house has an easterly aspect, with views over dense bushland near the headwaters of Govetts Leap Brook, including stands of *Grevillea acanthifolia* ssp. *acanthifolia*, a prickly shrub found in wet places in the upper Blue Mountains. The author remembers as a teenager how difficult it was moving through this bush which was also infested with blackberries and gorse. The open plan living / dining area and the two front bedrooms of *La Cabana* were under a skillion roof while the rear rooms comprising a third bedroom, WC, bathroom, laundry and kitchen were under a flat roof. There were wide overhanging eaves all round and a carport at the southern end with its roof supported on slanted cypress beams. The layout of the house is shown in the plan at Figure 2.

.

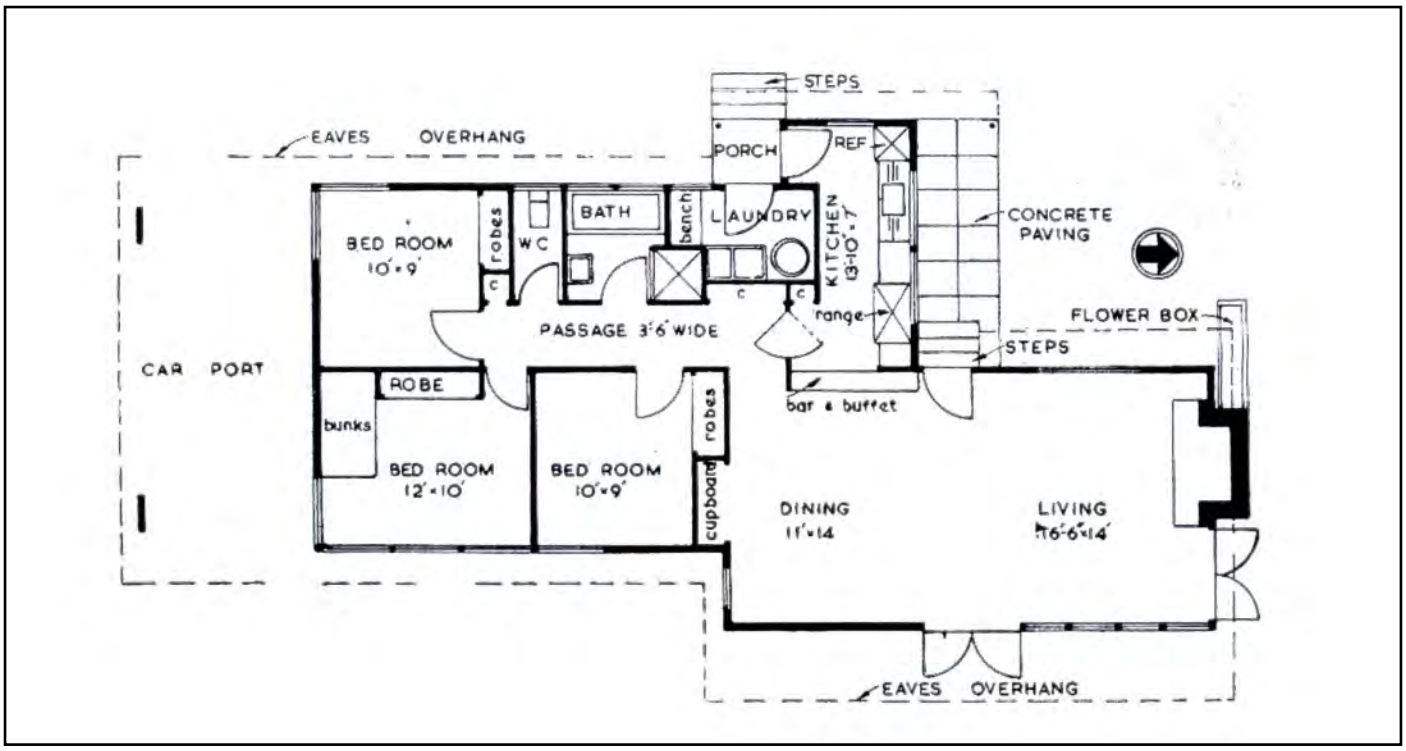

Figure 2. The plan of *La Cabana* (Norman 1951, p.43). [Chris Betteridge collection]

The external walls were clad in oiled and varnished horizontal cypress weatherboards. For the time, the house had extensive glazed areas, with a series of multi-paned timber framed French doors with fixed highlights giving onto the stone-paved front terrace which returns around to the northern and western sides. The living area has windows on three sides, maximising the solar access, and there is a fireplace at the northern end, with a brick chimney. The terrace had a barbecue and painted timber outdoor furniture on wheels for ease of movement. To the east of the house was a large lawn, with flower and vegetable gardens, fruit trees and shrubs.

In the early 1950s the palette of colours that had characterised interwar houses was replaced with vibrant primary colours on external joinery and accent panels and a variety of shades on internal walls, often with different colours on walls in the same room. The roof and entrance doors of *La Cabana* were painted pillar box red, as were the driveway gates and the arris rail and wire boundary fence. All external architraves and glazing bars were painted frosty white. In the living room the walls were painted eggshell blue and the ceiling grey. Interior doors were painted silver grey and curtains and upholstery were vibrant 'Mexican' colours. Furniture was made of Australian cedar, with an oiled finish over the natural timber. Built onto the living room wall adjoining the kitchen was a cypress pine cocktail bar made from left-over scraps of timber from the floors. A hatch through to the kitchen allowed for snack meals at the counter which had lacquered bar stools.

Figure 3. A corpulent but apparently happy Walter Magnus walking his dog *Amigo* at Rose Bay (Anonymous 1952).

Walter Magnus was obviously enjoying taking his pet dachshund *Amigo* for a walk at Rose Bay in the press photograph here as Figure 3.

Walter Magnus unfortunately did not live long enough to spend much time at his cherished *La Cabana*. He was described in the *Australian Dictionary of Biography* (Cunneen 2000, p.285) as:

> "heroically corpulent by the 1950s – his 24½ stone (*156 kg*) globular frame topped by a 'happy, smiling moon of a face'. He spoke several languages, English with a thick German accent. … A wine connoisseur, beer quaffer and cigarette smoker who indulged all his pleasures, he died of a cerebral haemorrhage on 5 February 1954 … A distinctive 'New Australian', Magnus had helped to broaden Sydney's culture and improve its cuisine."

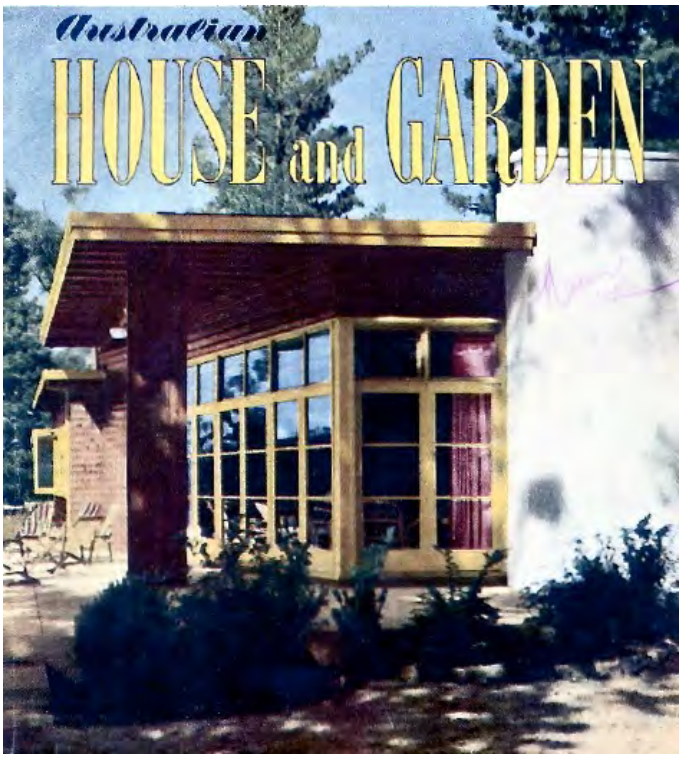

Photo M. Michaelis.

Figure 4. Side elevation of *Lilly Pilly* (Anonymous 1951). [Chris Betteridge collection].

The next owners of *La Cabana* were a couple named Inkster who adopted four young children from the one family and the author remembers these children enjoying the wonderful property, with its enchanting forest setting. The property was subsequently sold to the Fairfax family. Renamed *Pine Cabin*, the house survives but has been repainted and the state of its original interior is unknown to the author.

The Benjamin Family & *Lilly Pilly*

In a clearing to the south of *La Cabana,* but not separated from that property by a boundary fence, was the weekender that Oser designed for Magnus' friends, the Alfred J. Benjamin family. The Benjamins owned department stores at Chatswood and Top Ryde, the latter being the first regional shopping centre in New South Wales and only the second in Australia, opened by the premier J.J. Cahill in November 1957 (City of Ryde 2015). The author remembers as a child being very impressed by the cars in which the owner of this property arrived, including a two-tone blue and white 1950s Pontiac sedan. Set in just over two acres (*0.8 ha*) of pine forest and similar in many ways to the Magnus house, *Lilly Pilly* (Figure 4) was a house with yellow-painted window joinery and fascias and a white-painted rendered masonry chimney; it was clad in horizontal cypress weatherboards. It had three main roof planes, each a very slightly pitched skillion. The

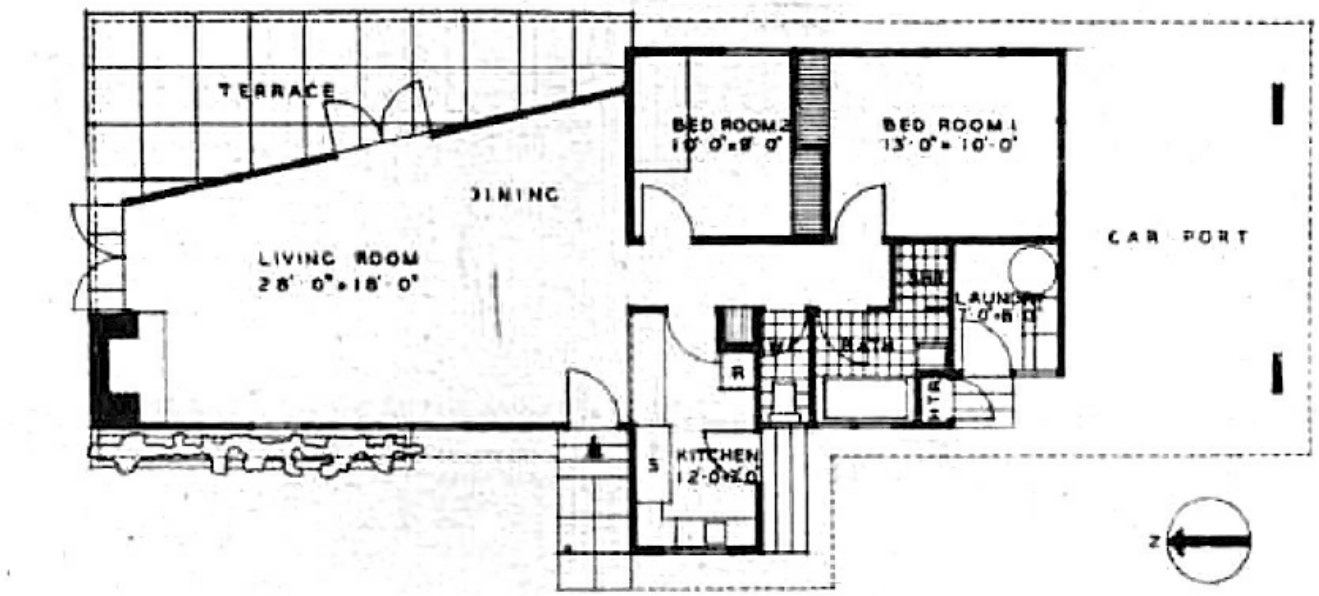

Figure 5. Plan of *Lilly Pilly*, Blackheath, as built (Anonymous n.d.).

highest roof covered the large asymmetric living / dining area, the middle roof covered the two bedrooms, kitchen, bathroom, WC and laundry, with the lowest roof over the carport at the southern end. As at *La Cabana*, a run of French doors with highlights above gave onto an elevated terrace with planter boxes and a garden bed along its eastern side. In a contemporary publication by the Timber Development Association of Australia (NSW Branch) Ltd, titled build your home in TIMBER, an unidentified house that was obviously *Lilly Pilly* was described in glowing terms thus:

> "An outstanding example of contemporary architecture in timber. Designed for both indoor and outdoor living, this Blue Mountains home nestles against a background of pine trees which provide an excellent wind-break. Architect, H.P. Oser."

Another article espousing the qualities and cost savings in using timber for house construction also shows *Lilly Pilly* as an example of a timber dwelling (Anonymous 1952) and the plan is shown in Figure 5.

Figure 6. End elevation of the carport at *Suvretta*, Blackheath (Anonymous n.d.).

Suvretta

The third in the enclave of Oser-designed houses in Prince Edward Street, Blackheath, is a small weekender called *Suvretta*, possibly named after a famous hotel in St. Moritz, Switzerland; it is located on the eastern side of the street in the short block between Belvidere Avenue and Hargraves Street. Sited quite close to the street boundary behind a row of screening conifers, *Suvretta* is clad with dark-stained timber boards and has a low-pitched gabled roof. It presents a more European appearance, with timber shutters to the windows. The carport, shown in Figure 6 is at the north-eastern end but the interior layout is not known. Originally set on a double lot with an ornamental garden of conifers and deciduous trees for autumn colour, the land has been subdivided, leaving the house on a relatively shallow site, with a new dwelling fronting Hargraves Street on part of the original garden.

Other Oser-Designed Buildings in NSW

Quinton was unaware of the Oser houses in Prince Edward Street, Blackheath when he prepared his architectural dissertation but he referred (Quinton 1997, p.144) to two other Oser houses in Blackheath – one in Golf Links Road and another in Govetts Leap Road – and a third at Echo Point, Katoomba. In addition to the Blue Mountains houses, Quinton referred to Oser designed residential dwellings in Bellevue Hill, Beauty Point, Mosman, Roseville, Middle Cove, Avalon, Woollahra and Castle Cove. The Hersey House in Telopea Street, Mount Colah, designed by Oser in 1954 is, like *Whispering Pines*, another timber dwelling with low-pitched gabled roof (O'Callaghan & Pickett 2012, pp.63-64, 117).

Oser's commercial output included the William Bland Centre at 229-231, Macquarie Street, Sydney, a building in which "the minimalist curtain wall reduces architecture to a grid of lines" (Jahn 1997, p.163) and the Canberra Rex Hotel (1959). Quinton (1997, p.87) stated that Oser

> "was known for taking on many young Jewish architects who were having difficulty finding work at the time".

In 1952 Oser employed the highly-skilled French émigré draftsman / architect Jean Fombertaux and the firm eventually became Oser, Fombertaux & Associates. In 1963 the practice designed the Sydney booking offices for the airline British Overseas Airways Corporation (BOAC) (now British Airways). Located at 64 Castlereagh Street, these offices, with a marble-sheathed beam across the façade allowed for an impressively wide front window of 11 metres, creating an 'open' ground floor (Apperly & Lind 1971, p.25). In 1966, the year before Oser's death, the firm designed the *Glenmore Apartments* at 176, Glenmore Road, Paddington, a slab block with extensive views of Sydney Harbour (Apperly & Lind 1971, p.46). In that same year the firm designed the cosmetic production complex for Helena Rubinstein Pty. Ltd. at 12-26, Wharf Road, Ermington (Apperly & Lind 1971, p.88).

Oser's domestic and commercial work has been described as

> "marked by a sophistication of form and composition within an informed modernist style." (Goad & Willis c.2012, p.520)

The Betteridge Family & *Whispering Pines*

When the author's parents were contemplating the purchase of land at Blackheath, their favourite holiday haunt, they were impressed with the three Oser-designed houses and they decided to commission the same architect for their weekender. They had purchased three adjoining lots fronting the western side of Prince Edward Street, directly opposite *La Cabana* and Blue Mountains City Council records indicate that the transfer of ownership had been completed by 14 May 1953. This land, of area 147 feet x 150 feet, sloped quite steeply up from the road which in the early 1950s was a narrow unsealed track leading down to the old dairy beside Prince George Street. The land also had many pine trees self-propagated from those on 'Foy's Paddock', as well as remnant eucalypts such as *Eucalyptus sieberi* (Silvertop Ash) and native shrubs such as *Telopea speciossima* (Waratah), *Persoonia levis* (Geebung), *Lambertia formosa* (Mountain Devil), *Hakea dactyloides*, *Lomatia silaifolia* (Crinkle Bush) and the prostrate spider flower, *Grevillea laurina*. At the time Radiata Pine did not have quite the bad reputation as an invasive species as it does today and the author's parents loved the smell of the pine needles and the sound the branches made in the wind. They named the property *Whispering Pines* [Lots 15-17 DP19856; 4-8 Prince Edward Street].

The family decided to site the house well-back from the street and straddling the three narrow lots to maximise the space around the dwelling. For at least two years they camped (Figure 7) on the property on weekends while they prepared the land, grubbing out large tree roots (Figure 8) and levelling the house site, being careful to retain as much as possible of the native vegetation. Transport from the family home in

Photo: Bob Betteridge c.1954

Figure 7. Camping on the land at weekends and during school holidays was great fun for a seven-year old boy; the author is next to the family tent.

Photo: Bob Betteridge c.1954

Figure 8. The author, clothed in 'Jackie Coogan' overalls and wielding a tomahawk, helping his mother, with axe and spade, to clear timber from the house site at *Whispering Pines*.

Parramatta was in the Ford V8 sedan which Bob Betteridge had bought new in December 1935 from a Strathfield dealer. Accommodation on these weekend excursions was a canvas tent strung between two pine trees. Cooking was done over an open fire or on a kerosene stove and food was kept away from marauding ants and possums in a meat safe hanging from a tree. All of the family helped to clear the land, gaining great satisfaction as each milestone was achieved.

It would have been quite a leap of faith for Bob and Bobbie Betteridge to commission Oser to design their house and the author suspects they took the plunge to engage an architect because they realised it was probably the only way they could get the house of their dreams. Roberta Betteridge had always had an interest in art, architecture and design. As a young woman she had wanted to study art but it was not considered an appropriate choice for the daughter of a Congregational minister. She did however dabble in sketching for many years and enjoyed hand colouring the black and white photographs which Bob took on his Kodak vest pocket folding camera. Bobbie threw herself into the house design process with considerable enthusiasm. Although she was a very shy person, she enjoyed the visits to Oser's offices in Hosking Place and to suppliers of kitchen appliances, bathroom fittings and furnishing fabrics. The author fondly remembers accompanying his mother on these outings to the city and playing on the floor of Oser's office, constructing buildings with the architect's books which probably included tomes on the works of Le Corbusier (1887-1965) and Mies Van Der Rohe (1886-1969). The earliest record of this project that the author has been able to locate to date is a note

about a working drawing dated 12 October 1953 (Oser 1953) which shows the house sited towards the eastern side of the land, close to Prince Edward Street, with a rotary clothes line to the rear, but the working drawing is marked 'Positions to be adjusted on site'.

In the early 1950s building materials were still in limited supply after World War II and there was a shortage of builders, particularly those who had worked under the supervision of an architect. On the Blue Mountains in 1953/4 such builders would have been a rarity and the author believes his parents and Oser had some difficulty finding someone who could take on the task of constructing the house, especially to Oser's exacting standards. The author remembers the builder's surname was Cadwallader but he has no further information on him apart from the fact that the house took much longer to be completed than his parents had expected. This was probably due to a number of factors including delays in obtaining supplies, Oser's Sydney base and likely arguments between the architect and the builder. Once the house was partially completed, the family would camp in the structure (Figure 9) in preference to the old canvas tent.

H.P. Oser had recently visited the United States and had come back impressed by the way in which American women had much greater choice when it came to fitting out their homes with colour-matched appliances, fitted wardrobes and labour-saving devices. Although the Betteridge house was only going to be a weekender, it was designed to make maximum use of available space. The refrigerator, kitchen bench and stove were all the same height and the fridge top could be used as extra bench space. The kitchen sink had wide draining boards either side, allowing for additional bench space and a generous cupboard underneath. There was a pair of casement windows above the sink offering views out to the garden during washing up. The L-shaped dining bench served both the kitchen and the large living area, with cupboards above the bench suspended on steel poles from the ceiling. You could reach just about everything you needed without leaving your chair. The kitchen cupboards were grey on the kitchen side and a coffee colour on the living room side. The kitchen wall above the stove and refrigerator was a deep turquoise colour and the 'lino' floor tiles were a random pattern of grey and yellow squares. Kitchen benches had Formica tops in a faintly patterned turquoise colour. The six dining chairs were Eames DCM and the lounge suite comprised a two-seater sofa and two chairs, upholstered in brown and yellow mottled woollen fabric

One long side and part of the end of the living room were fitted with wide divans which doubled as beds for extra guests on weekends. These were upholstered in a dark brown woollen fabric. The bedrooms had generous floor to ceiling fitted wardrobes. Long fitted dressing tables had compartments with lids that hinged up to reveal make-up mirrors. Oser had an aversion to traditional central ceiling-mounted pendant light fittings. Ceiling lights in the living area, kitchen and hall were translucent glass mushroom type but much of the lighting in the house was in the form of wall-mounted fittings and the coachwood double bunks had anodised aluminium bed lamps. At the northern end of the house a huge sandstone fireplace

Photo: Bob Betteridge c.1954

Figure 9. The author and his mother Bobbie Betteridge in the partially completed house circa 1954. The scaffolding for the stone work looks decidedly dodgy and would certainly not meet today's Workplace Safety requirements.

Photo: Bob Betteridge c.1960s

Figure 10. The northern end of the living area circa 1960s, showing the sandstone fireplace inside and barbecue outside on the terrace. The original red and yellow butterfly chairs were usually on the terrace. The lamp on the mantelpiece was fashioned by a family friend from a section of pine branch complete with four cones.

(Figure 10) continued through to the front terrace where it became a wood-fired barbecue. As with the previous Oser houses *La Cabana* and *Lilly Pilly* the house had large glazed areas but at *Whispering Pines* the windows are not multi-paned but large sheets of plate glass. There are large fixed picture windows and equally large casement windows, all with large fixed highlights above to ceiling height. When the Venetian blinds were open it was not uncommon for birds to knock themselves out on the windows, thinking that they could fly straight through the house.

The living area had light grey raked ceilings and pale yellow walls, contrasting with the dark brown upholstered divans. Floors throughout the living area, hall and bedrooms were oiled and polished 100mm cypress pine tongue and groove boards. Internal doors and architraves and the fitted wardrobes were painted glossy white. The ceiling and two walls in the main bedroom were painted off-white while the accent wall behind the fitted double bed was a mid-blue. The second bedroom featured fitted double bunks in coachwood, with alcoves at the head ends for book storage and further shelving at the head end of the lower bunk. Walls were painted pale yellow with a pale grey ceiling. A large storage box with hinged lid upholstered in studded red leather was fitted under the window. The riot of colour was continued in the bathroom, with pale blue toilet suite, wash basin and fitted bath. Wall tiles were pale pink and the floor and shower recess had small hexagonal tiles in a random pattern of pink and light grey.

The front elevation of the house under the bedroom windows, and the rear elevation under the kitchen windows and between the bathroom and laundry windows, featured yellow-painted panels of asbestos cement in white painted timber frames, providing a strong contrast with the glossy cypress weatherboards which were originally finished with Brolite yacht enamel. Oser would have been aware of this company's products because he had designed a second storey addition to their factory at Alexandria (Anonymous 1954). The front door was a solid core type painted turquoise blue while the kitchen door was a white-painted stable type which, with the top half open, allowed for good views out to the back garden. A concrete terrace extended along the rear of the house from the kitchen to the carport, with a step down to a wide crazy-paved path (Figures 11 & 12). The laundry, with external access from the rear terrace, featured a large off-peak Braemar hot water service and two concrete laundry tubs. A timber clothes drying rack suspended from the ceiling could be raised

and lowered with ropes. A Hoovermatic™ twin-tub washing machine was a later addition.

The low pitched main roof and the lower carport roof were both clad in 'super-six' corrugated asbestos cement sheeting with matching ridge cappings. The huge sandstone chimney which served both the internal fireplace and the external barbecue was topped with a rectangular steel plate supported on steel posts. In the author's opinion the low-pitched roof was not particularly well-suited to the heavily treed environment and sweeping pine needles off the roof and cleaning out the deep guttering hidden behind wide timber fascias was a constant chore. That roof also was unable to cope with heavy hail or snow but perhaps the architect did not anticipate events such as the record snow fall of June 1965 which also caused considerable damage to the garden (Figures 11, 12 & 13). The sandstone flagged front terrace, partly

Photo: Chris Betteridge 1965

Figure 13. The view up the drive from Prince Edward Street during the record June 1965 snow fall. The garden could not cope with such heavy snow and over two hundred pines, other trees and shrubs were broken by the weight of snow.

protected under the roof, featured a fitted cypress pine bench seat with a Formica topped bench next to the barbecue for preparation of meals. Extending along the front of the terrace to the steps leading up to the front door was a sandstone edged window box which was traditionally planted with daffodils for a great splash of spring colour.

In the late 1960s the author's parents commissioned Oser, Fombertaux and Associates to design a large rumpus room in the same style as the house, to be connected to the carport by a timber pergola. This structure provided support for climbers such as Clematis 'Montana' hybrids and shelter for the Mollis azaleas planted by Sorensen.

Sorensen and the garden at *Whispering Pines*

In his seminal 1990 work on the gardens of Danish-born landscape designer Paul Sorensen, the late Richard Ratcliffe (p.138) described the garden at *Whispering Pines* thus:

> "While Blue Mist [at Leura] shows Sorensen's virtuosity in the use of contrasting scale and dramatic surprise, Whispering Pines at Blackheath shows him in a simpler mood. When the Betteridge family built their house, designed by Sydney architect H.P. Oser in 1955, they chose to site it towards the rear of their largeish block because of the pleasure they gained from the mature pines which covered the major portion of the site towards the street. Sorensen built stone walls and paving which link the house to the garden and carried out some limited planting to the rear of the house. All other planting was completed by the owners but is so typically Sorensen in selection and style that it is plain that he provided much advice and inspiration. All of the pines were retained and simply underplanted with azaleas, maples, camellias and rhododendrons. In some areas these in turn are underplanted with ivy which makes its presence more visible as it climbs the occasional pine, adding to the lush verdure of contrasting foliage textures and forms. Paths in this garden are reduced to narrow ones of natural earth meandering among the trees and shrubs in an environment of overwhelming restfulness. The Betteridges have added subtle lighting among the trees to expand the available experiences into the darker hours."

The author is not sure how his parents came to choose Sorensen to design the garden around the house. They were probably aware of his work at *Everglades*, Leura, and possibly other gardens in the upper Blue Mountains – he is known to have designed more than forty gardens in the Blue Mountains (Aitken & Looker 2002, p.559). Sorensen's Nursery at Leura was also one of the main sources of cool climate trees, shrubs and herbaceous plants in the area and the author remembers many happy visits to the nursery with his parents who maintained a long friendship with Sorensen, exchanging cards at Christmas time for many years after their garden was finished. The author's friend, Sydney architect and garden historian Howard Tanner recounts a story of similar visits with his own parents to Sorensen's Nursery. On one occasion his parents were discussing plants with the great nurseryman when another customer came up to them and asked Sorensen how much a particular plant cost. Sorensen later turned to Howard's parents and said "if he has to ask the price, he probably can't afford it!" Judging from the receipts for the author's parents' plant purchases, Sorensen's prices were certainly not cheap but the quality of the plants was high and keen gardeners will often pay to get the plants they want.

As Ratcliffe suggested, Sorensen's main input at *Whispering Pines* was to the rear of the house but he also had some input to the area immediately in front of the house and at its northern end, as evidenced in his letter dated 1 May 1956 in which he styles himself as 'Consulting, Visualing, Landscape Artist' (Figure 14). Garden historians find it extremely frustrating that Sorensen never committed his plans to paper but his invoices and letters to clients do give clues to his design intent which must be supplemented by analysis of surviving gardens.

Mrs A R Betteridge
45 Hunter St
Parramatta

Dear Mrs Betteridge
The extension of the paving at the front of the house, which we so long promised you, has now been completed
Also the extension to the rock garden at the northern end of the house, the lawns have been aerated & we gave it a light brushing, it would benefit by further brushing, using the back of a rake forwards & backwards, which perhaps sometime you may find your way clear to do
The day was drawing to a close, leaving us down planting of the white Lilac, benching round the magnolia & the completion of the small garden at the end of the garage
As we are not dependant on the carter for material to complete these small jobs, the next time we are in Blackheath they will all receive attention
Yours faithfully P Sorensen

CONSULTING, VISUALING, LANDSCAPE ARTIST

Figure 14. A letter dated 1 May 1956 from P. Sorensen, Leura 'Consulting, Visualing, Landscape Artist' to Mr. A.R. Betteridge, the author's father, advising completion of the paving along the front of the house, the extension of the rockery and completion of the small garden at the end of the garage. [Betteridge Family Collection]

The rear (west) boundary adjoining the lawn, with a return along part of the southern boundary, was planted with a row of mixed conifers, supplied in June 1955, predominantly *Pseudotsuga menziesii* (Douglas Fir) but also including golden cultivars of *Chamaecyparis* spp. including *C. obtusa* 'Crippsii'. At the narrow end of the triangular lawn was a specimen of Blue Spruce, most likely a cultivar of *Picea pungens*. This tree flourished initially but never achieved its expected growth, possibly due to restrictions on its root system from one of the many stone 'floaters' in the garden. It eventually succumbed to insect attack.

Overhanging the steps from the back of the house up to the lawn was a pink flowering cherry. Along the eastern edge of the lawn was a row of three specimens of *Betula pendula* (Silver Birch) but these suffered from ongoing attack by borers. Specimens planted on the lawn included two dogwoods, *Cornus* 'Kousa' and *C. florida* 'Rubra' as well as a *Viburnum x burkwoodii* 'Chenault'. Two old grasstrees *Xanthorrhoea* sp. were retained on the lawn. The garden bed along the eastern edge of the lawn was planted with yellow, mauve, blue and pink flowers including varieties of primulas, phlox, rosemary, carnations and irises (Figure 15).

Along the western end of the house and extending around the northern side of the house was a rockery made of the eroded ironstone rocks common on the more exposed parts of the upper Blue Mountains. Bobbie Betteridge was very fond of alpine plants and Sorensen's Nursery supplied plants such as primroses, gentians, alpine phlox and aubretia. Sorensen planted specimens of an ornamental dwarf conifer, probably a juniper cultivar, beside the front steps up to the terrace and at the northern end of the planter box. In front of the terrace and on the eastern side of the path paved with sandstone stepping stones which extended along the length of the front of the house were massed plantings of azaleas, particularly the hardy pink Kurume types. At the northern and southern ends of the house were specimens of Mollis and Ghent azaleas in shades of orange, white and yellows.

Surviving records show that Sorensen's Nursery supplied considerable plant material for the garden until at least the middle of 1957 and probably the odd specimen after that. The author's parents also sourced plants from other mountain nurseries including Yamba Nursery, Leura (T. Shucksmith), The Pottery Patch

Photo: Bob Betteridge c.1950s

Figure 15. The author photographed circa late 1950s on the rear garden wall built to Sorensen's design. The vast majority of plants in the bed along the wall and in the rockery at far right were supplied by Sorensen's Nursery.

Nursery, Wentworth Falls (Dorothy H. Commins and Valerie T. Murray), Scrivener's Nursery at the bottom of Boddington Hill, Wentworth Falls and the Hollandia Nursery, Mt. Boyce (W.R. & P. Harris) as well as Rumseys in Church Street, Parramatta where Bob Betteridge worked as a pharmacist for over forty years. In later years Bob and Bobbie Betteridge continued to supplement the plantings at *Whispering Pines* with material from sources as varied as Coles at Katoomba to Libby Raines' nursery at Mt. Wilson.

In the early 1980s, Sorensen had been engaged by property developer Warren Anderson to make further changes to the garden which Sorensen had earlier designed for the Darling family at *Fernhill*, Mulgoa, the State significant property developed by Edward Cox as part of the Cox family's extensive pastoral holdings in the Mulgoa Valley. By then Sorensen was close to the end of his life but still a "man of impressive stamina" (Morris, 2012). At this time the author was working for the Heritage and Conservation Branch, NSW Department of Environment and Planning and met Sorensen again at *Fernhill* and remembers him dressed in jeans and jungle green army surplus shirt, up a ladder, waving his arms about and stating in his still broad Danish accent "We must seek to capture the Australian light!" Morris (2012) wrote

> "Sorensen excelled at pruning trees and, with theatrical gestures, extolled the virtues of bringing out the 'spirit' of a tree. Stone walls and paving were features of his work; keeping within budget was not."

Aitken & Looker (2002, p.559) described Sorensen gardens as

> "based on the idea of creating outdoor rooms defined by the use of large trees and shrubs or with walls and changes of level."

At *Whispering Pines* the house was quite close to the rear boundary and Sorensen created a secluded lawn area for display of specimen shrubs and took advantage of the change in level between the rear boundary and the back of the house to introduce the fine stone walling and paving that were trademarks of his work. *Whispering Pines* is an introspective garden, with many sheltered spaces and surprises as one moves through the landscape. Bob and Bobbie Betteridge and their children all helped to develop and maintain the garden over the years, with the construction of features such as ornamental pools, low stone walls and other landscape features. The author's brother, the late Warwick Betteridge, put in an enormous effort after his parents' deaths to maintain the garden. Over the past twenty years or so, the author's sister Roslyn Scribner has resided at *Whispering Pines* with her husband Ted Scribner and they have continued to care for the house and garden, regularly winning prizes at the local horticultural show for blooms from the garden.

The Future

The author's sister has retained the original exterior and interior colour schemes and most of the original fittings apart from replacement of items such as the original refrigerator. The recent replacement of the roofs on the house, carport and rumpus room has ensured the integrity of the interiors. The garden at *Whispering Pines* has suffered from a number of severe storms which have hit the upper Blue Mountains in recent years. A number of old pines have either come down in these storms or have been removed for safety reasons. Many of the surviving pines are over-mature and some paths are overgrown. When the house was built and the garden commenced, there was only one other house adjoining, and that only touching at the south western corner. The garden is now surrounded on three sides by residential dwellings squeezed onto the long narrow lots resulting from historic subdivisions. It is fortunate that Bob and Bobbie Betteridge had the ability and foresight to

acquire three lots and to site the house so that it still has an adequate curtilage around it. The author and his sister are discussing the conservation of the garden in ways that respect the original design intent but take into account the changes that have taken place both within the site and in its local context. The author is carrying out further research of the family archives, particularly in regard to the plant species used in the garden as many of the names have changed since the 1950s.

Pine Cabin (formerly *La Cabana*), *Lilly Pilly* and *Whispering Pines* are all included on the Australian Institute of Architects Register of Significant Architecture in NSW although there are some inaccuracies in the description of the properties which need to be corrected. *Whispering Pines* is private property and should be respected as such.

SOLDIERS PINCH, BLACKHEATH: THE HISTORY OF ITS NAMING AND DEVELOPMENT.

Peter C. Rickwood
BEES,
University of New South Wales,
Sydney, NSW 2052.
p.rickwood@unsw.edu.au

Abstract
Various versions of the highway across the Blue Mountains have been formed over a steeply sloping ridge between Blackheath and Mount Victoria, all with a severe bend known as Soldiers Pinch. The supposed alternative origins of that name are discussed as are the experiences of some 19th Century travellers heading west and down the slope. The various routes taken by successive road builders are shown on maps and aerial photographs but the exact route taken on the pioneer journey in 1813 remains uncertain.

Key Words: Soldiers Pinch, steep bend, Blackheath, Bathurst Road, Blue Mountains

INTRODUCTION

Under contract to The Roads and Transport Authority of NSW, Thiess Pty Ltd. completed the construction of a new segment of the Great Western Highway between Blackheath and Mount Victoria in June 2002 (RTA 2012) (Figure 1B) in order to avoid a notorious accident 'blackspot', a big bow in the road, which the RTA called Soldiers Pinch (RTA 2005) (at c.MGA 468 785; LIC 2000).

[The use of the apostrophe (as in Soldier's) is no longer favoured by the NSW Geographic Names Board.]

Prior to that (Figure 1A), the descent to the north was a moderately steep curving section of a three lane highway that had an adverse camber which had been the downfall (literally) of several well loaded trucks heading towards Sydney. However, the section at the Blackheath end had also been problematical with several accidents occurring due to a surface that was particularly slippery when wet (in the vicinity of the sign that forewarns Sydney bound travellers of the approaching truck checking station).

Myth ?

The origin of the name 'Soldier's Pinch' is probably the result of an apocryphal story that was repeated by several early travellers and circulated shortly after the road over the Blue Mountains road was first constructed. Thus in 1839 Louisa Anne Meredith (1844, p.54) wrote of her journey that

Figure 2. Early 20th Century Maps of Soldiers Pinch.

> "In one place we came to an almost precipitous descent in the road, called 'Soldier's Pinch' or 'Pitch', most probably from some accident which has happened there."

However, Mrs. Sophia Stanger (1882, p.68) was more forthcoming by stating in July 1841

> ".. Soldier's Pinch which owes its name to the folly of a soldier, who, being called on to block the wheel, unwittingly placed his foot instead of a stone, which was, of course crushed to atoms."

In 1848 the writer of a travel description stated that the explanation current at that time was:

> "A soldier – more probably some one known by the nick-name of The Soldier – was travelling with a heavily laden dray: in going up that *pinch* – an ugly one it is too – the driver requested him "to block up;" the poor man having no block to *block up* with, he put his foot behind the wheel, which immediately pinched it clean off; that is the reason why it has got such a strange name." (Anonymous 1848).

By 1860 the story had 'developed' for James Mudge wrote of the state of road from Bathurst in that year and stated:

> "Then there is 'Soldiers Pinch' which derives its name from the fact that an unfortunate soldier was killed there while the road was being formed." (Mudge 1905; Low & Smith, 1993, p.10)

If Meredith's 1839 account is correct then at that time Soldiers Pinch was a very steep descent, and that corresponds to the explanation of Harry Peckman, the renowned Blue Mountains horseman (started in 1863) who once related "We called a hill a 'pinch' in those days" (Low & Smith, 1993, p.11). That interpretation still exists for Woods (1999, p.149) gave the meaning as "a short but steep section of road".

But on the Parish of Blackheath Maps (7th to 10th editions inclusive (1909 (Figure 2A) - 1926), Robinson's "4 chains to an inch" map Sheet 47 (undated, c.1915; Figure 2B) and Coleman's 1946 map (Figure 3), 'Soldiers Pinch' is printed opposite Portion 218 and Carawatha Road at Mount Boyce c.MGA 469 771 (LIC 2000) in a relatively flat location. One definition is that

> "the word 'pinch' is a geographical term describing a narrow passage." (Fox 1999, p.124; 2001, p.151)

which tends to suggest that these maps are indicating such a feature at Mount Boyce - yet nothing there seems to warrant that term.

[Those placements of the name "Soldiers Pinch" have to have been deliberate for there is adequate space on the inside of the prominent bend that is on Figures 2A and 3 and which is to the north of Figure 2B on the adjacent Sheet 36.]

The location of Soldier's Pinch was the main topic of an unpublished paper by Cecil L. Atwell at the end of which he concluded;

> "... I would say that the "Soldier's Pinch" never existed on any part of the Cox's Road, and was originally the name bestowed about 1830, along part of the new line of Bathurst Road, somewhere

between Mt. Boyce and Black Heath (*sic*)." (Atwell 1995, p.11).

But that is even further south towards Blackheath and between those two localities the ridge has very limited undulation and no "narrow passage" so nothing warranting a special name.

Clearly these three locations cannot all be correct and the balance of evidence is for the most northerly of them. Whilst the exact location of Soldiers Pinch, as so-called in early 19th Century, is uncertain (Karskens, 1988, p.142) there seems little doubt that it was on a very steep slope (base c.MGA 465 782 and high point c.MGA 466 781 (LIC 2000) - pers. comm. Brian Fox, 25 October 2012) so somewhere between the small track (at c.MGA 4649 7820) and the power transmission line track (at c.MGA 4660 7820), both of which are clearly visible on the orthophoto maps (CMA 1980). At most this is a slope 150m long. However it could originally have been slightly further west in the present position of the railway lines (indicated by the YELLOW line in Figure 4) and once (21.5.1897) termed "Soldiers Pinch Ballast Siding" (Wylie & Singleton, 1958).

This deduction accords with the statement made by Mrs. Sophia Stanger (1882, p.68) that in July 1841

> "At the bottom of Soldier's Pinch is another cluster of huts belonging to the Iron-gang station."

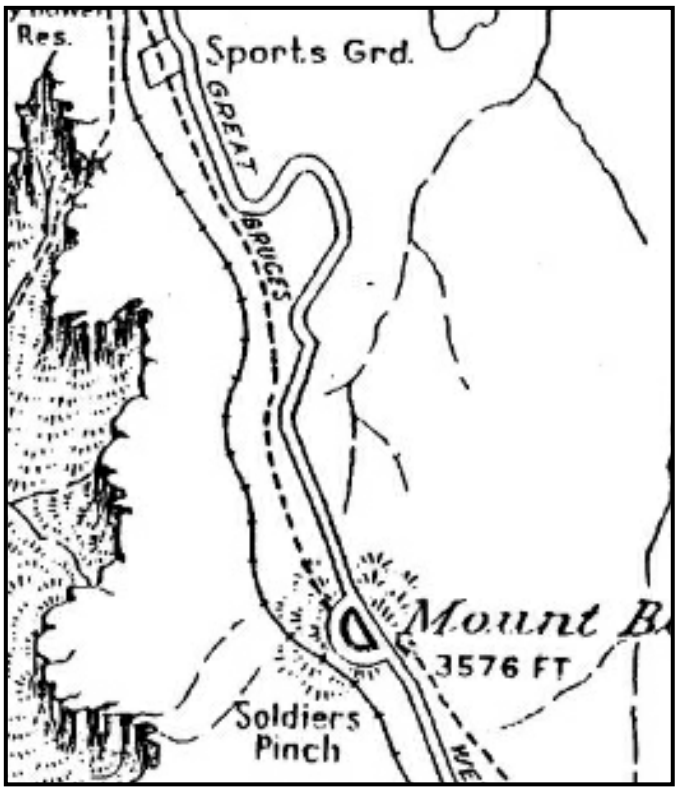

Figure 3. Part of Coleman's 1946 *Tourist map of Blackheath and Mount Victoria*.

Possibly that is Browntown Oval (opposite the label 'Sports Grd.' on Figure 3) or thereabouts and consistent with the location of the descent conjectured. A concrete marker post was installed at the western end of the oval in 1988 (a Bicentennial project), one of many placed as close as possible to the mile marks along the route surveyed by G.W. Evans in 1813 (Yeaman et al. 2009).

Routes down the ridge

The three explorers passed Soldiers Pinch on 28 May 1813 (Blaxland, 1823, p.17; Yeaman, 1976, p.17) and, although the exact route of the descent taken by them is not known, it is likely to have been very direct for time was pressing so possibly it was that shown in Figure 4 by the GREEN line. The track shown in Figure 5 was not cleared in 1813, but it indicates the kind of conditions that Blaxland, Lawson and Wentworth might have encountered.

[Atwell (1995, p.2) wrote about the accuracy of the type of compass that this party carried and stated: "From this I conclude that the true route taken by the Blaxland Expedition can not be plotted."]

Blaxland, Lawson and Wentworth were quickly followed on 24 November 1813 by G.W. Evans who had been sent to check their route and to survey a line for road construction (Evans, 1814, p.28). Most probably Evans would have deemed that direct route down the ridge too steep for horses to negotiate so he surveyed a curving but steep descent, close to the line taken by the Great Western Highway prior to the 2002 realignment but tighter (Karskens, 1988, Fig. 53; Figure 6; the BLUE line in Figure 4).

In the next year Cox built the first 'cart road' (Karskens 1988, p.22) and his gang got to the vicinity of Soldiers Pinch on 28 October 1814 (Cox 1815, p.52; Yeaman, 1976, p.17) but Evans' proposed route was not followed exactly (Karskens 1988, p.21) as Macquarie had given Cox permission to

> "make any occasional deviation therefrom" (Karskens 1988, p.17)

and he tried

> "to cut off over long or steep sections (for example at Caley's Repulse and Soldiers Pinch)." (Karskens 1988, p.19).

There are some who think Cox constructed his road along the route which was subsequently surveyed by McBrien in 1823; this was re-computed and plotted in 1986 (Karskens, 1988, p.55) and shown to be essentially the present dirt track with a left hand hairpin bend (Figure 6; Karskens, 1988, p.79, Fig. 53; the RED line in Figure 4) that is considerably tighter than Evans' line of descent but less steep. However

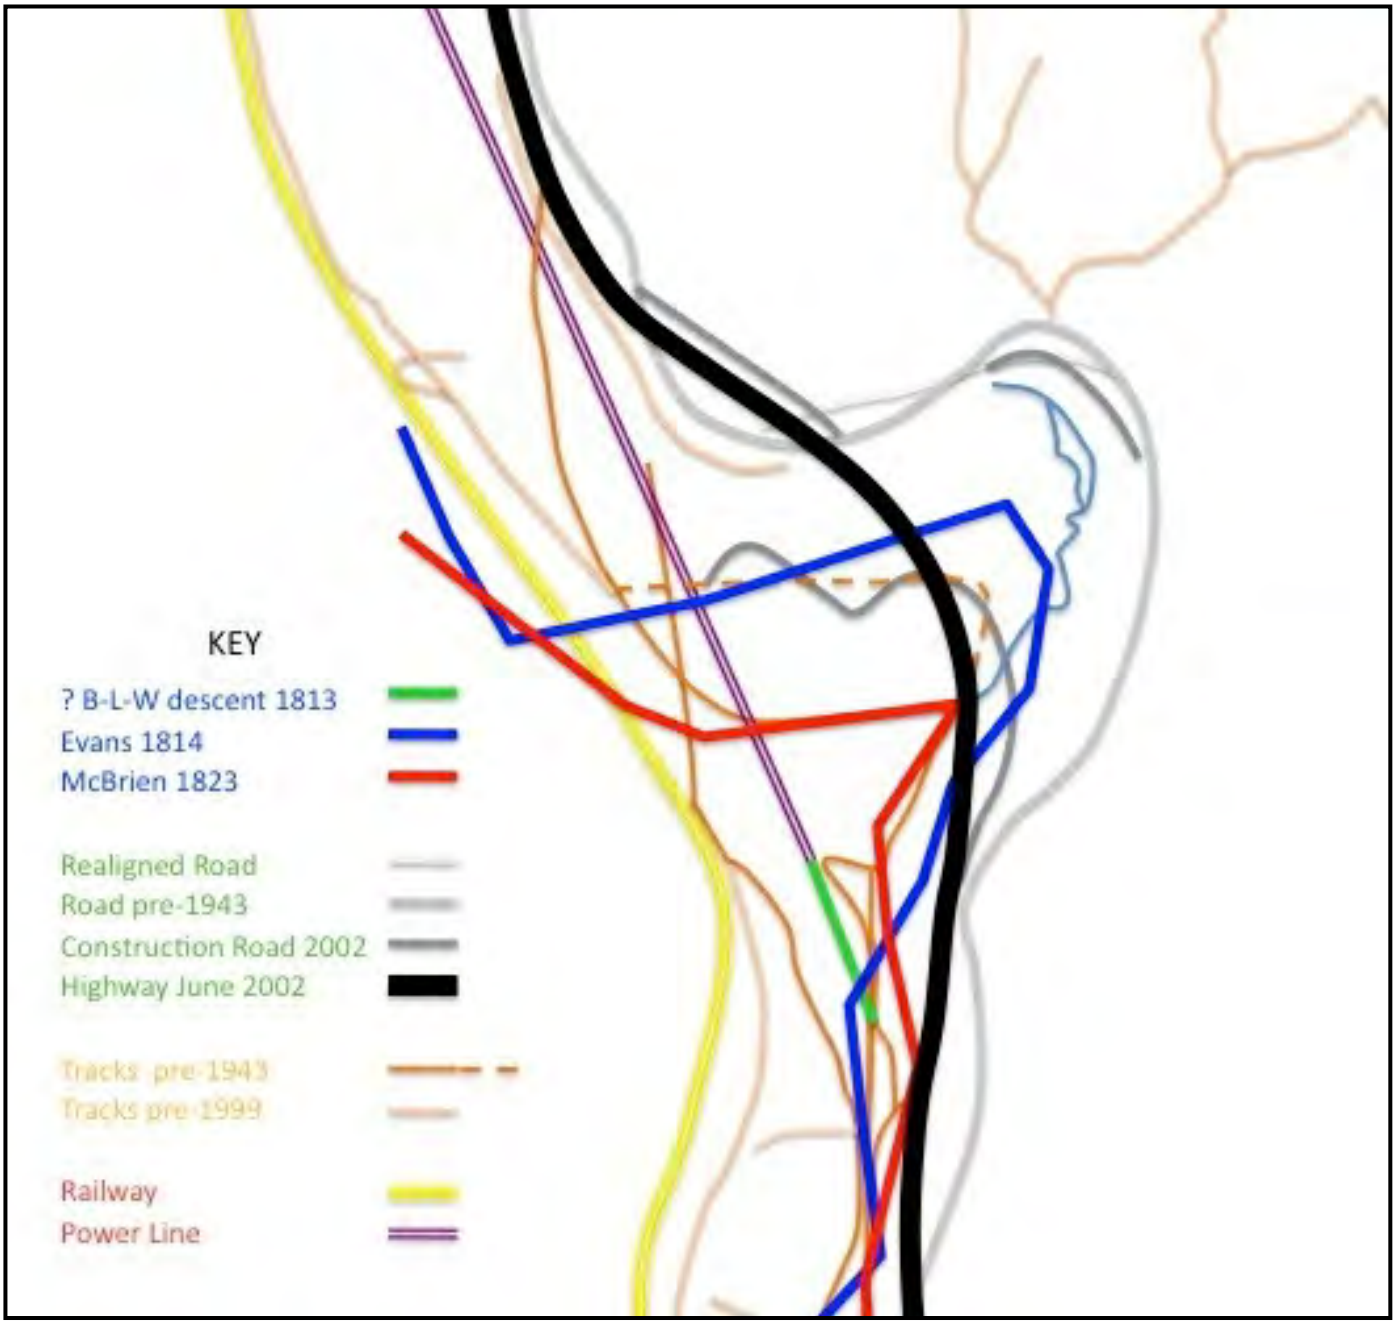

Figure 4. Composite map of tracings from 1943, 1999 (infra-red) and 2011 aerial photographs. Lines surveyed by Evans and McBrien were traced from Karskens (1988, Fig.53). The pale blue lines are rough tracks most clearly seen on the 1999 infra-red aerial photograph (Figure 15).

the road made by Cox was an evolving route, and Atwell (1995, p.3) wrote:

> "By the time McBrien did his survey ... Lieutenant Lawson ... had had many changes made to the route of the original Cox's Road."

But no record is known of any changes supposedly ordered by Lawson in the vicinity of Soldier's Pinch. Atwell deduced that McBrien used a prismatic circumferenter readable to fractions of a degree but the accuracy would not have been comparable to that of modern day instruments. However the plotted route is likely to have been close to, but not necessarily exactly the same as, the road that McBrien surveyed.

The road work done by Cox and his team was checked by Governor Macquarie (Antill, 1815, pp.87 & 97; Yeaman, 1976, p.17) who came through the area of Soldiers Pinch on 29 April and 18 May 1815, but neither he, nor his companions, made specific reference to any difficulties with the road at this point.

When in 1839 Louisa Anne Meredith (1844, p.41) described Soldier's Pinch

> "It was a mass of loose stones, continually rolling from under the horses' feet, and so steep as to be very fatiguing even to walk down, ..."

and Mrs. Sophia Stanger (1882, p.68) wrote of her 1841 encounter

Figure 5. Soldiers Pinch 2001 c.MGA 4655 7815.

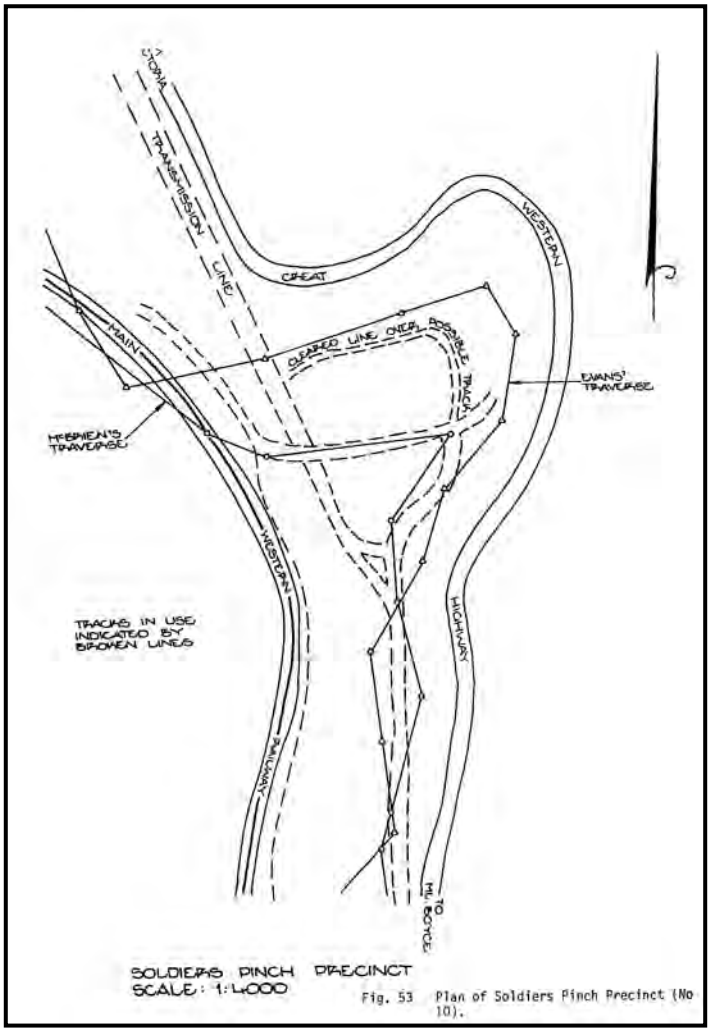

Figure 6. Soldiers Pinch (Karskens 1988, Fig.53).

> "It was late one evening when we began to descend Mount Victoria. At its top there is a very sudden and awkward hill, called Soldier's Pinch, ...".

The only known contemporary image of this location is a rather faint pencil sketch by Conrad Martens (1840) (Figure 7); it appears to depict two men seated at the crest of a bend in the road so that would correspond to the route that Louisa Anne Meredith had taken in 1839. The caption (oblique in the lower left corner) to this may be the first use of 'Soldiers Pinch' in print, but it seems to be directionally inaccurate for the view is to the west with Mount Piddington being on the right hand side.

The very angular bend at Soldiers Pinch was surveyed by William Romaine Govett in 1831 and plotted on his map (Figure 8), so probably it was created in the 1820s yet it is not shown on Mitchell's 1827 map although the scale used in the latter might have prevented the inclusion of such detail.

Matters were complicated by the visit of Thomas Mitchell in 1845 following which he ordered a realignment (Karskens 1988, pp.51, 78); on his map (Figure 9) the bend has the same angularity as Govett surveyed but in addition there is a broken line for the desired detour which would have been a direct descent. Atwell (1995, Fig.7) showed part of Mitchell's bypass as being equivalent to the southern solid BROWN line in Figure 4 labelled 'Tracks pre-1943'. On 20 December 1847 Captain Bull reported that his team was building that section of road (Karskens, 1988, p.51) and later it was confirmed that

> "Captain BULL turned the road to avoid the Soldier's Pinch between Blackheath and Hartley, ..." (Anonymous 1851).

However the exact location of Bull's construction is not known; perhaps it was that which Melville (1939) marked as 'Original Road' (Figure 11) although that would seem to be too straight and does not correspond to any known track and is at a different angle to that shown on the Parish of Blackheath map, 13th edition (1984) (Figure 15). One existing track crosses about a third of the way across the loop, and Karskens (1988, Fig.53) indicated that it might extend to two thirds of the distance, but not the whole way to the north side.

Figure 7. Conrad Martens' pencil sketch "Bathurst Road from Soldiers Pinch looking South".

State Records plan 3685

Figure 8. Soldiers Pinch (Govett 1831).

Figure 9. Mitchell's 1845 realignment proposal.

Figure 10. Part of the survey made by Horace Charlton (1849).

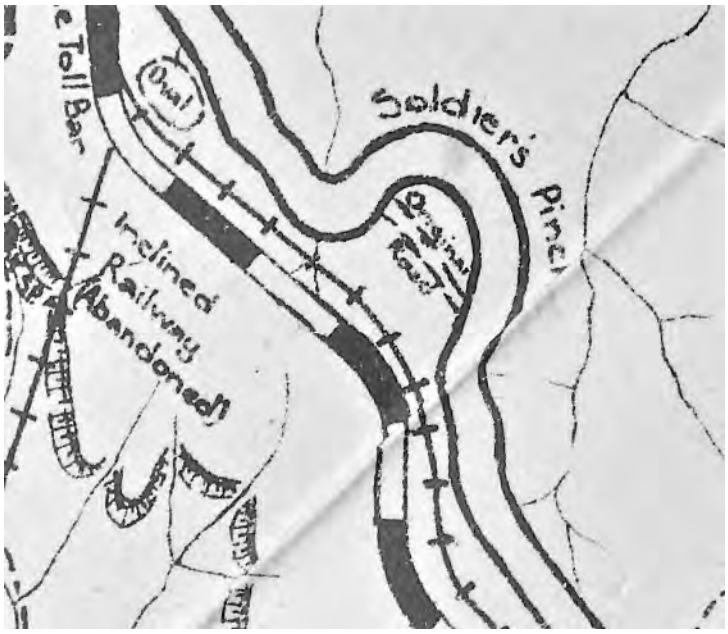

Figure 11. Part of a map by Nin Melville (1939).

The part of the Bathurst Road near Soldiers Pinch was surveyed again in 1849 (Charlton 1849; Figure 10) and on his plan Horace Charlton marked the 'Soldiers Pinch Bridge' in a position that today is close to the entrance to Browntown Oval and about 30 metres on the eastern side of the present Great Western Highway. That corresponds to about the north western end of the straight section of road shown in DARK GREY on Figure 4. During a site inspection remnants of old road surfaces were found and the narrow stream channel that had to be bridged; the slopes on the road leading to that bridge would have been fairly steep. Today the Great Western Highway is on an embankment that towers over that channel.

> "By 1862 very little of the original Cox's Road was still in use, .." (Karskens, 1988, p.51)

and

> "Cox's Road ... in the Soldiers Pinch section ... was cut off by the new highway by 1862" (Karskens, 1988, p.57).

That date is curious for only two years later, on 1 September 1864, the Department of Public Works issued an advertisement for tenders for two contracts for work to be done on the Great Western Road (Holroyd 1864a). Seemingly that advertisement was only partly successful for a month later one of those contracts was re-advertised as

> "Contract on the 2nd District, Great Western Road, viz.:– No. 8-64.–Soldier's Pinch." (Holroyd 1894b).

Neither the plan nor specification of what was to be done have been found, and the outcome is unknown, but that work may have been completed late in 1864 or early 1865.

A bend at that location is marked on Du Faur's (1877) map which is hardly surprising for it has in its title:

> "The Natural Features have been taken mainly from Plans and Sketches made by Mr Surveyor Govett in and about the Years 1831-2."

However the shape of the bend that Du Faur drew (Figure 12) is less angular than on Govett's map so in that interval of nearly half a century the road seems to have been modified - indeed it would be remarkable if it had not.

Road changes are well recorded on Parish maps but unfortunately a complete set of the Parish of Blackheath maps has not been located, the first and second editions being amongst those missing. However, the 3rd Edition (1890) (Figure 13A) (thin LIGHT GREY line in Figure 4) displays a further reduction in the angularity of the bend shown in Figure 12. The 4th Edition (1892) and the 5th Edition (189?) have not been located but the 6th Edition (1899) reveals another change in shape of that road bend that is essentially the same as shown in the 7th Edtion (1909) (Figure 13B) so it was effected in the last decade of the 19th century. That 1909 shape was retained in the 8th Edition (1915) and 9th Edition (1920) maps but in the 10th Edition (1926) (Figure 13C) the road was plotted as looping more tightly at its NW corner (thick LIGHT GREY line in Figure 4). That tighter shape is puzzling for it seems retrograde and the dating of that 10th edition Parish Map is also curious for the plan for that realignment was not

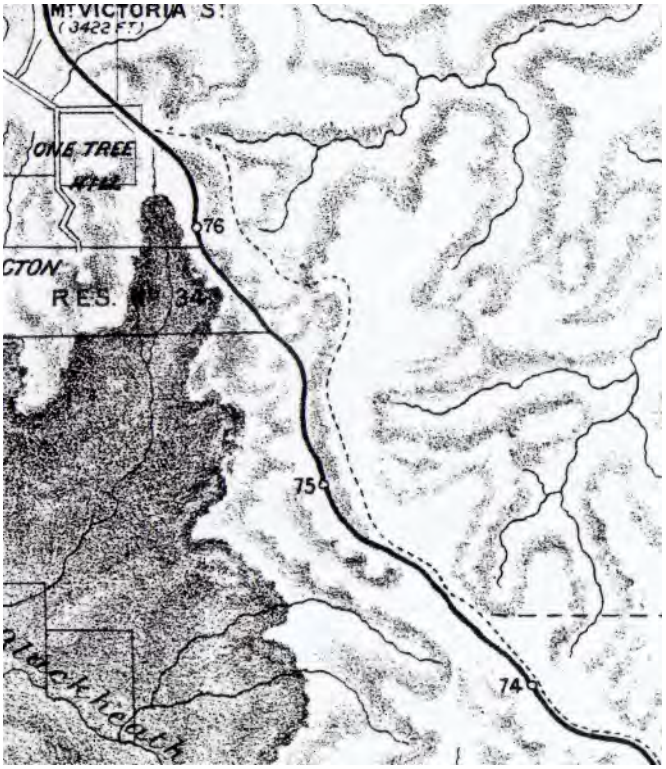

Figure 12. Soldiers Pinch (Du Faur 1877).

approved until 27 May 1927 (Hansen 1927), then notified on 3 June 1927 (Horsington 1927, p.2711), and dedicated and gazetted on 13th January 1928 (Bruxner 1928, p.133) so the work was most probably done late in 1927.

It is known that an adjustment to the Soldiers Pinch bend was made in mid-1900 (Anonymous 1900) and it may well have caused the undated realignment shown by a DARK GREY line in Figure 4 that became a construction road in 2002.

Thereafter that alignment of that bend appears to have been kept until the highway bypass (Figure 14) was constructed in 2002 (BLACK line in Figure 4).

But note that on the coloured version of the 13th edition (1984) (Figure 15) there are two nested bends and part of a third; those extra roads are not on the 12th edition (1971) map. Also sketched across the innermost loop on the 13th edition (1984) is a NW-SE track that is not seen in an aerial photograph (Figure 16).

Road Naming

From 1876 this major route to the west was known as the Main Western Road (Deering 1876) and later as the Main Bathurst Road (Batt, Rodd & Purves 1890) although often it was referred to as the Great Western Road (Macquarie 1822, p.696) or the Bathurst Road (Darling 1829a,b).

Summary

Figure 4 brings together these various surveyed routes, roads, tracks, railway and power lines. It is suggested that in 1813 Blaxland, Lawson & Wentworth would have taken a direct descent down the ridge such as is now beneath the power line (Figure 5 and shown by the GREEN line in Figure 4); if not there then it is likely to have been a short distance to the west but it would have had a similar character. The route planned by Evans in 1814 (BLUE line in Figure 4) was often eschewed by Cox and he made his road along the route confirmed by McBrien (RED line in Figure 4); it made a tight turn to the west part way down the slope.

Figure 16. Infra-Red Image December 1999.

Soldiers Pinch sequence of routes (refer to Figure 4).

No.	Date	Notes
1	1813	Blaxland - Lawson - Wentworth (inferred route - GREEN line)
2	1814	G.W. Evans surveyed route (BLUE line).
3	1823	McBrien's surveyed route which is that inferred to have been made by Cox (RED line).
4	pre-1831	a very angular bend was surveyed by Govett so it must have been made in the late 1820s (? broken BROWN line).
5	post-1845	easing of the gradient instructed by Mitchell (1827). Atwell (1995, Fig. 3) plotted this as a very straight route being roughly equivalent to the southern BROWN and GREEN lines and the parallel PURPLE lines.
6	1849	Charlton (1849; Figure 10) surveyed a 'smooth' bend, the southern and eastern parts of which are similar to those of the thick LIGHT GREY line. Note that on his plan he also marked a bridge across a gully at a position that is to the SE of the entrance to Browntown Oval and near the NW end of the straight section of the 2002 construction road (DARK GREY line).

Hereabouts in the time line the history becomes murky for, as has been explained above, it has been stated that by 1862 Coxs Road had been cut off (Karskens, 1988, p.57) yet in September 1864 the Department of Public Works (Holroyd 1894a) advertised for tenders for a contract to do work there.

7	pre-1890	a gentle curved route is recorded on the 3rd Edition Parish of Blackheath Map (thin LIGHT GREY line).
8	1900	In 1900 the curve was made tighter on the northern side as plotted on the 7th Edition (1909) Parish Map (DARK GREY line) and it is similarly shown on the 8th (1915) and 9th (1920) Editions of the Parish Map.
9	pre-1926	the curve was adjusted again as shown on the 10th Edition of the Parish Map (thick LIGHT GREY line) and maybe that is what was recorded on the 1943 air photo and is regarded as the old Great Western Highway. But the construction date has not been established more precisely than between 1920 and 1926 when the plan was sent by the Main Roads Board to the Blackheath Municipal Council (Anonymous 1926).
10	2002	Forewarning of an intended major upgrade was given in May 2000 (RTA 2000), it was followed by notification that work would commence in April 2001 (RTA 2001) and the realignment was completed by June 2002 (RTA 2008, p.3) to provide the current divided three lane section of road (BLACK line).

Three railway routes are known:

a	1867	Opened on 1 May 1868 (? the southern PINK line labelled 'Tracks pre 1999")
b	1897	Re-grading deviation on S side; opened 16 September 1897.
c	1902	Line duplication yielding the route taken today (YELLOW line); the high level line on the eastern side was closed on 16 October 1902.

WATERING THE GEE-GEES: A SURVEY OF BLUE MOUNTAINS HORSE TROUGHS, PART 2.

John Low
7 Church Street,
Portland, NSW 2847
grizzlybear3au@yahoo.com

Abstract
In Part 1 of this article (Low, 2015) I began a survey of the old horse troughs still surviving in the Blue Mountains City Council area arguing that, though generally now redundant and disregarded, they are valuable reminders of a time when the horse was central to community life and of the rise in consciousness that has led to the modern animal welfare movement. Part 1 covered the geographic area between Glenbrook and Wentworth Falls, Part 2 continues the survey onwards from Wentworth Falls to Mount Victoria and Bell. As before, each entry includes the trough's location and present condition, historical context and, where appropriate, any significant associations it has to specific people.

Key Words: horse troughs, water, animal welfare, wayside features, Bills, Goyder, Marr, Blue Mountains

Introductory Note
Readers are referred to the initial paragraphs of Part 1 (Low 2015) for the rationale and organisation of this two part paper. Here it suffices to explain that Troughs No.1 to No.5 were described previously and to avoid confusion the numbering has been continued so here it commences with No.6. Figures 1 to 17 were the numbers used for illustrations in Part 1 - here they have been started at Figure 21 to signify that they relate to part 2.

Trough No. 6: Leura (Figures 21 & 22).
Location: At the *Meeting of the Waters* on the north side of the old Chelmsford Drive, west of the arch bridge and opposite the lower park (formerly the men's section of the old Katoomba Swimming Baths).

Description & Condition: This small water trough has been hewn from the natural sandstone and was designed to tap the natural water flow before it channels under the road. The main bowl (Figure 21), measuring approximately 175 x 60 x 20 cm, is at ground level while, in a grotto-like cavity above there is a smaller bowl (Figure 22), measuring approximately 70 x 30 x 5 cm, probably intended for human use. On last inspection (16 August 2016) both continue to fill with water and, despite some sediment and obscuring vegetation, are accessible.

History: In the late nineteenth and early twentieth century the *Meeting of the Waters*, with its cascades, waterfalls, walking tracks and picnic area, attracted hundreds of visitors, especially during the summer season. As early as 1902 there were complaints from holiday makers about the lack of good drinking water

Photo J. Low 2016

Figure 21. *Meeting of the Waters* trough, Leura (lower bowl).

Photo J. Low 2016

Figure 22. *Meeting of the Waters* Trough, Leura (upper bowl).

and calls from local carriage drivers for the provision of "a drinking-trough for horses". In support, *The Mountaineer* newspaper declared that:

> "We would like to see a natural spring tapped at the top of the falls.". (Anonymous 1902b).

While the small trough at the *Meeting of the Waters* may have been constructed in response to this demand, its appearance could have waited until work on the Chelmsford Drive and the ladies and men's swimming baths took place some ten years later; these were officially opened in December 1913 (Anonymous 1913b). The improvements of drive, bridge and baths incorporated sweeping curves into a design that accentuated the natural beauty of the place and into which the small drinking trough fitted snugly. The trough is not on any heritage listing.

Trough No. 7: Park & Main Streets, Katoomba (Figures 23 & 24).

Location: This trough, now in the Mount Victoria & District Historical Society Museum (Accession No. 0217) (Figure 23), was originally located at the intersection of Park and Main Streets in Katoomba.

Description & Condition: A covered, cast iron trough (184 x 39 x 37cm) with two drinking holes and the mark of the maker, Gordon Marr & Sons Ltd., Pyrmont, stamped on **top**. While there are signs of deterioration (rust, missing bolts etc.) it appears to be in generally good, though inoperative, condition.

Photo Keith Painter 2016

Figure 23. Katoomba Trough now in the Museum at Mt. Victoria**.**

History: This cast iron trough, installed at the corner of Park Street and Bathurst Road sometime between 1904 and 1910 (Figure 24), appears to have been the first Council sponsored trough in the town. As Katoomba grew in the latter part of the nineteenth century the proximity of this section of Bathurst Road (soon to be known as Main Street) to the railway station made it the early focus of the town's commercial life. It was full of horse-related activity, with carriages and carts of all kinds coming and going throughout the day, loading and delivering goods and collecting visitors off the trains. It is not surprising that a horse trough was considered necessary in this vicinity or that it's siting and condition remained an issue of public debate.

Before the trough was installed sources of drinking water in the vicinity were limited. In early 1899 the licensee of the Railway Hotel had placed a trough in front of his premises opposite the station (Anonymous 1899), though how long it survived is unknown and, anyway, on its own it would not have been enough to cope with the increasing demand. The only alternative seems to have been a water hole in Railway Park (later known as Russell Hawke Park and destroyed during construction of the highway by-pass in the 1980s), a remnant of the earlier stone quarry. It, too, found the increasing demand difficult and suffered from over use and resultant issues of cleanliness. In 1902 it dried up and the press suggested that the town's horse owners band together to get it "thoroughly cleaned out" (Anonymous 1902a). As a permanent source, it was unreliable and problems with it persisted even as a supplementary supply after the Bathurst Road trough had been installed.

When Frederick Charles Goyder, Katoomba's first Mayor, died in January 1900 a committee was established to raise money for an appropriate public memorial and by the end of the year had announced its judgement that

> "a horse trough of freestone and trachyte and lamp at the intersection of the Bathurst road and Katoomba street would be most suitable, and would be in accordance with the views of the late highly respected gentleman." (Anonymous 1900b).

By the time the memorial lamp was unveiled in June 1901, however, the horse trough component had been dropped (Anonymous 1901b).

It was, nevertheless, clearly picked up again following a suggestion two years later for a similar lamp to be installed at the corner of Park Street and Bathurst Road (Anonymous 1902c, col.4) for, by 1910, both lamp and horse trough were *in situ* at the second intersection. The horse trough, however, was not the stone one of earlier conception but rather a cast iron model sourced from a Sydney manufacturer.

Though gaps in the contemporary newspaper record and in the KMC minutes make it difficult to determine the precise date of the trough's (or indeed the lamp's) installation, the fact that the trough's manufacturer, Gordon Marr & Sons Ltd., was registered under that

name in 1904 and that the trough was referred to in a newspaper account of a runaway coach in December 1910 (Anonymous 1910), place its installation sometime between those two dates. It is also possible that the lamp was erected soon after the proposal was accepted by Council and that the trough was a later addition, possibly added following the establishment of a town water supply in 1907. Though the memorial was originally intended to mark the coronation of Edward VII (Anonymous 1902c), it soon came to be seen as a second memorial to F.C. Goyder. Both lamp and cast iron trough appear in a photograph by Harry Phillips dated ca.1910 (Figure 24).

Photo H. Phillips c.1910 [BMHS P566]

Figure 24. Trough at Intersection of Park & Main

Goyder's trough did not have an altogether happy life, its location becoming increasingly problematic. While the coach mentioned above narrowly averted a collision with the horse trough, a few months later another carriage was not so lucky. In April 1911 a

> "coach was dashed into the water-trough … upsetting the trough and severing the connecting water pipe". (Anonymous 1911).

The trough again figured in a 'traffic' incident at the end of 1912 when a groom employed by local businessman Patrick Mullany lost control while exercising a racehorse and was thrown heavily as his mount "swerved to avoid collision with the watertrough (*sic*)." (Anonymous 1912).

Though, once again, the absence of KMC minutes for this period hinders specific dating, sometime during the next two years the cast iron trough appears to have been removed. In August 1914, a report appeared in the press of a proposal by Council for the

> "removal of the lamp post, [no mention of the trough] and the provision of a water trough at the intersection of Main and Park streets."

and tenders were called

> "for the construction of a trough in accordance with a plan submitted by the Town Clerk. The new trough is to be circular and uncovered and the cost is estimated at about £25." (Anonymous 1914).

When the new stone trough was installed the lamp was again incorporated into the design.

By the early 1920s, however, this replacement trough was also experiencing problems. Its "dirty state" was raised during a Council meeting in September 1923 and its contents described as more like

> "a concoction of chop suey and billagong (*sic*) juice" (Anonymous 1923d).

When a columnist in the local press remarked in February 1924 that the trough

> "looks as if it is only cleaned by Council's officers on February 29 of each Leap Year." (Anonymous 1924, col.4)

it was clear that little had changed during the intervening months. And, not only was the trough becoming an oft remarked upon public eyesore and a health risk to the horses that used it, but its pump was also malfunctioning.

> "The flow is too slow to meet requirements and half the time the convenience is useless for thirsty horses" (Anonymous 1925a).

While these problems persisted, motor traffic, too, was increasing and it soon became obvious that public unsightliness, mechanical failures and equine health were not the only problems posed by the 'new' Goyder trough. It was, to put it mildly, awkwardly located and its fate was finally sealed in early January 1927 when a traffic accident involving the trough resulted in a cyclist breaking his thigh (Anonymous 1927a). Promptly, the Council moved in and demolished the old trough. Its stonework was crushed and sent for use in road-making, the site was tarred over and the lamp "which sat so proudly on its crest," set aside to be erected elsewhere (Anonymous 1927b).

But that was not the end of the matter, for the removal of the trough and the subsequent tardiness of Council to honour its promise to erect another at the Cascade Street corner nearby upset the carters and carriage operators. Finding the Main Street trough had been removed, a local identity wrote an angry letter to the local press arguing that the cavalier manner in which the memory of the town's first Mayor was discarded was bad enough but with his memory

> "went the only small trough in this Municipality where Dobbin and his co-workers could get a drink."

He further recounted how he had approached a Council employee about the matter and was told to

> " "Let 'em go to the pond" – meaning the dirty slush pool at the foot of the small park near the Court House. This has been tried but horses used to good treatment and clean water will not tackle the semi-stagnant slush, and, when they do, are sick for days after." (Vanman 1927).

[When, a year or so later, the park was 'renovated' and became Russell Hawke Park the "slush pool" became an ornamental pond and probably off-limits to horses completely.]

Percy Tabrett, owner of a large coaching business in the town, urged the Katoomba Chamber of Commerce to lobby Council, "in the interests of humanity", to expedite a replacement for

> "the only available drinking trough [that] had vanished". (Anonymous 1927c).

Again, when put on the spot, Council moved swiftly and as quickly as its predecessor had vanished a replacement appeared at the intersection of Main and Cascade Streets (Anonymous 1927d). A week or so later the *Echo's* satirist, casting his eye over the whole saga, summed it up in a long piece of humorous verse (Double-Yew 1927).

The original cast iron horse trough that stood at the intersection of Park and Main Streets until ca.1914 had apparently been placed in storage by the KMC for, many years later, it was donated to the Mount Victoria & District Historical Society (est. 1966) by the Blue Mountains City Council. There are similar cast iron troughs, though by a different maker, at the Lithgow Showground and in the Bathurst District Historical Society. This Katoomba trough is not on any heritage listing.

Association with Particular People: Frederick Charles Goyder (1827-1900) (Figure 25) was born in Tewkesbury, Gloucestershire, England in 1827.

In 1856 he migrated to Australia where he settled in Melbourne, becoming a prominent and successful businessman in the hotel and sporting community, interests he had brought with him from England. For many years he ran the Victoria Hotel in Bourke Street where he 'practiced' as one of Melbourne's early bookmaking identities and where a small rear bar of the hotel, known as 'Goyder's Lounge', became a regular meeting place for the city's racing men. In the early 1870s buying and selling horses became another of his business concerns when, for several years, he and a partner managed sales in Kirk's Bazaar, the famous centre of Melbourne horse trading located

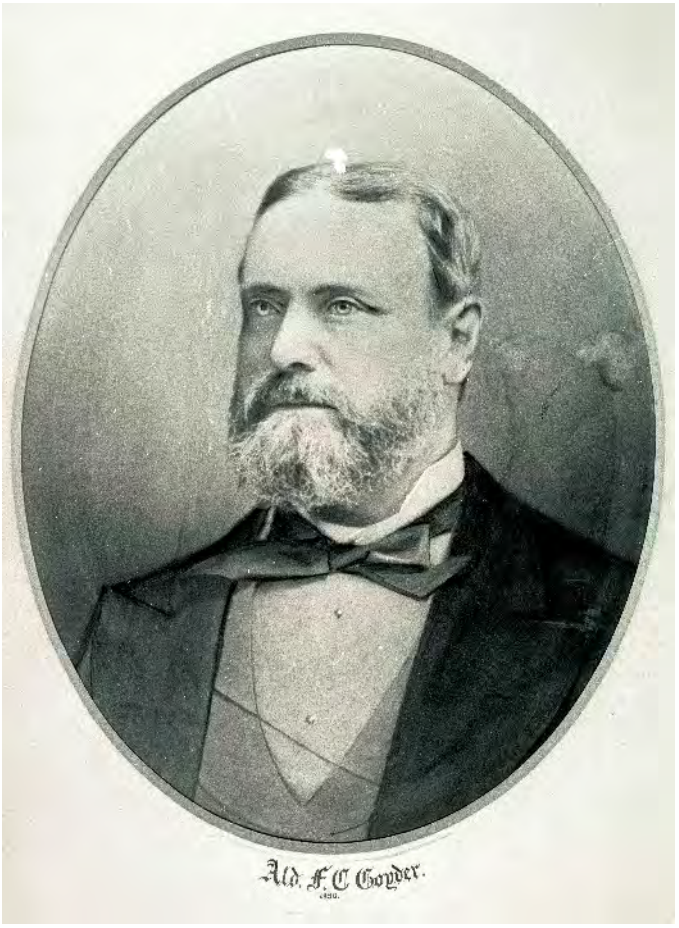

Photo BMHS P632.

Figure 25. Frederick Charles Goyder.

adjacent to his hotel (Anonymous 1871). Even as late as 1882, he was advertising to buy and sell

> "by public or private contract all kinds of horse stock." (Augur 1882, col.5)

at the Tattersall's Horse Bazaar in Stephen Street, Melbourne. During his time in Victoria Goyder, himself, owned numerous racehorses, his most successful being *Sussex*, winner of the inaugural Grand National Steeplechase at Flemington in 1881 (Anonymous 1881a, col.4) and rated by many as one of the greats of the Australian turf.

Goyder's career during this time, however, was not without controversy and his involvement in a number of racing-related 'scandals' landed him in court. Among these was an accusation of falsely and publically accusing a fellow owner of 'pulling' his horse in the Victoria Derby of 1859 (Anonymous 1859) and a charge of organising an illegal sweep on the 1881 Melbourne Cup (Anonymous 1881b). Each of these cases captured wide media attention, though in both instances the charges were dismissed.

In the early 1880s Goyder, now in his mid-fifties, sold his business and sporting interests in Melbourne and

cast his gaze north, investing in a sheep station in western NSW, on the Warrego River near Bourke (Anonymous 1890, col.1.). Though the railway was due to reach Bourke in 1885 and the future of the area seemed bright, the venture ended badly, his pastoral hopes killed off by drought. Again he looked elsewhere, this time to the Blue Mountains and a profession he knew, purchasing the Great Western Hotel at Katoomba in the latter half of 1885. With an eye to its image and with the permission of the Governor (one of the hotel's most prominent visitors), he re-named the hotel *The Carrington* and set about extensive additions and improvements, soon turning it into one of the most grand hotels in NSW. While its profitability was tempered by the depression of the early 1890s, its prestige remained high.

In Katoomba, Goyder quickly involved himself in community affairs. By December 1885 he was on the Katoomba Progress Committee (Anonymous 1885) and, during the next fifteen years, interested himself in a wide spectrum of town and district activities, including membership of the Cricket & Athletic Club, Recreation Reserves Trust, School of Arts and even a Katoomba Jockey Club, formed to establish a racecourse for the town. In 1890 he was elected to the new Katoomba Municipal Council and, as well as serving several terms as an alderman, was briefly the municipality's first Mayor. Following several years of debilitating ill-health, he died in January 1900 (Anonymous 1900a), in his seventy-second year, and was buried in Katoomba Cemetery. Goyder was survived by his second wife, Emily, three daughters and three sons. Of the various memorials erected in the years after his death only the small cast iron horse trough in the Mount Victoria museum survives. A small avenue in South Katoomba also bears his name.

Gordon Marr & Sons Ltd. was a Sydney firm of engineers and iron founders which operated from a factory on the corner of Jones and Miller Streets, Pyrmont up to the early 1920s when it relocated to Bourke Street, Waterloo. It was still in business there in the 1960s. The founder, Gordon Marr, was born ca.1840 at Fyvie in the North of Scotland and arrived in Sydney on the *Rifleman* in 1863 where he entered into a partnership in an engineering works. Originally in Clarence Street, the successful business soon outgrew its premises and moved to a larger site in Pyrmont. By the early years of the twentieth century, with his partners both departed, the firm was operating under his own name. Marr had married in 1867 and in 1904 several of his sons entered the business necessitating a further (and final) re-registration as Gordon Marr & Sons Ltd. In private life Gordon Marr was an active member of the Highland Society and the Masonic Lodge. He died at his Woollahra residence in 1915 and was buried in Waverley Cemetery, his wife Sarah predeceasing him by a couple of years. He was survived by six sons and three daughters (Anonymous 1915; Marr 1862-1972).

Trough No. 8: Katoomba Showground (Figure 26).
Location: This trough can be found on the north-west (Orient Street) side of the Katoomba Showground, 183-187 Great Western Highway, across from the grandstand and near what is now the Men's Shed and separated from the Orient Street fence by a wooden storage 'container' (against which it sits).

Photo J. Low 2016

Figure 26. Katoomba Showground Trough**.**

Description & Condition: This is a basic, unembellished, uncovered concrete trough, measuring approximately 200 x 65 x 40 cm and supported on sloping ground by bricks at one end. It is no longer operational, the cistern having been removed, and on last inspection (16 August 2016), except for some dirt and leaf litter, was empty. Signs of neglect and 'wear and tear' to the concrete are apparent, with the corners especially badly chipped. A distinguishing feature is its body's beveled edges.

History: The creation of a Katoomba Showground with an accompanying trotting track occurred during the decade following World War I and, while rugby league was played on it from 1925 (Anonymous 1925b), it was not for another two years that the

grandstand and other associated improvements were completed (Anonymous 1928b). Horse-related activities – gymkhanas, trotting club meetings etc. - were to feature prominently in the ground's use in subsequent years and when the first District Show on the new grounds took place in January 1928, impressive equine accommodation had already been provided in the form of twenty stalls

> "constructed of magnificent posts of mountain ash … with iron roof supported on sawn scantlings." (Anonymous 1928a, col.5).

No mention was made of a horse trough, however, and while it is possible that its installation at the showground could have coincided with (or come soon after) these developments, the trough could equally have been an addition made any time during the next two decades. The mounted division of the Volunteer Defense Corps, for example, were using the ground during World War II (Anonymous 1944c) while, at the end of the war, a new Blue Mountains Trotting Club was established that initiated considerable improvements and began to organize successful meetings which drew people and horses from all over NSW (Anonymous 1945a,b). The trough may well date from this period. It should be noted, too, that its present location may not be its original one; it could well have come even from somewhere beyond the perimeters of the showground. Though the trough does not have an individual heritage listing, the Showground (and its accompanying amenities) is listed in the Blue Mountains City Council's Local Environment Plan (LEP) as having local heritage significance (NSWOoEH 1999).

Trough No. 9: Victoria Street, North Katoomba (Figure 27).

Location: This trough is outside what used to be a small corner store, on the eastern side of Victoria Street near its intersection with Camp Street, North Katoomba.

Description & Condition: This is a basic, unembellished, uncovered concrete trough, measuring approximately 200 x 65 x 40 cm and supported level on a sloping street by a concrete slab. On last inspection (16 August 2016) there were signs of general distress and neglect – the rim especially is badly chipped - and the trough is no longer operational. It was filled with dirt, weeds and several hardy flowers perhaps surviving from its use as a 'garden' pot. Some remnant piping was still attached to the section once housing the cistern.

Photo J. Low 2016

Figure 27. Victoria Street Trough, North Katoomba.

History: The trough was clearly in existence by 1944 when the local newspaper reported it becoming the subject of a brief exchange at a KMC meeting in August of that year. Alderman Hodgson claimed that it was too high, provoking a response from the Mayor (Alderman Freelander) that he would instruct Council to make it lower "or raise the ground up a bit," (Anonymous 1944b). One might conclude from this exchange that the trough had not long been in operation and the fact that the RSPCA had donated a concrete trough to the Blackheath Municipal Council (BMC) earlier in 1944 (State Records NSW 1944) suggests that KMC may also have been the beneficiary of that organization.

Sometime after it ceased to operate as a water trough it was converted into a "flower garden" and was still functioning as such in 2006 (pers. comm. Mrs. Evelyn Harvey 2006). The small general store appears to have closed around this time and when I visited the trough in 2007 the weeds had already taken over. The trough is not on any heritage listing.

Trough No.10: Railway Parade, Medlow Bath (Figure 28).

Location: This 'Annis & George Bills' trough is situated in Railway Parade, backing on to the railway fence opposite the entrance to Somerset Street, Medlow Bath.

Description & Condition: The trough is similar in size, structure and design to those at Glenbrook, Warrimoo and Wentworth Falls (Low 2015). It is made of concrete, measures approximately 240 x 40 x 40 cm, is supported on three concrete blocks and possesses the usual pediment section that includes the

inscription "Donated by Annis and George Bills Australia". Like the trough at Wentworth Falls the concrete does not appear to have been painted and, on its right-hand side, it is accompanied by a small dog and cat trough, approximately 60 x 30 x 14 cm. A major difference with the other three Blue Mountains 'Bills' troughs, however, is the use of a terrazzo panel rather than a plain concrete one to carry the inscription. On last inspection (16 August 2016) there was water in the trough (though not in the dog/cat trough), the wall dividing off the uncovered cistern was still in place and the trough appeared to be in good condition and its surrounds clear of vegetation. The inscription to Annis and George Bills, however, was almost illegible.

History: Funded through the estate of businessman and animal welfare activist George Bills (Low 2015), it has not been possible to determine the date of this trough's arrival in Medlow Bath nor if it's present (seemingly 'out of the way') site is its original location. Long-time local resident John Pike remembers it being in its present position "by the mid-1940s" (pers. comm. J. Pike 27 July 2016) and while it is possible that it was received and installed around the same time as the three Blue Mountains Shire Council ones, the small embellishment of the terrazzo inscription panel does suggest that this is a distinct and, perhaps, earlier model. The trough is listed in the Blue Mountains City Council's LEP as having local heritage significance (NSWOoEH 2000b).

Associations with Particular People: George and Annis Bills. For information on the Bills see Part 1 of this article (Low 2015).

Photo Peter Rickwood April 2016

Figure 28. Annis & George Bills Trough, Medlow Bath.

Photo J. Low 2016

Figure 29. Neate Park Trough, Blackheath.

Trough No.11: Neate Park, Blackheath (Figure 29).
Location: This trough can be found against the railway fence in Neate Park, Great Western Highway (opposite 211 Great Western Highway) and near the statue of the bushranger and his horse.

Description & Condition: This is a basic, unembellished, uncovered concrete trough measuring approximately 200 x 65 x 40 cm and supported on two concrete blocks. At last inspection (16 August 2016) it was empty of water and no longer operational (cistern and connections removed) but was in good condition with minimal chipping. The area around the trough is kept mown and tidy.

History: The landscape through which the Western Road passes in the vicinity of Blackheath features a number of natural aquifers, making this one of the few spots on the upper ridge possessing permanent, accessible water. When Governor Macquarie travelled through the area in 1815 he noted "plenty of good water for Man and Beast" (Macquarie 1815) and later travelers would make good use of "several stock watering pounds" (Rickwood & West 2005, p.127) located along the road here. No doubt, too, there were early water troughs associated with the inn built in 1831 by Andrew Gardiner, the military stockade that operated during the 1840s and possibly others erected as the fledgling village of Blackheath evolved following the arrival of the railway in 1868.

The earliest horse trough I have been able to find any specific reference to, however, did not appear until after the establishment of the Blackheath Municipal Council (BMC) in 1919. Following a recommendation from the BMC Engineer in June 1922, a concrete horse trough was purchased from the

State Monier Pipe and Reinforced Concrete Works and erected "in front of the gardens on the main western road" in early 1923 (Anonymous 1923a; State Records NSW 1920-1925, Minute No.154, 6 February 1923, p.2). Its purchase appears to have been the culmination of advocacy led by Ald. Peter Sutton and proved to be

> "a great boon during the hot spell, not only horses, but house-keepers availing themselves of its cooling waters. It seems likely to develop into the village pump." (Anonymous 1923b).

Peter Sutton (1891-1970) had a long aldermanic career on the Blackheath Council, spanning the years 1922 to 1947 and serving as Mayor during 1930-1931. His interest in animal welfare was acknowledged in June 1923 when he was appointed an RSPCA Inspector (State Records NSW 1920-1925; Minute 29 June 1923, p.1.).

The trough's location "opposite The Gardens" was soon considered unsuitable for, in early August 1928, Council resolved that it be "removed to another position" and a committee was formed to meet at the Gardens the following day to decide on its new home (State Records NSW 1925-1928). This decision to move the trough may have had something to do with the imminent erection of a "Soldiers Memorial Arch" at the entrance to the Gardens, though I have not been able to determine what resulted from the committee's deliberations. If indeed the trough was shifted at this time it was certainly to another spot nearby on the Main Western Road for Ald. Sutton had to remind Council several times in the early 1930s

> "to have the horse trough in the main highway cleaned and kept in good condition." (Anonymous 1932, col.4; also see Anonymous 1934).

By the mid-1930s further difficulties emerged with the increasing motor traffic along the highway. When "Mr. George Bentley's well-known grey saddle horse" (Anonymous 1936) was frightened while drinking at the trough and bolted into the path of an on-coming car, the dangers associated with the trough's siting on the main highway became clear. The horse was so seriously injured that he had to be put down. However, when the trough was moved again (or ultimately disposed of) I have been unable to discover. Could it be the one now in Neate Park?

While this seems to have been the earliest concrete trough erected in Blackheath, the installation of others eventually followed. In April 1944, for example, BMC accepted an offer from the RSPCA to provide a

> "suitable water trough … complete with concrete stand and stop cock and valve"

on condition that the Council accept responsibility for its freight, installation and on-going maintenance (State Records NSW 1944). It was decided, reported the local newspaper, to locate it "at the top of Hill 33, near Whitley Park," (Anonymous 1944a). Could this trough have found its way to Neate Park!

There is, also, photographic evidence of a horse trough outside St. Aidan's church in 1943 (Figure 30) and a Heritage Inventory Sheet (NSWOoEH 2000a) records that in 1998 it was moved to its present site in Neate Park. But there is, in fact, conflicting information regarding this.. Local historian Geoff Bates, explained that its relocation from St. Aidan's was the result of impending roadwork, but he said it took place around the time of the erection of the 'Govett' bushranger statue in 1974, a re-siting that was thought would enhance that sculpture's equine associations (pers. comm. G. Bates 23 February 2008). Both of these accounts contrast with a further recollection that the trough had already been in Neate Park for some time before the bushranger statue arrived (pers. comm. W. Hanley 2016 in which he relayed the opinion of Dick Harris who with his brother Phil had installed the bushranger statue in 1974). Nevertheless, irrespective of which account is correct the question of whether any agreed former site was in fact the trough's *original* site still remains. It seems an element of mystery will

Go To Index

continue to surround the origin of the Neate Park trough.

As a footnote to this, in 1989 the Blackheath District Progress Association made a recommendation to BMCC that the Neate Park trough

> "be repositioned to Bundarra Street, Blackheath, near the RSL Hall and have a water service connected" (BMCC 1989).

This was, clearly, not taken up. The trough is listed in the Blue Mountains City Council's LEP as having local heritage significance (NSWOoEH 2000a).

Associations with Particular People: While there is no evidence that the Neate Park trough was the original council-installed trough initiated by Ald. Peter Sutton in the early 1920s, it could still be appropriate to see it as bearing a memory of the man whose concern led to BMC supplying accessible, public water troughs for the local working animals.

Photo Marika Low 2008

Figure 31. Shipley Road Trough, Blackheath.

Trough No. 12: Shipley Road, Blackheath (Figure 31).

Location: Travelling out from Blackheath this trough can be found on the section of Shipley Road between its intersection with the Megalong Road and its meeting with the Old Shipley Road at the bottom of Glen Esk Hill. The trough is on the right-hand side of the road and, because of its tendency now to be concealed by vegetation, the best guides to its location are the numbered electricity poles – it is between poles 627 and 628.

Description & Condition: This trough, measuring approximately 125 x 35 x 17 cm, has been hewn out of the solid sandstone and is fed by a natural spring. It is not easily visible because of the vegetation growth but, on last inspection (16 August 2016), was filled with clear water and in good, usable condition. It should be noted that, because of traffic on the narrow road, access can be dangerous.

History: The Shipley Road deviation on which the trough is located was opened to traffic in the first half of 1902, eliminating several steep sections that travelers were forced to navigate when using the old road. Though narrow, the road accommodated considerable and varied traffic, everything from pedestrians and riders to all manner of horse-drawn vehicles and bullock teams (Rickwood & West 2005, p.108). The 'Drinking Trough', hewn from the natural sandstone and

> "utilising the water from the permanent spring, which, hitherto, had been running to waste." (Anonymous 1922)

was an improvement proposed by the Shipley Progress Association in January 1922, along with a number of seats to be placed along the road for the benefit of walkers (Anonymous 1922; Rickwood & West 2005, p.110). The trough is not on any heritage listing.

Trough No. 13: Kanimbla Drive, Shipley (Figure 32).

Location: This trough is located on Kanimbla Drive (formerly Kanimbla Valley Road), on the left-hand side approximately 0.9 km from the junction with Mount Blackheath Road.

Description & Condition: Like the trough on Shipley Road (No.12), this too has been hewn out of the solid sandstone and is fed by a natural spring that continues to fill it with clear water. It measures approximately 200 x 120 x 65 cm and on last inspection (16 August

Photo Marika Low 2008

Figure 32. Kanimbla Drive Trough, Shipley.

2016) remains accessible and in usable and excellent condition.

History: Kanimbla Valley Road was constructed under the Unemployment Relief Scheme during the Great Depression. Work on the road began in October 1937 and the section on which the trough is located was completed by September the following year (Anonymous 1938). Workers were accommodated in camps and the trough was most likely constructed to provide them with a water supply in the first instance and then later to service those using the road when completed (Rickwood & West 2005, p.115). The trough is not on any heritage listing.

Photo Petah Low 2010

Figure 33. Former Mt. Victoria trough now at the Kanimbla Valley farm.

Trough No. 14: Mount Victoria Railway Station (Figure 33).

Location: Though originally located in the goods yard at Mount Victoria Railway Station, this trough is now operating on a sheep property in the Kanimbla Valley. It is not accessible to the public.

Description & Condition: This is a concrete trough of plain and functional design, manufactured by the Concrete Pipe Works of Richard Taylor Ltd. at Marrickville. It is approximately 240cm long, 65cm wide and 40cm deep, was in good condition and working order when I inspected it some years ago and, I understand, remains so.

History: With the arrival of the railway in 1868, Mount Victoria emerged briefly as a busy rail and road interchange where people, livestock and wagons interrupted their journeys to elsewhere. Outside the One Tree Inn, wrote one traveler in 1868,

> "were congregated some thirty wagons … Some were empty waiting the arrival of their loading by the train; some were loaded up with the goods which were about to be taken into the interior, and others still had their loads of wool and produce from the bush which they were waiting to discharge into the railway goods trucks. Around and about the wagons was a regular troop of horses." (Anonymous 1868, col.2).

All these horses, like their handlers, required feeding and watering, accomplished with the help of a large timber trough outside the inn and makeshift canvas 'mangers' hung between the shafts of the wagons. What additional feed and water facilities, permanent or impermanent, existed to cater for the multitude of other transiting livestock (cattle, sheep etc.) in these early years remain un-recorded. And, even when the railway extended beyond Mount Victoria, travelling stock continued for many years to be a significant part of local station activity. For the period June 1903-June 1904, for example, three thousand, nine hundred and thirty two sheep, among lesser numbers of other livestock, were loaded at the Mount Victoria Railway Station (Anonymous 1904).

The early animal welfare legislation was generally weak on affirming a positive duty of care to ensure that an animal's basic needs were satisfied (MacCulloch, 1994). That meant that, from the time animal welfare groups were established in the 1870s, the treatment of stock in transit was an issue that occupied much of their time and attention. As late as 1923 the Department of Railways was still being taken to task over the appalling conditions endured by animals being "cooped up, bumped, and waterless for days," (Anonymous 1923c) during their journey to market. The resultant lobbying of authorities responsible for the work areas where such animals congregated – railway stations, wharves, markets etc. - and the gradual improvements to legal protection, created an increasing demand for water troughs to accommodate these areas, to which companies in the business of manufacturing cement products responded.

The date of its installation in the railway goods yard at Mount Victoria is not known, though it could have been as early as the 1920s. By the 1970s the trough had become redundant and was marked for removal. When he heard that it "was to be broken up and taken to the tip" a farmer, Ross Fragar, approached the station master and purchased it for the nominal sum of one dollar. He transferred the trough (which had been "mounted on 2 stands, each 2ft. high") to his sheep property in the Kanimbla Valley on,

appropriately, 'the horse's birthday', 1 August 1975 (pers. comm R. Fragar July 2016). The trough is not on any heritage list.

Association with Particular People: Little is known of the manufacturer, Richard Taylor, though he appears to have played something of a pioneering role in the cement and concrete industry in Australia. Indeed, in 1936, his Marrickville firm claimed the distinction of being

> "the oldest and largest private concrete pipe and culvert works in New South Wales" (Marrickville Council 1936, p.179).

Apparently "English-trained" and with some experience in New Zealand, he arrived in Victoria in the 1880s and during the following decade, in association with Peter McCann, was involved in cement manufacture in Geelong and the nearby town of Fyansford (McKay 1986). By the early 1900s he had also become the Melbourne representative of the NSW-based Commonwealth Portland Cement Company (Taylor 1907; Anonymous 1920).

In January 1913 it was reported in the press that:

> "Richard Taylor, Ltd. has been registered with a capital of £10,000 in shares of £1 each, and will acquire the New South Wales rights for the Kielberg Patent, as well as certain lands at Marrickville for the manufacture of concrete pipes." (Anonymous 1913a).

Those "certain lands" were located at 46-72 Edinburgh Street, Marrickville and, by 1927, as well as pipes Taylor's works were turning out box culverts, gutter bridges, culvert covers, tanks, slabs and, of course, horse and cattle troughs and were advertising their role as

> "Contractors and Suppliers to Leading Municipalities, Shires, Surveyors, Estate Agents and Contractors" (Marrickville District Hospital 1927, p.48).

The company operated at the Marrickville site until its closure in the early 1940s (pers. com. C. Meader, Marrickville Council's historian, 26 April 2010).

Today, few troughs manufactured by Richard Taylor's company seem to have survived and even in the suburb where the business was located none now exist. Though there may be more, I know of only two other Taylor troughs: one on Clark Road at Anderson Park, North Sydney & one in the tip at the Royal National Park in Sydney's south.

Trough No. 15: Berghofer's Pass, Mount York (Figures 34 & 35).

Location: This trough is located on the old Berghofer's Pass (now a walking track), access to which is on the left hand side of Mount York Road about 1km from its intersection with the Great Western Highway. Proceeding down the Pass, the water trough can be found on the left of a sharp bend not long before arriving at the boundary marker between the Blue Mountains and Lithgow Council areas. A clear wooden signpost marks its presence.

Description & Condition: This is another water trough hewn out of the solid sandstone and fed by a natural spring that keeps it filled with clear water. It measures approximately 97 x 42 x 25 cm and, on my last inspection (16 August 2016), remains usable, with clear access and in excellent condition. There is also a smaller cup-like bowl (approximately 20 x 20 x 10 cm) hewn at the front right.

Photo J. Low 2007

Figure 34. Trough on Berghofer's Pass, Mount Victoria.

History: Berghofer's Pass was constructed as a direct result of the arrival of the motor car, early models of which found difficulty with the steep grades of Victoria Pass. Its construction was largely at the instigation of the remarkable early Blue Mountains resident and community leader, John William Berghofer (1840-1927), first President of the Blaxland Shire Council and owner of *Rosedale* at the foot of Victoria Pass. His pass was begun in 1907 and opened in 1912 and its easier grades made it the preferred route on and off the western escarpment until motor cars became more powerful and improvements to Victoria Pass were effected in the 1920s. It finally closed in 1934 and was re-opened in more recent times as a walking track. The stone trough would not only

have satisfied the thirst of human and animal traffic using the pass but, most probably, also the demands of many passing motor vehicles. Individually, the trough is not on any heritage list though Berghofer's Pass as a whole is listed in the Blue Mountains City Council's Local Environment Plan (LEP) as having local heritage significance (NSWOoEH 2008b).

Association with Particular People: Though not (as far as is known) specifically associated with John William Berghofer, the trough is an integral part of the pass that he initiated and that bears his name. Indeed, members of his family regard it as significant for on the rock wall to the right of the trough is a small memorial plaque to the memory of his great grandson, Cyril 'Bruce' Parker (1922-2004) who claimed this as "His Chosen Resting Place" (Figure 35).

Photo J. Low 2016

Figure 35. Plaque accompanying the trough on Berghofer's Pass, Mount Victoria.

Trough No. 16: Water Trough Hill, Bell (Figure 36).

Location: This trough can be found by travelling for about 3km east along the Bells Line of Road from its intersection with the Darling Causeway (or, alternatively, 4.5km west from the Mount Wilson turn-off) to the eastern base of Water Trough Hill (WTH). Here a remnant section of an earlier road veers off on the southern side of the current road and passes along the southern edge of WTH before rejoining the present road a kilometre or so further west. By walking west along the old road (in process of being reclaimed by nature and damp in parts) the trough can be found about 150m in on the right hand side. It is easily missed, however, being somewhat hidden by growth and the site can be a bit wet and boggy.

Photo Peter Rickwood 2016

Figure 36. The Bell Trough, Water Trough Hill, Bells Line of Road.

Description & Condition: The trough has been cut out of a natural sandstone shelf about 60cm above the ground, is fed by a permanent spring and is approximately 85cm in length, 52cm wide and 9cm deep. The date 1894 is carved into the rock face beneath the pool. At my last inspection on 12 April 2016 it was in good, serviceable condition, filled with cool clear water.

History: Bells Line across the Blue Mountains into the Vale of Clwydd, though following the route of an already established Aboriginal pathway, was 'discovered' in 1823 by Archibald Bell Jnr. and provided access to the west for travelers and stock from the Windsor and Richmond districts. Crossing to the north of the Grose Valley, it offered an alternative to the older line (the Western Road from Penrith) that followed the more southerly ridge. The earlier section of Bells Line on which the trough is located (also possessing good examples of dry stone walls, rock surfaces etc.) was by-passed, probably during the later major road improvements that began in 1939 under an unemployment relief scheme and continued during World War II and into the post-war period (Anonymous 1950). The origins of the trough, though dating from 1894, are unknown. It is possibly the

> "pool by the roadside, much patronized by horses and dogs"

mentioned in the account of a trip from Blackheath to Mount Banks published in the *Mountaineer* in 1901 (Anonymous 1901a). The trough is listed in the Blue Mountains City Council's Local Environment Plan (LEP) as having local heritage significance (NSWOoEH 2008a).

Conclusion:

If nothing else, I hope this survey of the surviving horse/water troughs in the Blue Mountains, an on-going project, has demonstrated the importance these unassuming relics of an earlier age can have in enhancing our experience of community. They are the bearers of memories and lost histories, they speak of the changes in our work-a-day world and of enduring values of respect and compassion, and as such are worthy of our attention and preservation.

Acknowledgements:

For encouragement, assistance, information and advice during the research and writing of Part 2 of my survey of Blue Mountains horse troughs I am sincerely grateful to the following people: Geoff Bates, Patrick Brackenrig, Ron & Delphine Brazier, Stephen Davis, Ross & Liz Fragar, Erik Halbert, Wayne Hanley, Vanessa, Tegan, Petah & Marika Low, Alan McRae, John Merriman, Keith Painter, John Pike, Peter Rickwood, Ted Szafraniec, Kay Shirt, Gary Steele and Deb Westbury. I would also like to acknowledge the assistance of the NSW State Library, NSW State Records Office, Blue Mountains City Library's Local Studies Section and the National Library of Australia's absolutely crucial *Trove* digital newspaper collection.

SANDSTONE CAVES IN THE BLUE MOUNTAINS: THEIR EUROPEAN CULTURAL HERITAGE

John R. Dunkley
5 Coleman Street,
Pearce ACT 2607
jrdunkley@gmail.com

Abstract
The concepts of place, space and landscape are discussed in constructing European cultural perspectives of sandstone caves in the Blue Mountains, of which nearly 400 are known, mostly named historically. Of minor significance individually but noteworthy in their totality, examples of their aesthetic, historic, scientific, social and spiritual values are described. The tangible European historical heritage is scattered among numerous sources, but much remains intangible. The caves are worth celebrating and their history recorded, not merely as natural features, but primarily as places and spaces connecting with human life, enlightenment and endeavour.

Key Words: caves; sandstone; cultural; place; European, Blue Mountains

INTRODUCTION

"... although we are accustomed to separate nature and human perception into two realms, they are in fact indivisible. Before it can ever be a repose for the senses, landscape is the work of the mind. Its scenery is built as much from strata of memory as from layers of rock. . . .(it is) a way of looking; of rediscovering what we already have, but which somehow eludes our recognition and our appreciation." (Simon Schama 1995, pp.6-7, 14)

This essay will focus on sandstone caves in the Blue Mountains, in particular the cultural interests of Europeans, and will touch on their aesthetic, historic, scientific, social and spiritual values.

Until late in the nineteenth century, limestone and sandstone caves were both regarded as important more for their exploitation and contents than for any consideration of genesis or aesthetics. No significant distinction was drawn between what we now refer to as karst caves in limestone, and artificial grottos, rock shelters and shallow sandstone caves. Sandstone caves are found throughout the onshore 36,000 km² of the Sydney Basin (Anonymous n.d.), including World Heritage Areas which, however, gained that status primarily for their natural biological values. Scattered in the 30% of the Basin which is sandstone and varying widely in their areal density, most are small but over 1,000 are recorded in the database of the Australian Speleological Federation Inc. (see Postscript Note below), the longest being 263 m (Dunkley 2013a, 2013c). About 395 are documented in the Blue Mountains greater than 3 m depth, most possessing greater cultural than natural associations. Of these, 31 have aboriginal significance, 49 are bushwalkers' camping sites, another 46 carry personal names evenly split between male and female, 17 have interior constructions, and a dozen or so were used as spiritual or family retreats and for a period by the homeless or destitute. It is likely that a significantly larger number were used by Aboriginal people, either seasonally or semi-permanently, especially those with sunny aspects and close to streams. First Fleet settlers recorded Aboriginal life in caves around Sydney Harbour not long after they arrived in January 1788 (Bradley 1788, pp.67-68) interpreting it through a European prism, not by scientific training or study. The result was that little serious academic research was undertaken for most of a century, and only then did enquiry into the Aboriginal occupation of the country arise and serious scientific investigations begin. See for example the catalogue of works relating to the surveyor and self-taught amateur anthropologist Robert H. Mathews, who produced 29 anthropological papers in NSW alone and over 170 in Australia at large (Thomas n.d., pp.435-450). It would take most of another century before the real antiquity of both the land and its original inhabitants' culture was recognised and eventually widely accepted (e.g. Stockton 1993).

Aboriginal sites have been studied for a century on the lower Blue Mountains (e.g. Stockton & Holland 1974), indicating a local community of about 2,000 people. At low elevations cave occupation was continuous for 20,000 to possibly 50,000 years. The central Blue Mountains attracted religious activity as evidenced by rock engravings, cave paintings and drawings, and stone arrangements, while the upper Blue Mountains (e.g. Walls Cave) proved favourable for good shelter, water and foraging for resources, despite climatic variations (Figure 1).

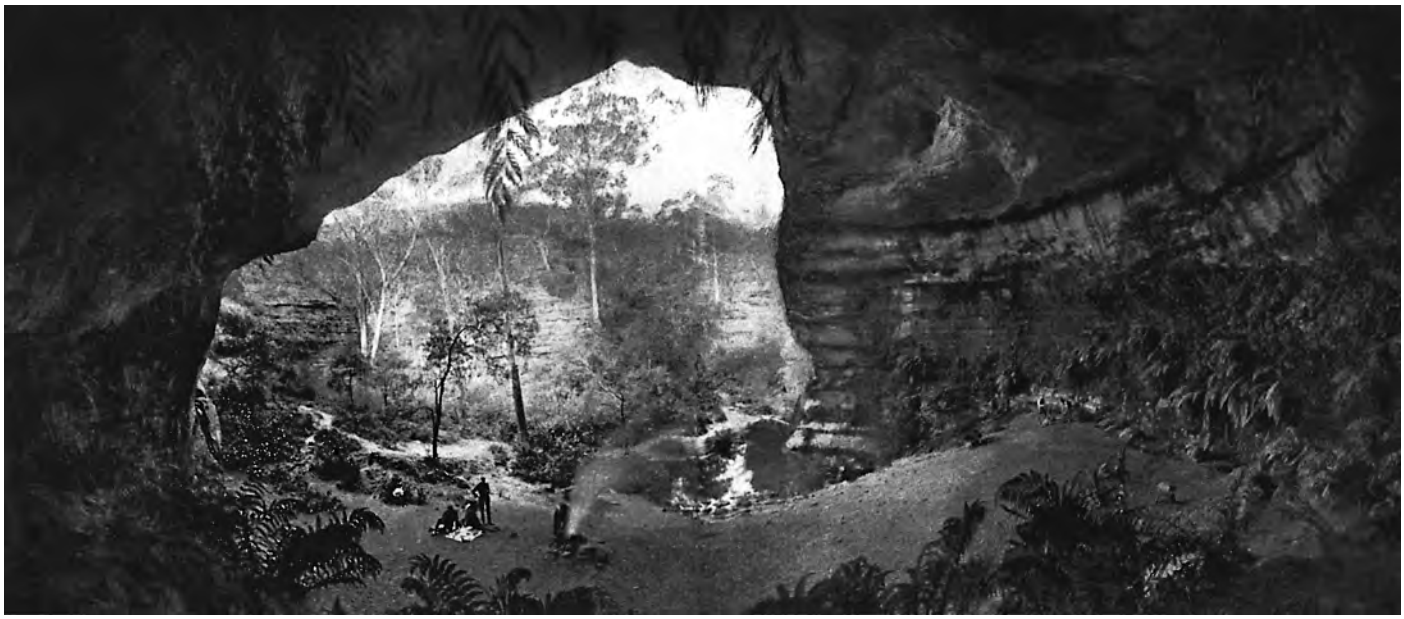

Figure 1. Walls Cave, Blackheath (Phillips n.d., p.13).
View facing north on a stream, significant for both Aboriginal and European heritage and now protected with a viewing platform, it has inspired poems, music and innumerable photographs.
[Photo taken with a panoramic lens by renowned Blue Mountains photographer Harry Phillips.]

This review thus concentrates on the webs of significance woven by European cultural perspectives, with examples of how individuals reacted, with caves as a common characteristic. Overall, quartz sand and sandstone provided a smaller lens through which scientists and managers tended to overlook the natural values of sandstone caves (e.g. Wray 1993,1995). West (2014-2016) described artificial 'grottos' in the Blue Mountains of the kind seen in parts of Europe and Asia, which in an Australian context appear out of place but may have some cultural significance.

European perspectives and perceptions: place, space, landscape, culture and caves.

It is well established that for more than a century most white settlers in Australia underestimated the differences between Australia and the lands that they left (Britain and Ireland) or that they had lost (America) (see, for example, Griffiths 1996, p.152; Horne 2005, pp.25-59). Initially regarded as an impassable barrier, and for long afterwards simply marvelled or despaired over - e.g. "wasteland, wilderness, wonderland" (Jones 2013), "production of imperial landscape" (Mitchell 2002, especially Chapter 1) and "pursuit of wonder" (Horne 2005) - a century after white settlement the encircling sandstone landscapes still served mainly as places to hurry through.

Immediately after 1813, the main agenda was building a road, and later a railway, to productive land on the other side. There were no old buildings to visit or study in Australia, no written history, no culture that Europeans understood. The Blue Mountains were thus the first Australian mountains to capture the colonial imagination, early accounts emphasising - often with a florid flourish - the cliffs and canyons, endless ridges, lack of reference points, and lack of water or of land suitable for agriculture. British imperial expansion informed travellers' accounts and drawings even as they ventured through landscapes bereft of a familiar past and barren of recognisable history and culture. Some Europeans took comfort that an uncertain past owed nothing to the present, and in time obtained temporal depth by turning to the sublime, to the natural environment. Fear can still descend quickly when, for example, someone becomes lost or disoriented in the trackless labyrinth of heavily vegetated hills and valleys below or distant from the escarpments. It is only in the last 130 years or so that we find mountains and caves influencing people's imaginations and lives more directly. Macqueen (2012, pp.1-15) reviewed the concept of the Blue Mountains as "space", effectively demonstrating that even the term 'Blue Mountains' is still not well defined.

Mitchell (2002) is admittedly difficult to read. At the outset (pp.x, 1) he distinguished between place, space and landscape as a dialectical triad: if a place is a specific location, a space is a 'practised' location, and a landscape is that encountered as image or 'sight'. He argued that landscape needs to move from noun to a verb, so that it becomes a process by which social and subjective identities are formed, he saw landscape

as a marketable commodity to be purchased, consumed and souvenired as postcards and, no doubt, 'Facebookfed'; the object of fetishistic practices involving limitless repetition of identical photographs taken on identical spots by tourists with interchangeable emotions is discussed:

> "… but how many photographs, postcards, paintings and awestruck "sightings" of the Grand Canyon will it take to exhaust its value as landscape? Could we fill up Grand Canyon with its representations? How do we exhaust the value of a medium like landscape"? (Mitchell 2002, p.15).

On the other hand, he accepted that landscape expresses meaning as well as value (and indeed spiritual value), thus mediating the cultural and the natural.

Horne (1991) discussed ideas that *cultural* acquisition of land, meaning the ways in which cultures define or imagine spaces, is extremely important when claiming land. From the time we started describing the Blue Mountains as mountains, the link between European civilisation in Australia and that in Europe became more firmly established. She concluded that Australian colonists gained confidence in the *idea* of the Blue Mountains both as a refutation of our convict inheritance, and a promise of a brighter future, concluding that the Blue Mountains became an important cultural acquisition for white settlers in nineteenth century Australia.

Vanclay et al. (2008, p.3) also dealt with places and spaces:

> "'Place' is generally conceived as 'space' imbued with meaning"

where an individual can tell a story about a specific location, with personal meaning. More than geographically unidimensional, it's the coming together of an atmosphere and a sense of narrative, symbolic meanings and emotional attachment, of exploring perspectives through different senses and lenses. A sense of place develops early, from childhood experiences, educational opportunities and learning from elders, then sustained and mediated by dozens of competing social factors: age, familiarity, ability or spirituality. A particular place in the landscape, such as a cave, thus becomes significant when we give meaning to its part in the larger, undifferentiated space.

Until humans arrived the Blue Mountains lacked cultural meaning: they were spaces without places. Millennia of corporate memory then followed and in time mostly vanished as new groups and individuals added new layers of meaning over time, thereby altering the perception of a place and its surrounding space. In other words, older layers of meaning are displaced, decay and vanish, as undoubtedly occurred, for example, even over two centuries of recorded visitors' perceptions of the sandstone caves. Now a recurring theme of conservation and management debate, the relationship between people and nature raises cultural questions about the knowing and experiencing of places, the power of both the familiar place and the newly discovered or rediscovered place, and the many different ways of seeing and knowing that each person brings to a landscape feature or place, including what we can divine about the first human visitors.

Place is thus our legacy on the land. Drilling down, a cave is three places: the one imagined, the one experienced, and the one remembered, each changed by its predecessor. It's a fuzzy concept: abstract, difficult to quantify, defined by local knowledge rather than broader principles, and perhaps embodied in folklore, music or literature.

Perception is the key: middle class conventions and values informed and pervaded the writings of nineteenth century travellers to caves (see, *inter alia*, Horne 2005, pp.227-251), passing on their 'discoveries' to others who in turn found their own. We can visit them, perhaps experience what to us is a new cave or other place and, like visiting a new city, we discover how much easier it is to understand and appreciate a memorable place if one has visited and can place it in context.

But we still return to how we look at the land: as artists and photographers, story tellers, writers and poets, historians, musicians, tourists, speleologists and, in a few cases, people who lived or died in caves. They all discovered, were inspired (or occasionally repelled), and drew on their experiences albeit fleetingly to enhance our appreciation of them, as discussed below. The idea of cultural landscape is a human concept: it is we who give place, space and landscape a context.

Caves as historical places

For thousands of years natural clifflines and gorges confined human movement throughout the area, early settlers observed Aboriginal groups moving through the few natural passes between the valleys and ridges (Smith et al. 2006). Escaped convicts undoubtedly stumbled into caves on the outskirts of Sydney in the 1790s, probably including sites beyond the Cumberland Plain. An early record of a cave beyond the Nepean came on 25 November 1802 when, during

Photo John Dunkley 1999

Figure 2. Barralliers Cave, near Yerranderie. It overlooks a view unchanged for two centuries since Francis Barrallier almost succeeded in crossing the Blue Mountains, possibly visited by only a dozen or so Europeans since.

his second expedition in search of a route across the Blue Mountains, Francis Barrallier recorded that

> "The rain compelled me to seek a shelter for myself and my men in the cave which, the natives assured me, was the home of wombats. I waited till 7 o'clock in the cave for my two men ..." (Barrallier 1802, p.795).

This description aided relocation of the cave in the 1990s (Figure 2), settling a long debate about the route taken by Barrallier's expedition (Andrews 1998; Dunkley 2002). Almost two years later a similar cave (possibly WL879*) sheltered George Caley from a wild thunderstorm in November 1804 (see map in Macqueen 2013, p.22) but that one has not been unequivocally identified among candidates above the upper Grose Valley.

[* Caves, including some unnamed, are listed in the state-by-state cave and karst database of the Australian Speleological Federation Inc. and may be referred to by their catalogue number.]

As early as June 1830 Thomas Mitchell was guided to "the Cataract near the Weatherboard hut at Wentworth Falls", where he stayed two nights en route to Bathurst (Dunkley in press), and by mid century travellers began making their own paths to nearby sites. Akin to crossing the Appalachian Mountains, within a few years waves of settlers were moving westwards across the Blue Mountains. The moving frontier continued for much of the remaining nineteenth century and into the twentieth. European use of Kings Cave at Linden dates may date as early as 1821 (Searle 1985, part 2, pp.13-15), as the base for the Kings Own Regiment whose task was to guard convicts and ensure that only authorised persons were allowed access across the Blue Mountains (although some sources attribute it – almost certainly incorrectly - to a bushranger named King, e.g. Russell 1882, p.28; 1885, pp.24-25,). Road builders, overseers and convict gangs laboured along the line of the now Great Western Highway, using small caves as shelters or depots. At Mount York evidence of past technologies from 1815 can still be discerned beside several caves alongside the steep Coxs Descent, before it was bypassed by Mitchell's route down Victoria Pass. Other examples include Store Cave at Linden and the

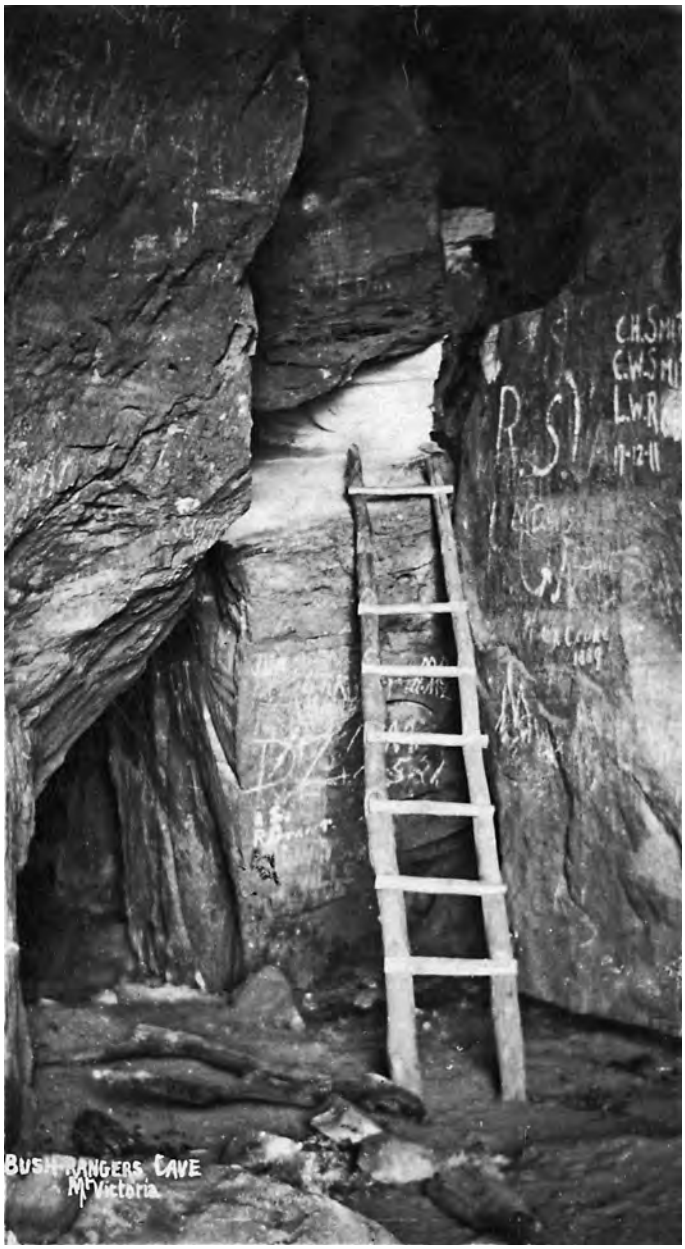

Figure 3. Bushrangers (Cunimbla, Kanimbla) Cave, Mount Victoria, one of the few carrying graffiti and debatable legends of European origin.

partly excavated Bulls Camp Cave at Woodford (ca. 1835-1844), both apparently used by the military to protect gold shipments in the 1850s, during the railway construction and workers in 1866 (Coleborn 1989a; Lavelle 1996) and again in 1896. By the 1880s Australia was a wealthy country. Caves housed itinerant workers in the lower Blue Mountains and as the railway edged up the ramp towards the Great Zig Zag and Lithgow from 1867 to 1869 it carried new waves of people: hotel, real estate and business entrepreneurs, tourists and recreationists.

Entrepreneurs, Walking Tracks, Tourist Authorities, Lovers, Fairies and Caves

The first wave of leisured travellers arrived in the lower Blue Mountains in the 1870s, even as the railway grew and long before Australia's beach culture was born, seeking retreat to pleasant climes and attractions on their mountain holiday properties. Beginning with wealthy landowners and hotel entrepreneurs, local councils, progress associations and enthusiastic volunteers later began cutting tracks to local lookouts, glens, waterfalls and caves. An early example was Sir Henry Parkes whose private 600-acre network at Faulconbridge formed, 80 years later, the heart of Blue Mountains National Park. As early as 1879 the authors of The Railway Guide of NSW described many tracks, including those to Rocklily Cave at Faulconbridge (p.38), and Cunimbla (Bushrangers) Cave at Mount Victoria (p.55) (Figure 3) where

> "These extend into the mountain for some considerable depth, and should not be explored without a light or guide." (Railway Guide of NSW 1879, p.55).

At the time there was no accommodation available between Mt. Victoria and Wentworth Falls - neither Leura nor Katoomba were even mentioned in the extensive guide. By the time of the second edition (1884), Mermaids Cave in the glen below Blackheath had been added along with a direction sign, the Trustees of Mount Piddington had built several trails and installed seats at intervals, including to Coxs Cave with its ladder leading upwards to a fine view,

> "the floor being covered with a luxuriant growth of large ferns." (Railway Guide 1884, p.53)

to Engineers Cascade (cave) and lower down the Little Zigzag to Cunimbla Cave (now obsolete) i.e. Bushrangers Cave.

From the early 1900s and peaking in the 1930s, local Councils and tourist authorities named and vigorously promoted many sandstone caves in the district (e.g. Walford 1928, pp.32, 44-45, 47), as did the Government Tourist Bureau (see, for example, Anonymous 1920). Every village on the Blue Mountains swiftly annexed a signature waterfall or cave, although a number of the latter were little more than overhangs with alluring names. Paths snaked down the escarpment to knit other waterfalls, caves and attractions into a network

> "Of more than 300 tracks and track sections studied for the 1999 Walking Track Heritage Study. ..." (Smith et al. 2006, Introduction p.3, Section 1.3).

Until the various small reserves began consolidation from 25 September 1959 into the Blue Mountains National Park, the Lands Department made modest annual grants (upon formal application) of a few hundred dollars to trustees of most towns on the Blue Mountains, typically local businessmen, who supplemented this with volunteer labour and with cash from fellow businessmen to promote local attractions and build walkways. Trustees placed very high priority on providing picnic facilities such as shelter sheds, fire places, picnic tables, seats and water supplies. While many caves were physically modified, few retain the infrastructure, exceptions being the seats in sites such as Ross Cave (Figure 4), those beside the Furber Steps (Figure 5) and in Lyrebird Dell at Leura. Some tracks were blocked, almost forgotten or became overgrown and have since

been reopened and abandoned sections added, such as Bruces Walk (Blackheath to Lawson) in 1986 onwards (Smith 2015) during which a minor long forgotten cave was relocated (Shelter Cave).

Thus over the 50 years or more from the 1930s a complex network of tracks grew, linking numerous attractive places, bequeathing romantic or fanciful names to caves, promoting a flourishing industry of postcards and souvenir books, and in turn encouraging extensive outdoor recreation activities. Much was touted about the desirable, restorative and curative properties of the climate, of a 'change of air'. But walks demanded a focal attraction, one reason for the promotion of caves as resting points or destinations as well as waterfalls and lookouts.

Medlow Bath hosted the most extensive private tracks (Smith 1999, pp.12 & 145) and almost all survived virtually intact (Smith 1999, p.14). Between about 1893 and 1907, and possibly later, Murdo McLennan, a gardener on William Hargraves' property, built many tracks along and down the escarpment, to and past several caves (Smith 1999). His achievements celebrate the skills of a master stonemason and the most extensive dry stone walls in the district (Figure 6). In 1903 Sydney businessman Mark Foy bought the land, built the *Hydro Majestic Hotel*, and to attract guests retained McLennan to extend the network to 18-20 km (Smith (1999, p.144) wrote that all the new tracks were constructed for Mark Foy). Although overgrown in places and occasionally eroded, the present author had few problems walking along them or locating the caves, at least two of which retain old signposts. Maxines Grotto retains some original pathways inside the cave. Foy's will provided for a large mausoleum to be built to accommodate both him and some of his family, about 850 m to the NNW of the *Hydro Majestic Hotel* at or near where Marks Tomb Cave is now located (Figure 7). This did not eventuate: he was buried at South Head Cemetery, the will was contested strongly by the beneficiaries, none of whom wished it to be built, and the presiding judge empowered them to determine the future use of the money including sale of the land (Anonymous 1951).

Similar tracks were built around Wentworth Falls by Peter Mulheran (Smith 2012a) and Halbert & Ellis (2011) wrote about the tracks and caves around Mount Victoria.

After 1935 many such caves and trails were forgotten or neglected, but most survived because the rugged escarpment in particular became incorporated into public reserves and later national parks. Forming probably the most remarkable network in Australia,

Blue Mountains City Library PF000/000817.

the trails are of heritage significance at the national level, although authorities appear to be slow in recognising this (Smith et al. 2006, 2-E-1).

Bushwalkers, Tourists and Campers

In the nineteenth century most travellers walked; time was cheaper than income and horses and coaches were both expensive. Increasing middle class affluence, the gradual demise of Saturday work, and the initiation

Photo John Dunkley 2011

Figure 8. Pumping Station Cave on Narrow Neck retains its artificial windbreak for campers, who enjoy stunning views across Megalong Valley.

of paid annual leave provided opportunities for recreational bushwalking. The Government Tourist Bureau encouraged weekend and longer walking trips by train (Anonymous 1920) and although omitting mention of caves, the delightful route guide *With Swag and Billy* (Tompkins 1914) must have whetted appetites; it certainly recalls a fitter, determined brand of long-distance walker to rival any seen today.

Nearly 50 caves are now known to have been pressed into service for a century or more for bush camping by walkers and climbers, occasionally by wanderers and more recently by boulderers and canyoners. Most still are, especially in rugged country, more than a day's walk from roads. Many more would have been utilised for centuries by Aboriginal groups. In the early years limited time and release from work often confined walkers to areas such as the Blue Labyrinth south of Glenbrook, accessible by train or car followed by a short walk, sometimes on a Friday night; there are four such camping caves known just in that area (Cameron 2014). The greatest concentration of caves is in the rugged wilderness stretching south from Narrow Neck and Mount Solitary, where there are ten (Figure 8), and on to the Gangerang Range, Wild Dog Mountains, Kanangra Walls, Kowmung River and Yerranderie, in some of the wildest country in eastern Australia where any overhang is a shelter from bad weather. Some caves were appropriated as weekend and holiday retreats by walkers and others, and partly as a result inspired works by writers, poets, artists and musicians. A number served as permanent homes for recluses and the indigent, especially in the early 20th century and during depression years. A camp fire cultural memory attaches to all these communal places, promoting shared ownership, common experiences and yarns as it probably did for thousands of years.

Evidence from a variety of sources (e.g. Horne (2005, pp.100-139), and Smith (1999, pp.105-107) who also referred to Government publications listing accommodation) indicates that in the 1920s and 1930s the typical visitor holidaying on the Blue Mountains did a bushwalk nearly every day of their stay; it was a largely middle class pursuit. Possibly to emphasise their ease of access, several caves received female names such as Annies Rest, and one each for Eveline, Lorna, Louisa, Marguerite, Marie and a Mermaid, along with Maxines Bower and Hildas, Minnies (Figure 9), Veras and Gwennies Grottos.

> "Most probably this 'grotto' was named for Guinevere Goyder, born in Katoomba in 1890 and granddaughter of Frederick Charles Goyder, owner of the Carrington Hotel, Mayor of Katoomba and early trustee on the Katoomba, Leura, Echo & Banksia Parks Trust. It was common for such attractions to be named for female relatives of trust members …

... I set out earlier this year to find this special place. Just below Weeping Rock we climbed down from the present track to where an earlier path followed more closely the edge of the creek and made an exciting discovery - evidence of an old bridge and the buttresses that had supported it. I recalled a lovely old photograph by Harry Phillips of two young girls standing on this bridge with Weeping Rock and the Bridal Veil in the background. But where had the girls been going to (or coming from)?

A scramble across the creek and up the opposite bank provided the answer, leading us to a series of steps and into a hidden recess of moss and fern that must surely, we thought, be Gwennies Grotto. Two overhangs, a levelled and stone wall supported floor, a fireplace, metal spikes (to hang picnic gear?) and an abundance of old graffiti spoke clearly of a place once buzzing with activity. A further path and steps wandered on to a ravine, the remains of another bridge visible in its depths, hinting at even more secrets to discover!

We had stumbled into a place long hidden from the world, closed up like a room in an old house. Changing times had shut the door on Gwennies Grotto and now only the ghosts of memory remained to shape and shift the shadows of its present disuse. William Goyder, his wife Phoebe and daughter Guinevere moved to Sydney ca.1904 where they settled in Mosman. 'Gwennie' never married and died there in 1933. Did she, I wonder, ever revisit her grotto? I'd love to know." (Low 2011).

Photo John Dunkley 2011

Figure 9. Minnies Grotto, an attractive historic resting point on the Prince Henry Cliff Walk, Leura.

Figure 10. Bride & Bridegroom's Cave: the ladder, the sign and the Edwardian era tourists have long vanished, leaving only a postcard memory.

An assortment of Ferns and Fairies of indeterminate gender and genera also became the names of caves. Several (particularly in the Leura - Katoomba area) alluded to romantic spots such as Bride and Bridegroom (Figure 10), and Honeymoon Cave (not forgetting Lovers Nook and Honeymoon Point - neither being a real cave), although no Breakup or Divorce Caves are known.

Women numbered among the early walkers as long ago as the 1880s on the Six Foot Track to Jenolan Caves (e.g. Allen 1886). In the 1920s and 1930s Marie Byles was a pioneer who regarded nature as a living being, responding to our love and interest, just like human beings, and that we get more from it by co-operation than by exploitation. Conservationist & feminist, the first practising female solicitor in New South Wales, mountaineer, explorer and avid bushwalker. In this extract she was following the first practicable route from the plateau established by

Frank Walford to the Grose River, camping in Hemispherical Cave at Butterbox Point, recording in her writings:

> "Marj said we would travel light, take no tent and camp in a cave. (Byles & Shaw 1935, p.24)
> …
> But who would camp down below when there is a perfectly good cave on the heights above? Below our cave the plateau dipped away in tier below tier till it reached the coastal plain, beyond which the lights of Sydney glimmered on the eastern horizon, with Pennant Hills Wireless Station conspicuous among them. But that was the only sign of civilisation: for the rest there were the silent hills and no light . . . (*op. cit.*, p.25)
> …
> . . .We camped near Butterbox Point, where there was both a cave and a stream and no necessity to spoon water from rocky pools. From there we followed the course of the stream towards its source, finding that every tributary ended in a waterfall, and that the seemingly gently sloping wooded spurs turned into caverned cliffs at the bottom. Still we went on hopefully, and eventually succeeded in making our way to what seemed a gentle slope right to the creek bed. But when we came to go down, we found the same cliffs as before, a little more broken, that was all. We were able to climb down till we stood on the verge of the final gorge. Fifty feet below ran the dark mysterious waters of a stream hemmed in by caverned cliffs, a stream whose waters had never seen the sunlight, and whose boulders had never known the foot of man, and Ernestine quoted:
>
> "Where Alph, the sacred river, ran
> Through caverns measureless to man
> Down to a sunless sea". (*op. cit.*, P.25)
>
> Up and down the valley the cliffs rose higher than ever, and deep beneath their many caverns flowed the Many Caverned Creek". (*op. cit.*, p.25)

For some years from the 1930s a few caves served as free holiday or weekend sanctums, or semi-permanent shelters for depression era indigents. Darks Cave near Wentworth Falls was for many years occupied regularly by the family of Eric and Eleanor Dark (see below) and a few artefacts remain. The Knowling family apparently used Lyrebird Cave at Blackheath (Figure 11), Frank Walford Cave hosted the sometime Mayor of Katoomba in a cave above Carne Creek and Arethusa Canyon (Fox 2006, p.119), and Eric Lowe in Rookery Nook (Fox 2006, p.256) while Little Switzerland Cave (Figure 12) on Kings Tableland was a hideout for indigents in the 1930s, a German speaker in World War 2 (an unlikely story!), and by bushwalkers, depending on which local legend is accepted (Coleborn 1989b, Fox 2006, p.184).

The removal of wartime restrictions and shortages, increasing real incomes and the rise of private motor vehicles spelt doom for older forms of holidays, and the wonder is that so much land in the Sydney Basin remained in public hands. Three reasons:

- first, unlike America, on settlement the Australian colonies began as Crown Land.
- second, the mountain region did not attract squatters: demand for agricultural land in the nineteenth century came from free immigrants and a rising number of emancipists who could not make a living on the Cumberland Plain, or the sandstone mountains, and merely moved through to greener pastures beyond.
- third, in the twentieth century, and beyond, demand rose for urban retreats and commuter suburbs, but the sandstone caves, located as they are on or near the escarpment, escaped depredation by developers and land clearance.

Recently one or two private caves began providing retreats for a much more moneyed clientele in search of troglodytic travel somewhere different e.g. Hatters Hideaway at Clarence (Hatters Hideaway 2016) or even 'romance-with-jacuzzi-and-view' as at the Clifftop Cave (Blain 2015) or Enchanted Cave (Anonymous 2016) near Berambing which, while artificial, is architecturally designed inside and out to mimic a sandstone cave in its natural setting.

The Artists - writers, musicians, poets and the spiritual dimension of the caves

Lower prices and peaceful surrounds attracted authors, artists, poets and even musicians to the mountains, the solitude of caves inspiring a number. The forbidding landscape, frequent swirling mists and secret caves backdropped yarns of adventure and romance. One example is Smeaton's fictional '*The Treasure Cave of the Blue Mountains*' (1898). Other writers found early escape after defining experiences in the bush suburbs of Sydney and the Blue Mountains, in the many small caves almost in their backyards, especially before suburbia tentacled and oozed across every rocky peninsula between the creeks. The mountains increasingly attract such escapees, recalling earlier innocence.

Grace Bayley wrote without pretension, evocatively and passionately about the magic:

> "On that holiday (*in 1932*) I fell in love with the Blue Mountains." (Bayley 1993, p.4) .

Over 80 years she visited and revisited numerous caves, helping offspring as well: ferns, rocks, pools and picnics at Mermaids; Dad wriggling into Harpers and helping her grandson do it as his granddad did 50 years earlier; grilling sausages at Walls Cave; the tunnel in Grand Canyon; swooping bats in Coxs; the third zag to Bushrangers, tables and chairs set out for a picnic at Flat Rock, Wentworth Falls, and the cave beneath; the huge overhanging rock at Lourdes Grotto; a room with three doors, a window and a story teller to talk about Marks Tomb Cave; the Keyhole Slot in Deep Pass and Wollangambe Canyons; lyrebird tracks, red mud, stalagmites and stalactites in Goochs Crater. Wind-eroded Cave. The Cave Church. Oxley Cave at Rocket Point.

Similarly without affectation, Jim Low wrote (2008):

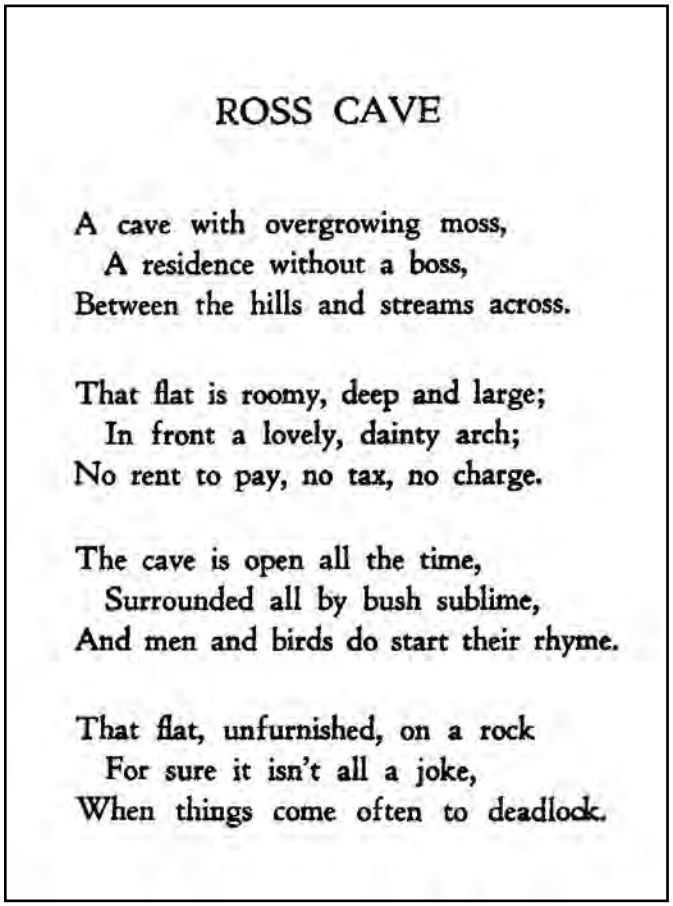
> "The large rocks look like they straggled slowly up the ridge, countless years ago. Some of them apparently stopped to rest forever along the way. Some arrived pocked with caves and inaccessible crevices; some continue performing incredible balancing acts, as if defying gravity. I crouch at the rear of one of these large caves and regard the valley, crudely framed by this cave.
>
> My valley view is serenely smothered in greens. Scattered, black tooth picks of trees protrude from the fresh greens, their crusty, black coats a testament to the intensity of previous, bushfire battles. Many are dead, cruelly transformed into their own monuments. They await the strength of the late winter/early spring wind gusts to see if they can last another year upright. Yellow flashes of 'egg-and-bacon' plants and the orange glow from intricate shaped bottle-brushes are splattered about the ridge.
>
> The cave floor is steep and uneven, dusted with sand from the stone that forms it. Part of the floor is stained with cement grey seepage, long dry. Other parts are variegated shades of browns and yellows. Directly above me is the cave's rough, coral textured, rust coloured ceiling. A closer inspection reveals the small, scattered, crystal pieces which softly reflect, like fragments of a shattered, dirty mirror. From my raised vantage, the cave has the feel of being in the 'gods' at a theatre. Its stage is a stone platform resting askew at the centre and its backdrop is the bushland, plummeting to the valley floor and up the other side.
>
> On some days, like today, the cave traps the exhilarating, subtle smell of the bushland, a mixture of eucalypt and wild flowers. You could almost bottle this essence. I am reminded of the elevated Queensland country city of Toowoomba, first visited many years ago as a youth. At the

information centre, I purchased 'a tin of Toowoomba fresh air' and sent it to my family back in Sydney. I guess they saw me coming!

Here in the cave, the powerful, deafening, jet engines of an aeroplane, distantly high in another world, are just a gentle rumble. A more audible impact comes from another source, a natural one. The sudden, jarring shrieks from a white cockatoo cascade from above, their echoes resounding raucously through the valley.

This is definitely another world here. I sing some words of a song and they surround me, resonating with intensity. Here no one can hear you. I could deliver a passionate address, expounding upon my inner most beliefs and no one would be any the wiser." (Quoted with permission, October 2016).

Perhaps the most widely circulated was Frederick Meyer's *Pearls of the Blue Mountains of Australia* (1929), 217 single page dollops of doggerel including 13 caves in NSW, three in Victoria and two in Western Australia. Paeans of praise were heaped on Hildas Grotto, Engineers Cascade, Lyrebird Dell (though curiously omitting mention of the large cave), and York, Walls, Ross (Figure 13) and Bushrangers Caves.



ROSS CAVE

A cave with overgrowing moss,
A residence without a boss,
Between the hills and streams across.

That flat is roomy, deep and large;
In front a lovely, dainty arch;
No rent to pay, no tax, no charge.

The cave is open all the time,
Surrounded all by bush sublime,
And men and birds do start their rhyme.

That flat, unfurnished, on a rock
For sure it isn't all a joke,
When things come often to deadlock.

Figure 13. One of Frederick Meyer's 'masterpieces' of meditative musing! (Meyer 1929, p.86).

First used in 1937, Darks Cave, the weekend retreat of the family of Eric and Eleanor Dark, inspired books and music. A decorated World War 1 veteran, Eric was a sergeant in the Blue Mountains Volunteer Defence Corps in World War 2 (Merriman 2011) when (according to local folklore, anyway) he was ordered to find caves to use as guerrilla bases in case of Japanese invasion, leading his wife to write to a friend that the latest rumour she'd heard was that "we have a year's supply of food hidden in our cave"! Eleanor authored well received novels such as the much reprinted 'The Timeless Land' trilogy (Dark 1941, 1948, 1954), said to have been partly written in the cave. In an essay Barbara Brooks (2000) wrote that Dark dealt with our history of black custodianship and white occupation, about the human need for wilderness, about what it does for the spirit. The country wasn't a passive backdrop to a human landscape; she (Dark) believed that the country had moulded people as well as people moulding, sometimes exploiting, the country. All that time in the bush meant she knew it in her body as well as her mind. We are part of the country, she said, concluding with a quote:

> *"....* this conception of ourselves as eternal antagonists of nature instead of harmoniously co-operating parts of it has made us strangers in our own world. *(Unpublished essay, Conquest of Nature)".*

Eleanor did much of her research in the Mitchell Library, Sydney, but apparently Darks Cave provided opportunities for reflection according to colleague Dr Willam Holland (pers. comm. 2012). Her novels share some worthy intentions - to educate in an entertaining manner and to remind Australians of where they came from. The main theme, of course, is the clash of two very different cultures, each obeying their own tribal law.

In 1999 Dr Holland, a musically inclined younger colleague of Eric Dark in the Volunteer Defence Force, was inspired by the company, by Dark's love of the outdoors, the writings of Eleanor Dark, and by an affinity with Aboriginal people derived from his archaeological cave work with Eugene Stockton (Dunkley 2013b). Composing 'Darks Cave' in three movements entitled 'Nature and the Aborigines', 'Katoomba' and 'The Cave', scored for soprano, bass baritone, piano, choir and orchestra (Figure 14) was followed by 'Walls Cave', for piano and orchestra,

Figure 14. Music written in 1999 to celebrate the memory of Darks Cave (with permission from Dr William Holland, 26 September 2016).

and 'Lyre Bird Dell Cave' for piano quintet (Holland 2016).

Scenes from *Mad Max Beyond Thunderdome*. were filmed in Mermaids Cave, Blackheath with sets inhabited by a tribe of feral kids at the 'crack in the earth' site; only photographs of this exploit remain (Barton n.d).

Spiritual and Religious Connections and Retreats

While Darks, Frank Walfords, Professor Eds, Rookery Nook and several other caves were appropriated from time to time as family seclusion from civilisation, surprisingly few have been used for religious retreats or observance, and only one or two carry any solid association. Known since the earliest days of European settlement and appearing on an 1837 map (Jack 2010, p.2) as Kables Spring, Lourdes Grotto is beside and behind a waterfall on Springwood Creek (Figure 15). In 1952 Catholic Bushwalking Club members placed a statue of Mary in the cave, officially blessed by Mgr. Duane on 27th September 1953. Mass was then said at the site every September until 1983, when the statue was removed to The Oaks as the Club was spending very little time visiting it. An easy, well constructed path leads down to the cave which has since become somewhat overgrown compared with the photograph.

Figure 15. Lourdes Grotto, Springwood (W.G. 1934, p.179; also see Jack 2010 Fig. 3, p.2).

Only a few caves retain tangible religious associations, compared with numerous sandstone caves in Europe and Asia of spiritual significance.

Cave Church below the *Hydro Majestic Hotel* at Medlow Bath hosted Anglican worship between 1894 and 1902 (Isbister et al. 2011, p.16), remaining in use until Mark Foy, a prominent Catholic, bought the site in 1903. Up to 70 adherents attended, although it's difficult to see how they could all have fitted into the available space. In the early 20th century it housed a Chinese market gardener employed by Foy, becoming known as Chinamans or simply Medlow Cave (Fox 2006, pp.75 & 198). Most of the masonry infrastructure remains (Figure 16).

From the writings of bushwalkers, in particular, several caves hold spiritual significance. The Word Cave was supposedly named before World War 1 by the devout Hall brothers for the first few words of Genesis (Cameron 2014, pp.214-216; Fox 2006, p.310). Sites closer to Sydney such as Father Guris Cave at Kentlyn (Campbelltown), and Santi Cave near Bundanoon (near Moss Vale) continue to serve similar purposes, but unlike long settled places few Australian caves evoke that kind of spiritualism.

Photo John Dunkley 2011

Figure 16. Cave Church, beside one of Murdo McLennan's wonderful tracks below the *Hydro Majestic Hotel*, was used for early church services, and later occupied by a Chinese market gardener.

The homeless, destitute or deceased

There are numerous accounts of homeless or destitute people living in caves in Sydney and a number in the Blue Mountains, in addition to several recorded deaths. A death in Chinamans Cave at Lapstone was recorded 1850, while Billy Toms Cave at Kurrajong (Anonymous 2010), and Chinamans Cave (i.e. Cave Church) at Medlow Bath were used for long term habitation in the twentieth century. Widely reported in Sydney newspapers, as recently as May 2011, the National Parks and Wildlife Service and Centrelink identified (from a police helicopter) 40 temporary shelters in Royal National Park, 30 of them inhabited by mostly middle-aged men with drug and alcohol, family and mental health issues (Wilkes 2011). This exercise highlighted the fact that occupation of caves by the homeless or indigent continues long after the 1930s Depression.

Behind Hazelbrook Bowling Club is a large cave believed to have been used by Aborigines on their way across the Blue Mountains, and by travelling 'swaggies"; it became the 'home' for Tom Hicks, alias 'Old Tom' or 'cappie' (Campbell 1989, p.119). However many residents were not so much destitute as mentally ill or, sadly, suicidal. Henry Snedden Grant, a former taxidermist at the Australian Museum, starved to death in a cave at Glenbrook (Anonymous 1944) and several others died in similar places. Patrick Molloy, a swagman aged about 60, was found on 17 March 1892 in Kings Cave, Linden (Anonymous 1892) and had apparently taken his own life. Audrey Mountford lived in an unnamed cave on the Blue Mountains for several years before dying in 1971 and the body and possessions lay undisturbed until a decade later when a bushwalker alerted police, but not until 2009 did a coronial inquest determine whose remains these were (Malkin 2009; Kontominas 2009).

Rockclimbers, Boulderers and Canyoners

Carter et al. (2010, pp.10-16) included a useful potted history of the growth of rock climbing, along with several hundred pages of route descriptions. Rockclimbing in the Blue Mountains appears to have been born in the 1920s around Malaita Point in Katoomba, by intrepid boys from Katoomba High School. There was a climbing accident in the area attended by the local GP who happened to be Dr Eric Dark, who had climbed in the Southern Highlands and southern Queensland before moving to Katoomba. Some of the boys continued to climb with him for some time after the accident and this small band became known as the Blue Mountaineers, notching up first ascents there and in the Warrumbungles. In the 1930s Dark and friends joined a group from the Sydney Bushwalking Club, making further first ascents.

The term 'cave' in rock climbing parlance means a roof (a horizontal or very steep overhang enclosed on two sides, so only a few will meet established criteria for a cave; certainly a number of major climbing sites house seriously impressive sandstone caves including some at Mount York and Blackheath in particular where there are spectacular overhanging cliffs.

The Sydney Rockclimbing Club set standards for the anarchy and disdain for rules for which some modern climbers pride themselves. One of their members started the practice of painting white squares at the base of routes to make them easier to find, analogous to cave tagging but more visually intrusive, though it seems to have decreased in recent years with the advent of detailed illustrated guidebooks such as Carter et al. (2010).

The sport expanded rapidly in the 1960s (Smith 2012b) and now attracts a wide range of enthusiasts, from traditional anarchists and iconoclasts to professional guides. There are several thousand 'routes' known and well documented in the Blue Mountains alone and of these at least 20 are 'caves'. On any good weekend there will be several small groups of climbers in places such as Centennial Glen (Blackheath), and especially around the crags and caves between Leura and Mount York, where scarcely a virgin stretch of cliff remains, with a few on outliers beyond to the Bell Road. Rockclimbers opened and maintained negotiable tracks to previously unknown and/or very inaccessible cave locations, including some reached only by difficult climbing or abseiling. Several sites, especially those with challenging 'roofs' such as WL847 and WL853 below Bardens Lookout at Mount York (Figure 17) and a cliff a short distance before WL763 at Blackheath are especially popular, being festooned with bolts, hangers, tags and an occasional old-fashioned piton, sometimes to excess.

Climbing can impact on the often fragile environment of the mountains: from foot traffic, vegetation trampling and erosion. However certain practices are now largely eschewed: chipping, drilling or gluing holds, and 'tagging' certain sites with painted initials of the kind seen at Little Zig Zag (Mount Victoria), parts of Mount York and on a cliff a small distance

Photo John Dunkley 2011

Figure 17. Bardens climbing site at Mount York.

before Centennial Glen Cave at Blackheath. A few sites have been closed to climbing for safety and environmental reasons: Jamison Valley around Wentworth Falls, areas near Katoomba including the Three Sisters, and Govetts Leap. To minimise foot traffic on Mount York, access pathways to most of the known caves have been sympathetically hardened with support from Blue Mountains City Council, sponsors, volunteer groups and an occasional helicopter.

With much less publicity, canyoning and bouldering flourish throughout the region, especially in the upper Blue Mountains and beyond. Mostly far from tourist centres, often with both difficult entry and exit points, world class spectacular caves (with little or no light) in the splendid deep, narrow and often dark canyons are generally robust because of regular flooding (see, for example Jenkins 2011). Over 80 such canyons are known: as with limestone caves, the National Parks and Wildlife Service cautions against publicity for "new" canyons and/or in wilderness areas to preserve opportunities for discovery and minimal impact. Specialised pursuits with small but enthusiastic adherents still find new canyons in some of the wildest country in Australia, but rely primarily on 'webliographies' and similar social media for exchange of views. As Brennan (2016) related:

> "For most people the word "canyon" evokes images of the Grand Canyon in the USA, a massive open gorge many kilometres wide and hundreds of kilometres long. The slot canyons of the Blue Mountains are quite different. Deep, dark, narrow and twisting, they are places forgotten by time, forsaken by light. Carved by water over many thousands of years, their sandstone walls and waterfalls make them a challenge to visit."

Bouldering is a more pure style of free rock climbing undertaken without a rope, less invasive than most rock climbing, traditionally carried out on 'boulders' rather than high cliff faces and normally limited to very short climbs. Assistants may stand poised beside or below to direct the climber's body toward the crash pad during a fall, while protecting the head from hazards. It is a relatively recent sport in New South Wales although practised for over a century in Europe, its popularity has increased because of the number of small sandstone overhangs with platy protrusions and because of the minimal cost. Numerous climbing and bouldering sites are recorded in the Blue Mountains (although based in Finland, Muittari (2016) and similar enthusiasts appear to be aiming to document all 100,000 crags and boulders

in the world! There are, for example, 14 listed just in Centennial Glen, Blackheath).

Environmental Pressures and Management

Sandstone caves are generally robust: in the Blue Mountains traffic is concentrated on a relatively small number alongside walking tracks or roads, especially between Wentworth Flls and Mount Victoria. The author has inspected well over 100 known or probable Sydney Basin Aboriginal sites including a number containing art work which are of course more sensitive, but they have also generally survived rather well, mostly through education and judicious non-disclosure. Aboriginal occupation itself did hasten deterioration of caves and art sites, and so do present-day visitors, but graffiti is almost absent. Most sites of Aboriginal significance are restricted, with visits to those open to the public confined to viewing platforms outside the cave, such as at Walls Cave at Blackheath. Inexcusable vandalism occurred at a very few sites, notably Red Hands Cave at Glenbrook, but protective measures are now in place. When visiting sites not physically protected, it is better to view and photograph from outside the dripline.

Mining subsidence and landslides recently forced closure of the area around Hassans Walls at Lithgow: the path had greatly deteriorated and the caves more difficult to locate. Adjacent to the area forming the main focus of this work, some sites could be impacted by coal extraction in the Gardens of Stone National Park and by the Moolarben Coal Project in the upper reaches of the Goulburn River. In some mountain areas urban encroachment has exacerbated run off, sedimentation, pollution and infiltration of garden and other chemicals but not to the extent readily apparent in Sydney metropolitan areas.

Conclusion

Visitors to the readily accessible sandstone caves came and went over the millennia. Aboriginal and later walkers, travellers, recreationalists and others built spiritual, emotional and psychological attachments to the sandstone caves, contributing to the proposition that it is culture that determines perceptions of scenery, and the converse. None of the sites is of great significance, and examples discussed evoke an everyday appeal to the senses.

Cultural significance is embodied in such places: the fabric, setting, use, associations, meanings, records, related places and related objects. As historian John Low (2011) concluded of one evocative cave place,

> "Now only the ghosts of memory remained to shape and shift the shadows … ".

The caves witness this intangible cultural and spiritual heritage along with their somewhat lesser scientific significance. They broaden and deepen our understanding of Blue Mountains social history. While minor features, they are worth celebrating and their history recorded, not primarily as natural features, but as places and spaces connecting with human life, enlightenment and endeavour.

Postscript Note

All the caves cited herein are documented in the state-by-state cave and karst database of the Australian Speleological Federation Inc, totalling more than 5,300 sites in New South Wales alone and over 20,000 nationally. General information on the NSW catalogue can be obtained from the state coordinator Mr. P. Dykes [ngalina@activ8.net.au, ph. 02-63355247]. The present work is based on a catalogue constructed by the author, dealing only with features in the Sydney Basin, during which nearly 1,000 sandstone sites were recorded (Dunkley 2013a), 395 of these being in the Blue Mountains region. However only recently has the database held more than a handful of sandstone caves, primarily because (having been constructed on a volunteer basis by speleologists), they received much less attention and documentation than traditional limestone caves. At the time of publication all are being transferred to a new database more accessible to researchers and others. In accordance with established practice of the Australian Speleological Federation Inc, detailed location information is not published. However the outlines below should entice visitors to a variety of readily accessible sites.

Cave Information

Organised **geographically westwards**, and except for Lourdes Grotto and Cave Church, all the following are on public land and readily accessible. Some appear on street directories and GPS assistance may be required.

Red Hands Cave (WL84) is one of the few Aboriginal sites to which tourist visits are encouraged and it is readily accessible from the Glenbrook entrance to the Blue Mountains National Park.

Lourdes Grotto (WL594) is on the property of St. Columbas College, Springwood, and requires access permission. The walk is easy, but the cave no longer carries the religious infrastructure and atmosphere.

Kings Cave (WL61), Burke Road, Linden. From Sydney turn left, cross back over the highway down

Burke Road. Not signposted but well known, a short walking track leads down to the cave which was almost certainly an Aboriginal camping cave with northerly aspect and permanent water supply from a shallow spring. It suffered some vandalism and extensive modification for nearly two centuries. Historical items nearby include Donohue's Grave, Caleys Repulse and Bulls Cave.

Bulls Cave Campsite (WL62) on the northern side of the highway at Woodford began as a convict stockade in 1835. To the left of the picnic ground a small sandstone cell was probably of convict origin, used for storing tools and (by legend) for punishment and known as The Dungeon. During the 1850s a Military Police Post was based there to protect travellers and gold shipments. Railway gangers occupied the camp during the 1860s construction period, again in the 1890s, and in the 1930s it was a transitory home for 'swaggies' heading across the Blue Mountains. Store Cave (WL63) across the highway next to Hepburn Road, Linden (beside remnants of the old road), is sometimes referred to as Powder Cell Cave as it may have stored gunpowder. It bears numerous pick marks, similar to such facilities on the convict roads to the north and south of Sydney in the 1830s.

Horseshoe Falls, Hazelbrook (WL612). Turn right from the highway along Oaklands Road. At the bottom of a hill, just before turning left, a walking track leads off to the right for about 1 km. Shaped like a horseshoe with a waterfall over the front, the cave is dank from spray but particularly photogenic after rain. An occupation site was radiocarbon dated by Eugene Stockton to 7280±230 years ago. Glow worms are sometimes to be seen.

Little Switzerland Cave (WL60). Drive to south end of Little Switzerland Drive, Wentworth Falls and then walk to Lincoln Rock for a spectacular view. The cave is immediately below the rock, with parts of a stone wall remaining.

Butterbox Point (Hemi-Spherical) Cave (WL650) overlooks a hanging swamp above Butterbox Canyon (also known as Mount Hay Canyon) near Mount Hay (access is restricted to preserve the swamp but the cave is close to the track), and is probably the one used by Marie Byles and Marjorie Shaw in the 1930s. From the corner of Britain Road, Leura, turn onto Mount Hay Road which progressively becomes a dusty 2WD track. From the car park, walk about 2.5 km to the cave, on the left and unposted. Beyond this a fair track continues to great views into the Grose River.

Minnies Grotto (WL644) is near the head of the first gully east of the Solitary Café (90 Cliff Drive, Leura). At the U-bend on the road descend a short stairway to Prince Henry Walkway, turning left on a level track for 400 m. Facing southwest, its walls are covered with moss and ferns and a seat has been installed, echoing the small scale infrastructure supplied by local trustees and Councillors before the area was incorporated into the National Park.

Hundred Man Cave (WL697) is a remote overhang 100 m long, east of Mount Cloudmaker, hard of access but well known to bushwalkers, hence the name. Even larger is Thousand Man Cave (WL698).

Cave Church (Chinamans Cave) (WL722) An easy, wide and well graded walk leads from behind the *Hydro Majestic Hotel* at Medlow Bath past the remains of the cave in the side of a cliff with a cement floor, masonry wall and shelving. From 1894 to 1902 it was used for Church of England services before a permanent structure was built nearby, with as many as 70 attending (there must have been quite an overflow of numbers!). Later it became the home of a Chinese gardener who supplied fresh food for the hotel. Compare this with another almost identical cave (WL721) which shows what the Cave Church cavity might have looked like before development.

Marks Tomb Cave (WL727) From the end of Belgravia Street, Medlow Bath, a short steep descent leads to the Wonderland Track. Turn right for about 400 m of easy level walking to an old sign pointing to "Marks Tomb". A less well defined downhill side track leads to the cave. The cave resembles a mausoleum but is well lit from three small entrances and is attractive to photograph.

Mermaids Cave (WL776) Marked on many street directories and GoogleEarth. From Blackheath drive south alongside the western side of the railway line, and turn right down Shipley Road. At the Crossroads, turn sharp left into Megalong Road and park on the inside of the first sharp U-bend. Cross the road to a path leading to the cave which features an attractive waterfall.

Walls Cave (WL51) and Underground River (WL55). Once a popular tourist spot then closed for many years, this wonderful site was improved by National Parks and restored with a good timber walking track. Follow Evans Lookout Road and turn right into Walls Cave Road, then walk the 800 m path down to Greaves Creek. Cross the little bridge, from which an underground river tunnel section passes through an unusual short entrenched meander to the right. The shortcut was caused by mass movement blocking the stream, causing it to pass underground. Continue downstream to the next curve of the creek, from which an access platform overlooks the cave. The cave is an aboriginal site - please do not cross the fence.

Bushrangers (Cunimbla) Cave (WL53). From Innes and Kanimbla Valley Roads, Mount Victoria, descend the Little Zigzag to its 7th turning, then scramble to the left for 60m. Long abandoned, the walk illustrates the difficulty and expense of providing access to Kanimbla Valley. Probably the longest cave in the area, it may have been formed by a process of mass movement.

ACKNOWLEDGMENTS

The field work on which this paper was based indirectly owes a debt to numerous assistants over a 40-year period (listed fully in Dunkley 2013a, p.4) over many years. For advice and assistance special acknowledgement is due to Dr Anna Binnie, Dr Jim Smith, Dr Michael Lake, John Merriman (Blue Mountains City Council Librarian), John Low, Denis Marsh, Jeanette Dunkley, Peter Dykes, archives of the late Professor Elery Hamilton-Smith, and particularly Bruce Welch.

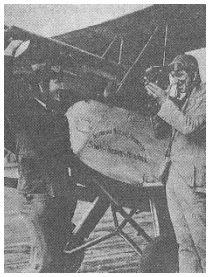
Southern Cloud – lost, found and remembered

Australia's worst civil aviation disaster (of the time) and greatest air mystery occurred on 21 March 1931. The aircraft was an Avro 618 Ten (licensed built as a Fokker F-VII), one of five, three engine aircraft flying daily services between Australian cities for Australian National Airways (ANA). ANA had been founded by aviation pioneers Charles Kingsford Smith and Charles Ulm.

Southern Cloud



Travis Shortridge (right)

Southern Cloud and friends

The aircraft carried the pilot Travis Shortridge, the co-pilot Charlie Dunnell, and six passengers: accountant Bill O'Reilly, first timer Clara Stockes, theatre producer Charles Clyde Hood, businessman Hubert Farrell, engineer Julian Margules and holiday maker Elsie Glasgow. Travis Shortridge and Charlie Dunnell were WWI veterans.

The plane disappeared without a trace on a routine flight between Sydney & Melbourne and a large search failed to find the whereabouts of the aircraft or the occupants.

The plane had left Sydney in the morning. However, during the day the forecast changed from "windy and rainy" to cyclonic conditions over the Australian Alps. The plane had no radio so the information could not be relayed.

Unfortunately, ANA lost another aircraft that same year in Malaya, and the airline closed down.

An exhaustive search by the Civil Aviation Branch of the Department of Defence, private pilots, RAAF personnel, Kingsford Smith and Ulm, other ANA pilots, and ground parties, failed to find the remains.

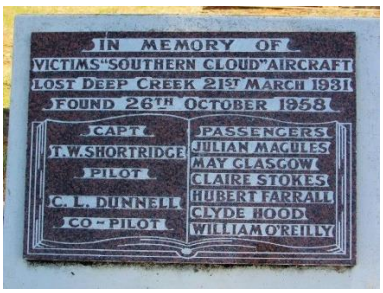
An official inquiry was held and could not determine the cause of the disaster, apart from the weather conditions. However, one of the recommendations of the inquiry was that radios and qualified operators be made compulsory in regular passenger services, and weather forecasting improved. Thus, the Southern Cloud helped create safer air travel for all Australians, but at a huge cost.

Matthew Higgins at crash site

Crash remains

Lions Club Plaque, Cooma

Twenty seven years later the crash site was found by Tom Sonter, a carpenter on the Snowy Mountains Hydro-Electric Scheme. He had been born only 9 months after the crash and had never heard of it. He was climbing on a mountain top at the north east end of the Toolong Range in October 1958, when he came upon a mound of earth which was a different colour to the surrounding landscape. He found shapeless twisted and bent pieces of metal. It was the plane. He took some pieces with him and a few days later led police and civil aviation experts to the site. They scraped away the earth and found the brass plate which read "Avrotype XDWG NO P1131".
Various theories arose as to what had occurred in 1931. The weather and the plane speed (from observations by residents along the route) were analyzed, as well as fuel carried, right down to the time on the broken watch of one of the passengers.



Cooma Cemetery

On December 11 1960 a burial service was held for the occupants of the aircraft in a common grave in Cooma's cemetery. Today little is left of the plane, the site has been cleared and tourists can climb to the site to see the few tangled remains. It is on a heavily wooded steep hillside, which is burnt out by bushfires from time to time, extremely rugged and named "World's End".

Cooma Memorial

Tumbarumba Memorial

In 1962 a memorial was erected in Cooma to the crash victims and all pioneers of aviation. Concrete wings provide the roof to a memorial alcove which encloses the memorial and the recovered engine parts and other historic relics. Another memorial was erected at Tumbarumba.
In 2006 another relic was presented to the Museum of Australia, a clock from the aircraft's instrument panel from the crash site in 1958. Matthew Higgins from the Museum was pleased to add the item to the Museum's collection of air-related objects. *Patsy Moppett*

Food for thought ..... Editor's note

Memories – we all have them, and we preserve them (or don't) in many different ways. Whether it is memory of a building, a place, or personal memories of people the recording of the past means different things to different people.
Trauma will trigger grief, but this mellows into precious recollection. The horror of the aftermath of the New Zealand earth quakes in 2010 for example, presented the loss of not just human life, but also the loss of buildings linked to the country's heritage, crumbled to the ground. WWI and WWII laid waste whole towns and cities, stunning cathedrals and local community edifices alike. Disasters of all kinds may result in the loss of similar tangible evidence of our history.
We cannot rebuild history, or bring the people back, but we can undertake the rebuilding, and the construction of memorials and plaques, the writing of publications, the posting of precious words on social media, and so on. Some people will simply treasure their memories in their hearts.
Some of the articles in this issue of *Heritage* present ways in which the relevant community set about preserving their recollections.
The loss of the Southern Cloud (page 1) in southern NSW in 1931 was devastating for both the families of those lost and for the airline company. The drama was made worse by the fact that the plane was not found. Imagine the relief years later in 1958 when the wreckage was found, and the families were able to lay their loved ones to rest and also to construction of memorials to ensure that they were never lost again.
Feel for Mrs Atkinson (page 4) when her husband James was taken from her at only 39 years of age, with 4 young children to care for. She chose to deny the community the consent to erect a public memorial in his memory. She had to deal with it in her own way.

The community was left to deal with it through heart felt obituaries and articles which acclaimed his popularity and achievements. He was not forgotten.
The Charles Hoskins Memorial Church in Lithgow (page 8) is an awe-inspiring memorial to a lost son. Several stained-glass windows in the church commemorate the lives of two daughters also lost, as well as the man himself. Hoskins commissioned the church but did not live to see it completed. His wife then sought to use the work as a memorial to her family.
The resilience of communities who, following a natural disaster or any other grave occurrence, completely rebuild a town or a city, or set about turning their lives in a different direction, is a tribute to their solidarity and determination, their resilience and their passion, such that the memory of that fateful day will not weigh them down.
Not everyone can deal with the situation with success, but the representations we present in *Heritage* seek to show how the wider community has attempted to conserve and preserve the memory of their history and heritage, their forebears and ancestors, the message being how often simple human nature drags us back to reality and moves us on.

Atkinson - a talented pioneering family

James Atkinson was born in 1795 at his father's farm "Oldbury" in West Kent near Mereworth and Ightham.
James' parents came from Yorkshire and had a well-run farm which influenced James later in life. At 16 he worked at the naval dockyard at Deptford, where he stayed for 9 years, meeting two other merchants. The three decided to emigrate to Australia. The merchants, Alexander Berry and Edward Wollstencroft, left first in early 1819 and James followed later in the year in the ship "Saracen". He arrived in May 1820 and obtained a job as Principal Clerk at the Colonials Secretary's Office. He explored the colony before applying for a land grant of 324 acres near Sutton Forest which he called "Oldbury", and an additional grant of 283 acres which he called "Mereworth", 140km south of Sydney.

Early "Oldbury"

"Oldbury"

He moved to "Oldbury" in 1822 and increased his grant to 809 hectares, commencing his farming career. His brother John arrived in 1823 and took over the "Mereworth" name, and obtained his own grant of 809 hectares, running horses and cattle. The Mereworth house had a long history, with John converting it into the Kentish Arms in 1836. It later became a dwelling again in 1867 when the southern railway caused it to cease trading. It was demolished in 1918 to make way for the Great Southern Road (the Hume Highway).
In 1825 James Atkinson sailed to England, where he published a book, "*An Account of the State of Agriculture and Grazing in New South Wales"*, to provide prospective settlers with practical information.
James, aged 33, married Charlotte Waring in 1827 at St Paul's at Cobbitty. Charlotte had come to the colony in 1826 to serve as a governess to the family of Hannibal Hawkins Macarthur. After her marriage to James, they settled at "Oldbury". They had four children, Caroline Louisa, Emily Jane, Charlotte Elizabeth and James John. The well educated Charlotte was the author of Australia's earliest known children's book, *"A Mother's Offering*

to her Children: By a Lady, Long Resident in New South Wales", In 1841. The book was published by George Evans (former surveyor), come book seller and stationer.
Charlotte also created a book of illustrations with pen, ink and watercolour drawings as a gift to her daughter Emily Jane on her 13th birthday in 1843, reflecting her study with John Glover back in England. The book demonstrates her interest as a naturalist, her English background and also her feeling for Aboriginal people at "Oldbury".
James interested himself in the development of the district and was also on the local bench of magistrates. He was involved in the Agricultural and Horticultural Society, and held annual ploughing matches on his property. He published other books, encouraged farmers to operate their own stills, and erected the first windmill in the district in 1827. In 1830 he introduced the first water mill. The first residential lot in Berrima was surveyed for James Atkinson. He had input into the location of road routes through the area, and to the location of Bong Bong village.

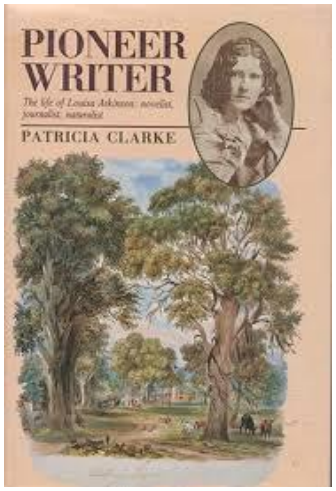
"Oldbury"

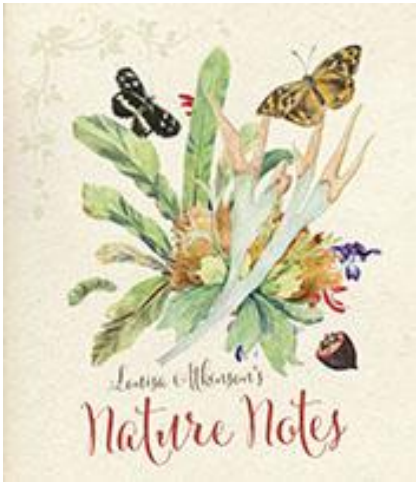
James Atkinson Esq., JP, died in 1834 soon after the birth of their fourth child, Caroline Louisa, at his estate at Sutton Forest, aged 39, after a painful and lingering illness. His obituary described him as a "*gentleman of great energy and considerable talent, and his frugality and economy on his farm …….. operated as a most useful example …….. in this Colony".*

Grave of James Atkinson

All Saints Church & graveyard, Sutton Forest

The community sought to erect a public monument. It was reported that he was a character, *"in every way estimable, highly talented, and patriotic individual".* A proposal was put to Mrs Atkinson, and money was raised, but the lady declined the offer, although was very grateful. The money was returned to the various subscribers.
James was buried in the All Saints Anglican cemetery at Sutton Forest. The "Oldbury" homestead still stands today, a testimony to this remarkable pioneer settler.
After James' death, Charlotte married "Oldbury" 's overseer, George Barton in 1836. However, he had a history of alcoholism and violence, became insane, and was convicted of manslaughter in Bathurst in 1854. Charlotte separated from him and moved to Budgong, and then to Sydney in 1839, taking on the guardianship of her children in court in 1841, and subsequently their education. In her book "*A Mother's Offering…."*, Charlotte used her own personal experiences and those of her children.
Charlotte lived at the house built by her, "Fernhurst" (now gone) with her daughter Louisa, at Kurrajong Heights, and then later returned to "Oldbury", where she died in 1867.
Their son James Atkinson, may also have been a farming pioneer, possibly at Moira Station in southern NSW, being the overseer of the station for 17 years.
Their daughter Charlotte lived to a ripe old age at Orange. Their daughter Emily Jane died at 24.

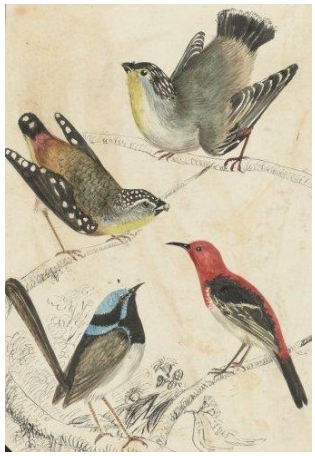




Louisa Atkinson

Caroline Louisa Waring Atkinson was born in 1834 at "Oldbury" not long before her father's death, to parents of considerable literary talents, as can be seen above.
Frail as a child with a heart defect, and under the influence of her mother, she developed a strong interest in geology, botany and zoology.
She herself became a novelist and journalist with a lifelong interest in the natural environment. Her first illustrated notes were published when she was 19, and she became the first woman in Australia to have a long running series of articles published in a major newspaper, in *The Illustrated News,* and had a regular column in the *Sydney Morning Herald* for over 10 years.
She lived briefly in Sydney and the Illawarra, and then at Kurrajong, where she collected botanic samples, which were sent to Rev Dr William Woolls and Baron Ferdinand von Mueller for identification. This resulted in her name being applied to a number of new species, including *Atkinsonia ligustrina*. In her articles, she often called for protection of the environment.
She was the first Australian-born woman to write and publish a book in 1857, *Gertrude, the immigrant: a tale of colonial life.* She developed a skill in taxidermy, and was also influential in dress reform, when she felt that a rambling naturalist might have difficulty with the long dresses of the day, and she expressed this feeling in her articles on practical fashion!
She was well known for her fiction writing, as a writer, illustrator, novelist and her botanical work, which included her sympathetic references to Australian Aborigines. She was

significant in the part played by women in natural science and journalism, giving a female perspective on colonial Australia in its urban growth and rural development.
Louisa was an advocate for fund raising which sought to investigate the ill-fated Leichardt expedition to inland Australia.
Louisa returned with her mother to "Oldbury" in 1869, where she married James Snowden Calvert, a survivor of the Leichardt expedition, who was also interested in botany. He was the manager of Cavan Station, near Yass. She died of heart disease at Swanton near Sutton Forest in 1872 soon after giving birth to a daughter, Louise Snowden Annie. She was buried in the family vault at All Saints Anglican cemetery, at Sutton Forest. Young Louisa grew up to marry a Mr Cosh.



An elderly Louisa

Louisa Atkinson's friend Rev Woolls composed a poem for his dedicatory sermon:

> *"Yes, still she lives! Her lasting fame*
> *Shall dwell in ATKINSONIA'S name*
> *And long as Tomah loves to wear*
> *Its leafy garlands – she is there".*

Her obituary described her as "*this excellent lady, who has been cut down like a flower in the midst of her days, highly distinguished for her literary and artistic attainments as well as for the Christian principles and expansive charity which made her career".*
In 1979 The Kurrajong Heights Garden Club produced a tribute booklet on Lousia's life and work, to commemorate the occasion of the unveiling of a plaque in Powell Park at Kurrajong Heights.
"The Club thought it fitting that the memory of a woman of her calibre should not fall into complete oblivion …….. The present inscription would place on record the fact that today's residents of the place where she spent so much fruitful time are not unmindful of her work".

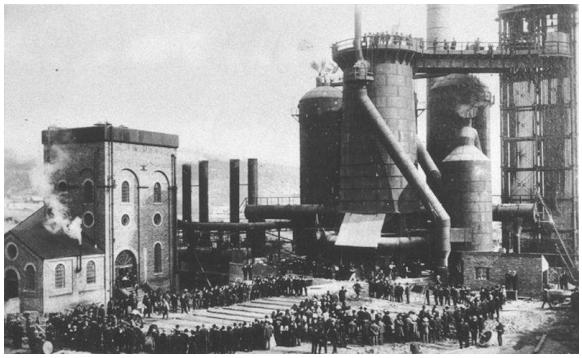
Hoskins Memorial Presbyterian Church – a tragic legacy

Charles Hoskins was a wealthy industrialist in Lithgow, having been the first man to establish successfully the iron and steel industry in Australia.

Coming to Australia from London in 1853 with his parents John and Wilmot Eliza Hoskins, the family first settled in Melbourne. After his father's death, young Charles and his family moved to Ballarat. In 1876 he joined his brother George in Sydney in a small successful engineering workshop.

In 1881 Charles married Emily Wallis. He helped to found the NSW Chamber of Manufacture in 1885, and became president of the Chamber in 1895. He was not a fan of trade unions, and he believed in freedom of contract and opposed a minimum wage. He was a leader in the Iron Trades Employers' Association of NSW, and prominent in the Employers' Federation of NSW in 1903.



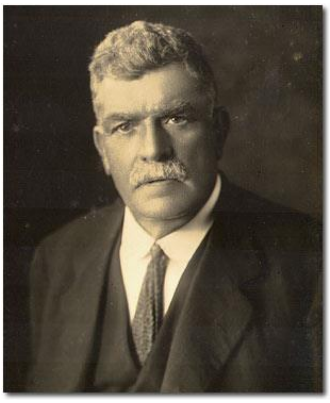
Blast furnace 1907

Blast furnace ruin 2015

G & C Hoskins P/L took over the Sandford ironworks in Lithgow in 1907, acquiring the blast furnace, iron and steel works, colliery, and leaseholds at Cadia and Carcoar.

In 1908 Charles moved his family to Lithgow, while George remained in Sydney. He then set about upgrading, despite it being in a difficult location for manufacture and marketing. He was an impatient employer and his efforts to enforce a contract day-labour system of wages resulted in a series of strikes, the major one being for 9 months in 1912.

The company flourished during WWI, and in 1919 he bought out his brother George, and the name of the company was changed to Hoskins Iron and Steel Co. Ltd. BHP slowly took over the industry in the early 1920s and Charles retired as manager in 1924.



Charles Hoskins

Police guard during strike in 1911 – Photo by H Mellor

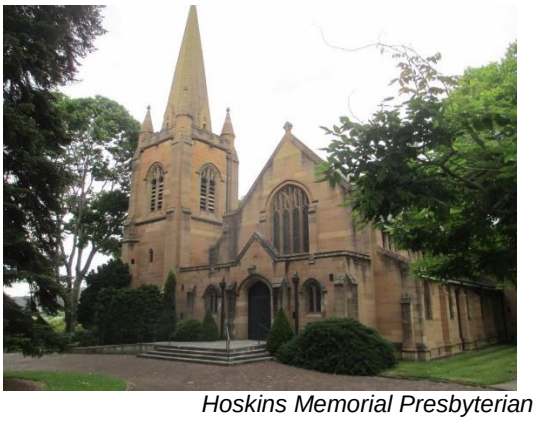
His life seemed to be fraught with challenges, and this did not exclude his private life. In 1912 he had moved to Cadia Park, at Lawson, where he established a beautiful garden and a private zoo, with an intention to provide an improved climate for the health of his ailing grownup daughter Nellie, who subsequently died of tuberculosis in 1914. (See *Heritage* Newsletter March-April 2015 - Bullaburra). Another daughter Hilda, had died in 1912 in a level crossing accident at Eskroy.

In 1916 his eldest son, Guildford, died while repairing a generator, after an acetylene gas explosion at the Eskroy Park works, at the age of 29. As a consequence, Charles donated land and paid for, a parish hall and the Hoskins Memorial Presbyterian Church, on the corner of Bridge and Mort Streets in Lithgow, as a memorial to his son. Work began on the site in 1919, and the hall was completed in 1924, but the church was not completed until 1928, two years after Charles' death. Charles himself died in 1926, survived by his wife, two sons Cecil and Sidney, and three daughters.

Under construction 1928

Lithgow churches

However, even Emily did not live to see the opening, as she died five days before the opening ceremony. The ceremony was then conducted by Guildford's widow, Jeanie.
The architect of the church was John Barr, and the supervising contractor was J Halliwell. The stonemasons were from Loveridge and Hudson, the gardens were laid out by Searle Brothers, and the building was opened in 1928, maintained by a family trust. The original church foundations had been laid for a building which could hold 1,000 people. Due to cost the project was changed so the church would seat 450 people. The foundations for the larger church lie beneath the current Sorensen gardens.
In 1938 the gardens were relaid by Paul Sorensen of Leura, under the guidance of Guildford's brother Cecil. A brick manse was built in 1977, about when the congregation elected to join the Uniting Church.



Hoskins Memorial Presbyterian Church and gardens 2016

The organ in the church is of particular note. It was built by WL Roberts of Adelaide in 1928, enlarged in 1935 by Hill, Norman and Beard (Aust) P/L, who rebuilt it in 1949. A further rebuild took place in 1961, and further work occurred again in 1972 and 1984. The result was that a Choir organ and the Great organ exist together in the church.
The windows in the church are dedicated to the sad family loses – to Hilda and Nellie, to Guildford and to Charles. Another window is dedicated to Cecil Hoskins' infant sons Charles and Eric, who also died in tragic circumstances. *Patsy Moppett*

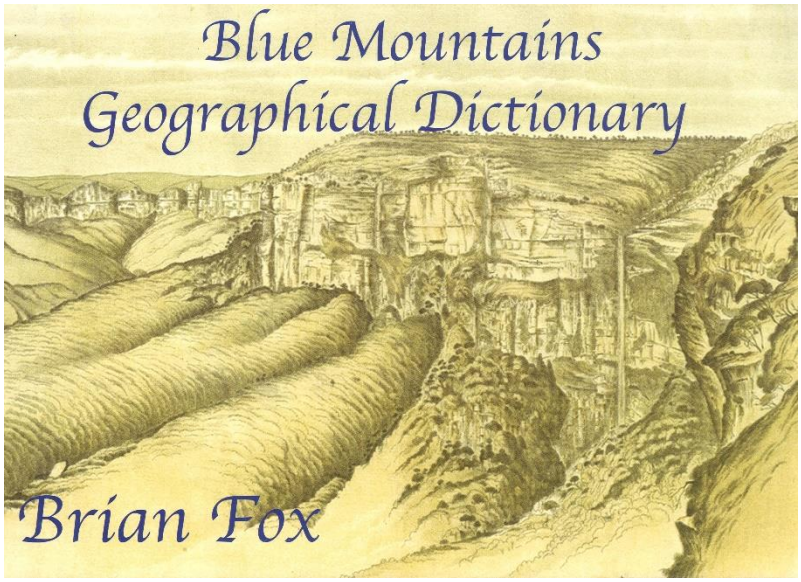
Browntown, Mount Victoria

In 2006 the *Blue Mountains Geographical Dictionary* was published by Brian Fox. The book is a marvelous description of hundreds of place names within the Blue Mountains, detailing the location, origin and background to each name's meaning. This includes Browntown, the locality at Mount Victoria as documented in the BMACHO Newsletter of April-May 2016. Brian now has found more information with regard to the site, which will be set down in a revision of the publication. Brian offers the following comments:

"In the Heritage Newsletter of the Blue Mountains Association of Cultural Heritage Organisations Inc. March / April 2016. Issue 43, p. 8, Patsy Moppett the editor posed the question and statement below:
What's in a Name – Browntown – which Mr Brown?
Browntown is located just south east of Mount Victoria on the Great Western Highway. Today all that can be seen is the Browntown Oval, which accommodates sporting events such as football, cricket and archery. There is a clubhouse and amenities on the site, along with another of the George Evans' "Footsteps in Time" obelisks, establishing that the site was on the route of the original western crossing alignment. Evans surveyed this location on 31 December 1813.



It is over 10 years since the last (3rd edition) of the Blue Mountains Geographical Dictionary was published. It quickly sold out. Over subsequent years I have continued to receive requests asking whether there are any copies available for purchase. I have also been asked for more information regarding particular names.
A further revision has been on hold due to an extended and ongoing collaboration with Michael Keats as we researched and produced, "The Passes of Narrow Neck", "The Upper Grose Valley - Bushwalkers Business" and the eight book series "The Gardens of Stone National Park and beyond." I have also authored numerous articles for the Blue Mountains History Journal. During the period, I also released my book "Isaac Barrow, Blue Mountains Map Maker," which has also sold out.
Now along with co-authors, Michael Keats OAM and my brother John Fox who has lived at Blaxland for the last 40 years, 28 of them as a Maths teacher at Blaxland High School, work

has commenced on producing a revised and expanded 4th edition of the Blue Mountains Geographical Dictionary.
In an endeavour to ensure as many names as possible are included and the information about them is accurate I am requesting you, the reader for assistance. Should you have an earlier edition of the dictionary and have noted errors or omissions then please let me know so these can be corrected or added. If you have seen a name in any publication or new signage that you think should be brought to my attention, again please let me know. Please do not assume that I would have that information. A quick phone call, an email, or a letter and you can be part of this massive project.
Back to the name Browntown and the editor's query. Browntown is just one of more than 2,400 place name entries in the Dictionary.

Browntown Oval, Mt Victoria

Browntown was a locality name in the vicinity of Browntown Oval, Mount Victoria. Located 1.1km south east of Mount Victoria Railway Station. The name originates from the extended Brown family who lived in this area. Ellen Brown purchased 40 acres in the locality c1837. It is known that several other family members lived here including her son, William Henry (c1838-1912) and his wife Margaret (c1833-1923) along with their children, William Clement Brown (1862-1936), James and George.
The old locality name lives on with the name Browntown Oval, a recreation area between the Great Western Highway and Main Western Line (railway). This reserve was Gazetted on the 21st April 1880. The first trustees appointed were Charles William Pratt, George William Biles and John George Cousins. At present Browntown Oval is administered by the Blue Mountains City Council and zoned as Public Recreation and has an area of 2.88ha".

BMACHO will advise further when the new updated book is due for issue, and any updated information may be conveyed directly to Brian, or to BMACHO.

Note: Madga Cawthorne, in her recently released book Hidden Histories of the Blue Mountains, suggests that Browntown was named for an old farm known to have been in the area as far back as the 1860s.

The Technical Side

The Tinsmith (fairy tapper)

As is suggested, this tradesman makes and repairs tinware, both industrial and domestic objects and containers, from sheets of steel coated with tin (tinplate). A tinker travelled the countryside repairing household utensils such as buckets, pots and pans.
Sometimes referred to as a whitesmith, he may work with tin, pewter, or other materials. Unlike blacksmiths (who work mostly with hot metal), tinsmiths do the majority of their work on cold metal (although they might use a hearth to heat and help shape their raw materials). The term is also applied to metalworkers who do only finishing work – such as filing or polishing – on iron and other "black" metals.

The tinsmith's workshop

Tin goods

Tin smithing emerged after the Industrial Revolution in the 18th Century due to the ready availability of affordable sheet metal. It is now considered a rare trade because, like many trades, the items made are produced by machines, and often now made of plastic. It is an occupation that transforms things from the two dimension to three, giving form to the flat. The techniques of the trade were learnt through an apprenticeship with a master craftsman. Tinplate is hammered, bent, rolled, pulled and twisted into shape. Curving metal into domes was called plenishing. Cut metal was put through a roller to break the grain, and shapes are cut out, hammered and joined. The term "fairy tapper" is used sometimes, as the hammering is more like a small gentle tapping.
Items made included lanterns, scone cutters, candle lamps, pie plates, serviette rings, bowls, cutlery and containers. Larger items might include a hip bath or a phonograph sound trumpet.

An 18th Century workshop

Civil War soldier's mess kit

Pure tin is an expensive and soft metal and it is not practical to use it alone. However it can be alloyed with lead and copper to make pewter or alloyed with copper alone to produce bronze. Today's tinplate is mild steel electroplated with tin.
Tin wares were being produced in London by the 1630s, being known as Crooked Lane Wares (from the street where they were made). The *Worshipful Company of Tin Plate*

Workers were incorporated as a separate London Livery Company in 1670. However, tinplate workers were widespread.
Tools of the trade include:

- Bick iron – the anvil used to shape sharp curves.
- Jenny – a crimping tool to crease the metal.
- Firepot and soldering irons.
- Bossing stump & mallet – hollowed out tree stump to allow shaping the metal into a bowl or dome shape, by gentle tapping with the mallet.
- Stick – made of wood and used to flatten or turn metal.
- Punches and stamps – used to impress shape or cut metal.
- Tinsnips – straight or curves snips to cut metal sheet.
- Square faced cross peen hammer – used for shaping through light tapping. A variety of other hammers are also used.

The tinsmith has been plying his trade in America since 1720. Colonial tinsmiths used tinplate, wire, solder, and a few simple tools to produce their wares. When tinplate was finally produced in America in the early 19th century the products of the tinsmith became more widely available. They in turn saw an increase in demand and a need to speed up production. This brought about the development of many ingenious hand powered machines which sped up production and helped the tinsmith meet the demands for his products. The goods were "brought to market" by peddlers. *Patsy Moppett*

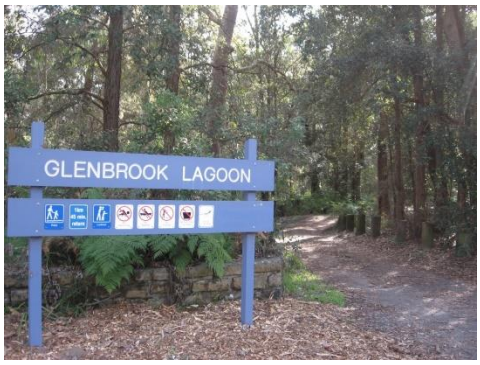
Glenbrook Walks 2017 - be tempted!

Take a look at the walks planned by the Glenbrook & District Historical Society for 2017! Always something to be seen in this part of the mountains and beyond, and with this variety, there must be something for you.

- March 11: Glenbrook Lagoon Precinct - the first water supply for the 1867 railway.



Glenbrook Lagoon

Berghoffer's Pass

- March 25: Walks along the three Mt York tracks – Cox's, Lawsons, and Berghofer's.
- April 8: The Duckhole, Glenbrook Creek: original roadway built for access to the pump site for the railway water supply.
- May 6: Bull's Creek Dam – railway water supply – stone dam, pump site, pipeline relics.
- June 10: The Mountains Murders – Captain Lee Waller's murder site, first grave, rock inscriptions.
- July 8: Zig Zag A – eastern Zig Zag 1867 – Knapsack viaduct, Gatehouse No. 1.

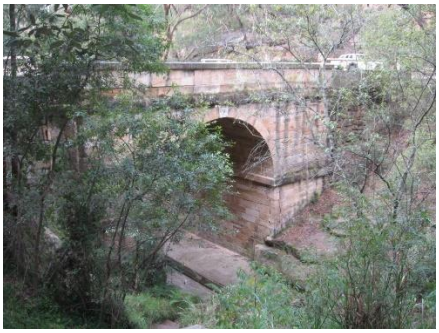
- July 15: Zig Zag B – eastern Zig Zag – 1867 railway line, Lapstone Hill Tunnel, east portal only.

Tunnel portal

Knapsack Viaduct

- July 29: Lapstone Construction (temporary) Railway 1910-1913 – the route and eastern portal.
- August 26: Faulconbridge Steam Sawmill and incline railway.
- September 9: Lennox Bridge, Brookside Creek old quarry, Dunn's Mill relics, earth dam.

Lennox Bridge1830



Lennox Bridge 2010

- October 7: Glenbrook Discovery – various sites.

Bookings essential via Doug Knowles Ph: 02 4751 3275.

BMACHO Arts NSW 2016 Cultural Grant Award

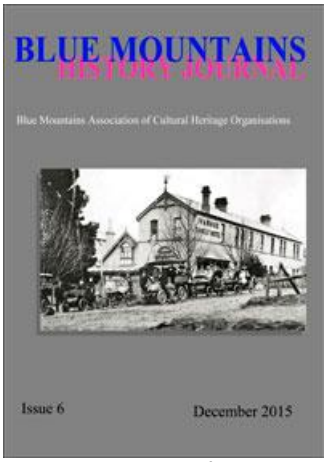
The Cultural Grants Program is an Arts NSW funding program administered by the Royal Australian Historical Society (RAHS) on behalf of the NSW Government. This Cultural Grants program assists historical research and publication of local, community and regional history projects. Arts NSW funding priorities can be found on its website, together with a list of grants awarded each year

Projects should be relevant to understanding the history of NSW and its people and places. Grants of up to $5000 support the work of historical research and publication undertaken by local historical societies and similar bodies across New South Wales. The projects should generally be able to be completed within 12 months. Applications may be made for more than one project.

Blue Mountains Association of Cultural Heritage Organisations (BMACHO) was successful in obtaining an Arts NSW 2016 Award.

Trish Doyle, MP Blue Mountains, was pleased to see NSW government funding being awarded to a Blue Mountains organization. BMACHO has received the grant to facilitate publication of its *Blue Mountains History Journal Issue 7.* *Patsy Moppett*

Trish Doyle, MP, & Jan Koperberg



Issue 6 December 2015

Windsor Bridge Update

A recent update from Roads and Maritime Services explains the background to the Windsor Bridge replacement project. It is planning to replace the existing 140 year old bridge with a new bridge (three lanes wide – two southbound and one northbound), some 35m downstream, across the Hawkesbury River.

This will require new approach roads and intersections, and incorporate landscaping. The existing bridge would then be removed, with the project expected to take 2 years to complete.

Artist's impression, looking north

This apparently provides an opportunity to unify the green space in Thompson's Square, by connecting the new bridge to Old Bridge Street, reducing the roads in the Square from three to two, and improving the connection of the Square to the river foreshore.

The RMS suggests the works are required to improve safety, improve traffic flow and efficiency, reduce the road footprint, unify the open space in Thompson's Square, increase flood immunity and give better pedestrian/cyclist access.

The traffic increase modelling was considered for the time period 2016 to 2026.

Archaeologists are involved in a detailed testing program required.

In early 2017 the RMS will invite community feedback on the proposed Urban Design and Landscaping Plan for the project. *Roads & Maritime Services*

Greater Sydney Commission – District Plans

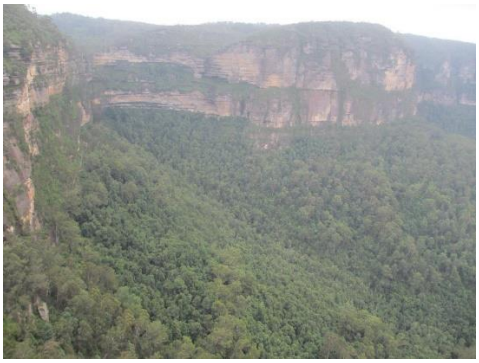
The Greater Sydney Commission (GSC) was established in 2016 to undertake the bigger picture planning for Greater Sydney, under the District Commissioner, Sean O'Toole. Six draft District Plans have been developed by the GSC to undertake the bigger picture planning for Greater Sydney. Each Plan sets out the GSC's 20-year vision for each District. Planning currently occurs at State and local level. The NSW Government develops overarching plans that consider the growing population, employment and transport. Local government develops local environmental plans to identify how land can be used, including housing, business and recreation areas. The GSC seeks to bridge this gap with district level planning that connects local planning with the longer term metropolitan planning for Greater Sydney.

The District Plans cover Greater Sydney as follows:

- Central – City of Sydney, Burwood and Canada Bay, Randwick, Waverly, Woollahra.
- South – Kogarah, Broken Bay.
- North – North Sydney, Macquarie Park, Brooklyn.
- West Central – Blacktown, Paramatta.
- South West – Camden, Picton, Bargo, Liverpool, Western Sydney Airport.
- West – Blue Mountains, Hawkesbury, Penrith.

Of relevance to BMACHO readers, the GSC recognizes the West District's *"unique and rich tapestry of urban, rural and natural environments, combined with access to jobs, quality health care, education, recreation, cultural and natural experiences, creates a great quality of life for its communities"*. It also acknowledges Aboriginal heritage and the associated cultural significance.

Katoomba



Blackheath

The West District Plan would look at this area with a view to the natural landscape, major infrastructure investments, the Greater Penrith region, tourism potential, and the relationship of the area with the Western Sydney Airport.

The Plan sets out priorities and actions that will shape the District's future and guide policy decisions. These include:

- Protecting the district's natural landscape.
- Making it a connected place.
- Planning for a 21st Century aerotropolis.
- Creating a hub for international tourism.
- Providing access to jobs, goods and services.
- Creating a diversity of jobs for the next generation.
- Enhancing Greater Penrith as Sydney's western gateway.
- Encouraging a diversity in housing.
- Acknowledging culture and heritage underpin the sense of place and identity.

The draft District Plans move on from the current 2014 20-year plan, *A Plan for Growing Sydney*, and contribute to *Towards our Greater Sydney 2056*, a strategy for a metropolis of

three cities (Western City, Central City and Eastern City), which is productive, livable and sustainable.

National Trust Blue Mountains Award Winners

Scott Pollock, Manager of Everglades Historic House and Gardens in Leura, recently received a Meritorious Service Award at the National Trust of Australia (NSW) Annual General Meeting, on Saturday 25 November 2016. The award was presented to Scott by Clive Lucas, President of the National Trust of Australia (NSW). Scott is also a valued BMACHO committee member and the BMACHO webmaster.

Clive Lucas & scott Pollock

Award winners

Scott was the only staff member receiving an awards. Other Award recipients were volunteers from Everglades, and also included Jenny Szemenyei from Woodford Academy and John Dikeman from the Blue Mountains Branch of the National Trust.

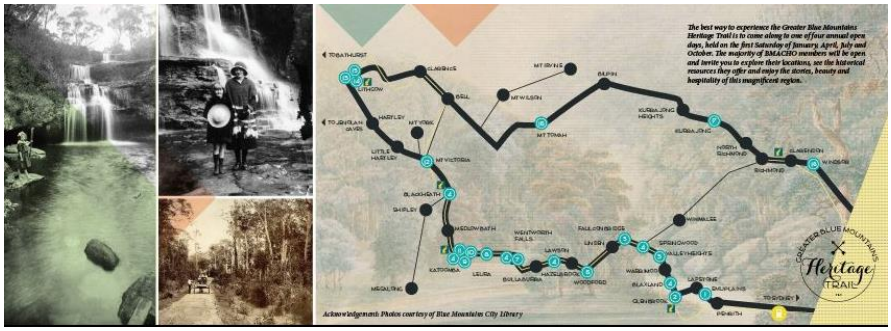
Greater Blue Mountains Heritage Trail Update!

Westpac
Australia's First Bank



The Greater Blue Mountains Heritage Trail is no longer holding the common Open Days, and BMACHO continues to promote the Heritage Trail and members' upcoming events. BMACHO intend to reprint the Heritage Trail brochure early next year and have asked members if they wish to participate. For a reasonable cost, members can appear in the

reprint of the brochure, feature on the Greater Blue Mountains Heritage Trail website and have their events promoted on the website and Facebook page.
In 2017 BMACHO are organising a competition to encourage visitation to Trail participant properties. For this purpose, BMACHO are asking members to think of an artefact or item at their premises that can only be found by visiting. BMACHO will then list approximately 25 questions on a "Passport and Entry Form", which will be an insert to the brochure, and visitors can either answer the questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months. BMACHO already have offers of prizes for the competition.
Most organisations will be closed from now till the end of January, so BMACHO are asking if you have not already responded in regard to participation in the reprint by 17 February 2017, please do so as soon as possible. BMACHO would like to have the new brochure printed in March.

If you are a member and you would like to participate, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see www.heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Day Fine Art; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators) & Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Laura Stinson, Wendy Hawkes, Jan Koperberg & Lynn Collins, Museums Advisor.

Gabriel Louis Marie Huon de Kerilleau

Gabriel Louis Marie Huon de Kerilleau was a member of the French nobility, born in Brittany, France in 1769, the youngest son of Squire Jean Francois Huon of Uxilleau (Kerilleau), at St-Pol-de-Leon. At age 20 he became a Royalist refugee from the French Revolution of 1789. He found himself in England in 1791-92 and enlisted in the NSW Corps under the name of M. Louis. In 1799 he served in Captain Abbott's company.

From 1800 he was under lieutenant John Macarthur on the *Surprize*, arriving in the colony in June 1794, with a desire to explore the new Great South Land. Macarthur's son James, and probably other Macarthur children, were apparently educated by a French refugee (M Louis) until about 1809. It appears Huon had a school at the Elizabeth Farm estate at Parramatta in 1807. His identity as M Louis was taken on to protect himself as a refugee. In a memorial to Governor Macquarie in 1810, he stated that his discharge from the army in 1807 had been ordered by the Duke of York, at the insistence of the Bishop of St Paul de Leon.

In 1807 M. Louis received a grant of land from the Governor of the colony, 100 acres near the Georges River, being some of the original land grants in that area, and several other small farms, and registered under his family name of Huon de Kerilleau. He also received 400 acres at Narellan, called *Buckingham*. He was held in high regard by most of the early governors and regularly visited Government House.

Gabriel Huon

Louisa Huon

Elizabeth Mitchell (Huon)

He was married to Louisa Le Sage in 1801, by the Rev Samuel Marsden at St John's Parramatta, under permission from Governor King. Later they married in a Roman Catholic nuptial mass in 1807.

Louisa de Sage was a French convict, born at Bretagne, France in 1772. She had been working as a maid at the home of James Brocke, where she only spoke French. Brocke lived

near Buckingham gate, interesting when we know that Huon called his Narellan property, *Buckingham*. Louise, who could not speak English at the time, was tried at the Old Bailey in 1794 for stealing a silver watch, a metal watch key, a black mode clock, a dimity petticoat, and two cotton shawls. The jury was comprised of half-English, half-foreign members, who found her guilty, and she was sentenced to 7 years' transportation. She arrived in Sydney in April 1776 aboard the *Indispensible*.

Soon after Louise's arrival in the colony she was living with Gabriel Huon, and it is possible they came from the same part of France, Saint Pol de Leon, so may have known each other before. She may have been assigned to him, as she was eventually granted her freedom by servitude.

Gabriel and Louise had five children, four sons, Louis, Paul, Aime and Charles, and a daughter, Elizabeth. They dropped the de Kerilleau from their name and were known simply as Huon. The daughter later married their neighbour, William Mitchell.

During the term of office of Governor Brisbane in 1823, Huon and Mitchell moved to new country near Bungonia, where they raised sheep. Huon's property was 3,000 acres, named *Corrun-daroo*, and Mitchell's was *Brisbane Meadow*. In 1825 Huon then purchased another 1,000 acres at nearby Corrundaroo, which he named "Carne" or "Karn". The 1820's house still stood on the property as late as the 1980's.

Images of house and outbuilding at "Carne"

However, tragedy struck the Huon family. At age 59, Huon headed out for Sydney on foot on business and to visit his son's property at Campbelltown, on a Sunday in December 1828, following the Shoalhaven gullies to the coast, with a book in hand, as was his custom. Local stockmen record seeing him moving along a track through that hugely mountainous country. He was later seen and spoken to, and twice put on the right road. He was never seen again. The community set out in search of him, led by Captain William Mitchell, but the only traces found were his gold spectacles, broken, and on a tree the words "*Going east".*

Scenes of the spectacular and rugged countryside where Gabriel disappeared

Bungonia Gorge

Shoalhaven River

Jerrara Creek

No stone can mark his last resting place. However, located on *Brisbane Meadow* is a headstone erected to the memory of son-in-law William Mitchell (died 1837), and Huon's wife Louisa Emmanuel Huon (Le Sage). Louisa died in 1842 aged 70.
Papa Huon's connection with the French Royal Family was not known until after his death, although his preferential treatment under his first land grant suggests that the Governor at the time was aware. Evidence was found amongst his papers after his strange disappearance.
His grandmother the Countess of Lesquern had left him an annuity of £200 and he sought to claim it. He maintained contacts with his family through letters and received a letter from the French monarchy after its restoration about reclaiming the family estates. These letters were uncovered after his death.
The Huon and Mitchell families maintained their family ties, and their descendants are numerous. Their history is also the history of the pastoral industry in the Riverina and more widely across south eastern NSW. *Patsy Moppett*

Food for thought ..... Editor's note

The subject of unauthorized demolition of a heritage building has arisen again, this time in Victoria.
BMACHO reported in *Newsletter* March-April 2015, details of the demolition of a 100-year-old homestead at Woodstock, near Cowra, NSW. Constructed in the 1900s, the Shiel Homestead was built in a late Victorian design before being renovated in the 1920s to a late Federation-style.The maximum penalty for the offence committed is $1.1 million. The landowner was ordered to pay $175,000.

Shiel, Woodstock, NSW

Kelly house, Beveridge, VIC

The latest incident involves the demolition of a significant hotel in Carlton, Victoria. Further detail in regard to this is set down in this Newsletter, immediately following this Editorial. Once again, it raises the question of penalties, and deterrents for these abhorrent actions. There are precedents set where a developer has been required to rebuild a demolished premises. This includes the 1860 house built for Ned Kelly's family in rural Beveridge, Victoria, where the building had become so dilapidated that it could not be restored as it was. However, consent was sought and the rebuild carried out under supervision.
It is the unauthorized demolition which creates the angst.
A 90-year-old factory in Richmond, Melbourne was demolished in 2011 and the developer was fined and ordered to rebuild using the original bricks. The building had been the former Wertheim Piano Factory, which had operated in Bendigo Street from 1908 to 1935.

Row of heritage shop fronts at Annandale, NSW

In 2015 a company was prosecuted and fined for the unauthorized demolition of a row of heritage shop fronts on Parramatta Road, Annandale NSW. Although a redevelopment had been approved, it required retention of the front façade. The builder was fined $50,000, the

developer was fined $150,000, and the developer's company $50,000. This sentence was to operate as a deterrent to prevent similar crimes in the future.
Extreme anguish is now felt for the demolition of the former Carlton Inn (more recently the Corkman Irish Pub), in Carlton, Melbourne. Coincidentally the Carlton Tavern in Kilburn, London UK, was also demolished in recent years. In this instance, the developer was ordered to rebuild.
In some instances, the community and/or the council has been able to purchase properties to prevent demolition, but this is not always an option in the open market.
It should be noted however, how many times in history we have seen a building, following eg. a fire, being rebuilt on the same site with the same use. Therefore, the alternative of a penalty to rebuild does remain an option.
However, the heritage laws in Victoria, and indeed across Australia, as they stand, do not prevent the developer then requesting demolition of the second building, as heritage significance can be shown to be drastically reduced. The developer in the Corkman case has provided a letter to the Victorian Planning Minister saying the hotel will be rebuilt. The letter admits that they were clearly at fault, and they have alleged a range of justifications for their actions.
The Melbourne City Council is at this stage reluctant to demand such rebuilding recourse in this case, but in late October the Victorian government launched Victorian Civil and Administration Tribunal action against the landowners, to compel the developer to rebuild, seeking an enforceable order.
Although the Victorian Minister said that the new laws would send the message to developers that rogue developers could not knock down buildings without permission or consequences, he also suggests that the laws would serve to preserve public confidence in the planning system.
But will they? The laws do not actually prevent demolition from happening. Unauthorised demolition will still occur, with developers weighing up the costs of demolition/penalties/redevelopment and determining whether risks are worth taking. It has been said that through demolition in the Corkman case, the developer has doubled the value of the site, literally overnight. Penalties are only useful after the fact, and the monetary penalties handed out by the courts never seem to reflect the gravity of the loss. Once a premises is bulldozed, it is gone, and the heritage significance and community (social) value completely removed. No amount of penalties or replica rebuilding or interpretive signage will replace this.
One matter in particular which constrains authorities is that the mechanisms for protection provided by local planning laws and the Heritage Act 1977, are generally limited to the conservation of fabric, and not necessarily retaining the historic use, where it is at all possible.
Definitely, food for thought……..!

Corkman Irish Pub (former Carlton Inn)

On the corner of Leicester Street and Pelham Street in Carlton Victoria, there used to be a two storey brick and bluestone hotel with rendered facades, in a simple Georgian style. Built in about 1856-7 it was one of the oldest buildings in the Carlton area.
In 1853 the corner block was purchased by R Hepburn, who subsequently subdivided the land into a number of allotments, with the corner allotment being 70ft x 70ft. Over the next couple of years an inn was built and in 1856 the licensee was George Edmonds. Originally known as the Carlton Inn, it was soon transferred to John Cozens. In 1863 it was taken over by the Noble family, who kept the premises for about 25 years, starting with Mrs Noble, and then to William Noble from 1923 to 1936, and then the Estate of WK Noble in 1954.
The site is across the roundabout, opposite Melbourne University's law building and Australia's oldest law school, and the University Square Gardens. The building was a striking yet simply styled building, which had had rear additions in 1933, designed by Thomas Watts & Sons, built by G G Edwards. In 1936 a new two storey section was added along the

eastern boundary, designed by JA Trencher and built by HJ Johnston. In 1954 Architect HJ Little designed further alterations, being amenities, storage and replacement of former outbuildings, building work being carried out by RJ Johnston.

Carlton Inn, 1950s

The City of Melbourne Heritage Inventory described the building as:

"……historically significant as one of the earliest extant buildings in this part of Carlton, which has undergone substantial change since the time of its initial phase of construction in 1857. The Carlton Inn is of aesthetic significance as a good example of the Victorian period. The façade is relatively plain and generally indicative of the early to mid-Victorian period, though the parapet may date to the later Victorian period. The façade has a stucco finish but the original corner section may be partly stone".

A recent heritage assessment had found it was one of the earliest remaining buildings in the precinct.

Corkman Irish Pub in recent years

The building was owned for a short time from 1973 by lawyer Sam Holt, son of the late Prime Minister, Harold Holt.
Mr Alf King then bought the premises in 1987, retaining ownership until he then sold the building for $4.76 million to Messrs Kutesovski and Shaqiri, with the previous lease due to expire. The new owners took possession and a week later a suspicious fire broke out on 8 August 2016.
Imagine the consternation felt by residents on the night of Saturday 15 October 2016, when destruction of the historic hotel was commenced by a demolition company. Local residents rang Melbourne City Council on the Saturday night complaining about demolition noise from the hotel site. Inspectors arrived on the site but the work had already begun. A stop work

order was issued by a Council officer, however the next day the contractors returned and completed the demolition.

The aftermath 15-16 October 2016

No demolition, building or planning permits had been issued by the Council, other than an application for a road closure. The road closure was clearly to cater for the demolition or at least some sort of work on the site, and hoardings had been erected along the footpath. Surely this evidence would lead one to believe the site was set for some type of activity, but it was not recognized by authorities as such at the time.

The building was listed in the Council's planning instrument, but not on the State Register. The heritage overlay applies to all fabric whether visible or not from the public realm. It does allow for the demolition of damaged parts of a building, on the proviso that they be rebuilt in sympathetic fashion, but they argue strongly against gutting a building and keeping the exterior only, and it does require that developers "*respect the rich fabric of the area*".

The demolition debris included asbestos material, and some was later found at nearby Cairnlea, on another property owned by the developer. The developer had proposed to redevelop the Leicster Street site with apartments and had also been linked to other unauthorized demolitions elsewhere in the city.

The response was immediate, from all forms of the media, politicians and the Melbourne Lord Mayor, the National Trust, the Victorian EPA, student groups and community groups such as the Melbourne Heritage Action Group. One of the University law students points out that the building was not just bricks and mortar. It was a gathering place for the student community and the wider community.

Victoria's Planning Minister Richard Wynne advised that the developers would be brought before the planning tribunal to force them to replace the illegally demolished 159-year-old hotel, with another heritage-style building.

The developer is currently negotiating through a solicitor with State government agencies and the Victorian Building Authority over penalties. Fines may go to $750,000 for planning breaches, and the asbestos and building waste dumping. The company has now been deregistered.

Law students at Melbourne University have launched a petition demanding the building be rebuilt.

Planning laws were set to be introduced in Victoria which would prevent the developer redeveloping the site with nothing other than a two-storey building of similar size and style. The new planning laws may enable the Council to utilize the site as a park temporarily if need be.

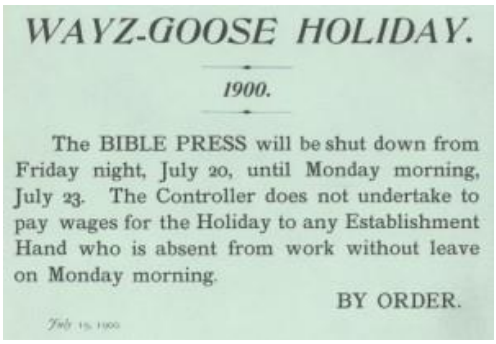
What's in a name - wayzgoose

A wayzgoose (waysgoose) was at one time an entertainment given by a master printer to his workmen each year on or about St Bartholomew's Day (24 August), St Bartholomew being the patron saint of bookbinders (amongst other things). It marked the traditional end of the English/European summer and the start of the season of printers working by candlelight. Later, the word came to refer to an annual outing, when the master would close the workshop and hold a feast for the staff of a printing works or the printers on a newspaper. It became an annual picnic day for printers.

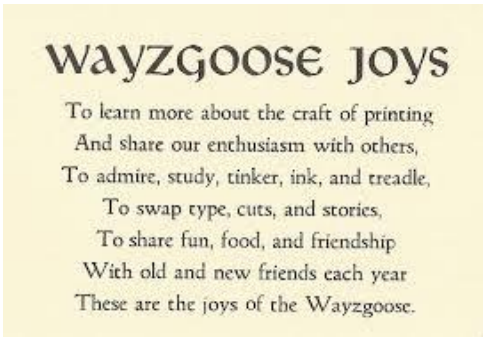


WAYZ-GOOSE HOLIDAY.

1900.

The BIBLE PRESS will be shut down from Friday night, July 20, until Monday morning, July 23. The Controller does not undertake to pay wages for the Holiday to any Establishment Hand who is absent from work without leave on Monday morning.

BY ORDER.



WAYZGOOSE JOYS

To learn more about the craft of printing
And share our enthusiasm with others,
To admire, study, tinker, ink, and treadle,
To swap type, cuts, and stories,
To share fun, food, and friendship
With old and new friends each year
These are the joys of the Wayzgoose.

The Oxford Dictionary relates that in 1919, in the first issue of the staff magazine *The Clarendonian*, a potted history is given, as follows:
"Prior to the year 1851 the Wayzgoose was an afternoon affair at some local inn…followed by a supper, which, if the accounts given by our seniors are to be trusted, did not invariably end in harmony."
Further, the Great Exhibition of 1851 and the opening up of the railways led to the wayzgoose becoming more of a holiday than a day trip. An extract given from a local newspaper for the 1854 wayzgoose states

Wayzgoose feast

"On Saturday, July 15, the men and boys employed on the Bible Side of the University Press enjoyed their annual holiday. The former, through the liberality of their employers and by an arrangement with the Great Western and the South Western Railway Companies, were enabled to spend a day or two on the sea-shore, arriving at Portsmouth about noon on Saturday and returning on the Monday evening following."
The building in which the Wayzgooze Café is located in the Mall, Leura, dates back to 1902-3 when it was constructed by the Milgate family, who kept it in the family for some three

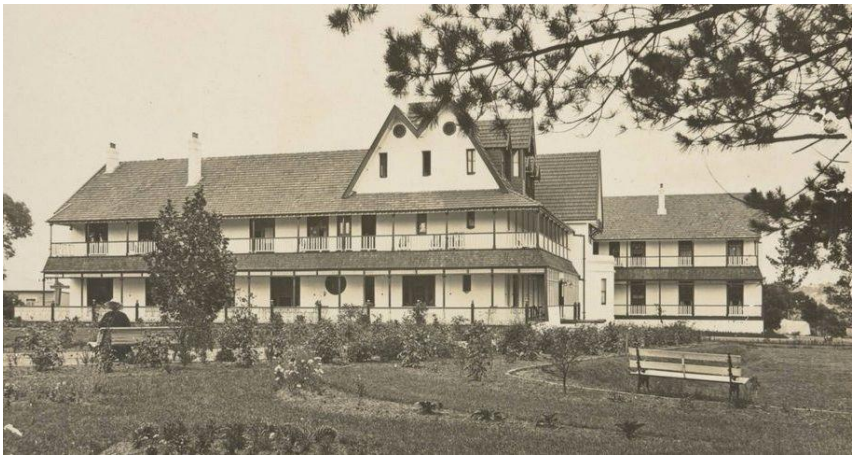
generations, leasing it out for over 40 years. The Milgates were dominant figures during the twentieth century in the development of Leura.
The establishment of Leura came with the subdivision of land owned by Benjamin Backhouse in 1881 under the **Leura Estate, Katoomba**. In December 1881 George Withers and Co were advertising allotments with *"commanding grand and extensive views of the most picturesque scenery in NSW"*. The allotments as surveyed by R L Murray, Sydney, stretched from the east-west railway line and Railway Parade, south to Craigend Road, east to Gladstone Road, and west to about Murray Street, offered in Crown Grant titles, at very liberal terms!
Later, the **Leura Estate, near Katomba**, was being offered for sale in 1893, by William Eyre, Patrick Mullany and Samuel Milgate, being advertised as Milgate's Subdivision. Around this time, advertisements stated that the blocks were being purchased by *"most respectable citizens"*, and that buildings to be erected would be *"largely advanced in value*"! This Estate stretched from Craigend Street, south to Malvern Road, east to about Holmes Street, and west to about Murray Street again.
The Milgate's bought several properties along what became the Mall, including the 170-174 property, during the 1890s.

S S Milgate

Samuel and Jessie Milgate

Thomas and Mary (Ranger) Milgate arrived in Sydney in 1840 with their 9 children, all under 14. Thomas established a corn and hay business in Newtown and by the 1870s had four produce stores managed by his sons, at Newtown, Camperdown, Parramatta and Campbelltown. He died in 1874 and his sons continued the business. The Camperdown store was managed by Spencer Samuel Milgate, senior.
Spencer was born in Rye, Sussex, England in 1835. Spencer had married Jessie Hamilton in 1855 and had planned to live at Campbelltown with their 7 children and his widowed mother, Mary. They did buy Eshcol Park and lived there for a while. However, tragedy struck and his mother died in 1877, and a year later two of his daughters died of diphtheria, followed by a third daughter in 1879. In 1878 Spencer turned his attention to real estate development at Leura. Spencer Samuel and Jessie Milgate became highly influential in shaping the early development of Leura.
The Milgates invested in land around Leura Mall. They acquired a number of properties including 170-174 The Mall, as well as the Methodist (Uniting) Church site in Grose Street. Spencer Samuel Milgate Snr's son, Spencer Samuel Milgate Jnr, was born in 1863, and was also involved in the development of Leura from the 1890's.
In 1903 Spencer Samuel Milgate Jnr announced he was about to construct two new shops next to Mr Jones' store. In 1903 he also offered to build a hall and furnish it suitably for school purposes. In 1904 he had built a hall near the railway station, being the owner and builder. However, he was not the perfect citizen as the Council found fault in 1909 when he had removed several trees from The Mall. He was reprimanded and the Council agreed to write to him that if he replaced the trees they would be happy!
Milgate acquired the church site for the Methodist congregation and the church opened on Good Friday in 1909.
Jessie Milgate had built a house in Grose Street called Adelia (later called Weeroona) in 1911, which was later demolished. It sat behind what is now Laurelea.

The Milgates were associated with 170-174 The Mall for three generations as well as the Leura Hotel. Milgate Snr and friends sought to erect a large coffee palace as early as in 1890, which eventuated as the Coffee Palace (now The Ritz).



The Ritz

Following a move to Sydney in the winter of 1911, Milgate Snr died in late October at Ashfield, aged 77. Milgate Jnr died in 1932 at Granville.

The building at 170-174 The Mall is one of the earliest remaining shop buildings in the Mall commercial area, there being only one other from the period. The format and use of the building over time appears to vary in interpretation. However, it was originally a shop and residence, with each having separate ground floor frontages. It is a simple traditional timber frame and weatherboard clad building, with a corrugated iron roof. Although there are a number of fireplaces remaining within the building, there is only one remaining chimney on the south side of the gable roof. At some point the front of the residence became a shop front.

The building was constructed by Spencer Samuel Milgate Jnr in 1902, and leased out in 1903 to a Mrs AG Clarke, who lived there and ran a store for a year or so. From 1908-11 the building was used as a branch of the Tabrett's shoe shop.

Before 1940, the building had been referred to as two shops, and in 1943 Emma Milgate, wife of Milgate Jnr, sold the property to Leura Olsen, her married daughter. At this time the building also had several outbuildings, including stables and storage sheds.

One tenancy was held by Peter Giles Hart, who operated his printing works from the building, the Federation Printing Works. Hart was born in 1863 and came from a printing works background, having worked in both Sydney and Melbourne. He established his business around the time of Federation, and purchased the "The Mountaineer" publication in the Katoomba in 1895 from Robert Moss, a publication which circulated throughout the blue Mountains and Hartley.

In 1904 he sold that paper to his brother-in-law John Knight, and moved to Rylstone, where he ran the local newspaper, combining the then "The Rylstone Star" with the "Rylstone Express". He was known for having "*a very neat journal, strong in advertising matter and its advocacy of local requirements".*

In 1907-08 he returned to the mountains, to Leura, where he moved his Federal Printing Works into the building at 170-174 Leura Mall. His wife Rosanna Knight, was also an entrepreneur, and was a guesthouse proprietor at the time, at "Hurlstone", also in the Mall. He may have added the side skillion extension during his time there. He was not necessarily in the newspaper business by then, but carried out a variety of other printing activities, flyers, cards and advertising etc

Hart died in 1946 aged 83, and was remembered as having published the first newspaper in Katoomba over 50 years previously. He was the proprietor of the Federal Printing Works (FPW) until just before his death, and was held in high regard by many Blue Mountains

residents, where he was widely known. He was survived by his wife Rosanna, four sons and a daughter.

Rylstone School of Arts, 1905, Hart back row, far right

FPW Leura advertisement 1924

In 1947 the premises was acquired by the Bank of NSW, and then one shop was tenanted to butcher, Cecil Stewart, in 1955. A further rear skillion was then added in the 1950s, possibly as coolroom and storage for Stewart.
The building survived the 1957 bushfires and was then purchased by Blue Mountains City Council in 1970 for a car parking area, but the shops have continued to be leased to various tenants over the years. The FPW remained in the building until 1980.
The Council was advertising for tenants in 1982, stating that the building was the "Federal Printing Works" building, and suggesting that the building "…..*would be suitable for use as restaurant or an art gallery……for suitable restoration and repair works to the exterior of the building….. consistent with the requirements of the National Trust"*. Central Leura is classified by the National Trust.
Today there are two shop fronts, with one recessed entry doorway, a second entry to the former residence area, and a third doorway to the former FPW premises and the Wayzgoose Café. The smaller shop premises is unlet at present. The internal floor plan is generally intact, and the former residential use can still be evidenced.

Street view

Front façade

Rear garden

Wayzgoose Cafe commenced trading in 2003, to create a link to the past and in acknowledgment of the building's printing past, hence the name. The café proprietors explain that it is their way of a sign of respect for the many people who worked in the humble building for nearly 80 years. They explain that the wayzgoose feast has remained exclusive to the printing industry, acknowledged in printing trade apprenticeships and in literary departments of universities.
The external gabled façade is typical of the original Mall streetscape, and together with several other original or near original buildings, demonstrates the historical character of the precinct. The building retains its own singular personality, but is also a part of the wider heritage significance of the Mall.

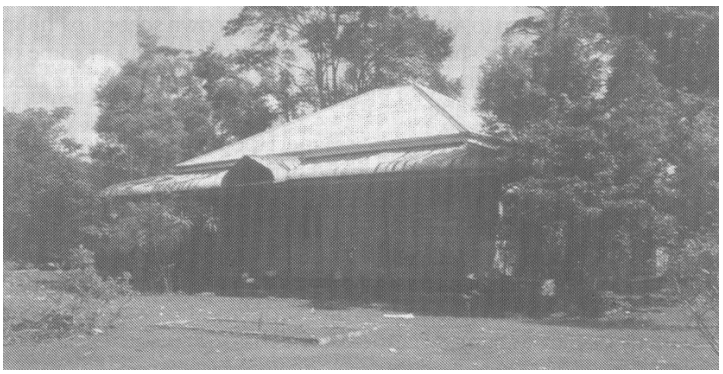
Advice and assistance in editing from Associate Professor Ian Jack

William Simpson's cottage

A year ago, BMACHO's *Newsletter* No. 43 presented an article on "Hartfields", a former school and now a residence, along the Hawkesbury Road at Hawkesbury Heights. Further along the same stretch of road is an intriguing stone ruin in a bushland setting, which invites the inquiring mind to ask what the history of the site is.
The substantial remains are of a house, and are quite visible from the road. They are located on private property, and were part of the history of the eastern end of Hawkesbury Road in the late Victorian era.

Simpson's Cottage 2016

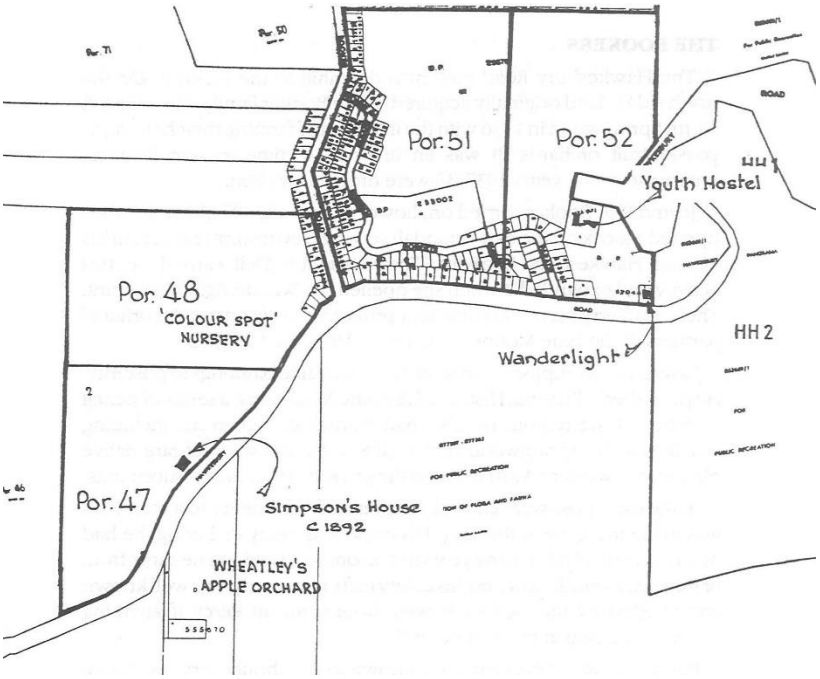
Although it is partially obscured by vegetation growing in and around it, the ruin comprises substantial sandstone walls, with window openings on the front façade, and a chimney at the rear. Some garden remains are evident, but the immediate curtilage is well maintained and simply mown. To the rear of the building and about 50m to the west, a stone chimney can be seen, the remnants of the former coach house and stables on the site, which served the house.
Old photos of the building show a hipped roof, but no gables, a front and side bullnose verandah with a bullnose gable, and a rear skillion roofed wing. The window and door frames that remain are charred, evidence of a fire in the premises. A top light is evident above the front door, which was flanked by French doors and shutters. The windows were paired casements with top lights.



Before the fire 1990

Chimney in rear yard

Between the house and the stables is evidence of an outbuilding, and the garden remnants around the site include a jacaranda, front path and garden edges, sandstone posts of the front fence, bushes and trees, and a tennis court site.



Location plan

Ruins about 2004

The house was built on Portion 47 by William H Simpson in about 1809-92. Simpson was a saddlery merchant from Glebe, hence the rear stables and coach house. He used the premises as a retreat, retaining his main residence at Waverley, but became involved in

local affairs. He joined the Springwood Progress Association in 1893, and in 1895 represented Christ Church at the Anglican Synod. He was a trustee for the Hawkesbury Lookout from 1895 for several years.
In later years the house was owned by Athol Hunt.
In 1994 a burning tree landed on the cottage during a bushfire, and caused extensive structural damage, together with the actual bushfire damage. It may be that the building can be restored, with a new roof, stabilization of the walls and renewed joinery, but a new dwelling has now been erected to the rear of the ruin site, allowing more seclusion and privacy, and the ruin has been recognized and maintained as a significant feature in the grounds by the current owner. *Patsy Moppett*

Hawkesbury Road and the development of North Springwood, Lindsay Paish 1998

The wild gardens of Miss Gladys Carey

My childhood at North Sydney took place in post-War Australia of the 1950s. Thankfully I still have many fond memories of not only the district but also the people I met there. One such person was Miss Gladys Carey.
When I first met Miss Carey she was in her mid to late seventies. She lived with her older sister Hilda in the same street as me and I can still clearly remember her. Her pale, tissue paper skin was creased by a life of care and usefulness. A kindly sparkle in her eyes shone from under a mop of white hair.
The Second World War resulted in a shortage of labour in many local communities. People living in North Sydney were asked by their local council to look after the appearance of their street. Miss Carey acted upon this request, keeping not only the footpath in front of her home tidy, but other neighbours' home fronts as well.
Close to Miss Carey's house is a walkway. It leads to Milson Park, which fronts Careening Cove on Sydney Harbour. Most of this walkway is a steep staircase which passes by an area of land that had been left to run wild. Over the next twenty years Miss Carey changed this over grown space into a small, attractive park.

Gladys at work

Gladys Carey Reserve

Hilda & Gladys

I remember her always in a long dress when working in the park. Bad weather never stopped her gardening and she toiled away on the most miserable of days. All the plants she grew came from cuttings from her own garden, her neighbours and discarded plants. The stones that form the rockeries were all manoeuvred into place by her.
During my early childhood, fresh bread was delivered daily to our homes by horse and cart. At my mother's suggestion, I would shovel up the horse manure that was left after the baker's delivery. I would then walk the short distance to Miss Carey's park and leave the contents there. She was a very friendly lady and always thankful for the manure.
Early in 1967 the local council recognised her selfless efforts by naming the park *The Miss Gladys Carey Reserve*, and 2017 marks the fiftieth anniversary of this gesture.
Gladys Carey was born in London, England in 1881. Her family sailed to Australia as unassisted passengers on the steamship *Sorata* in 1882, arriving in Sydney on 20 January1883. She was one and a half years old.

Educated in Bowral, Miss Carey trained as a kindergarten teacher. Around 1917 she and her mother moved to the Blue Mountains. Her teaching career was unfortunately cut short so that she could care full time for her mother. They lived at *Arlington*, Walgett Street, Katoomba until her mother's death in 1937. By then Gladys Carey had been looking after her mother for nearly twenty years.

When reading local papers of the day, I was surprised and excited to discover that her little park at North Sydney was not her first 'wild garden'. While living at Katoomba, she created a garden on a steep, neighbouring embankment. In 1936 her efforts caught the attention of the local council. The mayoral minute of Alderman Soper was quoted as follows in the ***Katoomba Daily***:

'It is with pleasure that I have to report that Miss Carey, of Walgett Street, has exhibited a particularly fine civic spirit in constructing a rockery and gardens at the end of Walgett Street, where it leads to the lower road level. The work has been well done and is a credit to Miss Carey's industry and enthusiasm. I recommend that a letter be addressed to Miss Carey conveying this Council's sincere thanks and appreciation for the improvements effected by her in beautifying this area.'

On 24 September of the following year, a month after her mother's death, another reference to the garden, under the heading *A Labour of Love*, again appeared in the **Katoomba Daily**. It was contributed by an appreciative resident and reads as follows:

'As I was taking a quiet walk along Walgett Street, Katoomba, the other day, I came upon an embankment of various plants of shrubs of every conceivable name, from the pretty little Forget-Me-Not upwards, interspersed with wild ferns from the bush, and divided by walks between the numerous bordered ironstone beds. I was told on making enquiries that the landscape gardener of this magnificent piece of beauty was a lady living on the brow of the hill by the name of' Miss Carey. It is a veritable feast for the eyesight to gaze on an embankment turned into a beauty spot by an indefatigable effort on the part of a lady in her spare time, for which she is deserving of the highest praise by the residents and visitors alike of the Blue Mountains.'

After her mother's death, Gladys Carey moved to High Street, North Sydney, to live with her sister Hilda. They resided there for the rest of their lives.

On Australia Day 26 January 1972 Miss Gladys Carey died at the Neutral Bay Convalescent Hospital after a short stay there. She was 90 years old. Her sister Hilda had died in March the previous year.

In 1989 I composed a song which I called *Miss Carey's Little Park*. It was a way of documenting a significant childhood memory, as well as keeping alive the memory of Miss Gladys Carey and her park. Over the years, I have performed the song many times and have had people tell me that they visited the park after hearing the song.

Sadly, there is no visible evidence today of her Katoomba garden. However, I still return to North Sydney and make time to visit Miss Carey's park where I happily spend time reflecting on this unassuming lady who believed in the value of living a useful life.

Jim Low

Notes:
A longer version of this article can be found at
http://simplyaustralia.net/article-jkl-carey.html
A newly recorded version of the song can also be listened to and downloaded freely at
https://soundcloud.com/jim_low/miss-careys-little-park

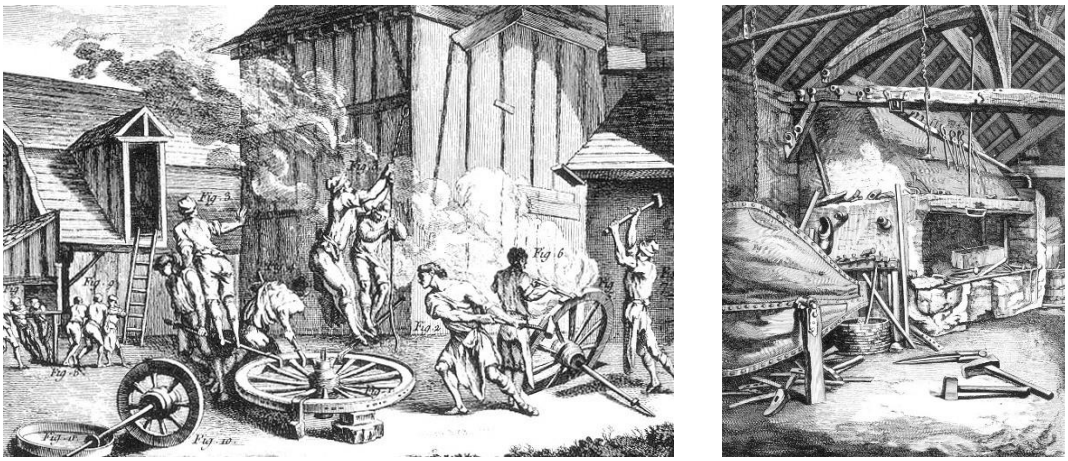
And of course, a visit to the Miss Gladys Carey Reserve is ***definitely recommended!***

The Technical Side

Another old occupation – the wheelwright

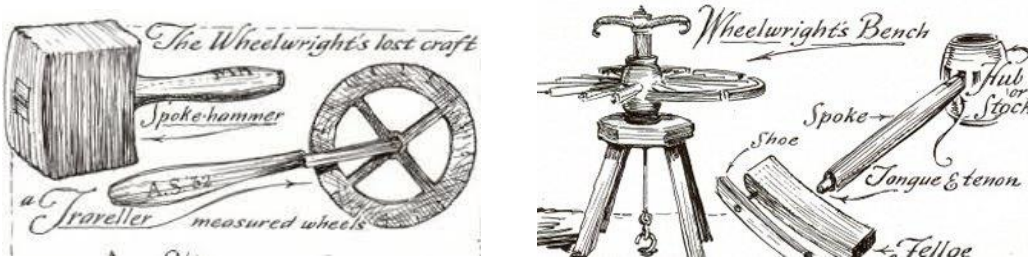
The wheelwright was a significant tradesman in colonial times and before. He made and repaired wooden wheels for carts, carriages and wagons, and the craft is said to be some

4,000 years old, dating back to prehistoric times and the invention of the wheel. Until the Iron Ages and Roman times, the wooden wheel was made and then the iron hoop was introduced around the rim of the wheel for strength. Before this rawhide was also used to bind the wheel, being applied wet and allowed to dry.
About 2,000 BC spoked wheels first appeared in Asia Minor. The one-piece hoop method disappeared in Victorian times, but reappeared in the 18th Century. But since the early 17th Century the main design has been largely the same. In later years came the development of the dished wheel, where the design was shaped like a saucer with the hollow side facing outwards.



Outdoor and indoor workshops

The wheelwright also made and repaired household utensils, farm implements and buildings, gates and coffins. They also actually built and repaired carts, wheelbarrows, and wagons. It was a woodworking business. The craft is in little demand as such these days with the use of steel rims and tyres. The horse and carriage days were the heyday of the craft, but roads were rocky and rough so wheels had to be made strong to handle these conditions.
A wheelwright had to have precise measuring skills as well as knowledge of basic geometry. Their tools were sharp so care had to be taken to avoid cuts. The wheelwright also had to deal with hot metals. They used a lathe, a traveller (a measuring device) stools and cradles for supporting the wheel during construction, knives and spoke shaves, saws and chisels, an adze, a spoke dog for inserting the spokes into the felloes (the sections forming the rim), and a Samson (a large iron clamp applied over the rim of the wheel to squeeze the felloe joints together while the iron strips are nailed into position).



Tools and terms of the trade

The wheelwright obtained his timber from a variety of sources, such as saw mills and timber merchants, or actually went bush to seek their own. He had to know his trees, and the position of the branches to know where knots and other weaknesses were. He also liked to know the location of the tree as different soils could impact the nature of the wood produced. The tree was felled and the bark stripped, the bark being sometimes sold to tanners for leather making. The wood was sought in spring, and left uncut until winter. A sawyer would then cut the logs into planks and it would be left to season for another 5-6 years.

Craftsmen specialized in a particular type of vehicle or design, the craft also varied according to the wheelwright's location, and construction could take up to six months. Variations included light carriages, smart coaches, or farm carts, as well as making fences, gates, ladders and horse boxes.

Workshop in Brockham, UK

Colonial workshop

The making of the wheel was critical, and they began from the centre, or the nave or hub. Elm wood (for its interwoven grain) was used for hubs and planks: oak (it does not bend, compress or flex), beech, ash (flexibility and springy nature) or elm was used for wheel spokes, and beech for felloes.
This skilled operation required years of experience to achieve the fit which could be neither too loose or too tight. Due to the variety of knowledge that they accumulated with regard to timber and its properties, and the way the skill was passed down through the trade and through families, the craft was highly regarded. They were often wearing more than one cap, being also employed in other trades to make their incomes, such as carpenter, blacksmith, postman or lamplighter!!

The modern workshop

The trade went into decline following WWI and WWII, but has been kept alive through trade groups such as the Worshipful Company of Wheelwrights in the UK, and other small businesses, societies and trusts. *Patsy Moppett*

Southern Cloud memories

BMACHO is always happy to receive feedback on the articles printed in the *Newsletter*, and sometimes these comments are quite moving.

Further to the article in the previous BMACHO *Newsletter* January-February 2017, in regard to the Southern Cloud, Bill Evans has related memories from his Mother's experience back in 1932.

It seems that June Evans, as a six year old (born 14 June 1926 in Sydney) was taken to a paddock near Mascot by her parents, Bill and Margaret Newell. They arrived in their Essex sedan (Rego 57376), where the plane was parked. Bill had heard that it was possible to go on a joy flight over Sydney. The money raised by the flights was to be used to start regular flights to other capital cities in Australia.

Bill was concerned that the plane might be too dangerous so he went for a flight on his own first, while June and her Mother waited in the car. When he landed, he said to them: *"I wouldn't let you miss this for the world"*. The tickets were 5 pounds each, and little June travelled for free.

June explains that the three engines were very loud and made the plane shudder as the pilot started them up. The flight lasted for just under an hour, and it flew all over Sydney and up to the harbor to see the partially constructed bridge, the bridge being what we now know as the Harbour Bridge. June can clearly remember seeing the Harbour Bridge still being built and that she had to kneel on the bench seat to look out the window. The seats on the Southern Cloud were all attached to the side walls and faced inwards. There were no seat belts for the passengers either.

June Evans and her memories

June may now be one of the last people alive to have travelled on, and seen the plane, before it disappeared two weeks later. Today June keeps a photograph of the Southern Cloud on the wall of her home in Dulwich Hill.

More on Windsor Bridge

Further to BMACHO's article in regard to the progress of the Windsor Bridge redevelopment project, the information presented in *Newsletter No*. 48 January-February 2017, was derived from Roads and Maritime Services sources.

However, like every story there are two sides, and BMACHO would encourage readers to do the research.

Community Action for Windsor Bridge (CAWB) is a community action group formed in 2013 in response to the NSW Government's decision to demolish and replace the existing historic Hawkesbury River bridge (Windsor Bridge) at Windsor and create a major, thoroughfare through the historic Thompson Square.
The CAWB website (www.cawb.com.au) elaborates that the group is made up of *"independent, local people from a wide variety of backgrounds including lawyers, engineers, financial advisers, business owners, teachers, architects, builders and academics".* It also includes families who have passion for the Hawkesbury and their local community, and for the historical significance of Windsor. Many of them also have ties to the very early settlers in the Hawkesbury and are proud and protective of both these long-standing family connections.
The majority of CAWB members use the current Windsor Bridge daily, and therefore experience the traffic congestion first hand.

CAWB in action April 2016

The campaign to save the bridge and to protect the precinct as a whole commenced in 2013. Since 21 July 2013, CAWB has been occupying Thompson Square 24 hours a day, 7 days a week, having reached over 1300 days of occupation, showing perseverance and tenacity. Readers are referred to their web site as documented above for further background and information about this group.

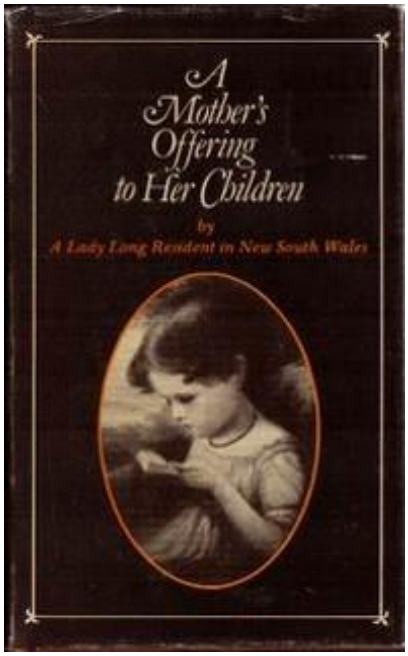
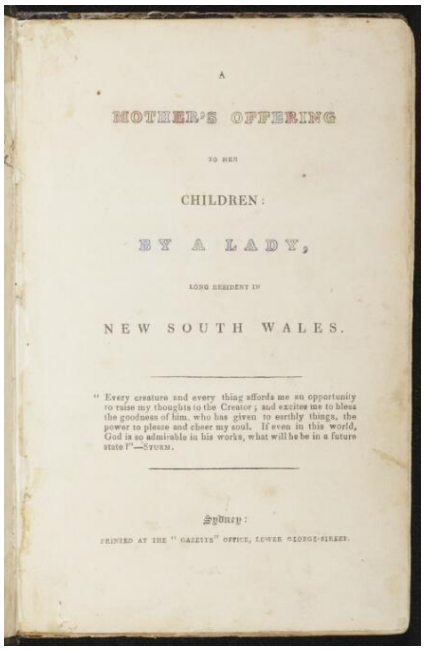
The Charlotte Waring Barton Award

Further to the Newsletter article relating to the Atkinson family, James and Charlotte (Waring), and their daughter Louisa, (January-February 2017), reader Wendy Blaxland advises that this story rings a strong chord with her as she is familiar with family descendants. In addition, Wendy relates information with regard to the Charlotte Waring Barton Award.
As documented, Charlotte was an extraordinary woman. Her daughters became notable writers, artists and naturalists, with Louisa becoming the first Australian born female novelist and journalist. Other descendants became successful writers and artists. Her great-great-great-great granddaughters, sisters Kate Forsyth and Belinda Murrell are both best-selling, internationally published authors. Their research and published imaginative work has led to the Children's Book Council of Australia (CBCA) offering an award in her honour.
The Charlotte Waring Barton Award is presented annually by the CBCA NSW Inc to an unpublished author residing in NSW. The recipient of the Aspiring Writers Mentorship Program receives the award at the Lady Cutler Dinner. The award is named in honour of Charlotte, the author of Australia's earliest known children's book, *A Mother's Offering to her Children: By a Lady, Long Resident in New South Wales*. It was published anonymously in 1841 by the Gazette Office in Sydney. The identity of the author was only discovered in 1980.





A

MOTHER'S OFFERING

TO HER

CHILDREN:

BY A LADY,

LONG RESIDENT IN

NEW SOUTH WALES.

"Every creature and every thing affords me an opportunity to raise my thoughts to the Creator; and excites me to bless the goodness of him, who has given to earthly things, the power to please and cheer my soul. If even in this world, God is so admirable in his works, what will he be in a future state?"—Evans.

Australia Day Award for Carolynne

BMACHO offers congratulations to Carolynne Cooper, member of the Colo Shire Family History Group, on the receipt of the Hawkesbury Cultural Heritage Award! Carolynne is a researcher with the Colo group, a key asset as the team leader and main digital archivist. Her volunteer work entails expert restoration of old photos given to the family history group and her expertise in the production of booklets, flyers and brochures for the group's activities, which are well recognized throughout the Hawkesbury.

Carolynne 3rd from left

Carolynne (right), Penrith Conference 2016

Previously Carolynne played an important role in the Kurrajong-Comleroy Historical Society's Family History Group. She was the team leader for the initiative and production of the transcripts of the Parish of St Stephens Anglican Church at Kurrajong and is continuing to work on those records for the group. *Patsy Moppett*

Mystery photograph

Another mystery to solve! A good deal of attention has been paid to this particular photograph from the BMHS collection. However, it remains something of a mystery. Where, along the line, was it taken? Early thoughts suggested it may have been at Blackheath. Perhaps it was, but there are reasons to suggest that this may not be the case. Can the collective investigative wisdom of our membership solve this ongoing riddle?

Yvonne Jenkins Memorial Award 2017 - an opportunity to remember & record

Our lives are a kaleidoscope, an intermingling of colourful episodes and shadows of memories past. Often these memories are never recorded, or are forgotten over the years. Details of an event not recorded in the newspaper of the day, how we felt during a family crisis, or at a celebration of national or local significance, even the birth of a sibling, escape being recorded by most of us.

The 2017 Yvonne Jenkins Memorial Award essay competition *title "An important time in my life was….",* is an opportunity to choose one of those memories within the framework of a 1,000 word essay to be submitted to the Lithgow & District Family History Society by 30th April 2017.

Yvonne

Rydal Village

Yvonne

The winner of the Yvonne Jenkins Memorial Award competition will be announced during National Family History month in August 2017.

The award is held annually in memory of Yvonne Jenkins, founder of the Society, who was well known for her work as an author, artist and family and local historian, from Rydal.

Further details about the competition are available on the society's website and Facebook page or may be obtained by writing to the Secretary, PO Box 516, Lithgow NSW 2790.

Jan Saundercock

Scenic Eastern Escarpment Master Plan

The eastern escarpment of the Blue Mountains is located on the eastern edge of the mountains, fringing western Sydney. The site extends from Darks Common in the south, adjoining the Blue Mountains National Park, to Knapsack Reserve in the north connecting with Yellomundee Regional Park. The western boundary of the precinct is formed by the residential areas of Glenbrook, Blaxland, Winmalee, Mt Riverview, Yellow Rock, and Hawkesbury Heights, while the eastern boundary is formed by the residential townships of Lapstone Emu Plains, Leonay, Emu Heights and the Nepean River.
