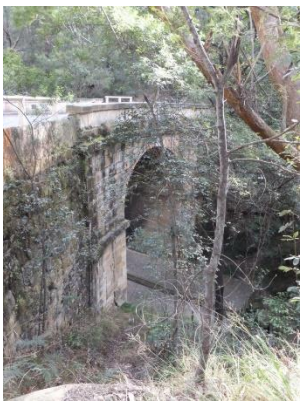
The eastern escarpment contains a rich diversity of ecological communities, significant historic and cultural heritage sites and a wide range of recreational opportunities. These cultural assets are spread across a large number of public reserves under different land ownership and management. In addition, the existing recreational facilities are aging and require renewal.

Knapsack Viaduct



Lennox Bridge

Blue Mountains City Council is preparing a Scenic Eastern Escarpment Master Plan as part of Council's visitor precinct planning work to provide a strategic, locality based approach to recreation and tourism in natural areas. The Master Plan will form the basis for resourcing and implementing visitor facility upgrades and developments aimed at improving opportunities for nature and culture-based recreation and tourism experiences.

The Scenic Eastern Escarpment Master Plan will focus on visitor and recreational facilities within the natural areas, and establish a coherent approach to landscape design and infrastructure development that supports nature and culture-based recreation and tourism experiences. The Plan will respond to recreation and tourism planning initiatives in the lower Blue Mountains and Western Sydney region.

The objectives of the Master Plan are to:

- Guide the future development of recreational infrastructure;
- Improve recreational and tourism opportunities in the region; and
- Support the promotion of the sites cultural and nature based recreational opportunities.

The key dates for development of the Plan and community engagement are as follows:

- Stage 1: Stakeholder engagement – 16 January 2017 to 17 March 2017.
- Stage 2: Prepare Draft Master Plan – 1 February 2017 – 31 May 2017.
- Stage 3: Public Exhibition Draft Master Plan – 1 June 2017 – 14 July 2017.
- Stage 4: Finalise Master Plan – 14 July 2017 to 31 August 2017.

West of the Great Divide – Surveyors and Settlers

National Trust (Lithgow) Tour 2017

On Sunday 23 April 2017, the Lithgow Regional Branch of the National Trust are hosting a coach tour to routes and sites important to opening up land west of the Great Dividing Range. The Tour will visit the point of Evans' first crossing by a European, Evans Crown, and parts of Cox's 1815 road. After lunch at the 1873 Tarana Hotel, the Tour will then visit *Macquarie* (1822) at O'Connell, the original home of William Lawson, and *Westham* (1830) at Brewongle, built by early settler Thomas West, and now owned by Ian Kiernan AO.

Convict barracks at Macquarie

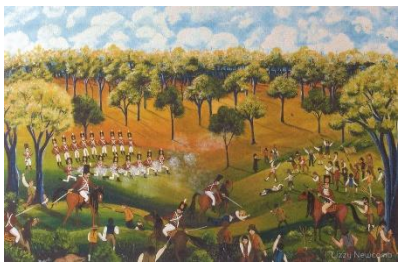
Westham

The Tour leaves from the Lithgow Visitor Information Centre (VIC) at 9.30am and returns there about 4.30pm. The cost ($60 NT members, $65 non-NT members) includes lunch at Tarana and morning tea.

Bookings are essential: Phone the Lithgow VIC on 1300 760 276.
For information contact Celia Ravesi: Ph: 02 6359 3109, or Email: cerav@bigpond.com

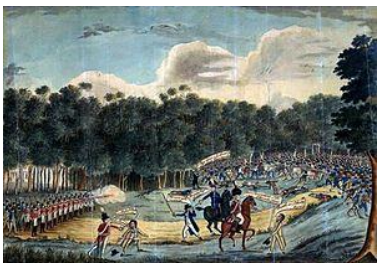
The Battle of Vinegar Hill 1804

The convict rebellion at Castle Hill in 1804 was dubbed the Second Battle of Vinegar Hill (the first being in Ireland in 1798). The battle was fought between convicts and the colonial forces. With the 1798 rebellion fresh in their minds, the convicts were led by veteran of the first rebellion, Philip Cunningham. Their intention was to establish Irish rule and capture a ship to sail to Ireland. Martial law was declared in the colony by Governor King. The convicts were brought to a halt by the colonial forces, led by Major George Johnston, at a hill named Vinegar Hill, and the rebellion was crushed. About 15 of the convicts were killed, nine of the rebel leaders were hanged, and hundreds were punished.



The battle

Major George Johnston



The battle & hangings

The bicentenary was celebrated in 2004 with a variety of events, celebrating the battle site as a special place of international and Australian significance. The remains of the site are centred on Castle Hill Heritage Park, and a sculpture commemorates the sacrifice, and the impact on Hawkesbury history.
On the 213th anniversary a special presentation by historian Lynette Silver and artist Lizzy Newcomb will bring to life the years of failed mini rebellions, botched escape attempts, mutiny, wild rumours, betrayals, conspiracies and personal tragedy that resulted in the ill-fated battle.

The event will be held at the Hawkesbury Regional Museum, 8 Baker Street, Windsor, on Saturday 4 March 2017, at 2pm. Bookings are essential. The cost is $5 and refreshments would be provided. *Hawkesbury Regional Museum*

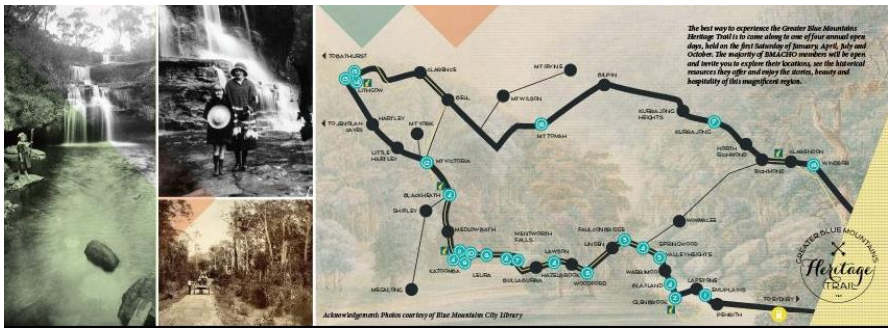
Greater Blue Mountains Heritage Trail Update!



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events.
BMACHO intend to reprint the Heritage Trail brochure soon and have asked members if they wish to participate. For a reasonable cost, members can appear in the reprint of the brochure, feature on the Greater Blue Mountains Heritage Trail website and have their events promoted on the website and Facebook page.
In addition, during 2017 BMACHO are holding a competition to encourage visitation to Trail participant properties. For this purpose, BMACHO are asking members to think of an artefact or item at their premises that can only be found by visiting. BMACHO will then list approximately 25 questions on a "Passport and Entry Form", which will be an insert to the brochure, and visitors can either answer the questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months.
BMACHO already have offers of prizes for the competition.
In regard to the Heritage Trail brochure reprint, BMACHO are asking members and prospective participants if you have not already responded in regard to participation in the reprint by 17 February 2017, please do so as soon as possible. BMACHO would like to have the new brochure printed sometime in March.

If you are a member and you would like to participate, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see www.heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury, Penrith and Mudgee. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Day Fine Art; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Norman Lindsay Gallery; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood & District Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; The Darnell Collection P/L; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Joan Kent, Ian Milliss, Patsy Moppett and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Wendy Hawkes (web site), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith and Laura Stinson (Events and Venue Co-ordinators) & Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Laura Stinson, Wendy Hawkes, Jan Koperberg & Lynn Collins, Museums Advisor.

The Bramley Apple

Whilst in Australia we value the heritage and history of our own Granny Smith Apple, in Great Britain it is all about the Bramley Apple!

It is recorded that over six thousand apple cultivars have been recorded across the UK alone. In Australia, there may be in the order of less than one thousand.

Most were developed many years ago in the northern hemisphere when selection of fruit was based on its suitability for home growing or for local markets. Flavour and appearance were important but the cooking apple was possibly the most important. Storage times and conditions were limited and different regions sought their own cultivars to serve their regional requirements.

Social change which came with modern industrialisation changed all this. Cultivars had to be tough to survive the picking, packing, handling and storage regimes which came with industry. So, the old home garden species became obsolete.

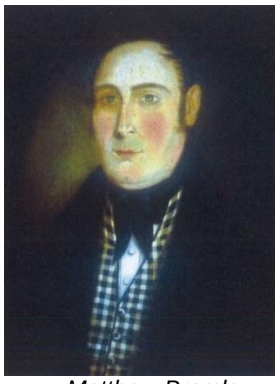
Thanks to specialist orchardists in both Australia and across the world, many of the old varieties are preserved, and cultivars can generally be sourced from nurserymen and guilds. The National Trust (Victoria) had a particular influence on the conservation of old fruits in Australia.

The Bramley apple tree at Southwell, UK

In Great Britain, the original Bramely apple tree, planted more than 200 years ago, and the "mother" of all modern Bramely apples, is located in Southwell, Nottinghamshire, dating back to 1809.Every Bramley apple can be traced back to one x 200 year old tree! The trees are

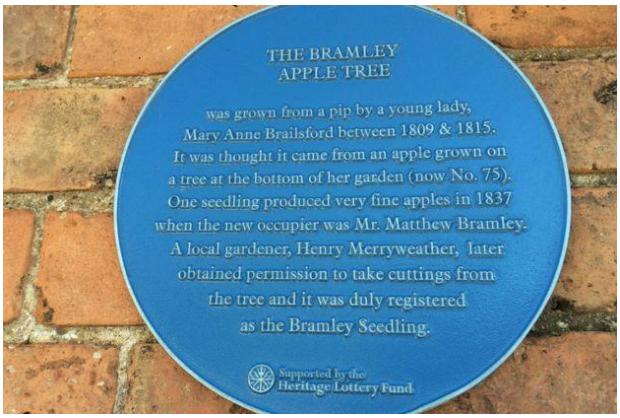
large, vigorous, spreading and long lived. It has won many awards over the years and holds the Royal Horticulrural Society's Award of Garden Merit.
The apple is a cultivar *malus domestica*, and current stock is slightly different from the original tree. Cloning was carried out in 1990 by the University of Nottingham, because the old tree was suffering from old age (!), and was under attack from fungus. Twelve of the cloned trees now grow in the University grounds, and one was planted beside the old tree at Southwell.
However, it was recently acknowledged in 2016 that this magnificent old tree is dying!!! The first seedling tree grew from pips planted by Mary Ann Brailsford when a girl, in her garden at Southwell. The tree was in the garden of the cottage when it was sold to Matthew Bramley in 1846. In 1856 a local nurseryman, Henry Merriweather, who was just 17, asked if he could take cuttings from the tree and start to sell the apples. Bramley agreed, but insisted that the apples should bear his name. The first recorded sales were in 1862.

The Bramley apple

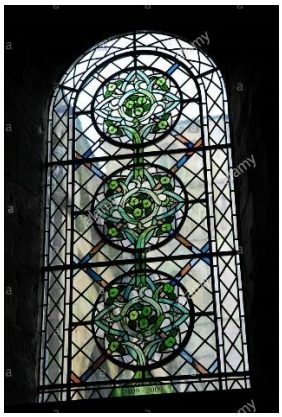


Matthew Bramley

In 1900, the original tree was knocked over during violent storms, but it survived, and is still bearing fruit two centuries after it was planted. There are now more than 300 Bramley growers across England. Although the apple can now be found in other parts of the world, it is almost exclusively a British variety.
The current owner, Coulson Howard, has been advised that the fungus is incurable. It gets into the water transport system of the tree and slowly kills it off. He hopes to preserve the tree where it stands for as long as possible once it has died.
The tree has been studied for many years and tissue cultures taken to micro-propagate the tree. Howard had acquired the cottage and garden from his aunt Nancy Harrison, who had spent many years caring for the tree and entertaining the many people who came from all over the world to visit it.



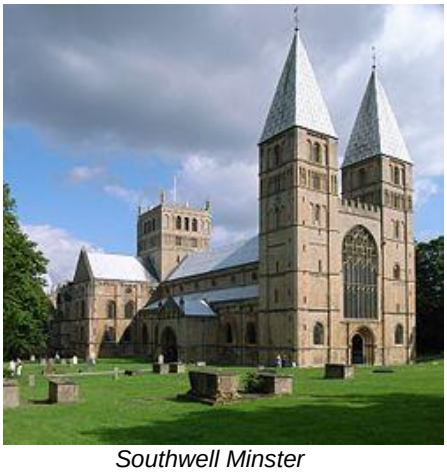
Brass plaque on the cottage



Minster stained glass window

Each year Southwell celebrates the Bramley Apple Festival, and the old tree is considered a town treasure. A plaque on the cottage wall commemorates the apple, and a stained glass window was installed in 2009 within the Southwell Minister, on the 200th anniversary of the

planting of the tree. The Minster is a magnificent cathedral with one of the finest Norman naves in Europe. It hosts a festival of food and drink and all things associated with Southwell's Bramley Apple heritage. Morris Men performances and live music can be seen as you wander the streets of one of the prettiest towns in Nottinghamshire in October.



Southwell Minster

Bramley Apple Festival

Lord Byron spent his holidays here in 1803. One of the local football clubs is nicknamed "The Bramleys". The local newspaper is "The Bramley". The town's new library and youth centre is The Bramley Centre.

The town also contains the Saracen's Arms, formerly the King's Head, where Charles I surrendered to a Scottish army in 1646, marking the end of the Civil War. *Patsy Moppett*

Food for thought ..... Editor's note

In this being the 50th issue of the Blue Mountains Association of Cultural and Heritage Organisations" *Heritage* Newsletter (!), it is a pleasure to bring to you some more articles and information, probably a little different from the usual. In addition, some of the articles are from members and community historians which contribute in their own way on topics of their choice.

And autumn is as always a busy time, with events, tours and exhibitions, information requests, festivals and conferences. It is hoped that in some way we are able to help you choose your itinerary for the coming weeks through this issue.

The BMACHO calendar of events is also due out for the month of May, so be on the lookout for it and leads to other happenings. Don't forget the Glenbrook walks, as presented in *Heritage* Newsletter January-February 2017.

Blue Mountains icon

All the past *Heritage* Newsletters can be found on our website, so if you missed an issue please feel free to download the one you need.

The new Committee for 2017-2018 was ushered in at the recent Annual General Meeting held at Hobbys Reach on 25 March 2017. The incoming Committee and the new position holders are documented on the last page of this Newsletter, and we are looking forward to the next 10 months of providing and sharing information with our members and the wider heritage community.

BMACHO will be holding a workshop later in the year to assist members with their use of Trove, and we look forward to learning more about the recent changes to this free search engine by the National Library of Australia, which will enable us to explore more deeply into our family histories and the history of our nation. More information will be provided as it comes to hand.

So keep busy as we head towards the colder months and we look forward to catching up with members at their various venues, at meetings and the workshop, or even just online, in the coming weeks.

Concrete Relief Maps

Early Aids to Teaching Geography & History

Having recently moved to Portland, about 25 km west of Lithgow, naturally I've been walking around a lot, looking for signs, so to speak, in the historical undergrowth of the town. One of my interesting early discoveries was made at the local school where my grandchildren attend. Opened as the Cullen Public School in 1884 to service the small bush community

growing around a nascent lime industry, Portland Central School is older than the town itself. It was moved to its present site shortly after the village of Portland was gazetted in 1894, adopted the new name in 1899 and has remained within the commercial heart of the town ever since. By 1931 the school had become an Intermediate High School, even taking on its first students to sit for the Leaving Certificate, and like many progressive schools at the time was clearly on the lookout for new teaching methods to enhance the learning experience of its pupils.

One of the fashionable new methods then circulating saw the construction of large concrete relief maps within school grounds all around NSW and beyond. Here was the interactive teaching of history and geography in an age before computers and for a town like Portland, founded on cement, what more appropriate idea could be adopted. Indeed, when the headmaster, J. B. Ireland, sought the help of the Commonwealth Portland Cement Company it supplied all the cement the project required and, with a number of workmen also volunteering their time, the project was completed at minimal cost by the end of November 1931.

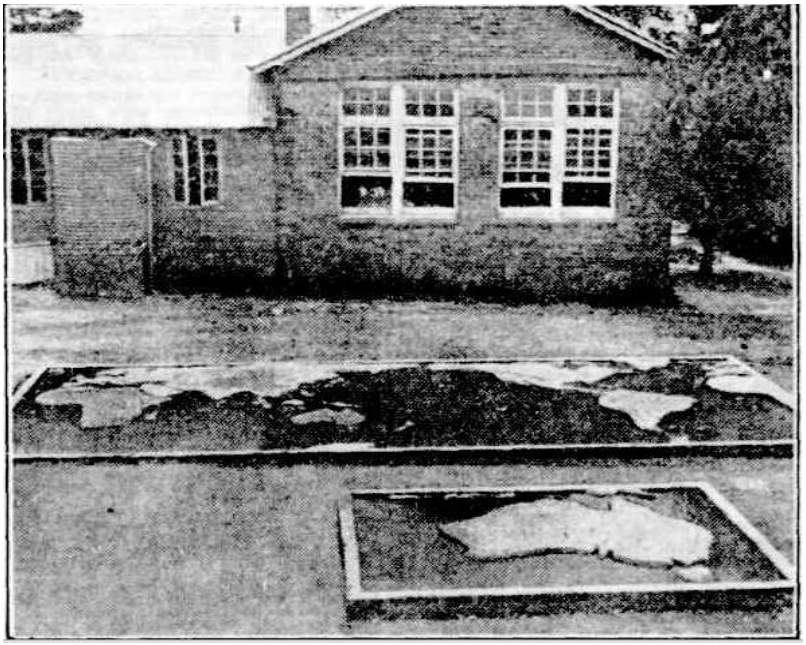

Image 1: Concrete Maps at Portland Intermediate High School, 1931 (SMH, 3 December, 1931, p.12, cols.2-3)

Unlike most other schools, Portland's project accomplished two separate maps: one of the world (28 x 14 feet) and a smaller one of Australia (10 feet). Each map was moulded in relief within shallow 'boxes' into which water would be poured to create the oceans, while atlas colours including national and state boundaries and locations of important cities were to be added later. Even a model ship "fitted with a magnet" was said to be under construction, soon to be launched and drawn by magnetism along the world and Australia's important sea routes. And finally, an observation block, complete with sun dial and rain gauge, allowed the whole cemented geography to be surveyed with ease. It was, said the *Sydney Morning Herald*, a piece of "novel school equipment".

But, as I've already indicated, it turned out to be not quite so novel. In fact, there were already some in existence by 1931 and during the following decade many more sprang up in playgrounds across the country. On a quick newspaper search I've listed at the conclusion of this article, 29 schools in NSW that initiated map projects and I'm sure there would have been lots more unremarked upon by the press. While the majority chose (or could afford) to create just one map (most chose Australia), Portland, through the practical support provided by the local cement company, was able to build both.

Though primarily school initiated projects, there are examples of concrete relief maps erected by other authorities. In 1932, for example, the Blue Mountains Shire Council constructed a large map of Australia in Wilson Park at Lawson, its surrounding 'ocean' fed

from a natural watercourse flowing through the park; while in 1937, next to the Ocean Baths at Newcastle, a 'Mariner's Pool' was built by the Municipal Council that included a large-scale relief map - with Australia and New Zealand in the centre surrounded by the world - around which model yacht owners could sail their boats. Apparently, too, even the lions at Taronga Park Zoo possessed a large relief map of Australia to amuse (and educate?) themselves.

Image 2: Map of Australia, Lawson, 1932 (Blue Mountains City Library)

The biggest and most ambitious concrete map I came across was a map of the world constructed on a scale that might have surprised even Walt Disney (or Clive Palmer!). It was, however, not Australian but spread over several acres of ground at a school in Paris. The major rivers were filled with real water and the volcanoes belched real smoke, while the sea was deep enough for boats to sail pupils from one country to another and deliver them into the hands of a small railroad system (steam engine etc.) which transported them to other more landlocked destinations.

In NSW schools, however, things were more modest. Nevertheless, though some maps remained fairly basic, there was always plenty of scope for imagination. All seem to have allowed for the presence of an 'ocean' of real water and the major cities, towns, rivers and mountain ranges were generally always marked. Centres of primary and secondary industry and the routes of explorers and major communication lines (Overland Telegraph, air and trade routes) were also commonly identified. Some schools even employed 'armies' of miniature models of animals, produce, aeroplanes, ships etc. to demonstrate particular themes of note (centres of industry, trade routes etc.). One country school in northern NSW even installed a working model of an artesian bore and a coastal lighthouse that actually flashed its light.

Such maps represent the progressive and 'interactive' teaching methods of an earlier era. Those that did survive into the age of television and computers, have struggled to justify their existence and, if not removed, are likely to be neglected and left to decay, their oceans dried up, all trace of human activity fading into a wasteland of cracked cement. Cautionary warnings, perhaps, of real-world climate disaster!

Originally Portland's maps were constructed next to each other in the playground fronting Wolgan Street but, as their usefulness as teaching aids diminished and school growth necessitated more classrooms, they fell victim to progress. Sometime before 1983 the map of Australia was 'buried' under a new Domestic Science room and later, in 1995, under the present Administration building; while the map of the world was cut into sections in the early

1990s and relocated to the Level 3 playground. Here it remains (2016), minus its original observation block, sun dial and rain gauge and, unless slow decay is to be its fate, in need of some repair.

Author's Note: *While I know that the maps at Portland and Lawson still survive and that the unique marine map at Newcastle and the one in possession of the lions at Taronga Zoo apparently do not, it would be great to learn the fate of others listed above. It would also be nice to discover more that could be added to my list. My email address is: grizzlybear3au@yahoo.com*

This article first appeared in Doryanthes, a Journal of History, Heritage & the Arts, Vol.9 No.2, May 2016, pp.18-21

Aboriginal place names along the upper Cox River

{The following article is the introduction and first part of a larger paper provided by Jim Smith.}

An official place name I am responsible for is Therabulat Lookout. This came about when I was asked by Blue Mountains City Council to suggest a name for a new lookout situated on the track between Nellies Glen and Stuarts Road, part of the proposed Grand Cliff Top Walk. I felt that recognition of the indigenous history of the Blue Mountains would be appropriate. During a visit to Katoomba in 1896, E.D. Hoben, a journalist for the *Sydney Mail*, interviewed the Gundungurra man Billy Lynch, who had been born in the Kanimbla Valley. Hoben interpreted Lynch's comments:
"The aboriginal tribe inhabiting the Cox River district was the Therabulat, taking their name from the native name of the district…".
In a list of local place names was included: *"Therabulat for the Cox River".* Hoben also referred to Lynch's clan as the "*Therabulat tribe*".
As the new viewing point overlooked what I believed to be part of Billy Lynch's country, I proposed the name Therabulat Lookout, which was gazetted in August 1988. It should be noted that, at the time, there were no Aboriginal organisations representing Gundungurra descendants.
This article has been partly prompted by the discovery by Andy Macqueen of an Aboriginal name for the Cox River, found in a notebook of surveyor Peter Ogilvie. His monthly report for March 1829 includes the annotation "*Native name of Coxes River is Duiwan*".
Macqueen concludes, after working out where Ogilvie had been surveying during that month, that Duiwan was the name for *"the part of Cox River from Glenroy up to around Mt Walker."*
The Cox River is over 100 kilometres long and passes through the country of numerous clans of Gundungurra speaking people, each of whom were "custodians" of the Creation stories associated with their section of the river. Place names were often derived from these stories. How many local names like Therabulat and Duiwan, for parts of the Cox River, would there have been?
The Aboriginal placenames on our maps are the result of mostly undocumented conversations between Aboriginal people and early surveyors and settlers. These conversations were fraught with misunderstandings. For example, when the earliest settlers applied for grants of land they would often describe the area they wanted as, for example, "*called by the natives Goodoomba*". Misunderstanding could easily occur with regard to the extent of the area to which the placename applied.
The Aboriginal informant, in trying to understand what the white man was asking, could give the name of the spot where they were standing or the name for where the enquirer was looking or pointing. In a situation like this, the name of the white recorder is known but the name of the Aboriginal informant is virtually never given. In many cases, settlers would ask

Aboriginal people for the “meanings” of placenames and again this question, and the Aboriginal person’s answer, could involve mutual misunderstandings.

HERITA

Once these alleged “meanings” have become established in local non-Aboriginal folklore there is strong resistance to challenging them. A good example is the place name Goodoomba, recorded by surveyor William Govett in 1833. This is a variant form of the word also pronounced as Katoomba and Kedumba. Since the 1880s it has repeatedly been stated that this is the name for the area around the township of Katoomba and means “falling water”. It is now known that this place name was used by Gundungurra people for the area around the junction of the Kedumba and Cox Rivers and refers to the edible ferns that grew in this area.

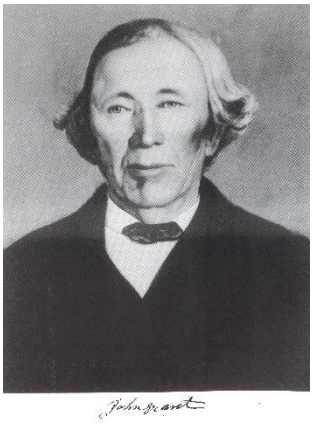
In contrast with the great majority of Aboriginal placenames, which are the result of attempts at communication between poorly educated settlers who were not particularly interested in Aboriginal language, and anonymous Aboriginal people, is a list of names for areas along the Cox River first published in 1892. They were recorded by surveyor William Mylecharane (20 February 1843-30 March 1917).

Mylecharane published these placenames in the *Lithgow Mercury* in April or May 1892. Unfortunately, there are no surviving issues of the *Lithgow Mercury* earlier than 1898. However, Lithgow resident James Padley (1860-1918) made a transcript of the article and deposited it in the Mitchell Library. Mylecharane himself summarised the list in the *Sun* newspaper in 1913 and identified his informants:

The following aboriginal names were obtained of the places mentioned, at different times, from Jenny Clay and Betsy Grant, so that one verified the other, fully 30 years ago [i.e. in about 1883]. They were the two last Cox River full Blacks that I remember meeting.

The ‘Cox’s River Tribe’ was recorded in the 1828 census. Hundreds of different members of this group of clans went to the Hartley courthouse throughout the 1830s and 1840s to receive blankets.

The first record I have located mentioning Jenny Clay is her marriage, as Jane Grant, to ex-convict Samuel Clay in January 1855. Presbyterian minister Colin Stewart was the celebrant. Jane and Samuel were both then living at Hartley. Samuel Clay died in 1868 and Jenny then became the partner of George Miranda, eldest son of the Gundungurra warrior Murrandah (c.1780-c.1852). Between 1870 and 1880 the couple were issued with blankets at various properties in the Bathurst district. George Miranda died in 1882, aged 60. Jenny then lived from time to time at the Kiloola property near Peel. Her companion there was the Aboriginal woman Mary Ann Parker. Jenny adopted an orphaned girl Sarah who died in about 1885. Jenny herself died a few years later.



John Grant Senior

Moyne Homestead

As Jenny’s maiden name was Grant, Betsy Grant may have been related to her. Jenny and Betsy could have been mother and daughter or sisters. A number of Aboriginal people in the upper Cox River and Canowindra districts adopted the name of Grant through their association with ex-convict John Grant (1792-1866) who settled at Moyne Farm near Hartley in 1821 and established a station on the Lachlan River in the early 1830s. It was a common practice of Aboriginal people living on the properties of early settlers to adopt their employers’ surnames. A Jackie Grant of the “Cox’s River tribe”, born about 1810, was issued

with blankets at the Hartley courthouse between 1838 and 1842. Betsy Grant was frequently referred to in local settler reminiscences and folklore as 'Black Bet' or 'Princess Betsy'. Hugh Dalziel, writing about the Aboriginal burial ground on top of Tinkers Hill in the Kanimbla Valley concluded: *"The last two natives buried there were George Miranda and his wife Black Bet."* It is possible that both Betsy Grant and Jenny Clay were partners of George Miranda. George's father had four wives.

Mylecharane was a licensed surveyor, used to precisely describing areas of land, and his informants were talking about places in their own country. It is rare to have a list of Aboriginal placenames in New South Wales where the names of both the recorder and informants are known. Mylecharane even took the precaution of interviewing his informants separately. He published the list about ten years after he first recorded it. Therefore, this list of placenames should be regarded as having a high level of authenticity.

The names are listed in the order of the 1913 article and compared with the wording in Mylecharane's 1892 article. The differences in spelling of the Aboriginal words suggest that, in 1913, Mylecharane did not have his 1892 article in front of him and was relying on memory. The numbers correspond to the numbers on the map.

Each placename, when first used, is followed by the spelling suggested by Jim Barrett, in square brackets, to reflect a more accurate sound of the word in the Gundungurra language. Barrett has recently published the authoritative work *Gandanguurra. The Language of the Mountain People and beyond.* *Jim Smith*

{In his article, Jim Smith goes on to elaborate on the names listed by Mylecharane. This coverage will be presented in the coming issues of Heritage}.

Lithgow Living History

Historical re-enactments are popular overseas and have been for decades. The Dark Ages, medieval times and Renaissance are popular eras for re-enactments, the American Civil War, WWI and WWII, the Vikings and late Roman times, knights and Saracens, crusaders and Napoleon, and martial arts groups. Re-enactments enable an understanding of history, and provide a way to interact with the past in a way that books and photos cannot.

History comes alive

In Australia re-enactments have occurred at least since the 1970s. With no significant civil disturbances since colonisation, many military re-enactments focus on events from other countries, mostly European. The oldest surviving re-enactment groups in Australia are the Ancient and Medieval Martial Arts Society, originating in the 1970s, and the New Varangian Guard, founded in 1981. There were earlier groups such as the Melbourne Vikings and the Medieval Society of Tasmania, which no longer exist.

Three main groups serve to cater for the interest, the Queensland Living History Federation (1997), the Australasian Living History Federation (2002), and the Australian Re-enactors Association (2012). These umbrella groups organise public liability insurance, and

represent members in areas such as legislation. They offer members, event organisers and the public, advice and guidance on such things as performance and display safety, and the reasonable representation of historical accuracy in recreational re-enactment activities. There is also the Australasian Register of Living History Organisations which is a website that provides links to living history groups in Australia and New Zealand.

Having a go

In particular, Australian groups focus on later periods within living memory – WWI and WWII, and on early colonial history. There is also a large focus on Australian Light Horse, which is significant as each participant must provide their own horse!
Many feasts, drill practices weekend events and tournaments are held throughout the year. Some groups are also involved in ceremonial duties and teaching history. Some have associations with the RSL, and can be involved in ANZAC Day activities. Other events include re-enactment of the Castle Hill convict rebellion (Vinegar Hill) and the Eureka Stockade.
Within the BMACHO membership area the Lithgow Living History group (established in 2012) are very active. Some of their activities include:

- Staging a display of the anti-aircraft guns at South Bowenfels in Lithgow in 2013 during Heritage Month.
- Invitation to Warbirds Downunder air show at Temora in 2015, to display the Bofors 40mm (gas firing) anti-aircraft gun, in 2013 and 2015.
- Regular involvement with the Ironfest event at Lithgow each year.
- Social occasions and photo shoots at Lithgow's Blast Furnace.
- Re-enactment of the Ben Hall Gang raid on Bathurst.
- Involvement in the Australasian Air Show.

There are over 20 members in the group, being multi-talented as performers in the re-enactments. Several members are also musicians and singers.
Group member Ian Rufus has previously explained to local press that they have all the legalities of firearms and such, covered. While authenticity and safety are prime factors, they focus on enjoyment for their members and their audiences.
Recently Ian provided BMACHO with the following commentary on their attendance at the Australasian Air Show:

"Lithgow Living History Anti-Aircraft crew came to the rescue of Port Moresby at the Australasian Air Show, the biggest in the southern hemisphere and one of the largest in the world. We helped the 39th Battalion, the Kokoda heroes, to defend the strategic aerodrome at 7 Mile outside Moresby. Our aircraft technicians attended to the needs of the Kittyhawks that beat off the attacking Zeros. Europeans trying to escape the Japanese invasion also came to the aid of the troops, even to manning and womaning the anti-aircraft gun. Unfortunately, some of our defences were hit and we showed the scars of battle.
We endured 3 days of constant air raids and put up strong airfield defence. The Bofors AA gun ran hot as we tracked aircraft attacking the 'drome. Huge fireballs filled the sky as aircraft attacked the landing strip. We had countless civilians coming to our compound to be saved from the attackers, who cheered and clapped at every plane which trailed smoke and disappeared after our shots shattered the tropical air. Our anti-tank gun, rifles and

pistols were used to good effect against the attacking ground forces.
Back to normality, our shows ran almost continuously. We responded to the crowds that gathered around us and used a full oxygen bottle which emptied last time over the course of a whole year. We had the same response as at Ironfest, where the displays and battles over the past 3 years have resulted in massive increase in attendance and ticket sales."

Mystery photograph

Yet another mystery to solve! This particular photograph is also from the BMHS collection. However, it also remains something of a mystery.
Who are these happy picnickers and bushwalkers, and where are they enjoying their interlude? The writing on the rock to the left of the photograph may give a clue. The young ladies look to the older gentleman with a mixed set of emotions on their faces. Has he just made an unwitting joke, and they are not sure how to take it??? However, the dog appears decidedly non-plussed!

Blue Mountains Historical Society

A day in the mountains

The Technical Side

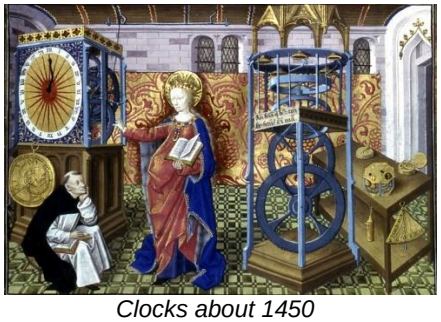
The Horologist

An horologist is a person who makes time pieces and measures time. Horology comes from the word “horologe” or the old French word “orologe”, meaning an instrument for telling the hour, or the study of time.

The clock is one of the most influential and significant inventions in history. Ancient Sanskrit language had a word for “hour”. Horology, or the science (or art or craft) of measuring time, can be dated back to the time of the Babylonians, who instigated the system of 60 second-minutes, and 60 minute-hours, as we know it. The Persians divided the day into 24 hours starting at sunrise. The Athenians began the day at sunset.

The first time keeping device was probably a stick in the ground, or observation of land features and their shadows. From this activity came the sundial. Other devices used included marked candles, oil lamps or a stick of incense, which burned at a measured rate.

The first mechanical clock was apparently made by a blacksmith in Italy, as an alarm clock for a brother in a monastery, who had to wake his colleagues at a certain time for the morning to start the day’s worship routine!



Clocks about 1450

Medieval

Colonial clockmaker

From this sprang the monster tower clocks that appeared all over Europe from about 1200, but which were most inaccurate, large mechanical edifices that were weight driven. The earliest use of the term *clokkemaker* is said to date from 1390. The first watch appeared in about 1500, also somewhat inaccurate. Between 1500 and 1510 Peter Henlein of Nuremberg invented the spring powered clock which resulted in smaller clocks, as alarm clocks, but these were still not too accurate.

The pendulum was known from the time of Galileo, who had the idea to use a swinging bob to regulate the motion of a time-telling device early in the 17th Century.

Antique pocket watch

Christiaan Huygens

Modern watch

Pendulums were not formally applied to the clock until a Dutch mathematician, Christiaan Huygens, in 1656 made the first pendulum clock, later in 1675 developing the balance wheel and spring assembly still found in some clocks today. He is considered as the inventor of the clock. Prior to 1800 clocks were entirely handmade in a single shop under a master

clockmaker. By the 19th Century clock parts were beginning to be made in small factories, but the skill of designing, assembling and adjusting the clock was still done by clockmaking shops.
Accuracy did not really kick in until Lee Deforest invented the vacuum tube in the 1920s, and the later invention of the transistor in the 1940s. Technical and decorative designs developed and many took on the trade of clock makers, or were involved in clock repairs.
Guilds of clockmakers were formed as early as 1544, and an enactment by Francis 1 declared that no one but a master could make or cause to be made any clocks, watches, alarms or other machines for measuring time. A requirement for joining a guild was to practice their craft and gain as much experience as possible. There are still many guilds where clockmakers meet to buy and sell, and have clocks left with them for repair.
During the 1800s and 1900s clocks or watches were carried around as a form of flaunting social status, or a way of instilling a sense of time regulation for work in the industrial workplace.
Interestingly, actual horological manufacturing was largely untouched by the industrial revolution. It was more the movement into the UK of US clockmakers, that spelt the demise of the long case clock. Also, many watchmakers in Britain were incensed by the comments of horologist John Bennett, who criticized English watch manufacturers in his praise of the industry in Switzerland. One Edward Johnson, a watch and chronometer maker from Clerkenwell, led the response to Bennett in 1857, which led to Johnson's idea of a Horological Institute. The Institute was then formed in 1858, and led to raising the standards of British horology, publication of a monthly journal, courses, examinations and diplomas. The Institute still exists today.

Edward Johnson

Fine motor skills required

The clock must first be designed. Each part is calculated, simulated and verified several times, drawings (blueprints) are made, and each part is individually made using very precise machinery to ensure precision. Tools of the trade included small screwdrivers, and broaches (boring tools), gear cutters, oilers, pliers, calipers, die/screw plate, files, piercing saws, turns (lathes), riveting hammers, and depthing tools to align the gears. Gloves protect the hands from chemicals and cuts, and prevent fingermarks on polished surfaces. Masks protect against fine toxic dust and fibres, and safety goggles protect eyes from machinery or dangerous fluids. Keen motor coordination is required to work on devices with small gears and fine machinery.
Since most clocks are now made in factories, most modern clockmakers only repair clocks. With the advent of digital clocks and watches, jewelers have little need to employ horologists. It is not hard to find a new battery, and more people make use of disposable watches. So the horologist is becoming a rare trade.

The workshop

Precision

The clockmaker

There are many horology museums and specialized libraries, including the Royal Greenwich Observatory, also the source of the Prime Meridian (longitude), and the home of the first marine timekeepers accurate enough to determine longitude. Other significant museums are found in Switzerland, Germany, North America and the USA, France, and of course Cuckooland Museum in the UK. *Patsy Moppett*

Community events & updates

Book Launch – Hassans Walls – Prized and Pillaged

A book launched on 24 March 2017 at the Lithgow Library Learning Centre has been welcomed by the community as a definitive examination of the Hassans Walls Reserve at Lithgow. The author, Keith Painter, has spent many months walking the Reserve and also collating data from a variety of sources, to compile a spectacular collection of photographs and information. The 160 page book, *"Hassans Walls - Prized & Pillaged",* names features of the Reserve and describes aspects of the Reserve which most of the wider community is unaware of.

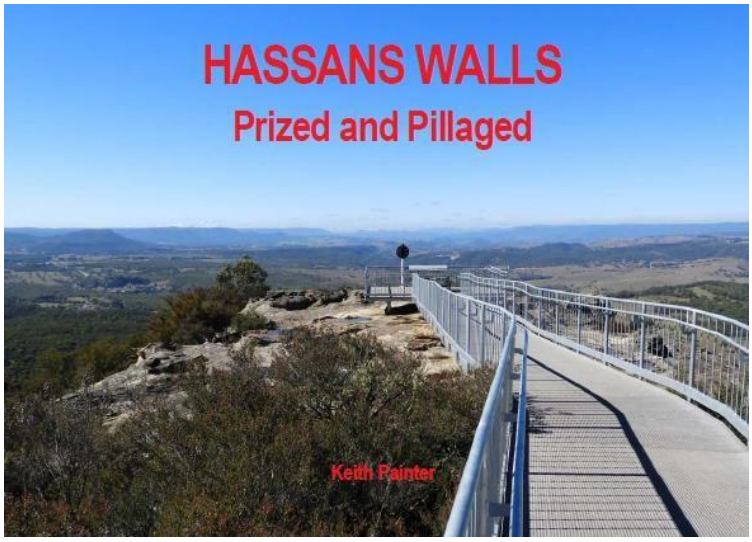
Keith, who hails from Raglan near Bathurst, says:

"The Reserve was created in 1882 and has grown to over 700 hectares. Hassans Walls Lookout is the highest lookout in the Blue Mountains and has the most extensive view from one point.

The heyday of development of facilities in the Reserve was from 1910 to 1918 under the leadership of James Padley. Lookouts, walking tracks, cave shelters and fireplaces were constructed and named after leading Lithgow citizen. So there is Rutherford Glen – James Rutherford of Cobb & Co fame and the first ironmaker at Lithgow; Dooleys Lookout – James Dooley, Premier of NSW in the 1920s; Hoskins Cave, Gannon Cave, Pillans Lookout and many more".

These are just one of the many fascinating details that are documented in *"Hassans Walls - Prized and Pillaged".*

As the book name suggests, the Reserve has had a chequered past, and its story now unfolds.



At the book launch, attended by over 80 people, the author gave a short talk, testimonials were presented by fellow bushwalker and author Brian Fox, and Len Ashworth of the Lithgow Mercury. These were followed by the formal book launch by Cr Maree Statham, who expressed her delight in the details and knowledge the book provided.
The book has also been entered in the 2017 NSW Premiers History Awards for the Community and Regional History Prize! *Patsy Moppett*

The book is available through the author at www.mountainmistbooks.com , various books shops in Lithgow and the upper Blue Mountains, and the Lithgow Visitor Information Centre.

Keith shows us around

Padley monument

Footnote:
The book had a timely release, given that the Lithgow City Council's Draft Plan of Management for the Hassans Walls Reserve had just gone on public exhibition. Although the preparation of the Draft PoM had already included community consultation, the recent exhibition provided opportunity for the community to provide further feedback on Council's proposed management of the Reserve and for its future.
It has already been established that there are a number of inaccuracies in the Plan, and the community is encouraged to approach the Lithgow Council web site and view it for themselves.
Now that the true value, character and history of the Reserve has been documented and the information placed out into the community through the recent book by Keith Painter, both local people and visitors to the area are urged to provide comments to Council so that the

Plan of Management truly reflects the significance of this special place both for Lithgow and the Region.
The Draft Plan of Management has been on exhibition until 28 April 2017 on the Lithgow Council website www.lithgow.nsw.gov.au

Request for information – Mt Victoria & District Historical Society

Mount Victoria & District Historical Society are seeking information on some "wall boards" that they hold in their collection. The Museum holds about twenty four (24) "wall boards" which they believe were used in the construction of a hut adjacent to the swimming baths at the Rienits School at Mount Victoria.
The School, Mount Victoria, was an independent, non-denominational, boarding school for boys. Opened on 18 July 1885, The School was designed and run by the proprietor and principal Mr Henry Guenther Rienits (1851 –1928). Although Rienits was a naturalized Australian citizen, he was of German birth and so was forced by war-time legislation to close The School during 1916. The campus was situated amongst ornamental trees and gardens on eight acres. The main building contained a large schoolroom, dining hall and lavatories on the ground floor, with dormitories on the upper floor. Facilities included a swimming pool fed by springs, rifle range, tennis court and gymnasium.

Wall boards

The "wall boards" contain names carved into the wood, one of which also appears on a list of students enrolled at the school. His name was Fred Hart.
The Museum Committee seeks information on the history of the boards, and how they came to be at the Museum.

Wall boards

Responses can be sent to BMACHO, or to Stephen Davis, member and volunteer at the Museum.

Exhibition: RESURRECT

BMACHO member, Everglades Gardens, announces its up and coming exhibition at their Gallery. ***RESURRECT*** is a collaboration of printmaker Jan Melville and photographic artist Tracy Ponich.

"The artists' subjects, materials and overall mood dovetail, as does the underlying notion of creating art that breathes life into things that are sometimes overlooked. ***RESURRECT*** evokes a sense of endurance and renewal of what is often dismissed as transitory, quickly passed by, or forgotten."

- Jan Melville - Tales of boats, birds and goddesses: Jan is a teller of tales, stories that take the form of the printed image and small-scale sculpture. She incorporates found materials into her works. These might be objects from nature, or as discovered elsewhere, then resurrected in unexpected ways to give new life, and a new mythology.
- Tracy Ponich - Photographs of the land and its elements: Tracy's images explore Blue Mountains bushland, and are fitting for the exhibition space, and aspects of Everglades. The photographs of land and garden join studies of found and fallen minutiae. Isolated flora and fauna, sympathetically captured in studio, come to life through the lens. Landscape or bush element, Tracy's photographs possess a stillness and sense of timelessness.
-

Melville - Redemption

Ponich – After the Rain

The exhibition runs from 8 - 30 April 2017, Wednesday to Sunday, from 11am to 3pm, being open on public holidays.

The Opening was held on Saturday 15 April from 1-4pm, and included an artists' talk & carving demonstration. *Everglades*

Exhibition: "IF THESE WALLS COULD SPEAK"

As part of the 2017 Australian Heritage Festival, a wonderful exhibition has opened at the Woodford Academy, 90-92 Great Western Highway, Woodford, on April 1 2017. It is a thematic exhibition inspired by the architecture, landscape, real and imagined personalities, history and heritage of Woodford Acadamy, the Blue Mountains' oldest building.

The exhibition will feature works by select Blue Mountains Artists' Network (BMAN) artists' works being displayed throughout the historic buildings and grounds. Poetry readings/artists' talks will be held at 1pm on each of the three open days on the exhibition.
Participating artists include Greg Bakes, Cathie Cox, Mary Grieg, Caitlin Hughes, Tia Henderson, Christine Hyde, Livonne Larkins, Jo Langley, and Alison Marcer. Poets include Emma Brazil, Jenny Campbell, Mark O'Flynn and John McManamey.

Elizabeth Burgess

Exhibition dates – 1 & 15 April, & 20 May 2017 10am to 4pm.
Museum entry & exhibition:

- *Adults $6*
- *Concession/child (4-16 yrs) $4*
- *Family $15 (2 adults, 2 children)*
- *Guided tours - $2/ person (4 + years)*

Exhibition - LITHGOW'S ANCIENT NATURAL GARDENS

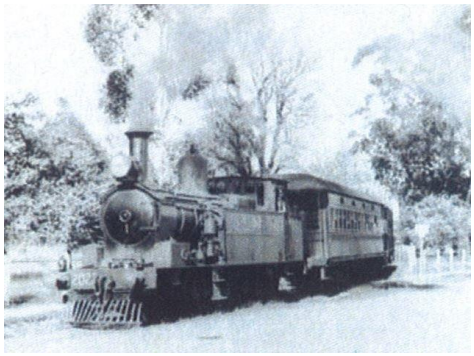
A photographic exhibition is being held at the Lithgow Library Learning Centre, 157 Main Street, Lithgow, from 31 March until 30 April 2017. With photographs by Julie Favell, the exhibition opening was held on 31 March, and presentations were given by:

- Vicki Dick, friend of Julie's and wildlife carer, with a passion for our native environment;
- Yuri Bolotin, exhibition co-ordinator: Nature Photography as a Constant Source of Inspiration and Knowledge;
- Michael Keats, OAM, author and bush explorer: Why Lithgow can be one of Australia's Top Ecotourism Destinations;
- And a Q & A with Julie and the presenters.

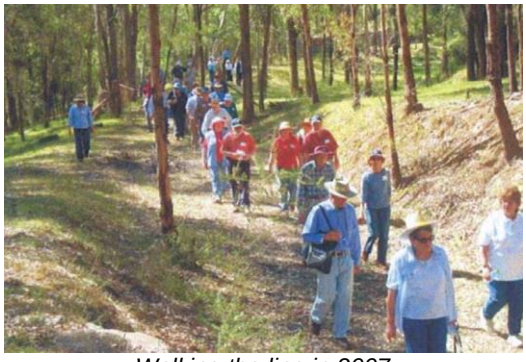
The exhibition remains open until 30 April 2017, and further information can be obtained from the Library on 6352 9100.

Pansy Line Tour

Join the Kurrajong-Comleroy Historical Society as they take the Pansy Line Tour on Saturday 17 June 1027. WALK ALONG as they explore the remnants of the Richmond to Kurrajong Railway 1926-1952. With the railway gone for so long, it is getting difficult to find many remnants but our experienced local guides will show you what there is, much of which is on private property and not normally accessible. Coaches depart from Richmond and the tour includes lunch in Kurrajong. Some walking would be involved.



Pansy



Walking the line in 2007

Bookings are essential. Details and bookings are to be found on their website,
www.kurrajonghistory.org.au
Or contact David on 02 4567 7993.
Costs are: Adults $35, Seniors $30 and children $25.
Order a copy of their Pansy book for the tour, only $10 (normally $12).

National Trust Australian Heritage Festival

NATIONAL TRUST
AUSTRALIAN
HERITAGE
FESTIVAL

The Australian Heritage Festival 2017 is being held from 18 April to 21 May, celebrating Australia's historic, natural and Aboriginal heritage.
The 2017 Festival theme is *Having a Voice*, and communities across Australia are invited to tell their stories through different voices, recognizing the many narratives that have shaped Australia. Thoughts to be considered include:

- When has your community joined together to be heard?
- What voices deserve to be commemorated in your town?
- What stories are shared across cultural groups in your community?
- How do you celebrate the voices that have shaped your area?
- What sounds are unique to your region?
- Does your community celebrate its heritage via song?

Our shared heritage is rich with voices from many cultures – *Having a Voice* is about taking time to stop and listen to stories from every corner of our society.

For further information and to register your event, contact www.nationaltrust.org.au

Conferences 2017

Penrith History Conference

For those of you who were looking out for information on the Penrith History Conference this year, you have not missed the Conference – it was not held! After 15 years of presenting their *Annual Makings of a City History Conference*, the Penrith City Council Library staff have made the decision to make a change to the way they disseminate their local history to the community. Instead of the conference, a program of events throughout the year has been organised:

- Saturday 25 March: *Family History Saturday: Sourcing and Sorting it.* Hosting a day to help people research and preserve their family history.
- 8-19 May: *The Many Voices of Penrith*. An oral history program.
- August 2017: National Family History Month. Talks and workshops.
- 2-10 September 2017 – History Week. Presentation of talks.
- Wednesday 15 November – film night and history talk with regard to the Light Horse Charge on Beersheba, 100 years on.
- Changing displays at the library throughout the year.
- Publications: Recent releases include:
  - 1917 Our Fallen booklet, to be released in April.
  - 2018 History Calendar, to be released in November 2017.
- Staff will attend fairs, conferences and talks throughout the year to promote the history of the local area.

More information can be found at their local history blog at https://penrithhistory.com//
For bookings for events or for information, call Lorraine Stacker, Vanessa Stockford or Alison Spencer at Penrith City Library.

Royal Australian Historical Society Conference 2017

The RAHS Affiliated Societies Committee announces that their next conference will be held at Cowra, in the Central West of NSW, on 28-29 October 2107. The venue will be at the Cowra Services Club, 101 Brisbane Street, Cowra.

Experiment Farm, Cowra

The RAHS will work with the Cowra & Distict Historical Society and the Cowra Family History Group to provide an opportunity to explore the fascinating history of the area and experience its good wines and great food. Details will be released I July 2017.
Travel and accommodation arrangements should be made early. Watch their website for further information www.rahs.org.au

Blue Mountains Association of Cultural and Heritage Organisations (BMACHO) Bi-annual Conference 2018

Save the date! BMACHO has scheduled its 2018 Conference a year out, and knows that last year's Conference at Mt Victoria "*Artefact"* will be a hard act to follow.

Conference 2016

The date is ***Saturday 12 May 2018***, and a theme has yet to be determined.
Watch this space!!!

Francis Greenway Tour

On Saturday 6th May 2017, Hawkesbury Historical Society is holding a Francis Greenway Car Tour of Windsor & Liverpool. The tour will be led by well-known historians Jan Barkley-Jack, and Ian Jack.
Although Francis Greenway arrived a convict forger and died in obscurity, he brought distinction to Australian colonial architecture. Windsor and Liverpool are two of Macquarie's country towns which retain works designed by Greenway.

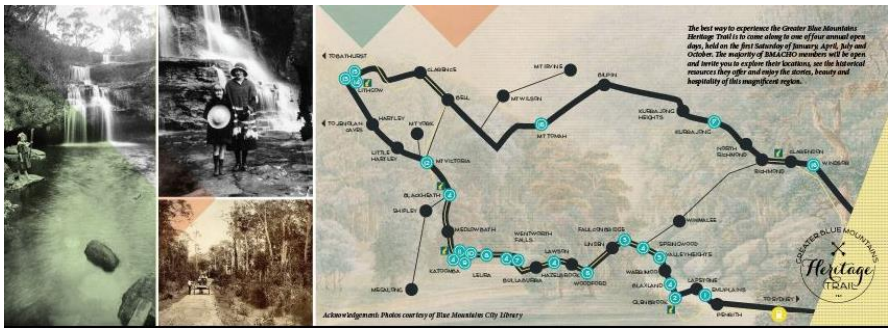
Western side of Thompsons Square, Windsor

The tour will begin at 9.45am in Thompson Square, George Street, Windsor and end at 4pm at St Luke's Anglican Church, Liverpool. Cost is $45.00 per person, $60.00 per family.

Neville Dehn

Bookings are essential. Bookings can be made through the Secretary:
secretaryhawkesburyhistory@gmail.com
Or phone: 02 9659 4103.
Payment is to be by cheque to P O Box 293, Windsor 2756,
Or by bank transfer: Hawkesbury Historical Society BSB 062 622, Account 009 006 643.

Greater Blue Mountains Heritage Trail Update!



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events.
BMACHO intend to reprint the Heritage Trail brochure soon and have asked members if they wish to participate. For a reasonable cost, members can appear in the reprint of the brochure, feature on the Greater Blue Mountains Heritage Trail website and have their events promoted on the website and Facebook page. This process is currently being finalised.
In addition, during 2017 BMACHO intend to hold a competition to encourage visitation to Trail participant properties. For this purpose, BMACHO have asked members to think of an artefact or item at their premises that can only be found by visiting. BMACHO will then list questions on a "Passport and Entry Form", which will be an insert to the brochure, and visitors can either answer the questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months. BMACHO already have offers of prizes for the competition, and this event is set to commence soon.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Day Fine Art; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leurella NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Scott Pollock and Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinators), Fiona Burn, Peter Brownlee and Roy Bennett. Greater Blue Mountains Heritage Trail sub-committee: Scott Pollock, Peter Brownlee, Fiona Burn, Jan Koperberg, Suzanne Smith, & Lynn Collins, Museums and Galleries Adviser.

Fernhill Estate, Mulgoa

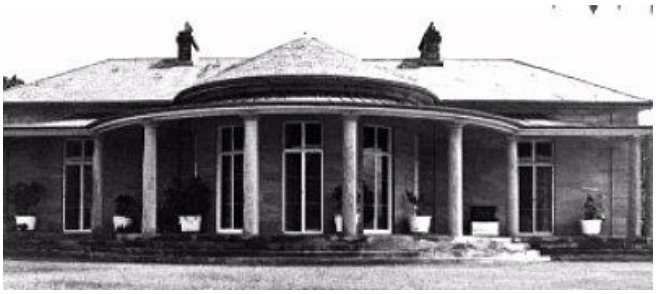
Fernhill Estate is a large rural property, being the remaining lands at Mulgoa associated with Edward Cox, son of the road builder and Hawkesbury magistrate William Cox. Edward was granted the land when still only 4 years old, in 1809.

Fernhill Homestead, Mulgoa

History: The original grants in the Mulgoa valley amounted to some 3,760 acres. Edward's was the first grant of 30 acres. The first house on this grant was The Cottage, built about 1810-11, and was occupied by several of William's sons in turn before they each developed their own properties. Edward had been sent away to school in England and returned in about 1825, married Jane Brooks, and lived at The Cottage for the next 16 years.

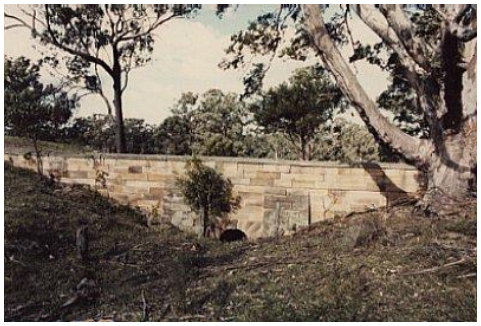
In 1843 Edward built the grand sandstone Greek revival temple house known as Fernhill. It was designed as a two storey building, but built as single storey, possibly by architect Mortimer Lewis, but was never actually finished. Some 20 Irish stonemasons were brought to Australia to the building project, using local stone quarried on the property. Other suggested architects were John Verge and Francis Clarke. Edward and Jane moved into the house in 1843. Above the door is a date of 1842.

The Cottage was also within the property, the whole of which was leased out during the depression of the 1840s.



Fernhill Estate, Mulgoa

The Cox's vineyards produced prizewinning wines, and their farming methods were recognized as significant land management practices.
Edward Cox died in1863 and the property passed to his son Edward King Cox of Mudgee, who operated a racehorse stud at Mulgoa until 1883.
Upon Edward King's death in 1883, the Estate was divided and his son in turn, Alfred Edward Cox ran a dairy from The Cottage property from 1897 to 1913.
In 1913 The Cottage was sold to Fowler and Bayliss of Penrith, and then to a Mr Max Lamb. In 1920 it was purchased by HJ Davey. Mrs Davey and a Mr Love ran a dairy until 1969 when Mrs Davey retired.
Fernhill was sold in 1888 by Standish Cox, to Mr Wright of Wright Heaton and the house was uninhabited for some years. By 1911 the property was owned by RB Baynes of Mudgee.
In 1931 the house and 1,000 acres was bought by Mr and Mrs Moyse who ran it as a guest house.
In 1965 John Darling bought the Estate. Darling was a WWII fighter pilot, a banker, company director, agri-business pioneer and film industry visionary. Fernhill was gradually restored. Darling had Paul Sorensen rework the gardens.
In 1980 the house was sold with 1,000 acres to a developer, Anderson, who continued with the restoration, adding the sandstone columns on the northern pergola.
Luckily, bushfires in 2001-2002 left the house undamaged, and Anderson then acquired properties to the north.
In 2010 an auction of Anderson's collection was held, which included antiques, furniture, and artworks.
Description: The property comprises farm estates, the building complex and areas of natural bushland, rural landscapes and escarpments, avenues of trees and sculptured gardens, watercourses and stone bridges.



Stone bridge, Fernhill

Cox's Cottage

The garden features include terracing and pool, significant plantings of trees and hedges, orchards and stone garden walls.
The building complex includes the house, cellar and wings, officers' courtyard, stables and coach house, stone box drains, and winery (now a ruin). At one stage in the 1980s there was a private zoo.
Modifications have occurred at various times to the buildings, mainly in the 1950s and 1960s, then again in the 1980s.
In 1966 a subdivision was approved into two lots, a 25 acre lot around the house and the driveway from Mulgoa Road, leaving a 926 acre residue.
In the 1970s the coach house and stables were renovated as stables and a dwelling.
Further subdivision occurred in 1979, excising 49.8ha in the north eastern sector of the property.
Former uses of the property include the farm, residence and guest house, plant nursery and chicken hatchery, piggery and stone mason's yard. The owners since 2011-2012, S & B Tripp, have used the property for functions, picnic races, moto cross events, rock concerts,

ghost tours and heritage tours. The property is also listed as farm stay accommodation. Earlier in 2017 the sale of five allotments in Fernhill's Mayfair precinct took place.
Significance: The property is significant for its modified and natural landscapes, a history of landed pastoral estates and early rural development of the colony, and its association with adjacent properties, St Thomas' Anglican Church and cemetery, and The Cottage.

St Thomas Anglican Church, Mulgoa

Edward Cox grave

George Cox grave

The future: Recently some 384ha of the property has been offered for sale. The property contains the historic house and outbuildings, horse racing track and stables.
Community opposition has been raised in recent years to proposals for rezoning and subdivision of the historic estate.
Town planning for the forecast increase in population is a priority for government, with new infrastructure such as rail, roads and housing well underway. Planning for future burial space is just as important.
With many Australian cemeteries expected to reach capacity in the next few decades, cemetery managers must look to the future early. This includes cemeteries such as Penrith and Rookwood.
Technologies such as multi-level structures and cremation are capable of extending the life of cemeteries, but for many people, religious earth interments are the only option.
Rookwood: One significant offer has now been made by Rookwood General Cemeteries Reserve Trust (RGCRT). RGCRT have been exploring options outside Lidcombe for many years including other large undeveloped areas in the west. They have now taken an important step towards expanding, and have nominated Fernhill Estate as a possibly alternate site to Rookwood, which was established in 1867 and includes many heritage buildings itself. It is the largest Victorian cemetery in the world.
The property that would be purchased at Fernhill comprises some 384ha, and about 40% of that would be required for a cemetery, a dignified and historically significant final resting place. It would provide burial potential for about 150 years.
They advise that given their history of heritage patronage, custodianship and commitment at the Rookwood site, they are very much aware of making the Fernhill homestead a site for the whole community. The current listing on the State Heritage Register would allow for protection of heritage significance and further conservation works. They advise:
"Fernhill Estate is a suitable location for RGCRT as it is within close proximity to Rookwood. Furthermore, the historic nature of the property gives an ongoing heritage link to Rookwood and provides the opportunity for the Trust to once again conserve and restore a significant piece of history for future generations."
At the same time, Rookwood would always be available for burials while space is available, with strategies being in place to ensure the gates remain open indefinitely.
Preliminary designs show that the Fernhill homestead and heritage landscape would be preserved, a buffer of 25ha being set aside around the house. Some 220ha of bio banked land would also be protected.

Rookwood Cemetery

A predominantly lawn style cemetery is proposed, with low profile plaques to be used in any areas visible from the road or homestead, together with appropriate landscape screening.
RGCRT have entered into a due-diligence process, with a view to securing the Fernhill Estate, which could run up until September 2017. This amounts to a six month exclusivity period which would allow the Trust to conduct the required due-diligence process, commencing with a period of community consultation. The first of twelve community meetings was held on 16 May 2017.
The community consultation process consisted of:

- Artists impression for visual landscape impact;
- Heritage assessments for impact on significance, and ongoing management;
- Environmental assessments to assess the impact on the existing biobanking arrangements;
- Noise and traffic assessments;
- Service assessments;
- Geotechnical assessments;
- Hydrological assessments.

Following these sessions, and upon receipt of community feedback, more community meetings would be held. RGCRT have stated that they will not proceed if public opinion is against the development.
The first meeting held in May discussed a wide range of topics, and specific concerns included the possibility of goth parties in the cemetery, vandalism and grave robberies. RGCRT advise that Roads and Maritime Services would determine whether Mulgoa Road would be upgraded and widened. Rookwood currently holds between 2 and 10 services daily, which is a guide to the traffic volumes generated by such a development.
Such a cemetery proposal would create business opportunities for the region and reduce the risk of residential subdivision of the Estate. It would provide opportunities for education and research, involving visitation by schools and university groups. It would provide opportunities for employment, for jobs in administration and apprenticeships.
Community comment: Most recently, the Mulgoa Progress Association has expressed grave concerns for the cemetery project, their president Wally Cox saying it would be destructive. As the site of both the homestead and the unique colonial landscape, is of the greatest State heritage significance, the aesthetics of a lawn cemetery would not be compatible. They would oppose any cemetery in the Mulgoa valley, which already has a cemetery on the grounds of St Thomas' Anglican Church. Their recently prepared submission opposing the development outlines a number of specific concerns:

- A historic colonial landscape in danger of development.
- Such a development which would include signage, roads, lighting, parking and administrative buildings would not be compatible or aesthetically sympathetic to this landscape.

- The landscape should not be compromised or developed.

The MPA are seeking the support of organisations and individual experts concerned about the conservation of gardens and landscapes, who would emphasize to the developer the importance of the landscape and the need for its conservation, and convey to it the extent of public concern.

Some time ago, during a proposal lodged with Council for rezoning and subdivision of the Fernhill Estate, the Blue Mountains Conservation Society Inc provided comment on the impact of that development on the Greater Blue Mountains World Heritage Area and the Blue Mountains National Park. As the Estate adjoins both these areas, the following concerns were raised:

- The proposal was not in accordance with the guidelines set down by the State and Federal governments for development in such adjoining land;
- Servicing matters such as sewer were not provided for.
- Sealing of local roads and the impact on neighbouring bushland – weeds;
- Impact on endangered species, and risk of fauna mortality;
- Influx of recreational animals;
- No ecological assessments were undertaken;
- Cumulative impacts of a staged development;
- Concern for tree removal;
- Consideration of the impact on the existing biobanking arrangements;
- Impact on the Shale Sandstone Transition Forest as a critically Endangered Ecological Community;

Conclusion: Fernhill Estate in its entirety is certainly in need of conservation and investment and the cost would be high. It can be seen that a wide range of land uses has been applied to the property over time, in an attempt to maintain and conserve this large and significant link to Australia's colonial past. The current zoning permits such a cemetery development with consent.

From the above it would appear as though the Rookwood General Cemetery Reserve Trust are quite aware of what they are dealing with. At the same time, the local Mulgoa community feel there are adverse implications for the Estate, as well as the wider Mulgoa valley.

It is to be hoped that the due-diligence period that has been undertaken by RGCRT results in a thorough consultation with the community. Also, a critical element will be a highly responsive community feedback regime. The results of the consultation period will be assessed by RGCRT and further consultation undertaken, before they decide in September whether to proceed or not.

Therefore, following the explanation and elaboration given by RGCRT, and a viewing of the specialist reports to be prepared, it is critical that the community express their specific concerns and general comments, both for and against. It is obvious that RGCRT are conscious of the value of Fernhill, and given their background they are not your usual property developer.

BMACHO member organisations and individuals, as well as the wider community are encouraged to contact RGCRT during any coming consultation periods, to register their thoughts in regard to this significant proposal, which should include both the positive and negative attributes of the project. *Patsy Moppett*

Food for thought ..... Editor's note

What a bumper issue we have for you this time! With so many interesting articles and input from a range of other writers, as well as our own happenings throughout the BMACHO membership region, I even had to keep some of the writings back.
There are so many fascinating topics floating around the heritage world at present that information is in overload.
We hope that the details provided will allow distribution of information on a range of topical matters, a wide appreciation of places, people and place names, contacts for coming events, tours and exhibitions.
Focussing on the age old question, "what is heritage", the situation regarding Fernhill Estate illustrates how people's views of heritage are so varied, and how values must be prioritised in order to achieve a balance between heritage conservation and progress.
It could be said that a cemetery is the ultimate in an expression of heritage. However, with modern cemeteries moving over into the lawn cemetery form, and the modern headstone being often less elaborate than the romantic grave markers utilised 150-200 years ago, the visual impact of this does not necessarily sit well with other elements we consider built heritage. However, this visual impact can be managed through careful site configuration and landscaping.
But not only is visual impact a matter for consideration at Fernhill.
The installation of a new cemetery anywhere will also involve consideration for the infrastructure required to cater for it. This includes roads and servicing, administrative building and facilities, and the impact and burden of these on the local and regional community. The natural environmental and heritage aspects of the landscape, considering

features such as plantings, old access roads, drainage lines, endangered species and habitat, as well as built heritage, all also come into play.
Large properties such as Fernhill require considerable ongoing cost and maintenance, and it is obvious that people who have taken the property on in the past have struggled, attempting to introduce a wide range of uses for both the buildings and the site, being the subject of multiple subdivisions, activities, alterations and additions over time, to generate income. Having said that, the property still remains quite an intact significant example of colonial rural development.
Ideas flow thick and fast as to what to do with the property, including the cemetery project, subdivision and residential development. However, how one narrows down exactly what is suitable for the site may continue to be an ongoing case of trial and error, with the hope that the significance is not eroded. Any suitable adaptive reuse development must provide opportunity to keep the Estate active, and conserved for future generations.
This dilemma occurs frequently with regard to large abandoned industrial sites, which are not necessarily visually attractive in themselves, but which usually demonstrate technological, economic and social history. More on that another day!
Happy reading!

Footsteps in Time – George William Evans

Travelling through the Blue Mountains we have often seen the memorials to George Evans and his survey across the Blue Mountains. But how often have we stopped to contemplate the context of those monuments, and how/when they were erected.
Yes, Evans carried out a survey from Penrith to Bathurst. The timing of that survey however, places him at the first white man to reach Bathurst. Cox then followed him with the first road. Sufficient credit has not been awarded Evans for this feat, whereas the feats of Blaxland, Lawson and Wentworth, and of William Cox are now well documented common knowledge.
These fifteen monuments each acknowledge the survey of Evans, and each contains an extract of his diary entry for each location.
Bill Ivin has set down some background to Evans' work, and also to how the monuments came to be, thanks to the efforts of John Yeaman and Jack Darby, who sought funding for the monument project.
Each monument was unveiled by a different person on a different date, such as Mignon Yeaman, widow of John Yeaman; Jennifer Hunt and Gwen Hammond, Great, Great, Great Granddaughters of George Evans; Donald M Grant, Surveyor General for NSW; and Greg Goodman, President, Institution of Surveyors NSW Inc. *Patsy Moppett*

A Tour Guide to the 15 Monuments Commemorating George William Evans', Survey 1813/14

(compiled by Bill Ivin in 2013-14 for distribution in 2015, but not adopted)

"Following the successful crossing of the Blue Mountains by Blaxland, Lawson and Wentworth in May/June 1813, the Governor Lachlan Macquarie instructed George William Evans – then Deputy Surveyor for Lands:
"To proceed in the Attempt of effecting a Passage over the great Range of Mountains. Called here the Blue Mountains, and to discover what Description of Country lay westward of them"
George William Evans set out on this exploration in November 1813, with five men – Richard Lewis and James Burns, (both Free Men) and three convicts – James Coogan, John Grover and John Tygh (sic Tighe). Evans made a significant decision, by determining to carry out the second part of his instructions first, ie. by surveying beyond the "Explorer's Terminal Point" which he did by starting at the foot of Mount York. Here he marked a tree on the 25th November, 1813, and measured westward to his later selected objective at the Macquarie River, reaching there on 9th December 1813.
Returning to the "Marked Tree" at the Riverlett, Evans began the survey to record the route established by the Explorers – defined by a line of blazed trees – back to Emu Ford, on 31st

December, 1813. This survey of 48 ½ miles (about 80km) was completed on 8 January, 1814.
Thus Surveyor Evans and party walked in the “Footsteps” of the three “Explorers”.
This Guide is intended for those wishing to visit the monuments spaced throughout the Blue Mountains, which record in part some of “Evans’ Survey” and thus become aware of its significance that led to the rapid expansion across the fertile plains west of the Great Dividing Range. This Guide commences at Mount York and proceeds to the Nepean River in accord with the records of the survey that will become self-evident when reading the historical facts.

Mt York

Browntown

Blackheath

Mount York: This is the first of 15 monuments – and is probably the most significant in the successful crossing of the Blue Mountains – is located at the end of Mount York Road, Mt Victoria. This is truly a very scenic location with good access to lookouts and detailed historical information. Most of the sites could be considered :wheel-chair accessible”. However, reasonable fitness is needed to undertake the first 200m down the original “Cox’s Road”, and the experience is well worth the effort. Prepare to spend in excess of ½ hour at this location.
Mt. Victoria: located at “Browntown Oval” – about 1km east of Mt. Victoria – turning right off the highway via a turn right seagull lane and continuing on to the amenities shed. It is unfortunate that this monument is in such a remote location and not wheel-chair accessible, however the nearby bush is typical for the upper mountains and probably very similar to that encountered by the “Explorers”, “Evans Survey Party” and “Cox’s Road Gang”.
Blackheath: located outside the Ivanhoe Hotel, Blackheath at the main set of traffic lights on the highway with easy access along a level path.

Katoomba

Wentworth Falls Lake

Wentworth Falls

Katoomba: Conveniently located outside the Blue Mountains City Council Chambers, with parking available outside the Chambers and easily accessible.
Wentworth Falls Lake: If driving down the highway this site is best accessed by turning in to Sinclair Crescent, before passing under the railway, and continue through to the lake. The monument is located at the western end of the lake and is quite accessible.
Wentworth Falls: This monument is centrally located within the shopping centre outside the former “old” Post Office in Station Street and has easy access.

Lawson: The monument is located near the Lawson Bowling Club, in Badgery Crescent and accessed by turning left off the highway at the set of traffic lights on the crest of a hill after passing the Blue Mountain Hotel. The site is easily accessible.
Hazelbrook: Situated in the precincts of the Hazelbrook Shopping Centre on the northern side of the highway – off street parking available and wheel-chair accessible.
Faulconbridge: Within Jackson Park, Prime Ministers' Corridor of Oaks and found by turning off the highway at the Railway Crossing – wheel-chair accessible – nearby is the former "country" home of Sir Henry Parkes, Premier of NSW (5 times) and also known as the "Father of Federation".

Lawson

Hazelbrook

Springwood

Springwood: Located in Telstra Park, Macquarie Road, Springwood Shopping Centre. Being located within the shopping centre the parking might present a problem, however the site is easily accessible. It is suggested that when driving from Faulconbridge one continue along Macquarie Road and stop for a while near the intersection with Short Street, Springwood, to observe the monument where Governor Macquarie camped in 1816 and named Springwood.
Warrimoo: Located within Ardill Park and easily accessible after turning off the highway just to the east of the "Citizen's Hall", after crossing over the railway.
Blaxland: Situated on the south side of the highway within the centre of the shopping centre and best to be accessed via turning right off the highway in to View Street and then Hope Street in to the parking area.

Warrimoo

Glenbrook

Lapstone

Glenbrook: Located within Glenbrook Park, at the rear of the Tourist Information Centre and accessed after turning right off the highway at the set of lights in to Mann Street and then continue to Glenbrook Park. The site is wheel-chair accessible.
Lapstone: Located within Skarrat Park, Governor's Drive and at time of publication in bushland and only accessible by the fit and adventurous?
Emu Plains: Located near intersection of Great Western Highway and River Road in Regatta Park. If visiting this site one should include a walk down the former Punt Road and the site of the former river crossing.

Acknowledgement: John Yeaman: Blue Mountains City Council Engineer 1948-1970, who during that time became interested in the feats of the early explorers that paved the way across the rugged Blue Mountains. He became somewhat miffed that the expedition of George William Evans, Deputy Surveyor of Lands (1813/14), who was the first European to cross the Great Dividing Range to discover the fertile plains of the Macquarie River Valley, had been given scant recognition. As part of this expedition George Evans surveyed the route undertaken by the three Explorers – Blaxland, Lawson and Wentworth (1813) from the Riverlett, Hartley Vale to Emu Ford, Penrith.
Also of the engineering feat of William Cox for the construction of the "road" from Emu Ford to Bathurst in 1815/16.
Upon his retirement, with Jack Darby, Surveyor General and the Blue Mountains City Council jointly prepared a submission to the Federal Government for funding under the Bi-Centennial Grants Projects for the establishment of monuments at suitable locations throughout the Blue Mountains to commemorate George William Evans Survey.
This pamphlet has been produced by W.C (Bill) Ivin, retired surveyor of Faulconbridge, as a personal contribution to the Bi-Centennial Celebrations of the Crossings of the Blue Mountains." *Bill Ivin*

Aboriginal place names along the upper Cox River

{The following article is the second part of a larger paper provided by Jim Smith. The first part was documented in HERITAGE Newsletter No. 50. Please refer back to that article for map showing the location of many of these places.}

(1) Thoondoo [dhuu(n)duu]

1892. "The Junction-- Aboriginal Name Thoondoo—Farmer's Creek with Walker's River, Rydal Road." Another local correspondent J. Dobbie added this description: "*So called because at this place on the Great Western Road (Bowenfells to Rydal) Farmer's Creek joins the Cox River. A convict settlement called the Junction Camp was established here on a small piece of flat land entirely surrounded by precipitous hills."*
1913. "Junction of Walker's or Cox's River with Farmer's Creek-- aboriginal name, Toondoo."
Interpretation. A section of Cox's River near the Farmers Creek junction was known as Walker's River after an early settler. Farmers Creek is also known Cooerwull [guuwawal] or Coerwull Brook. Cooerwull is said to be the name of a small blue flower, possibly the native Bluebell *Wahlenbergia stricta.* This word was chosen in 1824 by the first settler in the area, Andrew Brown, as the name for his property on Farmers Creek and also became the name for two schools in the area.
A "*small piece of flat land entirely surrounded by precipitous hills*" at the junction of two rivers is very likely to have been an Aboriginal camping place.

(2) Gillingarambilly [gi.li.nga.ra(m)bi.lii]

1892: "Mount Kirkley-- native name Gillingarambilly-- The hill behind Mr Gould's place on road from Bowenfells to Rydal."
1913: "Mount Kirkley, hill half-mile west of junction of Bathurst and Mudgee roads-- Gillingarambilli."
Interpretation. Gould's Hill or Mount Kirkley is shown on Alex Wilson's 1914 map. However, Wilson shows the Aboriginal name of Mt Walker, about three km to the north west, as Giligarambala. This is another interpretation of the word Gillingarambilli. Another local resident also claimed that Giligarambala was the name for Mt Walker. A story about the cultural significance of Mt Walker was recorded: "*the natives had a superstitious aversion to this hill owing to some very remarkable echoes to be heard about it, and which answered their coo-ees after a considerable lapse of time*." It is possible that this placename applied to the region around Mt Walker and Mount Kirkley.
Gillingarambilli is one of two words on Mylecharane's list which end with the suffix-- billi. The other one is Mooraminbilly. It is a common word ending (usually as --bili) in the Ngarigu language spoken in south-eastern New South Wales. David Nash kindly extracted, from the Geographical Names Board database, a list of New South Wales placenames with this

ending. One name, Jincumbilly, is in Ngarigu country but the majority are in or near the country mapped by Tindale as Ngunnawal country. These are: Yarrangobilly, Adjungbilly, Currockbilly, Mutmutbilly, Muttbilly and Wagragobilly. An outlier, Gogobilly, may be in Wiradjuri country. The other four names are many hundreds of kilometres away, in north-western New South Wales. Ngarigu, Ngunnawal and Gundungurra belong to the same language family, the Yuin group and Gundungurra and Ngunnawal are very similar in vocabulary and grammar. The placename ending—billi / billy appears to have had some significance within Yuin country, but its meaning is not known.

(3) Tarrapalat [dha.rra.ba.lat]

"1892: River Lett-- native name Tarrapalat-- Named by Evans 'The Riverlet' (Rivulet) corrupted to River Lett."

1913: "The River Lett at Hartley—Tarapalet."

Interpretation.

The journalist who interviewed Billy Lynch recorded that the word Therabulat was a name for [part of] the Cox River originally occupied by Lynch's "tribe". Tarrapalat and Therabulat are the same word, heard and recorded in English in variant forms by two different people. Jim Barrett concluded that "…*the appropriate spelling of "Therabulat" would be "Dhurrabulat", which means "two rivers*". While the literal meaning of Dhurrabulat is "two rivers", the Gundungurra appear to have used it for places where two rivers came together. Thus, it may not be an exclusive placename for the area around the junction of the River Lett and Cox River.

The Gundungurra people in the Burragorang Valley had a similar word to describe the areas around river junctions. R.H. Mathews noted that Gurradhulla meant a "junction of watercourses" and A.L. Bennett wrote Kurradalla for a "meeting of the waters (a junction)". These latter spellings may be the same word, heard and written down differently, or represent a difference in dialect between the clans of the upper and lower Cox River. Mathews recorded that the last waterhole on the Wollondilly River, about 400 metres above its junction with the Cox River, was called Gurradhulla. This indicates that the word Gurradhulla was not used just for an actual river junction by the lower Cox river clan but for the area around it. Tarrapalat /Therabulat was probably used in the same way by the upper Cox river clans.

River Lett at Glenroy

Cox's River at Glenroy

(4) Gnallwarra [nga.la.wa.rra]

1892: "Gnallwarra-- High rock of peaks, either side of Brown's Gap."

1913: "Rocky Peak, northerly from Blackman's old place near the new road over Brown's Gap from Mount Victoria and Hartley Vale to Lithgow-- Gnallwarra."

Interpretation.

The range dividing the Lett River catchment from the Farmers Creek catchment is called Hassans Walls, at least on its western end. Where this range swings northwards is a saddle called Brown's Gap. It appears that the peaks on either side of this saddle were known as

Gnallwarra, although the 1913 definition implies there is a single “Rocky Peak” on one side of the Gap which was known by this name.
When very early settlers chose to name their properties with Aboriginal words, they often used the true Aboriginal placename for their land. However, John Blackman called his property, some 2 km south-east of Brown’s Gap, “Nulwara” suggesting either that he wished to name his place after the “Rocky Peak” he could see in the distance or that he misunderstood his Aboriginal informant.

(5) Tuiwon [du.wii.wan]

1892: “The Vale of Clwydd-- native name Tuiwon-- This embraces the whole of the country under the mountains, extending from Mr Neale’s [Little Hartley], including Hartley Vale, and past the bottom of Brown’s Gap.”
1913: “The Vale of Clwydd (proper)-- Tuiwon.”
Interpretation.
Governor Macquarie named the Vale of Clwydd on 29 April 1815. After leaving the base of Mt York he described his party’s route along Cox’s Road: “*we pursued our journey in the carriage over a fine plain verdant country of open forest land through a beautiful extensive vale of five miles which I have named the Vale Clwydd after the vale of the same name in Wales. This vale terminates at a river running south formed by two smaller ones coming from the westward and eastward and which unite at the distance of 5 miles from Mount York.”* This “termination” of the Vale of Clwydd, as defined by Macquarie, is at Glenroy. Mylecharane’s description of the extent of the country described by Tuiwon is similar to Macquarie’s definition of the Vale of Clwydd i.e. what we call today the Hartley Valley. In 1913 Mylecharane needed to clarify that Tuiwon referred to Macquarie’s “Vale of Clwydd (proper)” as distinct from the suburb of Lithgow with the same name. So, how can Mylecharane’s information, that Tuiwon was the name for the extensive area of the Lett River catchment, be reconciled with Peter Ogilvie’s claim that Tuiwon was the name for part of the Cox’s River? One interpretation could be that a lengthy stretch of Cox’s River adjacent to (what we call) the Hartley Valley was known to Aboriginal people by the same name as the Valley, i.e. Tuiwon, with Therabulat / Tarrapalat being a more localised name for the area around the junction with the Lett River.
Jim Barrett has noted a relationship between the placename du.wii.wan and the name of one of the upper Cox River clans, recorded by early settlers as Wywandy, (spelt by Barrett as wii.wan.dii), with this local clan group identifying with the du.wii.wan river frontage. A problem with this suggestion is that, at the time of the earliest European records, the remnants of the Wywandy clan were living at Wallerawang, about 15 km north of the Hartley Valley. The Wywandy may have occupied all the country between du.wii.wan and Wallerawang and beyond. Alternatively, they may have been a small localised clan of the Hartley Valley that moved northwards to settle on James Walker’s Wallerawang property. When the Wywandy went to Bathurst to collect blankets they were referred to as the “Cox’s River Tribe”.

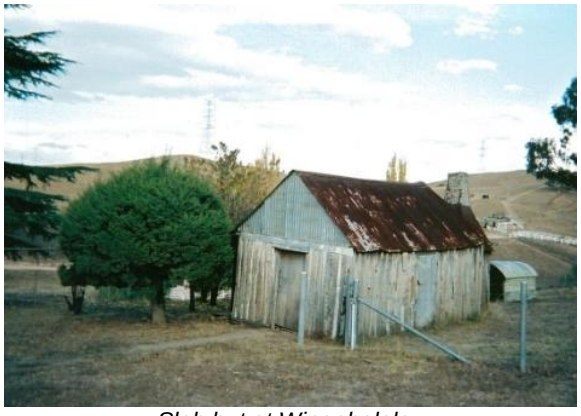
(6) Liddleton

1892: “Liddleton-- native name Mooraminbilly [muu.ra.mi.n.bili] (near Hartley).”
1913: “Liddleton, on Cox’s River-- Mooramanbilly.”
Interpretation. Liddleton was the name given to the 1826 land grant to John Maxwell, beside the Cox River, about two km downstream from the River Lett intersection. It is possible that the section of Cox River adjacent to this land was also known as Mooraminbilly.

(7) Cullenbenbong [gulan.ba(n).bung]

1913 only. “Junction of Long Swamp with Cox’s River, county Westmoreland, Keenan’s old place-- Cullenbenbong.”
Interpretation. The “Long Swamp” referred to is not Long Swamp Creek. “Keenan’s old place” was on Cullenbenbong Creek, extending between one and three km upstream of its junction with the Cox River. Both Long Swamp Creek and Cullenbenbong Creek originally consisted of a series of pools, full of reeds and other water plants, connected by slow flowing water. Both creeks were literally “long swamps”. On the parish map of Mylecharane’s era,

what is today called Cullenbenbong Creek was named “Cullenbenbong Swamp”. Due to the underlying geology, the creeks flowing eastwards from the Great Dividing Range to the Cox River, between Ganbenang Creek (which included Marsden’s Swamp) and Cullenbenbong Creek, tended to form wetlands. These environments were important places for Aboriginal people as they contained permanent water and were rich in plant and animal resources. William Cullen (1906-2007), a grandson of one of the original settlers on Long Swamp Creek, explained to me that a massive storm, soon after the devastating bushfire of 1905, scoured out Long Swamp Creek, destroying its wetlands. Since then the Creek has flowed along the channel created in 1905 and the reedbeds have never regenerated.
Peter Luke O’Reilly called his farm on Long Swamp Creek, just upstream of its junction with the Cox River, “Wingebelaley” [wi(n). dyi.ba.la.lii]. His son Bernard’s book about life in this area made the word Cullenbenbong one of the most widely known Gundungurra placenames. Two of the Cullen family farms higher up on Long Swamp Creek were given Aboriginal names that were probably of local origin. Portion 69 was called ‘Willaroi’ [wi.la.roi] and the property on Portion 157 was called “Gummakunulla” [gu.ma.gu.nu.la]. One of the Cullens wrote that the latter word meant “big reed bed”. This may have been the Aboriginal name for Long Swamp Creek or a general word for the swampy creeks in the region.
The Cullen of Cullenbenbong may be a version of a Wiradjuri word for water, often found as the ending *--gullen* on place names in the Yass district. Nash suggests that it may also have been used in other areas of Wiradjuri territory, for example in the placenames Cullen Bullen and Cullenbone. Cullen Bullen is not far south of “Wall Wall”, the most northerly name on Mylecharane’s list. *Cullen* or *gullen* were not recorded as Gundungurra words for water but Nash raised the possibility that the word may have travelled in Pidgin usage beyond Wiradjuri country. One of the recorded meanings for *gullen* was “swamp”.



Slab hut at Wingebelaley

Kanimbla Valley

(8) Minni Minni [mini mini]
1892: “The Alum Mount-- native name Minni Minni-- South of Ganbenang [ga(n).ba.nang] and east of Caves road.”
1913: “Range south of [Cullenbenbong] (the Alum Mount forms part)--Minni Minni.”
Interpretation. The 1892 definition appears to limit the name to a single peak, the Alum Mount, whereas the 1913 definition extends the name over the whole range which includes this peak. Jim Barrett wrote that The Alum Mount is the peak now called Gibraltar Sugarloaf. The Gibraltar Sugarloaf is probably the primary location of the placename Mini Mini and the rest of the range derived its name from this site. In current usage, the Mini Mini Range is the name for a major spur off the Great Dividing Range, extending as far as the Gibraltar Rocks. Mylecharane’s 1913 definition suggests that the name applied as well to the lower, more eroded sections of this range as far as Gibraltar Sugarloaf, and perhaps all the way to the Cox River at Billy Healy Hill.

{In the next article, Jim Smith goes on to conclude his research on the names listed by Mylecharane.}

Vale of Clwydd

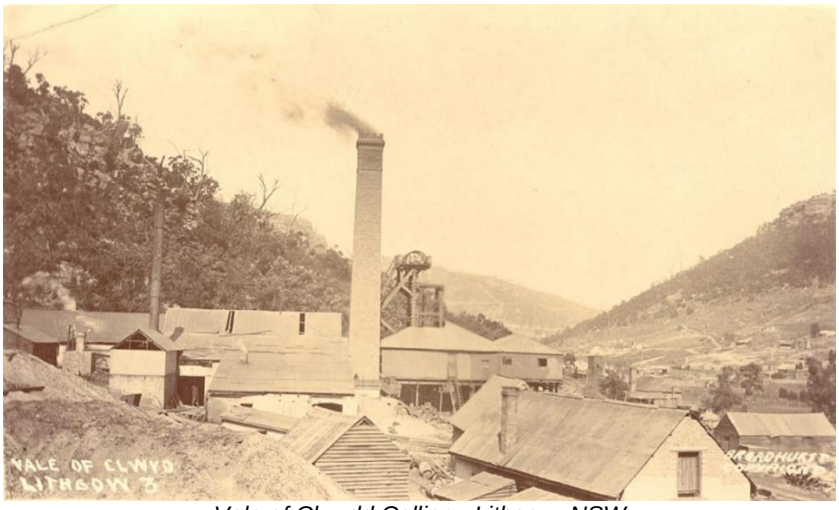
It was Governor Macquarie, on his trip to Bathurst in April 1815, who brought the name Vale of Clywdd to the region. Macquarie was moved by the beauty of the Hartley Valley and the escarpment and named the valley the Vale of Clywdd. After descending Mt York he wrote in his journal:

"*at 2.15pm we pursued our journey in the carriage over a fine plain verdant country of open forest land through a beautiful vale of five miles I have named the vale Clywdd after the valley of the same name in Wales. This Vale terminates at a river running South formed by two streams, one from the westward (the Cox) and one from the eastward (the River Lett) at a distance of five miles from Mt York*".

Rural scenes at Clwydd, Wales

This reference to the top of the Hartley Valley remained in use 'til late Victorian times. An 1879 map of the County of Cook marks the River Lett valley as the Valley of Clwydd. In the late 1800s a village of Clywdd subdivision was planned just east of the River Lett Crossing on Browns Gap Rd, the origin of the house blocks being built on today. In Colliers Arcade up at Blackheath a 1924 tourist map on the wall attributes the name Vale of Clywdd to the whole of the Hartley/ Kanimbla valley.

The Vale of Clywdd as a name clearly belongs to the Hartley Valley, so how did it become the name of the small community located just east of Lithgow on Hartley Valley Road? All is made clear in the publication "Looking Back and Forward", a 1947 publication by the Vale of Clwydd Progress Association, where it is stated "*the settlement was officially founded in 1867 when a member of the company (that sunk the coal mine in the Vale of Clywdd), a Welsh mining engineer, named the area the Vale of Clwydd*".



Vale of Clwydd Colliery, Lithgow, NSW

Not a bureaucratic bungle, more just a coincidence, two different individuals, at different times, seeing the likeness of these areas to the Vale of the same name in Wales.

Ramsay Moodie, Hartley District Progress Association

The Technical Side

Obtaining technical assistance

The NSW Heritage Council has advised in the past, the best way to ensure that a heritage building survives for future generations is for it to be used. Yet historic buildings were not designed with modern requirements for access, fire safety and building services in mind. In fact, some of our oldest buildings predate the existence of any formal building regulations in Australia.

Old houses in need……

Over time the NSW Heritage Division has produced a list of resources to help those seeking advice on fire safety, access and services, and their website contains a wealth of publications, many of which are free to download, which assist the home owner, tradesman and developer to undertake work on heritage buildings.

Some of the topics covered include historic masonry; cracking in buildings; terracotta roof tiles; marble headstones; salt attack and rising damp; metalwork; slating, tiling and roof plumbing; wood preservation; removing paint from old houses; paint, plaster and lime wash – the list goes on.

In addition, the Heritage Division's Technical Advisory Group provides directories for conservation products & services directory, including firms and specialist trades who provide a range of heritage supplies and services across NSW.

Salt attack *Peeling paint on timber* *Slate roofing*

Check these heritage consultant directory for professional heritage consultancy services across NSW. Also check for services, suppliers and tradespeople in your local business phone directory, newspaper or search on the internet. Sometimes your local Council will have a district specific Heritage Trades Directory.

There are a number of helpful publications on heritage conservation in Australia, available through the Sydney Building Information Centre and the National Trust of Australia (NSW) Bookshop.

Another useful directory for heritage building restoration is www.oldhouses.com.au , the numerous publications available covering a wide range of subjects.

Please note that inclusion in any such directory is not necessarily a recommendation or endorsement by the local Council, the Heritage Division or Heritage Council of NSW of any qualifications, skills or experience, or ability to meet your project requirements.

Convict barracks, Macquarie, Bathurst

Fairfax residence, Orielton, Narellan

Therefore, before purchasing supplies or engaging a firm, you should always check their suitability for your project requirements first! Check their qualifications, membership/s and accreditation; ask about relevant experience and to see examples of previous work, as well as references from previous clients; and obtain more than one quote.
Help is always out there!

Community events & updates

Scenic Eastern Escarpment Master Plan

Further to the article in HERITAGE Newsletter No. 50 March-April on this subject, BMACHO was represented at a meeting at 1.30pm at Glenbrook on 17 May 2017, when an address was given to the Glenbrook District Historical Society. It was presented by Soren Mortensen, Environmental Planning Officer for Blue Mountains City Council. The following notes are provided for the information of readers:

Soren advised that this large-scale planning initiative for the escarpment area will be funded by Blue Mountains City Council. The issues within the Master Plan are very broad and include heritage, public land management and recreation. The covered area goes from the Hawkesbury Lookout down to and including Darks Common. The Plan is more than just a reserve plan of management, and will look at all the reserves in that area, seeking to provide connectivity between them and the wider community. Most of the heritage items are around Mitchells Pass and in the southern sector.

The main stakeholders are Blue Mountains City Council, the Crown, Penrith City Council, Roads and Maritime Services, Railcorp and Sydney Water. There are connections between stakeholders, cross tenures and Crown lands held in trust by each Council.

The Plan's vision will relate to the management of open space at a strategic level, infrastructure renewal, tourism opportunities, coordinated management and economics.

The Plan was initiated by the Sydney Commission's Green Grid initiative, and will look at Blue Mountain City Council's existing strategies, and the Knapsack and Lapstone existing Plans of Management, being about managing changes that are required to those strategies and plans, to enable guidance for the use of government funding.

The Plan will calculate costings and investment, and prioritise regional projects.

A user survey was carried out by BMCC between 1 January 2017 and 1 May 2017, which resulted in some 300 responses.

The principle responses came from bicycle riders (40), walkers (180) and runners (25). The survey showed that there is a high level of usage of the various reserves, but that this will

change. A balance is needed to minimise impact when more facilities are to be provided, allowing more people to come.

Elizabeth Lookout

Bushwalkers

Marges Lookout

The priorities highlighted appeared to be for bike trails, walking trails, access opportunities, facilities, signage, protection of heritage items, accessibility, car access, transport and parking, balancing conservation and recreation.
The Management Plan must recognise that the reserves have to be managed for multiple uses, provide links to public transport and links to towns and other regional reserves. In particular, access/use will be set down for adaptive reuse for the Glenbrook (Lapstone) tunnel and the old STP (with Sydney Water) site, and attention to Aboriginal cultural heritage management.
Asset management plans would set priorities to match the level of use, the type of use and the users' priorities. Some uses don't mix, so planning and design for enhancement are critical to minimise conflict.
More investigation is needed for the Lapstone tunnel and the old STP site. The contamination matters have been addressed, but no strategic or heritage assessments have been done.
Matters highlighted by the meeting attendants at Glenbrook included:

- The Dark's Common shared pathways need work.
- The Whitten Memorial site and cottage need assessment and interpretation (the 150 year anniversary is due on 21/7/2017, and the site needs cleaning up).
- The Glenbrook tunnel name was corrected to the Lapstone hill rail tunnel.
- The Glenbrook History Walks should be acknowledged and allowance made re site access.
- Lucasville Station needs work.
- The viaduct – abseiling.
- Development v. informal walking tracks on private land. Some tracks have been lost. Council's only options would be to seek a right of way over the tracks, to acquire the land or seek alternate routes. No option is easy

Soren concluded that the Council are still doing stakeholder consultation – State agencies have been slow to respond. The Draft Plan should be ready by the end of July. The plans will go up on "Have Your Say" and other suggestions received by then. The Draft Plan will go to Council for endorsement, and then be placed on public exhibition during August-September 2017.
The meeting concluded at 2.10pm, and Soren was thanked for his presentation.

Patsy Moppett

Promoting tourism in our beautiful blue mountains

BMACHO, the Blue Mountains Association of Cultural Heritage Organisations Incorporated, was established in 2006 to support the work of the numerous organisations in the cultural heritage field in the Blue Mountains. In recent years, it has expanded to include neighbouring districts such as Lithgow, Penrith and the Hawkesbury.

BMACHO has been a strong and successful advocate on heritage matters at local government level. It is responsible for the Greater Blue Mountains Heritage Trail brochure which highlights significant heritage sites to tourists, to visit whilst in the Blue Mountains. Leuralla NSW Toy & Railway Museum is a member of BMACHO and recently hosted their meeting and morning tea for the members in the grand dining room.
For further information on becoming a member of BMACHO please contact the Secretary committee@bluemountainsheritage.com.au
The Leuralla NSW Toy & Railway Museum is open daily from 10am to 5pm. The Museum and gardens have particular appeal to families and special interest groups. For further info contact 4784 1169 or info@toyrail.com.au

BMACHO members meet in the original 1912 dining room at Leuralla

Leurella, 36 Olympian Parade, Leura NSW 2780
Phone: 02 4784 1169 • Fax: 02 4784 2462

Email: toyandrailwaymuseum@gmail.com

Celebrate 150 Years of Railway History

The Valley Heights Locomotive Depot Heritage Museum is planning to celebrate 150 years of railway history on the Blue Mountains. The anniversary is July 2017, 1867 being when the railway line went to Wentworth Falls (formerly Weatherboard).
Celebrations will be held over the weekend of July 21, 22 & 23:

- 21 July : Official Steam Train to Wentworth Falls followed by a ceremony.
- 22 July: From Penrith, ride Steam Train shuttles to Springwood and/or “Red Rattler” to Blacktown.
- 23 July: From Lawson ride Steam Train shuttles to Katoomba. Enjoy the street stalls and activities at Lawson.

Valley Heights Rail Museum is open each days, at 17b Tusculum Road, Valley Heights NSW 2777. Event details are to be confirmed (see website in the coming weeks).
Website: www.valleyheightsrailmuseum.info
Email: info@valleyheightsrailmuseum.info
Phone: 02 4751 4538 (leave messsage)

That mystery photograph….

Further information regarding the mystery photograph as presented in HERITAGE Newsletter May-June 2017, is provided by Dr Peter Rickwood. It was supposedly taken in Blackheath Glen pre 1903, but the more exact location is unknown. The original photo is inscribed on the back. The people in the photograph are:

Elsie Beer (Lithgow), Grace Sharp, Miss R Barnett;
Emily Sharp,(Mrs Alf Statham, Judy's grandmother married 1903), Mr Alf Field, dog Charcoal;
Ettie McLaren, Miss V Chandlerr.

The photograph

Blackheath Glen

One suggestion is that the rock in the background might be found around Lawson or Federal Falls, as there are some painted signs on rocks at Lawson in this vicinity.
If anyone can provide further information to BMACHO or the Blue Mountains Historical Society, it would be most welcome. *Patsy Moppett*

Wunderkammer – The Cabinet of Wonders

Everglades Garden Gallery is holding thought-provoking exhibition, opened on 10 June and running until 27 August.

Wunderkammer

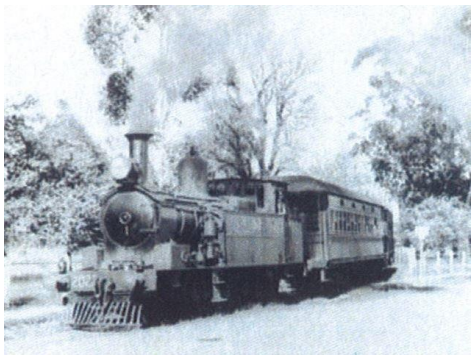
"Each work touches on a different aspect of the human-animal relationship, including biodiversity, pollution, climate change, conservation and stewardship. Each work asks us to examine our responsibilities as fellow travelers on this planet". Rod McRae, creator

Rod explains: "My principal area of investigation remains how art can influence and reinforce the environment and climate change debate. I draw on my knowledge and interest in taxidermy working with ethically sourced specimens as diverse as Polar Bear, Zebra, Lion, Lamb, Fox, Penguin, insects, skeletons and plant material to create installations to challenge human perceptions of the natural world and the non human species that inhabit it.
I would like to believe that art can make a difference!"

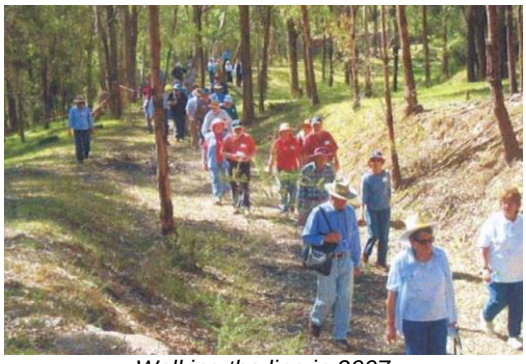
The exhibition is open from 11am to 2pm at Everglades Historic House and Gardens, 37 Everglades Avenue, Leura.
Ph: 02 4784 1938
Email: everglades@nationaltrust.com.au

Pansy Line Tour

Due to popularity and demand this tour will be held again in August!
Join the Kurrajong-Comleroy Historical Society In as they take the Pansy Line Tour on Saturday 12 August 2017. Join them as they explore the remnants of the Richmond to Kurrajong Railway 1926-1952. With the railway gone for so long, it is getting difficult to find many remnants but our experienced local guides will show you what there is, much of which is on private property and not normally accessible. Coaches depart from Richmond and the tour includes lunch in Kurrajong. Some walking would be involved.



Pansy

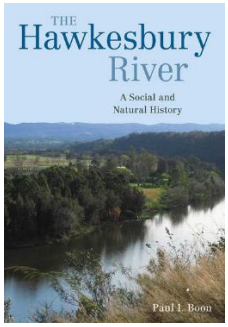


Walking the line in 2007

Bookings are essential. Details and bookings are to be found on their website,
www.kurrajonghistory.org.au
Or contact David on 02 4567 7993.
Costs are: Adults $35, Seniors $30 and children $25.
Order a copy of their Pansy book for the tour, only $10 (normally $12).

Book launch: The Hawkesbury River

The Hawkesbury is the longest coastal river in New South Wales. It has a long Aboriginal history, and was critical for the survival of the early British colony at Sydney. Its weathered shores, cliffs and fertile plains have inspired generations of artists and poets, and it is surrounded by an unparalleled mosaic of national parks, including the second-oldest national park in Australia, Ku-ring-gai National Park. But, despite being so close to Sydney, and home to tens of thousands who live within the local government area that takes its name, to many people the Hawkesbury is a 'hidden river' – its historical and natural significance neither understood nor appreciated.



Hawkesbury River

Paul Boon will be discussing his new book, *The Hawkesbury River: a Social and Natural History* (CSIRO Publishing) at Hawkesbury Central Library on Thursday 6 July 2017.
Paul is a Professor in the Institute for Sustainability and Innovation at Victoria University, Melbourne, and has published extensively on aquatic ecology and management. Though he has lived in Melbourne for the past 25 years, the Hawkesbury is very close to his heart: he spent his childhood and adolescence on the river, and conducted field studies for his

BSc(Hons) project on the mangroves at Brooklyn. He will describe how the Hawkesbury River has evolved, and how its uses have impacted on the community.
To be held at Hawkesbury Central Library, at 6pm. The event is free but bookings are essential (Phone 02 4560 4460). Hawkesbury Central Library is located at 300 George Street, Windsor.

Historical Open Day - Arms of Australia Inn Museum

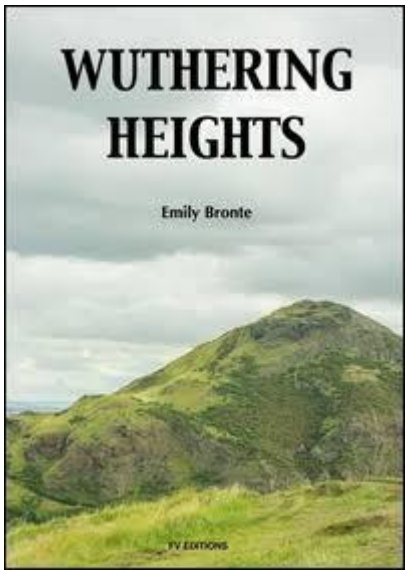
The Nepean District Historical Society will be holding their annual Historical Festival and Open Day at the Arms of Australia Inn Museum on Sunday July 16, 2017 at Emu Plains, from 9am to 3pm. Admission is free.
This year's Open Day will be centred on celebrating one of the most important achievements in our early colonial history, the opening of the Victoria Bridge and the start of the railway line from Penrith to Wentworth Falls in 1867.
There will be special displays of railway equipment, and a display in the inn telling the history of the building of the bridge and the railway line which went to Bathurst and the West.

The NSW Corp of Marines, who recreate the lives and times of the First Fleet Marines, will be at the festival and will be in charge of keeping law and order, helped by members of the 5th Light Horse Regiment from Windsor.
The marines will have displays, drills, and floggings of miscreants and re-enactments from the life and times of the early colony.
As in previous years, the festival will have activities for young and old - including the animal farm, pony rides, the old fashioned school room where they can write on slates, merry-go-round and jumping castle, plus plenty of stalls, displays, live music and food.
For more information call the inn on 4735 4394 on opening days or email info@armsofaustraliainn.org.au

Woodford Academy Happenings

The Woodford Academy is very proud to present "*Ephemeral Threads*", a collaborative sensory and tactile exhibition by Academy Artist in Residence, floral artist Edith Pass, & Blue Mountains photographer Jennifer Leahy, for our upcoming open days on Saturday 1st & Saturday 15th July, & Saturday 19th August 2017. The exhibition explores floral installation weavings that incorporate botanical and photographic materials.
Edith Pass is a floral and visual artist, with a background in print media, drawing, floristry and education. Her visceral investigations touch on the subject of commemoration, giving tribute to the post-colonial/Victorian women of the Blue Mountains. Edith runs a bespoke floral art and design studio based in the Blue Mountains called "Floral Ink", located at The Woodford Academy since 2015. See www.floralink.com.au
Jennifer's photography explores ideas of historical decay embellished with remnant traces of grandeur. Jennifer Leahy is a creative photographer based in the Blue Mountains, and works across both film and digital media creating imagery that questions historical reality, memory and folklore. Her interest and experience in photographic records and visual archives informs many aspects of her image making. See www.silversaly.com.au

Join Edith & Jennifer for the Exhibition Launch on Saturday 1st July 2017 at 1pm to hear more about the creative process behind this exciting collaboration.
Museum Entry & Exhibition
Adults $6, Concession/Child (4-16yrs) $4, Family $15 (2 adults, 2 children)
Guided Tours - $2/Person (4+years)
Woodford Academy 90-92 Great Western Highway, Woodford
(on street parking available on Vale Rd)



Woodford Academy is also thrilled to support the second *"Most Wuthering Heights Day Ever"* to be held in the Woodford Reserve on Saturday 15th July 2017. Originally the grounds of the Woodford Academy, the Woodford Reserve is a local heritage listed park, located behind the Blue Mountains' oldest building. All guests dressed as Kate Bush will be offered discounted entry of $2 to the Woodford Academy museum/café & exhibition on the day.
More information about this wonderful, fun community event can be found at
www.facebook.com/Most-Wuthering-Heights-Day-Ever-Blue-Mountains-NSW-454173658120146

As a volunteer managed property, all proceeds from Woodford Academy open days and events directly contributes to the conservation of this important historic property. Thank you for your ongoing support. *Elizabeth Burgess*

Lilianfels Winter Escape

Lilianfels present their winter escape details. Savings can be made through staying two or more nights at Lilianfels Resort and Spa, to explore the wonders and beauty of winter in the Blue Mountains: the winter school holidays, Yulefest celebrations, Winter Magic Festival, the MET Concert, Winter Magic Festival, the Daffodil Festival and much more.

- Yulefest, Christmas in July, is available this season every Friday and Saturday from the 1st July to 29th July 2017, at the Hydro Majestic at Medlow Bath.
- MET Winter Concert is to be held on Saturday 22 July 2017 at the iconic Hydro Majestic Ballroom at Medlow Bath. The Metropolitan Orchestra will explore the depths of emotion within the Hydro's stunning surrounds.
- Mountain Concert High Tea will be held on Saturday 19th August.
- Opera Festival 2017 at the Hydro will be held on the October long weekend, Saturday 30th September to Sunday 1st October 2017.

See www.lilianfels.com.au for further information on events.
Contact Email: reservations@lilianfels.com.au for bookings

Blue Mountains Association of Cultural and Heritage Organisations (BMACHO) Bi-annual Conference 2018

Save the date! BMACHO has scheduled its 2018 Conference a year out, and knows that last year's Conference at Mt Victoria "*Artefact"* will be a hard act to follow. The date is ***Saturday 12 May 2018***, and the theme is "Heritage Landscapes".

Mount Victoria Manor, Montgomery Street, Mt Victoria

The venue is to be Mount Victoria Manor, Mount Victoria, a significant heritage house with an interesting history. The property was built in 1876 as a weekender for John R Fairfax, founder of the Sydney Morning Herald. It was designed by architect and builder Alexander Dean. Since the late 1800s the property has had several owners and many renovations, including being George Cooper's Grand Hotel in the 1890s. In honour of its original name and its significance to the Mt Victoria village the property is now known as Mount Victoria Manor.

Tarella Cottage Museum, Hobby's Reach

This cottage was built by John McLaughlin, Sydney solicitor and Member of the Legislative Assembly, in 1890 as a holiday cottage for his family of four children to escape the heat of Sydney summers. His daughter Beryl McLaughlin was the benefactor of the Blue Mountains Historical Society, leaving Tarella and the land to the Society on her death in 1988 just two months short of her 100th birthday. The cottage contains an eclectic collection of memorabilia of the late 19th and early 20th centuries.
Tarella Cottage Museum is open on the last Sunday of each month from 10am - 4pm.
Homemade refreshments would be available
There is a small entry fee for adults.
Groups are always welcome throughout the year by prior arrangement and refreshments can be provided. Please contact the Society.
Associated with Tarella is Blue Mountains Historical Society. Their meetings are held at their Library & Research Centre at Tarella on the first Saturday of the month from February to November from 10 am until 12 noon at the premises, 99-101 Blaxland Road, Wentworth

Falls. Visitors are very welcome to attend these meetings. Morning tea is available from 10am and meetings commence at 10.30am.

John McLaughlin

Tarella Cottage Museum

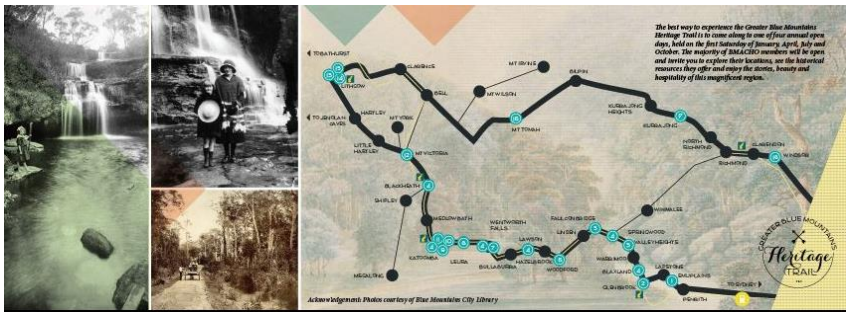
John McLaughlin Collection

The Library and Research Centre are open, and publications are available for sale.
If visitors wish to attend regularly then we would ask you to become a member and you become eligible to attend our monthly excursions to places of historic interest and borrow books from our extensive library of history books.
The monthly BMHS meeting coming up on Saturday 1 July 2017, will feature speaker Keith Painter, author of "Hassans Walls, Prized and Pillaged".
The next Open Day will be Sunday 30th July 2017.
Postal address: Blue Mountains Historical Society, PO Box 17, Wentworth Falls NSW 2782
Email: bmhs@bluemountainshistory.com
Ph: 02 4745 3824
www.bluemountainshisory.com

Greater Blue Mountains Heritage Trail Update!

BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO intend to reprint the Heritage Trail brochure and the final draft is ready for printing. In addition, during 2017 BMACHO intend to hold a competition to encourage visitation to Trail participant properties.
For this purpose, BMACHO asked members to think of an artefact or item at their premises that can only be found by visiting. BMACHO will then list questions on a "Passport and Entry Form", which will be an insert to the brochure, and visitors can either answer the questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months. The Passport Entry and Competition forms are also about to go to print, and information will be available on the Trail website (see below) as soon as the Competition is launched.

Westpac
Australia's First Bank



If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

A Most Ingenious Invention: An Early History of the Pianola in Australia

"The Pianola is certainly a most ingenious invention, and I feel quite sure that nothing has more closely approached hand-playing." Moriz Rosenthal, famous Concert Pianist
(Source: AEOLIANS issued by Henry M. Birge & Co, Melbourne c 1902)

Throughout most of the 20th century the Pianola played an important role in the musical life of many Australians and this is why even today many older Australians have fond memories of it. This essay is dedicated to telling the social history of the Pianola in Australia during its introduction in 1900 and is taken from my larger work which covers the period up to the First World War. It is also a history of the 65 note piano player in this country, i.e. the first and earliest Pianolas could only play 65 notes of the piano.

Aeolian Pianola with grand piano, New York 1898

The first major Pianola concert, New York, 1899

Sentiments about the place of the Pianola in Australian history were beautifully expressed by the late Denis Condon. Denis, a musicologist and avid collector of player pianos, penned these words in 1975 during a period of intense renewed interest in all things player piano:

Player pianos are numerous enough in Australia for most of the population to have personally had a try at pumping a roll through. Certainly all player owners have had their initial interest awakened by the enthusiasm of player piano owners. They are indeed happy folk, owners of player pianos - good quality players are easy to find, fairly simple to repair, no trouble to adjust and, with average care, maintenance free.

Player piano enthusiasts here enjoy the luxury of living in one of the only two countries in the world providing new repertoire for their machines - 88 note rolls are plentiful, of extraordinary variety and not unreasonably priced. Pumping a player piano gives a splendid "do-it-yourself" feeling second only to playing by hand; it is creative, the "performer" (or is it operator?) being able to give free reign to the most extravagant flights of musical fancy. He can sing, often in any one of seven keys of his

choice; indulge in the odd dramatic pause; crash through a magnificent climax, using the damper pedal as he sees fit; or play poetically with a wondrous pianissimo with no fear of notes failing him. If the Pianolist has a machine equipped with some sort of accentuating device such as "Themodist" or "Solodant" or the like, he can, as can any other musician, practice his performances until they are equal to the best "live" playing and very satisfying to both him and his listeners. There is no doubt that the player piano is a most sociable instrument when it comes to self-expression in music, the most sociable of the arts. (Source: Australian Collectors of Mechanical Musical Instruments (ACMMI) News Bulletin No.2 March 1975)

There are lots of scholarly books and articles written on the Pianola, but very little about the arrival of this amazing machine in Australia in 1900. This is not a technical history of the Pianola but an Australian social history of this ingenious invention.

The Pianola arrived in Sydney in February 1900 courtesy of William Henry Lardelli. However, before discussing what Mr. Lardelli did with his Pianola, it seems prudent to provide some background material on the music scene in Australian during the Edwardian period as well as a brief history of the early Pianola.

MUSIC IN AUSTRALIA

From the time of the Australian Federation in 1901 a growing sense of national identity began to emerge in the arts, although with a patriotic attachment to the 'mother country' (Britain and the Empire), which continued to dominate musical taste. In order to gauge the possible reaction the Pianola would have received upon its arrival in Australia in 1900, it seems sensible to give a brief account of the state of music in Australia at the beginning of the Twentieth century. In this regard I have selected the well-known work of W. Arundel Orchard, *Music in Australia.* Orchard arrived in Sydney in 1903 and is a prime source of information. Writing in 1952, Orchard describes this period as follows:

The beginning of the twentieth century found Australia both alive and vigorous in the development of music. During the past fifty years the slender link with England and Europe was considerably strengthened by improved facilities of travel, consequently the visits of overseas artists were not only more frequent, but many of the world's finest musicians had found it worthwhile to take the journey which, though still a matter of weeks instead of months, was endured under more comfortable conditions. The more frequent tours of distinguished visitors enabled resident musicians to adjust their standards and keep in closer touch with the developments in the great centres of music.

Locally great improvements had been made. Teaching was good; at least there were two conservatoria of music, those of Adelaide and Melbourne, to say nothing of smaller collegiate efforts. Choral singing was flourishing and much more general than it is today. Subscribers were plentiful, and there were no picture theatres or broadcasting commission to disturb the activities of choral societies. People were making music in their own good time, and doubtless were better and happier in doing it. Concert tickets and social invitations still bore the direction, "Carriages may be ordered for 10.15p.m." In fact life was then more leisurely, dignified, and comfortable. There were drawbacks and inconveniences, more or less tolerated, but the period of noise, speed and vulgarity generated by mechanical inventions had not yet arrived. (1)

One assumes his reference to 'mechanical inventions' does not including the Pianola or the Phonograph. With a burgeoning interest in music in Australia the arrival of the Pianola in 1900 was guaranteed to be favourably received, which it was.

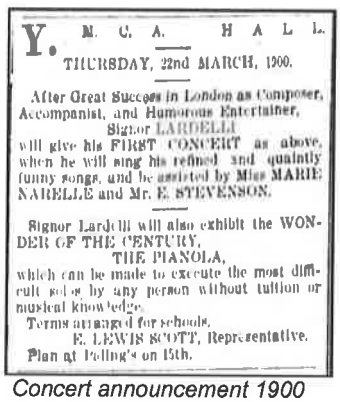
A BRIEF HISTORY OF THE PIANOLA

Whatever the claims to priority of invention may have been, it was certainly the Pianola which outshone all the rest, as the first truly musical piano player. The very first Pianola (piano player) was built in early 1895 by Edwin Votey, in a workshop at his home in Detroit, and his Farrand & Votey Organ Company made several trial models during 1896 and 1897. The first commercial use of the Pianola trademark occurred on 15 January 1898, and by the autumn of that year production in Detroit had started in earnest, with instruments being sold by the Aeolian Company in New York and elsewhere in the USA.

Like most other piano players, the Pianola worked by suction, created by foot pedals, and it played 65 notes of the piano, losing about an octave at each end of the compass. Its rolls were perforated at a scale of six notes to the inch, the same as the contemporary 58-note organ rolls, and both types of roll had pins that protruded from each spool end, where they attached to the Pianola mechanism. From left to right, are a sustaining pedal lever, a dynamic

subduing lever, a tempo lever that moves over a curved scale, and a forward/re-roll lever. Only the earliest of Pianolas are as simple as this.

Aeolian Pianola Advertisement c1903



Y. M. C. A. HALL.

THURSDAY, 22nd MARCH, 1900.

After Great Success in London as Composer, Accompanist, and Humorous Entertainer, Signor LARDELLI will give his FIRST CONCERT as above, when he will sing his refined and quaintly funny songs, and be assisted by Miss MARIE NARELLE and Mr. E. STEVENSON.

Signor Lardelli will also exhibit the WONDER OF THE CENTURY, THE PIANOLA, which can be made to execute the most difficult solos by any person without tuition or musical knowledge.

Terms arranged for schools.

E. LEWIS SCOTT, Representative.

Plan at Paling's on 15th.

Concert announcement 1900

William Henry Lardelli 1897

Export of Pianolas to Europe began in 1899, and Queen Victoria, for example, owned a Pianola for the last two years of her life, although one might surmise that she never actually played it herself. The rest of the world followed including Australia in 1900.

THE *WONDER OF THE CENTURY* ARRIVES IN AUSTRALIA 1900

My research has shown that the first Pianola arrived in Sydney from London in February 1900 courtesy of **William Henry LARDELLI** (1857-1910).(2) William Lardelli is better known by his self-styled Italianised version of his name - *Signor Guglielmo Enrico Lardelli*. Born in England in 1857 he first arrived in Melbourne in 1875 and was a successful organist, and a prolific composer of songs as well as piano, opera and organ music. He returned to England in 1885.(1)

The arrival of Signor Lardelli and the Pianola in Sydney in February 1900 was considered an important event by the press and the reporting on both of these topics is the genesis of our Pianola history in Australia:

> ***Return of Signor Lardelli.*** *Among the passengers by the incoming Barbarossa is Signor Lardelli, who returns to Sydney after a sojourn of five years in the world of London. Like many another accustomed to the warm glow of this southern clime, he found the English winter was in a fair way of breaking him up, so he returns with his muse, and, by way of compensation for his long absence, brings along with him a number of musical novelties. The chief of these is the pianola, an ingenious American contrivance, which adjusted to the keyboard of an ordinary piano, enables a person, whether musical or unmusical, intelligent or ignorant, who has strength enough in the feet to work a couple of pedals, to produce the most exquisite music, to execute such titles as Bach's Chromatic Fantasia and Fugue, and Liszt's Rhapsodies, with perfect ease and correctness, with the most minute detail of expression. Any doubt on this matter will be removed by Signor Lardelli; who purposes to take the public into his confidence, and demonstrate how it is done. Meanwhile, it may be said that this novel instrument has the appearance of a small American organ. It is easily wheeled up to the piano and adjusted to the key board, and the operator having inserted a roll of perforated paper — of which there are 7000 and more to choose from — has but to put his feet to the pedals to cause the paper to revolve, and so to set into swift and harmonious vibration little 'wooden' fingers, which overlap the keys of the pianoforte, and communicate to them a touch 'which may be high and ringing, soft and clinging,' according as the performer manipulates a little gauge, which finds itself convenient to his hand. Another novelty, in which, perhaps, the general public will be less interested, is the 'Virgil Clavier,' a dummy keyboard for pianoforte students, which has lately been adopted by the Berlin Conservatorium, and which, by reason of its 'click,' is said to surpass all other 'dummies' as a means of arriving at a perfect technique. As for himself, Signor Lardelli has not been idle during the years he has been away from our shores. No fewer than 150 of his musical compositions have been published by London firms, eighty of them emanating from Edwin Ashdown, Limited, who have appointed Signor Lardelli their Australian agent. In addition to these, Signor Lardelli is the composer of a number of songs of a refined, humorous turn (the words in every case being by Mr. M. B. Spurr of 'Tin Gee Gee' fame), and he contemplates in the near future; introducing them himself to the*

public notice. The return of Signor Lardelli, therefore, should create a flutter in circles musical. (Evening News Sydney Fri 23 Feb 1900).

MR LARDELLI'S FIRST PIANOLA CONCERT

It appears Signor Lardelli and the Pianola did cause a flutter in musical circles and he did not waste any time in promoting the Pianola in Sydney. His first big step was to exhibit the 'WONDER OF THE CENTURY, THE PIANOLA' at his first concert which was held at the YMCA Hall Sydney on the **22 March 1900**. A newspaper report promoting the forthcoming concert provides some very interesting details about Lardelli, the concert itself and of course the Pianola. The following promotional report is worth reporting:

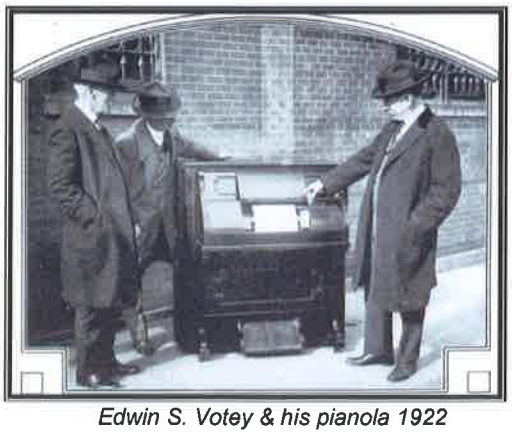
***SIGNOR LARDELLI'S CONCERT**. On Thursday next (22 March), at the Y.M.C.A. Hall; Signor Lardelli, whose reappearance in Sydney after an absence of five years was warmly welcomed when he sang at Mr. Lawrence Campbell's Kipling recital, will give an entertainment upon his own behalf. He will be assisted by that admirable vocalist **Miss Marie Narelle** (3) and by other favourite artists. His own share of the programme will be made up of excerpts from his humorous, repertoire, which is broad and extensive; and he will also display the prowess of the Pianola, an invention intended to enable lovers of the piano who cannot play the instrument to enjoy its effects by means of a mechanical attachment. (The Australian Star (Sydney) Sat 17 Mar 1900).*

REVIEWS OF THE FIRST PIANOLA CONCERT

Lucky for posterity there are two reviews of the first Sydney Pianola concert:

***First:** In Introducing the Pianola, which is a pneumatic machine, attached to the keyboard of a piano, Signor Lardelli has given us a novelty, for by this means he can produce some thousands of pianoforte pieces, such as Rubinstein's "Valse in E flat," "Ronda Capriccioso," by Mendelssohn, and Wieniawski's "Valse de Concert," all of which were played by him last night in a faultless manner. It can be worked so as to produce the requisite light and shade, a rallentando and even to accentuating a given chord in perfect style. Indeed, as expressed by many connoisseurs; played a long way better than many of the world's artists could do. We understand that the machine costs £65 In London. The class of entertainment given by Signor Lardelli is certainly most enjoyable. (The Australian Star Sydney Fri 23 Mar 1900).*

***Second:** Signor Lardelli gave a concert at the Y.M.C.A. Hall last week, at which the compositions were almost entirely from his pen. The only exceptions were those heard on the Pianola, a new instrument, of which Signor Lardelli is agent in these colonies. It is played by the feet, like a harmonium, and gives a solo with all the tone, power, and accuracy of a virtuoso, but lacks, of course, expression. On this occasion it pedalled out Rubinstein's pretty Valse in E flat, Mendelssohn's Andante and Rondo Capriccioso, and other well-known pieces. Signor Lardelli was himself heard in a number of humorous songs, although he cannot be said to be very funny. Some bright and light songs were sung by Miss Marie Narelle, and Mr, Stevenson played several pleasing violin soli. (The Sydney Mail & NSW Advertiser Sat 31 Mar 1900).*



Edwin S. Votey & his pianola 1922

Chris Neave, peddles, with fellow collector looking on

The reviews of the Pianola concert given by Lardelli in Sydney on 22 March 1900 cited above constitutes it as one of the very earliest known Pianola concert in Australia. The first Pianola concerts began in 1898 at The Aeolian Company's warerooms at 18 West 23rd Street, New York, USA. The first known Pianola Concert in the UK was held on Friday 28th February 1902 and organised by Milsoms, a large music dealer in Clifton, Bristol – the programme for this

concert has survived. I believe the March 1900 Lardelli Pianola concert to be one of the earliest known Pianola concerts in the British Empire.

COST OF A PIANOLA

There are a couple of interesting bits of information from the above Pianola concert reviews; firstly that Signor Lardelli is 'agent in these colonies' for the Pianola. Secondly, the cost of the Pianola in London in 1899 (the time he would have embarked for Sydney) was £65. More will be said about the Pianola agency in Australia further on. However, by 1902 the cost of the Pianola in Australia had changed very little e.g. Henry M. Birge & Co. of Sydney were advertising the cost as £60 (or credit £65 on monthly repayments) (*The Maffra Spectator* 8 May 1902).

Of course before you purchased your Pianola you would have to already own a piano or have to purchase one. The first Pianola was a piano player (push-up) and the price of an upright piano at the turn of the 20th century ranged from £12 (second-hand) to £95 plus (new) for famous upright and grand pianos such as Bechstein.

In Australia in 1902 the average weekly wage was £1.36 (by 1907 £1.39) which means in 1902 the cost of a Pianola would have been for the average worker 44 weeks' wages or 47 weeks on monthly repayments.(4) To own a Pianola would have been an impossible dream to those trying to live on an average weekly wage.

MR LARDELLI ON THE ROAD

After the success of the concert in Sydney, Lardelli then spent several months travelling in Australia, giving similar concert performances, such as the one at the Melbourne Exhibition Building 23 May 1900 and a further one in the Victoria Hall in Adelaide (date unknown, but assume mid 1900). The advertisement for the Melbourne Pianola demonstration follows but no newspaper review of it was located:

> ***Melbourne Exhibition Building 23 May 1900*** *Matinee: Attraction!!! - A New Musical Instrument, The Wonder of the Century, The Pianola. The Pianola, will Play "Paderewski Solos," "Mark Hambourg Solos," "Rubinstein Solos." Signor Lardelli will give a Lecture on the merits of this most marvellous instrument. (Admission one shilling, tickets from Allans) (The Melbourne Age, Wed 23 May 1900)*

After this initial burst of energy in early 1900 giving concerts and promoting the Pianola, Signor Lardelli appears to have found the need for other employment as news of his Pianola activities abruptly ended by mid 1900. Maybe he lost interest in the enterprise or he did not have the necessary entrepreneur skills to make money from selling the Pianola preferring to leave it to others, i.e. Nicholson & Co. From late 1900 onwards the shortage of money seems to have been a problem for Lardelli, as he was constantly moving around the country giving concerts of his own works, teaching music or accepting music posts as organist and/or choirmaster at some of Australia's prestigious cathedrals. At Charters Towers on the 7 July 1910, Lardelli became ill and died of pneumonia, he was aged 55.

PIANOLA AGENTS IN AUSTRALIA

In an advertisement in Sydney in **July 1900** Messrs. Nicholson and Co Sydney made the claim they were the sole agency. This appears correct with Nicholson either buying the sole agency claim from Signor Lardelli or just securing it from the Aeolian Co because Lardelli failed to do so himself. Nicholson's claim is stated in the following newspaper report:

> ***Mr. J. C. W. Nicholson****, of Messrs. Nicholson and Co., the well-known music and piano house in George Street, returned last week from an extended visit to the various piano factories of England, Germany, and America. In addition to the agencies they already hold for the celebrated Bechstein, Ronisch, Mignon, and other pianos, Mr .Nicholson has secured for the firm sole agencies for the Mason and Hamlin, Krell, Palmer, Crown, Cameron, and Sterling pianos, and the celebrated Pianola and Orchestrelle. Messrs. Nicholson is also sole Australian agents for John Church and Co., the music publishers of New York and London. (Sunday Times (Sydney) Sun 1 Jul 1900)*

In September 1900 Melbourne's *Carnegie & Sons* (106 Elizabeth Street) advertised themselves as the sole agents for the Pianola and the *Aeolian*.(5)(6) It is assumed they were referring only to Melbourne and/or Victoria. So with two companies advertising themselves as the Pianola agent, things must have come to a head by 1901 with the arrival of Henry M. Birge & Co. who took over sole agency for Australia. The Aeolian Co. New York must have finally decided who they wanted as their Australian agent.

It is interesting to note that another claimant other than Lardelli suggests he was the first to introduce the Pianola to Australia. This was reported in an advertisement for a concert 5th April 1901 to be held at the Town Hall Sydney (*Sydney Morning Herald*, Wed 27 March 1901). This notice advised readers that Mr A B Adams will introduce the Pianola for the first time and that the concert plan was available from Paling's (W H Paling & Co). As this advertisement did not say who the sponsor of the concert was, it probably was Birge & Co, as Mr Adams was identified as "Our Mr. Adams" by a Birge advertisement for 13 April 1901.(7) Birge & Co were not the first to introduce the Pianola to Australia, as already stated above that honour must go to Signor Lardelli.

W H Paling & Co was not the Pianola agent for Australia, though in 1901 they did have limited agency rights as attested by the following advertisement:

> ***W H Paling & Co. Limited.*** *The Pianola. Having taken the exclusive Agency for the Pianola & Aeolian for Newcastle & Environs from Messrs. Henry M. Birge & CO., the sole agents for Australasia, we have arranged to give daily recitals at our warehouse this day (Wednesday) from 10am to 1pm & tomorrow (Thursday) from 10am to 4pm and extend an invitation to all interested to see and hear these ingenious inventions. W. H. Paling & Co. Limited, 42 Hunter Street, Newcastle. (Newcastle Morning Herald Wed 17 Apr 1901)*

Henry M. Birge & Co became the sole agent for the Pianola in Australia opening their showroom in Sydney in early 1901 and their Pianola and Aeolian Rooms in Melbourne in December 1901. Why Nicholson (Sydney) and Carnegie (Melbourne) lost their agency rights is unknown. Henry M. Birge & Co. maintained their sole agency rights to sell the Pianola in Australia from *The Aeolian Co.* New York up to 1908 before changing its name to the *Pianola Company*. The story of Henry M. Birge & Co. continues the story from 1901 onwards and is the subject of the next chapter in my monograph *A Most Ingenious Invention: An Early History of the Pianola in Australia* (published 2017).

CONCLUSION

The Pianola went on to become the well-known and much loved musical instrument of choice for many Australians during the 20th century. An active interest in the Pianola and player piano was maintained throughout this period as can be seen by the fact that the well-known Sydney piano roll manufacturer *The Mastertouch Piano Roll Company* was able to continue its operations from 1919 until it closed its doors in 2005. At its height of interest in the first half of the 20th century, piano rolls were also manufactured in large numbers in Melbourne by *The Anglo-American Player Roll Company* under the brand name "Broadway". This company made piano rolls from 1921 up until the death of its founder Len Luscombe in 1957.

After more than 100 years in Australia, interest in the Pianola and player piano lives on thanks to collectors and enthusiasts who continue to love this amazing invention and who hope this interest will survive in a physical sense, i.e. player pianos will continue to be rescued, restored and used, rather than end up as an item of interest in a museum.

Christopher Neave

1. W.Arundel Orchard, Music in Australia, Melbourne 1952, page 65

*2. **LARDELLI, William Henry** (1857- 1910) (Composer & Organist): William Henry Lardeilli, also known by the self-styled Italianised version of his name, "Signor Guglielmo Enrico Lardelli," was born 12 May 1857 in Brighton, Sussex, the son of Italian immigrant Maurizio Giovanni Lardelli and Louisa Matilda Lardelli. Lardelli first arrived in Melbourne in 1875. He became prominent as an organist in Maitland and Sydney in the 1880s and 1890s. He also spent much time in England during the period 1885-1900. Later in life he lived in Grafton, Bathurst and Perth, followed by a short time in Queensland where he died at Charters Towers on 7 July 1910, at the age of 55 years. He was the first Australian musician to be made a Fellow of the College of Organists (from 1903 the Royal College of Organists) and he wrote several pieces of organ music. He was a prolific composer of popular songs, piano pieces, operas and operettas and was named one of Australia's 'first-class' organists in 1896. From the late 1890s Lardelli concentrated on compositions of popular music and the performance of humorous recitations and songs which took over from his career as an organist. Lardelli was a restless character who did not spend more than a few years in the same place and in later life became plagued by bad debts and ill health. After arriving back in Sydney in February 1900 from a trip to England, Lardelli was able to say that 150 of his compositions had been published in London, of which 80 were for Edwin Ashdown Ltd who had made him their Australian agent. Just after his arrival back in Australia he gave a 'bright concert' in the YMCA Hall on 22nd March (1900) featuring a pianola (invented in 1895) which he had brought with him from Europe and the rest of the programme consisted of his own compositions of a 'light' nature. He then spent several months travelling, giving performances in a similar vein, including one at the Melbourne Town Hall and Victoria Hall, Adelaide. (Source, Richard Ward, The Sydney Organ Journal 45.4 (2014). To see this biography in full go to: https://ozvta.files.wordpress.com/2011/12/lardelli-ge-ward-soj-2014.pdf.*

*3. **NARELLE, Marie** (1870-1941) (Singer): Marie Narelle, singer, was born on 28 January 1870 at Combaning station, near Temora, New South Wales, fourth child of native-born parents of Irish lineage, John Ryan, goldminer, and his wife Catherine, née Comans. Registered as Catherine Mary, the child was known as Molly. She was educated locally and at the Presentation convent (Mount Erin), Wagga Wagga, where she learned music and singing. On 29 January 1891 at St Mary's Cathedral, Sydney, she married Matthew Aloysius Callaghan, an attorney's clerk. A drunkard, he left her about 1894 with three small children to support. Finding few work opportunities in Sydney, she became a music teacher at Candelo, visiting her scattered pupils on horseback and by horse and sulky.*

Molly Callaghan adopted the stage name Marie Narelle, reputedly taking the surname from an Aboriginal 'Queen of the Moruya tribe' as a 'sort of talisman'. Invited by the visiting Irish politician William O'Brien to sing in Ireland at the close of the Cork Exhibition, she left Australia in July 1902. Narelle was acclaimed in Ireland. On 8 June 1903 she shared the platform at the Royal Albert Hall with (Dame) Clara Butt and Ada Crossley.

Further success saw Narelle and John McCormack visiting the United States of America in 1904 as part of the Irish cultural delegation to the St Louis World Fair. Following many American engagements, and having made wax cylinder recordings for Thomas Edison (1905), in June 1906 she returned to the Australian concert circuit; she also sang in New Zealand then went back to Europe.

During another Australian tour in 1909, including Western Australia, Narelle obtained a divorce from Callaghan in Sydney, on 2 June. Next year she settled in New York and in 1911 gave recitals throughout the U.S.A. with McCormack. On 9 December at the West End Presbyterian Church, Manhattan, she married Harry Allen Currie, a Canadian-born electrical engineer. The couple lived in New York, where her hospitality to Australian soldiers passing through the U.S.A. in World War I became famous.

Narelle made her last Australian tour in 1925-26, revisiting the New South Wales scenes of her youthful successes, including Temora, Candelo and Boorowa—'the Tipperary of Australia'. After her husband's death in 1934, she moved to England. Reconciled with the Catholic Church, Catherine Mary Narelle Currie died on 26 January 1941 at Clevecot, Chipping Norton, Oxfordshire, England.

'The Australian Queen of Irish Song' was noted for a voice 'not unlike Melba's', for her marvellous diction in four languages and for the passion with which she performed. Commenting on the pre-eminence of Australian singers such as Melba and Crossley, she held that, rather than physical influences like climate, it was 'the Australian personality that has made the Australian voice'. 'We are a natural people . . . free in all we do and say and think and it is that freedom, I believe, that makes us good singers'. (Source: Australian Dictionary of Biography).

5. The Age (Melbourne) Tue 4 Sep 1900.

*6. **The Aeolian** was a roll playing musical instruments based upon the organ principle, i.e. the sounds are produced by vibrating pipes or reeds. This is the oldest of all known methods of producing sound. The Aeolian was first produced in 1885 and by the late 1890's the Aeolian Grand, a 58 note music roll instrument, was the sales leader at that time. Around the turn of the 20th century the Grand was renamed the Aeolian Orchestrelle. Both the Aeolian and the Orchestrelle were built by the Aeolian Company, New York, USA.*

Food for thought ..... Editor's note

When planning my activities for the next few weeks I hardly know where to start! It is spring and there are so many events on! We could not include all events in the Newsletter that came past our desks, but have attempted to incorporate a cross section of events from across the BMACHO region. We apologise for any omissions but will depend upon our email distributions to get the wider message out there. If we know about your event, it will be disseminated in one way or another.
In the meantime there are a number of interesting articles in this issue from other writers, which cover a diverse range of topics. From the pianola to old photographs, we hope you enjoy the coverage.
In particular the analysis and dating of old photographs is a good one. Such analysis can be undertaken from a range of angles, from fashions, the format of the photograph and the photographer, dating the card mount or frame, and other visual clues such as landscape, nature of the event depicted, buildings and streetscapes.

Teachers of the art will instruct to "*Observe, reflect, question*": or describe, think about the features and then wonder.....

- Describe what you see: What do you notice first? What people and objects are shown? How are they arranged? What is the physical setting? What, if any, words do you see? What other details can you see?
- Why do you think this image was made? What's happening in the image? When do you think it was made? Who do you think was the audience for this image? What tools were used to create this? What can you learn from examining this image? If someone made this today, what would be different? What would be the same?
- What do you wonder about..... Who? What? When? Where? Why? How?

1839 is recognised as the dawn of photographic history, even though many people were working on various techniques for nearly 30 years prior. A history of 19th century photographs can be documented from the five distinct photographic technologies and their eras: Daguerreotypes, Ambrotypes, Tintypes, Cartes de Visite and Cabinet Cards.
Whilst the examination of these technologies is hoped to be covered within a future article in the BMACHO Newsletter, following the simple plain English method as set down above, may set you on a path of discovery! Have a go! *Patsy Moppett*

Analysing old photographs

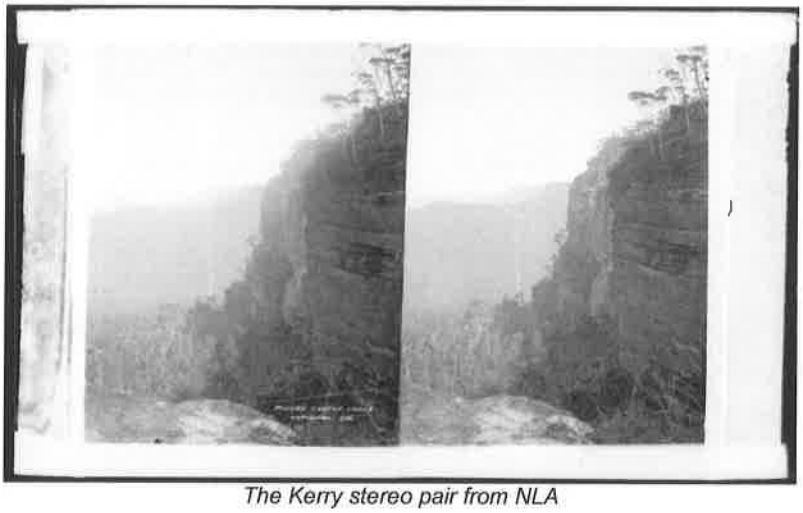
We often look at old photographs and tend to see only the picture on its face value. How often do we look into the background of the photograph and notice the buildings, the landscapes, even the clothing of the people pictured, or other features recorded? Photographs of people and places can tell us so much more about the wider context and the times in which the picture was taken.
Phil Hammon shows us an exercise he has undertaken and the unexpected things he found which helped to date the photos in question.
"I was first made aware of this photograph from Henry King when a photograph of the Bleichert Ropeway to the Ruined Castle Shale Mines was posted on the *"Do you remember Katoomba when"* Facebook page, with a link to the Museum of Applied Arts and Sciences (MAAS) photo library. (ex Powerhouse)

King's ropeway photo #1082 ex MAAS collection

Charles Kerry

Henry King advertisement

I was very excited to see this photo as I have been researching this ropeway for 30 years, and have only found two photographs of it, a stereo pair by Charles Kerry and a stereo pair by King.



The Kerry stereo pair from NLA

As far as I know, King and Kerry numbered their prints as they were printed, rather than the order in which they were taken, so the numbers help a bit but are not absolutely chronological.

Because of the link to MAAS, I followed it up to find other photographs by King that had recently been added to the page, and one was of Katoomba. I was particularly interested to see the one of Katoomba because it showed many buildings in Katoomba that may enable me to date it and hence get a better idea of the dates of the other two. I could also see the northern end of the Tramway in the far-right background. I do not have any other photographs of that area. Also in that far background is *Essendene*, North's house which had been sold in January of 1888 and turned into, firstly a guest house, then a school.

The King stereo pair #45 from Macleay Museum Sydney University.

The King photo of Katoomba numbered 410.

King's photo of the ropeway was numbered 1082, and his stereo pair was numbered 45. Certainly the stereo pair was earlier, because it was taken before the drive was commissioned, (indicated by the lack of spilled shale, and the tramway tracks are buried in sand washed down the cutting to the right of the photographer). The 1082 was taken later, when the ropeway was actually running (indicated by the motion blurred buckets on the ropeway). The ropeway only operated from May until September of 1889. So that should give me a time window for #1082. However, the shadows cast in that photograph are not conducive with a winter time photo, so more work to be done there. Unfortunately, both #410 and #45 were taken on overcast days (to reduce shadows and make less contrast), so sun angle was no help. So, when was 410 taken?
I obtained a high-resolution scan from MAAS and went to work.
The Carrington on the far left of the photo has not had the ballroom added on the LHS. Goyder called for tenders for additions to the Carrington on 11th April 1888 in the SMH.
The railway is still a single track. The duplication reached Katoomba in 1889.
Biles Hotel (to become Gearins) in centre foreground opened in May 1881, and the Great Western in January 1884.

The Family Hotel on the corner of Parke and Main Streets had been built by Mr Curnow and is now owned by Richard Fryer. Because there were a lot of hotels being built at the time all being called "Family Hotels", even the "Great Western" to become the Carrington, was called a Family Hotel when tenders were being called for, it is difficult to determine when Curnow built his hotel. Fryer bought it from Curnow in 1885. Richard Fryer left his hotel to become the manager of Oakey Park Coal Mine in Lithgow, then moved back to Katoomba to run the Katoomba Family Hotel. He died aged 54 in December 1891.

Katoomba Shop fronts

Left: Richard Fryer "Family Hotel"
Centre: Katoomba buildings. The signs on the awing areas follows;
I VENESS - Bootmaker
J STEEDMAN (John) Baker, Cordials and Fruit
STANLEY HOSIE – Auctioneer and Estate Agent
FRUITERER & c
Right: Australian Joint Stock Bank.
The building to the right of the Family Hotel was known as "Katoomba Buildings" and housed the following businesses:
I VENESS - Isaac Veness, bootmaker, appears in the Katoomba Times in May 1890 when his daughter, Clara Elizabeth Veness aged 17, committed suicide by taking rat poison.
J STEEDMAN. The first we hear of the Steedmans was when Mrs Steedman catered for the Loyal Orange Lodge annual meeting Saturday 21st July 1888. John Steedman was a baker and confectioner, who from May of 1889 regularly advertised in the Katoomba Times, as being in the "Katoomba Buildings". His wife had a significant hand in the business, for it was she, who placed advertisements in the 3rd August 1889 Katoomba Times, berating Mr William James for undercutting her quote of 3s 6d for "The Ball". Mr Williams replied to this "vile slander" the following week on behalf of Pritchard's Bakery.
By February 1890 James Steedman was bankrupt and held in Bathurst goal awaiting trial. Three months before, he had providentially given his business to his son. His son Andrew, continued to advertise his bakery business on these premises until December 1890. I don't know if he bothered to change the signwriting on front of the building, so that doesn't help much with the dating of the photo. Mr Steedman advertised his bakery business with cordials and fruits. Somehow Mr Stanley Hosie seems sandwiched between!
Stanley Hosie apparently was bought out by J H Mitchell & Co who are advertising houses for sale and rent from the "Katoomba Buildings" in August of 1889.
The Australian Joint Stock Bank opened a branch in Katoomba, with sub branches in Blackheath and Mt Victoria in January 1888. So, the photo is getting squeezed between 1889 and 1888.
There is a stormwater pipe being installed across the junction of Parke and Main Streets. We haven't been able to find a specific mention of this in Council reports.

On 11th April 1888 F C Goyder advertised for Tenders for additions to the Carrington. The item that clinched the date of the photo was the discovery in the photograph of a windmill behind the Carrington.

The windmill

Althouse Mill advertisement

This very same windmill from the Carrington was advertised for sale by R C Goyder in the Nepean Times on 7th and 14th April 1888.
The type of windmill, "Althouse", manufactured by Scott and Young of Melbourne, and promoted as a "vaneless fan" is advertised in the Sydney Mail 24th Nov 1888, as a unique design of vanes in a barrel, which can be seen in the shadow of the turning windmill in the photo, and the ad for the windmill above.
He wouldn't be advertising it for sale if it was still being used, so it seems reasonable that the photo was taken before that date.
So I conclude that the photo was taken in the first quarter of 1888!!!" *Philip Hammon*

Aboriginal place names along the upper Cox River

{The following article is the third part of a larger paper provided by Jim Smith. The first part was documented in HERITAGE Newsletter No. 50, the second part in HERITAGE Newsletter No, 51. Please refer back to the first article for map showing the location of many of these places.}

(9) Junumberee [dyu.nu(m).ba.rii]

1892. "Moyne-- Aboriginal name Junumberee-- near Little Hartley."
1913. "Moyne Farm, near Kanimbla [ka.ni(m).bula], county of Cook—Tenumberi."
Kanimbla Valley settler Mr Cullen compiled a list of place names, mostly based on Mylecharane's article, with another spelling for this place: Tunumberee.
Interpretation. John Grant's original portion of land was about 1.5 kilometres from the Cox River, although Grant later greatly expanded his holdings in the area. So, there is the usual difficulty in knowing whether the placename Tenumberi applied just to the little hollow where Grant built his first home, calling it Moyne Farm, or whether it had a wider application, perhaps extending to a stretch of the adjacent Cox River.

(10) Wall Wall

1892. "Crown Ridge-- Aboriginal name Wall Wall-- Mudgee Road."
1913. "The Crown Ridge (otherwise Dalhunty's Crown, Mudgee Road) - Wall Wall."
Interpretation. This is the most curious inclusion in Mylecharane's list. The other place names, apart from the one for Jenolan Caves, are all reasonably close to a 40 km section of the Cox River, between Thoondoo and Mini Mini. Crown Ridge (also known as The Crown and Blackman's Crown) is some 40 km northwards of Thoondoo. If Jenny and Betsy were describing a locality in their own country they have given us important information about the extent of the lands of the "Cox's River Tribe". Or, Crown Ridge may have been a place that

they just visited. It may be significant that Mylecharane does not appear to have recorded any Aboriginal placenames between Thoondoo and Crown Ridge.
Linguistically, Wall Wall is an unlikely pronunciation. It is possible that a quickly or softly pronounced vowel on the ends of the words was missed by Mylecharane. For example, 'Walli Walli' would be a more plausible pronunciation. Wiradjuri has *waliwali* for 'crooked, bent, askew'. Bennett recorded a similar Gundungurra word *walluk walluk* for 'crooked'. Seen from above, the Blackman's Crown ridge has almost a right-angle bend in it. It is rather like a boomerang in shape, so that it could definitely be described as a 'bent' ridge.

(11) Mulyan [mu.ly.an]

1892. "The Table Rock-- Native name Mulyan-- High Peak near Alum Mount."
1913. "The Table Rock, east of road to Jenolan cave, a little more than half-way from Mount Victoria-- Mulyan."
Interpretation. If, as Jim Barrett suggests, Alum Mount is the Gibraltar Sugarloaf it is not exactly "near" Table Rock, being over 6 km away. Mulyan is the Gundungurra word for the Wedge-tailed Eagle. The Table Rock is a typical place where updraughts attract soaring eagles.

(12) Binoomea [bi.nuu.mii.wa]

1892. "Jenolan Caves-- Aboriginal Name Binoomea."
1913. "Jenolan Caves-- Binoomea."
Interpretation. Oliver Trickett was the first author to widely publicise this Aboriginal placename, including it in his 1899 guidebook to Jenolan Caves, acknowledging Mylecharane for recording it from Betsy Grant and Jenny Clay. The only meaning that has been suggested for the word is 'holes', indicating that it may be a general word for landscapes with 'holes' such as caves.
The placename Jenolan was used by the Gundungurra for a mountain 13 km from the Caves. R.H. Mathews analysed the word: "Jeno'lan, Jenno-wullan, caves (two feet or Bullen feet?)". One interpretation of this is that Mount Jenolan was created by the feet of the Bullen brothers during their travels in the 'Dreamtime'.

(13) Kanowla [ga.nau.la]

1892. "The Brothers-- Aboriginal name Kanowla-- Opposite Mr. Blaxland's Cox's River."
1913. "The Brothers, two peaks on Cox's River near Mt Blaxland, now known as Lawson and Wentworth-- Kanowla."
Interpretation. "Mr Blaxland's" in the 1892 transcript is probably meant to be Mt Blaxland. The Cox River passes through a steep gorge, with the peaks of Lawsons Sugarloaf and Wentworths Sugarloaf to the north of the Cox, and Mt Blaxland on the other side of the river. It is possible that the Cox River in this area was also known as Kanowla. Usage of the English name 'Brothers' in this area may have been a recognition by early settlers that local Aboriginal people understood these peaks to be part of the Bullen Brothers story. A comparison could be made with the early English adoption of the name The Three Sisters for the rock formation near Katoomba. This may have been a recognition by early residents in the area that the rocks were once living Sisters in the mythology of the local Gundungurra people. Or, it could have just been a coincidence.

Conclusion

River junctions were important landmarks for Gundungurra people. Four of the placenames in Mylecharane's list: Thoondoo, Tarrapalat, Tuiwon and Cullenbenbong relate to areas around the junctions of creeks or rivers with the Cox River. It is likely that local clan groups were known by these names and that the section of Cox River adjacent to their country had the same name as the local clan group. Tarrapalat /Therabulat is the best documented example of this, with Billy Lynch saying that this was the name for his "tribe" (or clan), for part of the Cox River and the district around this section of Cox River.
Macqueen concluded his article by agreeing with Jim Barrett that *"there never was an Aboriginal name for the whole of Cox's River."* There would have been numerous local names for sections of the Cox River along its 100 km length, with many of these also identifying local clans adjacent to these sections.

The Aboriginal cultural practice of recognising a series of names applying to sections of a river was common across Australia. A South Australian anthropologist concluded:

> *Creeks almost always take their name from the last waterhole or other significant place through which they passed… That is to say, as well as relinquishing its name at a junction, a creek also relinquishes its name at a named place, generally a waterhole… it is more correct to talk not of a creek which "changes its name" but of (a series of) creeks.*

William Stanner gave an example of the difficulty (for non-Aboriginal people) of defining the extent of the areas covered by Aboriginal placenames.

> *"…a large stretch of the Fitzmaurice river was known to several contiguous tribes as 'Kimul', the place-name of a deep pool. But to try to plot the 'boundary' of Kimul in any precise way would have been meaningless to the aborigines. What was true of 'big' names like Kimul was true of unimportant place-names. Each, while denoting one particular place was projected onto a larger or smaller surround… Zones thus identified graded into one another except where natural features conveniently served as signs. Interest lay predominantly in the material, historical and symbolical values of particular places."*

It is because Aboriginal placenames sometimes "graded into one another" that different recorders, speaking to different Aboriginal informants, at different times, developed apparently contradictory interpretations of the areas described by placenames.

Three of the names on Mylecharane's list appear to be descriptive of topography and potentially could have been used in other areas than the ones identified in his list. Dhurrabulat, Mulyan and Binoomea were probably used for other localities where there were two rivers flowing together, congregations of eagles, or landscapes with 'holes', respectively. Because of our lack of knowledge of local creation stories, it is not possible to ascertain whether any of the placenames recorded by Mylecharane had associations with the 'Dreaming', except for Binoomea where the 'holes' were formed during the Dreamtime pursuit of Gurangatch by Mirragan. It is curious that Mylecharane did not attempt to ascertain the 'meanings', or cultural associations, of any of the names that he got from Betsy Grant and Jenny Clay.

Lower down on the Cox River there is a small waterhole named Me-oo-wun [mii.wuu.wun], formed during the journey of Gurangatch and Mirragan. Because of the great cultural significance of this waterhole to Gundungurra people, a nearby mountain range (now called the Wild Dog Mountains), about five km long, was also called Me-oo-wun, because of its proximity to the waterhole. This way of thinking seems paradoxical to non-Aboriginal people, who would see a huge natural feature like a mountain range as being more 'significant' than a small waterhole.

Of the thirteen names discussed in this article only two, Mini Mini and Cullenbenbong, are used on our maps. A third name, Binoomea, has a high level of recognition in the non-Aboriginal community as it has been acknowledged in the literature associated with Jenolan Caves from 1899 to the present day. Binoomea, and a number of the other names documented by Mylecharane, have potential to be used as 'dual names' together with their English equivalents, in accordance with the Geographical Names Board policy on dual naming. Some of them could eventually become as well-known as Uluru is today.

Betsy Grant and Jenny Clay were described as members of the "Cox's River tribe". There is strong ethnographic and linguistic evidence that this "tribe" was a clan of the Gundungurra speaking people. However, when visiting Lithgow, for example, there are signs erected asserting that this is in Wiradjuri country. 'Welcomes to country' in the upper Cox's River are performed by people of Wiradjuri descent. When the Gundungurra Tribal Council Aboriginal Corporation lodged their native title claim, all of the places discussed in this article (except for Crown Ridge) were included in what they regarded as traditional Gundungurra country. However, after the process of carving off areas claimed by other language groups, none of them remained in the 'core' undisputed area which recently became the subject of an Indigenous Land Use Agreement. Documents such as Mylecharane's list of Aboriginal placenames, along with a large amount of anthropological information from recent research,

will hopefully be used in the future to gain a clearer picture of the extent of Gundungurra country.
I wish I had known more about the subtleties of Aboriginal naming conventions back in the mid-1980s when I recommended the name Therabulat for the new lookout overlooking the Megalong Valley. It is at least a genuine Gundungurra word that draws attention to the indigenous history of the area. It also commemorates the clan name with which Billy Lynch, the best known early Gundungurra resident of the Megalong Valley and Katoomba, identified.

The Colraine Rock – a Modern Mystery

David Coleby is seeking information on this feature at Wentworth Falls:
"I came across The Colraine Rock by accident in May 2017 while looking for new locations for *Eucalyptus cunninghamii*, the Cliff Mallee Ash. I was searching a clifftop area of Kedumba Walls between the large gate on Kedumba Valley Road, and Sunset Rock, both on Kings Tableland, Wentworth Falls, in the Blue Mountains of Australia.
The location is in a mixture of habitats, Open Forest and Escarpment Complex, but the Colraine Rock itself juts out of the cliff, over the abyss which is the Jamison Valley. It is located at 33º 45′ 54.15″ S; 150º 22′ 22.0″ E, or Grid Values 56686079. It shows up as a bright rectangle on Google Earth (Satellite). Getting to it is a *very* hard bush bash!

Kedumba Walls

The carving of the name looks very professional, not the kind of thing a day-tripper would do, and more likely to be a stonemason's work, perhaps somebody who was used to carving inscriptions on gravestones. Whoever it was took time and trouble to make it look good.
Asking around, I drew blanks everywhere. NPWS at Blackheath had never heard of it, nor had Michael Keats, Brian Fox, John Low, Ian Brown, Jim Smith, the Blue Mountains Historical Society, the Blue Mountains Conservation Society, BM City Council, and the Geographical Names Board.
Two of them (John Low and Jim Smith) came up with a plausible theory that the inscription was carved by a patient at the nearby Queen Victoria Hospital, but sadly there is no proper evidence. Apparently the patients were encouraged to walk in the bush for exercise, and they would most likely go to the (nearer) Sunset Rock where there remain a number of walking tracks (see Jim Smith's article about Sunset Rock in the Newsletter of the BM Historical Society in 2011).
More investigations by Brian Fox drew blanks at Coleraine (Victoria) and Colerine (Ireland), although I did find a Daniel Colraine (b. about 1815, d. 15 December 1866) in Sydney in 1865-66, a Thomas Colraine also in Sydney in 1876-77, and an Edward Alleyne Eugene Colraine mentioned in the South Australian Police Gazette of 1909. The only more modern reference was to a Kmbrki (sic) Colraine in the Australian Electoral Rolls of 1972. I discarded the connection, if any, to the Colraine Equestrian Centre in Truro, Cornwall, England.
Has anyone else got information that would throw light on this modern mystery?"

The Technical Side

Wavy glass – my eyes are playing tricks

Have you ever been visiting a significant historic site or visiting in a historic house, looked out through the windows and thought your eyes were playing tricks on you? The glass appears uneven and features beyond the window are unclear and distorted. My thoughts were often that there was a fault in the glass.
However, no longer! A recent conversation over lunch at a Blue Mountains historic guest house, whilst looking through such a window, sent me to investigate this thing called "wavy glass".

Distorted fence

Multi storey distortion

Old window panes can sometimes look wavy, and handmade, and feel uneven, bumpy. Such ripples and dimples are not a sign of age, as such, but comes down to how the glass was made. Such glass, instead of being a fault, is another way of dating a building's construction.
There were two types of glass in the 19th Century, and each type represented the period and the manner in which it was manufactured. The first earlier type was crown glass, the second was cylinder glass.
Glass making was first perfected by French glassmakers in the 1320s and was a trade secret.

Crown glass

Cylinder glass

Crown glass was not actually made in London until 1678. Crown glass was made in front of a furnace to keep it hot and fluid so it could be formed into a circle shape by blowing and spinning it. Its popularity did not last long as it could not be used in larger windows due to its awkward nature. The thinnest glass was at the edges and the thicker glass towards the centre. Once it was cut to size the thicker glass was often used in gables or in doors where light meant more than a view.

Cylinder glass (1700-1860, the Georgian and Victorian periods) actually looks like our drinking glass. It became popular because it could be manufactured not only in cylindrical shape, but also in glass sheets, which could then be applied to larger windows. It was made when crown glass could not cater for the need for large panes.
It was imported from France and Germany from the 1700s until production in Britain began in the mid 1800s.To make cylinder glass, the glassblower blew a large tube of glass. After cracking off the blowpipe, he would then cut off the ends and slit the tube down one side. From here these shawls were transferred to a special oven where they could wilt and unfold into a flat sheet. Deep pits were dug into the glass factory floor to allow blowers to swing the glass as they blew. The resulting cylinders were up to 18 inches diameter and a remarkable 7 feet in length. Twenty years later some manufacturers had mechanized the steps with cranes and compressed air.
In the 1900s William Blenko used the cylinder method to make stained glass.
For a time both types of glass were made at the same time, so dating can be difficult.
You can determine whether you have crown or cylinder glass by eye and feel. When cutting glass for repairs, cylinder glass has a smooth side, once the outside of the cylinder, and a rough side, the former inside. Most crown glass is rare enough that you probably won't want to cut it at all. Crown glass was spun on the end of a rod in a circular motion, so the waves tended to be curved. Cylinder glass was spun in a back and forth motion and the waves tend to be straight and more parallel.

Mt Victoria Manor, Mt Victoria

So the waves and ripples are the characteristics created at the time the glass was made and not actually the regular flaws as we might think. Each pane of glass in an old house is unique and the old windows are like its fingerprints.
Decades of weathering May have left minute pits in the surface of either glass, which can make them hard to clean.
The early 20th Century saw the move away from hand blown to machine manufactured glass such as rolled plate, machine drawn cylinder sheet, flat drawn sheet, single and twin ground polished plate and float plate.
There are restoration companies which still carry the two older types of glass, used for replacement of window panes in these older buildings. They are usually made using modern methods, but there are craftsmen in Europe who still use the old methods.
Many people enjoy the unique designs and patterns that are remnants of the past as it signifies the house has a history to it.

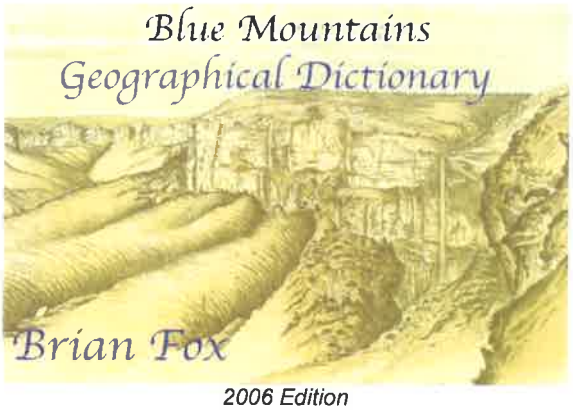
Community events & updates

Blue Mountains Place Names Project

Eleven years ago, in 2006 Brian Fox launched the third edition of an iconic book, 'Blue Mountains Geographical Dictionary'. It was a best seller, soon sold out and there have been consistent requests and enquires for it to be reprinted. In 2017 a reprint was not an option. The work merited a complete rewrite. This old text was compiled before the advent of GPS, Trove and other search engines.



2006 Edition

In the meantime, Brian has been busy working closely with Michael Keats to write texts on the Passes of Narrow Neck, a comprehensive work on the Upper Grose Valley and with a third team member Yuri Bolotin, the mammoth bench mark series, eight (8) volumes on The Gardens of Stone National Park and beyond.

The time has now come to revisit the Blue Mountains Geographical Dictionary and produce a text that has the benefit of technology advances, wider input and a more user-friendly format. For over 18 months in collaboration with his brother John Fox, a dedicated researcher, and Michael Keats OAM author, the team has been beavering away, revisiting sites, verifying information and checking out land ownership details for several generations and more.

The project team has also benefited from input from Blue Mountain authors, Bruce Cameron, author of *The Blue Labyrinth*, Erik Halbert and Ross Ellis's, *Sandstone Caves of Mount Victoria*, Dr Peter Rickwood's *Blackheath: today from yesterday*, Andy Macqueen's *Back from the Brink*, Phil Hammon's *The Burning Mists of Time*, and Keith Painter's Pocket Pal series. Also input from John Low - retired BMCC Local Studies Librarian, Doug Knowles - Glenbrook & District Historical Society, and many, many more.

The good news is that the project is advancing well. The team would like to hear from anyone who has local knowledge of names now fallen out of use or favour, or from anyone with knowledge of a particular area who would like to add their input.

They would also like to hear from those people wishing to express an interest in ordering a copy for early next year.

Blue Mountains Historical Society Garage Sale

The Blue Mountains Historical Society is raising funds for a cairn to be installed in the History Centre grounds at Hobby's Reach, for the Geoffrey McLaughlin Commemorative Weekend, to be held on 28 & 29 October 2017.

Geoffrey McLaughlin

Tarella Cottage Museum

The major part of the fundraising will take place on Saturday 16 September 2017, and will include a garage/jumble sale, cake stall and sausage sizzle, with the Tarella Cottage Museum also being open.
To this end, and throughout August, BMHS has been accumulating goods through donations.
Save the date and join the fun on September 16!!! *Alan Foster*

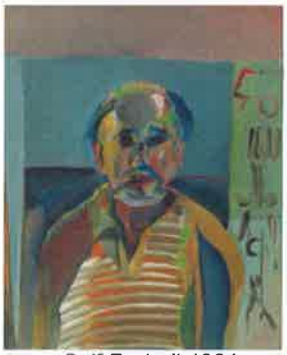
Exhibition: Jurgis Miksevicius, "Portraits Real & Imagined"

The National Trust Everglades Gallery will be hosting an exhibition from 2-23 September 2017. The exhibition will be a survey of selected portraits by Jurgis Miksevicius (1923-2014). **The exhibition is titled "*Portraits Real and Imagined*", will be opened by Elspeth Pitt, A/g** Senior Curator, Australia Prints, Drawings and Illustrated Books, National Gallery of Australia, Canberra, on Saturday 2 September 2017, 2-4pm. There will be a floor talk on Sunday 10th **September 2017, by Carolyn Leigh about the artist's life and work, followed by** morning tea in the Everglades Tearooms.

Gabrielle 1958

Sandpaper Lady c.1963



Self Portrait 1981

Jurgis Miksevicius (1923 – 2014) a Lithuanian displaced person, migrated to Australia in 1948 after studying fine arts at a school which followed Bauhaus principles of art education, in Darmstadt, Germany. He lived, painted and exhibited in Bathurst, Canberra, Sydney and the Central Coast, NSW for nearly seventy years. From 1960 to 1983 Miksevicius was an art teacher and Head teacher for the NSW Education Department.
His work is represented in the National Gallery of Australia, Canberra, Lithuanian Art Museum, Vilnius, Lithuania, National M.K. Ciurlionis Art Museum, Kaunas Lithuania, national and international private collections. *Carolyn Leigh*

Prosecution Project

An exciting historical research project has been developed over the last few years by Griffith Criminology Institute, Griffith University. The Prosecution Project been investigating the history of the criminal trial in Australia by digitizing a variety of court and criminal records, extending from the early 19th to the late 20th century. Some of the data has been made available to the community through their public website:
www.prosecutionproject.griffith.edu.au
The creation of the project has been greatly assisted by their army of community volunteers, who have worked to transcribe various sets of court records from across Australia. They are seeking to recruit volunteers to work at completing the transcription of the remaining court registers and witness depositions.

William Liardet, 'The Opening of the Supreme Court'

Mt Tomah: Diary of events, Spring 2017

Celebrating their 30th birthday, the Blue Mountains Botanic Garden is located under two hours' drive from Sydney & is home to some 21,000 species. It is the only Botanic Garden located in a World Heritage Area and is focused on the conservation of cool climate plants.

Their educational, cultural and artistic events including exhibitions and workshops are set against the breathtaking backdrop of the Garden, reflecting the stunning surrounds.

The following events will be available through September-October:

A LEAF, A TREE, A FOREST...WILD GARDENS OF THE BLUE MOUNTAINS BOTANIC GARDEN
Saturday 2 September – Sunday 22 October at the Visitor Centre
9.30am – 4.30pm Free entry.

STARRY NIGHT
Saturday 2 September at the Waratah Education Centre
5.30pm – 7.00pm
Join astronomers from The Sydney Observatory for a night of sky viewing from Mount Tomah. Cost: $15 adults (16+ years); $8 children (up to 16 years); $30 per family (2 adults & 2 children). Bookings essential at www.bluemountainsbotanicgarden.com.au/What-s-On

NERD ALERT
Saturdays 2 September, 14 October and 4 November at the Waratah Education Centre
1pm-3pm
Let's make and mix, build and test, investigate and experiment with super-cool science! Cost: $20 per child. Bookings essential at www.bluemountainsbotanicgarden.com.au/What-s-On

WILD ABOUT WARATAHS FESTIVAL
Saturday 23 September – Monday 2 October at the Visitor Centre & Garden
9.30am – 4.30pm. Free entry.

WARATAH SCIENCE + ART
Saturday 23 & Sunday 24 October at the Waratah Education Centre
11.30am – 12.30pm & 1.30pm – 2.30pm
Kids will discover the secrets of Waratahs on a Garden walk. Cost: $12 per child. Bookings essential at www.bluemountainsbotanicgarden.com.au/What-s-On

THE KING AND QUEEN OF GREEN: THE REALM OF RUBBISH
Saturday 23 & Sunday 24 September on the Formal Lawn
10.30am-11.15am & 12.30pm – 1.15pm
The King and Queen of Green love the planet earth and in particular things that are green! Cost: $8 all tickets. Bookings essential at: www.bluemountainsbotanicgarden.com.au/What-s-On

DINOSAUR STOMP
Wednesdays 27 September & 4 October at the Waratah Education Centre
1pm-3pm
Let's stomp around the Garden to discover megafauna and dinosaurs, and the plants they enjoyed eating. Cost: $20 per child. Bookings essential at:
www.bluemountainsbotanicgarden.com.au/What-s-On

GARDEN AFTER DARK – SPOTLIGHT TOUR
Saturday 30 September at the Waratah Education Centre
5.30pm – 7.00pm
Visit the Garden after hours. Cost: $20 adults; $12 children (8-16 years). Bookings essential at:
www.bluemountainsbotanicgarden.com.au/What-s-On

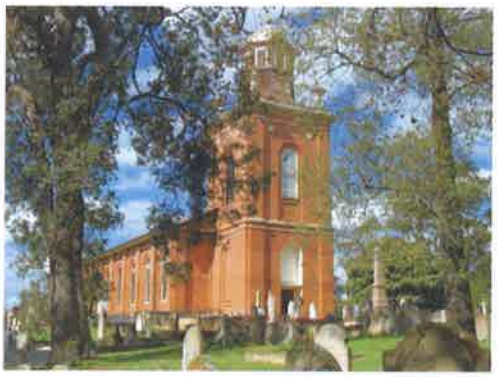
GADARA WILDFLOWERS FARM OPEN DAY
Sunday 1 October at 3401 Bells Line of Rd, Berambing NSW 2758
10.30am – 3.00pm
This local plantation has around 1,000 waratah plants including the unusual white waratah and is only open to visitors for one day during the Wild About Waratahs Festival. Cost: Gold coin donation.

SPRING BIRD WALK & TALK
Saturday 21 October, meet in the Wollemi Room
8am – 11am
Join birding guide Carol Probets on a morning walk to see some of the Garden's beautiful birds and learn about their habits. Cost: $30 per person. Bookings essential at:
www.bluemountainsbotanicgarden.com.au/What-s-On

Celebrating 200 Years – St Matthews, Windsor

The 200th Celebrations of St Matthews Anglican Church Windsor, 1817-2017, is set to hold a huge birthday bash!! The birthday program will include the following events:

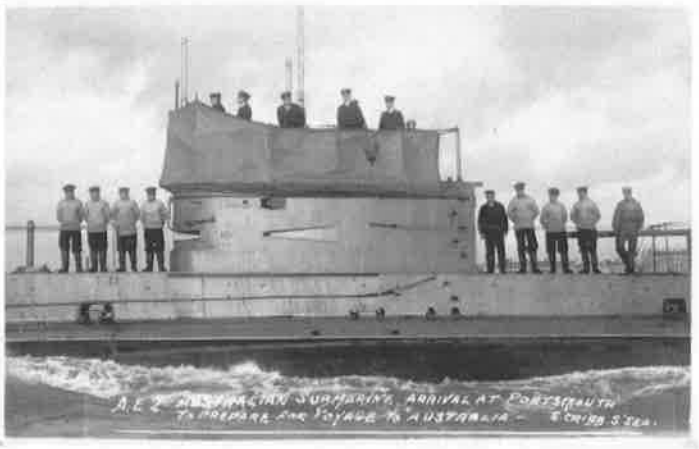
- 11 October 2017 – Wednesday School Church Service (by invitation only, invitations issued through the local district schools).
- 14 October – Saturday Big Birthday Bash, McQuade Park - Community and Family Celebrations in the Park in Windsor. All welcome. This will be a buzz for all ages, and a great chance for families to come together. Includes RAAF flyover, entertainment, food, history and family history, stalls tours and reenactments. All displays will be free.
- 15 October – Sunday Church Service and Celebration, with special guests, musical highlights and historical displays.



The celebrated publication *St Matthew's Windsor: an Anglican Landmark celebrating 200 years*, by Ian Jack and Jan Barkey-Jack, will be available from the church in hard copy at **$49.95. This book received a prestigious "Highly Commended" award in the recent Research** and Investigation section of the National Trust of Australia (NSW), Australian Heritage Festival 2017. Soft cover is also available from the church, Hawkesbury Regional Museum **and Wiseman's Book Shop, Richmond, for $29.95.**
For more information about the Church's Bicentenary and its celebrations, please contact St Matthew's Anglican Church, 1 Moses Street, Windsor
Ph: 02 4577 3193
Email: bicentenary@windsoranglican.asn.au

War at Sea – The Navy in WW I

Over one hundred years ago, on 14 September 1914, Australia's first submarine AE1 disappeared while patrolling the seas near present day New Guinea. No trace of the vessel or the 35 crew has ever been found.



This story is now being told in *War at Sea – the Navy in WWI*, an eight panel exhibition at Hawkesbury Central Library, Windsor, on tour from the Australian National Maritime Museum. This panel exhibition draws on the personal accounts of Navy service staff through their diaries, mementoes, ship's logs and letters home, to tell their incredible stories of bravery and sacrifice amidst the drudgery of life at sea, patrolling, blockading and escorting troopships.
The free exhibition runs from Tuesday, 8 August to Friday, 29 September, during opening hours, at Hawkesbury Central Library, 300 George Street, Windsor.

Glenbrook Park update

Current and upcoming works in Glenbrook Park, as at 1 August 2017:

- ***Park Street Frontage***: Works have commenced on opening up the lawn area in front of the Country Women's Association building. Turf should be laid this week or next and should be well established in time for the Spring Fair.
- ***Investigative excavation***: Next week a series of test pits will be dug across the park to inform the upcoming construction work. The information is required before works can proceed. Around 8 test pits are to be dug to understand what footings are needed for the VIC expansion, the carpark works, and the shade sails are to be installed in the playground. A separate investigative trench will be dug across what is considered to be the Cox's Road alignment. It is hoped to discover whether there are any traces, or not, of the original road. All excavations will be monitored by an archaeologist. All excavations will be backfilled as soon as possible.
- ***Playground construction***: Tenders have closed for the construction of the new junior accessible playground to replace the existing junior playground. It is expected to appoint the contractor at the August Council meeting. Work should commence in September and is scheduled for completion before the Christmas school holidays.
- Some children's events will be held in the park during the construction phase to offset the unavailability of the playground. The senior playground and the oval will still be available for use.

Seminar: Settling the Blue Mountains

Blue Mountains Family History Society presents this interesting seminar on Saturday 9th September 2017, at the Springwood Baptist Church Hall, 313 Macquarie Road, Springwood.

Presenters will include:

- Brian Fox: Development of the mountain villages.
- Doug Knowles: Blue Mountains tunnels, railways, roads and bridges.
- John Low: Travelling to Wonderland: Coach Services from the Blue Mountains to Jenolan Caves in the Pre-Motor Era.
- Ken Goodlet: Woodford Academy, when the building was an inn.

Jim Low will provide entertainment after lunch.

Hotel Mt Victoria

Woodford Academy

Bathurst Rd, Katoomba

The cost is $40.00 per person, and this includes morning tea and lunch. It is 9.15am for a 9.30am start, and goes until 3.30-4pm.
Early bookings are advised and bookings can be received up to Friday 1 September 2017. Places are limited due to hall space, and bookings may be made at a General Meeting of the group, in the family history section of the Springwood Library, or post a cheque to the Family History Society, PO Box 97, Springwood 2777.

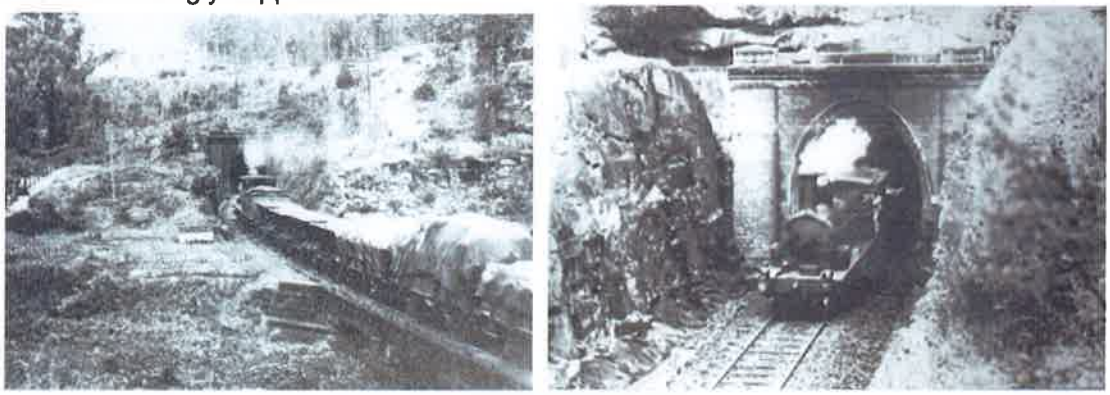
Lapstone Tunnel Clean-up - update

Further to the BMACHO lead article in Newsletter No. 45 July-August 2016, and in regard to the Disused Lapstone Tunnel (former mushroom farm), the Blue Mountains Conservation Society has contacted the Environment Protection Authority (EPA), making a formal complaint about pollution at the site, providing BMACHO with a copy of their submission. Although a number of other societies and stakeholders have already been involved in consultation regarding the clean-up and future use of the tunnel, the Society's concerns are still to be strongly supported.



Western portal in use

The group are concerned about the ongoing use of the tunnel for storage of mushroom compost and associated waste, and the resulting possible pollution of nearby waterways and groundwater. To date the Society has been advised that the Dept of Lands cannot identify whether the waste and other material was left by the immediate past leaseholder, or by prior leaseholders.
In their submission to the EPA, the Society acknowledge that significant progress has been made with site clean-up including removal of onsite amenities, sheds, chemicals storage

facilities, compost waste and machinery, weed removal and site regeneration, and the efforts of the Dept are appreciated. However, they are still concerned about illegal access, graffiti, lack of health warning signage and camera surveillance, the remaining old machinery and rubbish, the continued weed problem, soil contamination, and the unknown extent of contaminated material remaining inside the tunnel.
Attempts by the Dept for clean-up funding for 2017/18 have been unsuccessful, and no other funds have been allocated to the site. The Society feel that this is unsatisfactory.
They have requested that the EPA investigate the inside of the tunnel to ascertain the extent of contamination, and establish whether the tunnel site pollution is resulting in pollution of nearby waterways and groundwater. They have requested a clean-up notice to be issued to the Dept, and that the Dept be required to undertake soil contamination testing and secure the site. *Patsy Moppett*

These concerns are forwarded to BMACHO readers for information.

Blue Mountains Conservation Society can be contacted at:
Blue Mountains Conservation Society In., PO Box 29, Wentworth Falls 2782

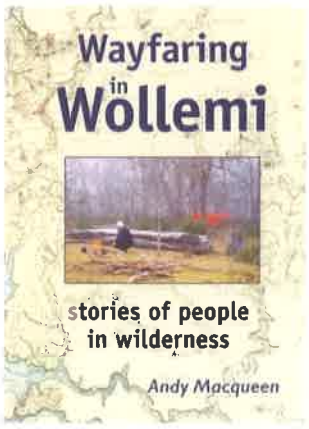
Book Launch : Wayfaring in Wollemi - stories of people in wilderness



This fabulous and fascinating publication is the latest by author Andy Macqueen. The book describes stories of 28 explorers, surveyors, wanderers, cattlemen, would-be developers, adventurers and conservationists who each spent a part of their life in the Wollemi, the largest declared Wilderness in NSW. What took them there and what did they get up to? Did the experience change their lives? The author follows their footsteps through the gorges, over the mountains and into the hideaways. *Andy Macqueen*

The launch will take place on Sunday 22 October 2017, at 10.30am - morning tea supplied - at the Education Centre, Blue Mountains Botanic Garden, Mount Tomah.
Hardback • 352 pages • 140 maps & images • RRP $40

The event will be hosted by the Colong Foundation,
Please RSVP andymacqueen@gmail.com

Greater Blue Mountains Heritage Trail Update!

BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed. During 2017 BMACHO are holding a competition to encourage visitation to Trail participant properties, and the competition entry forms are incorporated into the brochure.

Visitors to any of the participating venues as identified on the Trail brochure can either answer the set out questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months. Information with regard to the competition is available on the Trail website (see below).

Westpac

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Event and Venue Co-ordinators), Fiona Burn, Peter Brownlee and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Peter Brownlee, Fiona Burn, Jan Koperberg, Suzanne Smith, & Lynn Collins, Museums and Galleries Adviser.

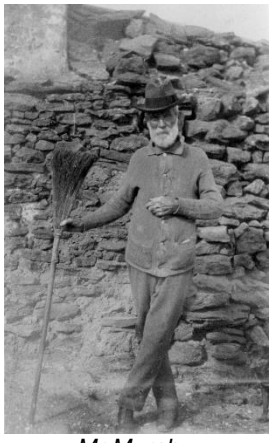
Mr Murphy of Hat Hill

William Andrew Murphy was born in 1846 in the Maitland area of New South Wales. Late in his life, he lived near Hat Hill at Blackheath in the Blue Mountains. This would have been from around 1913 to 1925. Hat Hill was so named because it looks rather like an old felt hat.

Mr Murphy built a small dwelling and soon the local animals and birds began regular evening visits to scavenge food from him. It was not long before people heard about this. On Sundays a local bus began driving people out to Hat Hill to watch quietly as Mr Murphy fed the wildlife.



Mr Murphy

Mr Murphy's hut at Hat Hill, Blackheath

Unfortunately, a bushfire came through this area in either 1918 or 1919 and Mr Murphy's home was destroyed. After the fire had passed, Mr Murphy was found underneath a small waterfall at the back of his property. Local people helped the old man to rebuild his house. They also gave him a horse to ride. However, the shock he must have suffered during the fire meant that things at Hat Hill could never be the same for him again.

The last year or more of his life was spent at West Kogarah at the home of a friend, Mrs Helen Drain. He died there on 30 November 1927 at the age of 81. On his death certificate, his occupation is "carpenter" and he apparently never married. Reference is made to his former residence, "late of Blackheath". He was buried on 2 December 1927 in the Roman Catholic section of Woronora Cemetery.

I visited the cemetery at Woronora in August 2004. Thankfully I was given the names of neighbouring graves at the administration office, for I soon discovered that Mr Murphy's grave was unmarked. I had hoped a gravestone might have provided more

information. The elation felt at the realisation that I was standing next to his final resting place surpassed any initial feelings of disappointment. As I stood under the shady trees I wondered how many others had made this pilgrimage to his grave during the last 75 years.

Remains of Mr Murphy's hut at Hat Hill, Blackheath

Most of the information I know about Mr Murphy comes from the recollections of Jack and Ted Harris. In the early 1980's they were asked to record some of their memories of the Blackheath area. William Murphy obviously created a lasting impression for the brothers. They clearly remembered the old gentleman who, over sixty years ago, had lived at the end of their road when they were children.
In July 1984, after listening to the Harris brothers' recording in the Blue Mountains Oral History Collection, I wrote a song about Mr Murphy. Some years later photographs of Mr Murphy and his home were uncovered.
Sections of the stone walls of Mr Murphy's abandoned home can still be found in the bushland at Hat Hill. I have visited these ruins a number of times since writing the song. The view to the east extends as far as the Sydney skyline. It is a place made special for me by Mr Murphy's story. A story of celebration and loss, his association with this place leaves many questions unanswered. I often wonder about the events of his life and what motivated him to live in such an isolated part of the Blue Mountains. Perhaps in the future, as I keep singing my song, I will continue to discover more about him.
And despite his unmarked gravesite at Woronora, for me the ruins of his Hat Hill home serve as his monument. The ruins are slowly being reclaimed by the surrounding bush. Nature is seeing to it that this place will remain undisturbed and eventually return to how it was when Mr Murphy first arrived. *Jim Low*

SONG LYRICS
Mr Murphy

Chorus:
Old Mr Murphy's a friend to all
Especially the animals, large and small
Especially the animals, large and small.
Old Mr Murphy lives all alone.

At the bottom of a hill in a house of stone
A house that he built from the things around
The soil, the stones and the timber he found.
Each day to Blackheath he walks the track
For his daily supplies, then he's heading back
A smile or a greeting along the way
"How y' keeping, Mr Murphy?" and the odd "G'day".

His blue eyes pierce the fading light
He starts the fire and prepares for night
Then knocks his old pipe on his dusty old heel
And checks the billy and prods at his meal.
A whistle is heard and the silence ends

It's old Mr Murphy calling his friends
In the evening shadows the bush comes alive
As the animals and birds begin to arrive.

There's food for all creatures - the Gang Gang and quail
Brown wallabies and possums and the willy wagtail
The old man smiles broadly, his teeth displayed
As he stares at the sanctuary his kindness has made.
On Sunday the tourists would come to his door
And the people would marvel at the things they saw
A kind old man with snowy hair
Treating the animals with so much care.

Then the bushfires came and his home was destroyed
He lost the place that he once enjoyed
He returned for a while but it wasn't as before
He was taken away and heard of no more. *© Jim Low*

Food for thought ..... Editor's note

The recent 2017 RAHS Conference was, as usual, a resounding success! Everyone left Cowra on information overload, knowing so much more about Cowra itself, the Prisoner of War Camp, the war cemetery and the Japanese Gardens, amongst other things!
However, one of the most useful agenda items was the Business Session, which provided a handout asking questions pertinent to history/family history groups and museums, such as, should groups charge entry fees, ideas for gathering revenue, ensuring submissions on heritage matters have an impact, should your organization register for GST, the best way to manage ISBN & ISSN numbers, and the necessity for Working With Children checks.

BMACHO Secretary Jan Koperberg has emailed out the information sheet to BMACHO email contacts. However if anyone missed out, please feel free to contact BMACHO and a copy can be sent.
In particular, and relevant to the various correspondences which come across the BMACHO desk, is the subject of making a submission, and making sure your submission, whether it is on a heritage listing, other heritage issue, or on any other topic for that matter, has an impact.
We are all, as groups or individuals, asked to comment on things from time to time, and the preparation of a submission can be very time consuming. It is a pity to spend so much time preparing correspondence and supporting documentation, only to find it is relegated to the shelf and never read.
Bruce Baskerville, with considerable experience in submitting submissions, but also receiving and assessing submissions, provided some advice to ensure your submission counts. The hints are regarding heritage submissions, but could be carried across into any submission situation:
What works:

- Focus on history and historical significance, and play to your strengths. You are talking about significance of a place, emphasize this.
- Keep it short – you should be able to say on one page why a place is important enough to be listed – precision shows you know what you are talking about.
- Begin with the sentence "Harriett's Hut is significant and should be listed because ….."
- Be polite, use plain English, be helpful – offer to provide further information if requested.
- Be regularly engaged with Council's heritage advisor or committee – support them as ongoing friends or allies.
- Cherish (loudly) local heritage and history, challenge those who say "it's only local" as if that means it doesn't really matter.

What doesn't work:

- Overwhelming with too much information – it just won't be read.
- Bundling together lots of papers and pictures and expecting someone else to just "get" the point you want to make.
- Heckling, badgering, being equivocal or pointing out the serial failures of the local council to take heritage seriously (even if it might be true!)
- Not taking time to find out who matters in making LEP listing [and planning] decisions, and only finding out who is council's heritage officer at the last minute [and thereby making last minute inaccurate submissions].
- Failing to keep up to date with Council notices in local papers or on Council's website advertising changes to LEP lists, changing public land classifications, etc.

Careful consideration enables you to have an opportunity to provide additional historical information, suggest further historical values and significance, or achieve more accurate names or curtilage boundaries, but not necessarily in the first submission.
Polite persistence supported by verifiable historical research has worked for the RAHS for many years.

*Bruce Baskerville is an independent public historian, has been a Senior Heritage Officer with the NSW Heritage Office, is a Royal Australian Historical Society Council Councillor, and been involved in the Professional Historians' Association in NSW & ACT Management Committee (Secretary, Treasurer, President, Chair**),** History Council of NSW Management Committee (Treasurer, Councillor), and The Australian Heraldry Society Management Committee (Deputy President, President and Editor). Bruce was a judge for the NSW Premier's History Prize in 2000, and for the National Trust Heritage Awards in 2008, being awarded a Centenary of Federation Medal in 2002, and was elected a Fellow of the Federation of Australian Historical Societies in 2011. Amongst other things!!*

The Village of Brasfort

The following articles posted in the Sydney Morning Herald in 1881 signalled the Crown disposal of land (some 80 lots this day) in the Village of Brasfort:

> *Department of Lands, Sydney*
> *November 11, 1881*
>
> *L A N D S A L E*
>
> *Attention is called to a sale of Crown Lands, to be held at the Village of Brasfort, Wentworth Falls (late Weatherboard) – on the 17th DECEMBER 1881, comprising Lands, County of Cook, Parish of Jamison.*
>
> *TOWN LOTS*
>
> *In the Village of Brasfort (at Wentworth Falls) fronting Armstrong, Parkes, Backhouse, Fletcher and Wentworth Streets, and Pritchard, Day, Cascade, Boomara, Wilson and Jamison Streets. For further particulars see Gazette of November 10, 1881, No. 449 at Police Office or Local Land Office.*
> *Lithographs price shilling each showing the land for sale, can be obtained at the Land Offices, Penrith and Hartley, and the Surveyor-General's Office, Sydney.*
>
> *JAMES HOSKINS*

> *Department of Lands, Sydney*
> *November 17, 1881*
> *ATTENTION IS CALLED to a sale of CROWN LANDS. TO BE HELD ON THE GROUND, at the VILLAGE OF BRASFORT on SATURDAY, 17TH DECEMBER NEXT, at two o'clock p.p., Comprising lands in the Parish of Jamisson, County of Cook, as per the schedule appended. The VILLAGE OF BRASFORT EXTENDS FROM THE Wentworth Falls (late Weatherboard) Railway Station to the Falls.*
> *LITHOGRAPHS (price one shilling each), showing the land for sale, can be obtained at the Land Offices at Penrith and Hartley, and at the Surveyor-General's Office, Sydney.*
>
> *JAMES HOSKINS*

Early beginnings

Although the streets and lots were soon settled, the name of Brasfort did not survive progress in the development of the town of Wentworth Falls.

Wentworth Falls was barely in existence in terms of subdivision as a village until well after the coming of the railway. Prior to this there were a handful of farming families in the vicinity, teamsters along the western road, which then was what we know as Blaxland Road, and then railway gangs from 1863, who were served for many years by the Weatherboard Inn until the 1860s. The Weatherboard Hut was set up by Cox in 1814, and the Inn in the 1820s. Robyn Ridge, in her book "Once Upon a Time in History", notes that Governor Macquarie renamed the waterfalls "Campbell's Cataract", after his secretary, but "Weatherboard" persisted for some time.

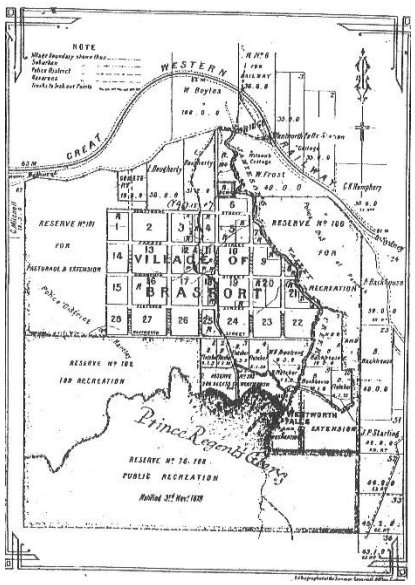
Once the government chose the Nepean Valley for the city's new water supply, things began to change and restrictions on residential development in the Blue Mountains were removed. The town name was changed from Weatherboard to Wentworth Falls to remember William Charles Wentworth of explorer fame.

Once the rail came through, Sydney inhabitants began to seek holiday accommodation and mountain retreats, hotels, boarding houses, holiday houses, services and guest houses sprang up. Social reformers in Sydney were renouncing the unhealthy living conditions in the city, and people sought access to the mountains and the pure mountain air via the railway.

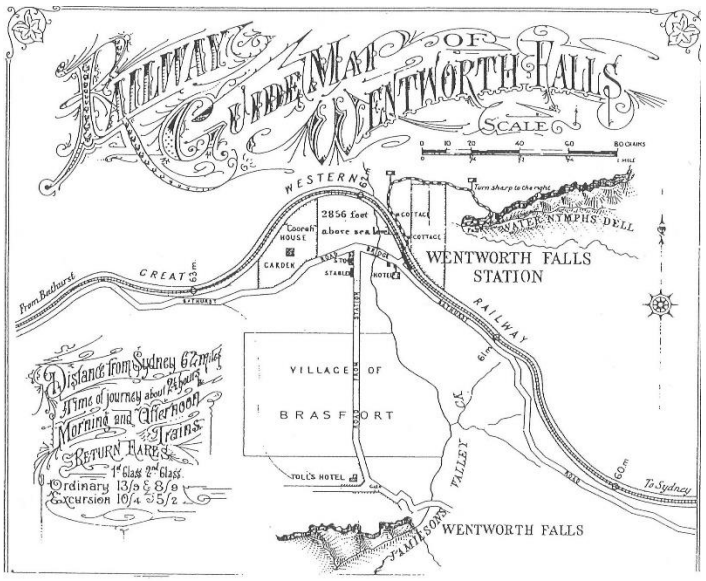
Brasfort is gazetted

However, in between Weatherboard and Wentworth Falls, the town had another name – Brasfort. In 1881 the Village of Brasfort was set out in a grid pattern of 28 sections on some 24 hectares (61 acres) along and around what we now know as Falls Road, to the south of the current Great Western Highway, and gazetted in 1885. The subdivision allowed for a buffer along Armstrong Street and along the highway. Government reserves were included

and in 1889 the cemetery reserve was separated out; but not all of the gazetted streets were formed at first.

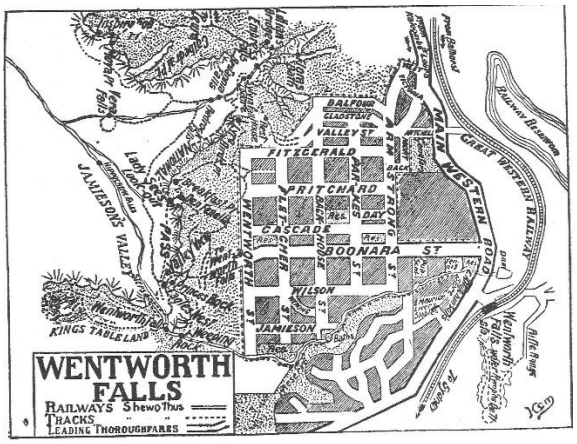


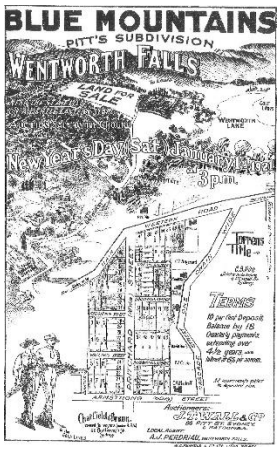
1887



1894

By 1889 Wentworth Falls consisted of about forty homes, with a population of about 150 people. The school was erected in 1887 and Peter Mulheran was running his Mount Allen Hotel, which included livery stables. This hotel became a boarding house and then a private residence. He later built a boarding house in Wilson Street, called “Rockwall”.
Brasfort however, although it was proclaimed a village in 1885, was absorbed into Wentworth Falls in 1896, even though by 1892 it already had 24 homes erected. These residences within the subdivision served professional people from Sydney as mountain holiday homes.
Elsewhere, settlement was by local workers on the railway and on farms, and it was these who became the first permanent residents of Wentworth Falls.





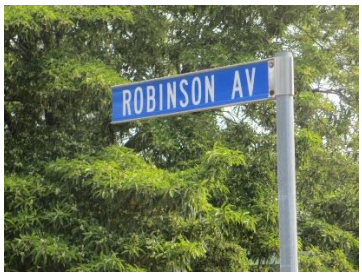
Over time, further subdivision within the village, with elaborate invitations to mountain living!

Early development

In Brasfort, a general store was established on the corner of Boonara Road (now Falls Road) by Thomas Cale in 1887 and the Highway. A second general store was opened on the highway between the hotel and the creek. Land was reserved for future public buildings, but few were developed, and were eventually sold off. The corner of Armstrong and Robinson/Cascade Streets was dedicated for a Mechanics Institute in 1899, and a School of Arts was erected there in 1902.

In the 1890s Joseph Toll built a hotel, Toll's Hotel on Falls Road. In 1891 he bought Mt Allen Hotel and transferred its licence to his new Wentworth Hotel, which burnt down in 1932.The Holy Trinity Church was built on Falls Road in 1888-89. Prior to this services were held in Cale's store. Other churches included the original Catholic and Presbyterian churches.
The railway had been surveyed in 1862 and reserves for platforms and station were created throughout the mountains soon after. The reserve was created at Weatherboard in 1866, and the platform was built in 1867, retaining a substantial portion of land around it. This reserve was not released until 1906, which inhibited development, particularly a commercial precinct, which did not take off until 1910. Eventually the reserve was subdivided into residential lots which included parks and recreation areas.
By 1900 most of the population still lived in Brasfort, but following WW1 the move was more to the north into what we know as Wentworth Falls. By the time the commercial area of today was established, the community's means of transport had turned again, and there was a shift away from rail to road, and the upgrading of the highway took place over time.

Land ownership and streets
The land which encompassed Brasfort was originally "owned" by Walter D. Armstrong a draftsman in the Lands Department (probably leased from the Crown), from whose name the village received its name: a French adaptation, "bras" meaning arm and "fort" meaning strong, or the Saxon "strongitharm". The name was originally given to the gully into which Falls Road dips beyond Armstrong Street.



The streets were named after prominent local people who had purchased land in the subdivision at the time. Benjamin Backhouse was a prominent Sydney architect and William Pritchard was a Sydney auctioneer and real estate agent, and others included Henry Parkes, Horden brothers, George and Robert Pitt, John McLaughlin, Captain John Charles Smith of Goodlet and Smith, and Captain James Somerville Murray. The Murrays built homes for themselves as well as rental houses, and donated land for Murray Park.
Other early Brasfort Village landowners included Edward Dougherty and David Davis.

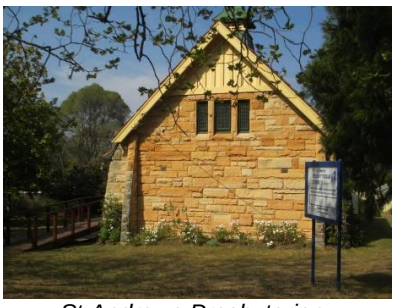
Early significant homes
("**Davisville**"). "Davisville", on Falls Road, was purchased by the YWCA in 1920 and later by the Anglican Church. It was located on part of the original land grant in the area to Doherty in 1857. Davis was a Sydney builder.
The property "**Eurona**" was first bought in 1881 in Brasfort by John Hawksford, and the Federation house was built by Sydney merchant Arthur Pearce in 1900. It was later used by the Sisters of Mercy as their mountain retreat for some 50 years.
Walter Armstrong built "**Green Gables"** (formerly named "**Gila**", and later "**Minniewanka**") in about 1880 on Railway Parade. This land was originally fronting the railway to the south, and was granted to Robert Stubbs, Thomas Boland, David Fletcher (a Sydney dentist) and Walter Armstrong. The land was immediately subdivided for the four, with Armstrong maintaining his share whilst also being instrumental in the development of the main village. The house was named "Green Gables" in 1919 by the then owner William Wood, and has been rebuilt and extended over time, passing through many hands. An Anglican minister associated with the Hordern empire held the house for from 1930 to 1952, when it was bought by the Mather family, who retained ownership until 2003.

Verna

Etheldale

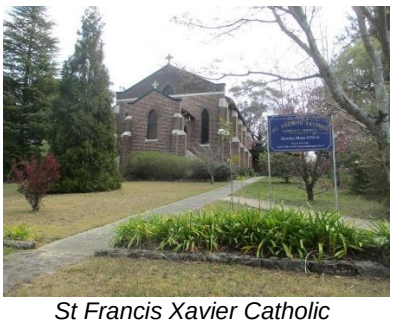
Inglewood

"Verna" is located on the Great Western Highway, and was built in the late 1890s by John Farrell of Manly, or his daughters, and was bought in 1895 by Dora (Dolly) Boulton. The house was originally known as **"Clunes**", and the land was subdivided in 1900, and sold to Rev E Claydon and the Anglican church. Later, the Claydon family used the place as a mountain holiday home, and it has had a number of owners since then.
"Inglewood" is located in Pritchard Street, and was built between 1880-1890. The house was shown on a subdivision plan of 1912, although significant changes have occurred to the building since then. It was owned by the Murphy family for 99 years until it was sold in 1992.
"Etheldale" is located in Falls Road, (formerly Boonara Street), and is a significant home, claiming associations with prominent families such as the Heney-Gullett family of journalistic and literary distinction, and with General Stewart an early Bathurst settler, and his descendants. Dr Charles McKay first bought the land, but sold it to David Davis in 1889 without developing it. In 1919 Davis sold to Amy Heney, and she and her husband built the house, naming it "**Lymdale**". They moved to Queensland only a few years later, selling the property to the Stewarts. A number of lots were added to the property over the next 10 years, to enhance the garden. On one allotment was built the cottage **"Amiens",** by the Stewarts. In 1962 "Lymdale" was sold to Derek Howlett, an archaeologist. In 1977 Howlett sold to Margaret Ethel Henderson, who renamed the property "Etheldale". In 1987 it was bought by James Meadows and Marlie Rendel.
Another mountain residence was "**Raleighville"**, home of the summer residence of the Simmons family. This home burnt to the ground in August 1899.
Joseph Bowes built **"Strathmore",** and the Reverend Stephen Childe built "**Chalet Fontanelle**" which was changed to "**Whispering Pines**".
Early boarding houses included **"Berry Lodge"** in Pritchard Street, **"The Pines"** in Boonara Street, and **"Rotorua"** in Pritchard Street. CW Medcalf was a carpenter who built several of the houses west of the Holy Trinity Church in Armstrong Street in the 1880s.



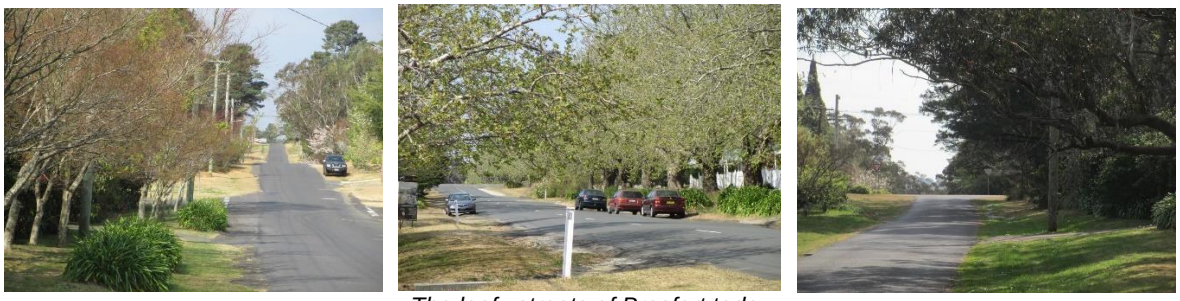
St Andrews Presbyterian

Holy Trinity Anglican



St Francis Xavier Catholic

Brasfort today
There are many other significant homes and tree lined streetscapes within the Brasfort Village area, which demonstrate the 19th century ideal of a mountain escape on spacious grounds, within reach of the rail line, the Falls, and the beginnings of the small commercial centre and other services. Activities included flower and vegetable gardens, orchards, dairies and poultry, all of which demonstrated a need to be self-sufficient until the development of the railway enabled better access to markets in Sydney.



The leafy streets of Brasfort today

Wentworth Falls has therefore had two previous lives, as the simple Weatherboard, and then the residential estate of Brasfort. The changing modes of transport and servicing did the most to alter the character of the town we know today. The Weatherboard name is familiar to many, with its associations to William Cox and the building of the first road. The name Brasfort, however, has faded in familiarity especially for the younger generation, and to folk from beyond the mountains who were not aware of its existence.

Maxwell's Hut, Burragorang Valley

Chris Banffy of NSW National Parks is heading a restoration team for Billy Maxwell's Hut in the Burragorang Valley.
The hut, built in 1925 using the methods of his father William Maxwell, and expanded over time by William (Billy) Maxwell, has been abandoned since 1943.
A very detailed document by Ian Jack is available at:
http://www.asha.org.au/pdf/australasian_historical_archaeology/27_04_Jack.pdf
The hut is well documented because of a shooting accident on Boxing Day of 1926, where Alan Crago was shot, and his kidney damaged. A hospital was set up in Maxwell's Hut and photographed by Horace Milton.
Because of this detailed documentation, Chris believes he has a good case to have the hut restored, and has formed a committee to raise funds for the project.
So far there has been considerable work done to protect the remaining timbers from white ants, and some protection of remnant timbers from the hut, and an enclosing fence has been erected to unsuccessfully keep the wombats out and stop them from undermining the foundations.

Maxwell's hut 2017

Some of the locals

Site visit April 2017

Chris hopes to restore the hut to a habitable state, and have it used by bushwalkers, using a booking system. On 5th April 2017 I visited the hut with Chris, Jan Koperberg, and Ian Jack his wife Jan. It stands in a large paddock frequented by kangaroos, wombats and echidnas.
Philip Hammon

The search for the recovery road, Katoomba coal mine

Once again, Phil Hammon has been analysing old photographs! However, this time he follows it up with some ground truthing

"The search for the Recovery Road began with the finding of this photo in MAAS website which showed in the far background, J B Norths house Essendene, and a small shed at the top of the Tramway.

I had seen references to it but never took it seriously, as I had no idea where it was or how it could work. My mother had told me tales of sliding down the "mullock heaps" on sheets of galvanised iron when she was a child, so I knew that they had existed. The only other reference was a mention in Bennett's paper of the crews building the Catalina racetrack coming across heavy timbers in this area and assuming that they were something to do with the tramway. However, searching Google Earth and SIX Maps for land boundaries of the tramway at its northern end, the road which runs west from the intersection of Kulgoa and Gundar Street in the 1943 aerial photos of the area looked like it could be a suitable candidate, as it curves under the hill in what would be just in the right place.

The coal and shale that was brought up the tramway from the top of the incline, at what today is the Scenic Railway, was tipped across screens, which sized the coal and dropped it into bins for loading into rail wagons. If the bins were full or the coal was oversized it passed across the top of the screens and went into the bypass chutes. At present I have no detail on these chutes, be they wooden troughs or simply dividing fences on the ground, but they were needed to separate, shale from coal, and to feed a loading chute at the bottom.

A site survey on 29 May 2017 with Patrick Leonard and myself, armed with the trusty Garmin GPS, followed the road from Kulgoa St. There is a steel gate across the road with a BMCC padlock. It is obviously a well made road, cut and benched across the hillside, sloping gently downhill, and following the side of the hill around towards the NW. My conversations with "horsey" people had told me of the necessity for a turning circle for the horse and cart to turn around, then a means of backing the cart under the chute. Horses don't back carts very well, especially downhill!

Sure enough there is a turning circle 10-12 metres in diameter with the remains of a hitching post in its centre. From here the road slopes more steeply into the bottom of a small waterfall and terminates.

It seems to me that the 3 metre high cliff formed by the waterfall was perfect to give the loading chute some elevation, and allow the coal to slide into the dray. I conclude that the driver would bring the cart to the turning circle, turn it around, unhitch the horse and tie him to the hitching post, then manually walk the dray downhill to run up against the stop under the end of the chute. He then brings the horse down, turns him, and backs him into the shafts.

The dray is then loaded from the chute, and the horse pulls the dray all the way around the recovery road, into Gundar St, up onto the highway,and around to the top of the screens where the coal or shale was again screened. I am assuming that the large lumps of coal and shale which had bypassed the screens, were manually broken down whilst lying on the ground awaiting reloading.

Picture from 1943 SIX Maps showing the remains of the Recovery Road

Patrick under the loading chute for the tip dray

Round footing for a post beam, part of loading chute

Coal and shale recovered from the creek bed

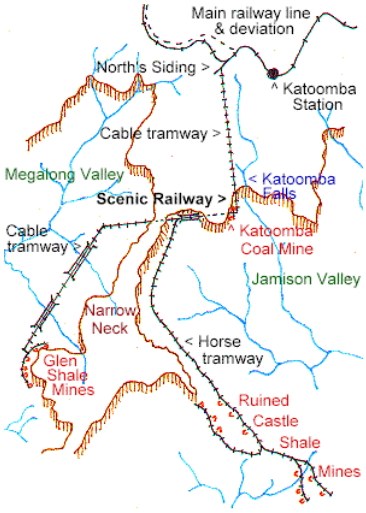
Post hole recess, with small objects placed in it

Remains of an iron box up on the bank

Two post holes above creek bed

There were the remains of an iron box on the bank, perhaps formerly a horse feed or water trough. There were two post holes on the slope 2 metres apart, 10 metres above the creek bed, they appear to be post hole footings, and have recently been used by animals, evidenced by the pile of fresh earth outside the holes.
Our explorations carried us up to the railway siding, which we followed to the south west. I was looking to prove or disprove the statement from Bennett's paper that the tramway went over the railway siding on a bridge. It is quite obvious, from the earthworks that the tramway passed under the NSWGR rails. The tramway only being 12ft wide, and the skips 3ft high, it was a not a long span for standard gauge rail.

The hold down bolt for the return wheel of tramway



Katoomba mining tramlines

This also answered another question, on how were the rail trucks moved along under the chutes as they were being loaded, then moved to await pickup by a locomotive. This is answered by the siding being on a slight gradient, the locomotive pushing the empty trucks right up the siding, then individual trucks being rolled back down the slope using sprags and pinchbars, to be loaded.
Now proceeding up the tramway to the North, looking for the site of the shed that can be seen in the first photograph. There has been a lot of site disturbance by the RFS, cutting up the large pine tree logs that were growing on the site from John Britty North's time, but we did manage to fine one 1 1/4" diameter hold down bolt, which probably held the return wheel for the tramway. There is also a substantial concrete footing here, which has coal and goolies for aggregate dating it to the 1880's." *Philip Hammon*

The Technical Side

Heritage Gardens

Creation of a garden takes time, and its establishment and development over time demonstrate the vision of the designer. To reach a mature state may take decades, but the garden by then may have reached a stage when it requires redevelopment, adaptation, amendment, when its original perceived character is altering and it needs reinvigorating. This redevelopment may require more regular maintenance than the maintenance of the building/s around which the garden sits.

Leuralla, Leura

Paul Sorensen 1936

Everglades, Leura

However, events and landuses that created the site took place in a certain physical environment. The investigation of the history of the site, the assessment of the significance and a review of events which have shaped the place over time, may enable the current owner to decide how to undertake future land management.
The conservation, care and restoration of a heritage garden will always follow some basic principles:

1. ***Condition assessment:***

The curtilage around the built elements is integral to the heritage significance of the items, and this is usually the garden setting. Assess the existing nature and condition of the garden, describing it through drawings, plans, maps and photographs. Any description will include buildings, works, relics, trees or places and their setting. Records should note contours, species and species maturity, and location, height and foliage cover, location and nature of features such as grassed areas and garden bed form, cottage gardens, hedging, tree avenues, water features, tennis courts, garden edging, orchards and vegetable gardens, gates and fencing, paths and patios, retaining walls, pergolas and statuary.
Note other features such as the nature and location of services. Take photographs, and use aerial photography. Identify areas which might require urgent attention – stabilization, weeds, tree surgery, impacts from stock grazing, plants which are impacting upon building stability, and areas of erosion.

2. ***Historical research:***

Carry out historical research based on the physical and documentary evidence available. Your research may relate to soil types, and condition, regional climate, and access to light, historical research of the property itself, the buildings and the owners. Analysis of old photographs, sketches and paintings, reviewing oral histories and inventory sheets will assist, as well as consultation with bodies such as the Australian Garden History Society, and the various Botanic Gardens. Investigate if significant people such as Paul Sorensen were connected to the garden, to obtain some insight as to its original establishment.
This site investigation may result in the discovery of archaeological remains, former outbuildings and /or relics. These should be documented, especially where the garden is of known significance, and should involve minimal excavation until an archaeologist can be brought on site.

3. ***Significant values and constraints:***

Prioritise what is important about a surviving garden. What is it about the garden which gives it its significance, what was the original concept and character? It may be the garden design, the context, the trees, mature plantings or stone walling, heritage associations such as with people, buildings or events, or a rare surviving example of a garden type or period of time. The place may contain research value in terms of plants or plant remains of historical and horticultural value.
Determine what features should be incorporated into the restored garden. Prepare a policy for the ongoing conservation and restoration of the garden. Identify the constraints such as budget, climate, zoning, significance, encroaching landuses, road widening and service upgrades. Consider risks to neighbouring properties, and also to public access to the garden, such as limb/tree fall or root invasion.

4. Prepare the management documents:

From the above research and analysis, a statement of significance should be prepared for future planning and development.
Undertake preparation of plans and heritage management documents for construction and ongoing maintenance. The plans and heritage management documents should show the existing condition of the garden, the research undertaken, and allowance made for limiting criteria such as servicing and costing.
Original curtilage of the property should be plotted, and the remaining area available for restoration defined.
It should include a planting scheme, and garden layout and planting/maintenance calendar, looking for appropriate species where original ones are unavailable. Some species might be obtained over time, and be subject to development in nurseries. Cuttings and seeds from other similar period gardens are an option, as is propagation on site where species can be cultivated for replacement.
Where gardens are open for public inspection, a range of other measures may have to be set down in regard to public safety, signage, insurance, amenities and parking.
Critically, the heritage management documents should be regularly reviewed and amended to reflect changes over time.

Conclusions:

Gardens are organic, plants grow, climate and landuses changes and species die. Many aspects cause change over time, such as the setting, light and shade, growth of species and views, landuse change, subdivision, disaster such as fire or flood, change of ownership, zoning laws, bad management and neglect.
Heritage garden restoration may come down to attempting to recreate the original character, style and personality of the garden, rather than repetition of the original garden per se. There is also a difference in outlook and planning if the garden is a remnant bushland pocket, or it is a broadly exotic garden.

Norman Lindsay garden, Faulconbridge

Lidsdale House, Lithgow

Hoskins Church, Lithgow

Although for substantial restoration it is preferable to have the works overseen by a landscape architect along with knowledgeable horticulturalists, most gardens were created by the former occupants of the property, and the current occupants are usually most capable of managing and carrying out restoration work themselves, with guidance and research.

The changes in the garden must be accepted, although the function of the garden may not have changed. Management techniques might include reducing flower beds, and using low maintenance species etc, and it is important to retain evidence of the changes you make. Mowing, pruning and weeding take time, and the original garden may have had the benefit of paid help to assist, so time saving techniques and low cost may be paramount.
Above all, monitor seasonal changes, and hasten slowly. Have patience and undertake observation to understand the place and how it has changed over time. It is said we are but land managers not land owners, and the continuity may not benefit us directly now, but be a garden for future generations to enjoy. It may have taken 50 years for the garden to mature, and the new restoration work may not mature for another 50 years! So the restoration process is not a stop/start activity, rather than a continual process of adaptation to change over time.

The above is a very brief description of techniques which might be applied to heritage garden restoration.
HOWEVER! This is only the start of information which is out there to help you with your project. The following references are highly recommended as well.
In addition, the ***BMACHO Conference 2018*** will feature keynote speaker ***Stuart Read*** from the Department of Environment and Heritage, NSW Heritage Branch. Stuart will present an address on "Succession Planting", which is expected to be a thorough and informed account of how to proceed with the task of heritage restoration. So save the date, ***12 May 2018 at Mount Victoria Manor, Mount Victoria.***

Community events & updates

Thank you, Scott Pollock!

Scott Pollock, former Manager of Everglades Historic House and Gardens, served on the Blue Mountains Association of Cultural Heritage Organisations (BMACHO) committee from 2013. During that time Scott helped launch and maintain the Greater Blue Mountains Heritage Trail and managed our website. Scott did not accept nomination for the committee in March 2017, but he did remain on the Greater Blue Mountains Heritage Trail sub-committee.

GBM Heritage Trail launch

At Everglades

Scott leads the BMACHO group

Before James Fairfax died in January 2017 at the age of 83, he bequeathed to the National Trust his sumptuous Victorian estate, Retford Park, in the NSW Southern Highlands, to be opened as a house museum.
Scott has now been appointed Manager of Retford Park at Bowral, by the National Trust of Australia (NSW), and has moved to Bowral. This is the National Trust's gain and BMACHO's loss.
We wish to thank Scott sincerely for all the enthusiastic help and support provided during his time with BMACHO and we wish him all the very best for his new appointment.
The new Manager of Everglades Historic House and Gardens is the former head gardener, Guy McIlrath. *Jan Koperberg*

St Thomas Anglican Church, Hampton

St Thomas Anglican Church Hampton will celebrate its 120th Anniversary on Sunday 12th November 2017. Hampton is an area rich in the history of pioneer farmers and timber cutters dating back to the 1840s. For many years there was no Anglican Church. In 1813 only eight kilometres up the Hampton Road from the site later chosen for the church, Deputy Surveyor George Evans was the first known European to have crossed the Great Divide. In 1892 The Rev Thomas J Heffernan from Mt Victoria was ministering to parishioners at Hampton and arranged for a site for a church to be donated. The donor was P H Chauncy, the land being a subsection of one of the Wilson family paddocks now on Wicketty War Road.

Hampton Church 2017

Rev. Heffernan's father, Rev W Heffernan, laid a foundation stone on 9 November 1897 but building did not begin until 1905. Using stone quarried at Norman Lea on the Hampton/Rydal Road by Macarthur, and cut by local stonemason, Billy Boyd, the contractor E Cooke of Jenolan Caves and the foreman, D Chalmers, completed the church early in 1907. The wife of the donor Mrs Chauncy was presented with "a beautiful gold brooch, set with pearls and sapphires" when Canon Boyce opened the church on 23 February 1907. The hall adjacent was opened on 8 March 1964, donated by Mr and Mrs J Finlay and in the same year the church was finally cleared of debt and consecrated. It is now part of the Parish of Blackheath administered by the Anglican Diocese of Sydney but also cared for by Oberon ministers and lay ministers who officiate at the services.
Sadly congregations are dwindling; but the sense of heritage remains with the early endeavours to establish schools, places of worship etc in our villages, the hotels of necessity getting there first! Many families here are fifth generation - the same names on the same properties and roads.
The celebration will commence at 11.30am, and will be followed by refreshments. All are welcome to revisit and share old friendships and memories with the congregation.
Celia Ravisi

Glenbrook History Walks – 2018

Planning ahead, the Glenbrook group has their programme for next year all sorted. Book in early!

GLENBROOK & DISTRICT HISTORICAL SOCIETY Inc.

'HISTORY WALKS' PROGRAMME for 2018.

All on Saturdays: Walks led by Doug. Knowles & Team.

March 3rd:	**9.00am**	**"Glenbrook Lagoon Precinct."** Early campside and railway dam construction 1880 for Water Supply to Glenbrook Station.
24th:	**9.00am**	**"The Descent to the West:"** Mt. York : Three short return walks on the three most historic roads to the West: Cox's Pass 1815: Lawsons Road 1822 and newest: Berghofer's Pass 1909. Includes Tea/coffee, biscuits. **Special Walk: $12.00 Adults.**
April 14th:	**9.00am**	**"Faulconbridge Steam Sawmill Site."** Engine remnants and other relics. Operated 1914-1925.
May 5th:	**1.30pm**	**"The Mountains Murders."** Captain Lee Weller's grave site and rock in scriptions.
26th:	**1.30pm**	**"Cox's Road."** Walk along a section of this historic road following the ridge top from Linden to Woodford Trig.
June 9th:	**1.30pm**	**"Lapstone Construction Railway." 1910--1913** and east portal of Lapstone Hill Tunnel 1892.
23rd:	**1.30pm**	**"Duck Hole--Glenbrook Creek."** Old Roadway construction and pump site for railway water supply to old Glenbrook Station.
July 14th:	**1.30pm**	**"Dunn's Steam Sawmill Site" and earth dam.** Brookside Creek, Lennox Bridge and the old stone quarry.
Aug. 4th:	**9.00am**	**"Bull's Creek."** Railway relics:- Stone dam and steam pump relics.
Sept. 1st:	**9.00am**	**"Eastern Zig Zag Railway 1867"** and the first improvement: The Lapstone Hill Tunnel route. 1892.
Sept. 29th:	**9.00am**	**"Glenbrook Heritage Walk."** Historic sites, houses and West Portal of Lapstone Hill Tunnel--1892. **(Last Walk for the year.)**

Adults: $10 (Except for Special Walk.) **Accompanied Children under 16yrs. Free**

BOOKINGS are ESSENTIAL: Phone Doug on **4751 3275**. Please allow the phone to ring longer than usual, for details re meeting place, time and grade of walk. Good walking shoes are essential. Please bring a hat and drinking water. (No dogs please.)

BAD WEATHER ON THE DAY: Excessive wind or rain could cause cancellation due to hazardous conditions.

The Great Western Walk

Four years ago, Dr David Goldney asked fellow ecologist, Wyn Jones, to be involved in creating the Great Western Walk across the World Heritage Listed Blue Mountains from Emu Ford on the Nepean River at Emu Plains to Bathurst, NSW.

It is a 200km walk that follows (as near as possible) the 1814-1815 Cox's Road, commissioned by Governor Lachlan Macquarie, and built by William Cox and his team of convicts over six months.

David Goldney's publication, Cox's Road Dreaming Guide Book", produced in 2015 by David Goldney and Greening Bathurst, which won the 2017 Chifley Heritage Award in May, is still being distributed widely and the sub-title is "History With Your Boots On".

The 100-page book provides information about 116 sites and their natural and cultural significance. It brings together stories of the three Aboriginal nations (the Dharug, Gundungurra and Wiradjuri) who first walked the land and held their meetings on the ridges of the Blue Mountains. It also tells the stories of the Europeans, and the flora and fauna of the region.

Emu Plains

Bathurst

Paintings by John Lewin naturalist and artist (1770-1819)

The Great Western Walk is planning to start from the new Green Bridge being built over the Nepean River at Penrith, which is expected to open in 2018.
The whole walk will take about two weeks for people with moderate fitness. However, it has been designed to cater for all levels of fitness and interest. People will be able to slip in and out at various sections, using assisted transport. Wyn Jones said it would take about one week from Emu Plains to Mount York, and one week from Mount York to Bathurst.
The walk winds through wilderness, urban, village and rural environments. It travels across sandstone and granite country. It includes great views, east and west flowing rivers, hanging swamps and waterfalls, where Aboriginals sourced the grasses they ground for their food.
It will be a good opportunity for people to slow down and reconnect with nature, history, culture, local communities and themselves.
To complete the project, signage needs to be put up, pathways cleared, legal access obtained through private owned land west of Mount York, Council support sought to maintain the tracks and most importantly funding found for the project. All of this seems like an impossible dream, but the Great Western Walk committee hopes to launch the first stage of the walk, ie. from Penrith to Glenbrook, at the time of the opening of the Green bridge for pedestrians and cyclists.
Dame Marie Bashir AD,CVO has become the Patron, brochures are being produced, the support of politicians sought and funding is being sourced. *Jan Koperberg*

Changing of the guard

BMACHO would like to offer congratulations to several member groups on the recent election of their new committees.
The incoming committees are comprised as follows:

Mount Victoria & District Historical Society 2017-18

President: Tim Jones
Vice-President: Geoff Bates
Treasurer: Jack Thompson
Minute Secretary: Peter Lammiman
Committee:
Jean Winston, Roy Bennett, Stephen Davis, Cheryl Bawhey

Kurrajong-Comleroy Historical Society 2017 - 2018

President – David Griffiths
Vice-President – Steve Rawling
Treasurer – Pat O'Toole
Secretary – Marguerite Wyborn

Committee:

Suzanne Smith – Millstone Newsletter
Jenny Griffiths – Digital Archivist
Deborah Hallam

Colo Shire Family History Group 2017 – 2018

President – Carolynne Cooper
Vice-President – Paul McDonald
Treasurer – Joy Shepherd
Secretary – Neil Renaud

Committee:

Wanda Deacon
Carol Roberts (Grants Officer)
Jill Renaud (Public Officer)
Chris Upton (Newsletter Editor)

It is understood that Valley Heights Locomotive Depot Heritage Museum and Mt Wilson/Mt Irvine Historical Society will both be undertaking their Annual General Meetings in the coming weeks.

Patsy Moppett

Crossing the Divide - George Evans Memorial sign

[George Evans (1780-1852) (surveyor, explorer, artist, draftsman)]

The conventional line taught to most of us at school was that a bloke called Blaxland, accompanied by Lawson and Wentworth (BLW), found the way to the west. Not so. They may have paved the way across the difficulties of the sandstone plateau, but they ended their exploration short of the Great Dividing Range. The real honours went to another fellow, George W Evans, who retraced the route of the BLW expedition some five months after the earlier party's return. George successfully crossed the watershed of the Great Dividing Range near Mt Cheetham just South of Rydal on 30th November 1813.

Evans' reason for undertaking his trip was not in the interest of personal gain, the often-speculated motivation for Blaxland. Evans, acting in the public interest, under the direction of Governor Macquarie, was to explore to the west of BLW's endpoint and to cross the watershed. Taking as a guide James Byrne, one of the BLW expedition's members, Evans arrived on 25th November 2013 at the distinctive hill that represented the terminus of the BLW expedition, naming that hill Mt Blaxland. Five days later, after an arduous few days negotiating the steep country up onto the line of the Great Dividing Range, Evans crested the range and crossed into the western watershed and down to the Fish River. The first European to cross the Divide and enter the territory of the Wiradjuri people.

From this point on, Evans' journal of the trip reads with an ascending excitement about a land of true plenty, a land that progressively got richer; the grass more sumptuous, the wildlife more prolific and the fish and fishing beyond belief. "Nothing can exceed the fine appearance of this country" he extols in his journal on Wednesday 22nd December 1813, as they returned from the end point of their journey somewhere near present day Molong.

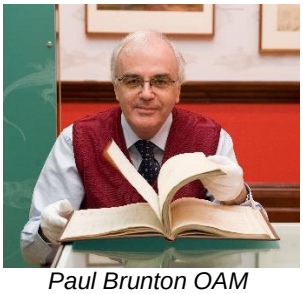
This was the pinnacle of Evans' early achievements. After this journey Evans settled in Tasmania but was regularly recalled by Macquarie, first to accompany Governor Macquarie and his party to the site of present day Bathurst in 1815 and then to accompany the Surveyor John Oxley as second in command in expanding the known horizon of the Colony northwest from Bathurst. Subsequently, Evans sold up in Tasmania and returned to England

before coming back to Australia where he conducted a retail business before joining the Kings School in Parramatta as an art teacher, ultimately retiring to Tasmania.
Back in 1963, the Lithgow Historical Society took an enlightened decision to erect a small monument on Hampton Road incorporating a plaque acknowledging Evans and the members of his party. Building on an original idea of Hampton resident, Ian Litchfield, this memorial is now being enhanced with an interpretive sign that incorporates a copy of the map that Evans created in 1813 showing the precise line of his survey, a brief biography of Evans and a summary of other earlier attempts to reach the inland. *Ramsay Moodie*

George Evans, with a party of five, two freemen and three convicts, was the first European to cross the Great Dividing Range NSW on November 30th 1813. The site is marked on the Hampton Road near Rydal NSW.
An illustrated interpretive sign acknowledging this achievement will be dedicated on November 25th 2017 at 10.30am.

George Evans

Evans Memorial, Bathurst

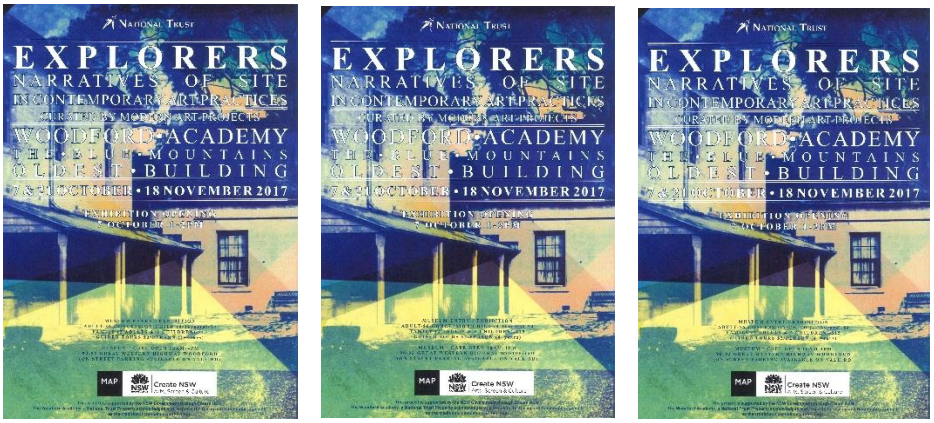


Paul Brunton OAM

GUEST SPEAKER: Paul Brunton OAM FAHA Emeritus Curator of the State Library.
DATE: Saturday November 25th 2017 at 10.30am.
SITE: The Evans Crossing Memorial, Antonio Reserve next to 1202 Hampton Road, 16km from the Great Western Highway, Lithgow. Turn off at Magpie Hollow Road, Lithgow, OR travel 12km from the Hampton Halfway Hotel.
Morning Tea is optional, with a gold coin donation, at *Bark Ridge* at 11.30am, 707 Hampton Road. BOOKINGS ARE ESSENTIAL for morning tea.
For details, bookings and a map contact: Lithgow Regional Branch of the National Trust (NSW): Ph: 02 6359 3109 or Celia Ravisi at cerav@bigpond.com

The interpretive sign is funded by Bill Hoolihan of Rydal, Lithgow Regional Branch of the National Trust (NSW) & Lithgow City Council. *Celia Ravisi*

Exhibition: Explorers: Narratives of Site in Contemporary Art Practices
The current exhibition at **Woodford Academy** is to be featured again on the Academy open day of 18 November 2017, following its viewings on the open days of 7 and 21st October. "The idea of "exploration'" has been a strong narrative associated with the Blue Mountains and predominant discourses on colonialist Australia. Artists and curators will explore other, lesser-known narratives, including pre-colonial perspectives and traditional cultural stories, historic accounts and urban myths. "Explorers: Narratives of Site in Contemporary Art Practices" is an extended, multilayered, accumulative exhibition project where new artists and new and altered works are added over the duration of the show. This layering of narratives, through the accumulation of work in the space, mirrors the complex, layered and overlapping narratives of the historic Woodford Academy site."



The exhibition is curated by Modern Art Projects Blue Mountains Beata Geyer and Mahalya Middlemist, and includes many exhibiting artists.
More information about the exhibition program is available at
www.explorersnarrativesofsite.org and *www.modernartprojects.org*
"Explorers: Narratives of Site in Contemporary Art Practices" project is supported by the NSW Government through Create NSW.

Museum Entry & Exhibition
Adults $6, Concession/Child (4-16yrs) $4, Family $15 (2 adults, 2 children)
Guided Tours - $2/Person (4+years)
Woodford Academy 90-92 Great Western Highway, Woodford
(on street parking available on Vale Rd)

Collections MOZAiC software

A request has been directed to BMACHO to inquire of members whether organisations have Collections MOSAiC software installed and if it is used regularly. If yes, would they be prepared to demonstrate its use. *Stephen Davis, BMHS and MV DHS.*

"Collections MOZAiC is a collections management system that is simple enough to use for anyone, affordable enough for everyone, sophisticated enough for the most discerning and flexible enough to suit collections of any size.
Fully searchable data, with built-in and user-definable reports and data export functions. Pre-loaded with industry standard validation lists, but fully customizable by yourself.

An internet connection is not required, but if available, your collection data can be easily uploaded to the internet for searching by the public (or just your staff)."

Responses can be directed to BMACHO.

People moving on

BMACHO has been advised in recent weeks of two people who are set to open new chapters in their lives, moving away from their Blue Mountains associations from previous times.
Rosemary Weaver, editor of The Arms Chronicles, and Vice President of the Nepean District Historical Society, leaves Emu Plains and the Arms of Australia Museum group to head north, and thanks everyone for their support and kinds words regarding the Chronicles over the past 107 issues. It is to be hoped that the newsletter will continue on under new management within the group, carrying on where Rosemary has left off.

Lynn Collins, Museums Advisor Blue Mountains City Council and formerly advisor to Lithgow City Council, has decided to up stumps and leave his museums advisory role. He intends to pursue his writing and painting, and tending to a boy now heading towards 8 years old. Sounds like he will have his hands full! Lynn will be sorely missed by many, and BMACHO will feel the loss from his valuable input on our GBM Heritage Trail Committee. BMACHO wishes them both well, and hope they will experience deserved satisfaction from their new experiences, and hope they stay in touch with their former heritage communities.

BMACHO receives RAHS Create NSW Cultural Heritage Grant

BMACHO were recent recipients of a 2017 Create NSW Cultural Heritage Grant from the Royal Australian Historical Society. The Grants were presented to recipients at the recent RAHS Conference in Cowra. BMACHO received a grant of $800.00 towards the publication of the 2018 issue of the Blue Mountains History Journal.

"The program is designed to facilitate the dissemination of local Australian stories, expression of the diversity of Australian culture as it impacts on communities, and to highlight and localise pivotal Australian historical events and issues." RAHS

Presentation by RHAS President Associate Professor Carol Liston to Jan Koperberg

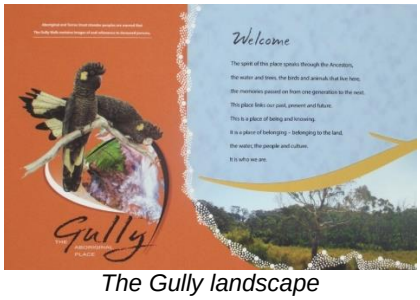
BMACHO was ably represented by Secretary Jan Koperberg, who received the grant on our behalf. *Patsy Moppett*

BMACHO Conference 2018: Heritage Landscapes

Plans are well under way for the 2018 Conference, *"Heritage Landscapes*". The Conference will be held on Saturday 12 May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria.

Most speakers have been confirmed and the Committee is quite excited about the quality of input that we are anticipating being presented. The key note address will be on the subject of "Succession Planting", a topic dear to the hearts, and a worry to the planning, of anyone with a heritage listed or significant garden. What happens when certain species, trees or shrubs die? What happens when alternate landuses begin to compete with and threaten the character of the particular landscape? How do you move on to retain the significance of the landscape?

Mt Wilson landscape



The Gully landscape

Eurama landscape

Other subjects include Mt Wilson Gardens, The Blue Labyrinth, The Gully, "Eurama", Sorensen gardens, and Woodford Reserve. Each of these landscapes is precious for very different and significant reasons, and how to perpetuate that is always a challenge. Accommodation for the Conference is available within Mount Victoria and at the Manor, and train access takes you to within walking distance of the venue. Trade tables will be available. Costs and booking details will be published in the New Year via the BMACHO website and within the first Newsletter issues of 2018. *Patsy Moppett*

Position available – Honorary Auditor

Blue Mountains Association of Cultural Heritage Organisations Inc (BMACHO) is seeking administrative assistance.

Prior to 2013, BMACHO were able to apply for funding for administrative expenses from the Federal Government's Grants for Voluntary Environment, Sustainability and Heritage Organizations (GVESHO), but this funding was discontinued with the 2013-2014 round of funding.

Blue Mountains City Council recently provided a $400.00 Community Assistance Donation, which was much appreciated and helpful.

However, BMACHO is wondering if there is an accountant available who is prepared to act annually in an honorary capacity to provide the annual financial report. The BMACHO financial year ends on 31 December. *Jan Koperberg*

Responses and inquiries may be directed to the Secretary, Jan Koperberg, on:

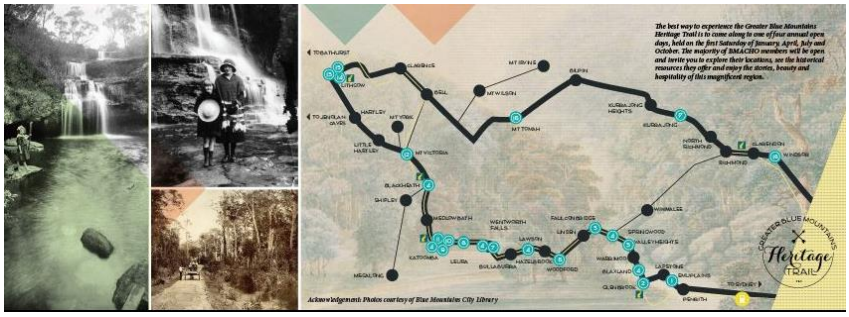
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed. During 2017 BMACHO are holding a competition to encourage visitation to Trail participant properties, and the competition entry forms are incorporated into the brochure.

Visitors to any of the participating venues as identified on the Trail brochure can either answer the set-out questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months.

So - Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure with the "Passport Competition and entry for" insert, and discover artifacts with altitude!

Great prizes to be won and the next draw will be December 2017. Check our website http://heritagedrive.com.au for the brochure, form and list of prizes, or collect the brochure and insert from visitor centres at Glenbrook, Katoomba, Lithgow, Clarendon, Bathurst, Oberon, and Orange. Trail participants will also have brochures and forms available. Email committee@bluemountainsheritage.com.au if you would like a brochure and form posted to you.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

To find out more about BMACHO visit www.bluemountainsheritage.com.au

Merry Christmas and a safe and Happy New Year

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2016-2017 (from April 2016) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Fiona Burn, Peter Brownlee and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Peter Brownlee, Fiona Burn, Jan Koperberg, Suzanne Smith, & Lynn Collins, Museums and Galleries Adviser.

Carlon's Farm, Green Gully, Megalong Valley

From 1788 all land in the colony was owned by the Crown. In 1824 Surveyor Hoddle undertook surveys for the colony, and in 1832 the first parish map was drawn up.
Then in 1861 conditional purchase was introduced to distribute Crown land. This enabled land to be taken up after improvements had been made to a farm, which could include slab huts, yards, sheds etc
Combined with the land distribution and settlement patterns, the isolation of Burragorang and Megalong Valleys served to produce a hardy breed of people who survived in trying times, making do with what materials they had to hand to provide for their families.
Carlon's farm, Green Gully is one of the earliest farms in the Megalong, and the remains of former buildings and other infrastructure can still be seen.

Green Gully Farm House

The Carlon (Carolan) family was one of the first to settle in both Valleys and the following is a brief description of settlement there and the beginnings of Green Gully, with a view to place in context why it is vital that the remaining features of the farm be preserved for future generations.

Burragorang Valley

Bryan Carolan was born in Ireland in 1780. He eventually married Ann Reilly. However, in 1820 Thomas O'Reilly and Bryan Carolan were transported from Ireland, being convicted of

conspiracy to murder against the British. They both served John Jamison at Emu Plains for about 15 years, after which they settled in Burragorang Valley. In 1828 Ann and their two children Patrick and Margaret followed him out from Ireland. He received his ticket of leave the same year, and in 1835 he received his conditional pardon.
The centres of Upper and Lower Burragorang and Cox's River settlement began in 1828. Bryan's name morphed to become Carlon, but Carlons were still not listed in the 1828 census at Upper Burragorang. Once established, the Carlons cultivated the river flats, and then later selected them.
Young Patrick had been born in 1807, and Margaret was born in 1811. In 1831 at age 24 Patrick bought 80 acres in Burragorang Valley, as surveyed by Surveyor Elliott. The deeds however were not issued until 1838. He also purchased 820 acres in 1835, and then purchased some 2,000 acres from John Campbell.
In 1837 Patrick married Mary Ann Purcell. They had 7 boys and one girl, commencing the Carlon family dynasty.
The original 80 acres became known as Carlon Town, and all the good land in the Valley was selected by the 1870s. The next land to be taken up was the talus slopes below the cliff lined rim of the Valley.
The first crop of any kind in the Valley was planted by John Lacey 1829, and the first wheeled vehicle in Burragorang Valley was actually built there by Patrick Carlon. Patrick Carlon and his son Bernard had taken the first wheeled vehicle into the valley, a dray lowered by ropes from the old pack horse track over the cliff side, the "Jump Down".
The first wheat crop grown in the Upper Burragorang was by Patrick Carlon and his father Bryan, and the first crop grown at Lower Coxs River was by George Pearce. Aboriginal elder William Russell recalls that Michael Quig also grew wheat in the Upper Burragorang about the same time.
Carlon Town, Portion 19 Parish of Nattai, was a central area of the Burragorang settlement, where Patrick & Joseph Carlon had their residences. From Patrick's land 3 acres were taken for a school site, church, residence and burial ground, as Central Burragorang. A post office was put at Mick Carlon's for a time. Mrs Patrick Carlon was to have had the post office located at her residence in 1906, but it remained at the old site.
Catholic mass was first held in the home of Patrick Carlon in 1833. In 1839 the Archbishop actually held mass on the Carlon farmhouse verandah! A church was called for by 1839, and a stone church was built on Carlon's 80 acres, which was used until 1957 when the valley was flooded. Patrick died in 1883 leaving some eleven properties to his seven sons.

Burragorang Valley after the flooding – from Nattai Lookout

Patrick's son Bernard Carlon was born in 1841. Bernard and his father Patrick were always on good terms with the Aboriginal people, and Bernard was reputed for treating ill people.

Bernard Carlon was very active in the settlement of the Valley. He and others obtained permission in 1893 to search for silver and lead near The Peaks. In 1919 he requested a money order service for the post office, but this was refused.
The Carlons were all educated as their parents were educated. Many other children suffered as their parents were not educated and they had little access to schools, with having to help out on the farm being a higher priority than an education.
Bernard and his wife Mary, settled in at Burragorang, and had nine children – Bernard, Francis, Patrick Luke, Margaret, the twins Norbert and Mary Anne, Teresa, Alphonsus and Agatha. Their daughter Teresa was a teacher.
The elder Bernard was blind in later years and was known as the *grand old man of Burragorang*. He died in 1925.
In 1907 lots were sold at the Yerranderie township, and Bernard's son Norbert Carlon bought Lot 73 on Taylor Street.
A new school site was pegged in 1915 for a school at Portion 109 Parish of Nattai, on land owned by the younger Bernard and Alphonso Carlon, facing the main road. It was built by 1917. The Upper Burragorang school was then closed.
A Mr. T Carlon had a store at the Yerranderie mines and Carlons also ran a boarding house.
The Upper Burragorang had wider river flats and better access to Camden, therefore the settlers were able to build a better style of housing. They were always conscious and proud of their convict heritage.
The Carlons remained in the Burragorang Valley until 1957 when the valley was flooded to form Warragamba Dam. Eight generations of the family were spread across the district. Over time, many moved further afield to Megalong Valley, but there have always been close links between the two valleys.

Megalong Valley

There are various routes between the Burragorang Valley and Megalong Valley, mainly based on old Aboriginal trails, and the two valleys are closely linked through people, industry and history.

Megalong Valley from the Hydro Majestic, Medlow Bath

1818 saw Thomas Jones, a naturalist, looking for horticultural specimens in both valleys. In The first official settlement in Megalong was undertaken in 1838, when the first survey there was done by W Davidson for George Aspinall.
The first landuses in Megalong were agricultural, with guesthouses and timber supplementing incomes. The guest houses catered for the bushwalkers and trail riders who later frequented the valley throughout the year.
In 1866 European access into the valley was from Hartley. There was an Aboriginal track from Blackheath, Megalong Road and Nellies Glen from Katoomba, and via Devil's Hole and Redledge Pass.

There would have been squatters in Megalong Valley before the first land grant by Norton in 1824. By the time the coal and oil shale seams were mapped in 1865, the first land was taken up by George Aspinal. Miners were brought in from Joadja in 1890 by the company AKO & M, and a road to the mine was constructed in the 1890s. Blacks Ladder had been a former tenuous access route for the fit and healthy, a former Aboriginal route.
Kerosine shale was discovered in Nellie's Glen in 1870, and in 1885 JB North started shale mining.
In 1884 a search was carried out to find a horse track from Katoomba to Jenolan Caves. When completed it became known as the Six-Foot Track. The south end of Megalong Valley obtained access from Megalong Valley Road.
The population grew, and a hotel, butcher, general store, bakery, billiards room, boarding house, post office and public hall were established. Once the mines closed in 1904, all buildings were demolished and removed to Katoomba.
A village was established near the Diamond Creek/Megalong Creek junction, with a hotel, stables and vegetable garden. A school was located on England's property near where Nellies Glen road goes to Megalong Creek. It was moved to the Nellies Glen mining village. There were no police, but in 1893 there were some 70 children at the school. In 1892 the post office was operated from the Megalong store by Elizabeth James, and the timber industry had begun to thrive with timber needed for fuel, heating and mining.
Development was generally close to the track.
Early settling families included Boyd, Tolhurst, Duff, Duncan, Carlon, Kirby, Grady, Ward and Gracey.

Green Gully

The Carlon family's property Green Gully was first selected in the 1890s by Mr Tolhurst, having been surveyed by Mr Chapman in 1891. Tolhurst forfeited his selection in 1905, although the site was first known as Green Gully in 1903.
Green Gully is on Portions 44 and 45, and was known as Green Gully from the 1890s, bounded by Galong Creek to the north and Carlons Ridge to the south.

Carlon family at Green Gully 1908

Family at Green Gully

At New Year in 1903, following a serious drought in 1902, a bad bushfire hit the valley, burning most of the timber houses. Following the fire some people left the valley, but many remained, and houses were replaced. A road was opened to Blackheath via Blackheath Glen, and the next generation of houses were built of sawn timber and pise earth walls. Then in 1905 there was a rabbit plague.
Green Gully was leased by Bernard Carlon in 1908 at age 67, and then sold to his son Norbert. Norbert and his sister Teresa were the only children left at home by this stage. Patrick and Phillip Carlon were pound keepers, Joseph kept a slaughterhouse, and Bernard C Carlon was an auctioneer.

Norbert and Alice Carlon (second and third from right) and bushwalkers 1937

Bernard and Norbert built the wattle and daub house, Green Gully, in 1908 and both lived there. Norbert lived there until his death in 1958, his wife Alice remaining there until 1976, when she moved to live with her daughter. She died in 1986.

In the 1920s motor cars were on the scene, and tourism began along with the activities from the Hydro Majestic. But even by 1956 there was no road down to Green Gully, and their supplies were left at the top of the hill and brought down to the house on horseback or sulky. Electricity was achieved in 1966.

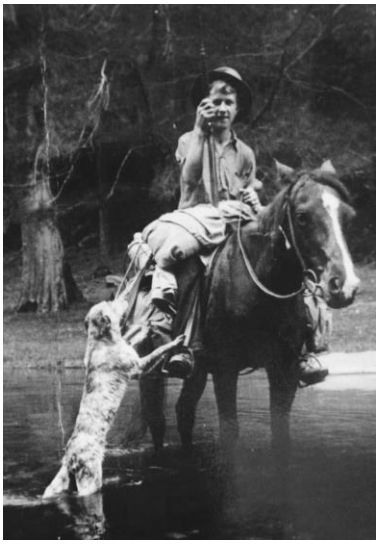
Although it had commenced long beforehand, serious bushwalking in the Valley did not commence until after WW2, including walkers such as Miles Dunphy. A drought came again after WW2, and tree lopping was used for feed. Bushwalkers at the time appealed to Norbert to influence the cattlemen to reduce the cutting, as tree loss was causing erosion and diversion of riverbeds of the Upper Wollondilly River.

Both Carlons Farm in Green Gully and the Packsaddlers below Carlons Saddle were frequented by bushwalkers and became popular camping and stop-over points on Galong Creek.

Norbert's son Bert, and his wife Norma, commenced their horse riding concern with Packsaddlers in 1963. Their house was at the rear of Alice's where they had settled in 1960. Both Norma and Alice had cared for the survivors of the Oonagh Kennedy tragedy in 1967, in Alice's little house.

Bert Carlon had been born to Norbert and Alice Carlon in 1924. He carried on a tradition begun by his father Norbert, in hosting the walkers and horse riders at Packsaddlers. He was a known story teller. He was known to say that a damper was not worth the eating until it was 3 weeks old. He made regular visits back to Burragorang Valley along the Coxs River to visit family.

Most of the work was done by the women, mainly Alice and her daughter Bernadette. Bernard O'Reilly described Green Gully as "*A peaceful, forgotten little pocket amongst the wild ranges over beyond Megalong*", where he frequently visited as a child, sleeping on the earth floored verandah, and visiting every time he was back in the district in later years.



A young Bert Carlon

Bert and Norma Carlon 1950s

National Parks and Wildlife Service

Green Gully was purchased by the National Parks and Wildlife Service in 1998, and this brought Green Gully within the Blue Mountains National Park. The Carlons Creek Bushcare Group – Megalong Valley, is based at Green Gully, and was formed in 2006, and Blue Mountains City Council has the entire site listed as a heritage item of local significance. The NPWS had a Conservation Management Plan (CMP) drawn up in 2001 to identify several houses in the vicinity of Green Gully, including Alice and Norbert's house, known as Carlon's Farmhouse, built in 1908. Norma and Bert Carlon built nearby in the 1960s. Norbert and Alice's house is described as a rammed earth building of solid construction, a vernacular farmhouse with associated kitchen gardens, erected to replace a former slab building on the site, destroyed in the 1903 bushfire. Originally the house contained 3 rooms, a living room and 2 bedrooms. By the late 1930s the bushwalking clientele necessitated the construction of a boys' bedroom and a girls' bedroom (strict segregation back then). The house then had 5 bedrooms, a living room, a kitchen in the rear courtyard, an external slab bath house and front and rear verandahs. The bedrooms served both the family and as guest rooms over time.

Construction techniques, Green Gully

It was not a traditional rammed earth building, having a timber stud frame with window/door openings. The construction was uncommon in NSW, but common in South Australia, where it was known as "pug and pine". The front wall was clad in weatherboards, facing north. Uncommon materials for the time included corrugated iron, glass, it had a water tank and the weatherboards. The yard contained a kitchen garden and orchard, and cottage gardens.

The CMP refers to the building in 2001 as a ruined house in a cultural landscape, already in a “ruinous state”, and notes the weatherboards having been still in place in 1960.

Side and rear additions – bathroom, kitchen

Photographs taken during the Kennedy tragedy in 1967 show the weatherboards still in place then, but they have since either been removed or have rotted away. Bert had partly dismantled the front verandah, and then fell ill, carrying out no further work.
The CMP outlines the significance of the place as follows:

- Green Gully is an integral part of the history of the Carlon and O’Reilly family history.
- There were numerous Aboriginal tracks passing through Green Gully.
- Aesthetically, the vistas from the place are spectacular, and the garden plantings are typical of Megalong farmhouses after the 1903 bushfire.
- The family connections and the cultural landscape are significant.
- The site provides an understanding of the land “selection” process, and the operation of self-sufficiency that existed during early settlement.
- It is a rare example of this architectural construction.
- Its principle characteristics demonstrate a representative example of construction after the bushfire.

Green Gully was a gateway to the Megalong and Burragorang Valleys, a cultural interface, and a place of regional significance. Five generations of Carlons occupied the valleys, from the start of exploration and mapping, through to the decline of cattle and the commencement of the conservation movement, and its purchase in 1998 by NPWS. They used very particular building techniques and materials, particularly after the 1903 bushfire.

Internal wattle and daub

Green Gully setting

The CMP provides policies for the long-term conservation of the significant fabric of the dwelling and the cultural significance, with no emphasis on an actual reuse of the building, and the impact of any works on the place having to be carefully considered.

Any actual reuse of the building would have to consider the National Construction Code and the Disability Discrimination Act, for fire and access. Access to the building must be suitably managed. Where it is only being used for interpretive purposes, upgrading is not required to be undertaken as it would destroy the fabric of the place.
It is noted by the CMP that any activities on the site have the potential to impact on the National Park itself, and that access to any historic places in the NPWS estate is on a priority basis. They must determine the condition of the place, threats to conservation, and the sustainability of the place for interpretation. The place should be monitored, information collection should be ongoing, and the S170 register updated (Heritage Act – s.170 NSW agency heritage register).
The CMP is to be reviewed every 5 years or when new information requires a policy change.
The CMP claimed that the Carlon family have been liaising with NPWS ever since the NPWS purchase of the place, and regular meetings were taking place. It is unknown if this still occurs.
Section 4.1, p.134 of the CMP provides that:

- NPWS should ensure the site remains publically available.
- NPWS should increase public awareness.
- Green Gully should continue to be used as a track head.
- Additional infrastructure in BMNP should not detract from the significance of the place.
- All fabric should be retained and enhanced. The buildings should be repaired for interpretation, with traditional materials.
- Regular maintenance inspections should be undertaken, and preventative maintenance and repair undertaken when required.
- Staff should have a thorough knowledge and understanding of the site.
- The potential for future use by NPWS through interpretive programs, for field studies and other cultural tours, and for interpretation of/with the Aboriginal community, should be explored.
- The CMP contains an implementation program for the immediate, short, medium and long terms, and for any ongoing works.

Conclusion

The site is currently unfenced and quite accessible, although in an overgrown, weathered and possibly unstable state. Many garden elements are evident, as are construction techniques and associated outbuildings and primitive infrastructure.
Much as BMACHO realise that we cannot save every heritage item or place, this site and its curtilage seem to represent a very particular part of the history of western settlement, and should at least be stabilized, contained and interpreted.
BMACHO has forwarded correspondence to the Department of Environment and Heritage (NPWS) in early November 2017 to ascertain the current status of both the CMP and the cottage at Green Gully, and is yet to receive a response. *Patsy Moppett*

Food for thought ..... Editor's note

Helping each other

Whilst the former Museums Advisor to Blue Mountains and Lithgow Councils, Lynn Collins, has hung up his hat and headed for greener pastures, he has left the museum community with some things to think about.

Lynn contacted BMACHO seeking feedback from the BMACHO membership with regard to specialist needs of museums in the region. Lynn sought to gauge the concerns of cultural heritage agencies, and how they might liaise with both BMACHO and Blue Mountains City Council, with a view to augmenting and improving the effectiveness of BMACHO as an umbrella organization.

Although BMCC has commenced the process of seeking a replacement Museums Advisor, Lynn will be more than happy to assist his successor.

Some of his recommendations include:

1. An examination of cultural heritage agency archives, looking at better management, preservation and improved access.
2. Auditing cultural heritage groups' (and other community groups?) current and future needs for secure, safe, accessible shared repository.
3. Thoughts on staffing of cultural agencies like museums, notably in regard to:
    - Coordination of volunteers;
    - Expert assistance Council staff may be able to offer;
    - Advice on caring for heritage properties occupied by heritage/community groups;
    - A safety audit of places used by workers and visitors.
4. Ideas on the improved presentation and marketing of cultural heritage collections via eg
    - Ensuring museum representatives are consulted and included in cultural heritage forums;

- Ensuring collections are promoted and showcased;
- Updating and active promotion via Visitor Information Centres and web-sites;
- A small grants system for research and creative 3D interpretations of Blue Mountains history for the public arena including museums;
- Employing expertise in fashioning destinations and projects using museum collections that refer directly to the education curriculum, and fostering their use by schools.

Only one response was received to Lynn's request for feedback, but it emphasized the vital part that BMACHO could (and does) play in the coordination and dissemination of information relating to heritage issues.

Workshopping the issues

BMACHO held a workshop in 2015 on succession planning, which was well attended, as was this year's Trove workshop. These subjects alone apply to all community groups, not just museums, and BMACHO continues to provide a forum for the sharing of many other ideas and information, with other workshops being considered for next year.

One example in recent months has been the use of freezers in museums for the stabilization of objects. The acquisition of a freezer by one member group was considered, and feedback from another member organization was able to provide information as to how to go about it. The current situation being experienced by Mt Wilson and Mt Irvine Historical Society, as documented in this Newsletter, is a classic example of how spreading the word leads to the inflow of ideas for solving a problem.

BMACHO would encourage member organisations to share their successes as well as their dramas with the wider community through the conduit of BMACHO. You never know who you might be able to help, or who may be able to help you.

BMACHO will continue to liaise with local groups, Blue Mountains City Council and relevant State agencies on matters of common concern, and welcomes requests for help and assistance at any time. BMACHO may not have the answers, but would endeavor to refer the matter to whoever may be able to assist.

Crisis at Mt Wilson

The Mt Wilson & Mt Irvine Historical Society archives have been stored and accessed in the former Mt Wilson primary school building for many years. Built in 1891, the school outlasted the ups and downs of changing populations and world affairs of WWI and WW2, finally closing in 1983, and was dedicated by the Minister for Education as an Adult Education Centre in 1988. Scholars were housed in the adjoining school residence, while the school room was used as a conference centre with seminar rooms attached. The school building has proven to be a successful research centre, and has enabled the retention and conservation of many priceless documents and photographs from the history of that area.

In October 2017, Stephen Dean from the Study Centre Council presented a report to the Historical Society committee concerning the state of the building. The information was then confirmed to the Historical Society by Joe Montano, Chair of the Mount Wilson Study Centre Inc.

Mount Wilson Study Centre

Village entry signage

Unfortunately, there has now been structural damage to the building by termites which will need to be repaired. The reports provided to date indicate that "*the subfloor areas of the former school building have suffered significant degradation as a result of the combined effects of historical and current termite activity, dry rot, settlement of piers and age. The conclusion that has been reached is that the school house is no longer safe for occupation."*
The school building had been closed and no further bookings taken. It is expected that the building will be out of use for quite some time. Joe expressed concern not just for the building but for the Society's collection. Subsequently, the building has been stabilised and the Society has been granted permission to remain in the building in the short term.
The building is owned by the NSW Department of Education. However, the Department has advised that it is not prepared to do anything to repair the damage, even though the Study Centre is listed on the Heritage Act Section 170 State agency heritage register.
A termite inspection had been undertaken, a building report prepared, and termite baits have been placed around the building at a cost of $6,200.00.
Thus, the Study Centre Council is left with the responsibility. There was some suggestion that the Mt Wilson Progress Association would assist but that is uncertain.
A recent funding application under the Community Heritage Grants to digitise the collection was unsuccessful, as the collection was deemed of only local or regional significance, not national significance. Now the local community must develop alternative plans to raise funds for the building's structural repairs.
The Society itself, needs to determine interim measures that will allow them to store and use the archives, and also gain access to the collection for when external researchers want to use and view material. At present members of the MW&MI Historical Society will need to sign an indemnity form which will be drawn up by the Study Centre Council. Added to that is the question of where researchers can work, and also for those who need to sort the collection, which requires attention urgently. The temporary solution is that they hire the Village Hall from Blue Mountains City Council for which the cost would be $15.00 per hour, as opposed to $30.00 per hour for others.
The principle issues faced include, but are not limited to, the following:

- Accessing the archives for both Society members and researchers.
- Security of the building and the collection.
- Establishing a suitable library storage area and a work area.
- Seeking funding to address the various issues eg. BMCC heritage assistance program.
- Establishing suitable conditions (temperature and humidity) under which to store the collection in the short and long term.
- The possible use in the short term of a container for storage and the issue of where to locate it.
- The possibility of a shared storage arrangement.
- Retaining the collection in Mt Wilson or Mt Irvine.

The archives are not fully digitised, and as a result, in case of fire, the Society may lose their treasured resource. The bulk of the collection amounts to about what would fit into a single garage.

At the recent Mt Wilson & Mt Irvine Historical Society AGM, BMACHO Vice President Ian Jack addressed the group to make suggestions and provide BMACHO support. Several members of BMACHO were then able to view the collection in situ, where it is stored in two rooms being the closed in front verandah of the former school building. The archives section of the collection is the least affected by insect invasion, due to any careful labelling and storage which has occurred to date. Filing cabinets have been used, but much remains in storage boxes and lever arch folders on open shelves.

The collection – photographs courtesy of Dr Peter Rickwood

The use of a refrigerated storage container, suitably acclimatised, has been suggested, but the location of such a structure is an issue. BMACHO Treasurer Phil Hammon has sourced some container quotes for reference purposes. The Mt Wilson community appears to be generally reluctant to consider the location of containers within their local area.

The Society is encouraged to contact the Department of Education to remind them of their responsibilities for repairs and maintenance, and also to liaise with Blue Mountains City Council to discuss temporary storage arrangements, waivers in rental fees etc to assist in the short term. BMACHO have offered to provide the Society and also the Study Centre Council with letters of support where needed, for both the building restoration and the safety of the collection.

Consultation has commenced with the Blue Mountains Historical Society to discuss options for short term housing of the collection at Hobbys Reach and Mt Victoria respectively, and a sympathetic response has been received from both organisations. However, until BMHS undertake their own planned collection storage review in 2018, it is unknown what space would be available on that site.

So, for the moment the Society is not faced with urgently finding a suitable place to store the archives. However, when the building repairs commence, if ever, the society will have to vacate. A long-term solution must be determined.

The Royal Australian Historical Society has been contacted, and BMCC's Heritage Advisor Christo Aitkin is aware of the situation, as is the former Museums Advisor, Lynn Collins. Other local community organisations at Mt Wilson are aware of the problem. Christo has requested access to the report on the structural/termite damage.

The Society has approached the local State member Trish Doyle for support, and it will also require further consultation with the Study Centre Council itself.

A working bee on the first weekend on 3-4 February 2018 will be held in the Village Hall, to sort the archives, and undertake any culling required. A Committee meeting before this will determine the best way to approach this exercise. It has been recommended that insect bombs be utilised in the rooms prior to the working bee to ensure the confidence and safety of volunteers.

BMACHO members are asked if there are any volunteers willing to assist on the day.

For further information contact BMACHO.

More recently, a proposal has been recommended by the NSW Heritage Office staff that a co-design group be formed to establish a way forward to seek funding and undertake actions to restore the buildings. The group would include representatives from the Mt Wilson and Mt

Irvine Historical society, Mt Wilson RFS, Mt Wilson & Mt Irvine Progress Association, Mt Wilson Study Centre Council and the Heritage Office of NSW. *Patsy Moppett*

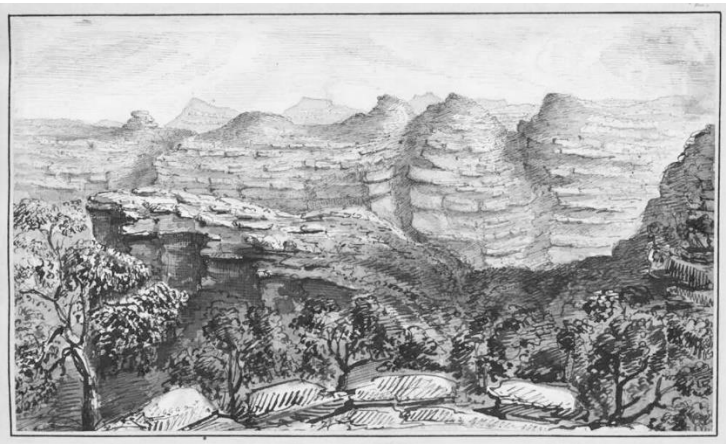
Book Review: "Wayfaring in Wollemi: stories of people in wilderness"

The Wollemi Wilderness is the largest declared wilderness in the state. At 4,250 square kilometres, it extends more or less from the Bell Range to the Hunter Valley. It occupies a substantial portion of the Greater Blue Mountains World Heritage Area, and lies largely within the area once generally considered to be the Blue Mountains.
In 1904 a gent by the unfortunate name of Cecil Poole set off from Putty in a bid to reach the Capertee Valley, crossing what is now the Wollemi. He was trying to find a tortuous path purportedly used to take a prize bull to market by the McLean family, back in the 1870s. Perhaps the most enduring outcome of his failed adventure - aside from his colourful account of the experience - was a patriotic poem that was published in "The Bulletin" a few weeks later. It was evidently inspired by the remarkable view he enjoyed while standing on Gospers Mountain, at the Wollemi's geographic centre.

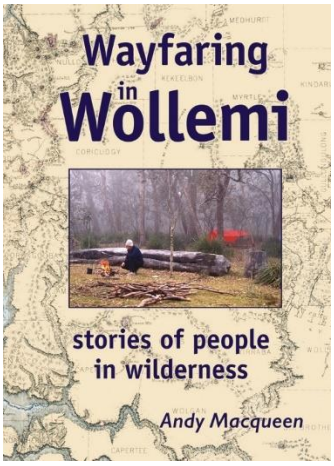


Govett's "Scenery of the Blue Mountains"

Geologist, Joseph Carne

Poole spent most of his adult life wandering the Australian bush, plying his trade as a phrenologist and writing articles for rural newspapers as he went. Some of those articles suggest he was quite eccentric to say the least. He wasn't mad though. Poole had advanced views on conservation for his time, and wrote at length on how land clearing and farming practices were degrading the land. And he spoke up for women, railing about their lot in life and the evil effects of their husbands' heavy drinking.
Around the same time as Poole's Wollemi adventure, geologist Joseph Carne was wandering the Wollemi extensively, seeking out and mapping the myriad volcanic mountains and "holes". He was supposed to be mapping the coalfields at the time, and his interest in what he called the "veritable oases" of the Wollemi seems to have arisen from his love of the place.
Poole's and Carne's stories are just two of 28 told in "Wayfaring in Wollemi". The other "wayfarers" variously include explorers, colonial surveyors, cattlemen, railway and dam builders, soldiers, bushwalkers and conservationists. They all spent a part of their life in the

Wollemi, for one reason or another. Some hated it, some loved it. Some could only see it as a target for exploitation while others spent their lives in the cause to conserve it.
Take William Govett, of Govetts Leap fame. In 1833 he was sent by Major Mitchell to survey all the country between Bell and the Colo. He ran into all manner of difficulties, ultimately finding the country inaccessible. Rather than admit defeat, Govett faked his work, and his resulting imaginary mapping was not exposed for another century. Mitchell didn't know of the deceit but may have been suspicious: Govett was sacked soon afterwards. Govett no doubt had that part of the mountains in mind when he later wrote this appraisal:
"It will remain forever, as it is now, a desolate and uninhabited region, where even the animals are seldom seen, where nature itself has been rendered defective, and useless both to man and beast, and where the observer would exclaim and feel, that He who made these mountains alone can declare their use."
The person who finally corrected Govett's work was Army surveyor Hugh Clews. He had difficulties too, but he revelled in them. He loved the bush.



Poole's Canyon

If George Townsend had had his way back in the 1880s, a railway would today be snaking its way up the nearly 100 kilometres of the Colo and Capertee River gorges: a great railway journey of the world indeed. Unfortunately, Townsend was so obsessed with the project that he was in denial about the enormous technical difficulties and expense involved. He was into grand schemes, among other things publishing a book expounding his plan to drought-proof all of NSW.
A few years later a man named John Cotton was behind a hare-brained plan to dam the Colo with logs, and flood all the "useless" country. Had the railway or the dam perchance materialised, we would not now have the rip-roaring tales of wilderness adventure also to be found in the book.
Then there's Bob O'Neill, Vietnam veteran, renowned Oxford professor of the history of war, and now Blue Mountains resident. The book tells the story of O'Neill's role in the enormous army exercises which took place in the Wollemi in the sixties - and also reveals how the experience changed his life.
O'Neill is not alone. Another of the book's wayfarers, Haydn Washington, has spent his life saving the Wollemi and other wild places, and can trace his endeavours and world view back to a life-changing experience on the Colo River in 1974.
Another wayfarer in the book is the author himself. Andy Macqueen has spent much of the last 20 years literally following his subjects through the wilderness. In the course of his efforts to "get inside their heads" he tells some of his own story, and reveals his personal attachment to the country. Thus, the book not only provides a rich history of fascinating people – and the cultural history of the Wollemi in general – but also stands as piece of very personal nature writing. *Andy Macqueen*

Beautifully presented, "Wayfaring in Wollemi" has 352 pages, 140 images and maps, and a hard cover. It is available for $40 from Blue Mountains bookshops and (post-free in Australia) from the author at andymacqueen@gmail.com

Caption notes

- *The author's companions camped in the tracks of Cecil Poole on a tributary of Coorongooba Creek. Poole referred to the spot as a "true canyon", possibly the first application of the word "canyon" to such a place.*
- *Geologist Joseph Carne (Carne family papers, National Library of Australia)*
- *William Govett's "Scenery of the Blue Mountains" (National Library of Australia). The scenery depicted is strongly reminiscent of the Wollemi country that was his downfall.*

The Technical Side

Bespoke Shoemaker

A bespoke shoemaker makes custom made footwear, bespoke meaning spoken for, to speak for something, or custom-made. The shoes are usually made for a particular person or for a particular event. "Bespoken" means ordered, commissioned, arranged for, and was first cited from 1607.

Early shoes – Celtic, tribal, Scandinavian

Shoes, as such, date back to the Egyptions, the Chines and other early civilisation, and were often simply a piece of plaited grass or rawhide strapped to the feet. The actual fitting or comfort of footwear was not considered until the 1850s. In the 1840's the rolling machine and the sewing machine revolutionised shoe making. Once technology came, the need for handmade shoes was reduced.

In the workshop

Shaping the last

At the end of the Middle Ages round and square toes shapes became popular. During the reign of Henry VIII shoes could be 6 inches wide and were known as foot bags.
As with many of the early trades, techniques were passed down from master to student through apprenticeships, and years of practice were needed to learn the craft.
Nowadays, training is carried out in colleges and universities and the manufacture is mostly by machine.
The principle tools of the trade included:

- Last – the wooden model of the foot.
- Awl – a tool to poke a hole in the fabric.
- Clans – a clamp held between the knees to hold the work.
- Die – a sharp knife for cutting sizes and shapes of leather.
- Long stick – a tool for rubbing the surface of the outer sole after founding and tacking.
- Paring knife – a sharp knife to trim away excess leather.
- Pincers – pliers used to pull through a reluctant needle when stitching.
- Punch – a tool for making holes in leather.
- Shears – a large pair of scissors for cutting leather.
- Tranchet – a form of French clicking knife held along the arm.

The feet are measured and a last for each foot is created. Paper templates transfer the design to the leather, which is then stitched with lining and stiffening. The uppers are attached to the sole, and the heel built up to the required height. The bespoke maker's label is attached to the insole, and the shoe polished.

Modern hand-crafted shoes

At the first fitting, the customer tries a prototype pair of shoes made in an inexpensive leather and the shoemaker checks if anything needs to be changed. If so, the changes are applied to the lasts and the shoes are created with a precious leather. After the final lasts are created, the customer can order more pairs of shoes without more measurements and fittings.
It is noted that a bespoke shoemaker is different to a cobbler, who is a person who mends and repairs shoes. The difference between the two trades was once considered so vast, it was a serious insult to call a shoemaker a cobbler (the latter of which is a term that also means to work clumsily or bungle).
The modern form of bespoke, orthopaedics, involves making shoes especially for people with special needs, or for stage or screen shows. There are still small teams of shoe designers, shoemakers and leather artisans committed to making comfortable and stylish shoes or leather accessories to particular requirements. *Patsy Moppett*

George W Evans Monument Unveiled

On Saturday 26 November 2017, the Lithgow Regional Branch of the National Trust (NSW) unveiled a new interpretive sign at The Evans Crossing Monument on Antonio Reserve, next to 1202 Hampton Road, near Rydal, NSW. This was to acknowledge the achievement of George W Evans (1780-1852): surveyor, explorer, artist and draftsman, who with a party of five, was the first European to cross the Great Dividing Range NSW on 30th November 1813. Paul Brunton OAM FAHA, Emeritus Curator of the State Library of NSW, unveiled the sign, ably assisted by a local school boy. Paul then gave a presentation on the life of George W Evans.

Memorial plaque 1963

New interpretive Sign unveiled

The new sign was funded by Lithgow Regional Branch of the National Trust (NSW), Lithgow City Council and Bill Hoolihan of Rydal.
An earlier monument had been erected in the grounds of 1202 Hampton Road, when this building was the school. It is now a home and the monument had been moved some time ago to Antonio Reserve. This earlier monument was erected by the Lithgow District Historical Society in 1962, and reads:

"IN THIS VICINITY
THE FIRST CROSSING
OF THE MAIN DIVIDE
WAS MADE ON NOVEMBER 29 1813
BY
DEPUTY SURVEYOR GEORGE WILLIAM EVANS
WITH
RICHARD LEWIS, JAMES BURNE, JOHN COOGAN,
JOHN GROVER, JOHN TIGHE
LITHGOW DISTRICT HISTORICAL SOCIETY
1963"

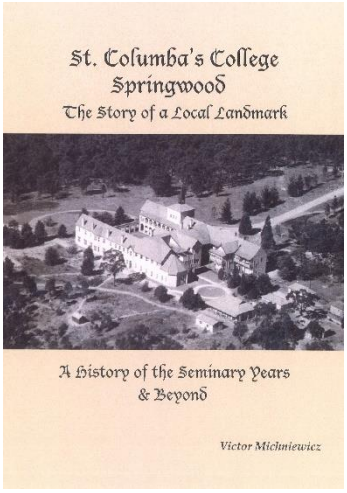
Book Review: St. Columba's College, Springwood - The Story of a Local Landmark

A History of the Seminary Years & Beyond - Victor Michniewicz

St. Columba's College is a landmark that is well known not only to Springwood locals but also to many residents of the central Blue Mountains. The choice of Springwood as the location of the Catholic Church's first minor seminary in Australia was not only important for the Catholic community, but also for what the establishment of the seminary would bring to the local community. The purchase of the property by the Church would have a significant influence upon the way in which north Springwood (later Winmalee) developed.



Established in the early 20th century, St. Columba's College would draw students from across Australia. For well over half a century, it would continue to grow until, over the space of a few short years, student numbers declined and in 1977 the seminary doors would close only to re-open just one year later as a Catholic high school.
The book is based entirely on historical facts that have primary sources as their foundation. The true story of St Columba's is a fascinating and complex one, so important from a local history perspective.
This is the story of that institution - its establishment, development and the nature of daily life for those that passed through its gates. *Victor Michniewicz*

The book is now available for $40.00 plus postage. Contact Victor at emailofvictor@gmail.au

Bathurst Heritage Trades Trail 2018

Bathurst Heritage Trades Trail is a Bathurst Regional Council initiative supported by a number of community heritage and history groups including Bathurst District Historical Society, Bathurst Heritage Network, The National Trust, Bathurst Bead & Wire Craft Guild, Bathurst Embroidery Guild and the Bathurst Family History Group. It will take place during Bathurst Heritage Week, on the 12th and 13th of May 2018, and will feature heritage trades in a number of heritage buildings and precincts around Bathurst.

It is aimed at increasing public awareness of heritage for locals and visitors. It is a not-for-profit community activity, and venues will be managed and manned by volunteers.
The Heritage Trades concept will be based around a number of heritage locations, each showcasing genuine heritage artisan trades in Bathurst heritage buildings or precincts over two days, as part of Bathurst Heritage Week, Bathurst Autumn Colours and the National Trust Australian Heritage Festival.
The locations planned at this stage are as follows:

1. **Convict Women** - an exhibition with a focus on food and food preparation at Chifley Home – a smaller space, but with the attraction of the house museum of our famous Prime Minister.
2. **Soft trades** - in the 1837 Uniting Church Hall in William Street – a great heritage venue with excellent large space and a full commercial kitchen. Spinning and weaving, crocheting, knitting, embroidery, lacemaking, felting, quilting and other soft trades, including workshops - living heritage.
3. **Restoration trades** - at the 1856 Tremain's Mill eg. pole wood lathe, adze wood shaping, found bush timber furniture, cedar furniture restoration, violin making, decorative joiner, cane furniture restorer, live traditional music and food. Tremain's is a proven event drawcard space in a heritage precinct.
4. **Farm trades** - at the Agricultural Research Farm Square eg. blacksmithing, farrier, wheelwright, winemaking, beekeeping, whips, steam engines, sadler, with a bush BBQ and corn on the cob. The Ag Station is heritage listed by Bathurst Council and has numerous heritage buildings to showcase, including a blacksmiths shop, stables, and (blade) shearing shed.
5. **Wedding Dresses** - at the Bathurst Memorial Entertainment Centre. A display and workshops concerning Australian wedding dresses and wedding paraphernalia from across two centuries.
6. **Other Venues** may be added.

The concept is that each exhibitor will showcase their skill by actually working on an example so that people can gain an understanding of the trade or craft. They would particularly like to encourage hands-on activities and workshops.
Potential craft/trades people are currently being asked to submit an expression of interest in showcasing their traditional trade or craft skills at one of the elements of "The Trail". The organisers are particularly interested in people who can demonstrate and discuss their trade with the public. There is no charge to demonstrators, and they can sell their products as well without any commission. Exhibitors who only sell their product and do not demonstrate are not encouraged, and will be required to pay a fee to participate, as will food vendors.
The Trail would run from 10.00am to 4.00pm both days, with set up possible on the Friday afternoon immediately before, with dispersal on the Monday morning after.
The organisers would be responsible for all logistics, professional OH&S risk assessment, all set up, running and clean up, portable toilets, small marquees and traffic management.
Marketing is being undertaken extensively, particularly via online and social media channels. The event is intended as a visitor attracting occasion, as well as for engagement with the local community. Marketing and promotion is being carried out by Bathurst Regional Council, and the individual community groups involved. They would encourage demonstrators to promote the event through their Trade or Craft organisation, and their network of contacts. Sharing from Council's Facebook page is a powerful way to spread the word.
The organisers would like to know as soon as possible what facilities and equipment would be needed so that these can be arranged before the event. If you are an Agricultural Trade or an outdoors trade, they would encourage you to bring your own gazebo and tables etc.
The organisers have a tight timetable to bring the event together and they hope you will be able to confirm at an early date. Each venue is organised and managed by a team from Bathurst community groups. Each team is responsible for locating, booking and managing the

talent for their location and bump in/out, and manning their entrance. Some locations will have live traditional music and food. The venues are ticketed as one & sold through Council facilities and on site. *Sandy Bathgate*

For any queries contact the organisers at heritagebathurst@gmail.com

PROJECTDOCUMENT: Enquiries/Inquiries - Perspectives on War

An invitation has been issued to Blue Mountains communities to contribute photographic and written documents from WW2 and post WW2 for inclusion in a significant exhibition *Perspectives on War*, to be held at the Woodford Academy in 2018 and the Blue Mountains Cultural Centre, Katoomba during 2019.
The Project is an ongoing research based contemporary art exhibition project situated in the Blue Mountains, NSW. It was established in 2015 by Blue Mountains Artist /Curator Vivienne Dadour to investigate and respond to public and private archives concerning the complexities of identity and place in the Blue Mountains Region, NSW, during WW2 and Post WW2, -to coincide with the 80th year anniversary of the commencement of WW2.

From 2016-17, Dadour extended the project concept to include Blue Mountain artists, writers, historians and local community groups to collaborate in developing work for exhibition that referenced *The Historical Landscape and/or The Political Landscape WW2 and Post WW2,* in the Blue Mountains, NSW.

In 2017 exhibition proposals were accepted by-

1.Woodford Academy, Woodford, NSW.

- *The Woodford Files 1940-50.* May-July 2018.

The Woodford Files 1940-50 is an exhibition developed in collaboration with Local Blue Mountain Historians that references a collection of handwritten letters from WW2 and located in the Woodford Academy archives. To coincide with Heritage Week a series of artworks by artist Vivienne Dadour that references this collection of letters, will explore the margins of photography and the archive to construct interplay between memory, history, text, and photo/digital imagery, throughout the Academy.

*2.*Blue Mountains Cultural Centre. Katoomba, NSW.

- Contemporary *Art and War,* August-September 2019.

This exhibition is a collaborative, interdisciplinary, contemporary art project that includes invited Blue Mountain artists, writers, historians and community groups to participate in an exhibition at the Blue Mountains Cultural Centre, Katoomba from August-September 2019- coinciding with the 80th year anniversary of the commencement WW2. Invited participants are: Vivienne Dadour visual artist /curator, community collaborator. Anne Graham, conceptual installation artist. Fiona Davies conceptual installation artist. Sean O'Keeffe film maker, visual artist. Chris Tobin, Blue Mountains Indigenous artist and historian. Ken Goodlet, local historian and writer. Various Blue Mountains community groups, individuals and National organizations. E.g., RSL, Red Cross, The Australian Lebanese Historical Society and other groups representing migrants to the Blue Mountains, Blue Mountains Indigenous groups, Women's land Army and Women Ambulance drivers, Blue Mountain's Hostels, Factories and Hospitals and Heritage organizations -will be invited to contribute personal WW2 and post WW2 archives/memorabilia for inclusion in the exhibition to form a pictorial wall of remembrance.
Intrinsic to the artistic vision of the project is the facilitation of a deep engagement with the historical and political landscape of the Blue Mountains during WW2 and post WW2. Blue Mountains community members are invited to contribute personal WW2 and post WW2 photographic and written documents for inclusion in the exhibition. Contributions will be copied to form a pictorial display as part of the exhibition within the gallery.
For further information please contact Vivienne Dadour
Email: research@projectdocument.com.au
Web: www.viviennedadour.com

Changing of the guard

BMACHO would like to offer congratulations to further member groups on the recent election of their new committees.
The incoming committees are comprised as follows:

Springwood Historical Society 2017-18

President: Peter Chin
Vice-president: Sue Fulton
Secretary: Dick Morony
Treasurer: Sara Matthews

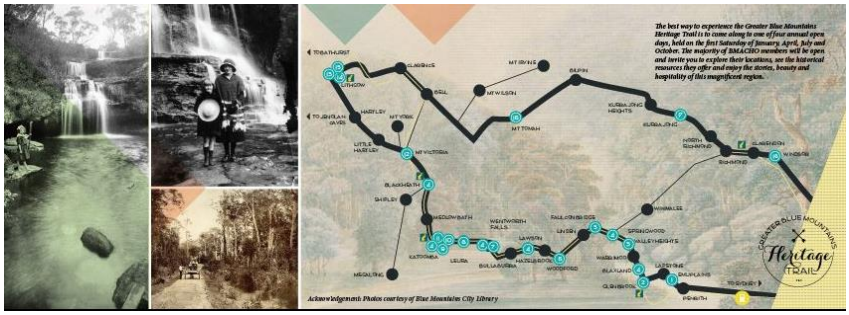
The Executive remains the same as last year.

Valley Heights Locomotive Depot Heritage Museum 2017-18

Chairman: Henk Luf
Secretary: Ross Stenning
Treasurer: John Carter
Publicity Manager: Keith Ward
Retail Manager: Steve Corrigan
Building Restoration Manager: Dave Grove
Building Services Manager: Ted Dickson
Grounds Maintenance Manager: Stephen Dive
Workshop Manager: Terry Matchett
Membership Officer: Jeff Russell
Large Exhibits Manager: Vacant - *(Henk Luf substituting)*
Small Exhibits Curator: Mike Pensini
Model Railway Manager: Ray Beharrell
Perway Manager: Vacant

Patsy Moppett

Greater Blue Mountains Heritage Trail Update



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region. During 2017-18 BMACHO are holding a competition to encourage visitation to Trail participant properties, and the competition entry forms are incorporated into the brochure.
Visitors to any of the participating venues as identified on the Trail brochure can either answer the set-out questions or obtain a stamp showing they have been to a venue. BMACHO will hold a prize draw approximately every six months.

So - Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure with the "Passport Competition and entry form" insert, and discover artifacts with altitude!
Great prizes to be won and the next draw will be in January 2018. Check our website http://heritagedrive.com.au for the brochure, form and list of prizes, or collect the brochure and insert from visitor centres at Glenbrook, Katoomba, Lithgow, Clarendon, Bathurst, Oberon, and Orange. Trail participants will also have brochures and forms available. Email committee@bluemountainsheritage.com.au if you would like a brochure and form posted to you.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Fiona Burn, Peter Brownlee and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Peter Brownlee, Fiona Burn, Jan Koperberg and Suzanne Smith.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Tasman Island Lighthouse, Tasmania

Light houses have fascinated people for decades and originally served a vital part in the safety of sea and coastal navigation around Australia from early colonial days.

The Tasman Island Lighthouse is on Tasman Island off the coast of south eastern Tasmania, and is one of the most isolated lighthouses in Australia. It was built in 1906, automated in 1976 and demanned in 1977. It was the last of the manned lights to be built in Tasmania.

The 29m high lighthouse is one of the highest lighthouses in Australia and marked the final turning point for yachts in the Sydney-Hobart race. The island is separated from nearby Cape Pillar by the narrow Tasman Passage, which is less than 500m wide. It was one of the more isolated lightstations and for many keepers was not a popular posting.

Tasman Island Lighthouse and cottages

As early as 1885 discussions were held about the possibility of a lighthouse in the vicinity of Cape Pillar. After discounting nearby mainland sites, a site inspection was made to Tasman Island. Despite a recommendation in 1886 that construction should proceed, approval was not given until 1903.

Plans were drawn up by Huckson & Hutchison and a prefabricated cast-iron tower and 1st Order lens were shipped out from England. The components of the cast iron lighthouse were hauled piece by piece up the 250m high cliffs before assembly, some parts taking up to eight hours to reach the construction site.

The difficulties of working in such a precipitous location were highlighted when two members of the Marine Board fell in while attempting a landing. Despite this, builders Henriksen & Knutsen commenced construction in January 1904.
Three keeper's cottages were built of solid brick, with sheds for wood and coal under the same roof for protection from the wild weather. The first superintendent was George Johnston who arrived on Tasman Island in December 1905 and already had vegetable gardens growing by the time the light was officially opened on 2nd April 1906.

1910

1968

2015

The nature of most light house sites is their isolation and their vulnerability to the whims of climate and weather. This light house and its associated infrastructure certainly had their fair share of drama. There were problems with the lamp mantle which regularly fractured due to the swaying of the top of the tower in strong winds. During a storm in 1919, verandahs and fences were blown away, water tanks blown off their stands and out-buildings shifted off their foundations. The winds were so strong that the vibrations in the lantern room destroyed five mantles and two pounds of mercury jumped out of the race and had to be replaced.
Once thickly forested, Tasman Island was almost bare soon after establishment of the lighthouse due to cutting timber for firewood, and this compounded the impacts of strong winds across the island.
Much of the island was originally grazed with flocks of up to 500 sheep, cattle, pigs and goats. However, stock regularly disappeared down the various sink-holes and clefts on the island, never to be seen again. Today, the native vegetation is returning, with pockets of small trees and shrubs appearing in more sheltered areas.

A truly spectacular landscape

Access to such a remote light station was always difficult. Seas were frequently too rough for supply ships to approach the island. Landings were originally made on the north-west side of the island where a track known as the zigzag was built. Then a landing platform was constructed on the more sheltered north-east corner of the island with a crane operated by a steam-driven donkey engine. Today, access to the island is much easier by helicopter.
Some interesting facts:

- For the first 20 years pigeons provided a link with the Tasmanian mainland. However, the birds were so well fed that they were often reluctant to leave the island!
- Because of the isolation, most women left the island to give birth. However, in 1920 a daughter was born to the lighthouse keeper and his wife, nursed by a Nurse Cleary.
- In their remote location the keepers on Tasman Island were vulnerable to infections, and medical help was often unable to be obtained.
- During the war years the job of lighthouse keeping was considered a reserved occupation and keepers were not permitted to enlist.
- A major accident occurred in 1927. Rigger, William Groombridge was killed and Joseph Patterson was seriously injured when a crane, being installed on the landing, collapsed without warning. The body of the dead man was thrown into the sea and never recovered. With no direct communication with Hobart it took until the next day to get medical help for the injured man and another day to get him to Hobart for treatment.
- Unlike many other Tasmanian lightstations, there are no European graves on the island.

In the years following the automation of the lighthouse and removal of lightkeepers, the unoccupied buildings deteriorated badly. However, with dedicated work by the volunteer group *Friends of Tasman Island*, this trend is now being reversed. Formed in 2005, the *Friends of Tasman Island*, work in partnership with the Tasmanian Parks & Wildlife Service, conducting work programs on the island about three times each year. They have a membership of committed volunteers and supporters who focus on the restoration of both the cultural heritage and natural environment on the island.
Access by sea continues to be very difficult. The haulage route is no longer operational and tracks up the 250 metre cliffs are overgrown. A permit to land by helicopter must be obtained from the Tasmanian Parks & Wildlife Service and no commercial accommodation is available on the island, although tours are available.

The 2015 plaque

Original lens

A bronze plaque was erected in 2015 to commemorate lighthouse keepers and their families for their contribution to maritime safety in the Tasman Island region from 1906 to 1976.
The island is now part of the Tasman National Park, and the lighthouse and associated structures, such as the keepers' cottages, are listed on Australia's Register of the National Estate.

The original first order Fresnel lens by Chance Brotherscan be seen on display at the Australian National Maritime Museum in Sydney, and the original lantern is stored at the Maritime Museum of Tasmania in Hobart. *Patsy Moppett*

Food for thought ..... Editor's note

Back through the archives

In February 2009 the then President of BMACHO, John Leary OAM, launched the first edition of BMACHO'S Newsletter HERITAGE. His Editorial highlighted the need for communication and dissemination of information within the heritage world, and his words seem to be still pertinent today.
The current committee can stand testament to the aspirations expressed then, that the Newsletter would be widely spread and that communications since then have definitely come a long way, in part a credit to the work of previous BMACHO committees.
Bearing in mind that the mentioned MPs involved may have changed, that Editorial is repeated below in memory of John, and to demonstrate how far we have come in the wider Blue Mountains heritage community. *Patsy Moppett*

Issue No. 1

Issue No. 2

Issue No. 3

From the president's pen.....NEED FOR IMPROVED COMMUNICATIONS

Some time ago, the committee of BMACHO identified as a major issue, the need to improve communications in the local heritage sector.

Across a broad range of issues it was considered that various organisations were not sharing information which could not only make their operations more effective, but would also make life easier and more pleasant in the bid to achieve goals of conserving, researching, recording, preserving and promoting our heritage.

The executive has spent considerable energy and time, with some success, in opening up communication with Blue Mountains City Council, the former Federal Member for Macquarie, Kerry Bartlett, the State Member for Blue Mountains and now the Federal Member, the Hon. Bob Debus and the new Member for Blue Mountains, Phil Koperberg.

In discussions with these community leaders they have generally displayed more than a cursory interest and knowledge of the diversity of heritage in the Blue Mountains, Lithgow and Hawkesbury regions.

However, what they were not aware of was the large number of individuals, which includes amateur enthusiasts, academics and professionals who are active within the local heritage sector. Community leaders have accepted the need to improve two-way communication and BMACHO's executive has seen some tangible improvement at government level. Many of those active in the heritage sector appear to have operated in isolation for many years — sometimes, totally unaware of the importance they play in the fabric of Australian society.

For more than five decades of societies in this region have been party to hosting most informative historic talks and presentations and yet there has been very little done in the way of publishing these interesting dissertations.

There have been some excellent books produced by local authors on very well researched material, but little effort in promoting these publications. Even some of the newsletters which have been produced are in their own right worthy of commendation as sound historical documents. While there is an urgent need to promote publications in print, there is an even greater need to share information between like organisations. It is imperative that organisations, if they are to succeed in maintaining membership, become more proactive in selling their group to the public. One of the best ways of doing this is to communicate and share ideas with like-minded bodies.

To participate in the process of improving communications, BMACHO's executive has initiated this Newsletter, HERITAGE, which it is proposed to publish every couple of months. The newsletter is designed to reach as many individuals as possible. Too often communications addressed to busy secretaries do not seem to go any further down the line. It is hoped that secretaries on receipt of HERITAGE on their e-mail will simply forward it on to those members who have registered their e-mail. Hopefully those who do not have e-mail will be provided with hard copies by other members of their organisation.

John K Leary, OAM – President and Newsletter Editor, Blue Mountains Association of Cultural Heritage Organisations (BMACHO)

Blue Mountains Historical Archives Storage

Following on from the article in the last BMACHO Newsletter (January-February 2018) relating to Mount Wilson's predicament on archive storage, comments have been received from Woodford Academy on their situation, and on the matter generally.

Woodford advise that due to the receipt of grants in 2017 the Academy has been able to undertake much needed collection management of their historical archives which were until recently stored on site. This process resulted in the archives being removed for urgent pest treatment and the services of Kate O'Neill were very much appreciated during the packing of the collection.

Due to poor climate control at the Woodford Academy, the archives are now held at the James Fairfax & National Trust property, Retford Park, Bowral, (where there is a specialized climate controlled storage facility), until such time as appropriate storage can be arranged at the Academy. The containers and an adjacent cottage were utilized by James Fairfax to hold furniture and paintings he brought back from Europe. They are lockable, powered, and the climate keeps temperatures inside remarkably stable.

Concerns have been raised generally in recent years however, about the loss of many local historical artefacts from the mountains. Whilst the Academy is sorry that the archives had to leave the mountains, Rae Clapshaw of the Academy advises that they are safe and in a clean environment, constantly monitored by data loggers and people living on site.

Access is restricted but not impossible. Thursday has worked out as the most suitable day and it is a matter of targeting your research, packing some lunch and travelling to Bowral. Academy volunteers take cameras, computers, scanners and other equipment, and work chairs and tables are provided.

Archive storage – Windsor

Archive storage – Retford

In regard to treatment of artifacts when freezing facilities are available, advice from Mt Victoria Historical Society Museum notes that freezing for borers was undertaken of some items for eight days, and the problem has returned. Advice from a Hobart conservator to members now suggests that freezing times should be closer to three weeks. So there is a lot of inaccurate and mis-information around.

A number of organisations, including BMACHO, have taken it upon themselves to investigate as to whether there are any other local appropriate storage facilities in the Blue Mountains local government area, as they and/or their members are struggling with the same issue. In doing this, to date it has been found that there was no known space available, at this stage.

In undertaking research for Mount Wilson, BMACHO established that funding opportunities were limited for small regional organisations due to the criteria set in those funding programs, and that larger organizations appeared to be able to comply more easily.

BMACHO also undertook research into the cost of climate controlled storage units, finding that there is a range available. However, with the situation being that many organisations are located in heritage buildings on small sites, there is no space on site for a storage container to be located, the costs of such containers may be prohibitive, and there is often a local

government Development Control Plan which prevents the location of storage containers on the site due to heritage issues and visual amenity! A catch-22 situation.
BMACHO also established that both long and short term solutions may be required for an organisation, depending upon their individual circumstances, along with opportunities for multiple user facilities. Access to the collections once archived is a part of the issue, if located off site.

Storage solutions

At its recent committee meeting at Mt Tomah, BMACHO discussed the issue with Rae Clapshaw of the Woodford Academy, who explained the access process as described above. She did emphasize that the Academy is lucky to be a National Trust property, and therefore have a large support system in place. They still need to find funding for remedial work at the Academy before the archives can return. They realise they are custodians of the collection and that they must be preserved for the future.
The State government has been undertaking an online community/industry survey of cultural infrastructure needs, and such survey closed on 11th February 2018. The Cultural Infrastructure Program Management Office (CIPMO) was seeking feedback from the community and sector about arts and cultural spaces in NSW. In April 2017, the CIPMO in the Arts, Screen & Culture Division was established to provide a coordinated response to the planning and delivery of cultural infrastructure in NSW.
The Academy in their submission has included the need for accessible, appropriate historical archives storage. Woodford have suggested that there may be a local government solution, and that perhaps BMCC should undertake a similar such review. An email with regard to this survey was distributed to BMACHO members on 8th January 2018.
This Office, one of the first of its kind, works in partnership with Create NSW to ensure appropriate infrastructure facilities are developed and maintained to support the growing arts and cultural sector across metropolitan and regional NSW.
The Office can be contacted at their email address: *ci@arts.nsw.gov.au* It is unknown when the results of the survey will be published, but the aim is to draw up a Cultural Infrastructure Plan resulting, it is hoped, in funding opportunities. It must be understood though, that this will take time.
In the meantime, BMACHO would encourage members and the wider community to "have their say" and make it know also to local authorities of the issues which particularly relate to Blue Mountains' organisations.
Feedback to BMACHO is always encouraged on issues such as this, within the bounds of the BMACHO aim, to foster and support cultural heritage activities related to the Greater Blue Mountains and beyond, through the sharing of experiences for a greater good.

Patsy Moppett

Moorecourt and Springwood Ladies' College, Springwood

Moorecourt was a mansion constructed in 1876 by Charles Moore, former Lord Mayor of Sydney, which became the Springwood Ladies' College in 1897, following Moore's death in 1895.
Moore was born in Ireland in 1820, and sailed for Australia in 1849. He had been apprenticed to his brother in the drapery business, and arrived with a shipload of drapery

which he sold in Adelaide. He went to Melbourne and then on to Sydney, where he set up a drapery business, and then went on to auctioneering.
In 1854 he married Sarah Jane Wilcox, and built a substantial home at Coogee in 1860.
He was mayor of Randwick Municipal Council in 1863, and was then elected to Sydney City Council. There he was Mayor from 1867-69. He became known as an improver, undertaking reclamation projects to utilize swampy land, covering the Tank Stream, establishing a number of public buildings, and developing Sydney Common which was to become Moore Park.
He refused to receive a Mayoral salary and in spite of his improvement works, was often criticized. In 1869 he resigned and went to Europe, returning in 1871, where he was Mayor again until 1886.

Charles Moore

Moorecourt

In 1876 he built Moorecourt at Springwood, and moved there in 1880. Soon after, Sarah died, having had no children. In 1883 Moore married a widow Annie Hill Montgomery in Ireland, during another trip to Europe. He remained childless, and died at Parramatta on 4 July 1895, being buried at Emu Plains Cemetery.
Moorecourt was built on a site to the northern side of the Great Western Highway between Springwood and Faulconbridge. The site falls away from the highway to a creek at the centre and rising again (to the present-day swimming pool) at the north. The mansion was demolished in 1858 and the south side of the park has now been cleared and landscaped adjacent to the highway, where there is an asphalt paved carpark and play area. Bench style tables and seats provide picnic facilities, in what is now called Buttenshaw Park. The Blue Mountains Shire Council acquired the land for recreational purposes in 1939 through the actions of a former Minister for Lands, E.A. Buttenshaw. The removal of the gateposts from Moorecourt when the house was demolished in 1958 was organised by the Springwood Historical Society.
A pair of sandstone gateposts in Buttenshaw Park mark the beginning of a wisteria walkway through the Park, relocated following the demolition of Moorecourt. Informal planting beds, partly planted with roses, are located to the northeast of the gateposts.
The Moorecourt gateposts are large square dressed sandstone posts with astragals and pyramidal caps. The Moore family crest carved on the posts has the motto *"PERSEVERANDO ET CAVENDO".* (By Never Giving Up and Taking Care). The crest is located on the east face of the northern gatepost and the west face of the southern gatepost. The northern gatepost has been set on a plinth at a higher level than the southern gatepost.

Moorecourt

Gateposts, Buttenshaw Park

Memorial Plaque

A memorial plaque reads:

These gates are re-erected
from "Moorecourt" Springwood
Residence of Charles Moore
Mayor of Sydney 1867-69
M.L.A. East Sydney 1874 M.C.L. 1880-1895
Moorecourt built 1876 Demolished 1858
Springwood Historical Society

Moore had originally acquired some of the sandstone building blocks used in Moorecourt from the convict lockup on Pulpit Hill west of Katoomba, which dated from the 1820s. Originally constructed as a single storey country style residence, two storey additions were added to the rear at a later date. Extensive gardens were established with ponds, pathways, orchards and kitchen gardens.

After Moore's death in 1895, the residence became the home of Springwood Ladies College. Established in 1897, it was one of several private ladies' colleges in the Blue Mountains, which lent a colour and eccentricity to Australian education which is gradually fading in memories. Once the dominance of State and religious schools came to the fore, private schools almost disappeared. These private schools were reputed to possess exceptional advantages for young ladies desiring to complete their education.

Gate post detail

Springwood Ladies College

The longest serving proprietor and headmistress of the Springwood Ladies' College was Mademoiselle Mignon Durand, who transferred her Ladies Grammar School in Newcastle in the 1920s. She stamped her personality on the place, and her name became synonymous with the school. She was short, dark haired and of unremarkable appearance, but she knew how to dress, being stylish and elegant. She produced women of grace, courtesy and refinement. College life was one of order and Spartan comfort. The spacious and well-laid-out grounds surrounding the college enable students to enjoy outdoor exercises to their heart's content, thus acquiring a physique not obtainable in less favoured colleges.

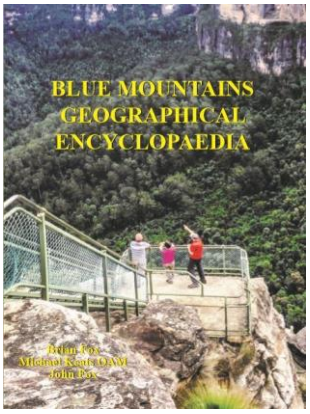
Book Launch : Blue Mountains Geographical Encyclopaedia

The launch of this much awaited publication is set to take place at Hobbys Reach, Wentworth Falls, on Monday 26 March 2018, at 10am for 10:30am.

It was February 2017 when Brian Fox spoke on maps of the Blue Mountains at Hobbys reach where he also gave an invitation to anyone to help and contribute to this huge place names project, a number of our members are to be thanked for their contribution to this project.



Between the Nepean River and Mount Victoria is sandwiched over 200 years of European history and thousands of years of Aboriginal heritage, some 2700 names have been applied to the places in between. This book is about those names, the men and women who named them, why and when they did.
Lead author Brian Fox has been on the job for over 20 years, systematically collecting and documenting every fact and every event. Researching and honing the text has been the role of co-authors John Fox and Michael Keats respectively.
A tome of 544 pages, full colour, hard cover with dust jacket. It includes 180 colour photographs, 70 of different waterfalls.
This text is a must for every person interested in the Blue Mountains whether they are a resident, bushwalker, teacher, history buff or curious visitor, and follows on the heels of the first of Brian's geographical research book, A Geographical Dictionary of the Blue Mountains .
The new book will be on sale for $50.00, and Brian asks to be contacted if you require more information. If you are unable to attend the book launch and would like to purchase a copy, this can be organised by an email or phone call.

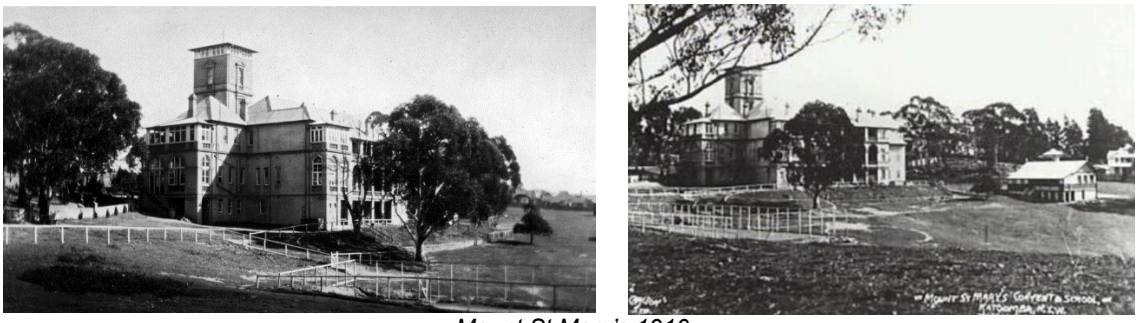
Mount St Mary's College and Convent, Katoomba

A wander around Civic Place at Katoomba takes you past an intriguing building, surrounded by vegetation, which was once the Mount St Mary's College and Convent, a building of State significance, listed on the NSW State Heritage Register in 2003. The Renaissance Action Group lobbied for this listing.
The place is significant due to its connection with education from 1909 to the 1990s, and in particular with the Congregation of the Sisters of Charity in Australia. It comprises an imposing complex of ecclesiastical buildings on a sloping site, dominated by the impressive, highly visible tower.
In the late 1890s the Sisters of Charity rented a small cottage, a former guest house in Katoomba Street, near the Catholic Church, as a place of respite for weary nuns. At the same time they realized a Catholic school was needed, and they opened a small college in 1901. They bought the adjoining house when student numbers rose, and joined them by a covered passageway.
Numbers increased again and they sought a larger site. The place chosen was located on a 1.6ha site on the northern side of the railway line, and with a northerly aspect. The entrance

was on the southern façade, and included a formal garden, now overgrown, and a courtyard with vehicular access.



Mount St Mary's 1910

The land was originally part of the Frank Grimley subdivision, and Lots 26-35 were bought by the Sisters of Charity in 1907. It was open paddocks with some mature eucalypts. In 1908 an additional 1.2ha was purchased from Grimley including orchards and vegetable gardens. The gardens established were extensive, and included low stone garden walls, terraces, ornamental trees and shrubs, paths and steps, urns, fountains, grotto and gazebo. It featured both exotic and native species, including orchards. The grounds had basketball and tennis courts.

The convent/college construction commenced in 1909 with the convent and college building, and the builder was Michael Byrne. It was designed by Nagle (James) and Nurzey, who became known as Henry E Budden & Nagle. The foundation stone was laid by Cardinal Moran in April 1909. It was completed quickly and by February 1910 boarding school students were being accepted.

In 1923 the College carried out a subdivision and sold off several blocks including its tennis courts, and also sold "The Rocks" cottage. The cottage "The Rocks" had been in the south west corner, and it had been relocated to the north east corner of the land.

In 1926 Mount St Mary's celebrated its silver jubilee, which resulted in the construction of the grotto. Some of the balconies at ground and first floor levels were infilled.

The school became a local landmark and a model of Catholic education, and with its attractive climate, attracted students from interstate and overseas.

Mount St Mary's 1984

In 1932 a reunion was held, synchronizing with the opening of the Harbour Bridge, as many ex-pupils would be in Sydney for that event. The local community heartily supported the

event, assisting in attending to the catering. Reverend Vaughan presided over lunch in the large college dining hall, decorated for the occasion. A concert was then held in the college concert hall, followed by a meeting of the students Ex-students' Union.
In 1941 the college provided refuge for the inmates and staff of St Vincent's Convent from Sydney when the Harbour was considered unsafe. The mountains were considered safe and an increase in student numbers occurred. In 1946 there were convent extensions, both internally and externally, to accommodate the increase in student numbers. This included a four storey extension at right angles to the original school building. In the 1950s a primary school bungalow was added to the site.

In 1957 The college and convent provided a temporary home for sisters and juniors from Leura and other community members left homeless by the terrible fires of that year.
In the 1960s the science block was added, and Mount St Mary's became a regional girl's school, and also became co-educational, taking boys from St Bernard's College which had just closed.

Covered walkway

Renaissance Centre 2014

However, due to declining enrolments the school finally closed in 1974. The premises were then to be a centre for religious and training purposes, which occurred until 1984 when a fire order was placed on the building and the school was closed. As the costs of upgrade were prohibitive, the Church sold the property in 1985. It was purchased by John and Pamela Patterson and L Donivito, with the intention of turning the place into a tourist and cultural centre, housing 30 craft areas, shops, studios, galleries, performance and teaching areas. Extensive alterations were carried out to create the Renaissance Centre, which included a kiosk and walkway from Civic Place, into a restaurant and cultural centre. The Centre was opened in 1987, as a transformation of the historic building into a multi-functional community and tourist centre. Stage 2 would have seen the building of a motel and entertainment centre with a 500 seat theatre. The center was to house the Penzig Collection of relics of Australia's bush ranging past, and the Trantor Museum of local history and colonial artifacts.

Mount St Mary's College and Convent buildings 2017

Mount St Mary's College and Convent buildings 2017

However, the property was sold in 1992 to Crestown P/L, and despite the restoration and goodwill, tenants began to leave the premises, and it has been vacant ever since. Some discussions were held about 2001 for the building to be used as a tertiary institution for a university campus, but this did not eventuate. The building did have development approval for restoration and the construction of 122 apartments, however this DA lapsed.
Some of the original landscaping is still evident, although much over grown, and extensive vandalism has occurred across the site and in the building complex. Fires in the building in 2003 and 2010 have taken their toll. It was listed for sale in 2009 and in 2012, but did not sell.
Many old buildings such as this have their mysteries, and Mount St Mary's is not without its own. The tunnels, "the dungeon", were supposedly under the school and have puzzled people for many years. The Edge Theatre sits within what would have been the grounds of the school, on the playing fields. The tunnel went from the playing fields, or maybe from in the vicinity of the music room, due east under the railway line, to emerge in what is now inside a private residence on the eastern side, although all bricked up. There was a doorway bricked up at the railway station too. The purpose and size of the tunnel is puzzling, but it is thought it was probably an air raid shelter for WWII.
There is also supposed to a ghost nun who wanders the lonely, dark halls of the upper dormitory! *Patsy Moppett*

The Technical Side

Nissan Huts

Farm sheds can take on a wide variety of shapes and sizes. Many are built from scratch as new buildings, but the nature of farming over the years is that a great many others are reused buildings, relocated buildings, built from second hand materials and generally constructed from whatever materials the landowner had at hand. Making do was the name of the game. One particular structure that has been reused across Australia is the Nissan hut, sometimes called an igloo. Nissen huts have also been utilised for other purposes such as one converted to a church at Port Lincoln, South Australia, warehouses at Wyong NSW, migrant workers huts at Balgownie NSW, munition stores in Darwin, Northern Territory, Snowy Mountains huts, hangers, railway workshops and many converted to the ubiquitous wool or machinery shed across Australia.

Colonel Peter Nissen

Building sale advertisement

During World War I Major Peter Nissen of the 29th Company Royal Engineers, began to experiment with hut design. The need for the hut was dictated by a demand mainly for accommodation, but also for bomb/ammunition and material stores, machinery stores and administration buildings. War use demanded that they be made of economical materials due to shortages during the war, and also that they be portable and compact to transport, particularly by ship. This resulted in a simple form which was quick and easy to erect and pull down. The world record for erection was 1 hour and 27 minutes!

Shearing shed interior

Derelict hut

The semi cylindrical shape was derived from a drill shed roof at Queen's University in Kingston, Ontario. A number of prototypes were made, and many reviews undertaken of the design before production commenced in 1916. The design was patented in the UK. During World War I over 100,000 were made by Nissen Buildings Ltd. Production waned between wars but was revived in 1939. A number of similar shaped hut types were developed such as the Romney in the UK and the Quonset in the USA.

As wartime accommodation the huts were cold and draughty or stuffy, hot and humid. They were also used for accommodation on construction sites, and a two-storey version was marketed by Nissen-Petren Ltd. Nissen received the royalties from the British government for the original huts made during the war, but only for their sale after the war. For the project Nissen received a Distinguished Services Order (DSO).

Articles appeared on how to convert the buildings for domestic use, but this was not a success. Despite the low cost, the hut was not a house, and had none of the status of a house. Also, the use of the internal space was not conducive to the placement of conventional furniture. One wonders how the construction would be adapted in the current age, when alternate building design is all the rage.

Under construction 1916

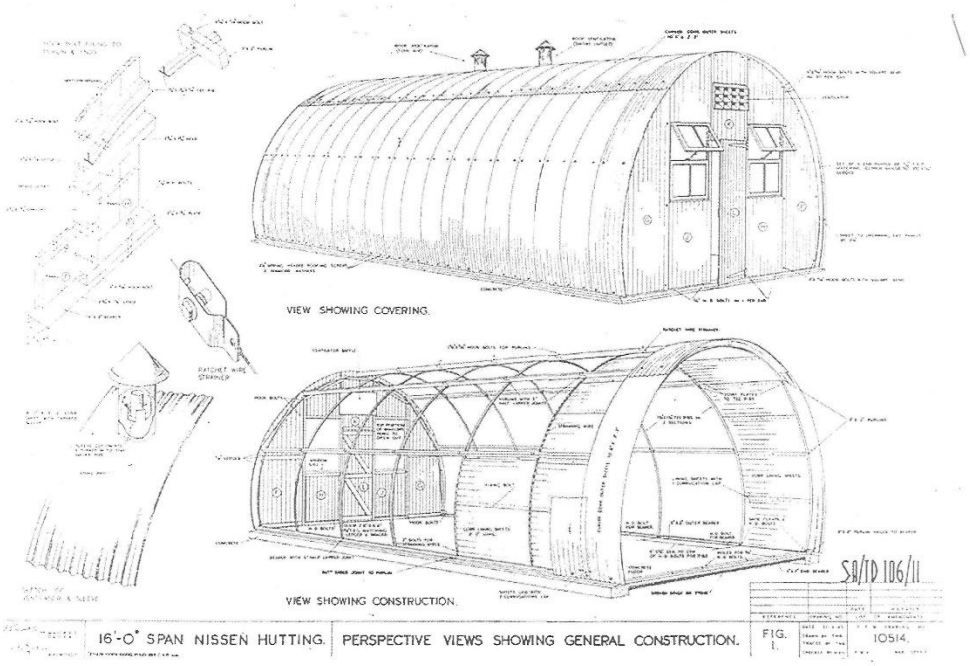
Church conversion, Port Lincoln

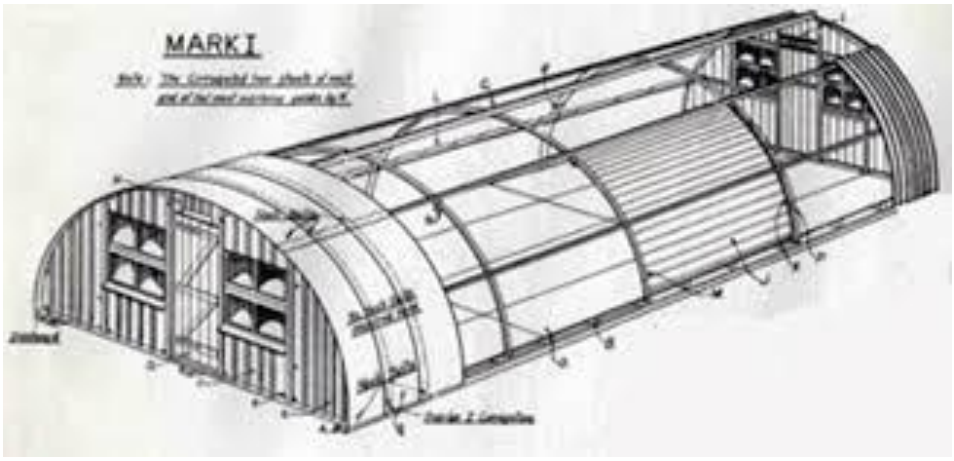
Accommodation – Perthshire

POW accommodation

A large number were constructed in Australia after WW II at Newcastle, to provide cheap, ready made housing for post-war British migrant families Many were subsequently demolished after their original purpose ceased, but the remainder were refurbished, improved and extended over time.

The Nissen hut is made from a sheet of metal bent into a half cylinder and planted into the ground with its axis horizontal. The sheets were attached to wooden purlins, and spiking plates at the end of each floor joist. The purlins were attached to T-shaped ribs, which were bolted to the floor. During construction, straining wires were utilised, although these were not in the original design. Interior lining, if there was any, could have been corrugated iron or Masonite.





Basic construction

The internal height (radius) was 8 feet and the floor was 15 feet 10 inches. The building was rested on stumps and the floor was tongue and groove timber. Buildings at East Hills and Villawood in Sydney had concrete floors. Farm buildings often had earth floors. Either end of the building was closed in by a wooden frame clad in weatherboards, bricks or corrugated iron. Windows and doors were added where required. *Patsy Moppett*

Tour: Land & Property Information , Bathurst

BMACHO is to undertake a tour of Spatial Services at Land and Property Information (LPI), Bathurst on Thursday 15th March 2018. BMACHO will hire the Blue Mountains City Council Access Bus for travel, seating about 20.
Much has changed at LPI since BMACHO last toured in 2010. The innovation, advances in technology and projects being undertaken right across the organisation will resonate with mapping and surveying enthusiasts.

NSW GOVERNMENT Spatial Services

Spatial Services implements and monitors standards for the survey industry in NSW. Spatial Services is the official source of land information for NSW, maintaining a digital cadastre map and a digital topographical map of the State. It also provides aerial photography, satellite imagery, addressing information, touring maps and a unique customised mapping service that tailors spatial information to meet specific needs.
The tour is due to arrive at Bathurst at 10am and will be provided with morning tea. The group will be divided into two smaller groups and the Spatial Services Managers will take groups to the various business areas.
A light lunch of sandwiches will be provided, dietary requirements withstanding, and the tour will conclude about 3.30pm.
The bus will pick up from Springwood and along the highway where required. Times are to be advised.
This tour will book up quickly and BMACHO can only take the number of persons who can be seated on the bus. **Bookings should be made by 7 March 2018**. Once numbers are confirmed for the bus, the final cost and travel times will be determined, but cost should be in the order of $15.00. *Jan Koperberg*

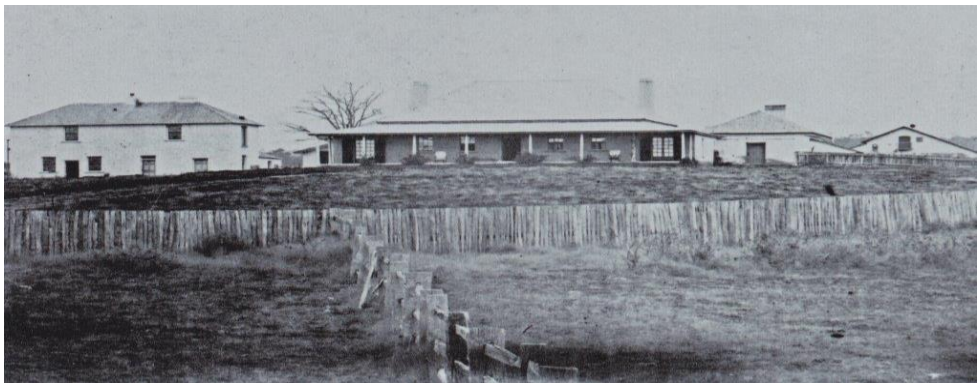
Open Day at "Macquarie", O'Connell

On 24 March 2018 the former Governor of New South Wales, Professor The Honourable **Dame Marie Bashir AD CVO**, patron of the Macquarie Society will **at 11.00 a.m**. formally unveil a plaque to commemorate the restoration of the two storey convict barracks (circa 1820-1822). The homestead at "Macquarie" (circa 1820–1822) has also been restored and the formal rooms will be open for viewing.



"Macquarie " 1863 Photograph courtesy of the Mitchell Library, State Library of NSW – Icely Family Albums

Circumstantial evidence supports the assertion "Macquarie", containing the original 1000 acre land grant to Lieutenant William Lawson by Governor Lachlan Macquarie as Lawson's reward for his contribution in finding a way across the Blue Mountains, is the oldest farm and oldest continuing residence west of the Great Divide. In its 200 years of European history "Macquarie" has only had two owners prior to the Hennessy family, namely, the Lawson and McKibbin families. Accordingly, it remains remarkably unaltered.
"Macquarie" is situated approximately 12 kilometres south east of Bathurst on the O'Connell Road and approximately 8 kilometres from the Great Western Highway.
The property will be open from 10.30am to 2.30pm, at 3397 O'Connell Road, O'Connell (south east of Bathurst).
Refreshments will be available. It would be appreciated if visitors would bring their own folding picnic chairs. Limited seating will be provided.
Entry fee: $10pp (Concessions for families, children and seniors). Net proceeds raised on the day will be donated to the Bathurst Community Op Shop. *Paul Hennessy*

To assist with catering it would be helpful if you could ***RSVP by 7 March, 2018 to:***

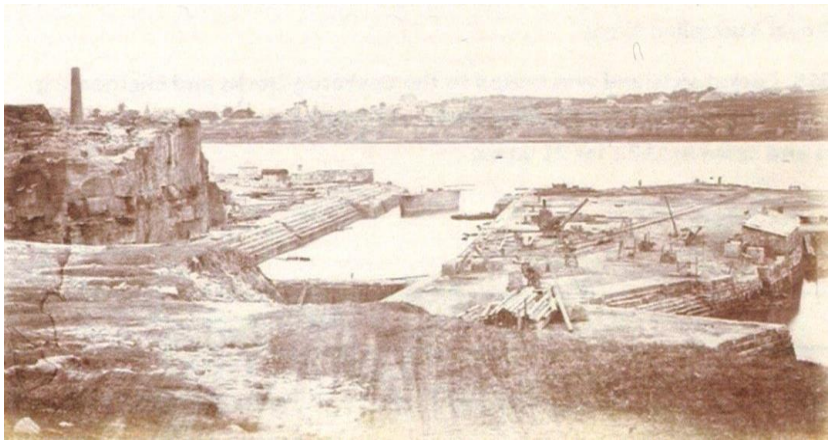
Historical Tour of Cockatoo Island

Colo Shire Family History Group are holding a tour of the historic Cockatoo Island on Tuesday 27th March 2018.
In 1839 the Island was chosen as the site of a new penal establishment by the Governor of the colony of New South Wales, Sir George Gipps. Between 1839 and 1869 the Island was used as a convict prison. Initially, prisoners were transferred to Cockatoo Island from Norfolk Island, and were employed constructing their barracks and rock-cut silos for storing the colony's grain supply.



Dry dock 1872

In 1869 the convicts were relocated to Darlinghurst Goal and the prison complex became the Industrial School for Girls and also a Reformatory. In 1871, the name Cockatoo Island was dropped in favour of Biloela.
Ship building began on Cockatoo Island in 1870. In 1913, Cockatoo Island was transferred to the Commonwealth Government to become the Naval Dockyard of the Royal Australian Navy.
In 1933, Cockatoo Island was leased to the Cockatoo Docks and Engineering Company Limited for 21 years. The lease was renewed in 1954 for a further 20 years and again in 1972 for 21 years.

Itinerary:

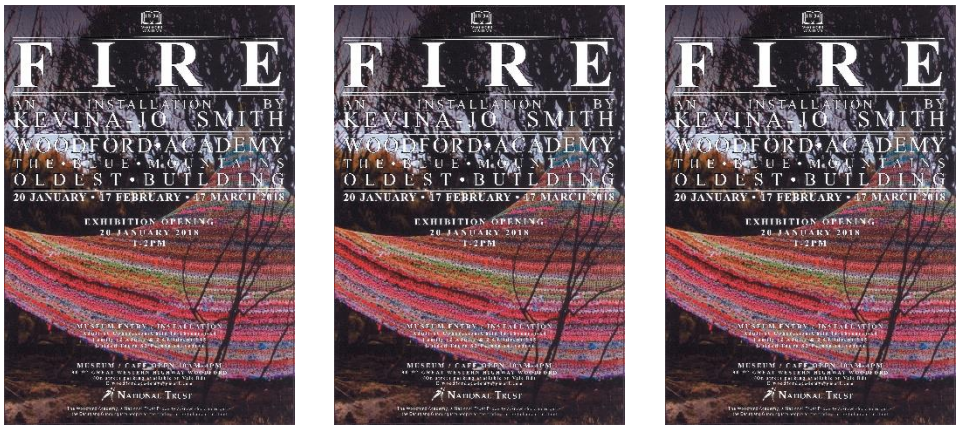
- A train will leave Richmond Railway Station at 7.41am, arriving at Central at 9am, then change trains for Circular Quay.
- The Ferry for Cockatoo Island leaves at 9.45am and arrives at 10.14am, to meet the tour guide at the visitors centre at 10.40am to start the tour.
- After the tour you may look around at your leisure.
- It is recommended that you bring the following items with you: water bottle, hat & sun screen, wet weather gear, enclosed shoes and lunch.

Cost is $16.00 for the tour. This does not include ferry or train to Circular Quay. Money is payable to Colo Shire Family History Group, posting cheques to PO Box 206 Richmond NSW 2753.

For inquiries and bookings: Neil Renaud Ph: 0423 157 089 or Joy Shepherd Ph: 02 4588 5867
Bank details provided by the Group upon request.

Exhibition: Fire: a site-specific installation

The Woodford Academy Management Committee launched "*Fire: a site-specific installation*" by Blue Mountains artist Kevina-Jo Smith on Saturday 20th January 2018. The exhibition was also available on 17th February 2018, and there is one day left to run on 17th March 2018. The installation engages with concerns of climate change and the bushfire season in the Blue Mountains, and responds to investigations of the Academy's collection of research by historical guests, researchers, artists and the local indigenous community, the Darug and Gundungurra people, who have provided records of documenting bushfire in the past, through written word and illustration.



Smith's artwork emerges from her collection and reuse of consumer by-product materials. Her process is a tribute to the natural world and a ritual against its destruction. Her work explores shelter, environments and cultural climates, through both exhibited works and the lived process behind those pieces. *Elizabeth Burgess*

Museum Entry & Exhibition:
Adults $6, Concession/Child (4-16yrs) $4, Family $15 (2 adults, 2 children)
Guided Tours - $2/Person (4+years)
Woodford Academy 90-92 Great Western Highway, Woodford
(on street parking available on Vale Rd)
Hours 10am-4pm

Reminder: Exhibition at Mount Victoria Museum

There will be an exhibition marking the 150th anniversary of the railway to Mount Victoria, at the Mount Victoria & District Historical Society's Museum, commencing on 5th May 2018. The event commemorates the Governor's arrival by train on 1st May 1868 to declare the line open.

The exhibition takes the form of a photographic display relating to the railway and text describing the impact over the years of the railway to the village of One Tree Hill, as Mount Victoria was originally known. Various other attractions will be staged, such as shingle splitting on site and a poetry recital relating to trains.

The official exhibition opening by Trish Doyle will be held at 11.15 am. Champagne and nibbles will be provided.

Bring the family to share the fun! The museum will be open at 12 noon to 3pm for its usual session charging $5 adults and $1 per child. *Jean Winston*

Please contact Jean Winston on 02 4782 7866 for further details.
Regular Opening Hours: Weekends, public & school holidays from 12 noon to 3pm.
Closed Christmas Day and Good Friday.
Guided groups and coach parties can be accommodated at other times by contacting the Curator or Publicity Officer. www.mountvictoriamuseum.info

The Museum is located at the back of the Mount Victoria Railway Station at Station Street, Mt Victoria.

New Mountains Museum Advisor

A new museums Advisor has now been appointed by Blue Mountains City Council, to replace Lynn Collins.
Gay Hendriksen is a local based at Blaxland, and familiar with the special nature of the Blue Mountains and the many and varied communities which make up the mountains region. Some of you may have already met Gay and she may have already visited some of your museums and heritage/cultural organisations in the area.

Gay has said she firstly wishes to become familiar as quickly as possible with what each museum or organisation does, their custodianship of collections, their vision for their special places and their needs and challenges, so that she can be of best use under her role. She says it is a special thing being part of this kind of network, ensuring the tangible and intangible heritage survives, sharing the passion, the stories, the object and site histories the interpretations and the knowledge.
We look forward to working with Gay in the greater Blue Mountains region. *Patsy Moppett*

Yvonne Jenkins Memorial Award 2018

This award is held annually in memory of Yvonne Jenkins OAM, from Rydal, whose vision was to found the Lithgow and District Family History Society and was well known for her work as an author, artist and family and local historian.
The essay title for the Award, announced during 2017, is "*A Favourite Family Heirloom I have, or would like to have"*. The winner of the Award will be announced on Saturday 19th August 2018.

Yvonne Jenkins

Heirlooms…….

The Award is in the form of a certificate and free membership of the Lithgow & District Family History Society Inc, for the following year. Entry is open to members and non-members of the LDFHS and is to be in the form of a short essay (not to exceed 1,000 words).
Entries close on 30th April 2018.
Further details about the competition are available on the Society's website and Facebook page, email or may be obtained by writing to the Secretary, PO Box 516, Lithgow NSW 2790.

Valley Heights Locomotive Depot Heritage Museum

IMPORTANT ANNOUNCEMENT: MAJOR WORKS: MUSEUM CLOSED FOR MINIMUM OF FOUR WEEKS FOR ESSENTIAL INFRASTRUCTURE WORK

The Museum management reluctantly advise that due to the commencement of major works starting from Monday 12th February 2018, the Museum will be CLOSED to the Public until Sunday 25th March 2018.

The scheduled Public Open Days that were to be held on Sunday 25th February & Sunday 11th March have been CANCELLED.
The works are required to address the following:

- Reduction of injuries as a result of trips and falls.
- Improve accessibility across the site for the general public and those with mobility issues.
- Increase undercover storage for railway exhibits.
- Restoration of the Roundhouse forecourt area.

The works will enable a much better and safer Museum for everyone, visitors and staff alike.

Patsy Moppett

Check their website for further information.

Errors

A correction is offered on the advice of a reader with regard to a photograph printed in the January-February Newsletter, Issue 54, page 5, on Carlon's Farm, Green Gully. Megalong

Valley. The photograph is of a group of bushwalkers, the T.I.G.E.R. walkers – that being an anagram of their names, the ultra walking athletes of the day.
The error lies in that the woman, third from the right, is in fact not Alice Carlon, but Dot English, the famous "barefoot bushwalker"!
The other "error" mentioned was that the article stated that serious bushwalking did not start until after WW2. It is acknowledged that very serious walkers such as Miles Dunphy were out and about long before WW2. Perhaps the information provided in the research material referenced related to the publicity afforded bushwalking back before the war, given that the extremities of many of their extraordinary exploits have only come to light since the war. BMACHO apologises for these inaccuracies.
Recording history will always be a work in progress. Any corrections, additions, or incidental information is always welcome. *Patsy Moppett*

Blue Mountains Historical Society Activities 2018

BMHS have planned an interesting range of speakers at Tarella, Hobbys Reach, for the first part of 2018, as follows:

3 March 2018 - McLaughlin Lecture
- Speaker: Phil Hammon – *Bleichert before and after*

7 April 2018 – AGM
- Speaker: Max Hill – *Living in the Kedumba Valley*

5 May 2018 – Monthly Meeting
- Speaker: Magda Cawthorme – *Hidden History of the Blue Mountains*

2 June 2018 - Monthly Meeting
- Speaker: Sue Castrique – *Convict History of Cockatoo Island 1839-1869*

Tarella cottage museum

Monthly excursions are also held and details will be provided in a full calendar of events on the Blue Mountains Historical Society website as they come to hand, so stay tuned!

www.bluemountainshistory.com

BMACHO Conference 2018: Heritage Landscapes

Book in now for the 2018 Conference, *"Heritage Landscapes*". The Conference will be held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria. Take advantage of the $60.00, ***early bird registration***, up to 12th March 2018. The cost will be $70 for registrations from 13th March to 30th April 2018.This registration fee covers individual attendance at the conference, morning tea, lunch and afternoon tea.
Speakers have been confirmed, and a few changes made to the topics to be covered on the day:

- Keynote Speaker – Stuart Read, Office of Environment & Heritage: "Landscape and garden-themed trails as Blue Mountains lure".
- Colleen Morris: Heritage consultant: "Sorensen Gardens".

- Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney: "Eurama and the nearby Parkes property at Faulconbridge".
- Kate O'Neill: Woodford Academy Management Committee: "Woodford Reserve 1830-2018: as good as the most capricious taste could desire".
- Mary Reynolds: Mount Wilson & Mount Irvine Historical Society: "Mount Wilson Gardens".
- Aunty Sharyn Halls: Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association: "The Gully & Gundungurra Country".
- Bruce Cameron, historian & author: "The Blue Labyrinth".

The Conference is Proudly sponsored by Scenic World Shared

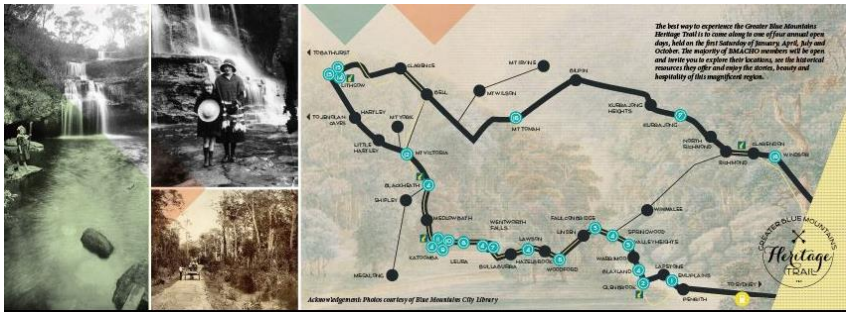
Registration is from 8.45am and the Conference concludes at 4.30pm.
Accommodation is available within Mount Victoria and at the Manor, and train access takes you to within walking distance of the venue. Trade tables will be available.

Full costs, program and booking details can be found on the BMACHO website.

Patsy Moppett

Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region. During 2017-18 BMACHO are holding a competition to encourage visitation to Trail participant properties, and the competition entry forms are incorporated into the brochure.
Visitors to any of the participating venues as identified on the Trail brochure can either answer the set-out questions or obtain a stamp showing they have been to a venue.
BMACHO will hold a prize draw approximately every six months.

So - Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure with the "Passport Competition and entry form" insert, and discover artifacts with altitude!
Great prizes to be won. Check our website http://heritagedrive.com.au for the brochure, form and list of prizes, or collect the brochure and insert from visitor centres at Glenbrook, Katoomba, Lithgow, Clarendon, Bathurst, Oberon, and Orange. Trail participants will also have brochures and forms available.

Email committee@bluemountainsheritage.com.au if you would like a brochure and form posted to you.
If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Fiona Burn, Peter Brownlee and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Peter Brownlee, Fiona Burn, Jan Koperberg and Suzanne Smith.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Tasman Island Lighthouse, Tasmania

Light houses have fascinated people for decades and originally served a vital part in the safety of sea and coastal navigation around Australia from early colonial days.

The Tasman Island Lighthouse is on Tasman Island off the coast of south eastern Tasmania, and is one of the most isolated lighthouses in Australia. It was built in 1906, automated in 1976 and demanned in 1977. It was the last of the manned lights to be built in Tasmania.

The 29m high lighthouse is one of the highest lighthouses in Australia and marked the final turning point for yachts in the Sydney-Hobart race. The island is separated from nearby Cape Pillar by the narrow Tasman Passage, which is less than 500m wide. It was one of the more isolated lightstations and for many keepers was not a popular posting.

Tasman Island Lighthouse and cottages

As early as 1885 discussions were held about the possibility of a lighthouse in the vicinity of Cape Pillar. After discounting nearby mainland sites, a site inspection was made to Tasman Island. Despite a recommendation in 1886 that construction should proceed, approval was not given until 1903.

Plans were drawn up by Huckson & Hutchison and a prefabricated cast-iron tower and 1st Order lens were shipped out from England. The components of the cast iron lighthouse were hauled piece by piece up the 250m high cliffs before assembly, some parts taking up to eight hours to reach the construction site.

The difficulties of working in such a precipitous location were highlighted when two members of the Marine Board fell in while attempting a landing. Despite this, builders Henriksen & Knutsen commenced construction in January 1904.
Three keeper's cottages were built of solid brick, with sheds for wood and coal under the same roof for protection from the wild weather. The first superintendent was George Johnston who arrived on Tasman Island in December 1905 and already had vegetable gardens growing by the time the light was officially opened on 2nd April 1906.

1910

1968

2015

The nature of most light house sites is their isolation and their vulnerability to the whims of climate and weather. This light house and its associated infrastructure certainly had their fair share of drama. There were problems with the lamp mantle which regularly fractured due to the swaying of the top of the tower in strong winds. During a storm in 1919, verandahs and fences were blown away, water tanks blown off their stands and out-buildings shifted off their foundations. The winds were so strong that the vibrations in the lantern room destroyed five mantles and two pounds of mercury jumped out of the race and had to be replaced.
Once thickly forested, Tasman Island was almost bare soon after establishment of the lighthouse due to cutting timber for firewood, and this compounded the impacts of strong winds across the island.
Much of the island was originally grazed with flocks of up to 500 sheep, cattle, pigs and goats. However, stock regularly disappeared down the various sink-holes and clefts on the island, never to be seen again. Today, the native vegetation is returning, with pockets of small trees and shrubs appearing in more sheltered areas.

A truly spectacular landscape

Access to such a remote light station was always difficult. Seas were frequently too rough for supply ships to approach the island. Landings were originally made on the north-west side of the island where a track known as the zigzag was built. Then a landing platform was constructed on the more sheltered north-east corner of the island with a crane operated by a steam-driven donkey engine. Today, access to the island is much easier by helicopter.
Some interesting facts:

- For the first 20 years pigeons provided a link with the Tasmanian mainland. However, the birds were so well fed that they were often reluctant to leave the island!
- Because of the isolation, most women left the island to give birth. However, in 1920 a daughter was born to the lighthouse keeper and his wife, nursed by a Nurse Cleary.
- In their remote location the keepers on Tasman Island were vulnerable to infections, and medical help was often unable to be obtained.
- During the war years the job of lighthouse keeping was considered a reserved occupation and keepers were not permitted to enlist.
- A major accident occurred in 1927. Rigger, William Groombridge was killed and Joseph Patterson was seriously injured when a crane, being installed on the landing, collapsed without warning. The body of the dead man was thrown into the sea and never recovered. With no direct communication with Hobart it took until the next day to get medical help for the injured man and another day to get him to Hobart for treatment.
- Unlike many other Tasmanian lightstations, there are no European graves on the island.

In the years following the automation of the lighthouse and removal of lightkeepers, the unoccupied buildings deteriorated badly. However, with dedicated work by the volunteer group *Friends of Tasman Island*, this trend is now being reversed. Formed in 2005, the *Friends of Tasman Island*, work in partnership with the Tasmanian Parks & Wildlife Service, conducting work programs on the island about three times each year. They have a membership of committed volunteers and supporters who focus on the restoration of both the cultural heritage and natural environment on the island.
Access by sea continues to be very difficult. The haulage route is no longer operational and tracks up the 250 metre cliffs are overgrown. A permit to land by helicopter must be obtained from the Tasmanian Parks & Wildlife Service and no commercial accommodation is available on the island, although tours are available.

The 2015 plaque

Original lens

A bronze plaque was erected in 2015 to commemorate lighthouse keepers and their families for their contribution to maritime safety in the Tasman Island region from 1906 to 1976.
The island is now part of the Tasman National Park, and the lighthouse and associated structures, such as the keepers' cottages, are listed on Australia's Register of the National Estate.

The original first order Fresnel lens by Chance Brotherscan be seen on display at the Australian National Maritime Museum in Sydney, and the original lantern is stored at the Maritime Museum of Tasmania in Hobart. *Patsy Moppett*

Food for thought ..... Editor's note

Back through the archives

In February 2009 the then President of BMACHO, John Leary OAM, launched the first edition of BMACHO'S Newsletter HERITAGE. His Editorial highlighted the need for communication and dissemination of information within the heritage world, and his words seem to be still pertinent today.
The current committee can stand testament to the aspirations expressed then, that the Newsletter would be widely spread and that communications since then have definitely come a long way, in part a credit to the work of previous BMACHO committees.
Bearing in mind that the mentioned MPs involved may have changed, that Editorial is repeated below in memory of John, and to demonstrate how far we have come in the wider Blue Mountains heritage community. *Patsy Moppett*

John Jeary OAM

Issue No. 1

Issue No. 2

Issue No. 3

From the president's pen.....NEED FOR IMPROVED COMMUNICATIONS

Some time ago, the committee of BMACHO identified as a major issue, the need to improve communications in the local heritage sector.

Across a broad range of issues it was considered that various organisations were not sharing information which could not only make their operations more effective, but would also make life easier and more pleasant in the bid to achieve goals of conserving, researching, recording, preserving and promoting our heritage.

The executive has spent considerable energy and time, with some success, in opening up communication with Blue Mountains City Council, the former Federal Member for Macquarie, Kerry Bartlett, the State Member for Blue Mountains and now the Federal Member, the Hon. Bob Debus and the new Member for Blue Mountains, Phil Koperberg.

In discussions with these community leaders they have generally displayed more than a cursory interest and knowledge of the diversity of heritage in the Blue Mountains, Lithgow and Hawkesbury regions.

However, what they were not aware of was the large number of individuals, which includes amateur enthusiasts, academics and professionals who are active within the local heritage sector. Community leaders have accepted the need to improve two-way communication and BMACHO's executive has seen some tangible improvement at government level. Many of those active in the heritage sector appear to have operated in isolation for many years — sometimes, totally unaware of the importance they play in the fabric of Australian society.

For more than five decades of societies in this region have been party to hosting most informative historic talks and presentations and yet there has been very little done in the way of publishing these interesting dissertations.

There have been some excellent books produced by local authors on very well researched material, but little effort in promoting these publications. Even some of the newsletters which have been produced are in their own right worthy of commendation as sound historical documents. While there is an urgent need to promote publications in print, there is an even greater need to share information between like organisations. It is imperative that organisations, if they are to succeed in maintaining membership, become more proactive in selling their group to the public. One of the best ways of doing this is to communicate and share ideas with like-minded bodies.

To participate in the process of improving communications, BMACHO's executive has initiated this Newsletter, HERITAGE, which it is proposed to publish every couple of months. The newsletter is designed to reach as many individuals as possible. Too often communications addressed to busy secretaries do not seem to go any further down the line. It is hoped that secretaries on receipt of HERITAGE on their e-mail will simply forward it on to those members who have registered their e-mail. Hopefully those who do not have e-mail will be provided with hard copies by other members of their organisation.

John K Leary, OAM – President and Newsletter Editor, Blue Mountains Association of Cultural Heritage Organisations (BMACHO)

Blue Mountains Historical Archives Storage

Following on from the article in the last BMACHO Newsletter (January-February 2018) relating to Mount Wilson's predicament on archive storage, comments have been received from Woodford Academy on their situation, and on the matter generally.

Woodford advise that due to the receipt of grants in 2017 the Academy has been able to undertake much needed collection management of their historical archives which were until recently stored on site. This process resulted in the archives being removed for urgent pest treatment and the services of Kate O'Neill were very much appreciated during the packing of the collection.

Due to poor climate control at the Woodford Academy, the archives are now held at the James Fairfax & National Trust property, Retford Park, Bowral, (where there is a specialized climate controlled storage facility), until such time as appropriate storage can be arranged at the Academy. The containers and an adjacent cottage were utilized by James Fairfax to hold furniture and paintings he brought back from Europe. They are lockable, powered, and the climate keeps temperatures inside remarkably stable.

Concerns have been raised generally in recent years however, about the loss of many local historical artefacts from the mountains. Whilst the Academy is sorry that the archives had to leave the mountains, Rae Clapshaw of the Academy advises that they are safe and in a clean environment, constantly monitored by data loggers and people living on site.

Access is restricted but not impossible. Thursday has worked out as the most suitable day and it is a matter of targeting your research, packing some lunch and travelling to Bowral. Academy volunteers take cameras, computers, scanners and other equipment, and work chairs and tables are provided.

Archive storage – Windsor

Archive storage – Retford

In regard to treatment of artifacts when freezing facilities are available, advice from Mt Victoria Historical Society Museum notes that freezing for borers was undertaken of some items for eight days, and the problem has returned. Advice from a Hobart conservator to members now suggests that freezing times should be closer to three weeks. So there is a lot of inaccurate and mis-information around.

A number of organisations, including BMACHO, have taken it upon themselves to investigate as to whether there are any other local appropriate storage facilities in the Blue Mountains local government area, as they and/or their members are struggling with the same issue. In doing this, to date it has been found that there was no known space available, at this stage.

In undertaking research for Mount Wilson, BMACHO established that funding opportunities were limited for small regional organisations due to the criteria set in those funding programs, and that larger organizations appeared to be able to comply more easily.

BMACHO also undertook research into the cost of climate controlled storage units, finding that there is a range available. However, with the situation being that many organisations are located in heritage buildings on small sites, there is no space on site for a storage container to be located, the costs of such containers may be prohibitive, and there is often a local

government Development Control Plan which prevents the location of storage containers on the site due to heritage issues and visual amenity! A catch-22 situation.
BMACHO also established that both long and short term solutions may be required for an organisation, depending upon their individual circumstances, along with opportunities for multiple user facilities. Access to the collections once archived is a part of the issue, if located off site.

Storage solutions

At its recent committee meeting at Mt Tomah, BMACHO discussed the issue with Rae Clapshaw of the Woodford Academy, who explained the access process as described above. She did emphasize that the Academy is lucky to be a National Trust property, and therefore have a large support system in place. They still need to find funding for remedial work at the Academy before the archives can return. They realise they are custodians of the collection and that they must be preserved for the future.
The State government has been undertaking an online community/industry survey of cultural infrastructure needs, and such survey closed on 11th February 2018. The Cultural Infrastructure Program Management Office (CIPMO) was seeking feedback from the community and sector about arts and cultural spaces in NSW. In April 2017, the CIPMO in the Arts, Screen & Culture Division was established to provide a coordinated response to the planning and delivery of cultural infrastructure in NSW.
The Academy in their submission has included the need for accessible, appropriate historical archives storage. Woodford have suggested that there may be a local government solution, and that perhaps BMCC should undertake a similar such review. An email with regard to this survey was distributed to BMACHO members on 8th January 2018.
This Office, one of the first of its kind, works in partnership with Create NSW to ensure appropriate infrastructure facilities are developed and maintained to support the growing arts and cultural sector across metropolitan and regional NSW.
The Office can be contacted at their email address: *ci@arts.nsw.gov.au* It is unknown when the results of the survey will be published, but the aim is to draw up a Cultural Infrastructure Plan resulting, it is hoped, in funding opportunities. It must be understood though, that this will take time.
In the meantime, BMACHO would encourage members and the wider community to "have their say" and make it know also to local authorities of the issues which particularly relate to Blue Mountains' organisations.
Feedback to BMACHO is always encouraged on issues such as this, within the bounds of the BMACHO aim, to foster and support cultural heritage activities related to the Greater Blue Mountains and beyond, through the sharing of experiences for a greater good.

Patsy Moppett

Moorecourt and Springwood Ladies' College, Springwood

Moorecourt was a mansion constructed in 1876 by Charles Moore, former Lord Mayor of Sydney, which became the Springwood Ladies' College in 1897, following Moore's death in 1895.
Moore was born in Ireland in 1820, and sailed for Australia in 1849. He had been apprenticed to his brother in the drapery business, and arrived with a shipload of drapery

which he sold in Adelaide. He went to Melbourne and then on to Sydney, where he set up a drapery business, and then went on to auctioneering.
In 1854 he married Sarah Jane Wilcox, and built a substantial home at Coogee in 1860.
He was mayor of Randwick Municipal Council in 1863, and was then elected to Sydney City Council. There he was Mayor from 1867-69. He became known as an improver, undertaking reclamation projects to utilize swampy land, covering the Tank Stream, establishing a number of public buildings, and developing Sydney Common which was to become Moore Park.
He refused to receive a Mayoral salary and in spite of his improvement works, was often criticized. In 1869 he resigned and went to Europe, returning in 1871, where he was Mayor again until 1886.

Charles Moore

Moorecourt

In 1876 he built Moorecourt at Springwood, and moved there in 1880. Soon after, Sarah died, having had no children. In 1883 Moore married a widow Annie Hill Montgomery in Ireland, during another trip to Europe. He remained childless, and died at Parramatta on 4 July 1895, being buried at Emu Plains Cemetery.
Moorecourt was built on a site to the northern side of the Great Western Highway between Springwood and Faulconbridge. The site falls away from the highway to a creek at the centre and rising again (to the present-day swimming pool) at the north. The mansion was demolished in 1858 and the south side of the park has now been cleared and landscaped adjacent to the highway, where there is an asphalt paved carpark and play area. Bench style tables and seats provide picnic facilities, in what is now called Buttenshaw Park. The Blue Mountains Shire Council acquired the land for recreational purposes in 1939 through the actions of a former Minister for Lands, E.A. Buttenshaw. The removal of the gateposts from Moorecourt when the house was demolished in 1958 was organised by the Springwood Historical Society.
A pair of sandstone gateposts in Buttenshaw Park mark the beginning of a wisteria walkway through the Park, relocated following the demolition of Moorecourt. Informal planting beds, partly planted with roses, are located to the northeast of the gateposts.
The Moorecourt gateposts are large square dressed sandstone posts with astragals and pyramidal caps. The Moore family crest carved on the posts has the motto *"PERSEVERANDO ET CAVENDO".* (By Never Giving Up and Taking Care). The crest is located on the east face of the northern gatepost and the west face of the southern gatepost. The northern gatepost has been set on a plinth at a higher level than the southern gatepost.

Moorecourt

Gateposts, Buttenshaw Park

Memorial Plaque

A memorial plaque reads:

These gates are re-erected
from "Moorecourt" Springwood
Residence of Charles Moore
Mayor of Sydney 1867-69
M.L.A. East Sydney 1874 M.C.L. 1880-1895
Moorecourt built 1876 Demolished 1858
Springwood Historical Society

Moore had originally acquired some of the sandstone building blocks used in Moorecourt from the convict lockup on Pulpit Hill west of Katoomba, which dated from the 1820s. Originally constructed as a single storey country style residence, two storey additions were added to the rear at a later date. Extensive gardens were established with ponds, pathways, orchards and kitchen gardens.

After Moore's death in 1895, the residence became the home of Springwood Ladies College. Established in 1897, it was one of several private ladies' colleges in the Blue Mountains, which lent a colour and eccentricity to Australian education which is gradually fading in memories. Once the dominance of State and religious schools came to the fore, private schools almost disappeared. These private schools were reputed to possess exceptional advantages for young ladies desiring to complete their education.

Gate post detail

Springwood Ladies College

The longest serving proprietor and headmistress of the Springwood Ladies' College was Mademoiselle Mignon Durand, who transferred her Ladies Grammar School in Newcastle in the 1920s. She stamped her personality on the place, and her name became synonymous with the school. She was short, dark haired and of unremarkable appearance, but she knew how to dress, being stylish and elegant. She produced women of grace, courtesy and refinement. College life was one of order and Spartan comfort. The spacious and well-laid-out grounds surrounding the college enable students to enjoy outdoor exercises to their heart's content, thus acquiring a physique not obtainable in less favoured colleges.

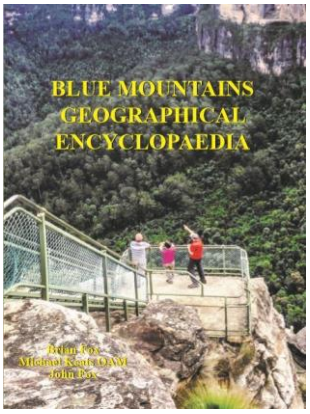
Book Launch : Blue Mountains Geographical Encyclopaedia

The launch of this much awaited publication is set to take place at Hobbys Reach, Wentworth Falls, on Monday 26 March 2018, at 10am for 10:30am.

It was February 2017 when Brian Fox spoke on maps of the Blue Mountains at Hobbys reach where he also gave an invitation to anyone to help and contribute to this huge place names project, a number of our members are to be thanked for their contribution to this project.



Between the Nepean River and Mount Victoria is sandwiched over 200 years of European history and thousands of years of Aboriginal heritage, some 2700 names have been applied to the places in between. This book is about those names, the men and women who named them, why and when they did.
Lead author Brian Fox has been on the job for over 20 years, systematically collecting and documenting every fact and every event. Researching and honing the text has been the role of co-authors John Fox and Michael Keats respectively.
A tome of 544 pages, full colour, hard cover with dust jacket. It includes 180 colour photographs, 70 of different waterfalls.
This text is a must for every person interested in the Blue Mountains whether they are a resident, bushwalker, teacher, history buff or curious visitor, and follows on the heels of the first of Brian's geographical research book, A Geographical Dictionary of the Blue Mountains .
The new book will be on sale for $50.00, and Brian asks to be contacted if you require more information. If you are unable to attend the book launch and would like to purchase a copy, this can be organised by an email or phone call.

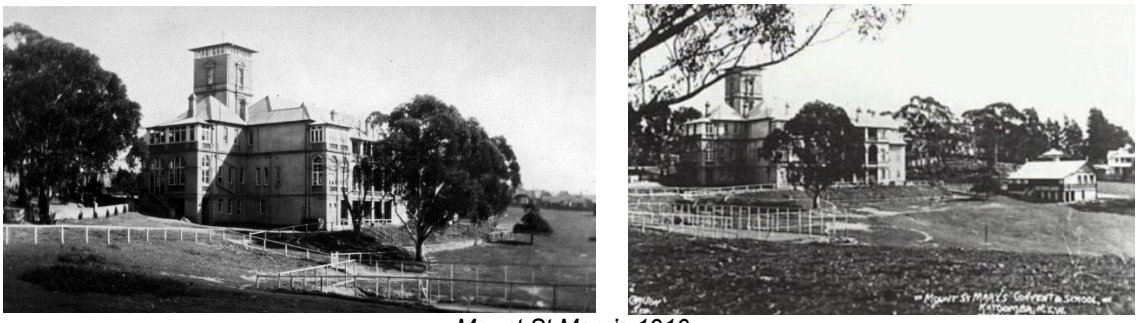
Mount St Mary's College and Convent, Katoomba

A wander around Civic Place at Katoomba takes you past an intriguing building, surrounded by vegetation, which was once the Mount St Mary's College and Convent, a building of State significance, listed on the NSW State Heritage Register in 2003. The Renaissance Action Group lobbied for this listing.
The place is significant due to its connection with education from 1909 to the 1990s, and in particular with the Congregation of the Sisters of Charity in Australia. It comprises an imposing complex of ecclesiastical buildings on a sloping site, dominated by the impressive, highly visible tower.
In the late 1890s the Sisters of Charity rented a small cottage, a former guest house in Katoomba Street, near the Catholic Church, as a place of respite for weary nuns. At the same time they realized a Catholic school was needed, and they opened a small college in 1901. They bought the adjoining house when student numbers rose, and joined them by a covered passageway.
Numbers increased again and they sought a larger site. The place chosen was located on a 1.6ha site on the northern side of the railway line, and with a northerly aspect. The entrance

was on the southern façade, and included a formal garden, now overgrown, and a courtyard with vehicular access.



Mount St Mary's 1910

The land was originally part of the Frank Grimley subdivision, and Lots 26-35 were bought by the Sisters of Charity in 1907. It was open paddocks with some mature eucalypts. In 1908 an additional 1.2ha was purchased from Grimley including orchards and vegetable gardens. The gardens established were extensive, and included low stone garden walls, terraces, ornamental trees and shrubs, paths and steps, urns, fountains, grotto and gazebo. It featured both exotic and native species, including orchards. The grounds had basketball and tennis courts.

The convent/college construction commenced in 1909 with the convent and college building, and the builder was Michael Byrne. It was designed by Nagle (James) and Nurzey, who became known as Henry E Budden & Nagle. The foundation stone was laid by Cardinal Moran in April 1909. It was completed quickly and by February 1910 boarding school students were being accepted.

In 1923 the College carried out a subdivision and sold off several blocks including its tennis courts, and also sold "The Rocks" cottage. The cottage "The Rocks" had been in the south west corner, and it had been relocated to the north east corner of the land.

In 1926 Mount St Mary's celebrated its silver jubilee, which resulted in the construction of the grotto. Some of the balconies at ground and first floor levels were infilled.

The school became a local landmark and a model of Catholic education, and with its attractive climate, attracted students from interstate and overseas.

Mount St Mary's 1984

In 1932 a reunion was held, synchronizing with the opening of the Harbour Bridge, as many ex-pupils would be in Sydney for that event. The local community heartily supported the

event, assisting in attending to the catering. Reverend Vaughan presided over lunch in the large college dining hall, decorated for the occasion. A concert was then held in the college concert hall, followed by a meeting of the students Ex-students' Union.
In 1941 the college provided refuge for the inmates and staff of St Vincent's Convent from Sydney when the Harbour was considered unsafe. The mountains were considered safe and an increase in student numbers occurred. In 1946 there were convent extensions, both internally and externally, to accommodate the increase in student numbers. This included a four storey extension at right angles to the original school building. In the 1950s a primary school bungalow was added to the site.

In 1957 The college and convent provided a temporary home for sisters and juniors from Leura and other community members left homeless by the terrible fires of that year.
In the 1960s the science block was added, and Mount St Mary's became a regional girl's school, and also became co-educational, taking boys from St Bernard's College which had just closed.

Covered walkway

Renaissance Centre 2014

However, due to declining enrolments the school finally closed in 1974. The premises were then to be a centre for religious and training purposes, which occurred until 1984 when a fire order was placed on the building and the school was closed. As the costs of upgrade were prohibitive, the Church sold the property in 1985. It was purchased by John and Pamela Patterson and L Donivito, with the intention of turning the place into a tourist and cultural centre, housing 30 craft areas, shops, studios, galleries, performance and teaching areas. Extensive alterations were carried out to create the Renaissance Centre, which included a kiosk and walkway from Civic Place, into a restaurant and cultural centre. The Centre was opened in 1987, as a transformation of the historic building into a multi-functional community and tourist centre. Stage 2 would have seen the building of a motel and entertainment centre with a 500 seat theatre. The center was to house the Penzig Collection of relics of Australia's bush ranging past, and the Trantor Museum of local history and colonial artifacts.

Mount St Mary's College and Convent buildings 2017

Mount St Mary's College and Convent buildings 2017

However, the property was sold in 1992 to Crestown P/L, and despite the restoration and goodwill, tenants began to leave the premises, and it has been vacant ever since. Some discussions were held about 2001 for the building to be used as a tertiary institution for a university campus, but this did not eventuate. The building did have development approval for restoration and the construction of 122 apartments, however this DA lapsed.
Some of the original landscaping is still evident, although much over grown, and extensive vandalism has occurred across the site and in the building complex. Fires in the building in 2003 and 2010 have taken their toll. It was listed for sale in 2009 and in 2012, but did not sell.
Many old buildings such as this have their mysteries, and Mount St Mary's is not without its own. The tunnels, "the dungeon", were supposedly under the school and have puzzled people for many years. The Edge Theatre sits within what would have been the grounds of the school, on the playing fields. The tunnel went from the playing fields, or maybe from in the vicinity of the music room, due east under the railway line, to emerge in what is now inside a private residence on the eastern side, although all bricked up. There was a doorway bricked up at the railway station too. The purpose and size of the tunnel is puzzling, but it is thought it was probably an air raid shelter for WWII.
There is also supposed to a ghost nun who wanders the lonely, dark halls of the upper dormitory! *Patsy Moppett*

The Technical Side

Nissan Huts

Farm sheds can take on a wide variety of shapes and sizes. Many are built from scratch as new buildings, but the nature of farming over the years is that a great many others are reused buildings, relocated buildings, built from second hand materials and generally constructed from whatever materials the landowner had at hand. Making do was the name of the game. One particular structure that has been reused across Australia is the Nissan hut, sometimes called an igloo. Nissen huts have also been utilised for other purposes such as one converted to a church at Port Lincoln, South Australia, warehouses at Wyong NSW, migrant workers huts at Balgownie NSW, munition stores in Darwin, Northern Territory, Snowy Mountains huts, hangers, railway workshops and many converted to the ubiquitous wool or machinery shed across Australia.

Colonel Peter Nissen

Building sale advertisement

During World War I Major Peter Nissen of the 29th Company Royal Engineers, began to experiment with hut design. The need for the hut was dictated by a demand mainly for accommodation, but also for bomb/ammunition and material stores, machinery stores and administration buildings. War use demanded that they be made of economical materials due to shortages during the war, and also that they be portable and compact to transport, particularly by ship. This resulted in a simple form which was quick and easy to erect and pull down. The world record for erection was 1 hour and 27 minutes!

Shearing shed interior

Derelict hut

The semi cylindrical shape was derived from a drill shed roof at Queen's University in Kingston, Ontario. A number of prototypes were made, and many reviews undertaken of the design before production commenced in 1916. The design was patented in the UK. During World War I over 100,000 were made by Nissen Buildings Ltd. Production waned between wars but was revived in 1939. A number of similar shaped hut types were developed such as the Romney in the UK and the Quonset in the USA.

As wartime accommodation the huts were cold and draughty or stuffy, hot and humid. They were also used for accommodation on construction sites, and a two-storey version was marketed by Nissen-Petren Ltd. Nissen received the royalties from the British government for the original huts made during the war, but only for their sale after the war. For the project Nissen received a Distinguished Services Order (DSO).

Articles appeared on how to convert the buildings for domestic use, but this was not a success. Despite the low cost, the hut was not a house, and had none of the status of a house. Also, the use of the internal space was not conducive to the placement of conventional furniture. One wonders how the construction would be adapted in the current age, when alternate building design is all the rage.

Under construction 1916

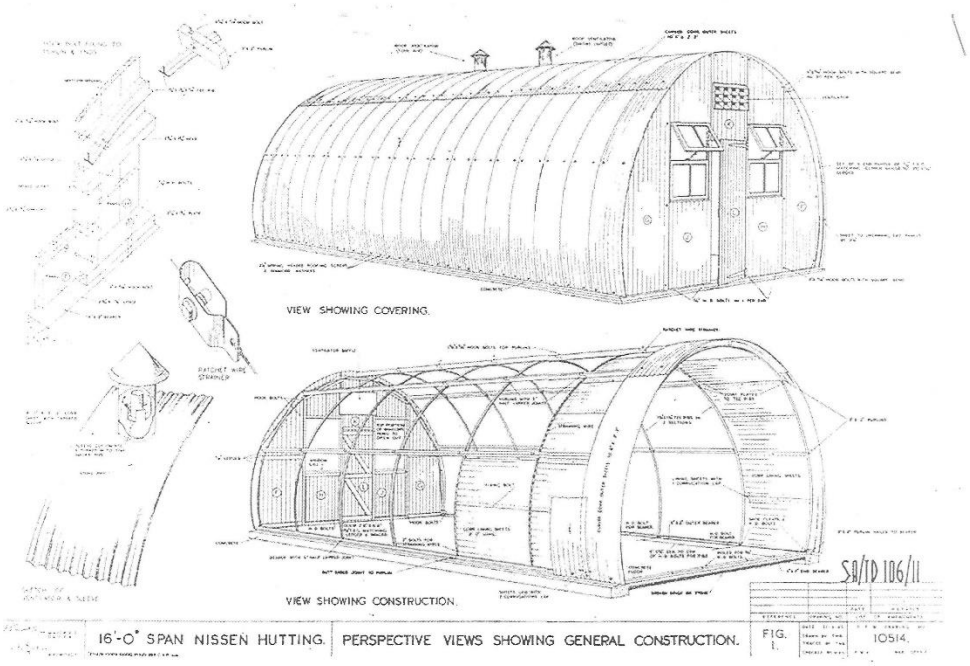
Church conversion, Port Lincoln

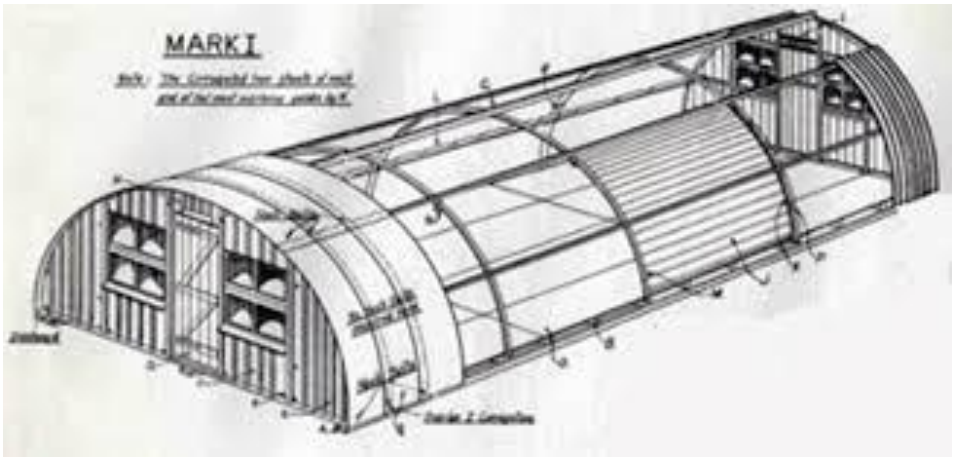
Accommodation – Perthshire

POW accommodation

A large number were constructed in Australia after WW II at Newcastle, to provide cheap, ready made housing for post-war British migrant families Many were subsequently demolished after their original purpose ceased, but the remainder were refurbished, improved and extended over time.

The Nissen hut is made from a sheet of metal bent into a half cylinder and planted into the ground with its axis horizontal. The sheets were attached to wooden purlins, and spiking plates at the end of each floor joist. The purlins were attached to T-shaped ribs, which were bolted to the floor. During construction, straining wires were utilised, although these were not in the original design. Interior lining, if there was any, could have been corrugated iron or Masonite.





Basic construction

The internal height (radius) was 8 feet and the floor was 15 feet 10 inches. The building was rested on stumps and the floor was tongue and groove timber. Buildings at East Hills and Villawood in Sydney had concrete floors. Farm buildings often had earth floors. Either end of the building was closed in by a wooden frame clad in weatherboards, bricks or corrugated iron. Windows and doors were added where required. *Patsy Moppett*

Tour: Land & Property Information , Bathurst

BMACHO is to undertake a tour of Spatial Services at Land and Property Information (LPI), Bathurst on Thursday 15th March 2018. BMACHO will hire the Blue Mountains City Council Access Bus for travel, seating about 20.
Much has changed at LPI since BMACHO last toured in 2010. The innovation, advances in technology and projects being undertaken right across the organisation will resonate with mapping and surveying enthusiasts.

NSW GOVERNMENT Spatial Services

Spatial Services implements and monitors standards for the survey industry in NSW. Spatial Services is the official source of land information for NSW, maintaining a digital cadastre map and a digital topographical map of the State. It also provides aerial photography, satellite imagery, addressing information, touring maps and a unique customised mapping service that tailors spatial information to meet specific needs.
The tour is due to arrive at Bathurst at 10am and will be provided with morning tea. The group will be divided into two smaller groups and the Spatial Services Managers will take groups to the various business areas.
A light lunch of sandwiches will be provided, dietary requirements withstanding, and the tour will conclude about 3.30pm.
The bus will pick up from Springwood and along the highway where required. Times are to be advised.
This tour will book up quickly and BMACHO can only take the number of persons who can be seated on the bus. **Bookings should be made by 7 March 2018**. Once numbers are confirmed for the bus, the final cost and travel times will be determined, but cost should be in the order of $15.00. *Jan Koperberg*

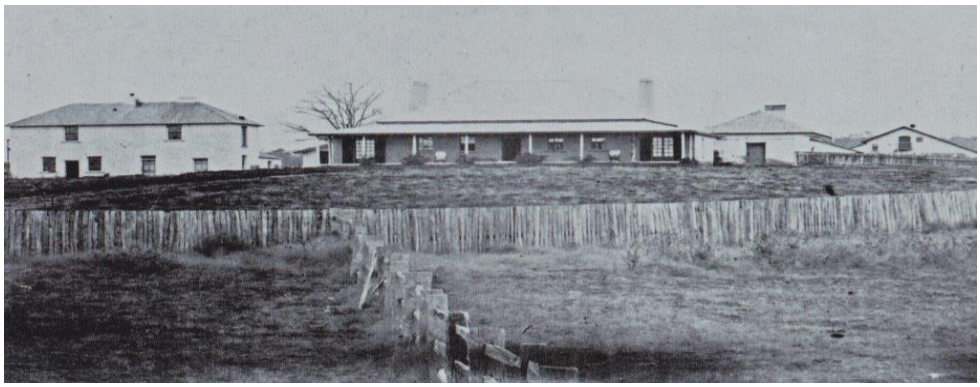
Open Day at "Macquarie", O'Connell

On 24 March 2018 the former Governor of New South Wales, Professor The Honourable **Dame Marie Bashir AD CVO**, patron of the Macquarie Society will **at 11.00 a.m**. formally unveil a plaque to commemorate the restoration of the two storey convict barracks (circa 1820-1822). The homestead at "Macquarie" (circa 1820–1822) has also been restored and the formal rooms will be open for viewing.



"Macquarie " 1863 Photograph courtesy of the Mitchell Library, State Library of NSW – Icely Family Albums

Circumstantial evidence supports the assertion "Macquarie", containing the original 1000 acre land grant to Lieutenant William Lawson by Governor Lachlan Macquarie as Lawson's reward for his contribution in finding a way across the Blue Mountains, is the oldest farm and oldest continuing residence west of the Great Divide. In its 200 years of European history "Macquarie" has only had two owners prior to the Hennessy family, namely, the Lawson and McKibbin families. Accordingly, it remains remarkably unaltered.
"Macquarie" is situated approximately 12 kilometres south east of Bathurst on the O'Connell Road and approximately 8 kilometres from the Great Western Highway.
The property will be open from 10.30am to 2.30pm, at 3397 O'Connell Road, O'Connell (south east of Bathurst).
Refreshments will be available. It would be appreciated if visitors would bring their own folding picnic chairs. Limited seating will be provided.
Entry fee: $10pp (Concessions for families, children and seniors). Net proceeds raised on the day will be donated to the Bathurst Community Op Shop. *Paul Hennessy*

To assist with catering it would be helpful if you could ***RSVP by 7 March, 2018 to:***

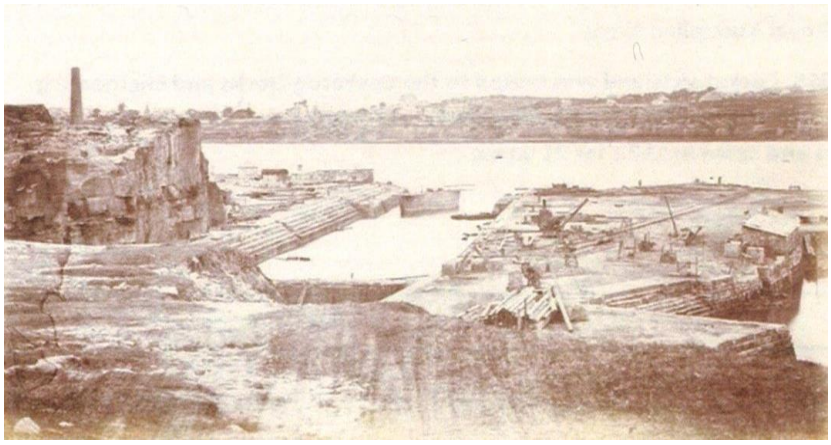
Historical Tour of Cockatoo Island

Colo Shire Family History Group are holding a tour of the historic Cockatoo Island on Tuesday 27th March 2018.
In 1839 the Island was chosen as the site of a new penal establishment by the Governor of the colony of New South Wales, Sir George Gipps. Between 1839 and 1869 the Island was used as a convict prison. Initially, prisoners were transferred to Cockatoo Island from Norfolk Island, and were employed constructing their barracks and rock-cut silos for storing the colony's grain supply.



Dry dock 1872

In 1869 the convicts were relocated to Darlinghurst Goal and the prison complex became the Industrial School for Girls and also a Reformatory. In 1871, the name Cockatoo Island was dropped in favour of Biloela.
Ship building began on Cockatoo Island in 1870. In 1913, Cockatoo Island was transferred to the Commonwealth Government to become the Naval Dockyard of the Royal Australian Navy.
In 1933, Cockatoo Island was leased to the Cockatoo Docks and Engineering Company Limited for 21 years. The lease was renewed in 1954 for a further 20 years and again in 1972 for 21 years.

Itinerary:

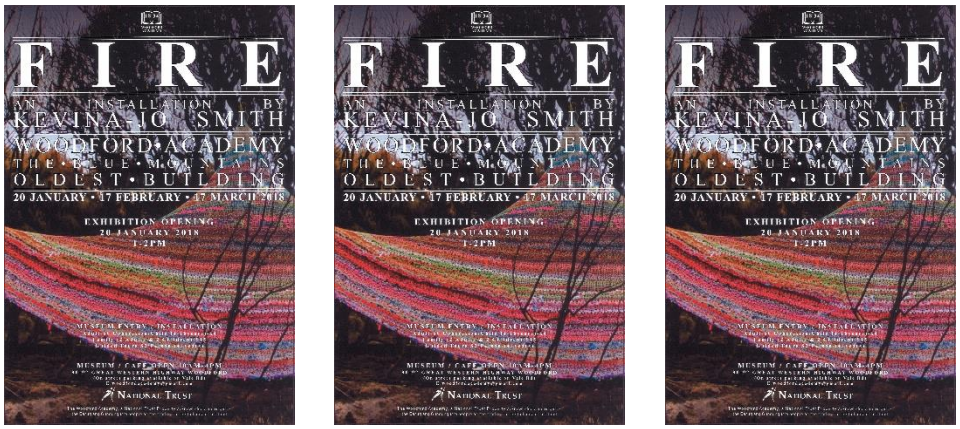
- A train will leave Richmond Railway Station at 7.41am, arriving at Central at 9am, then change trains for Circular Quay.
- The Ferry for Cockatoo Island leaves at 9.45am and arrives at 10.14am, to meet the tour guide at the visitors centre at 10.40am to start the tour.
- After the tour you may look around at your leisure.
- It is recommended that you bring the following items with you: water bottle, hat & sun screen, wet weather gear, enclosed shoes and lunch.

Cost is $16.00 for the tour. This does not include ferry or train to Circular Quay. Money is payable to Colo Shire Family History Group, posting cheques to PO Box 206 Richmond NSW 2753.

For inquiries and bookings: Neil Renaud Ph: 0423 157 089 or Joy Shepherd Ph: 02 4588 5867
Bank details provided by the Group upon request.

Exhibition: Fire: a site-specific installation

The Woodford Academy Management Committee launched "*Fire: a site-specific installation*" by Blue Mountains artist Kevina-Jo Smith on Saturday 20th January 2018. The exhibition was also available on 17th February 2018, and there is one day left to run on 17th March 2018. The installation engages with concerns of climate change and the bushfire season in the Blue Mountains, and responds to investigations of the Academy's collection of research by historical guests, researchers, artists and the local indigenous community, the Darug and Gundungurra people, who have provided records of documenting bushfire in the past, through written word and illustration.



Smith's artwork emerges from her collection and reuse of consumer by-product materials. Her process is a tribute to the natural world and a ritual against its destruction. Her work explores shelter, environments and cultural climates, through both exhibited works and the lived process behind those pieces. *Elizabeth Burgess*

Museum Entry & Exhibition:
Adults $6, Concession/Child (4-16yrs) $4, Family $15 (2 adults, 2 children)
Guided Tours - $2/Person (4+years)
Woodford Academy 90-92 Great Western Highway, Woodford
(on street parking available on Vale Rd)
Hours 10am-4pm
Contact: woodfordacademy@gmail.com

Reminder: Exhibition at Mount Victoria Museum

There will be an exhibition marking the 150th anniversary of the railway to Mount Victoria, at the Mount Victoria & District Historical Society's Museum, commencing on 5th May 2018. The event commemorates the Governor's arrival by train on 1st May 1868 to declare the line open.

The exhibition takes the form of a photographic display relating to the railway and text describing the impact over the years of the railway to the village of One Tree Hill, as Mount Victoria was originally known. Various other attractions will be staged, such as shingle splitting on site and a poetry recital relating to trains.

The official exhibition opening by Trish Doyle will be held at 11.15 am. Champagne and nibbles will be provided.

Bring the family to share the fun! The museum will be open at 12 noon to 3pm for its usual session charging $5 adults and $1 per child. *Jean Winston*

Please contact Jean Winston on 02 4782 7866 for further details.
Regular Opening Hours: Weekends, public & school holidays from 12 noon to 3pm.
Closed Christmas Day and Good Friday.
Guided groups and coach parties can be accommodated at other times by contacting the Curator or Publicity Officer. www.mountvictoriamuseum.info

The Museum is located at the back of the Mount Victoria Railway Station at Station Street, Mt Victoria.

New Mountains Museum Advisor

A new museums Advisor has now been appointed by Blue Mountains City Council, to replace Lynn Collins.
Gay Hendriksen is a local based at Blaxland, and familiar with the special nature of the Blue Mountains and the many and varied communities which make up the mountains region. Some of you may have already met Gay and she may have already visited some of your museums and heritage/cultural organisations in the area.

Gay has said she firstly wishes to become familiar as quickly as possible with what each museum or organisation does, their custodianship of collections, their vision for their special places and their needs and challenges, so that she can be of best use under her role. She says it is a special thing being part of this kind of network, ensuring the tangible and intangible heritage survives, sharing the passion, the stories, the object and site histories the interpretations and the knowledge.
We look forward to working with Gay in the greater Blue Mountains region. *Patsy Moppett*

Yvonne Jenkins Memorial Award 2018

This award is held annually in memory of Yvonne Jenkins OAM, from Rydal, whose vision was to found the Lithgow and District Family History Society and was well known for her work as an author, artist and family and local historian.
The essay title for the Award, announced during 2017, is "*A Favourite Family Heirloom I have, or would like to have"*. The winner of the Award will be announced on Saturday 19th August 2018.

Yvonne Jenkins

Heirlooms…….

The Award is in the form of a certificate and free membership of the Lithgow & District Family History Society Inc, for the following year. Entry is open to members and non-members of the LDFHS and is to be in the form of a short essay (not to exceed 1,000 words).
Entries close on 30th April 2018.
Further details about the competition are available on the Society's website and Facebook page, email or may be obtained by writing to the Secretary, PO Box 516, Lithgow NSW 2790.

Valley Heights Locomotive Depot Heritage Museum

IMPORTANT ANNOUNCEMENT: MAJOR WORKS: MUSEUM CLOSED FOR MINIMUM OF FOUR WEEKS FOR ESSENTIAL INFRASTRUCTURE WORK

The Museum management reluctantly advise that due to the commencement of major works starting from Monday 12th February 2018, the Museum will be CLOSED to the Public until Sunday 25th March 2018.

The scheduled Public Open Days that were to be held on Sunday 25th February & Sunday 11th March have been CANCELLED.
The works are required to address the following:

- Reduction of injuries as a result of trips and falls.
- Improve accessibility across the site for the general public and those with mobility issues.
- Increase undercover storage for railway exhibits.
- Restoration of the Roundhouse forecourt area.

The works will enable a much better and safer Museum for everyone, visitors and staff alike.

Patsy Moppett

Check their website for further information.

Errors

A correction is offered on the advice of a reader with regard to a photograph printed in the January-February Newsletter, Issue 54, page 5, on Carlon's Farm, Green Gully. Megalong

Valley. The photograph is of a group of bushwalkers, the T.I.G.E.R. walkers – that being an anagram of their names, the ultra walking athletes of the day.
The error lies in that the woman, third from the right, is in fact not Alice Carlon, but Dot English, the famous "barefoot bushwalker"!
The other "error" mentioned was that the article stated that serious bushwalking did not start until after WW2. It is acknowledged that very serious walkers such as Miles Dunphy were out and about long before WW2. Perhaps the information provided in the research material referenced related to the publicity afforded bushwalking back before the war, given that the extremities of many of their extraordinary exploits have only come to light since the war. BMACHO apologises for these inaccuracies.
Recording history will always be a work in progress. Any corrections, additions, or incidental information is always welcome. *Patsy Moppett*

Blue Mountains Historical Society Activities 2018

BMHS have planned an interesting range of speakers at Tarella, Hobbys Reach, for the first part of 2018, as follows:

3 March 2018 - McLaughlin Lecture
- Speaker: Phil Hammon – *Bleichert before and after*

7 April 2018 – AGM
- Speaker: Max Hill – *Living in the Kedumba Valley*

5 May 2018 – Monthly Meeting
- Speaker: Magda Cawthorme – *Hidden History of the Blue Mountains*

2 June 2018 - Monthly Meeting
- Speaker: Sue Castrique – *Convict History of Cockatoo Island 1839-1869*

Tarella cottage museum

Monthly excursions are also held and details will be provided in a full calendar of events on the Blue Mountains Historical Society website as they come to hand, so stay tuned!

www.bluemountainshistory.com

BMACHO Conference 2018: Heritage Landscapes

Book in now for the 2018 Conference, *"Heritage Landscapes*". The Conference will be held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria. Take advantage of the $60.00, ***early bird registration***, up to 12th March 2018. The cost will be $70 for registrations from 13th March to 30th April 2018.This registration fee covers individual attendance at the conference, morning tea, lunch and afternoon tea.
Speakers have been confirmed, and a few changes made to the topics to be covered on the day:

- Keynote Speaker – Stuart Read, Office of Environment & Heritage: "Landscape and garden-themed trails as Blue Mountains lure".
- Colleen Morris: Heritage consultant: "Sorensen Gardens".

- Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney: "Eurama and the nearby Parkes property at Faulconbridge".
- Kate O'Neill: Woodford Academy Management Committee: "Woodford Reserve 1830-2018: as good as the most capricious taste could desire".
- Mary Reynolds: Mount Wilson & Mount Irvine Historical Society: "Mount Wilson Gardens".
- Aunty Sharyn Halls: Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association: "The Gully & Gundungurra Country".
- Bruce Cameron, historian & author: "The Blue Labyrinth".

The Conference is Proudly sponsored by Scenic World Shared

Registration is from 8.45am and the Conference concludes at 4.30pm.
Accommodation is available within Mount Victoria and at the Manor, and train access takes you to within walking distance of the venue. Trade tables will be available.

Full costs, program and booking details can be found on the BMACHO website.

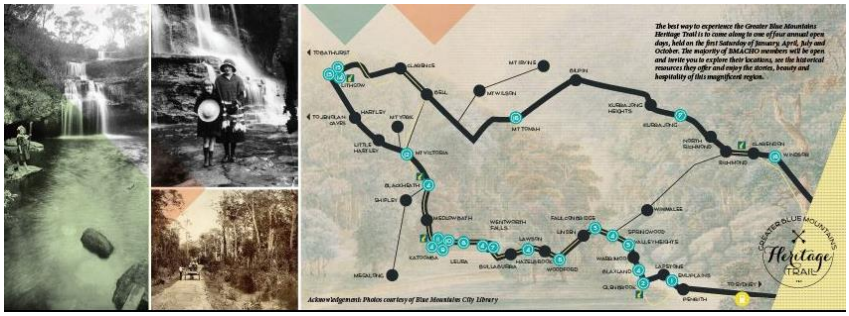
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region. During 2017-18 BMACHO are holding a competition to encourage visitation to Trail participant properties, and the competition entry forms are incorporated into the brochure.
Visitors to any of the participating venues as identified on the Trail brochure can either answer the set-out questions or obtain a stamp showing they have been to a venue.
BMACHO will hold a prize draw approximately every six months.

So - Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure with the "Passport Competition and entry form" insert, and discover artifacts with altitude!
Great prizes to be won. Check our website http://heritagedrive.com.au for the brochure, form and list of prizes, or collect the brochure and insert from visitor centres at Glenbrook, Katoomba, Lithgow, Clarendon, Bathurst, Oberon, and Orange. Trail participants will also have brochures and forms available.

Email committee@bluemountainsheritage.com.au if you would like a brochure and form posted to you.
If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society and is affiliated with the Better Planning Network.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Jan Koperberg (Secretary), Philip Hammon (Treasurer), Jan Koperberg (web sites), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Fiona Burn, Peter Brownlee and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Peter Brownlee, Fiona Burn, Jan Koperberg and Suzanne Smith.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Hadley Park, Castlereagh

The Heritage Council of NSW considers nominations for listing on the State Heritage Register based on an assessment of heritage significance and taking into account any submissions received from the public. Section 33 (3) of the NSW Heritage Act 1977 requires that the Heritage Council must be of the view that the item is of State heritage significance before it makes a recommendation to the Minister.

Upon receipt of a recommendation for listing from the Heritage Council of NSW it is the Minister for Heritage who has to consider that recommendation and decide whether or not to direct the listing of the item on the State Heritage Register under Section 32 (1) of the Heritage Act.

Hadley Park, Castereagh

One such item currently under consideration is Hadley Park, Castlereagh. Castlereagh was one of the five Macquarie towns proclaimed by Governor Lachlan Macquarie in 1810. Hadley Park was the earliest known European settlement in this location at the time. Charles Hadley acquired land at Castlereagh and his home, possibly the small adjacent weatherboard cottage, was erected in about 1806. The main house may have been built nearer to 1801 and still stands today.

Hadley Park is located on one of the 31 grants given out by Governor King in the Castlereagh (Mulgrave Place) area. Most of the grants had river frontages, and had a regular north-south orientation. They ranged from 70 to 160 acres, and the size reflected

social status and family size. The 89 acre block was originally granted to Martin Mentz (Mintz/Mince) in 1803. He cleared and cultivated the land, living on the property.
Charles Hadley was a convict, who arrived on the *Matilda* in the Third Fleet in 1791. He obtained his pardon, and returned to England, arriving back in 1806. In 1806 Mentz leased 30 acres to Charles Hadley.
In 1812 Hadley married Sarah Phillips, with whom he already had a son (Charles Jnr). By 1812 they had seven more children. Hadley had developed his farm, and was supplying meat to the depot at Emu Plains. He had a publican's licence as early as 1817, for his premises "The First and Last" (location unknown).
By 1821 he had accumulated 300 acres, and he became involved in the local community.
In 1827 Sarah left him for a neighbour, John Griffiths, leaving Charles with 9 children.
Charles died the following year. He left Hadley Park to his son Charles, who maintained the property until his death in 1891.
The property withstood numerous floods during the 19th century, including one in 1864, and the notorious 1867 event, which washed away all Charles Jnr's furniture and household goods.

Early main dwelling

Contemporary deterioration

Charles Jnr died in 1891 and his wife died a few days later, both of influenza. The property then passed to their son-in-law, William Alvan Hadley Childs, the husband of their daughter Louisa Matilda Hadley. In 1892 the property was noted as having a brick house of seven rooms, a barn, stable and outbuildings, all in a dilapidated condition.
William and Louisa's son William Charles was the owner in 1898. A number of lots had been sold off by Charles Hadley under his will, and young William set about purchasing them back, bringing the property back to 80 acres. He then ran the property as a successful dairy farm.
Upon his death in 1950, his son William George inherited the southern part, and his daughters, Elsa and Hannah, the northern part (44 acres) which included the main house.
Between 1940 and 1961 a few improvements were made including a hay shed and orchards. The orchards were removed by 1978.
Elsa and Hannah owned Hadley Park until 1972, when it was sold to a sand and gravel quarry company, who quarried the western sector.
Hadley Park's ownership was passed down through the generations of descendants of the Hadley and Hadley Childs families for over 150 years.
Jacqueline Flower, a sixth-generation descendant of Charles Hadley, was the last person to live in the property in 2008. She lived in a cottage on the site from 1996.
The Penrith Lakes Development Corporation took ownership in 1998, and commenced sand mining, The dwelling and farm buildings have since remained unoccupied.
Today it comprises a farm house, several farm buildings and a garden, within a rural landscape, which includes the lakes scheme on the Nepean River floodplain. The main features are located on the original 1803 lot, and the eastern section was quarried and then flooded as part of Lake Burralow. The western section slopes down to Cranebrook Creek.

In 2010-2011 the Penrith Lakes Development Corporation (PLDC) undertook extensive works to stabilise the premises, under the direction of reputable heritage practitioners, with the support of the NSW Heritage Office.

A significant rural landscape

In 2013 a Conservation Management Plan was drawn up by Godden Mackay Logan, on behalf of the PLDC.
Today the property is not listed on Schedule 5 of the Penrith Local Environmental Plan.
The site was opened to the public in early 2018, and many people were able to view the site and its remarkable collection of intact buildings.
Recently the State Government has started a process to list the Hadley Park precinct on the State Heritage Register. Penrith State Liberal MP Stuart Ayres urged the community to make submissions in support of the listing to the NSW Heritage Council.
"Anyone with an interest in our history and in preserving this important property is encouraged to make their submission before the cut off," he said.
Submissions closed on Monday, 5 March 2018, and the community awaits the results of the State government's deliberations.

Food for thought ..... Editor's note

We have been able to present plenty of "food for thought" in this issue! From the historic home of Charles Hadley at Castlereagh, to catering on the early railways in NSW, travelling to Jenolan Caves in the early 1900s, and looking at the preservation of moveable (movable?) heritage, we hope we have your interests covered.
And because it is autumn, a wide range of events are being held to commemorate our history and heritage. Only a few are listed here due to space constraints!
In particular, the subject of moveable heritage is covered in a broad fashion, but the matter is a very involved and emotive one. We have touched briefly on the legal aspects of the preservation process, but every community organisation or individual should be aware of the implications of NOT getting it right. It is a shame that heritage ownership must be subjected to the intense interpretation and investigation that can occur, where past owners and land managers have not accurately recorded, or been aware of, the details around lease and purchase of property and building contents, and accessioning activities.
We can only learn from current experiences, and know that history should be shared in a way that is accessible to the whole community, without encumbrances which might necessitate removal of objects from their contexts, or total destruction of objects or collections.
It is to be hoped that the collectors of this world, be it individuals or groups, continue to accurately collate (as far as possible) information about singular items and collections, together with associated provenance, conveying the significance of those artifacts and their stories through to future generations.
We encourage BMACHO members to regularly review the documentation of their items and collections, utilizing formal auditing processes where funding permits, and ensure that all bases and scenarios are covered as much as possible.

Getting a Bite to Eat on NSW Rail

Overview

If the description by John Rae, Commissioner for the New South Wales Government Railways (NSWGR) in 1871 is anything to go by, early railway food services were most unsatisfactory …. *"the keepers of what are facetiously termed refreshment rooms on our Railways are little more than apple stall holders and vendors of lollypops and stale pastry, serving out junks of sandwiches and messes of tea and coffee to their customers without any regard to their accommodation or comfort"*.
Obviously the only way was up.
The NSWGR had fallen behind the railway systems of other colonies in the provision of refreshments for passengers. Inspired by the facilities he had seen in Britain and Europe, Commissioner Rae decided to improve the situation and succeeded. The first station restaurants were leased to private operators and opened at Mittagong and Mt Victoria in 1873, followed by Central Station in 1874. The operators were licensed to provide hot beverages, hot and cold meals, and take-away baskets for consumption during the journey.
Temperance Societies were alarmed at the suggestion that alcohol may be available, which they asserted had caused many railway accidents in Britain. They successfully petitioned Parliament on the subject for a time.

Casino Railway Refreshment Room in 1947
Source: NSW State Archives

Following considerable pressure over decades to improve the standards of catering, a Railway Refreshment Room (RRR) service was established in 1916. The NSWGR took control from private operators and all the outlets were linked to a network of operations. Local businesses were initially upset as provisions once purchased from the neighbouring township were frequently brought in from Sydney.

Passengers had to wait another ten years before they were able to experience on-board train dining with a service which commenced on limited lines from 1926.

Eventually there would be a total of 52 'ref' rooms across New South Wales, serving hot grills, soup, sandwiches, cold meats and salads, a range of beverages and the ubiquitous railway pies.

Already, from 1906, the thousands of people who passed through Central Station had a range of options. They could ascend the grand staircase to the elegant Dining Room to enjoy high class silver service or enter The Grill Room downstairs, which later became the cafeteria.

Milk shakes, hot aerated milk, fountain drinks and aerated waters were available from milk bars and kiosks on the Main Assembly Platform and on the Eddy Avenue concourse.

Passengers short of time could order food hampers ahead of their journey and collect them for a small fee, which included a deposit for the crockery and cutlery – no sign of plastic.

For last-minute decisions, there were Basket Boys carrying large cane containers over their shoulders, walking the platforms selling snacks, sandwiches, sweets and ice creams amongst the cacophony of whistles, hissing steam and milling crowds.

From the early 20th century, platform buffet trolleys usually staffed by women were laden with urns serving piping hot tea and coffee plus fresh sandwiches, cakes and confectionery.

Today, these are gone and all food outlets at Central are run by the private sector. Automatic vending machines and 'fast food' outlets have replaced the 'basket boys', platform kiosks and buffet trolleys.

Quenching the thirst

In the first days of rail travel in NSW from 1855, passengers carried their own supplies of water or waited until their train stopped at a station where they could fill containers from water tanks. Subsequently, water was carried in canvas bags suspended on the outside of carriages and kept cool through the transfer of heat during evaporation. However, this ‘facility’ wasn’t popular as much of the water was lost through spillage, it tasted of dust and

grime, and the contents had to be shared amongst fellow passengers. It wasn't until 1914 that contractors were appointed to supply large blocks of ice for the station railway water tanks so that the water for refilling the bottles could be kept cool.
The first glass water bottles and tumblers were introduced into passenger compartments in 1892. They were filled at Central Station and replenished by staff at country stations along mail and mainline routes. Still, it must have been a nightmare for public health authorities trying to stop the spread of disease.
Prior to this in 1883, despite the vigorous campaigns of the Temperance Movement, the sale of alcohol to bona fide railway travellers stopping at Refreshment Rooms with liquor licenses was introduced. The range of wines, beers and spirits was extensive, each carefully measured out by bar staff into a range of specially marked glassware to restrict hurried over-imbibing and ensure fair value.

Railway Refreshment Rooms

A common factor among RRRs was steaming teapots, filled from heated urns, to keep up the supply to thirsty passengers. In on-board sleeping cars, an early morning 'cuppa' was delivered to passengers by the Conductor or Car Attendant.
There were fewer coffee drinkers than today and they had little choice but tentatively sipping on scalding milk coffee frequently flavoured with liquid chicory essence.

Mt Victoria RRR Museum Display
Source: Mt Victoria & District Historical Society Museum

Wynyard Buffet style RRR 1936
Source: NSW State Archives

Five different categories of RRRs offered combinations of liquor bar, counter service and full dining room meals depending on the size of the station and the volume of travelling public. The RRRs at larger stations even had their own poultry yards.
The menu choices of hearty home-style fare were standard across the State. It was all very traditional English-style with no suggestion of any Asian-style or Mediterranean influences. For breakfast, a set table meal included porridge, ham and eggs, grills or cutlets, fish, toast with preserves or marmalade with tea, coffee or a glass of milk.
Counter lunches included pork sausages and mashed potatoes, haricot chops, steak and kidney pies and vegetables, salads with tea, coffee or milk. Sandwiches, scones, meat pies, cakes, pastries and beverages could be purchased over the counter.
Dinner patrons enjoyed hot soup, a choice of fish, poultry or a hot roast joint of meat, followed by pudding and pastry. An extensive range of cigarettes and cigars, which could be smoked on board in designated carriages, could also be purchased.
The last RRR to open was at Wynyard Station in 1932, distinguished by an elegant Art Deco interior, air-conditioning and kitchens where meals could be prepared in full view of the public.

A plethora of choice

Railway Refreshment Rooms (RRR) were often located where the engines had to take on coal and water or change or add locomotives. Serving three-course meals to a trainload of hungry passengers whose eating time was determined by timetables and trains which could not wait for the last diners to finish their meal, was challenging.

At the smaller stations, trains might stop for 8-10 minutes, with a flurry of activity for staff. At larger stations, staff had 30 minutes to serve a room full of diners with 3 course meals or light refreshments at the counter bar.
I travelled back from a trip to the Snowy Mountains in winter as a teenager in the Scouts by the night mail train from Cooma to Sydney when the refreshment room staff were overwhelmed with numbers and sold us cold pies to munch as we huddled in the FS car for a long tedious steam journey to Goulburn and then diesel to Central. The cold pies made it seem much longer.
Meanwhile, a bell would be rung in the Railway Refreshment Rooms 10 minutes before the train departed - then it was time to wash-up and set tables before the next train would arrive. Staff would be informed by telegraph wire in advance of the numbers on board the next train to ensure they had enough meals ready to be served.
Despite the hustle and bustle, the dining room tables were often elegantly set with white linen and silver plated cutlery and tea sets. The refreshment rooms generally had a welcoming, sedate, homely atmosphere between the rushes with vases of fresh flowers and bowls of fruit on the tables and side boards. However, at Moss Vale Station the Governor had a large ornate private dining room.
Nevertheless, the kitchens were a hive of activity from pre-dawn until the departure of the last train for the evening. A busy RRR might have a complement of chef, second cook, pastry, pudding or sweets cook, pie-maker or roll-baker, third or relief cook, second pastry cook, grill or stove cook, fish cook and a vegetable cook; assisted by stewards and waiters, and kitchen hands, scullery staff and young 'usefuls' for odd jobs. In the absence of today's high standards of food training, skills were acquired through apprenticeship and on-the-job training.
RRR kitchen staff were complemented by service workers, many of whom were women. There was a manager, head and assistant head girls, barmaids, dining room waitresses, pantry maids, counter hands, housemaids and buffet girls.
Conditions for the women, many of whom worked in partnership with spouses or other family members, were unsatisfactory. Not only did most earn only half the wage of their male equivalent, they had almost no job security and were forced to work part-time on broken shifts, and sometimes with as little as three hours off a day. They were often the first to be retrenched.
As far as staff dress, late 19th century RRR cooks and waitresses wore caps and serge tunics reminiscent of nursing uniforms. From the 1920s, the uniforms were inspired by 'diner' styles as seen in American magazines and movies featuring subdued colours and jaunty caps and headpieces.
In the austere war years of the 1940s and rationing, green cotton 'wrap' style dresses were introduced for easy care and wear.
From the 1950s, the benchmark for women’s uniforms were set by airline hostess styles, with mix and match combinations for a corporate, sometimes almost military look, in a range of bright colours.
This style of uniform was worn by the female crew when Buffet Dining Cars were introduced in 1950 on the new eight-car air conditioned Riverina Express. The following year the same service was added to the Northern Tablelands Expresses.
The role of RRRs had been gradually changing after the War as it had become increasingly difficult to recruit suitable staff. Table service was replaced by counter service and set menus were encouraged in response to tighter timetabling. Modern kiosks were introduced at a number of suburban stations.
However, by the mid-fifties with the rapid uptake of dieselisation, several RRRs were closed, others were modified to exclude table accommodation, and some were leased to private enterprise as they had originally started in the 1870s. Eventually all cost-inefficient rooms and catering services on board trains were closed.
In 1962 the women’s uniforms changed again. Dorothy Darke from the Australian Women's Weekly designed bright new turquoise blue cotton shirtmaker dresses, worn with

monogrammed forage style caps. Ten years later, she updated the look with a vibrant jade uniform featuring gold buttons and embroidered with the initials for the new Trading and Catering Services.
It was an era of constant name and image changes in the Railways. So, the ‘new’ uniforms were soon replaced with grey and blue uniforms to match the Public Transport Commission's livery for trains, buses and ferries and the job title changed from waitress to stewardess.
In 1980, the look changed again with the uniforms streamlined and coloured maroon and cream to match the new 'candy' livery of orange, dark red and white for State Rail.
No matter what the style, a strict dress code was enforced. Nail polish, high heeled shoes and non-regulation hair styles were strictly forbidden and jewellery restricted to watches and wedding rings.
There was a distinct military air, with a small badge worn to identify the job title. Seniority was denoted by bars on shoulder epaulettes. Trousers were not introduced as a uniform option for women until the 1980s.
Male uniforms in the Catering Division usually reflected the standard on-board train crew styles of the eras.
The service crew on board trains had few opportunities to prepare individual meals for à la carte dining owing to limited space for food storage and preparation. Time was short too, with set dining shift times allocated to passengers so menus offered only a small selection within each course.

Monogramed RRR cutlery and crockery display

Made to last

Early railway china was manufactured locally at first, and then imported from large potteries in England, which produced tough, hard-wearing glazed earthenware and ironstone ceramics.
While monogrammed china, silverware and cutlery in Railway Refreshment Rooms added an air of distinction to the dining experience the logo was more likely intended as a security measure. Each piece was marked with a transfer printed monogram, incorporating a crown, with the letters RRR within a belted garter inscribed NSWGR.
This insignia was updated in 1962 when the abbreviation for RRR was replaced by TCS (for Trading and Catering Services).
A thoroughly modern look which departed from the use of a monogram, was chosen for the china for the all first class Southern Aurora, introduced in 1962 and the Indian Pacific in 1970. Some items were designed to reduce spillage during travel over bumpy sections of track, like the bowl shaped tea cup. On other routes, drivers would reduce speed to avoid the soup from being spilt during service.

Railway Kitchens

The heart of the railway food operation for the NSWGR was underneath Central Station. Here, deliveries of fresh produce would be made from Eddy Avenue and taken on trolleys to

the enormous industrial kitchens where a range of savoury and sweet food was prepared by an army of cooks and pastry cooks. From there it would be packed in large baskets and loaded onto trains for delivery to refreshment rooms across the State and to the railway workshops at Chullora where staff would be fed each day.
The scale of the operation was enormous. In 1942, 2,316,000 meat pies, 700 tons of meat, 100 tons of sausages, 42 tons of ham, 30 tons of bacon, 454 tons of potatoes, 92 tons of butter, 300,000 loaves of bread, 37,000lbs of tea, 36,000 lbs of coffee and 250,000 gallons of milk were distributed from Central.

Kitchen stove at Blayney Railway Station 2018
Source: Patsy Moppett

Railway kitchens across the State were equipped with huge coal-fired stoves for cooking and heating the water for the boilers. Large blocks of ice for keeping fresh meat, fish, vegetables, butter and milk cold would be sent regularly from Sydney, packed in sawdust and potato or wheat bags for insulation. Later, gas refrigeration was provided to keep food cool.
To improve productivity and efficiency, Railway Refreshment Rooms were phased out from the 1950s and replaced with on-board dining facilities on country routes. BS-class carriages built in the 1930s were converted and fitted with a food preparation area at one end, complete with gas refrigerator, ice cream cooler, hot water urns, a stainless-steel sink, pie warmer and shelves for crockery and cutlery. Passengers could dine in the wide servery space which was fitted with a curved counter and fixed stools or take food back to their seats. The Canberra Railway Museum had such a converted car in its fleet.

Catering during World War 2

During World War 2, all aspects of railway catering were under enormous continuous pressure for six years. Just the troop trains, which usually ran at night, carried 5,609,000 personnel. In one 36-hour period, 27 special troop trains arrived and departed Sydney for Brisbane and Melbourne during which time 26,850 meals were served.
After the War, in 1947, the NSWGR reported serving over 8,500,000 meals and light refreshments in its 52 Railway Refreshment Rooms. Another 1,500,000 meals were provided at country stations across the State by railway and volunteer staff - a total of over 10 million meals!

Mobile Buffet Trolley

Mobile buffet trolleys were introduced for the convenience of passengers to provide cool drinks, hot tea and coffee, sandwiches and sweets on the platform. They were also trialled at some country stations, including Albury and Moss Vale, to assist women travelling with young children and those who did not wish to leave the train to purchase food and drink.

A mobile tea and light refreshment buffet was introduced on to the steam platforms at Central Railway Station in 1948. Buffet dining cars were inaugurated in 1950 when they were added to the new eight-car Riverina Express.

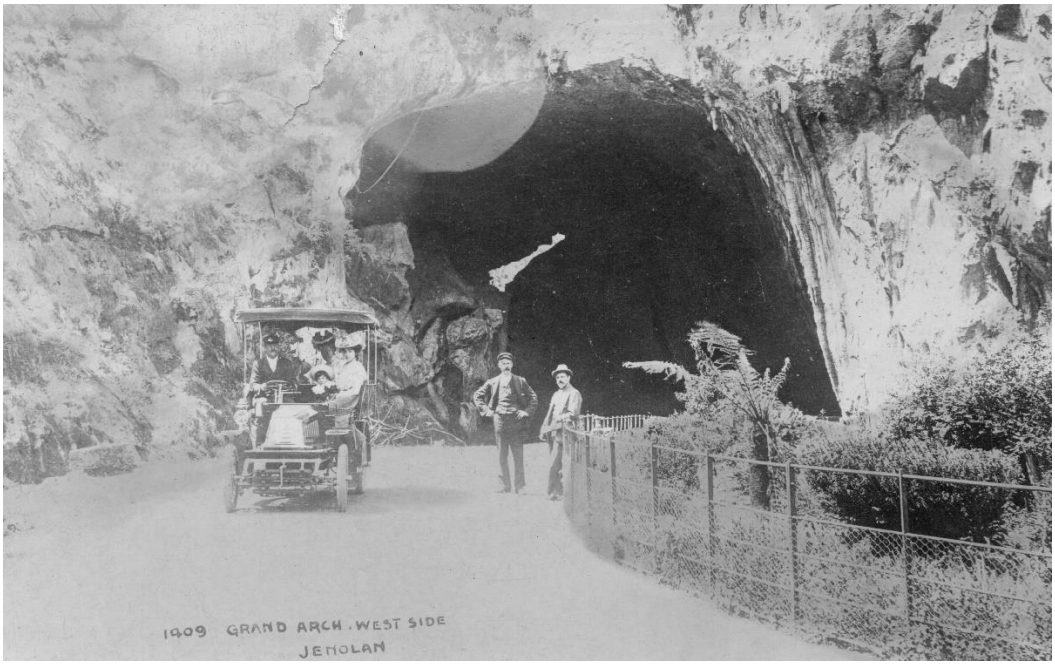
Central Station RRR Milk Bar in 1946, and Central station mobile buffet service 1948 with staff still wearing wartime wraps uniforms
Source: State Archives

In the Post-War period, the role of the Refreshment Rooms gradually changed. Table service was replaced by counter service, set menus were encouraged for time economies and in the mid to late 1950s, some rooms closed and others were leased to private enterprise.
The demise of the overnight mail train services, an increase in road and air travel and cost-cutting reviews eventually spelt the end for the RRRs. They were progressively closed from the mid-1950s, with Junee and Dubbo being the last to survive into the 1990s. It also meant the end of the hotel accommodation associated with RRRs at major junctions and interchanges. The first of these had opened at Junee and Werris Creek in 1885, followed by others at Newcastle, Wollongong, Moss Vale, Muswellbrook, Wellington and Yass Junction. By the mid-1980s, they had all closed. *Garry Reynolds*

A portion of this research has been based on the Food-to-Go Exhibition held at Central Railway Station in 2012.

The first car to reach Jenolan Caves?

I decided to write this article after reading Robyne Ridge's article "On the road to Jenolan Caves" in the *Blue Mountains Review* issue of 14 February 2018. The article included a reproduction of a postcard by Charles Kerry, showing an early model car outside the western entrance to the Grand Arch. This photo is one of the most commonly reproduced images connected with Jenolan Caves. There is no date on the photo, and it has been published with various dates estimated between 1903 and 1909. It has been claimed to be a photo of the first car to reach Jenolan Caves. None of the captions accompanying reproductions of this photo have ever named all the people in the picture.
The car in the photo [below] was probably imported by Mark Foy in early February 1903. Foy arrived back in Sydney, after a nine months overseas tour, on the "Friederich der Grosse" on 8 February 1903. The *Sydney Morning Herald* reported: "Mr Foy is importing three motor cars of the De Dion make. Two of these he will use in his business, and the other will be reserved for pleasure. The cars are of eight horse-power, which Mr Foy considers sufficient for the roads in Australia."



For many years the only reference to the earliest known car trip to Jenolan was the article by Ward Havard, "The Romance of Jenolan Caves", first published in 1933. Havard states: "Early in June 1903, Mr Mark Foy conducted a party in two motor cars from Blackheath. After delay occasioned by boggy roads and a mechanical defect in one car, the first car - an eight horse-power single cylinder De Dion, driven Mr B. Beckman - reached the Caves at 8 p.m., having left Blackheath at 11 a.m."

The only contemporary accounts of this trip I have found on Trove are from the *Lithgow Mercury* of Friday, 12 June 1903. These are reproduced below.

Jenolan Caves. A Motor Trip.

From our own Correspondent.

"Mr Mark Foy conducted a party of nine persons in two motor cars from Blackheath to Jenolan Caves, arriving here about 9 o'clock on Wednesday night. The trip was merely a trial one, and, considering the bad state of the roads at present, it was a decided success. The party left again the following morning for Blackheath, where they expected to arrive early in the afternoon. Although Mr Foy was quite satisfied with his run out, he is of opinion that motors of a little more power would be required to comfortably negotiate the steep pinches along the road between Mount Victoria and the Caves. Along the road in various places during yesterday's trip Mr Foy said that the wheels were buried to a depth of from 6 in. to 8 in. in the mud, so that the task can better be imagined than described."

Mount Victoria.

"Two motor-cars passed through on Wednesday from the Ivanhoe hotel for the Jenolan Caves, intending to return the same night to dinner at Blackheath. They contained in all some seven passengers."

A later article appeared in the *Lithgow Mercury* issue of 23 June 1903.

The Recent Motor Trip.

"To the Editor.

Sir - Re the experiment of a motor trip to the Jenolan Caves, you say in your journal that it was a very successful trip. I should like you to allow me space to flatly contradict that statement, as it was a complete failure, as the cars left Blackheath about 9 a.m. and reached the Caves about 9:30 p.m., the road being strewn with bushes in different parts to help progress. On the return journey one completely broke down, and remained at the Half-way House [at Hampton] for the fowls to roost on. As your report is likely to do me harm in my business, I would like you to do me the favour to insert what I have written to you - yours, etc.,

G.H. Cooper." June 18.
George Hubbard Cooper took tourists in horse-drawn coaches from his Grand Hotel at Mount Victoria to Jenolan Caves. Although motor cars did eventually "harm" his business, because the early cars were more expensive and less reliable than the coach trips, he was able to continue in business until his death in 1917.
Havard's article and the *Lithgow Mercury* articles have differences in such details as the departure and arrival times, and the newspaper articles do not mention the name of the driver or the makes of the cars. It is likely that Havard obtained information about the trip directly from Beckman, who was working as a guide at Jenolan Caves at the same time as him.
Summarising the information in these articles suggests that two cars left the Ivanhoe hotel at Blackheath at some time between 9 and 11 am, on Wednesday, 10 June, intending to return the same day to Blackheath, and arrived at the Caves at some time between 8 and 9.30 pm. The cars left the Caves the next morning, with only one making it back to Blackheath.
This well-known photograph has often been claimed to show the first car to reach Jenolan Caves. It should be noted that none of the articles quoted above claim that this journey by Mark Foy was the first car trip to the Caves, although Mark Foy was quoted as saying that it was "merely a trial".
Many readers will recall the exhibition entitled "The Air Up There. Vintage Tourism in the Blue Mountains" at the Blue Mountains Cultural Centre, which opened in December 2013. There was a gigantic reproduction of this photo, several metres tall, in the exhibition, beside a restored 1902 de Dion Bouton car loaned by Kevin Boardman. I was told by Boardman that the car in the photo and his restored model were of the same vintage.
On 7 September 1910 Mark Foy auctioned 15 cars, as he was intending to live overseas for some years. Car number 11 in the sale was:
"The Old Blue De Dion, "Old Bluey" as she was called, but she is now a new Bluey, being, you might say, a new Car.
Gentlemen, this Car was originally imported for a parcel delivery car by Mark Foy a great many years ago - but was never used for such. She was fitted with a body to carry 6 persons, and was absolutely the first motor car to run from the Blue Mountains to the Caves, and this Car did this work for years. The body is still to be had if wanted for any passenger service, and will be sold separately after the Car is sold; also her original parcel delivery body.
What an advertisement for Messrs De Dion Bouton this Car has been in Australia, and she pulls like a bulldog."
The car sold for £50.
Many years later, in July 1936, an article appeared in the *Lithgow Mercury* and *Katoomba Daily* with details about early motoring in the Blue Mountains. After a claim that Mr John Durie was the first to cross the Blue Mountains by car, the article concluded: "… Mr Mark Foy had cars running from Medlow Bath to the Caves at the time. Mr Bert Beckman, one of the guides at the Caves was the first man to drive a car down to Jenolan."
I copied the back of Mark Foy's own copy of this photo, owned by his granddaughter Mary Shaw, which had these words on the back, in his handwriting (reproduced in the original spelling):
"Lizzie, Mark junr 3 yrs and Sue Baxter. I think Roderiguz in car at Grand Arch Cave Jenolan. This was a very nice car. I called her the firefly she was some unknown make - not a de Dion."
Some years later, in a more shaky hand, Foy added the following comments: "about 3rd or 4th car in Australia. Lovely Car - I don't know what happened to it. Mr Roderigo leaning on fence, he was from Blackheath."
Most historians would think that you couldn't get a better primary source than the written words of someone who was actually on the trip. Unfortunately, there are mistakes in Foy's memories. Mark Foy Jr was born in January 1898, making him 5½ years old in mid-1903. Thomas Rodriguez is not in the photo. The car is definitely a 1902 model de Dion.

At this point, it will be of interest to identify the people in the picture.
The driver of the car is indeed “Bert” Beckman, as there are a number of other photos of him driving Foy’s cars. He was Axel Burnett Beckman (1881-1951), who married Rebecca Haslop in 1907 while still employed by Foy, and later became a guide at Jenolan Caves. Also in the front seat is Susan Baxter. Mary Shaw described her as an actress, but I could only find one record of her on Trove, in an amateur performance in Burwood in 1905. She may be the Susan J. Baxter born in Carcoar in 1877. Between them is Mark Francis Foy Jr (1898-1961). He was born out of wedlock in England while Mark Foy senior was still married to his first wife Annie née Davey. At the time of his son’s birth, Mark was waiting for approval from the Pope for an annulment of his first marriage on the grounds of non-consummation. When this, and his civil divorce, came through, he married ‘Lizzie’ in 1900. It is interesting that Mark Foy estimated his son’s age in the picture as three. If it was taken in 1903, it was actually three years since his marriage to Elizabeth, but over five years since Mark junior’s birth. It is possible that Mark and Elizabeth concealed the true year of their son’s birth to avoid scandal. Elizabeth, née Tweedie (1863-1940) is seated in the rear, wearing her customary large hat. Beside her, in the shadows, is another unidentified woman.
Standing on the road are two cave guides, James Carvosso (“Voss”) Wiburd (1866-1942), and John (“Jack”) Edwards (1866-1908), who is leaning on the fence. Both started working at Jenolan in 1885. Wiburd is wearing his official uniform, but Edwards is in casual clothing, and probably came to see the novel sight of the car.
If in fact this photo is of Mark Foy’s party’s return to Blackheath on Thursday 11 June 1903, it is a posed recreation of the arrival late at night on the day before, as it is taken on the west side of the Grand Arch, with the car facing west. It may have been just luck that there was a photographer at Jenolan that morning. Although Charles Kerry visited the Caves regularly, there is no indication that Mark Foy gave warning of his arrival to Kerry or one of his photographers.
Only three weeks after Foy’s trip on 10 June, it was announced that Rodriguez had “obtained a licence for a motor car to run between Blackheath and the Caves. He has already made several trips, and accomplished the run in four hours.” Rodriguez’ “Mountain Motor-car Company” was officially opened in late September 1903. It had two x 9 horsepower De Dions, each with seating for six people. The return fare between Blackheath and Jenolan Caves was 30 shillings. When accommodation and meals at the Caves, and cave inspection fees were added, a trip to Jenolan Caves was not affordable for working class people. At that time, a workman’s wage was about 42 shillings per week. George Cooper at Mt Victoria took a different approach, offering a five-day package tour. This included the return train fare from Sydney, return horse-drawn coach fares, two nights at the Grand Hotel, two overnight stays at Jenolan Caves House and three cave inspections for £3.12 shillings (i.e. 72 shillings). A more expensive option added a half day trip from Mount Victoria to Govett’s Leap, Katoomba and Wentworth Falls, with lunch at Toll’s Hotel, for a total of 84 shillings. Rodriguez must have decided to go “head-to-head” with Cooper and, in 1905, offered a similar package including car travel (with only one night at Jenolan) for a little under 74 shillings.

Early Ivanhoe Hotel

Early Hydro Majestic

Rodriguez' business was initially successful, and he ordered two new 20 horsepower cars from England. In mid-1904 Mark Foy offered him the job of manager at the Hydro Majestic. Rodriguez was probably overcommitted in trying to run the Hydro, his own Ivanhoe Hotel and the car transport businesses of both hotels. There was an obvious conflict of interests, with Rodriguez expected to manage Mark Foy's own fleet of cars commuting to Jenolan Caves as well as his own cars based at the Ivanhoe competing with them. Rodriguez' car transport business folded in about 1906.

Does the photo on the postcard actually show the first motor car to reach Jenolan Caves? None of the contemporary newspaper articles claimed that the car trip on 10 June 1903 was the first. It is interesting that Mark Foy did not claim this in his annotation on the back of the postcard. His statement about "Old Bluey" in 1910, that it "was absolutely the first Motor Car to run from the Blue Mountains to the Caves" is ambiguous. It may have been the first car to run a regular scheduled service from the Blue Mountains, but not necessarily the first car to ever reach the Caves.

It does seem a coincidence that there was a photographer at Jenolan Caves when he arrived on 10 June 1903, especially as Charles Kerry's branch studio did not open at the Caves until 1904. The souvenir booklet, detailing the products available from the studio, and published by Kerry in 1904 features the photo of Foy's car on the cover. Elery Hamilton-Smith, the expert on the history of photography at Jenolan Caves, puts the date of publication of the postcard at 1905, as it has a 'divided back' (a line separating correspondence and the address) which was only allowed by the postal authorities from 1905. Of course, the photo could have been taken earlier than this.

Until a contemporary article listing the passengers on the 10-11 June 1903 trip is located, it cannot be assumed that the photo on the postcard was taken on this day. Look at how lightly clad the passengers are in the open cabin. If it was winter they would be wearing overcoats and scarves. Would Mark Foy have taken his wife and young son and two other women on the very first car trip to Jenolan Caves? There is no definitive evidence that the car shown was the first to reach Jenolan Caves. Although Mark Foy's memory was muddled by the time he wrote on the back of the postcard, it is possible that the first car to reach the Caves was his "Firefly", not a De Dion. The photo could have been taken during one of the "several" trial runs by Rodriguez in the three weeks after 10 June, or at any time before the opening of his motor transport company in September. Alternatively, the photo could have been taken in the spring of 1904, when regular services were arriving from the Hydro Majestic and there was more likelihood of a Kerry company photographer being on site. *Jim Smith*

The Technical Side

Moveable (Movable) Heritage

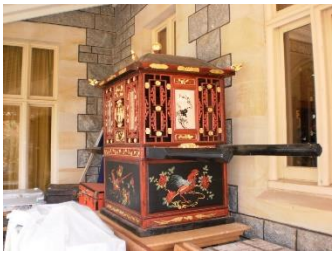
Of late, and in conjunction with the matter of archiving, comes consideration and concern for the preservation and conservation of moveable heritage. But what is moveable heritage? This can be used to define any natural or manufactured object of heritage significance. It is portable, therefore easily sold off, relocated or thrown away. Moveable heritage items may not be valued by the next generation or another culture so it is vulnerable to loss, damage or destruction, theft and disposal.

It may include jewelry, china, furniture, correspondences, photographs, vehicles, museum collections and objects, industrial, agricultural and commercial machinery, but does not include archaeological relics found under water or underground.

The critical thing for collection managers and owners is firstly to recognize whether an object or collection has significance. This can be a very subjective and emotional exercise.

Although every object cannot be preserved, an item's significance should first be assessed

within its context, and with regard to its importance to associated people and places. Once an item is removed from its context its significance is markedly reduced. However, sometimes it is necessary to remove an object from its location to undertake preservation, such as where threatened by eg. demolition or by coastal wave activity.



Abercrombie House

Ben Chifley Home

Millthorpe Museum

Therefore, whether the item or collection is to be removed or not, it is imperative to document the particulars of the object or collection, such as location, arrangement, details of manufacture, ownership and use. We need to document how and where the object was used, who owned it and any stories relating to its use and/or operation. This assists in retaining the history of both the object and the location. The provenance of the item is just as important as the object itself.

Methods which can assist in this include:

- Photographing the item and its location/context.
- Make up an inventory of the items in a collection, recording their relationships to people and places.
- Undertake oral histories with reference to the item and its context.
- Research the local history and historical changes in the locality.
- Examine and document the condition of the object.

Finally, based on the above, make an assessment of significance of the object or collection and prepare a conservation management plan (CMP).

Until such time as funding is available to undertake both the CMP and its recommendations, ensure that the object or collection is secure from pests and the elements, retained in context where possible. This is a matter which has arisen at both Mt Wilson and Woodford in recent months, and those communities have sought to undertake suitable measures to protect their paper collections. Where adaptive reuse is proposed to a building or place, some articles, architectural features etc may need to be removed and appropriately stored, in conjunction with advice from a suitable conservator and or museum. In addition, the role of private individuals and community custodians in caring for moveable heritage should also be recognized. The documentation of moveable items and collections is a critical aspect of the process.

When an item is listed on a heritage schedule, be it local, State or National, the accompanying inventory sheet should be clear and concise as to what is significant about the object and what is not. Inadequate descriptions on an inventory sheet will threaten the ability of authorities and legal entities to afford the item or collection appropriate protection. As well, during the processes of property transfer/lease or museum accessioning, it is critical to clearly detail each stakeholders rights and expectations. Otherwise, misconceptions and significant costs and angst will arise for all parties during the resolution process to establish each stakeholder's rights, such as is currently occurring in relation to the Paragon Café at Katoomba.

Faulconbridge

Lawson

Paragon interior

Education of the community is a key principle to protecting moveable heritage, as both the community and individuals play a significant part in managing and interpreting all cultural heritage. Community access and interpretation should be encouraged wherever possible, to pass on the significance of an item or collection from one generation or culture to the next.
In NSW, legislative protection can be achieved under various legislations, including the *Environmental Planning & Assessment Act 1979,* the *NSW Heritage Amendment Act 1998*, and the *Protection of Moveable Cultural Heritage Act 1986.*
In addition, grant funding programs are available at all levels of government for both groups and individuals, but will vary according to the criteria, available budgeting allocations, and listing status.

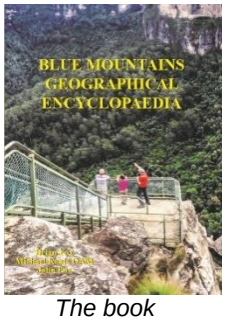
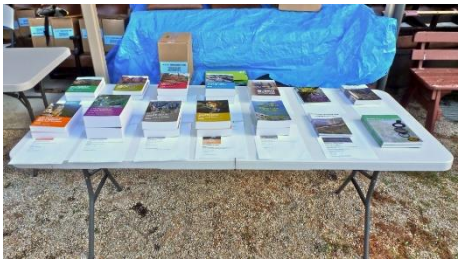
Book Launch : Blue Mountains Geographical Encyclopaedia

As flagged in the March-April edition of the BMACHO Newsletter, the launch of this book took place at Hobbys Reach, Wentworth Falls, on Monday 26 March 2018.
Peter Rickwood attended, and provides this account:
"At 8.30am Alan Foster opened up the premises and at 8.40am the authors arrived with vast quantities of their books, (one sold to a walk-in customer only 5 minutes after we arrived) - yes plural as they also had the intent of marketing their series on The Gardens of Stone National Park and Beyond. I arrived at 8.55am to find tables already set up in the area outside of the lecture room with John Fox and Michael Keats about to unpack books from numerous boxes. Brian was inside working with Alan on the electronic equipment. Also, inside the building were Jenny Keats and Jenny Fox who had the kitchen tasks well under control and were about to set up tables and plates of cakes etc. So all seemed under control and there was still an hour to go ! But there was a cold wind so we were a bit concerned about those who were to man the tables outside.
It was not long before droves of Fox relatives arrived to increase the work force and almost all did - the exception being the 92 year-old father of Brian and John Fox.
Tea and coffee was being served long before the appointed hour of 10.00am and by then some persons had occupied seats in the lecture room and others had marked where they intended to sit. Proceedings were commenced promptly at 10.30am by which time the hall was almost full - a wonderful response for a Monday. And most of the people therein were clutching newly purchased copies of the *Blue Mountains Geographical Encyclopaedia*.

The buyers



The book



The enticements

My introduction was short - as had been directed - and then Brian Fox took over. Towards the end of his "talk" he asked each of his co-authors "Dorothy Dix" questions to get them to participate. Not satisfied with quizzing his colleagues he then posed questions to the audience, mostly about names of places in the Blue Mountains, and rewarded responders with small gifts which were thrown in the right direction but did not always reach the respondent. It was an amusing episode and informative too.
I closed the session at 11.10am and thereafter sales continued under the control of family members as Brian, Michael and John were engaged in discussions with various attendees for another hour or so.
I cannot comment about the success of the sales but money seemed to be being handed over continually before and after the formal presentation so I guess it went well. Indeed, each of the authors commented later about their satisfaction with the way things had gone. But to the book *Blue Mountains Geographical Encyclopaedia*. No, it is not a 'good read', and was never intended to be, but it is an incredibly useful resource into which to dip from time to time. During a visit to Spatial Services in Bathurst earlier in the month the leader of the Geographical Names Board commented that he was waiting to get a copy, so what better endorsement do you want?" *Peter Rickwood*
The new book is on sale for $50.00, and Brian asks to be contacted if you require more information. If you would like to purchase a copy, this can be organised by an email or phone call.

Tour - Passion: Francis Greenway's Windsor & Liverpool

On Saturday 5th May 2018 Hawkesbury Historical Society is holding a car-tour, being a tour of features of Francis Greenway's Windsor and Liverpool. The tour will be led by historians and authors Jan Barkley-Jack and Ian Jack.

Thompson's Square

Although Francis Greenway came to NSW as a convicted forger and died in obscurity, he brought distinction to Australian colonial architecture. Windsor and Liverpool are the two of Macquarie's country towns which retain rare public works designed by Greenway.

The tour includes the site of the large wharf in Thompson Square redesigned by Greenway after the 1817 floods, and detailed inspections of St Matthew's Anglican Church Windsor, the Rectory and Stables, Windsor Courthouse, St Luke's Anglican Church, Liverpool and externally, old Liverpool Hospital.

St Matthew's

Windsor Court House

St Luke's

The tour will begin at 9.45am in Thompson Square, George Street, Windsor and end at 4.00pm at the Burial Ground, Liverpool.
Book individually: $25 per person (we can arrange transport), or by car group: $50 per car (no more than 5 people). Bookings are essential. Buy/bring own food.

Bookings are online via EVENTBRITE: https://www.eventbrite.com.au
OR by cheque to PO Box 293, Windsor 2756

Inquiries: secretaryhawkesburyhistory@gmail.com
OR phone the Treasurer: (02) 9659 4103

FAHS - last minute reprieve

The Federation of Australian Historical Societies was established in 1977 to communicate with governments and public officials to inform them about issues affecting historical societies and museums, and to advocate the interests of historical societies and museums. It provides members with access to a variety of guides and training materials to assist their operations historical societies, including guides to heritage identification and protection, heritage tourism, cultural landscapes, writing and publishing local history, disaster planning and recovery, local history and schools' curriculums. In addition, the FAHS publishes an E-Bulletin, and a Newsletter.

Federation of Australian Historical Societies Inc.

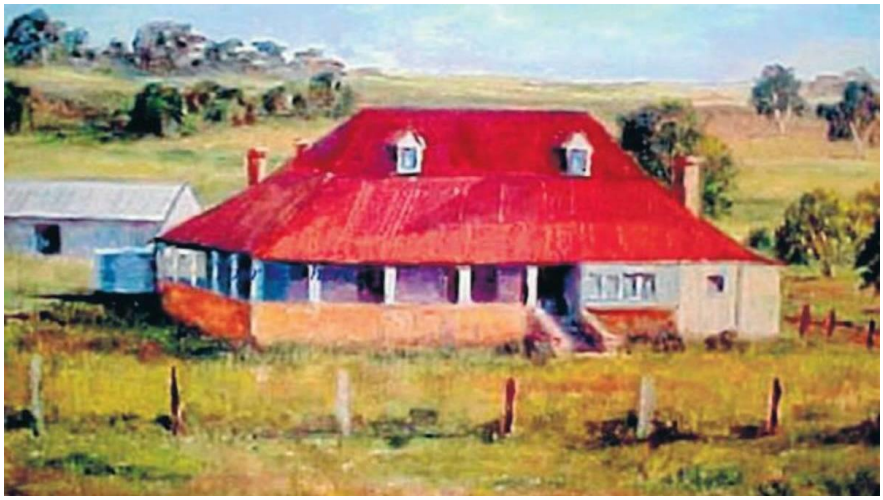
Recently the Commonwealth government announced that they would no longer support the FAHS or any other forms of voluntary community heritage. The implications for staffing, publications, training, conservation and research for FAHS were going to be significant.
A cry for help was issued to the community to lend support to the plea for ongoing funding. However, a last minute reprieve was found and Minister Frydenberg announced an amount of $80,000 would be allocated to the group. Timing and outlay is not as yet clear, and updates will be provided on the FAHS website.
For those people already preparing submissions of support, the FAHS has asked that they be held over for now. *Patsy Moppett*

www.history.org.au

Moyne Cemetery Conservation, Hartley

The historic Moyne Farm cemetery at Little Hartley near Lithgow will be preserved and made accessible to the public with help from a grant of $80,000 from the NSW Government's Heritage Near Me Program.

Member for Bathurst Paul Toole said the project would enhance public appreciation of the historic cemetery.



A painting of the historic Moyne Farm by Yvonne Jenkins, courtesy of Francis Owens

"Moyne Farm was believed to be the first farm house built over the mountains and the cemetery contains several graves dating from the 1830s," Mr Toole said.

"This project will see the cemetery undergoing work including monument repairs, fencing, development of a conservation management strategy and, in conjunction with the Lithgow Branch of the National Trust, a plan for ongoing public access and interpretation of the cemetery.

"The project will also use ground penetrating radar to determine the number of burials onsite."

Mr Toole said this funding is from the Heritage Near Me program's Local Heritage Strategic Project grants, which aims to support local communities to enhance and protect their local heritage assets.

The grants are awarded to owners and managers of local heritage items and community groups.

For more information on the Heritage Near Me Program, including available grants visit www.environment.nsw.gov.au/heritage-near-me.

Tour: Land & Property Information, Bathurst

As previously publicised, BMACHO undertook a tour of Spatial Services at Bathurst on Thursday 15th March 2018.

Much has changed since BMACHO last toured in 2010. The innovation, advances in technology and projects which have been undertaken right across the organisation dazzled attendees.

In depth explanations

The tour group

Photographs courtesy of Keith Ward, Valley Heights

Spatial Services implements and monitors standards for the survey industry in NSW, and is the official source of land information for NSW, maintaining a digital cadastre map and a digital topographical map of the State. It also provides aerial photography, satellite imagery, addressing information, touring maps and a unique customised mapping service that tailors spatial information to meet specific needs.

The group arrived at 10am to receive morning tea, and then a welcome from senior staff. A tour was conducted of each section beginning with Survey Services, Cadastral Spatial Programs, Geographical Names Board, and Digital Services. After lunch the group were shown through Environmental Spatial Data Programs, Administrative Spatial DATA Programs, and Service Delivery. A Q&A session finished the day at 3.30pm.

The tour was an eye opener for most visitors, and we viewed fascinating old charts and survey equipment, learnt about historical parish map interpretation, geographical place naming, the scanning and digital recording of colonial manuscripts and title documents, the use of drones in modern land surveying and interpretation, printing services, plan/document /book restoration, as well as the administrative side of it all.

We came to realise the enormity of what goes on in the unimposing building on Panorama Avenue, and the vast number of people beavering away in there, to produce documents we find on line and take for granted in our research projects.

We also came to realise how passionate the speaker from each section was about their own particular area of expertise, and how the combined passion of the sections goes to making Spatial Services the valuable community service it is.

We were encouraged to visit again, so we envisage that BMACHO will repeat this excursion.

Patsy Moppett

Lithgow Blast Furnace Heritage Park – OFFICIAL OPENING

To mark the completion of the upgrade works and the re-opening of this iconic heritage site for public use, an event is being held on the site on Saturday 12th May 2018. The opening coincides with the first night of the LithGlow Heritage Festival Light Show that will showcase the Blast Furnace by night.

The event will be opened by Ray Christison, President of the City of Greater Lithgow Mining Museum, and a historical archaeologist.

The upgrading works commenced in 2014/2015 and involved two stages:

- Stage 1: Repair and remediation works to remaining brick ruins
- Stage 2: Masterplan works, to provide safe and accessible visitor access, together with a new interpretive strategy.

The event will commence at 4pm with a welcome and site inspection. The official opening and speeches will be at 4.30pm, and entertainment by *Celtic Heart* will delight attendees. The Light Show is scheduled for 5.30pm to 10pm on the night. *Matthew Johnson*
RSVP by 4th May 2018 to:
matthew.johnson@lithogow.nsw.gov.au
The site is located on Inch Street, Lithgow. Parking for official attendees will be available on site.

BMACHO Conference 2018: Heritage Landscapes

Book in now for the 2018 Conference, *"Heritage Landscapes*". The Conference will be held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria. The cost will be $70 for registrations from 13th March to 30th April 2018.This registration fee covers individual attendance at the conference, morning tea, lunch and afternoon tea. Speakers have been confirmed, and the topics to be covered on the day include:

- Keynote Speaker – Stuart Read, Office of Environment & Heritage: "Landscape and garden-themed trails as Blue Mountains lure".
- Colleen Morris: Heritage consultant: "Sorensen Gardens".
- Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney: "Eurama and the nearby Parkes property at Faulconbridge".
- Kate O'Neill: Woodford Academy Management Committee: "Woodford Reserve 1830-2018: as good as the most capricious taste could desire".
- Mary Reynolds: Mount Wilson & Mount Irvine Historical Society: "Mount Wilson Gardens".
- Aunty Sharyn Halls: Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association: "The Gully & Gundungurra Country".
- Bruce Cameron, historian & author: "The Blue Labyrinth".

The Conference is Proudly sponsored by Scenic World Shared

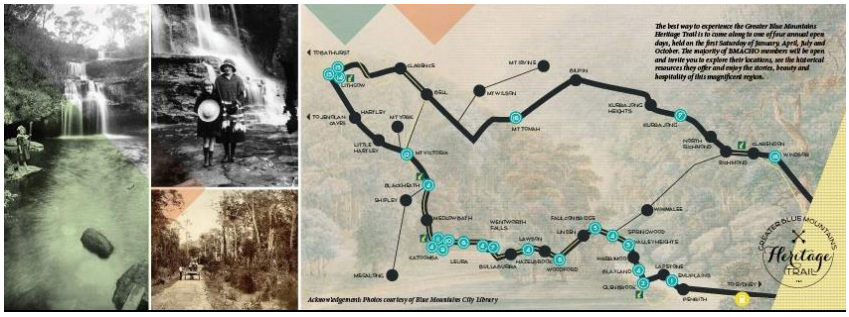
Registration is from 8.45am and the Conference concludes at 4.30pm.

Accommodation is available within Mount Victoria and at the Manor, and train access takes you to within walking distance of the venue. Trade tables will be available.

Full costs, program and booking details can be found on the BMACHO website.

Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BMACHO Committee 2018-2019

BMACHO presents your Committee for the coming twelve months as follows:

- President: Patsy Moppett (Individual Member)
- Vice-President: Ian Jack (Individual Member, and President of Hawkesbury Historical Society)
- Treasurer: Philip Hammon (Individual Member)
- Secretary: Fiona Burn (Individual Member)

Elected to the Committee were Roy Bennett, Rae Clapshaw, Summar Hipworth, Jan Koperberg, Dick Morony and Suzanne Smith.

Note 1: The tasks of the secretarial role will be carried out through Fiona, she being the minute secretary, with Jan Koperberg being the correspondence secretary and webmaster.
Note 2: Subcommittee memberships are set down on the last page of this Newsletter.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator),Jan Koperberg, Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrickson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Hadley Park, Castlereagh

The Heritage Council of NSW considers nominations for listing on the State Heritage Register based on an assessment of heritage significance and taking into account any submissions received from the public. Section 33 (3) of the NSW Heritage Act 1977 requires that the Heritage Council must be of the view that the item is of State heritage significance before it makes a recommendation to the Minister.

Upon receipt of a recommendation for listing from the Heritage Council of NSW it is the Minister for Heritage who has to consider that recommendation and decide whether or not to direct the listing of the item on the State Heritage Register under Section 32 (1) of the Heritage Act.

Hadley Park, Castereagh

One such item currently under consideration is Hadley Park, Castlereagh. Castlereagh was one of the five Macquarie towns proclaimed by Governor Lachlan Macquarie in 1810. Hadley Park was the earliest known European settlement in this location at the time. Charles Hadley acquired land at Castlereagh and his home, possibly the small adjacent weatherboard cottage, was erected in about 1806. The main house may have been built nearer to 1801 and still stands today.

Hadley Park is located on one of the 31 grants given out by Governor King in the Castlereagh (Mulgrave Place) area. Most of the grants had river frontages, and had a regular north-south orientation. They ranged from 70 to 160 acres, and the size reflected

social status and family size. The 89 acre block was originally granted to Martin Mentz (Mintz/Mince) in 1803. He cleared and cultivated the land, living on the property.
Charles Hadley was a convict, who arrived on the *Matilda* in the Third Fleet in 1791. He obtained his pardon, and returned to England, arriving back in 1806. In 1806 Mentz leased 30 acres to Charles Hadley.
In 1812 Hadley married Sarah Phillips, with whom he already had a son (Charles Jnr). By 1812 they had seven more children. Hadley had developed his farm, and was supplying meat to the depot at Emu Plains. He had a publican's licence as early as 1817, for his premises "The First and Last" (location unknown).
By 1821 he had accumulated 300 acres, and he became involved in the local community.
In 1827 Sarah left him for a neighbour, John Griffiths, leaving Charles with 9 children.
Charles died the following year. He left Hadley Park to his son Charles, who maintained the property until his death in 1891.
The property withstood numerous floods during the 19th century, including one in 1864, and the notorious 1867 event, which washed away all Charles Jnr's furniture and household goods.

Early main dwelling

Contemporary deterioration

Charles Jnr died in 1891 and his wife died a few days later, both of influenza. The property then passed to their son-in-law, William Alvan Hadley Childs, the husband of their daughter Louisa Matilda Hadley. In 1892 the property was noted as having a brick house of seven rooms, a barn, stable and outbuildings, all in a dilapidated condition.
William and Louisa's son William Charles was the owner in 1898. A number of lots had been sold off by Charles Hadley under his will, and young William set about purchasing them back, bringing the property back to 80 acres. He then ran the property as a successful dairy farm.
Upon his death in 1950, his son William George inherited the southern part, and his daughters, Elsa and Hannah, the northern part (44 acres) which included the main house.
Between 1940 and 1961 a few improvements were made including a hay shed and orchards. The orchards were removed by 1978.
Elsa and Hannah owned Hadley Park until 1972, when it was sold to a sand and gravel quarry company, who quarried the western sector.
Hadley Park's ownership was passed down through the generations of descendants of the Hadley and Hadley Childs families for over 150 years.
Jacqueline Flower, a sixth-generation descendant of Charles Hadley, was the last person to live in the property in 2008. She lived in a cottage on the site from 1996.
The Penrith Lakes Development Corporation took ownership in 1998, and commenced sand mining, The dwelling and farm buildings have since remained unoccupied.
Today it comprises a farm house, several farm buildings and a garden, within a rural landscape, which includes the lakes scheme on the Nepean River floodplain. The main features are located on the original 1803 lot, and the eastern section was quarried and then flooded as part of Lake Burralow. The western section slopes down to Cranebrook Creek.

In 2010-2011 the Penrith Lakes Development Corporation (PLDC) undertook extensive works to stabilise the premises, under the direction of reputable heritage practitioners, with the support of the NSW Heritage Office.

A significant rural landscape

In 2013 a Conservation Management Plan was drawn up by Godden Mackay Logan, on behalf of the PLDC.
Today the property is not listed on Schedule 5 of the Penrith Local Environmental Plan.
The site was opened to the public in early 2018, and many people were able to view the site and its remarkable collection of intact buildings.
Recently the State Government has started a process to list the Hadley Park precinct on the State Heritage Register. Penrith State Liberal MP Stuart Ayres urged the community to make submissions in support of the listing to the NSW Heritage Council.
"Anyone with an interest in our history and in preserving this important property is encouraged to make their submission before the cut off," he said.
Submissions closed on Monday, 5 March 2018, and the community awaits the results of the State government's deliberations.

Food for thought ..... Editor's note

We have been able to present plenty of "food for thought" in this issue! From the historic home of Charles Hadley at Castlereagh, to catering on the early railways in NSW, travelling to Jenolan Caves in the early 1900s, and looking at the preservation of moveable (movable?) heritage, we hope we have your interests covered.
And because it is autumn, a wide range of events are being held to commemorate our history and heritage. Only a few are listed here due to space constraints!
In particular, the subject of moveable heritage is covered in a broad fashion, but the matter is a very involved and emotive one. We have touched briefly on the legal aspects of the preservation process, but every community organisation or individual should be aware of the implications of NOT getting it right. It is a shame that heritage ownership must be subjected to the intense interpretation and investigation that can occur, where past owners and land managers have not accurately recorded, or been aware of, the details around lease and purchase of property and building contents, and accessioning activities.
We can only learn from current experiences, and know that history should be shared in a way that is accessible to the whole community, without encumbrances which might necessitate removal of objects from their contexts, or total destruction of objects or collections.
It is to be hoped that the collectors of this world, be it individuals or groups, continue to accurately collate (as far as possible) information about singular items and collections, together with associated provenance, conveying the significance of those artifacts and their stories through to future generations.
We encourage BMACHO members to regularly review the documentation of their items and collections, utilizing formal auditing processes where funding permits, and ensure that all bases and scenarios are covered as much as possible.

Getting a Bite to Eat on NSW Rail

Overview

If the description by John Rae, Commissioner for the New South Wales Government Railways (NSWGR) in 1871 is anything to go by, early railway food services were most unsatisfactory …. *"the keepers of what are facetiously termed refreshment rooms on our Railways are little more than apple stall holders and vendors of lollypops and stale pastry, serving out junks of sandwiches and messes of tea and coffee to their customers without any regard to their accommodation or comfort"*.
Obviously the only way was up.
The NSWGR had fallen behind the railway systems of other colonies in the provision of refreshments for passengers. Inspired by the facilities he had seen in Britain and Europe, Commissioner Rae decided to improve the situation and succeeded. The first station restaurants were leased to private operators and opened at Mittagong and Mt Victoria in 1873, followed by Central Station in 1874. The operators were licensed to provide hot beverages, hot and cold meals, and take-away baskets for consumption during the journey.
Temperance Societies were alarmed at the suggestion that alcohol may be available, which they asserted had caused many railway accidents in Britain. They successfully petitioned Parliament on the subject for a time.

Casino Railway Refreshment Room in 1947
Source: NSW State Archives

Following considerable pressure over decades to improve the standards of catering, a Railway Refreshment Room (RRR) service was established in 1916. The NSWGR took control from private operators and all the outlets were linked to a network of operations. Local businesses were initially upset as provisions once purchased from the neighbouring township were frequently brought in from Sydney.

Passengers had to wait another ten years before they were able to experience on-board train dining with a service which commenced on limited lines from 1926.

Eventually there would be a total of 52 'ref' rooms across New South Wales, serving hot grills, soup, sandwiches, cold meats and salads, a range of beverages and the ubiquitous railway pies.

Already, from 1906, the thousands of people who passed through Central Station had a range of options. They could ascend the grand staircase to the elegant Dining Room to enjoy high class silver service or enter The Grill Room downstairs, which later became the cafeteria.

Milk shakes, hot aerated milk, fountain drinks and aerated waters were available from milk bars and kiosks on the Main Assembly Platform and on the Eddy Avenue concourse.

Passengers short of time could order food hampers ahead of their journey and collect them for a small fee, which included a deposit for the crockery and cutlery – no sign of plastic.

For last-minute decisions, there were Basket Boys carrying large cane containers over their shoulders, walking the platforms selling snacks, sandwiches, sweets and ice creams amongst the cacophony of whistles, hissing steam and milling crowds.

From the early 20th century, platform buffet trolleys usually staffed by women were laden with urns serving piping hot tea and coffee plus fresh sandwiches, cakes and confectionery.

Today, these are gone and all food outlets at Central are run by the private sector. Automatic vending machines and 'fast food' outlets have replaced the 'basket boys', platform kiosks and buffet trolleys.

Quenching the thirst

In the first days of rail travel in NSW from 1855, passengers carried their own supplies of water or waited until their train stopped at a station where they could fill containers from water tanks. Subsequently, water was carried in canvas bags suspended on the outside of carriages and kept cool through the transfer of heat during evaporation. However, this ‘facility’ wasn’t popular as much of the water was lost through spillage, it tasted of dust and

grime, and the contents had to be shared amongst fellow passengers. It wasn't until 1914 that contractors were appointed to supply large blocks of ice for the station railway water tanks so that the water for refilling the bottles could be kept cool.
The first glass water bottles and tumblers were introduced into passenger compartments in 1892. They were filled at Central Station and replenished by staff at country stations along mail and mainline routes. Still, it must have been a nightmare for public health authorities trying to stop the spread of disease.
Prior to this in 1883, despite the vigorous campaigns of the Temperance Movement, the sale of alcohol to bona fide railway travellers stopping at Refreshment Rooms with liquor licenses was introduced. The range of wines, beers and spirits was extensive, each carefully measured out by bar staff into a range of specially marked glassware to restrict hurried over-imbibing and ensure fair value.

Railway Refreshment Rooms

A common factor among RRRs was steaming teapots, filled from heated urns, to keep up the supply to thirsty passengers. In on-board sleeping cars, an early morning 'cuppa' was delivered to passengers by the Conductor or Car Attendant.
There were fewer coffee drinkers than today and they had little choice but tentatively sipping on scalding milk coffee frequently flavoured with liquid chicory essence.

Mt Victoria RRR Museum Display
Source: Mt Victoria & District Historical Society Museum

Wynyard Buffet style RRR 1936
Source: NSW State Archives

Five different categories of RRRs offered combinations of liquor bar, counter service and full dining room meals depending on the size of the station and the volume of travelling public. The RRRs at larger stations even had their own poultry yards.
The menu choices of hearty home-style fare were standard across the State. It was all very traditional English-style with no suggestion of any Asian-style or Mediterranean influences. For breakfast, a set table meal included porridge, ham and eggs, grills or cutlets, fish, toast with preserves or marmalade with tea, coffee or a glass of milk.
Counter lunches included pork sausages and mashed potatoes, haricot chops, steak and kidney pies and vegetables, salads with tea, coffee or milk. Sandwiches, scones, meat pies, cakes, pastries and beverages could be purchased over the counter.
Dinner patrons enjoyed hot soup, a choice of fish, poultry or a hot roast joint of meat, followed by pudding and pastry. An extensive range of cigarettes and cigars, which could be smoked on board in designated carriages, could also be purchased.
The last RRR to open was at Wynyard Station in 1932, distinguished by an elegant Art Deco interior, air-conditioning and kitchens where meals could be prepared in full view of the public.

A plethora of choice

Railway Refreshment Rooms (RRR) were often located where the engines had to take on coal and water or change or add locomotives. Serving three-course meals to a trainload of hungry passengers whose eating time was determined by timetables and trains which could not wait for the last diners to finish their meal, was challenging.

At the smaller stations, trains might stop for 8-10 minutes, with a flurry of activity for staff. At larger stations, staff had 30 minutes to serve a room full of diners with 3 course meals or light refreshments at the counter bar.
I travelled back from a trip to the Snowy Mountains in winter as a teenager in the Scouts by the night mail train from Cooma to Sydney when the refreshment room staff were overwhelmed with numbers and sold us cold pies to munch as we huddled in the FS car for a long tedious steam journey to Goulburn and then diesel to Central. The cold pies made it seem much longer.
Meanwhile, a bell would be rung in the Railway Refreshment Rooms 10 minutes before the train departed - then it was time to wash-up and set tables before the next train would arrive. Staff would be informed by telegraph wire in advance of the numbers on board the next train to ensure they had enough meals ready to be served.
Despite the hustle and bustle, the dining room tables were often elegantly set with white linen and silver plated cutlery and tea sets. The refreshment rooms generally had a welcoming, sedate, homely atmosphere between the rushes with vases of fresh flowers and bowls of fruit on the tables and side boards. However, at Moss Vale Station the Governor had a large ornate private dining room.
Nevertheless, the kitchens were a hive of activity from pre-dawn until the departure of the last train for the evening. A busy RRR might have a complement of chef, second cook, pastry, pudding or sweets cook, pie-maker or roll-baker, third or relief cook, second pastry cook, grill or stove cook, fish cook and a vegetable cook; assisted by stewards and waiters, and kitchen hands, scullery staff and young 'usefuls' for odd jobs. In the absence of today's high standards of food training, skills were acquired through apprenticeship and on-the-job training.
RRR kitchen staff were complemented by service workers, many of whom were women. There was a manager, head and assistant head girls, barmaids, dining room waitresses, pantry maids, counter hands, housemaids and buffet girls.
Conditions for the women, many of whom worked in partnership with spouses or other family members, were unsatisfactory. Not only did most earn only half the wage of their male equivalent, they had almost no job security and were forced to work part-time on broken shifts, and sometimes with as little as three hours off a day. They were often the first to be retrenched.
As far as staff dress, late 19th century RRR cooks and waitresses wore caps and serge tunics reminiscent of nursing uniforms. From the 1920s, the uniforms were inspired by 'diner' styles as seen in American magazines and movies featuring subdued colours and jaunty caps and headpieces.
In the austere war years of the 1940s and rationing, green cotton 'wrap' style dresses were introduced for easy care and wear.
From the 1950s, the benchmark for women’s uniforms were set by airline hostess styles, with mix and match combinations for a corporate, sometimes almost military look, in a range of bright colours.
This style of uniform was worn by the female crew when Buffet Dining Cars were introduced in 1950 on the new eight-car air conditioned Riverina Express. The following year the same service was added to the Northern Tablelands Expresses.
The role of RRRs had been gradually changing after the War as it had become increasingly difficult to recruit suitable staff. Table service was replaced by counter service and set menus were encouraged in response to tighter timetabling. Modern kiosks were introduced at a number of suburban stations.
However, by the mid-fifties with the rapid uptake of dieselisation, several RRRs were closed, others were modified to exclude table accommodation, and some were leased to private enterprise as they had originally started in the 1870s. Eventually all cost-inefficient rooms and catering services on board trains were closed.
In 1962 the women’s uniforms changed again. Dorothy Darke from the Australian Women's Weekly designed bright new turquoise blue cotton shirtmaker dresses, worn with

monogrammed forage style caps. Ten years later, she updated the look with a vibrant jade uniform featuring gold buttons and embroidered with the initials for the new Trading and Catering Services.
It was an era of constant name and image changes in the Railways. So, the ‘new’ uniforms were soon replaced with grey and blue uniforms to match the Public Transport Commission's livery for trains, buses and ferries and the job title changed from waitress to stewardess.
In 1980, the look changed again with the uniforms streamlined and coloured maroon and cream to match the new 'candy' livery of orange, dark red and white for State Rail.
No matter what the style, a strict dress code was enforced. Nail polish, high heeled shoes and non-regulation hair styles were strictly forbidden and jewellery restricted to watches and wedding rings.
There was a distinct military air, with a small badge worn to identify the job title. Seniority was denoted by bars on shoulder epaulettes. Trousers were not introduced as a uniform option for women until the 1980s.
Male uniforms in the Catering Division usually reflected the standard on-board train crew styles of the eras.
The service crew on board trains had few opportunities to prepare individual meals for à la carte dining owing to limited space for food storage and preparation. Time was short too, with set dining shift times allocated to passengers so menus offered only a small selection within each course.

Made to last

Early railway china was manufactured locally at first, and then imported from large potteries in England, which produced tough, hard-wearing glazed earthenware and ironstone ceramics.
While monogrammed china, silverware and cutlery in Railway Refreshment Rooms added an air of distinction to the dining experience the logo was more likely intended as a security measure. Each piece was marked with a transfer printed monogram, incorporating a crown, with the letters RRR within a belted garter inscribed NSWGR.
This insignia was updated in 1962 when the abbreviation for RRR was replaced by TCS (for Trading and Catering Services).
A thoroughly modern look which departed from the use of a monogram, was chosen for the china for the all first class Southern Aurora, introduced in 1962 and the Indian Pacific in 1970. Some items were designed to reduce spillage during travel over bumpy sections of track, like the bowl shaped tea cup. On other routes, drivers would reduce speed to avoid the soup from being spilt during service.

Railway Kitchens

The heart of the railway food operation for the NSWGR was underneath Central Station. Here, deliveries of fresh produce would be made from Eddy Avenue and taken on trolleys to

the enormous industrial kitchens where a range of savoury and sweet food was prepared by an army of cooks and pastry cooks. From there it would be packed in large baskets and loaded onto trains for delivery to refreshment rooms across the State and to the railway workshops at Chullora where staff would be fed each day.
The scale of the operation was enormous. In 1942, 2,316,000 meat pies, 700 tons of meat, 100 tons of sausages, 42 tons of ham, 30 tons of bacon, 454 tons of potatoes, 92 tons of butter, 300,000 loaves of bread, 37,000lbs of tea, 36,000 lbs of coffee and 250,000 gallons of milk were distributed from Central.

Kitchen stove at Blayney Railway Station 2018
Source: Patsy Moppett

Railway kitchens across the State were equipped with huge coal-fired stoves for cooking and heating the water for the boilers. Large blocks of ice for keeping fresh meat, fish, vegetables, butter and milk cold would be sent regularly from Sydney, packed in sawdust and potato or wheat bags for insulation. Later, gas refrigeration was provided to keep food cool.
To improve productivity and efficiency, Railway Refreshment Rooms were phased out from the 1950s and replaced with on-board dining facilities on country routes. BS-class carriages built in the 1930s were converted and fitted with a food preparation area at one end, complete with gas refrigerator, ice cream cooler, hot water urns, a stainless-steel sink, pie warmer and shelves for crockery and cutlery. Passengers could dine in the wide servery space which was fitted with a curved counter and fixed stools or take food back to their seats. The Canberra Railway Museum had such a converted car in its fleet.

Catering during World War 2

During World War 2, all aspects of railway catering were under enormous continuous pressure for six years. Just the troop trains, which usually ran at night, carried 5,609,000 personnel. In one 36-hour period, 27 special troop trains arrived and departed Sydney for Brisbane and Melbourne during which time 26,850 meals were served.
After the War, in 1947, the NSWGR reported serving over 8,500,000 meals and light refreshments in its 52 Railway Refreshment Rooms. Another 1,500,000 meals were provided at country stations across the State by railway and volunteer staff - a total of over 10 million meals!

Mobile Buffet Trolley

Mobile buffet trolleys were introduced for the convenience of passengers to provide cool drinks, hot tea and coffee, sandwiches and sweets on the platform. They were also trialled at some country stations, including Albury and Moss Vale, to assist women travelling with young children and those who did not wish to leave the train to purchase food and drink.

A mobile tea and light refreshment buffet was introduced on to the steam platforms at Central Railway Station in 1948. Buffet dining cars were inaugurated in 1950 when they were added to the new eight-car Riverina Express.

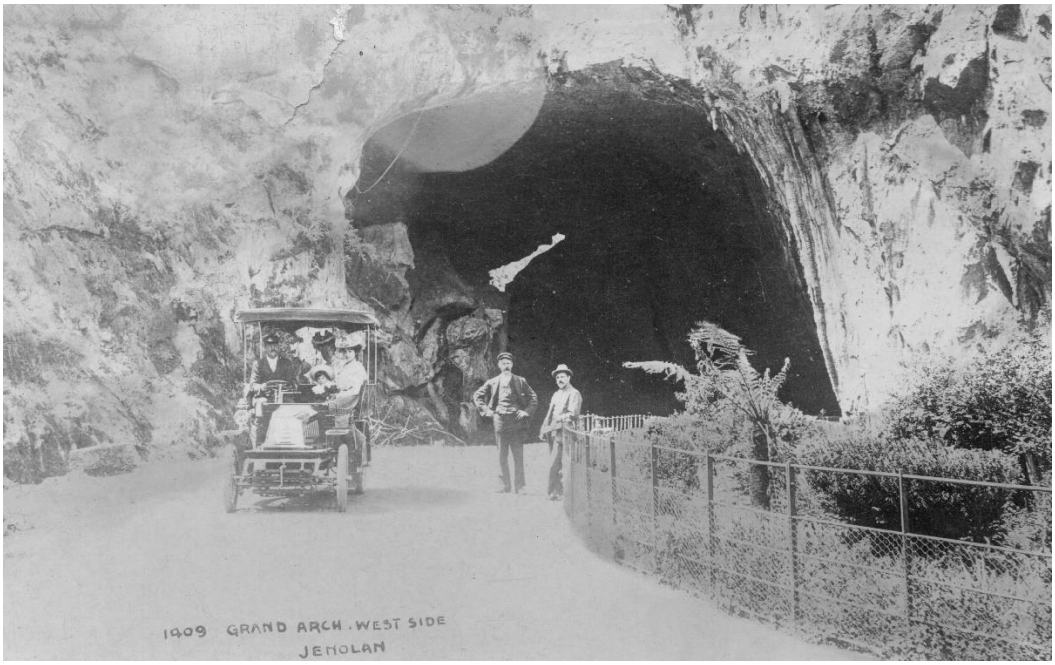
Central Station RRR Milk Bar in 1946, and Central station mobile buffet service 1948 with staff still wearing wartime wraps uniforms
Source: State Archives

In the Post-War period, the role of the Refreshment Rooms gradually changed. Table service was replaced by counter service, set menus were encouraged for time economies and in the mid to late 1950s, some rooms closed and others were leased to private enterprise.
The demise of the overnight mail train services, an increase in road and air travel and cost-cutting reviews eventually spelt the end for the RRRs. They were progressively closed from the mid-1950s, with Junee and Dubbo being the last to survive into the 1990s. It also meant the end of the hotel accommodation associated with RRRs at major junctions and interchanges. The first of these had opened at Junee and Werris Creek in 1885, followed by others at Newcastle, Wollongong, Moss Vale, Muswellbrook, Wellington and Yass Junction. By the mid-1980s, they had all closed. *Garry Reynolds*

A portion of this research has been based on the Food-to-Go Exhibition held at Central Railway Station in 2012.

The first car to reach Jenolan Caves?

I decided to write this article after reading Robyne Ridge's article "On the road to Jenolan Caves" in the *Blue Mountains Review* issue of 14 February 2018. The article included a reproduction of a postcard by Charles Kerry, showing an early model car outside the western entrance to the Grand Arch. This photo is one of the most commonly reproduced images connected with Jenolan Caves. There is no date on the photo, and it has been published with various dates estimated between 1903 and 1909. It has been claimed to be a photo of the first car to reach Jenolan Caves. None of the captions accompanying reproductions of this photo have ever named all the people in the picture.
The car in the photo [below] was probably imported by Mark Foy in early February 1903. Foy arrived back in Sydney, after a nine months overseas tour, on the "Friederich der Grosse" on 8 February 1903. The *Sydney Morning Herald* reported: "Mr Foy is importing three motor cars of the De Dion make. Two of these he will use in his business, and the other will be reserved for pleasure. The cars are of eight horse-power, which Mr Foy considers sufficient for the roads in Australia."



For many years the only reference to the earliest known car trip to Jenolan was the article by Ward Havard, "The Romance of Jenolan Caves", first published in 1933. Havard states: "Early in June 1903, Mr Mark Foy conducted a party in two motor cars from Blackheath. After delay occasioned by boggy roads and a mechanical defect in one car, the first car - an eight horse-power single cylinder De Dion, driven Mr B. Beckman - reached the Caves at 8 p.m., having left Blackheath at 11 a.m."

The only contemporary accounts of this trip I have found on Trove are from the *Lithgow Mercury* of Friday, 12 June 1903. These are reproduced below.

Jenolan Caves. A Motor Trip.

From our own Correspondent.

"Mr Mark Foy conducted a party of nine persons in two motor cars from Blackheath to Jenolan Caves, arriving here about 9 o'clock on Wednesday night. The trip was merely a trial one, and, considering the bad state of the roads at present, it was a decided success. The party left again the following morning for Blackheath, where they expected to arrive early in the afternoon. Although Mr Foy was quite satisfied with his run out, he is of opinion that motors of a little more power would be required to comfortably negotiate the steep pinches along the road between Mount Victoria and the Caves. Along the road in various places during yesterday's trip Mr Foy said that the wheels were buried to a depth of from 6 in. to 8 in. in the mud, so that the task can better be imagined than described."

Mount Victoria.

"Two motor-cars passed through on Wednesday from the Ivanhoe hotel for the Jenolan Caves, intending to return the same night to dinner at Blackheath. They contained in all some seven passengers."

A later article appeared in the *Lithgow Mercury* issue of 23 June 1903.

The Recent Motor Trip.

"To the Editor.

Sir - Re the experiment of a motor trip to the Jenolan Caves, you say in your journal that it was a very successful trip. I should like you to allow me space to flatly contradict that statement, as it was a complete failure, as the cars left Blackheath about 9 a.m. and reached the Caves about 9:30 p.m., the road being strewn with bushes in different parts to help progress. On the return journey one completely broke down, and remained at the Half-way House [at Hampton] for the fowls to roost on. As your report is likely to do me harm in my business, I would like you to do me the favour to insert what I have written to you - yours, etc.,

G.H. Cooper." June 18.
George Hubbard Cooper took tourists in horse-drawn coaches from his Grand Hotel at Mount Victoria to Jenolan Caves. Although motor cars did eventually "harm" his business, because the early cars were more expensive and less reliable than the coach trips, he was able to continue in business until his death in 1917.
Havard's article and the *Lithgow Mercury* articles have differences in such details as the departure and arrival times, and the newspaper articles do not mention the name of the driver or the makes of the cars. It is likely that Havard obtained information about the trip directly from Beckman, who was working as a guide at Jenolan Caves at the same time as him.
Summarising the information in these articles suggests that two cars left the Ivanhoe hotel at Blackheath at some time between 9 and 11 am, on Wednesday, 10 June, intending to return the same day to Blackheath, and arrived at the Caves at some time between 8 and 9.30 pm. The cars left the Caves the next morning, with only one making it back to Blackheath.
This well-known photograph has often been claimed to show the first car to reach Jenolan Caves. It should be noted that none of the articles quoted above claim that this journey by Mark Foy was the first car trip to the Caves, although Mark Foy was quoted as saying that it was "merely a trial".
Many readers will recall the exhibition entitled "The Air Up There. Vintage Tourism in the Blue Mountains" at the Blue Mountains Cultural Centre, which opened in December 2013. There was a gigantic reproduction of this photo, several metres tall, in the exhibition, beside a restored 1902 de Dion Bouton car loaned by Kevin Boardman. I was told by Boardman that the car in the photo and his restored model were of the same vintage.
On 7 September 1910 Mark Foy auctioned 15 cars, as he was intending to live overseas for some years. Car number 11 in the sale was:
"The Old Blue De Dion, "Old Bluey" as she was called, but she is now a new Bluey, being, you might say, a new Car.
Gentlemen, this Car was originally imported for a parcel delivery car by Mark Foy a great many years ago - but was never used for such. She was fitted with a body to carry 6 persons, and was absolutely the first motor car to run from the Blue Mountains to the Caves, and this Car did this work for years. The body is still to be had if wanted for any passenger service, and will be sold separately after the Car is sold; also her original parcel delivery body.
What an advertisement for Messrs De Dion Bouton this Car has been in Australia, and she pulls like a bulldog."
The car sold for £50.
Many years later, in July 1936, an article appeared in the *Lithgow Mercury* and *Katoomba Daily* with details about early motoring in the Blue Mountains. After a claim that Mr John Durie was the first to cross the Blue Mountains by car, the article concluded: "… Mr Mark Foy had cars running from Medlow Bath to the Caves at the time. Mr Bert Beckman, one of the guides at the Caves was the first man to drive a car down to Jenolan."
I copied the back of Mark Foy's own copy of this photo, owned by his granddaughter Mary Shaw, which had these words on the back, in his handwriting (reproduced in the original spelling):
"Lizzie, Mark junr 3 yrs and Sue Baxter. I think Roderiguz in car at Grand Arch Cave Jenolan. This was a very nice car. I called her the firefly she was some unknown make - not a de Dion."
Some years later, in a more shaky hand, Foy added the following comments: "about 3rd or 4th car in Australia. Lovely Car - I don't know what happened to it. Mr Roderigo leaning on fence, he was from Blackheath."
Most historians would think that you couldn't get a better primary source than the written words of someone who was actually on the trip. Unfortunately, there are mistakes in Foy's memories. Mark Foy Jr was born in January 1898, making him 5½ years old in mid-1903. Thomas Rodriguez is not in the photo. The car is definitely a 1902 model de Dion.

At this point, it will be of interest to identify the people in the picture.
The driver of the car is indeed “Bert” Beckman, as there are a number of other photos of him driving Foy’s cars. He was Axel Burnett Beckman (1881-1951), who married Rebecca Haslop in 1907 while still employed by Foy, and later became a guide at Jenolan Caves. Also in the front seat is Susan Baxter. Mary Shaw described her as an actress, but I could only find one record of her on Trove, in an amateur performance in Burwood in 1905. She may be the Susan J. Baxter born in Carcoar in 1877. Between them is Mark Francis Foy Jr (1898-1961). He was born out of wedlock in England while Mark Foy senior was still married to his first wife Annie née Davey. At the time of his son’s birth, Mark was waiting for approval from the Pope for an annulment of his first marriage on the grounds of non-consummation. When this, and his civil divorce, came through, he married ‘Lizzie’ in 1900. It is interesting that Mark Foy estimated his son’s age in the picture as three. If it was taken in 1903, it was actually three years since his marriage to Elizabeth, but over five years since Mark junior’s birth. It is possible that Mark and Elizabeth concealed the true year of their son’s birth to avoid scandal. Elizabeth, née Tweedie (1863-1940) is seated in the rear, wearing her customary large hat. Beside her, in the shadows, is another unidentified woman.
Standing on the road are two cave guides, James Carvosso (“Voss”) Wiburd (1866-1942), and John (“Jack”) Edwards (1866-1908), who is leaning on the fence. Both started working at Jenolan in 1885. Wiburd is wearing his official uniform, but Edwards is in casual clothing, and probably came to see the novel sight of the car.
If in fact this photo is of Mark Foy’s party’s return to Blackheath on Thursday 11 June 1903, it is a posed recreation of the arrival late at night on the day before, as it is taken on the west side of the Grand Arch, with the car facing west. It may have been just luck that there was a photographer at Jenolan that morning. Although Charles Kerry visited the Caves regularly, there is no indication that Mark Foy gave warning of his arrival to Kerry or one of his photographers.
Only three weeks after Foy’s trip on 10 June, it was announced that Rodriguez had “obtained a licence for a motor car to run between Blackheath and the Caves. He has already made several trips, and accomplished the run in four hours.” Rodriguez’ “Mountain Motor-car Company” was officially opened in late September 1903. It had two x 9 horsepower De Dions, each with seating for six people. The return fare between Blackheath and Jenolan Caves was 30 shillings. When accommodation and meals at the Caves, and cave inspection fees were added, a trip to Jenolan Caves was not affordable for working class people. At that time, a workman’s wage was about 42 shillings per week. George Cooper at Mt Victoria took a different approach, offering a five-day package tour. This included the return train fare from Sydney, return horse-drawn coach fares, two nights at the Grand Hotel, two overnight stays at Jenolan Caves House and three cave inspections for £3.12 shillings (i.e. 72 shillings). A more expensive option added a half day trip from Mount Victoria to Govett’s Leap, Katoomba and Wentworth Falls, with lunch at Toll’s Hotel, for a total of 84 shillings. Rodriguez must have decided to go “head-to-head” with Cooper and, in 1905, offered a similar package including car travel (with only one night at Jenolan) for a little under 74 shillings.

Early Ivanhoe Hotel

Early Hydro Majestic

Rodriguez' business was initially successful, and he ordered two new 20 horsepower cars from England. In mid-1904 Mark Foy offered him the job of manager at the Hydro Majestic. Rodriguez was probably overcommitted in trying to run the Hydro, his own Ivanhoe Hotel and the car transport businesses of both hotels. There was an obvious conflict of interests, with Rodriguez expected to manage Mark Foy's own fleet of cars commuting to Jenolan Caves as well as his own cars based at the Ivanhoe competing with them. Rodriguez' car transport business folded in about 1906.

Does the photo on the postcard actually show the first motor car to reach Jenolan Caves? None of the contemporary newspaper articles claimed that the car trip on 10 June 1903 was the first. It is interesting that Mark Foy did not claim this in his annotation on the back of the postcard. His statement about "Old Bluey" in 1910, that it "was absolutely the first Motor Car to run from the Blue Mountains to the Caves" is ambiguous. It may have been the first car to run a regular scheduled service from the Blue Mountains, but not necessarily the first car to ever reach the Caves.

It does seem a coincidence that there was a photographer at Jenolan Caves when he arrived on 10 June 1903, especially as Charles Kerry's branch studio did not open at the Caves until 1904. The souvenir booklet, detailing the products available from the studio, and published by Kerry in 1904 features the photo of Foy's car on the cover. Elery Hamilton-Smith, the expert on the history of photography at Jenolan Caves, puts the date of publication of the postcard at 1905, as it has a 'divided back' (a line separating correspondence and the address) which was only allowed by the postal authorities from 1905. Of course, the photo could have been taken earlier than this.

Until a contemporary article listing the passengers on the 10-11 June 1903 trip is located, it cannot be assumed that the photo on the postcard was taken on this day. Look at how lightly clad the passengers are in the open cabin. If it was winter they would be wearing overcoats and scarves. Would Mark Foy have taken his wife and young son and two other women on the very first car trip to Jenolan Caves? There is no definitive evidence that the car shown was the first to reach Jenolan Caves. Although Mark Foy's memory was muddled by the time he wrote on the back of the postcard, it is possible that the first car to reach the Caves was his "Firefly", not a De Dion. The photo could have been taken during one of the "several" trial runs by Rodriguez in the three weeks after 10 June, or at any time before the opening of his motor transport company in September. Alternatively, the photo could have been taken in the spring of 1904, when regular services were arriving from the Hydro Majestic and there was more likelihood of a Kerry company photographer being on site. *Jim Smith*

The Technical Side

Moveable (Movable) Heritage

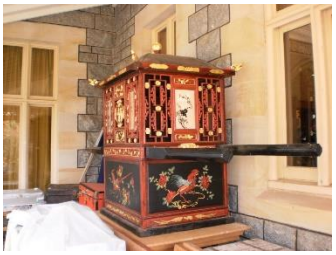
Of late, and in conjunction with the matter of archiving, comes consideration and concern for the preservation and conservation of moveable heritage. But what is moveable heritage? This can be used to define any natural or manufactured object of heritage significance. It is portable, therefore easily sold off, relocated or thrown away. Moveable heritage items may not be valued by the next generation or another culture so it is vulnerable to loss, damage or destruction, theft and disposal.

It may include jewelry, china, furniture, correspondences, photographs, vehicles, museum collections and objects, industrial, agricultural and commercial machinery, but does not include archaeological relics found under water or underground.

The critical thing for collection managers and owners is firstly to recognize whether an object or collection has significance. This can be a very subjective and emotional exercise.

Although every object cannot be preserved, an item's significance should first be assessed

within its context, and with regard to its importance to associated people and places. Once an item is removed from its context its significance is markedly reduced. However, sometimes it is necessary to remove an object from its location to undertake preservation, such as where threatened by eg. demolition or by coastal wave activity.



Abercrombie House

Ben Chifley Home

Millthorpe Museum

Therefore, whether the item or collection is to be removed or not, it is imperative to document the particulars of the object or collection, such as location, arrangement, details of manufacture, ownership and use. We need to document how and where the object was used, who owned it and any stories relating to its use and/or operation. This assists in retaining the history of both the object and the location. The provenance of the item is just as important as the object itself.

Methods which can assist in this include:

- Photographing the item and its location/context.
- Make up an inventory of the items in a collection, recording their relationships to people and places.
- Undertake oral histories with reference to the item and its context.
- Research the local history and historical changes in the locality.
- Examine and document the condition of the object.

Finally, based on the above, make an assessment of significance of the object or collection and prepare a conservation management plan (CMP).

Until such time as funding is available to undertake both the CMP and its recommendations, ensure that the object or collection is secure from pests and the elements, retained in context where possible. This is a matter which has arisen at both Mt Wilson and Woodford in recent months, and those communities have sought to undertake suitable measures to protect their paper collections. Where adaptive reuse is proposed to a building or place, some articles, architectural features etc may need to be removed and appropriately stored, in conjunction with advice from a suitable conservator and or museum. In addition, the role of private individuals and community custodians in caring for moveable heritage should also be recognized. The documentation of moveable items and collections is a critical aspect of the process.

When an item is listed on a heritage schedule, be it local, State or National, the accompanying inventory sheet should be clear and concise as to what is significant about the object and what is not. Inadequate descriptions on an inventory sheet will threaten the ability of authorities and legal entities to afford the item or collection appropriate protection. As well, during the processes of property transfer/lease or museum accessioning, it is critical to clearly detail each stakeholders rights and expectations. Otherwise, misconceptions and significant costs and angst will arise for all parties during the resolution process to establish each stakeholder's rights, such as is currently occurring in relation to the Paragon Café at Katoomba.

Faulconbridge

Lawson

Paragon interior

Education of the community is a key principle to protecting moveable heritage, as both the community and individuals play a significant part in managing and interpreting all cultural heritage. Community access and interpretation should be encouraged wherever possible, to pass on the significance of an item or collection from one generation or culture to the next.
In NSW, legislative protection can be achieved under various legislations, including the *Environmental Planning & Assessment Act 1979,* the *NSW Heritage Amendment Act 1998*, and the *Protection of Moveable Cultural Heritage Act 1986.*
In addition, grant funding programs are available at all levels of government for both groups and individuals, but will vary according to the criteria, available budgeting allocations, and listing status.

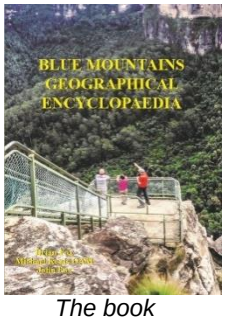
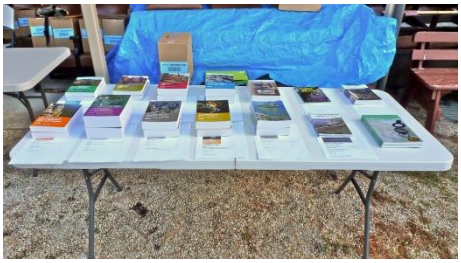
Book Launch : Blue Mountains Geographical Encyclopaedia

As flagged in the March-April edition of the BMACHO Newsletter, the launch of this book took place at Hobbys Reach, Wentworth Falls, on Monday 26 March 2018.
Peter Rickwood attended, and provides this account:
"At 8.30am Alan Foster opened up the premises and at 8.40am the authors arrived with vast quantities of their books, (one sold to a walk-in customer only 5 minutes after we arrived) - yes plural as they also had the intent of marketing their series on The Gardens of Stone National Park and Beyond. I arrived at 8.55am to find tables already set up in the area outside of the lecture room with John Fox and Michael Keats about to unpack books from numerous boxes. Brian was inside working with Alan on the electronic equipment. Also, inside the building were Jenny Keats and Jenny Fox who had the kitchen tasks well under control and were about to set up tables and plates of cakes etc. So all seemed under control and there was still an hour to go ! But there was a cold wind so we were a bit concerned about those who were to man the tables outside.
It was not long before droves of Fox relatives arrived to increase the work force and almost all did - the exception being the 92 year-old father of Brian and John Fox.
Tea and coffee was being served long before the appointed hour of 10.00am and by then some persons had occupied seats in the lecture room and others had marked where they intended to sit. Proceedings were commenced promptly at 10.30am by which time the hall was almost full - a wonderful response for a Monday. And most of the people therein were clutching newly purchased copies of the *Blue Mountains Geographical Encyclopaedia*.

The buyers



The book



The enticements

My introduction was short - as had been directed - and then Brian Fox took over. Towards the end of his "talk" he asked each of his co-authors "Dorothy Dix" questions to get them to participate. Not satisfied with quizzing his colleagues he then posed questions to the audience, mostly about names of places in the Blue Mountains, and rewarded responders with small gifts which were thrown in the right direction but did not always reach the respondent. It was an amusing episode and informative too.
I closed the session at 11.10am and thereafter sales continued under the control of family members as Brian, Michael and John were engaged in discussions with various attendees for another hour or so.
I cannot comment about the success of the sales but money seemed to be being handed over continually before and after the formal presentation so I guess it went well. Indeed, each of the authors commented later about their satisfaction with the way things had gone. But to the book *Blue Mountains Geographical Encyclopaedia*. No, it is not a 'good read', and was never intended to be, but it is an incredibly useful resource into which to dip from time to time. During a visit to Spatial Services in Bathurst earlier in the month the leader of the Geographical Names Board commented that he was waiting to get a copy, so what better endorsement do you want?" *Peter Rickwood*
The new book is on sale for $50.00, and Brian asks to be contacted if you require more information. If you would like to purchase a copy, this can be organised by an email or phone call.

Tour - Passion: Francis Greenway's Windsor & Liverpool

On Saturday 5th May 2018 Hawkesbury Historical Society is holding a car-tour, being a tour of features of Francis Greenway's Windsor and Liverpool. The tour will be led by historians and authors Jan Barkley-Jack and Ian Jack.

Thompson's Square

Although Francis Greenway came to NSW as a convicted forger and died in obscurity, he brought distinction to Australian colonial architecture. Windsor and Liverpool are the two of Macquarie's country towns which retain rare public works designed by Greenway.

The tour includes the site of the large wharf in Thompson Square redesigned by Greenway after the 1817 floods, and detailed inspections of St Matthew's Anglican Church Windsor, the Rectory and Stables, Windsor Courthouse, St Luke's Anglican Church, Liverpool and externally, old Liverpool Hospital.

St Matthew's

Windsor Court House

St Luke's

The tour will begin at 9.45am in Thompson Square, George Street, Windsor and end at 4.00pm at the Burial Ground, Liverpool.
Book individually: $25 per person (we can arrange transport), or by car group: $50 per car (no more than 5 people). Bookings are essential. Buy/bring own food.

Bookings are online via EVENTBRITE: https://www.eventbrite.com.au
OR by cheque to PO Box 293, Windsor 2756

Inquiries: secretaryhawkesburyhistory@gmail.com
OR phone the Treasurer: (02) 9659 4103

FAHS - last minute reprieve

The Federation of Australian Historical Societies was established in 1977 to communicate with governments and public officials to inform them about issues affecting historical societies and museums, and to advocate the interests of historical societies and museums. It provides members with access to a variety of guides and training materials to assist their operations historical societies, including guides to heritage identification and protection, heritage tourism, cultural landscapes, writing and publishing local history, disaster planning and recovery, local history and schools' curriculums. In addition, the FAHS publishes an E-Bulletin, and a Newsletter.

Federation of Australian Historical Societies Inc.

Recently the Commonwealth government announced that they would no longer support the FAHS or any other forms of voluntary community heritage. The implications for staffing, publications, training, conservation and research for FAHS were going to be significant.
A cry for help was issued to the community to lend support to the plea for ongoing funding. However, a last minute reprieve was found and Minister Frydenberg announced an amount of $80,000 would be allocated to the group. Timing and outlay is not as yet clear, and updates will be provided on the FAHS website.
For those people already preparing submissions of support, the FAHS has asked that they be held over for now. *Patsy Moppett*

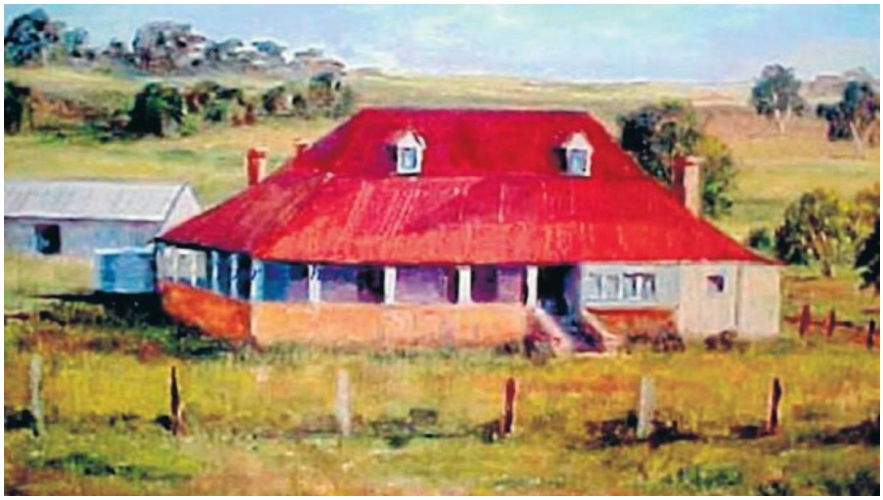
Moyne Cemetery Conservation, Hartley

The historic Moyne Farm cemetery at Little Hartley near Lithgow will be preserved and made accessible to the public with help from a grant of $80,000 from the NSW Government's Heritage Near Me Program.

Member for Bathurst Paul Toole said the project would enhance public appreciation of the historic cemetery.



A painting of the historic Moyne Farm by Yvonne Jenkins, courtesy of Francis Owens

"Moyne Farm was believed to be the first farm house built over the mountains and the cemetery contains several graves dating from the 1830s," Mr Toole said.

"This project will see the cemetery undergoing work including monument repairs, fencing, development of a conservation management strategy and, in conjunction with the Lithgow Branch of the National Trust, a plan for ongoing public access and interpretation of the cemetery.

"The project will also use ground penetrating radar to determine the number of burials onsite."

Mr Toole said this funding is from the Heritage Near Me program's Local Heritage Strategic Project grants, which aims to support local communities to enhance and protect their local heritage assets.

The grants are awarded to owners and managers of local heritage items and community groups.

For more information on the Heritage Near Me Program, including available grants visit www.environment.nsw.gov.au/heritage-near-me.

Tour: Land & Property Information, Bathurst

As previously publicised, BMACHO undertook a tour of Spatial Services at Bathurst on Thursday 15th March 2018.

Much has changed since BMACHO last toured in 2010. The innovation, advances in technology and projects which have been undertaken right across the organisation dazzled attendees.

In depth explanations

The tour group

Photographs courtesy of Keith Ward, Valley Heights

Spatial Services implements and monitors standards for the survey industry in NSW, and is the official source of land information for NSW, maintaining a digital cadastre map and a digital topographical map of the State. It also provides aerial photography, satellite imagery, addressing information, touring maps and a unique customised mapping service that tailors spatial information to meet specific needs.

The group arrived at 10am to receive morning tea, and then a welcome from senior staff. A tour was conducted of each section beginning with Survey Services, Cadastral Spatial Programs, Geographical Names Board, and Digital Services. After lunch the group were shown through Environmental Spatial Data Programs, Administrative Spatial DATA Programs, and Service Delivery. A Q&A session finished the day at 3.30pm.

The tour was an eye opener for most visitors, and we viewed fascinating old charts and survey equipment, learnt about historical parish map interpretation, geographical place naming, the scanning and digital recording of colonial manuscripts and title documents, the use of drones in modern land surveying and interpretation, printing services, plan/document /book restoration, as well as the administrative side of it all.

We came to realise the enormity of what goes on in the unimposing building on Panorama Avenue, and the vast number of people beavering away in there, to produce documents we find on line and take for granted in our research projects.

We also came to realise how passionate the speaker from each section was about their own particular area of expertise, and how the combined passion of the sections goes to making Spatial Services the valuable community service it is.

We were encouraged to visit again, so we envisage that BMACHO will repeat this excursion.

Lithgow Blast Furnace Heritage Park – OFFICIAL OPENING

To mark the completion of the upgrade works and the re-opening of this iconic heritage site for public use, an event is being held on the site on Saturday 12th May 2018. The opening coincides with the first night of the LithGlow Heritage Festival Light Show that will showcase the Blast Furnace by night.

The event will be opened by Ray Christison, President of the City of Greater Lithgow Mining Museum, and a historical archaeologist.

The upgrading works commenced in 2014/2015 and involved two stages:

- Stage 1: Repair and remediation works to remaining brick ruins
- Stage 2: Masterplan works, to provide safe and accessible visitor access, together with a new interpretive strategy.

The event will commence at 4pm with a welcome and site inspection. The official opening and speeches will be at 4.30pm, and entertainment by *Celtic Heart* will delight attendees. The Light Show is scheduled for 5.30pm to 10pm on the night. *Matthew Johnson*
RSVP by 4th May 2018 to:
matthew.johnson@lithogow.nsw.gov.au
The site is located on Inch Street, Lithgow. Parking for official attendees will be available on site.

BMACHO Conference 2018: Heritage Landscapes

Book in now for the 2018 Conference, *"Heritage Landscapes*". The Conference will be held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria. The cost will be $70 for registrations from 13th March to 30th April 2018.This registration fee covers individual attendance at the conference, morning tea, lunch and afternoon tea. Speakers have been confirmed, and the topics to be covered on the day include:

- Keynote Speaker – Stuart Read, Office of Environment & Heritage: "Landscape and garden-themed trails as Blue Mountains lure".
- Colleen Morris: Heritage consultant: "Sorensen Gardens".
- Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney: "Eurama and the nearby Parkes property at Faulconbridge".
- Kate O'Neill: Woodford Academy Management Committee: "Woodford Reserve 1830-2018: as good as the most capricious taste could desire".
- Mary Reynolds: Mount Wilson & Mount Irvine Historical Society: "Mount Wilson Gardens".
- Aunty Sharyn Halls: Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association: "The Gully & Gundungurra Country".
- Bruce Cameron, historian & author: "The Blue Labyrinth".

The Conference is Proudly sponsored by Scenic World Shared

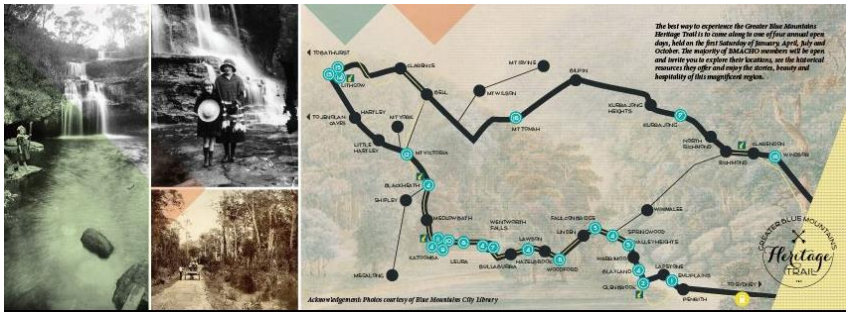
Registration is from 8.45am and the Conference concludes at 4.30pm.

Accommodation is available within Mount Victoria and at the Manor, and train access takes you to within walking distance of the venue. Trade tables will be available.

Full costs, program and booking details can be found on the BMACHO website.

Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BMACHO Committee 2018-2019

BMACHO presents your Committee for the coming twelve months as follows:

- President: Patsy Moppett (Individual Member)
- Vice-President: Ian Jack (Individual Member, and President of Hawkesbury Historical Society)
- Treasurer: Philip Hammon (Individual Member)
- Secretary: Fiona Burn (Individual Member)

Elected to the Committee were Roy Bennett, Rae Clapshaw, Summar Hipworth, Jan Koperberg, Dick Morony and Suzanne Smith.

Note 1: The tasks of the secretarial role will be carried out through Fiona, she being the minute secretary, with Jan Koperberg being the correspondence secretary and webmaster.
Note 2: Subcommittee memberships are set down on the last page of this Newsletter.

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Glenbrook & District Historical Society Inc; Hartley Valley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Paragon Cafe, Katoomba; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator),Jan Koperberg, Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrickson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Edward Gell, an Architect of the Colony

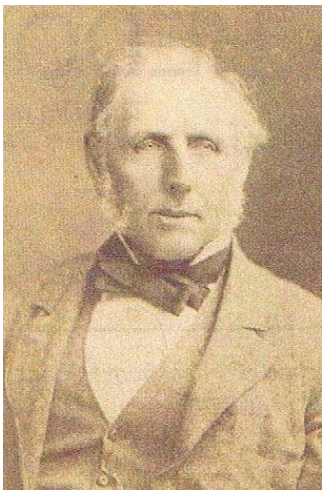
Edward Gell was the fourth child of Edward Gell (1790-1819) and Elizabeth Pickering (1788-1875), of Hedon, Yorkshire. Edward Snr and Elizabeth were married at Hedon in 1809. Young Edward was born there in 1818 and baptized at Hedon on 7 November 1818. Edward Snr was a mariner. By 1841 Elizabeth was a widow.

Young Edward received his education in England, studying and then practicing architecture. A Gell sketchbook dated 1846 showed he was a keen follower of architecture, and had a great skill for drawing. In particular, he sketched church buildings, and was obviously heavily influenced by the Gothic Revival work of A W Pugin. His notes also showed that he was doing some sort of project management, in the ordering of building materials, as a foreman or clerk of works.



Edward Gell

St Michael's & St John's Cathedral, Bathurst

Young Edward emigrated to Australia in 1857 as a single man. He was contracted to build St Michael's and St John's Catholic Church in Bathurst, which was eventually elevated to cathedral status. Many of the mouldings were carved by Gell himself, so he may originally have had some stone mason training.

In 1861 he married Elizabeth Haseldon at St Michael's and St John's. They had some seven children four of whom survived infancy.

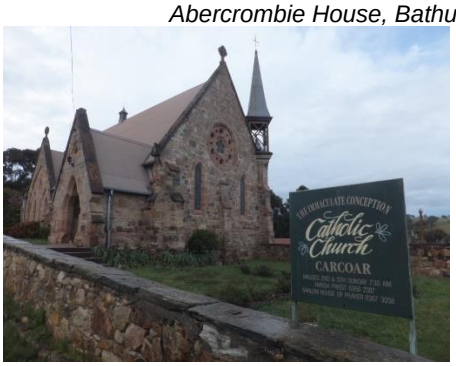
When the first Mayor of Bathurst, Richard Young Cousins was elected in 1863, Gell was a local architect, and was hired as town surveyor. He supervised building and construction work within the new municipality and remained in this position until 1866, when he was replaced by F W Holland.

Gell lived in Bathurst for some 25 years and despite some controversy, was Mayor of Bathurst in 1867, a member of Council during the period 1864 through to 1873, and was heavily involved in the establishment of public buildings such as the hospital, schools and the town hall.
During the 1860s and 1870s he designed many schools, shops, colleges, cottages and parsonages, and from 1871, many stately homes.

St Stanislaus College, Bathurst

Abercrombie House, Bathurst

Bathampton, near Bathurst



Catholic Church, Carcoar

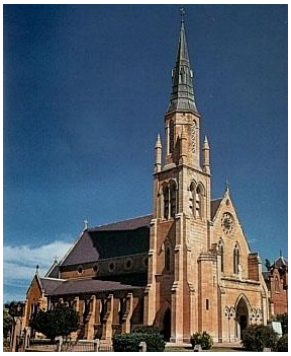
Logan Brae, Bathurst

Catholic Church, Dubbo

St John's Anglican Church, Georges Plains

St Mary's Catholic Church, Kirkconnell

Catholic Church, Rockley



Catholic Church, Mudgee

From 1858 to 1880 Gell designed some 154 buildings in the central west of NSW, his main client being the Catholic Church. In Rockley, south of Bathurst, he also designed the Anglican church. At Moorilda he designed the Presbyterian church of St Andrews.
Other significant buildings at Bathurst included Abercrombie House, St Stanislaus College, Busby's Logan Brae, pavilions and landscaping at the Bathurst Showground, Bathurst hospital, the Bathurst School of Arts and Bathurst railway station.
He became engaged in mining ventures, mainly gold and copper, and was a co-founder of the Lithgow Valley Colliery (LVC) in 1871, with T Wilton and P Higgins. Gell and his family moved permanently to Lithgow in 1881, where he designed buildings associated with the mine, and employee housing. His own dwelling on Lithgow Street still stands and is retained as a private home. It was named St Helen's, and built as a suitably impressive house for the general manager of LVC. Edward Gell designed the Lithgow Street residence in about 1875, and it was completed by 1877, when the Bathurst Times described the house as "that little gem of Gothic architecture".

St Helen's, Lithgow Street

Lithgow Valley Colliery

After Gell's death the history of occupancy is not known. After being sold by LVC, the house became a restaurant in the mid-1980s, was unoccupied for a time, and it is now a private residence.
In the 1890s his son Edward was sent to England for his education, and he became a Catholic priest in 1894. He returned to Australia and settled into the parish around St Charles Borromeo Church at Ryde, Sydney. He remained there for some 42 years and his family is remembered in a stained-glass window in the church. The original church was replaced, and the new church design influenced by Father Gell's architectural influence from his own father, in attention to a Pugin style.
Ill health saw him relocate to Sydney in 1898, where he died a year later.

Patsy Moppett

Book Review: Building Bathurst 1815-1915 by Graham Lupp

While undertaking his architectural studies in the late 1960s, Graham Lupp completed an ungraduated *architectural* honour's thesis on Edward Gell, major architect in Bathurst in the late 1800s.

During his research he discovered Gell was a remarkable man who had designed many of Bathurst's finest buildings, along with many others across the Central West. Gell would become a lifelong obsession for Lupp and a central character in his current publication.

His debut book set, *Building Bathurst 1815-1915,* is a definitive architectural history of the built heritage of Australia's oldest European inland settlement, and a biographic history about the architects and builders in the central western region.

Graham Lupp and his debut publication

Building Bathurst 1815-1915 is a limited edition with only 1500 copies printed, numbered and signed by Lupp. The two-volume book has a combined 844 pages featuring 1172 images, and while it took Mr Lupp five years to write, it features photos and information he has collated for decades. *Patsy Moppett*

It is available for purchase though Bathurst Regional Council's Civic Centre or by contacting Graham Lupp direct.

Heritage Division News

Macquarie Homestead

Following on from a previous article in the BMACHO Newsletter, it is noted that a particular property has now been recognised for listing on the State Heritage Register.

- **Macquarie Homestead Group, 3397 O'Connell Road, O'Connell** – BMACHO Newsletter No. 55, March-April 2018 reported on the open day at Macquarie Homestead.

In accordance with section 33(1)(e) of the *Heritage Act 1977 (NSW)*, the Heritage Council of NSW has resolved to recommend listing the item on the State Heritage Register (SHR) to the Minister for Heritage. The recommendation was resolved at the NSW Heritage Council meeting of 7 June 2018.

Macquarie residence and convict barracks 2017

The recommendation was made after consideration of a report prepared by the Heritage Division, Office of Environment & Heritage (OEH) which included submissions received from affected parties and members of the public.

Once the Minister has considered the Heritage Council's recommendation and made a decision whether or not to list the item on the SHR, further notification will be provided of that decision.
It is pleasing to see the property obtain the recognition that it deserves, opening up doors for funding and other assistance opportunities to aid in its conservation.

Hedgerows
In an earlier BMACHO Newsletter No.45 (July-August 2016), an article was printed on hedgerows. Now you have the chance to have a go at this ancient craft yourselves. Stuart Read of the NSW Heritage Division has passed on the following information:
A rare mainland workshop, the opportunity to learn how to "lay" a traditional hedge – i.e. cut/tilt/prop and 'weave' it to make it stock-proof.
Once layed hedges defined paddocks and fields, after shepherds and labourers rushed off to goldfields, and labour to herd the flocks or protect the crops was scarce. It was used before fencing wire arrived (1850s) and fencing became cheaper.
The workshop will be held at gorgeous *Oldbury*, a State Heritage listed farmhouse a parkland in Sutton Forest, Southern Highlands, on 21 July from 10:00 am - 3:00 pm. The cost is $75.00.

James and his craft

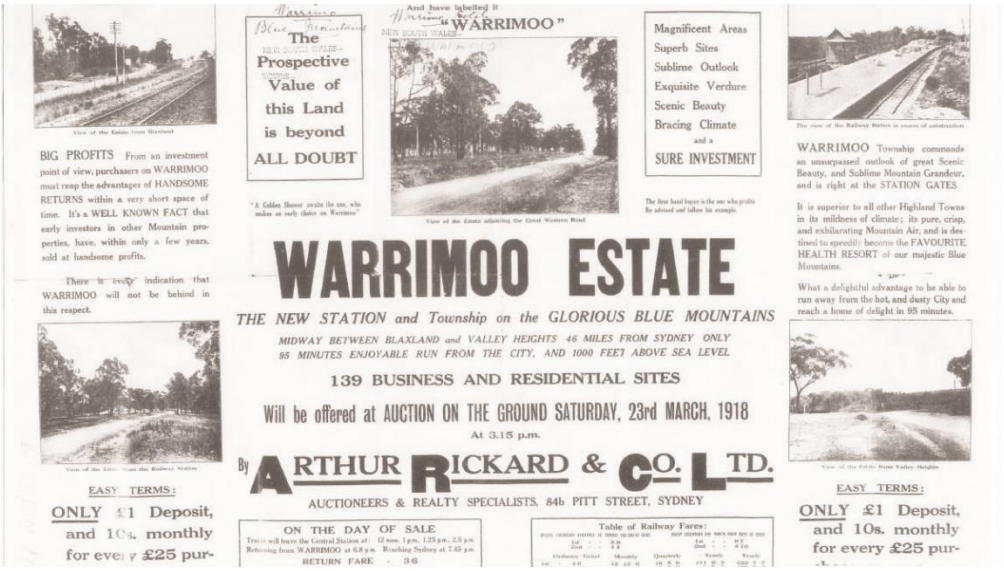
Learn from a master, James Boxhall, who has been laying hedges for 14 years, and enjoy seeing beautifully-laid old and young hedges. Theory & practical workshops are led by James, from '*Sticks and Stones*', who learnt the craft from expert Karl Liebscher, a professional hedge layer from Shropshire, England. James has competed in the National Hedge Laying Championships (UK), becoming the first person from outside of Europe to do so.
According to James a multitude of types of plants can be used for laying hedges including hazel, hawthorn, ash, elm, crab apple, plums and the list goes on. They provide aesthetically appealing, stock proof plantings and can add attraction to any garden.
More information is available about *Oldbury* itself on the Heritage Division database.
Numbers are limited so be quick!

Workshop bookings and information are available at:
www.shbg.com.au/event/hedge-laying-workshop (Southern Highlands Botanic Garden)
Phone: 02 4861 4899

Editor: So, heritage conservation and the retention of old trades is still alive and well in the heritage world!
The sharing of information such as this by the Heritage Division is much appreciated and BMACHO will continue to pass on news on conservation and preservation projects as it comes to hand.

Warrimoo Railway Station (former the Karabar level crossing)
In March 2018 Warrimoo railway station celebrated its 10th birthday! NSW Train Link celebrated the day by holding a morning tea hosted by the local rail staff. A display of historical photographs and plans of Warrimoo's railway history was exhibited at the time.

Located on the Main Western Line, which had gone through in 1867, the Warrimoo station was opened on 9 March 1918 as part of Arthur Rickard's "Warrimoo Estate", the auction of which was held on 23rd March. The Estate was bounded by the Main Western Road, The Boulevard and The Avenue.



The station had two passenger platforms, four station buildings, two signal boxes, two goods sidings, a level crossing, three overbridges and a crossing loop!
As with most of his estates, Rickard realized the importance of the rail connection to provide access for new residents to Sydney and to the west. One of the platforms, the waiting shed, a footbridge and a goods siding were built at his own expense, later being reimbursed by the government when it was proven that there was to be enough patronage to warrant government purchase.
The location was originally known as Karabar. Karabar was the site of No.3 level crossing, and a sandstone gate keeper's house where the railway crossed the Main Western Road, to the west of the present overbridge. The level crossing was meant to serve a new Richardson & Wrench subdivision named "Karabar Estate".
In 1881 a platform called "Karabar" was opened on the Sydney side of the level crossing but was closed in 1897 due to the lack of patronage.
Rickard proposed the change of name to "Warrimoo" by running a competition to select a new name for his proposed estate. John Low records that the winning entry suggested the name "warrimoo", an Aboriginal word (not local) meaning "eagle".

The first waiting shed about 1930

In later years

The first platform had a small brick unattended waiting shed which was later divided in half for a ticket office. The original 1918 waiting shed was destroyed in the 1951 bushfires, and the current brick station building was erected in its place in 1957. Internally the building's original floor layout has been modified and consists of a combined ticket office and station master's room, male and female toilets, waiting room and a store, on a linear floor plan.

A pedestrian bridge was built in 1917 to provide access to the station and in 1990 alterations were made. The pedestrian bridge's twin beam construction is typical of NSWGR practice. Since 1990, some of the components of the bridge, except the steel structure, have been replaced. The goods siding was closed in 1956.

Warrimoo Railway Station today

Warrimoo was also the site of the 1930 fatal derailment of a Sydney-bound passenger train where the driver and fireman on the leading engine were killed. The train had consisted of two steam locomotives along with eight carriages filled with passengers and a brake van. It left Mount Victoria headed for Sydney Central on the morning of 27th January. It had been lightly raining.

All rail lines leading to Sydney are known as "up" lines, and all those leading away are "down" lines, regardless of whether the train is going uphill or down. In this instance, and due to a previous incident, the particular train was on the "down" line, with the points supposedly adjusted to suit the situation, and travelling quite slowly.

The first engine passed safely over the catch-points about 450 metres on the Sydney side of Warrimoo, but the second engine fouled the points and left the rails. The heavy locomotive surged forward and then lurched to the right and "nose-dived" over a 5m embankment.

The derailment and retrieval

The crew of this engine leapt clear, and were uninjured, but the second engine's dive down the embankment threw the leading locomotive off the rails and caused it to turn over on its side with portion of it projecting over the brink of the embankment. The driver Harold Hanna and the fireman Edward Smith, both of Springwood, were pinned down by the twisted ironwork, and were killed instantly. A young porter was thrown clear, with severe injuries. The carriages were unaffected and passengers uninjured, apart from shock and bruising. The porter, Joe McGarrity, later lost his arm due to his injuries.

At the inquest the Coroner found that a fettler and a flagman were guilty of culpable negligence for not locking the points in place and not signalling that the points were open, to the oncoming train. Their supervisor was severely reprimanded for the casual manner in

which he supervised the work of the other two men, who appear to have avoided custodial sentence.
So, despite its humble beginnings as an 1800s rail siding, the opening of Warrimoo station in 1918 and the establishment of the Rickard estate, were the commencement of Warrimoo village as we know it today. *Patsy Moppett*

Pulpit Hill, Katoomba

The Conservation Management Plan (CMP) for Pulpit Hill, Katoomba, (Godden McKay Logan Pty Ltd 2012), which includes the explorer's tree, natural flora and fauna, convict graves, colonial roads, and signs of early indigenous and colonial settlement, incorporated a recommendation: "*to ensure opportunities for community engagement, appreciation and enjoyment of the significant heritage values are provided at Pulpit Hill*".

Edgar Church grave

Six Foot Track

Explorers Tree 1886

In February 2018, Blue Mountains City Council Heritage Adviser, Christo Aitken, reiterated actions from the CMP, with a view to seeking funding under the OEH Heritage Near Me – Activation Grants 2018-19. His comments were as follows:

- Undertake a review the original CMP and it recommendations.
- Organise a public open day at Pulpit Hill to present the findings of the review and to provide an opportunity to draw together new material and comment from the community to include in the Review.
- Stabilize the Explorer's Tree to ensure safety and conservation of its significant values.
- Develop an Interpretation Plan that brings together the multi-layered Colonial and Indigenous history of the place.
- Implement the plan together with an interpretative trail on Pulpit Hill that showcases the key historic elements with appropriate public access, signage, fencing and landscaping.
- Develop a Masterplan for Pulpit Hill to guide the way forward, particularly addressing sensitive issues, such as the Explorer's Tree and its remnant fabric.

It is understood that Council is primarily looking towards facilitating the stabilisation of the Explorers' Tree through improved fencing, with a focus on an inclusive and comprehensive interpretation plan being developed for the Pulpit Hill Precinct, to ensure the conservation of the significant multi-layered colonial and indigenous history of the place.

This would conserve the heritage values of the area, showcase the key historic elements with appropriate public access, signage, fencing and landscaping and make the site more appealing to visitors.
Progress on this action for funding will be provided by BMACHO as it comes to hand.

Windsor Barrel Drain (1814) Discovery

The Royal Australian Historical Society recently reported on the progress of the ongoing archaeological works at Thompson Square, Windsor, in relation to the State government proposal to demolish the existing bridge over the Hawkesbury River and to build a new bridge structure in its place.
Associate Professor Carol Liston AO submitted a statement to the NSW Legislative Council on behalf of the RAHS, with an overview of the site's significance:
Thompson Square is of outstanding historical and heritage importance because it is the only original surviving foundation site for eighteenth century European settlement in Australia. This space, adjacent to the Hawkesbury River landing place, provided structure to an emerging village and farming settlement. Neither the settlement at Sydney Cove nor at Parramatta developed around a central focus space, despite the importance of their waterfront locations.
In January 1795 Acting Governor William Patterson authorized use of the area as the government precinct. Around its edges, a wharf and storehouse were built, followed by a granary and soldiers' barracks. As the settlement developed other official buildings surrounded the precinct providing accommodation for officials (including the governor), a watch house, and later a school and church. When Governor Macquarie formally proclaimed the town in 1810 the existing square was incorporated into the formal town plan as the first designed urban space. The investment of expensive drainage works confirmed its importance as a function hub of the settlement.
In late 2017 a significant discovery was made by Roads and Maritime Services adjacent to the existing bridge and landing place at Thompson Square. The man-sized brick barrel drains appear to be the oldest government infrastructure in Australia, the earliest example of brickwork used in drainage works, dating back to 1814 and the early colony of New South Wales.

Windsor brick barrel drain

Calls have been made by Members of Parliament, the community and by experts in the field to retain the drains in situ, rather than attempt to salvage them and restore them, subject to intensive assessment and evaluation. The discovery lends further weight to the proposed Windsor Bridge Replacement Project, and calls to have any new bridge located in a more suitable site further along the river.
Also known as "smugglers' tunnels, the tunnels were convict built, using sun dried bricks, due to the lack of brick kilns at the site at the time. It has been suggested that the drains

would have tourist potential, but more significantly it is imperative to preserve this heritage feature which is unique and rare, not destroy or hide it.
Roads and Maritime Services had previously engaged professional archaeologists to excavate the north eastern section of Thompson Square to record and document any heritage artefacts found within the area. During the excavation, archaeological crews discovered the brick barrel drain in a hand-dug test pit near the river. Most of the brick drain was found intact, although one end was found to be eroded and partially washed away. Roads and Maritime Services has advised that it has now developed a way to protect and preserve the brick drain in place, and not remove it. They advise that further archaeological studies are under way to record any additional archaeological finds and preserve the historical significance of the site.

Example of brick barrel drain features

However, they still maintain that their new bridge will provide a safe and reliable crossing across the Hawkesbury River at Windsor, without impacting upon the heritage of the Thompson Square precinct. *Patsy Moppett*

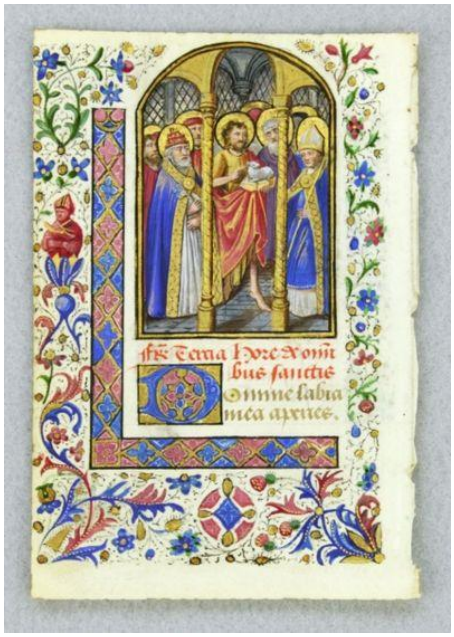
The Technical Side
Vellum & parchment

The term parchment is a general term for an animal skin which has been prepared for writing or printing and has been made for centuries. It is usually calf, goat, or sheep skin. Parchment (*pergamenum* in Latin) derives its name from the city of Pergamon, (via the French *parchemin*).
Vellum is a finer quality material, prepared from animal skin or membrane also used as a material for writing on. The term is derived from the Latin word *vitulinum* meaning "made from calf", leading to the Old French velin for "calfskin".
Writing on prepared animal skins had a long history. Some Egyptian Fourth Dynasty texts were written on vellum and parchment. Though the Assyrians and the Babylonians utilised clay tablets, they also wrote on parchment and vellum from the 5th and 6th century BC onward.
Scribes carved the first writing on wet clay tablets, but soon after that, about 3000 BC, the Egyptians invented papyrus, and by about 500 BC most people in West Asia and the Mediterranean used papyrus for writing.
Subsequently, vellum and parchment were invented under the patronage of Eumenes of Pergamum, as a substitute for papyrus, which was temporarily not being exported from Alexandria.



Early Latin manuscript

German book binding WW1

In the Middle Ages, calfskin and split sheepskin were the most common materials for making parchment and vellum in England and France, while goatskin was more common in Italy. The heyday of parchment use was during the medieval period, but there has been a growing revival of its use among contemporary artists since the late 20th century. Although it never stopped being used (primarily for governmental documents and diplomas) it had ceased to be a primary choice by the end of 15th century Renaissance. This was partly due to its expense and partly due to its unusual working properties.

Dutch portrait on vellum

Land deed on vellum

During the seventh through the ninth centuries, many earlier parchment manuscripts were scrubbed and scoured to be ready for rewriting, and often the earlier writing can still be read. These recycled parchments are called palimpsests.

The process

Parchment is prepared from pelt, i.e., wet, unhaired, and limed skin, simply by drying at ordinary temperatures under tension, most commonly on a wooden frame known as a stretching frame.

The stretching frame

After being flayed, the skin is soaked in water for about one day. This removes blood and grime from the skin and prepares it for a dehairing liquor. The dehairing liquor was originally made of rotted, or fermented, vegetable matter, like beer or other liquors, but by the Middle Ages an unhairing bath included lime.
Today, the lime solution is occasionally sharpened by the use of sodium sulfide. The liquor bath would have been in wooden or stone vats and the hides stirred with a long wooden pole to avoid contact with the alkaline solution. Sometimes the skins would stay in the unhairing bath for eight or more days depending upon how concentrated and how warm the solution was kept - unhairing could take up to twice as long in winter. The vat was stirred two or three times a day to ensure the solution's deep and uniform penetration. Replacing the lime water bath also sped the process up. However, if the skins were soaked in the liquor too long, they would be weakened and not able to stand the stretching required for parchment.
After soaking in water to make the skins workable, the skins were placed on a stretching frame. A simple frame with nails would work well in stretching the pelts. The skins could be attached by wrapping small, smooth rocks in the skins with rope or leather strips.
Both sides would be left open to the air, so they could be scraped with a sharp, semi-lunar knife to remove the last of the hair and get the skin to the right thickness. The skins, which were made almost entirely of collagen, would form a natural glue while drying and once taken off the frame they would keep their form. The stretching allowed the fibres to become aligned running parallel to the grain.
It is recorded that the process was/is a very smelly one!!

Uses

Vellum and parchment have been used since the earliest times, and still find uses today amongst artists, scribes and bookbinders. Though now costly to produce, it remains one of the most durable of library materials. Vellum – a material that would otherwise go to waste – was used to print the Magna Carta, the Domesday Book and thousands of other historical documents.

The Magna Carta

Map on vellum

Modern book binding

Vellum was and is commonly used in bookbinding. It could be used to cover a wooden or cardboard core or alone without any backing. Many vellum bindings are simple and undecorated. Vellum was often used to cover less-valuable or common books.
Recent moves by the House of Lords in the UK are noted, where they seek to abandon vellum on the grounds that it is too expensive, and revert to archival paper that is said to last up to 500 years. In comparison, vellum keeps forever.

Scottish Heritage of Lithgow

The 2018 National Trust Heritage Festival theme,*" Our Culture Our Story",* acknowledged the contribution of those who have enriched our heritage.
Lithgow Regional Branch of the National Trust Australia (NSW) presented the Scottish Heritage of Lithgow: *"The Scots of the Lithgow District in the 19th Century",* at a lecture by Professor Ian Jack, Senior Fellow and archivist at St Andrew's College within the University of Sydney, on 13th May 2018 at the Bowenfels Presbyterian Church Hall, Lithgow.

Master of Ceremonies Danny Whitty

Professor Ian Jack

The presentation, led by Master of Ceremonies Danny Whitty, was a fascinating account by Professor Ian Jack, of the three main leaders in the settlement and development of Lithgow, Andrew Brown, Thomas Brown and Colin Stewart. These three very different characters

provided diverging but complementary contributions during the 19th Century, as Lithgow changed from a pastoral community to a major industrial town.
The event was accompanied by John Cambridge on the bagpipes and Pat Connell with some moving and popular Scottish songs.
Photographs and displays illustrated their story, including details about the Scottish founding fathers, their homes and families; pastoral heritage; early enterprises and industries; woollen mills artefacts; pottery and stonemasonry.

Cooerwul House

Eskbank House

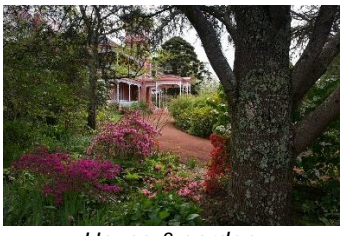
A wonderful and fitting Scottish afternoon tea was provided with music. Visitors were also able to view the Bowenfels Church and the replica of Christina Brown's quilt.

Patsy Moppett

Retford Park, Bowral

James Fairfax AC has always believed that Retford Park should be preserved for the enjoyment and benefit of future generations, particularly those of the local district. On 19th April 2016 and in fulfilment of his ambition, Mr. Fairfax gifted his historic Retford Park home to the National Trust of Australia (NSW). It was in August 2017 that the National Trust officially took control of the property.
On the weekend of the 4th and 5th August 2018, the house and gardens of Retford Park will be once again opened to the public. Retford Park is a place of great heritage significance. Its European history extends back to grants of land promised to Edward Riley senior by Governor Macquarie in 1821.

Dining room



House & garden

Sitting room

The house was built in 1887 by Samuel Hordern (1849-1909) merchant and stockbreeder, and his wife Jane, nee Booth. The house at Retford Park (designed by Albert Bond) is set on a low rise, a grand rendered brick Italianate style residence. It was in 1964 that James Fairfax bought the property and started to turn it from an agricultural property to a gentleman's residence. The house has become a treasure trove of pieces Fairfax collected over the years. Having been in his caring hands for over 50 years, both the house the garden is a delight to wonder through. A surprise at every corner.

National Trust of Australia (NSW)

IMPORTANT - HOUSE TOURS: Due to the popularity of the house tours, bookings are essential. There will be four tours per day. 10.30am, 11.30am, 1.30pm and 2.30pm. There will be a maximum number of 20 people per tour.
House and garden: BOOKINGS ESSENTIAL: Adult - $25 Concession - $18 Child - $10 National Trust members - $15
Garden Only: No bookings needed Adult - $15 Concession - $12 Child - $5 National Trust Members: Free

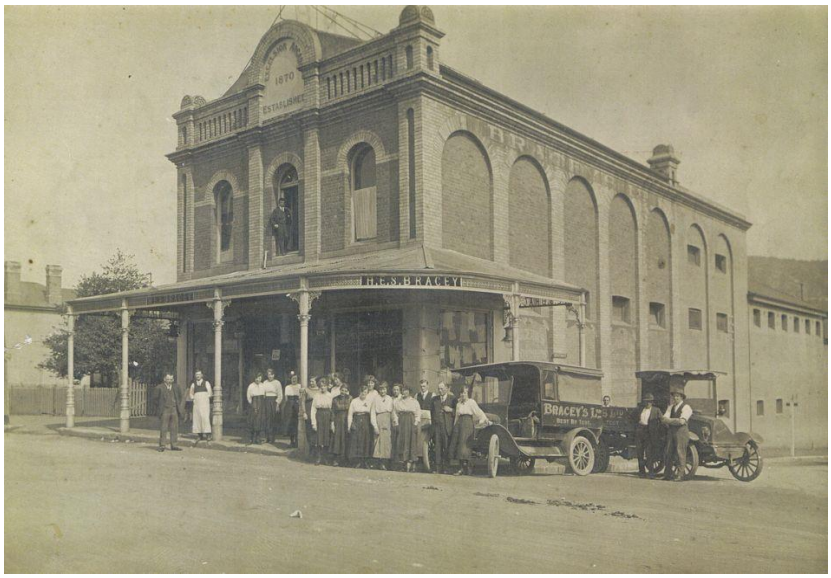
Faces Behind the Facades

The Lithgow and District Family History Society's ongoing project relating to the history of individuals who operated businesses in days gone by in Main Street, Lithgow, is proving fascinating. Many interesting and informative stories have been revealed which help inform us of the people who shaped Main Street and the history of the region, by their participation in community organisations and government.



Bracey's Store, Main Street

Large scale window vinyls are on display in relevant business windows in Main Street, which would include narratives capturing the stories of individuals, historic portraits and images of the original building facades.
A brochure has been produced which includes a local map of the location of the panels, with some ten premises listed so far. Businesses include S H Gannon's Eskbank Store, F R Eather's Butchery, James Padley's store, Porter's Pharmacy, James Walker's Pure Food Store and Durie Bros Rubber Works. *Patsy Moppett*

Further information may be obtained from the Society:
Post: PO Box 516, Lithgow 2790

Email: secretarty@gmail.com.au
www.ldfhs.org.au

Archive storage

Following discussions with regard to archive storage over the last few months, BMACHO are looking to compile a list of historical societies/family history societies/museums/galleries/archives who might have inadequate storage facilities, in order to seek a way to have collections/archives stored in climate controlled, acid free conditions. It was felt by the BMACHO Committee that it would be appropriate, and the heritage community would be more likely to gain assistance for such a facility, for some sort of application for funding on a regional basis. BMACHO members are in four local government areas, Penrith (Arms of Australia Inn at Emu Plains), Blue Mountains, Lithgow and Hawkesbury. BMACHO are therefore asking our members in this region, not just the Blue Mountains, to provide information if they have archiving concerns.
Recently the Woodford Academy Management Committee found it necessary to move their archives to another National Trust property in the Southern Highlands, which means their

archives are no longer easily accessible. BMACHO realise that many other organisations find the need to store their archives or part of their collections externally.
If you would be interested in providing feedback in this regard, please advise the approximate cubic meterage you would require (or other measurement), and any other relevant comments, by 31 July 2018. This gives time for discussion at a Committee meeting.

Jan Koperberg, correspondence secretary

Rex Stubbs Symposium 2018

Hawkesbury Regional Museum has been chosen as the venue for this year's Rex Stubbs Symposium to be held on Saturday 25 August 2018. Much advice and many suggestions have been received on how to make the day better than previous years!
This year, it is proposed to have two guest speakers:

- Kate Gahan, historian and curator of Food Bowl Farming, and
- Deborah Vaughan, head of regional partnerships at MAAS.

As part of the morning, organisers would also like to invite each attendee group to give a brief talk on what they're working on/points of interest.

Dr Rex Stubbs

Hawkesbury Regional Museum

After lunch it is hoped that history stalls/groups could set up in the museum grounds (similar to the ten-year anniversary day – with some entertainment). So, they could all encourage museum visitors and members of the public to engage and learn.
If you would like the organisers to put stall space aside for you, please let them know ASAP, so they can include you in the program.
They will be sending out invitations and program information as soon as they can.

Annual Historical Festival and Open Day, Emu Plains

The Nepean District Historical Society will be holding its Annual Historical Festival and Open Day at the Arms of Australia Inn Museum on Sunday 15 July 2018 at the Museum at Emu Plains, from 9am to 3pm.
Displays and activities will include:

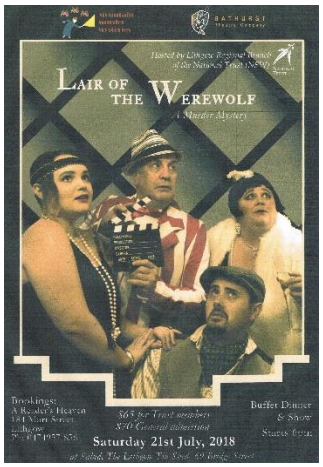
- NSW Corps of Marines Re-enactments
- Merry-go-round and jumping castle
- Old fashioned school room
- Light horse regiment
- Animals and pony rides
- Displays, music, food, stalls

The Museum is located on the corner of the Great Western Highway and Gardenia Avenue, Emu Plains. Admission is free. *Trish Montgomery*

For more information contact the museum:
Ph: 02 4735 4394
Email: info@armsofaustraliainn.org.au

National Trust Event – Werewolves and pit ponies?

At 6pm on Saturday 21st July 2018 Lithgow Branch of the National Trust presents another fun interactive whodunit buffet dinner and show in a heritage 1880s venue. Mountain Murder Mysteries & Bathurst Theatre Company combine to thrill with *"The Lair of the Werewolf",* directed by Hampton resident and actress Melissa Docker (Star of TV mini-series, "Fields of Fire"). The event will be held at 6pm at the Tin Shed in Bridge Street, Lithgow. The hosts will tickle your taste buds, with a unique blend of wood fired pizza and tapas. Suggested dress - 1920s, prizes for best dressed.

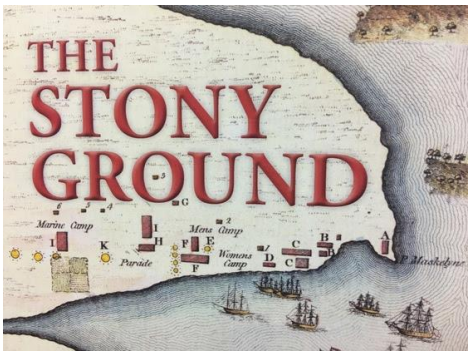


The Tin Shed (Salud) in Bridge Street was a produce warehouse going back to the 1880s, when a rail line brought goods up from the station and pit ponies were stabled behind it, the stables being only recently demolished. The restaurant is following a pleasing Lithgow trend of reinventing heritage buildings into performance spaces, some incorporating cafes and art galleries.
Lithgow National Trust raises funds for local heritage projects & signage and contributes to the restoration and maintenance of heritage properties in NSW. Our last Whodunit at the Brewery was enjoyed by all!
"The Lair of the Werewolf" would make a night out for a birthday, special occasion, or a fun way to support the Trust's activities in your area! *Celia Ravisi*
Cost: $70 general admission, $65 National Trust members

Bookings can be made at:
A Readers Heaven Bookshop, 184 Mort Street, Lithgow
Phone: 0474 957 856
Celia Ravesi – NT Secretary: 02 6359-3109

James Ruse - convict, farmer settler: Tour and book launch

James Ruse was a Cornish farmer who was reprieved from the hangman's noose and transported on the First Fleet in 1788. He was reputedly the first prisoner ashore, carrying an officer on his back. He went on to become the first ex-convict to be granted land and the first settler to become self-sufficient.



The Hawkesbury

These remarkable achievements are to be celebrated on Sunday 8 July 2018 at Windsor and Pitt Town with a tour of sites associated with Ruse, and sites farmed by him around Pitt Town and the peninsula area of Windsor, taking in some of the most beautiful and historic parts of the district. The tour will also include information and sites relevant to Ruse's time in the Hawkesbury, such as floods and other significant happenings.

The tour will be conducted by Hawkesbury Valley Heritage Tours and will take place from 10am to 12.30pm. The cost will be $20 per person.

The tour will be followed at 1.30pm by the launch of the book "*The Stony Ground*". UK based writer Michael Crowley describes the life of Australia's most symbolic convict using Ruse's own voice. His narrative carries us from his impoverished life in Cornwall to plot number one at the Hawkesbury, and beyond.

The launch is free, but bookings are essential, and light refreshments will be served.

Transport Heritage Grants Program – now open

This program is a NSW Government funded program, administered by the Royal Australian Historical Society (RAHS), with the support of Transport Heritage NSW (THNSW).

The Program is run on an annual basis and supports organisations and individuals to preserve, explore and promote the history of land-based mass transport in NSW.

The program can fund projects in the following categories:

- Restoration, reconstruction or preservation of a heritage transport item.

- Education, publication or interpretation of an event, item/s or person/s that will promote heritage transport.
- Study, consultation, report or review that will assist in managing a heritage transport place or item.

Applicants can apply for grants of up to $15,000, and one grant of $50,000.
The closing date is 7 August 2018.

The 2018 Guidelines, Application Form and further information are now available from:
Royal Australian Historical Society https://www.rahs.org.au/grants/transport-heritage-grants-program/
If you need further information, contact the RAHS Grants Officer grants@rahs.org.au

BMACHO Conference 2018 - Report

The 2018 BMACHO Conference, *"Heritage Landscapes*" was held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria.
Master of Ceremonies was Bruce Ferrier, and speakers included keynote speaker Stuart Read, Office of Environment & Heritage; Colleen Morris: Heritage consultant; Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney; Kate O'Neill: Woodford Academy Management Committee; Mary Reynolds: Mount Wilson & Mount Irvine Historical Society; and Bruce Cameron, historian & author.
Aunty Sharyn Halls, Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association, made her apologies as she was unable to attend and give her presentation on "The Gully and Gundungurra Country".

John Low, Robyne Ridge & Keith Painter

Attendees in deep discussion

BMACHO correspondence Secretary Jan Koperberg reports that there have been many positive comments via email and by word, about the speakers, the venue, the catering and the conference in general, including the following:

- Robyne Ridge, Vice President and Publicity Officer of Blue Mountains Historical Society:
  Just a quick thank you to you and to all who organised the Conference. What a lovely venue! The talks were all very interesting especially the key note speaker…….. felt he had some very interesting ideas re our tourism potential. Food was great - best conference food I've had!! Designed for the gold day it was. Finally, thanks for the trade table. We actually sold six books (which I didn't expect) but I learnt a lot from observing the others too.
  Robyne later found after reconciliation, that she had sold seven books – she was very pleased!

- Guy McIlrath, Manager, Everglades Historic House & Gardens:
  Thank you for a very interesting & well-run conference on Saturday – I am happy I was able to attend.

- Suzanne Smith, Kurrajong-Comleroy Historical Society and BMACHO Committee:
  Thank you for an enjoyable Friday evening, along with all the work which contributed to the success of the event. Thank you to the other members of the organising committee group, Summar and Ian. Also, an acknowledgement to Phil (recording) and Scenic World. Thought the conference was top class and speakers most interesting. Kate O'Neill's talk with the historical timeline of the Woodford Reserve ownership and transition use, I found interesting. Mary Reynolds and Ian Jack were certainly very entertaining, their respective personalities and humour shining through their interesting topics. But must say all speakers shared topics of great interest. From the feedback received over the day everyone was equally engaged in the topics. Top class hats off to Denise, Garry and staff, for excellent facilitation of the conference event, food, warmth and overall attention to any needs of the BMACHO group. The Mt Vic Manor was a most suitable venue.

- Julie O'Keeffe, Secretary, Friends of the Paragon and Blue Mountains Historical Society Member:
  Thank you to everyone involved in organising such a splendid conference – all speakers were excellent and very interesting. The venue is brilliant and the food for the day was simply super delicious!!! Looking forward to the 2020 conference!!

- Dick Morony, Secretary of Springwood Historical Society and BMACHO Management Committee Member:
  I thought it was a nice venue and the catering was the best of any conference/seminar/course I have attended. Although I am not a dedicated garden aficionado I enjoyed the talks; they didn't seem too long to me …….

- Sara Riley, Blue Mountains City Council:
  Thanks for Saturday, it was a really lovely day. It was good to meet Stuart, who I interviewed in my masters, and to meet Colleen who I had heard so much about …… a great venue too. And a really interesting cross-section of talks. Congratulations on a really successful conference.

- Celia Ravesi, Lithgow Regional Branch of the National Trust:
  Thank you very much for a well-organized and very interesting conference for BMACHO on Saturday 12th May at the Manor House Mt Victoria. The variety of speakers was excellent, and we were privileged to have all of them, particularly the ageless Mary Reynolds to show the late Libby Raines' photographs of Mt Wilson gardens. And the opportunity to hear Dr Ian Jack. twice in one weekend.
  Thank you allowing us to have an information stand for our Lithgow National Trust Branch. That was a good networking opportunity to meet some National Trust Representatives from the Mountains I had not met before. The lunch provided by the Manor House was delicious! Congratulations again, and we do appreciate receiving your Newsletter online on a regular basis.

Master of Ceremonies, Bruce Ferrier

Keynote speaker, Stuart Read

- Kate O'Neill, Woodford Academy:

Thank you to BMACHO for organising the Blue Mountains History Conference and for giving me the opportunity to speak about the Woodford Reserve. I greatly enjoyed the talks and appreciated the opportunity to meet with the other speakers and many key people in the heritage community. It was a very apt location with so much history of its own, and a nice connection to the Academy. I look forward to other events of this kind.

- Roy Bennett, Mount Victoria & District Historical Society:

Well done for the Conference reports…..good reading and good to read others feedback.
I enjoyed it more than expected, as in addition to the presentations, there were often comments, subjects, etc that give ideas .eg marketing comes to mind.
I guess that's how we get extra benefits from conferences.

Raffle winners on the day were:

- Jessica Lawn with Blue F 06
- Suzanne Mitchell with Blue F 39
- Mary Reynolds with Blue F 29

Comments: Although, as in most events such as this, we acknowledge there were the usual IT and conference management problems, which we have listed for considerations at future subcommittee meetings, to be addressed at future events.
We certainly appreciated the efforts made by the Manor operators, who made every effort to make the venue suitable to our needs.

Mary Reynolds

Associate Professor Ian Jack

Colleen Morris

Photographs courtesy of Carolynne Cooper

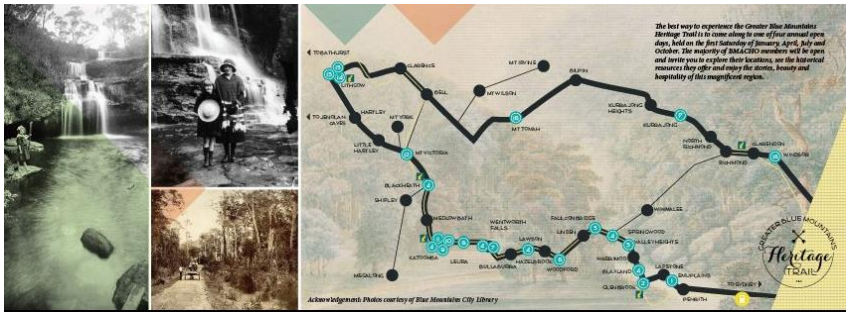
In conclusion, the presentations by the speakers were well received. The venue and catering provided by the Mount Victoria Manor and the warmth on a cold day, was very much appreciated.

All the speakers, the MC and the IT person have been emailed and thanked, as have Denise and Gary at the Mount Victoria Manor. Bruce Cameron has offered BMACHO copies of his book 'The Blue Labyrinth' to use for future event prizes.
A special thank you to Philip Hammon for recording the conference.

Jan Koperberg & Patsy Moppett

The Conference was Proudly sponsored by Scenic World Shared

Greater Blue Mountains Heritage Trail Update



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail

Blue Mountains winter

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

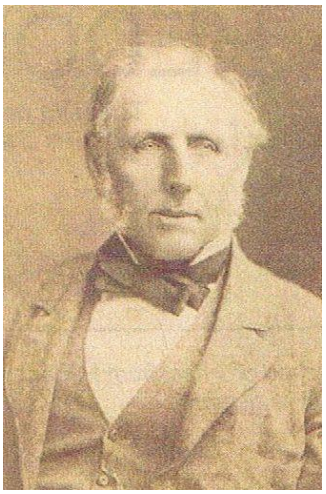
Edward Gell, an Architect of the Colony

Edward Gell was the fourth child of Edward Gell (1790-1819) and Elizabeth Pickering (1788-1875), of Hedon, Yorkshire. Edward Snr and Elizabeth were married at Hedon in 1809. Young Edward was born there in 1818 and baptized at Hedon on 7 November 1818. Edward Snr was a mariner. By 1841 Elizabeth was a widow.

Young Edward received his education in England, studying and then practicing architecture. A Gell sketchbook dated 1846 showed he was a keen follower of architecture, and had a great skill for drawing. In particular, he sketched church buildings, and was obviously heavily influenced by the Gothic Revival work of A W Pugin. His notes also showed that he was doing some sort of project management, in the ordering of building materials, as a foreman or clerk of works.



Edward Gell

St Michael's & St John's Cathedral, Bathurst

Young Edward emigrated to Australia in 1857 as a single man. He was contracted to build St Michael's and St John's Catholic Church in Bathurst, which was eventually elevated to cathedral status. Many of the mouldings were carved by Gell himself, so he may originally have had some stone mason training.

In 1861 he married Elizabeth Haseldon at St Michael's and St John's. They had some seven children four of whom survived infancy.

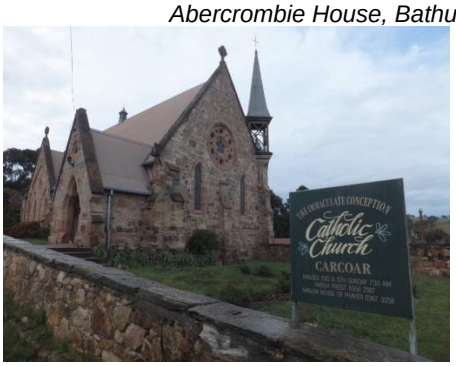
When the first Mayor of Bathurst, Richard Young Cousins was elected in 1863, Gell was a local architect, and was hired as town surveyor. He supervised building and construction work within the new municipality and remained in this position until 1866, when he was replaced by F W Holland.

Gell lived in Bathurst for some 25 years and despite some controversy, was Mayor of Bathurst in 1867, a member of Council during the period 1864 through to 1873, and was heavily involved in the establishment of public buildings such as the hospital, schools and the town hall.
During the 1860s and 1870s he designed many schools, shops, colleges, cottages and parsonages, and from 1871, many stately homes.

St Stanislaus College, Bathurst

Abercrombie House, Bathurst

Bathampton, near Bathurst



Catholic Church, Carcoar

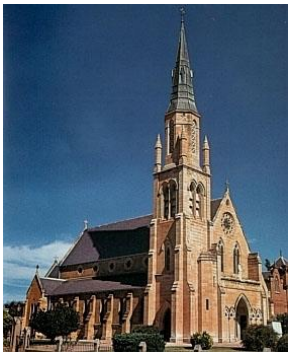
Logan Brae, Bathurst

Catholic Church, Dubbo

St John's Anglican Church, Georges Plains

St Mary's Catholic Church, Kirkconnell

Catholic Church, Rockley



Catholic Church, Mudgee

From 1858 to 1880 Gell designed some 154 buildings in the central west of NSW, his main client being the Catholic Church. In Rockley, south of Bathurst, he also designed the Anglican church. At Moorilda he designed the Presbyterian church of St Andrews.
Other significant buildings at Bathurst included Abercrombie House, St Stanislaus College, Busby's Logan Brae, pavilions and landscaping at the Bathurst Showground, Bathurst hospital, the Bathurst School of Arts and Bathurst railway station.
He became engaged in mining ventures, mainly gold and copper, and was a co-founder of the Lithgow Valley Colliery (LVC) in 1871, with T Wilton and P Higgins. Gell and his family moved permanently to Lithgow in 1881, where he designed buildings associated with the mine, and employee housing. His own dwelling on Lithgow Street still stands and is retained as a private home. It was named St Helen's, and built as a suitably impressive house for the general manager of LVC. Edward Gell designed the Lithgow Street residence in about 1875, and it was completed by 1877, when the Bathurst Times described the house as "that little gem of Gothic architecture".

St Helen's, Lithgow Street

Lithgow Valley Colliery

After Gell's death the history of occupancy is not known. After being sold by LVC, the house became a restaurant in the mid-1980s, was unoccupied for a time, and it is now a private residence.
In the 1890s his son Edward was sent to England for his education, and he became a Catholic priest in 1894. He returned to Australia and settled into the parish around St Charles Borromeo Church at Ryde, Sydney. He remained there for some 42 years and his family is remembered in a stained-glass window in the church. The original church was replaced, and the new church design influenced by Father Gell's architectural influence from his own father, in attention to a Pugin style.
Ill health saw him relocate to Sydney in 1898, where he died a year later.

Patsy Moppett

Book Review: Building Bathurst 1815-1915 by Graham Lupp

While undertaking his architectural studies in the late 1960s, Graham Lupp completed an ungraduated *architectural* honour's thesis on Edward Gell, major architect in Bathurst in the late 1800s.

During his research he discovered Gell was a remarkable man who had designed many of Bathurst's finest buildings, along with many others across the Central West. Gell would become a lifelong obsession for Lupp and a central character in his current publication.

His debut book set, *Building Bathurst 1815-1915,* is a definitive architectural history of the built heritage of Australia's oldest European inland settlement, and a biographic history about the architects and builders in the central western region.

Graham Lupp and his debut publication

Building Bathurst 1815-1915 is a limited edition with only 1500 copies printed, numbered and signed by Lupp. The two-volume book has a combined 844 pages featuring 1172 images, and while it took Mr Lupp five years to write, it features photos and information he has collated for decades. *Patsy Moppett*

It is available for purchase though Bathurst Regional Council's Civic Centre or by contacting Graham Lupp direct.
Email: enquiries@grahamlupp.com.au

Heritage Division News

Macquarie Homestead

Following on from a previous article in the BMACHO Newsletter, it is noted that a particular property has now been recognised for listing on the State Heritage Register.

- **Macquarie Homestead Group, 3397 O'Connell Road, O'Connell** – BMACHO Newsletter No. 55, March-April 2018 reported on the open day at Macquarie Homestead.

In accordance with section 33(1)(e) of the *Heritage Act 1977 (NSW)*, the Heritage Council of NSW has resolved to recommend listing the item on the State Heritage Register (SHR) to the Minister for Heritage. The recommendation was resolved at the NSW Heritage Council meeting of 7 June 2018.

Macquarie residence and convict barracks 2017

The recommendation was made after consideration of a report prepared by the Heritage Division, Office of Environment & Heritage (OEH) which included submissions received from affected parties and members of the public.

Once the Minister has considered the Heritage Council's recommendation and made a decision whether or not to list the item on the SHR, further notification will be provided of that decision.
It is pleasing to see the property obtain the recognition that it deserves, opening up doors for funding and other assistance opportunities to aid in its conservation.

Hedgerows
In an earlier BMACHO Newsletter No.45 (July-August 2016), an article was printed on hedgerows. Now you have the chance to have a go at this ancient craft yourselves. Stuart Read of the NSW Heritage Division has passed on the following information:
A rare mainland workshop, the opportunity to learn how to "lay" a traditional hedge – i.e. cut/tilt/prop and 'weave' it to make it stock-proof.
Once layed hedges defined paddocks and fields, after shepherds and labourers rushed off to goldfields, and labour to herd the flocks or protect the crops was scarce. It was used before fencing wire arrived (1850s) and fencing became cheaper.
The workshop will be held at gorgeous *Oldbury*, a State Heritage listed farmhouse a parkland in Sutton Forest, Southern Highlands, on 21 July from 10:00 am - 3:00 pm. The cost is $75.00.

James and his craft

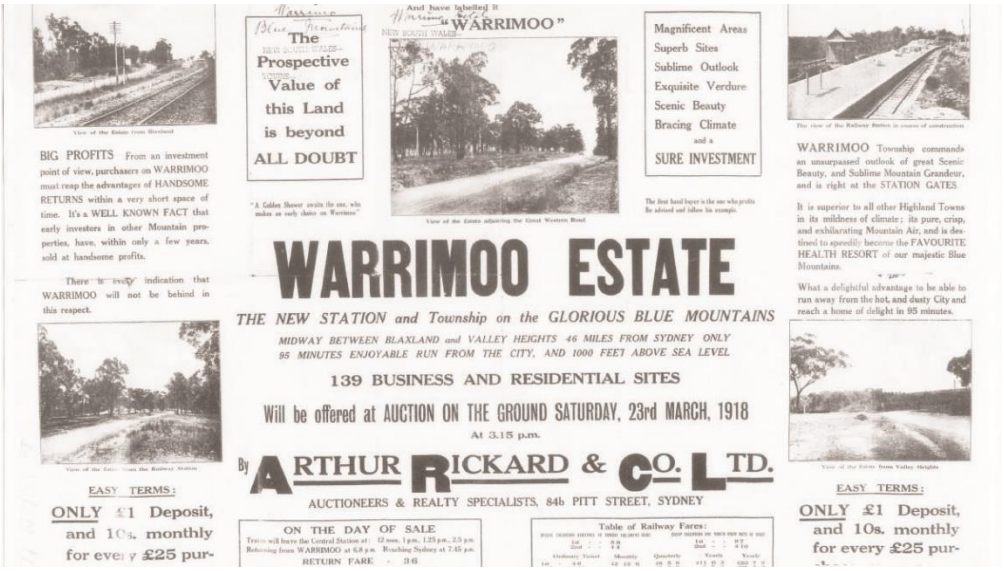
Learn from a master, James Boxhall, who has been laying hedges for 14 years, and enjoy seeing beautifully-laid old and young hedges. Theory & practical workshops are led by James, from '*Sticks and Stones*', who learnt the craft from expert Karl Liebscher, a professional hedge layer from Shropshire, England. James has competed in the National Hedge Laying Championships (UK), becoming the first person from outside of Europe to do so.
According to James a multitude of types of plants can be used for laying hedges including hazel, hawthorn, ash, elm, crab apple, plums and the list goes on. They provide aesthetically appealing, stock proof plantings and can add attraction to any garden.
More information is available about *Oldbury* itself on the Heritage Division database.
Numbers are limited so be quick!

Workshop bookings and information are available at:
www.shbg.com.au/event/hedge-laying-workshop (Southern Highlands Botanic Garden)
Phone: 02 4861 4899

Editor: So, heritage conservation and the retention of old trades is still alive and well in the heritage world!
The sharing of information such as this by the Heritage Division is much appreciated and BMACHO will continue to pass on news on conservation and preservation projects as it comes to hand.

Warrimoo Railway Station (former the Karabar level crossing)
In March 2018 Warrimoo railway station celebrated its 10th birthday! NSW Train Link celebrated the day by holding a morning tea hosted by the local rail staff. A display of historical photographs and plans of Warrimoo's railway history was exhibited at the time.

Located on the Main Western Line, which had gone through in 1867, the Warrimoo station was opened on 9 March 1918 as part of Arthur Rickard's "Warrimoo Estate", the auction of which was held on 23rd March. The Estate was bounded by the Main Western Road, The Boulevard and The Avenue.



The station had two passenger platforms, four station buildings, two signal boxes, two goods sidings, a level crossing, three overbridges and a crossing loop!
As with most of his estates, Rickard realized the importance of the rail connection to provide access for new residents to Sydney and to the west. One of the platforms, the waiting shed, a footbridge and a goods siding were built at his own expense, later being reimbursed by the government when it was proven that there was to be enough patronage to warrant government purchase.
The location was originally known as Karabar. Karabar was the site of No.3 level crossing, and a sandstone gate keeper's house where the railway crossed the Main Western Road, to the west of the present overbridge. The level crossing was meant to serve a new Richardson & Wrench subdivision named "Karabar Estate".
In 1881 a platform called "Karabar" was opened on the Sydney side of the level crossing but was closed in 1897 due to the lack of patronage.
Rickard proposed the change of name to "Warrimoo" by running a competition to select a new name for his proposed estate. John Low records that the winning entry suggested the name "warrimoo", an Aboriginal word (not local) meaning "eagle".

The first waiting shed about 1930

In later years

The first platform had a small brick unattended waiting shed which was later divided in half for a ticket office. The original 1918 waiting shed was destroyed in the 1951 bushfires, and the current brick station building was erected in its place in 1957. Internally the building's original floor layout has been modified and consists of a combined ticket office and station master's room, male and female toilets, waiting room and a store, on a linear floor plan.

A pedestrian bridge was built in 1917 to provide access to the station and in 1990 alterations were made. The pedestrian bridge's twin beam construction is typical of NSWGR practice. Since 1990, some of the components of the bridge, except the steel structure, have been replaced. The goods siding was closed in 1956.

Warrimoo Railway Station today

Warrimoo was also the site of the 1930 fatal derailment of a Sydney-bound passenger train where the driver and fireman on the leading engine were killed. The train had consisted of two steam locomotives along with eight carriages filled with passengers and a brake van. It left Mount Victoria headed for Sydney Central on the morning of 27th January. It had been lightly raining.

All rail lines leading to Sydney are known as "up" lines, and all those leading away are "down" lines, regardless of whether the train is going uphill or down. In this instance, and due to a previous incident, the particular train was on the "down" line, with the points supposedly adjusted to suit the situation, and travelling quite slowly.

The first engine passed safely over the catch-points about 450 metres on the Sydney side of Warrimoo, but the second engine fouled the points and left the rails. The heavy locomotive surged forward and then lurched to the right and "nose-dived" over a 5m embankment.

The derailment and retrieval

The crew of this engine leapt clear, and were uninjured, but the second engine's dive down the embankment threw the leading locomotive off the rails and caused it to turn over on its side with portion of it projecting over the brink of the embankment. The driver Harold Hanna and the fireman Edward Smith, both of Springwood, were pinned down by the twisted ironwork, and were killed instantly. A young porter was thrown clear, with severe injuries. The carriages were unaffected and passengers uninjured, apart from shock and bruising. The porter, Joe McGarrity, later lost his arm due to his injuries.

At the inquest the Coroner found that a fettler and a flagman were guilty of culpable negligence for not locking the points in place and not signalling that the points were open, to the oncoming train. Their supervisor was severely reprimanded for the casual manner in

which he supervised the work of the other two men, who appear to have avoided custodial sentence.
So, despite its humble beginnings as an 1800s rail siding, the opening of Warrimoo station in 1918 and the establishment of the Rickard estate, were the commencement of Warrimoo village as we know it today. *Patsy Moppett*

Pulpit Hill, Katoomba

The Conservation Management Plan (CMP) for Pulpit Hill, Katoomba, (Godden McKay Logan Pty Ltd 2012), which includes the explorer's tree, natural flora and fauna, convict graves, colonial roads, and signs of early indigenous and colonial settlement, incorporated a recommendation: "*to ensure opportunities for community engagement, appreciation and enjoyment of the significant heritage values are provided at Pulpit Hill*".

Edgar Church grave

Six Foot Track

Explorers Tree 1886

In February 2018, Blue Mountains City Council Heritage Adviser, Christo Aitken, reiterated actions from the CMP, with a view to seeking funding under the OEH Heritage Near Me – Activation Grants 2018-19. His comments were as follows:

- Undertake a review the original CMP and it recommendations.
- Organise a public open day at Pulpit Hill to present the findings of the review and to provide an opportunity to draw together new material and comment from the community to include in the Review.
- Stabilize the Explorer's Tree to ensure safety and conservation of its significant values.
- Develop an Interpretation Plan that brings together the multi-layered Colonial and Indigenous history of the place.
- Implement the plan together with an interpretative trail on Pulpit Hill that showcases the key historic elements with appropriate public access, signage, fencing and landscaping.
- Develop a Masterplan for Pulpit Hill to guide the way forward, particularly addressing sensitive issues, such as the Explorer's Tree and its remnant fabric.

It is understood that Council is primarily looking towards facilitating the stabilisation of the Explorers' Tree through improved fencing, with a focus on an inclusive and comprehensive interpretation plan being developed for the Pulpit Hill Precinct, to ensure the conservation of the significant multi-layered colonial and indigenous history of the place.

This would conserve the heritage values of the area, showcase the key historic elements with appropriate public access, signage, fencing and landscaping and make the site more appealing to visitors.
Progress on this action for funding will be provided by BMACHO as it comes to hand.

Windsor Barrel Drain (1814) Discovery

The Royal Australian Historical Society recently reported on the progress of the ongoing archaeological works at Thompson Square, Windsor, in relation to the State government proposal to demolish the existing bridge over the Hawkesbury River and to build a new bridge structure in its place.
Associate Professor Carol Liston AO submitted a statement to the NSW Legislative Council on behalf of the RAHS, with an overview of the site's significance:
Thompson Square is of outstanding historical and heritage importance because it is the only original surviving foundation site for eighteenth century European settlement in Australia. This space, adjacent to the Hawkesbury River landing place, provided structure to an emerging village and farming settlement. Neither the settlement at Sydney Cove nor at Parramatta developed around a central focus space, despite the importance of their waterfront locations.
In January 1795 Acting Governor William Patterson authorized use of the area as the government precinct. Around its edges, a wharf and storehouse were built, followed by a granary and soldiers' barracks. As the settlement developed other official buildings surrounded the precinct providing accommodation for officials (including the governor), a watch house, and later a school and church. When Governor Macquarie formally proclaimed the town in 1810 the existing square was incorporated into the formal town plan as the first designed urban space. The investment of expensive drainage works confirmed its importance as a function hub of the settlement.
In late 2017 a significant discovery was made by Roads and Maritime Services adjacent to the existing bridge and landing place at Thompson Square. The man-sized brick barrel drains appear to be the oldest government infrastructure in Australia, the earliest example of brickwork used in drainage works, dating back to 1814 and the early colony of New South Wales.

Windsor brick barrel drain

Calls have been made by Members of Parliament, the community and by experts in the field to retain the drains in situ, rather than attempt to salvage them and restore them, subject to intensive assessment and evaluation. The discovery lends further weight to the proposed Windsor Bridge Replacement Project, and calls to have any new bridge located in a more suitable site further along the river.
Also known as "smugglers' tunnels, the tunnels were convict built, using sun dried bricks, due to the lack of brick kilns at the site at the time. It has been suggested that the drains

would have tourist potential, but more significantly it is imperative to preserve this heritage feature which is unique and rare, not destroy or hide it.
Roads and Maritime Services had previously engaged professional archaeologists to excavate the north eastern section of Thompson Square to record and document any heritage artefacts found within the area. During the excavation, archaeological crews discovered the brick barrel drain in a hand-dug test pit near the river. Most of the brick drain was found intact, although one end was found to be eroded and partially washed away. Roads and Maritime Services has advised that it has now developed a way to protect and preserve the brick drain in place, and not remove it. They advise that further archaeological studies are under way to record any additional archaeological finds and preserve the historical significance of the site.

Example of brick barrel drain features

However, they still maintain that their new bridge will provide a safe and reliable crossing across the Hawkesbury River at Windsor, without impacting upon the heritage of the Thompson Square precinct. *Patsy Moppett*

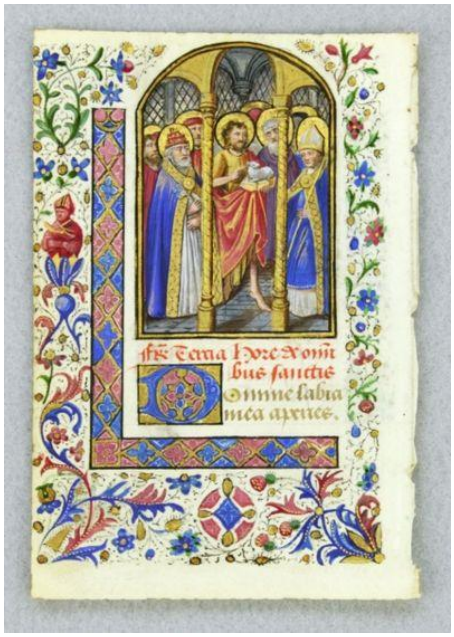
The Technical Side
Vellum & parchment

The term parchment is a general term for an animal skin which has been prepared for writing or printing and has been made for centuries. It is usually calf, goat, or sheep skin. Parchment (*pergamenum* in Latin) derives its name from the city of Pergamon, (via the French *parchemin*).
Vellum is a finer quality material, prepared from animal skin or membrane also used as a material for writing on. The term is derived from the Latin word *vitulinum* meaning "made from calf", leading to the Old French velin for "calfskin".
Writing on prepared animal skins had a long history. Some Egyptian Fourth Dynasty texts were written on vellum and parchment. Though the Assyrians and the Babylonians utilised clay tablets, they also wrote on parchment and vellum from the 5th and 6th century BC onward.
Scribes carved the first writing on wet clay tablets, but soon after that, about 3000 BC, the Egyptians invented papyrus, and by about 500 BC most people in West Asia and the Mediterranean used papyrus for writing.
Subsequently, vellum and parchment were invented under the patronage of Eumenes of Pergamum, as a substitute for papyrus, which was temporarily not being exported from Alexandria.



Early Latin manuscript

German book binding WW1

In the Middle Ages, calfskin and split sheepskin were the most common materials for making parchment and vellum in England and France, while goatskin was more common in Italy. The heyday of parchment use was during the medieval period, but there has been a growing revival of its use among contemporary artists since the late 20th century. Although it never stopped being used (primarily for governmental documents and diplomas) it had ceased to be a primary choice by the end of 15th century Renaissance. This was partly due to its expense and partly due to its unusual working properties.

Dutch portrait on vellum

Land deed on vellum

During the seventh through the ninth centuries, many earlier parchment manuscripts were scrubbed and scoured to be ready for rewriting, and often the earlier writing can still be read. These recycled parchments are called palimpsests.

The process

Parchment is prepared from pelt, i.e., wet, unhaired, and limed skin, simply by drying at ordinary temperatures under tension, most commonly on a wooden frame known as a stretching frame.

The stretching frame

After being flayed, the skin is soaked in water for about one day. This removes blood and grime from the skin and prepares it for a dehairing liquor. The dehairing liquor was originally made of rotted, or fermented, vegetable matter, like beer or other liquors, but by the Middle Ages an unhairing bath included lime.
Today, the lime solution is occasionally sharpened by the use of sodium sulfide. The liquor bath would have been in wooden or stone vats and the hides stirred with a long wooden pole to avoid contact with the alkaline solution. Sometimes the skins would stay in the unhairing bath for eight or more days depending upon how concentrated and how warm the solution was kept - unhairing could take up to twice as long in winter. The vat was stirred two or three times a day to ensure the solution's deep and uniform penetration. Replacing the lime water bath also sped the process up. However, if the skins were soaked in the liquor too long, they would be weakened and not able to stand the stretching required for parchment.
After soaking in water to make the skins workable, the skins were placed on a stretching frame. A simple frame with nails would work well in stretching the pelts. The skins could be attached by wrapping small, smooth rocks in the skins with rope or leather strips.
Both sides would be left open to the air, so they could be scraped with a sharp, semi-lunar knife to remove the last of the hair and get the skin to the right thickness. The skins, which were made almost entirely of collagen, would form a natural glue while drying and once taken off the frame they would keep their form. The stretching allowed the fibres to become aligned running parallel to the grain.
It is recorded that the process was/is a very smelly one!!

Uses

Vellum and parchment have been used since the earliest times, and still find uses today amongst artists, scribes and bookbinders. Though now costly to produce, it remains one of the most durable of library materials. Vellum – a material that would otherwise go to waste – was used to print the Magna Carta, the Domesday Book and thousands of other historical documents.

The Magna Carta

Map on vellum

Modern book binding

Vellum was and is commonly used in bookbinding. It could be used to cover a wooden or cardboard core or alone without any backing. Many vellum bindings are simple and undecorated. Vellum was often used to cover less-valuable or common books.
Recent moves by the House of Lords in the UK are noted, where they seek to abandon vellum on the grounds that it is too expensive, and revert to archival paper that is said to last up to 500 years. In comparison, vellum keeps forever.

Community events & updates

Scottish Heritage of Lithgow

The 2018 National Trust Heritage Festival theme,*" Our Culture Our Story",* acknowledged the contribution of those who have enriched our heritage.
Lithgow Regional Branch of the National Trust Australia (NSW) presented the Scottish Heritage of Lithgow: *"The Scots of the Lithgow District in the 19th Century",* at a lecture by Professor Ian Jack, Senior Fellow and archivist at St Andrew's College within the University of Sydney, on 13th May 2018 at the Bowenfels Presbyterian Church Hall, Lithgow.

Master of Ceremonies Danny Whitty

Professor Ian Jack

The presentation, led by Master of Ceremonies Danny Whitty, was a fascinating account by Professor Ian Jack, of the three main leaders in the settlement and development of Lithgow, Andrew Brown, Thomas Brown and Colin Stewart. These three very different characters

provided diverging but complementary contributions during the 19th Century, as Lithgow changed from a pastoral community to a major industrial town.
The event was accompanied by John Cambridge on the bagpipes and Pat Connell with some moving and popular Scottish songs.
Photographs and displays illustrated their story, including details about the Scottish founding fathers, their homes and families; pastoral heritage; early enterprises and industries; woollen mills artefacts; pottery and stonemasonry.

Cooerwul House

Eskbank House

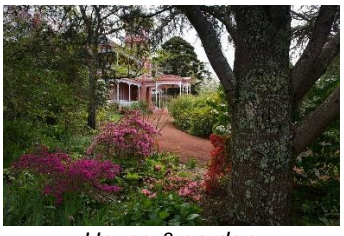
A wonderful and fitting Scottish afternoon tea was provided with music. Visitors were also able to view the Bowenfels Church and the replica of Christina Brown's quilt.

Patsy Moppett

Retford Park, Bowral

James Fairfax AC has always believed that Retford Park should be preserved for the enjoyment and benefit of future generations, particularly those of the local district. On 19th April 2016 and in fulfilment of his ambition, Mr. Fairfax gifted his historic Retford Park home to the National Trust of Australia (NSW). It was in August 2017 that the National Trust officially took control of the property.
On the weekend of the 4th and 5th August 2018, the house and gardens of Retford Park will be once again opened to the public. Retford Park is a place of great heritage significance. Its European history extends back to grants of land promised to Edward Riley senior by Governor Macquarie in 1821.

Dining room



House & garden

Sitting room

The house was built in 1887 by Samuel Hordern (1849-1909) merchant and stockbreeder, and his wife Jane, nee Booth. The house at Retford Park (designed by Albert Bond) is set on a low rise, a grand rendered brick Italianate style residence. It was in 1964 that James Fairfax bought the property and started to turn it from an agricultural property to a gentleman's residence. The house has become a treasure trove of pieces Fairfax collected over the years. Having been in his caring hands for over 50 years, both the house the garden is a delight to wonder through. A surprise at every corner.

National Trust of Australia (NSW)

IMPORTANT - HOUSE TOURS: Due to the popularity of the house tours, bookings are essential. There will be four tours per day. 10.30am, 11.30am, 1.30pm and 2.30pm. There will be a maximum number of 20 people per tour.
House and garden: BOOKINGS ESSENTIAL: Adult - $25 Concession - $18 Child - $10 National Trust members - $15
Garden Only: No bookings needed Adult - $15 Concession - $12 Child - $5 National Trust Members: Free

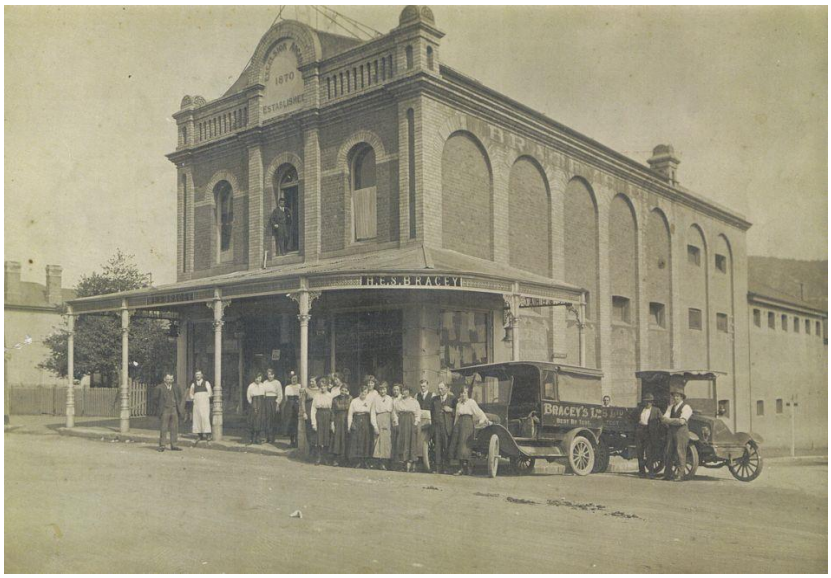
Faces Behind the Facades

The Lithgow and District Family History Society's ongoing project relating to the history of individuals who operated businesses in days gone by in Main Street, Lithgow, is proving fascinating. Many interesting and informative stories have been revealed which help inform us of the people who shaped Main Street and the history of the region, by their participation in community organisations and government.



Bracey's Store, Main Street

Large scale window vinyls are on display in relevant business windows in Main Street, which would include narratives capturing the stories of individuals, historic portraits and images of the original building facades.
A brochure has been produced which includes a local map of the location of the panels, with some ten premises listed so far. Businesses include S H Gannon's Eskbank Store, F R Eather's Butchery, James Padley's store, Porter's Pharmacy, James Walker's Pure Food Store and Durie Bros Rubber Works. *Patsy Moppett*

Further information may be obtained from the Society:

Archive storage

Following discussions with regard to archive storage over the last few months, BMACHO are looking to compile a list of historical societies/family history societies/museums/galleries/archives who might have inadequate storage facilities, in order to seek a way to have collections/archives stored in climate controlled, acid free conditions. It was felt by the BMACHO Committee that it would be appropriate, and the heritage community would be more likely to gain assistance for such a facility, for some sort of application for funding on a regional basis. BMACHO members are in four local government areas, Penrith (Arms of Australia Inn at Emu Plains), Blue Mountains, Lithgow and Hawkesbury. BMACHO are therefore asking our members in this region, not just the Blue Mountains, to provide information if they have archiving concerns.
Recently the Woodford Academy Management Committee found it necessary to move their archives to another National Trust property in the Southern Highlands, which means their

archives are no longer easily accessible. BMACHO realise that many other organisations find the need to store their archives or part of their collections externally.
If you would be interested in providing feedback in this regard, please advise the approximate cubic meterage you would require (or other measurement), and any other relevant comments, by 31 July 2018. This gives time for discussion at a Committee meeting.

Jan Koperberg, correspondence secretary

Rex Stubbs Symposium 2018

Hawkesbury Regional Museum has been chosen as the venue for this year's Rex Stubbs Symposium to be held on Saturday 25 August 2018. Much advice and many suggestions have been received on how to make the day better than previous years!
This year, it is proposed to have two guest speakers:

- Kate Gahan, historian and curator of Food Bowl Farming, and
- Deborah Vaughan, head of regional partnerships at MAAS.

As part of the morning, organisers would also like to invite each attendee group to give a brief talk on what they're working on/points of interest.

Dr Rex Stubbs

Hawkesbury Regional Museum

After lunch it is hoped that history stalls/groups could set up in the museum grounds (similar to the ten-year anniversary day – with some entertainment). So, they could all encourage museum visitors and members of the public to engage and learn.
If you would like the organisers to put stall space aside for you, please let them know ASAP, so they can include you in the program.
They will be sending out invitations and program information as soon as they can.

Annual Historical Festival and Open Day, Emu Plains

The Nepean District Historical Society will be holding its Annual Historical Festival and Open Day at the Arms of Australia Inn Museum on Sunday 15 July 2018 at the Museum at Emu Plains, from 9am to 3pm.
Displays and activities will include:

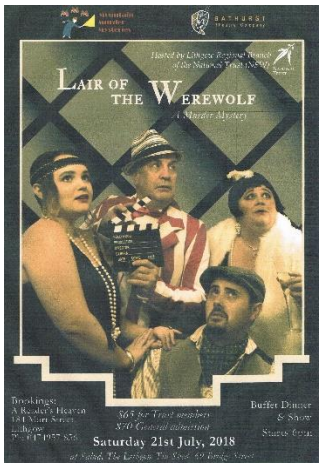
- NSW Corps of Marines Re-enactments
- Merry-go-round and jumping castle
- Old fashioned school room
- Light horse regiment
- Animals and pony rides
- Displays, music, food, stalls

The Museum is located on the corner of the Great Western Highway and Gardenia Avenue, Emu Plains. Admission is free. *Trish Montgomery*

For more information contact the museum:
Ph: 02 4735 4394
Email: info@armsofaustraliainn.org.au

National Trust Event – Werewolves and pit ponies?

At 6pm on Saturday 21st July 2018 Lithgow Branch of the National Trust presents another fun interactive whodunit buffet dinner and show in a heritage 1880s venue. Mountain Murder Mysteries & Bathurst Theatre Company combine to thrill with *"The Lair of the Werewolf",* directed by Hampton resident and actress Melissa Docker (Star of TV mini-series, "Fields of Fire"). The event will be held at 6pm at the Tin Shed in Bridge Street, Lithgow. The hosts will tickle your taste buds, with a unique blend of wood fired pizza and tapas. Suggested dress - 1920s, prizes for best dressed.

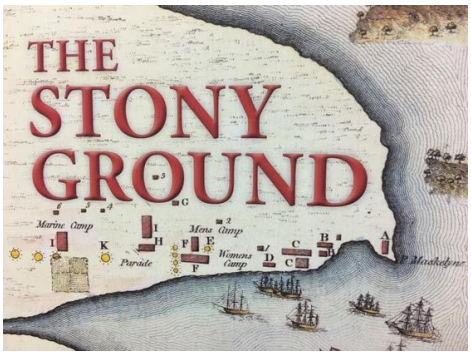


The Tin Shed (Salud) in Bridge Street was a produce warehouse going back to the 1880s, when a rail line brought goods up from the station and pit ponies were stabled behind it, the stables being only recently demolished. The restaurant is following a pleasing Lithgow trend of reinventing heritage buildings into performance spaces, some incorporating cafes and art galleries.
Lithgow National Trust raises funds for local heritage projects & signage and contributes to the restoration and maintenance of heritage properties in NSW. Our last Whodunit at the Brewery was enjoyed by all!
"The Lair of the Werewolf" would make a night out for a birthday, special occasion, or a fun way to support the Trust's activities in your area! *Celia Ravisi*
Cost: $70 general admission, $65 National Trust members

Bookings can be made at:
A Readers Heaven Bookshop, 184 Mort Street, Lithgow
Phone: 0474 957 856
Celia Ravesi – NT Secretary: 02 6359-3109

James Ruse - convict, farmer settler: Tour and book launch

James Ruse was a Cornish farmer who was reprieved from the hangman's noose and transported on the First Fleet in 1788. He was reputedly the first prisoner ashore, carrying an officer on his back. He went on to become the first ex-convict to be granted land and the first settler to become self-sufficient.



The Hawkesbury

These remarkable achievements are to be celebrated on Sunday 8 July 2018 at Windsor and Pitt Town with a tour of sites associated with Ruse, and sites farmed by him around Pitt Town and the peninsula area of Windsor, taking in some of the most beautiful and historic parts of the district. The tour will also include information and sites relevant to Ruse's time in the Hawkesbury, such as floods and other significant happenings.

The tour will be conducted by Hawkesbury Valley Heritage Tours and will take place from 10am to 12.30pm. The cost will be $20 per person.

The tour will be followed at 1.30pm by the launch of the book "*The Stony Ground*". UK based writer Michael Crowley describes the life of Australia's most symbolic convict using Ruse's own voice. His narrative carries us from his impoverished life in Cornwall to plot number one at the Hawkesbury, and beyond.

The launch is free, but bookings are essential, and light refreshments will be served.

Contact the Hawkesbury Museum, 8 Baker Street, Windsor

Transport Heritage Grants Program – now open

This program is a NSW Government funded program, administered by the Royal Australian Historical Society (RAHS), with the support of Transport Heritage NSW (THNSW).

The Program is run on an annual basis and supports organisations and individuals to preserve, explore and promote the history of land-based mass transport in NSW.

The program can fund projects in the following categories:

- Restoration, reconstruction or preservation of a heritage transport item.

- Education, publication or interpretation of an event, item/s or person/s that will promote heritage transport.
- Study, consultation, report or review that will assist in managing a heritage transport place or item.

Applicants can apply for grants of up to $15,000, and one grant of $50,000.
The closing date is 7 August 2018.

The 2018 Guidelines, Application Form and further information are now available from:
Royal Australian Historical Society https://www.rahs.org.au/grants/transport-heritage-grants-program/
If you need further information, contact the RAHS Grants Officer grants@rahs.org.au

BMACHO Conference 2018 - Report

The 2018 BMACHO Conference, *"Heritage Landscapes*" was held on Saturday 12th May 2018, at Mount Victoria Manor, 11 Montgomery Street, Mount Victoria.
Master of Ceremonies was Bruce Ferrier, and speakers included keynote speaker Stuart Read, Office of Environment & Heritage; Colleen Morris: Heritage consultant; Associate Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney; Kate O'Neill: Woodford Academy Management Committee; Mary Reynolds: Mount Wilson & Mount Irvine Historical Society; and Bruce Cameron, historian & author.
Aunty Sharyn Halls, Gundungurra elder and member of the Gundungurra Aboriginal Heritage Association, made her apologies as she was unable to attend and give her presentation on "The Gully and Gundungurra Country".

John Low, Robyne Ridge & Keith Painter

Attendees in deep discussion

BMACHO correspondence Secretary Jan Koperberg reports that there have been many positive comments via email and by word, about the speakers, the venue, the catering and the conference in general, including the following:

- Robyne Ridge, Vice President and Publicity Officer of Blue Mountains Historical Society:
  Just a quick thank you to you and to all who organised the Conference. What a lovely venue! The talks were all very interesting especially the key note speaker…….. felt he had some very interesting ideas re our tourism potential. Food was great - best conference food I've had!! Designed for the gold day it was. Finally, thanks for the trade table. We actually sold six books (which I didn't expect) but I learnt a lot from observing the others too.
  Robyne later found after reconciliation, that she had sold seven books – she was very pleased!

- Guy McIlrath, Manager, Everglades Historic House & Gardens:
  Thank you for a very interesting & well-run conference on Saturday – I am happy I was able to attend.

- Suzanne Smith, Kurrajong-Comleroy Historical Society and BMACHO Committee:
  Thank you for an enjoyable Friday evening, along with all the work which contributed to the success of the event. Thank you to the other members of the organising committee group, Summar and Ian. Also, an acknowledgement to Phil (recording) and Scenic World. Thought the conference was top class and speakers most interesting. Kate O'Neill's talk with the historical timeline of the Woodford Reserve ownership and transition use, I found interesting. Mary Reynolds and Ian Jack were certainly very entertaining, their respective personalities and humour shining through their interesting topics. But must say all speakers shared topics of great interest. From the feedback received over the day everyone was equally engaged in the topics. Top class hats off to Denise, Garry and staff, for excellent facilitation of the conference event, food, warmth and overall attention to any needs of the BMACHO group. The Mt Vic Manor was a most suitable venue.

- Julie O'Keeffe, Secretary, Friends of the Paragon and Blue Mountains Historical Society Member:
  Thank you to everyone involved in organising such a splendid conference – all speakers were excellent and very interesting. The venue is brilliant and the food for the day was simply super delicious!!! Looking forward to the 2020 conference!!

- Dick Morony, Secretary of Springwood Historical Society and BMACHO Management Committee Member:
  I thought it was a nice venue and the catering was the best of any conference/seminar/course I have attended. Although I am not a dedicated garden aficionado I enjoyed the talks; they didn't seem too long to me …….

- Sara Riley, Blue Mountains City Council:
  Thanks for Saturday, it was a really lovely day. It was good to meet Stuart, who I interviewed in my masters, and to meet Colleen who I had heard so much about …… a great venue too. And a really interesting cross-section of talks. Congratulations on a really successful conference.

- Celia Ravesi, Lithgow Regional Branch of the National Trust:
  Thank you very much for a well-organized and very interesting conference for BMACHO on Saturday 12th May at the Manor House Mt Victoria. The variety of speakers was excellent, and we were privileged to have all of them, particularly the ageless Mary Reynolds to show the late Libby Raines' photographs of Mt Wilson gardens. And the opportunity to hear Dr Ian Jack. twice in one weekend.
  Thank you allowing us to have an information stand for our Lithgow National Trust Branch. That was a good networking opportunity to meet some National Trust Representatives from the Mountains I had not met before. The lunch provided by the Manor House was delicious! Congratulations again, and we do appreciate receiving your Newsletter online on a regular basis.

Master of Ceremonies, Bruce Ferrier

Keynote speaker, Stuart Read

- Kate O'Neill, Woodford Academy:

Thank you to BMACHO for organising the Blue Mountains History Conference and for giving me the opportunity to speak about the Woodford Reserve. I greatly enjoyed the talks and appreciated the opportunity to meet with the other speakers and many key people in the heritage community. It was a very apt location with so much history of its own, and a nice connection to the Academy. I look forward to other events of this kind.

- Roy Bennett, Mount Victoria & District Historical Society:

Well done for the Conference reports…..good reading and good to read others feedback.
I enjoyed it more than expected, as in addition to the presentations, there were often comments, subjects, etc that give ideas .eg marketing comes to mind.
I guess that's how we get extra benefits from conferences.

Raffle winners on the day were:

- Jessica Lawn with Blue F 06
- Suzanne Mitchell with Blue F 39
- Mary Reynolds with Blue F 29

Comments: Although, as in most events such as this, we acknowledge there were the usual IT and conference management problems, which we have listed for considerations at future subcommittee meetings, to be addressed at future events.
We certainly appreciated the efforts made by the Manor operators, who made every effort to make the venue suitable to our needs.

Mary Reynolds

Associate Professor Ian Jack

Colleen Morris

Photographs courtesy of Carolynne Cooper

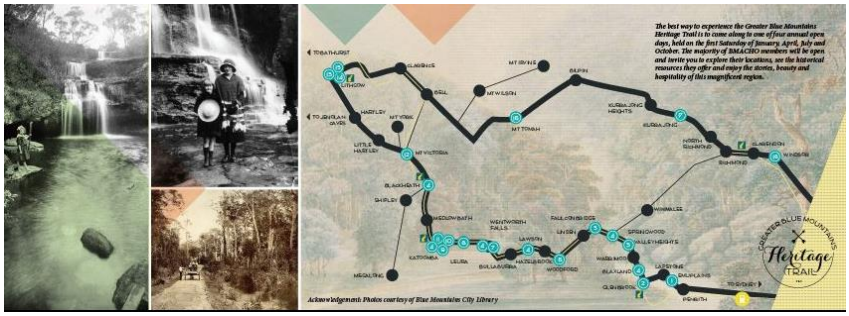
In conclusion, the presentations by the speakers were well received. The venue and catering provided by the Mount Victoria Manor and the warmth on a cold day, was very much appreciated.

All the speakers, the MC and the IT person have been emailed and thanked, as have Denise and Gary at the Mount Victoria Manor. Bruce Cameron has offered BMACHO copies of his book 'The Blue Labyrinth' to use for future event prizes.
A special thank you to Philip Hammon for recording the conference.

Jan Koperberg & Patsy Moppett

The Conference was Proudly sponsored by Scenic World Shared

Greater Blue Mountains Heritage Trail Update



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO have reprinted the Heritage Trail brochure which has now been distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

Blue Mountains winter

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Springwood Historians Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd.
The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2017-2018 (from March 2017) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Tasmanian Magic Research Project

Further to the Heritage Newsletter article in issue No.37 of March-April 2015, on "Farm Magic", historian Dr Ian Evans has provided an update on the second field season in January 2018 for the Tasmanian Magic Research Project. This Project is funded by the University of Hertfordshire, The UK Vernacular Architecture Group and Steven G. Sharman, and was established to find and record evidence of the material culture of magic in Tasmania during the nineteenth century.

Magic left no contemporary documentary record but its role in the lives of Tasmanians is evident in the evil-averting (apotropaic) marks on their houses and other structures and in objects concealed in buildings. Concealed objects including shoes and garments have been found in houses and other buildings in many locations throughout Tasmania.

Project site visits occurred every day between 6th January and 27th January 2018, with the exception of Thursday, 18th January. Evidence of magic in the form of evil-averting marks and practices was found at various locations throughout both survey areas in the northern and southern midlands. Sufficient evidence was gathered to enable some conclusions to be reached. It appears that there is no single form of evil-averting magic practiced throughout Tasmania, but particular groups within the community practiced their own varieties of magic that they found to be widespread.

Flame burn mark

Mummified cat

Old boot

Hexafoil

Director, Dr Ian Evans reported that:

……. this season's work of the Tasmanian Magic Research Project has been uploaded to Academia.edu and is available for download now.

The team consisted of Tully Brookes, location scout, Steve Dunbar, photographer, Vanessa Grant and myself. Ruth Hazeleton placed progress reports on social media, including Facebook.

We spent the whole of January visiting rural properties in Tasmania's northern midlands. Our work was supported by the University of Hertfordshire, the UK Vernacular Architecture Group and by Steven Sharman. We owe a debt of gratitude to the property owners who welcomed us and made their property available for research.

We inspected stables, barns, woolsheds, mills and a number of unusual buildings. These included a cider house and a squab house where pigeons were raised as an emergency food source. We also looked for a leech pit in which injured horses were placed to enable leeches to suck congested blood from their bruised limbs and bodies. The leech pit, not relevant to the main aim of the Project but too interesting to ignore, had unfortunately been filled in.

But evidence of the use of magic by British colonists was found and interesting conclusions arrived at. We now know that various groups within the community practised their own individual varieties of magic.

Builders placed shoes, garments and occasionally cats in voids in houses and other buildings under construction to lure evil beings from the underworld away from the human occupants of the buildings.

The professionals who managed the stables on the larger estates burnt candle-flame shaped marks on the stalls, the purpose of which appears to have been to inoculate these buildings against fire. Burn marks were not found in mum-and-dad stables on smaller properties.

We also noted the use of X marks on hinges made by blacksmiths. A good number of the larger properties had their own blacksmith's shop so it would appear that the use of the letter X on hinges in buildings used for storage or preparation of food was common among blacksmiths.

It's reasonable to suspect that there were other groups within 19th century communities who had their own varieties of magical rituals.

We have not yet been able to positively identify the practitioners known as cunning men and cunning women in Tasmania but strongly suspect their presence here, albeit one with a very low profile.

This concludes research in the midlands of Tasmania. The Project has been successful and has achieved its objective.

While fieldwork has been confined to Tasmania there is every reason to believe that magic was used in the same way throughout the Australian colonies. Until very recently Australia was thought to be a desert as far as the practice of magic in the 19th century was concerned. This belief has now been discredited.

Previous research into magic in Australia was confined to the contemporary documentary archive. There is nothing to be found there. The evidence was written on the houses and other buildings constructed by European settlers and can still be seen on those buildings today.

Ian Evans with examples of protective marks

The Tasmanian Magic Research Project had its first field trips in 2017, the idea originating from conversations Dr Evans had with some friends in the United Kingdom.

The Project's surveys of Tasmania are expected to produce results that will be applicable Australia-wide and of international significance. The protection symbols, which include hexafoils, deliberate candle burn marks, and clothing and shoes concealed in voids in buildings were used in the UK for centuries.
Dr Evans told The Examiner that it
"……. was common practice for builders, to conceal clothing, shoes and other items into voids in houses. Dead cats were used, for unknown reasons, when builders couldn't get access to the house's new owners' garments or shoes to place into the void. Common places to find garments or cats include underneath the front step, in the chimney or under the hearth. The most notable discovery, of 39 concealed shoes and a variety of other objects, was found at Woodbury, north of Oatlands……"
Subsequently Dr Evans had had inquiries from other states, including a recent one from Galong NSW.
The group is looking for volunteer researchers with expertise in photography (and their own cameras) as well as people who can do measured drawings of buildings where marks have been identified.
They are also seeking funding - please contact them if you can offer assistance.

For further information contact Dr. Ian Evans evansthebook@gmail.com

Food for thought ..... Editor's note

BMACHO continues to promote the Greater Blue Mountains Heritage Trail, and you are encouraged to provide feedback and input into the pending review of the Trail operation, which will result in the issue of the third brochure in 2019.

The Trail was initiated in 2015, the brainchild of BMACHO member Richard Woolley and the previous BMACHO President John Leary, (both deceased), to promote the history and cultural heritage of the region, together with the resources of BMACHO members.
A new brochure is issued every two years, the contents of which are reviewed with each issue. In terms of BMACHO member participants, features include the listing of "Hidden Gems" and places to eat and stay.
"Accessible by road or partly by rail, the Greater Blue Mountains Heritage Trail offers historically minded visitors the opportunity to explore these important resources, as well as the spectacular scenery, through the historical societies, family history societies, museums, galleries, historic gardens and historic businesses that appear on the GBMHT brochure".
So, if the Trail has worked for you, we would like to know how and why. If it has had little impact, this information too, is a valuable insight into how the wider community sees our Trail and our Region.
It may be appropriate, early in 2019, to hold a workshop for Trail participants, to discuss the various issues, good or bad.
Please advise BMACHO of your thoughts on this matter within the next few months, to enable a thorough review of the worth of the project for 2019.

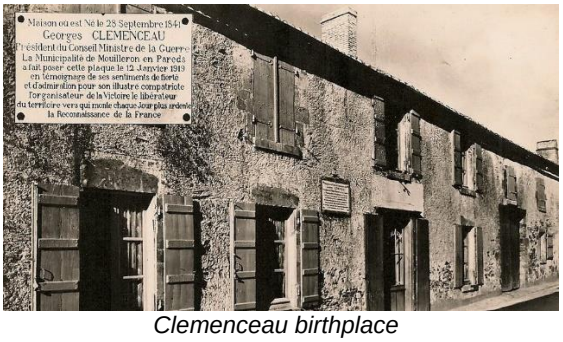
Georges Benjamin Clemenceau – "Father of Victory"

The recently held Tour de France commenced Stage 2 in the village of Mouilleron-Saint-Germain. Commentators noted that the Tour did this to honour the memory of Georges Clemenceau who was born and is buried here. The town has a museum dedicated to Clemenceau and another famous son of Mouilleron, Jean de Lattre de Tassigny (a French General in North Africa and involved in the invasion of the south of France in August 1944, during World War II). Mouilleron-Saint-Germain is the result of a fusion in 2016 of two communes, called Mouilleron-en-Pareds and Saint-Germain-l'Aiguiller. The main town is Mouilleron-en-Pareds. So, who was Georges Clemenceau?
Georges Benjamin Clemenceau was a French statesman, politician, physician and journalist, who became the Prime Minister of France during World War I. He first held office from 1906 to 1909, and then was elected again from 1917 to 1920. He was one of the principal architects of the Treaty of Versailles at the Paris Peace Conference of 1919. He was nicknamed the *Father of Victory* or *The Tiger* and took a harsh position against the defeated Germany, and the stand which he felt France should take.

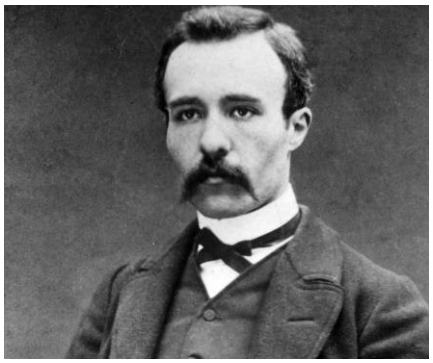
Mouilleron-en-Pareds, Vendee



Clemenceau birthplace

Clemenceau was a native of the Vendée region, born in 1841 to his physician father Benjamin Clemenceau and his mother Sophie Eucharie Gautrea, at Mouilleron-en-Pareds. During his youth Georges studied in the Lycée in Nantes, and then went to Paris to study medicine. He received his Doctor of Medicine in 1865, founded several literary magazines, and wrote many articles, most of which attacked the imperial regime of Napoleon III.

Clemenceau and others founded a journal, *Le Travail ("Work"),* which expressed views that were to characterize his future political actions. It was seized by the police, and Clemenceau was imprisoned for 73 days. Upon his release, he started a new paper, *Le Matin ("Morning"),* which was in turn seized by the authorities. Clemenceau soon left France for the United States when the imperial agents began cracking down on dissidents.

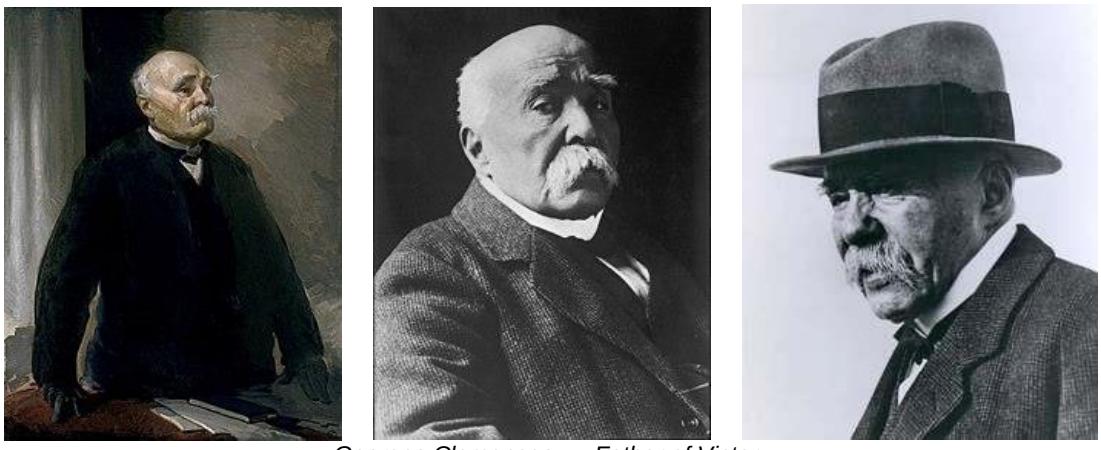


Georges Clemenceau – political activist

He worked in New York in the years 1865-69, following the American Civil War. He maintained a medical practice but spent much of his time on political journalism for a Parisian newspaper. He taught French at the home of Calvin Rood in Great Barrington, Massachusetts, and taught at a private girls' school in Stamford, Connecticut. In 1869, he married one of his students, Mary Eliza Plummer. She was the daughter of William Kelly Plummer and wife Harriet A. Taylor. Georges and Mary had three children together, two daughters and a son, before the marriage ended in a contentious divorce.
Clemenceau returned to Paris after the French defeat at the Battle of Sedan in 1870 during the Franco-Prussian War and the fall of the Second French Empire.
In 1876 Clemenceau returned to national politics and was elected to the Chamber of Deputies. His highly individual debating style, marked by a caustic wit, soon won him undisputed leadership of the radicals. Clemenceau possessed a genius for destructive criticism and won the appellation of the "*Tiger*" for his role in destroying Cabinets.
His hostility to the Franco-Russian Alliance so increased his unpopularity that in the French legislative elections of 1893, he was defeated for his seat in the Chamber of Deputies, after having held it continuously since 1876. After this defeat, Clemenceau confined his political activities to journalism for nearly a decade.
The miners' strike in the Pas de Calais after the Courrières mine disaster, which resulted in the death of more than one thousand persons, threatened widespread disorder in May 1906. Clemenceau had remained in the Chamber of Deputies, ordering the military against the strikers and repressing a wine-growers' strike in the Languedoc-Roussillon region. Clemenceau's speech to the Chamber of Deputies positioned him as the strong man of the day in French politics. When the Sarrien ministry resigned in October, Clemenceau became premier.
Clemenceau was defeated on 20 July 1909 in a discussion in the Chamber of Deputies on the state of the navy. Between 1909 and 1912, Clemenceau dedicated his time to travel, conferences and the treatment of an illness of his own, travelling to South America in 1910, to Brazil, Uruguay and Argentina.
At the outbreak of World War I in France in August 1914, Clemenceau's newspaper was one of the first to be censored by the government. He criticized the government for its lack of transparency and its ineffectiveness, while defending the patriotic union sacrée against the German Empire, and wielded considerable political influence.
In November 1917, at one of the darkest hours for the French war effort in World War I, Clemenceau was again appointed Prime Minister. Unlike his predecessors, he discouraged internal disagreement and called for peace among the senior politicians. This was a first, or at least for France.

Georges Clemenceau – Prime Minister of France – The Tiger

Clemenceau was also well received by the media, because they felt that France was in need of strong leadership. It was widely recognized that throughout the war he was never discouraged and never stopped believing that France could achieve total victory.
He made numerous visits to the front lines, risking his own life by insulting and threatening the German soldiers in person directly from the trenches. These visits, his speeches, and his verbal threats directly to the enemy impressed the soldiers and contributed to Clemenceau's title "*Père la Victoire" (Father of Victory).*
At the Paris Peace Conference of February 1919 it was decided that since the Conference was being held in France, Clemenceau would be the most appropriate President. He also spoke both English and French, the official languages of the Conference.
During the Conference an assassination attempt was made on Clemenceau by a disgruntled Frenchman, and the shot fired hit him between the ribs, just missing his vital organs. Too dangerous to remove, the bullet remained with him for the rest of his life.
The Treaty of Versailles was signed later that year in June 1919, and Clemenceau had to defend the Treaty against critics who viewed the compromises Clemenceau had negotiated as inadequate for French national interests. Clemenceau's main speech on the Treaty was delivered in September. He said that he knew the treaty was not perfect, but that the war had been fought by a coalition and therefore the treaty would express the lowest common denominator of those involved.
In 1919 France adopted a new electoral system. Clemenceau resigned as Prime Minister as soon as the presidential election was held in 1920 and took no further part in politics.
Clemenceau believed in human perfectibility through scientific knowledge and moral effort. He firmly upheld liberty and natural rights and was influenced by the ideas of Auguste Comte, J. S. Mill, and Charles Darwin.



Georges Clemenceau – Father of Victory

He continued writing travelling and lecturing and wrote his memoirs. His interests however were not confined to politics and journalism. Clemenceau was a close friend of the artist Claude Monet. He knew the importance of exercise and practiced fencing every morning

even when he was an old man. He also took an intense interest in Japanese art, especially Japanese ceramics, and amassed a large collection of pieces.
Georges Benjamin Clemenceau died in Paris on 24 November 1929 aged 88 and was buried at Mouchamps. His memoirs of the war and the peace settlement were published after his death.
Some of his quotes for thought:
"I'm more interested in the lives of those who failed because it shows they tried to beat their limits."
"It's better to lose than to win on the same side as villains".

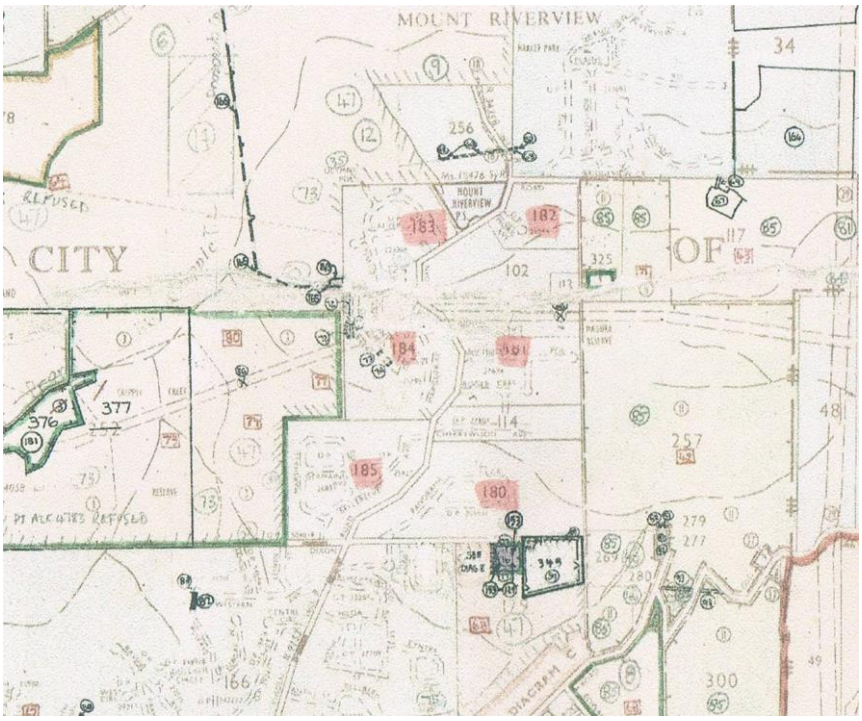
Origins of Mt Riverview

Mt Riverview is located to the north east of Blaxland, and to the north of Glenbrook, on the edge of the Blue Mountains escarpment to the west of the Nepean River, overlooking Emu Plains and Penrith. Today it is a residential town which offers walking opportunities through its various recreational reserves, including Harley Park, walking tracks to Winmalee and lookouts with beautiful scenic views. It also features a small shopping centre, a school, tennis court, woodcraft centre, churches, fire brigade and other community facilities.
However, the locality had remained untouched Crown land until 1907, when it was subdivided into six lots (180 to 185) varying in size from 35 acres to 52 acres. In 1908 Riverview Lookout was featured on early maps, but land in the area was not offered up for sale until 1920.
The first block of land was not sold until then and was acquired by Mr. Chas R Grandquist (Lot 181). In 1923 the last lot of land was purchased (Lot 184).



Extract of Parish of Strathdon

- Lot 180 – GC Singleton

- Lot 181 - Chas R Grandquist
- Lot 182 - BF Cummins, then Ferguson & Hall
- Lot 183 – Tomkins, then Blue Mountains City Council
- Lot 184 - F.T. Buxell, then CM Curvers
- Lot 185 – Henry Leahy

As early as 1914, according to a map from that year, an area was classified as a "Special Area being held for Returned Soldiers". The gully to the west of Blackbutt Circle was deemed suitable land for returned soldiers to undertake beekeeping activities.
Bernhard Cummins was also one of the first purchasers in the 1920s. He set up a lookout in a tree on his property at the end of what is now Bunbinla Avenue, which he named Mount Riverview Lookout. For a small cost, visitors could climb the tree via a set of steps/stairs and obtain a view over the Penrith and Emu Plains Valley. He also ran a tearoom and art gallery nearby. However, the complex was destroyed by fires in 1944. The location is now the site of the scout hall.
The Crown land adjoining Cummings property was declared "for public recreation." Cummins then sold the land in 1952 to a trust for the All Services Welfare Society, with a view to creating the Mt Riverview Village, for ex-servicemen, women, and their families. The village was to be a showpiece built over about 5 years, incorporating a community centre, school, two churches, 14 shops, a club, service station, and kindergarten, as well as 800 houses in a residential area. Each house would have a half acre of land and the streets would be lined with orange trees and feature dry stone walls. As the project had the backing of the Legion, blocks of land were keenly sought after in the new estate. This plan did not eventuate, as the owner of the land, Ian Ferguson, was declared bankrupt. Any people who had paid money for the land already had nothing to show for their purchase.
Bellereeve Avenue was established and building lots developed in 1953, Marshall Road and Germaine Road in 1955. In 1956, the development from the southern side of Bunbinla Avenue to Cherrywood Avenue took place. In 1957, Anthony Avenue and Marguerite Avenue were created. Marguerite Avenue was named after the wife of John Curvers, a Dutchman who owned the land at the time. Panorama Crescent and Dixon Road followed in 1960, and Curvers Drive in 1961.
In the early 1960s Charles Degotardi purchased and subdivided land he called the Grandview Estate, which was completed in September 1964. It involved all of the development north of Rusden Road, including Emu Plains Road and Grandview Drive.
In 1976 the establishment of the Blackbutt Circle Estate took place, a part of which the Department of Education purchased for the school.

Harley Park

View over Penrith Valley

The main purchase of school property was made in September 1959, when the Blue Mountains City Council purchased Lot 183 from Clive and Errol Tompkins, sons of the original owner. The Council sold a portion of this land to the Department of Education in February 1962 for a future school site, although the school was not built until 1971. It operated from then but was not officially opened until 1974. The remaining portion of land

was subdivided by the Council in 1964, making provision for shops, a water tower, recreation facilities and community services, and developing the remainder for housing.

Decorated water tower

Mt Riverview School

The town name was not gazetted until 1964. This followed an appeal by the local progress association to Blue Mountains City Council, before which the town was considered as part of Blaxland.

Blue Mountain Education & Resource Trust, Lawson

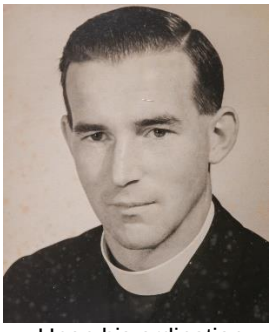
The Blue Mountain Education and Resource Trust was established in 2008 by the Rev Fr Eugene Stockton, based at Lawson, the original "Blue Mountain". The name, Blue Mountain [singular], was taken from the original name for the village of Lawson, where Fr Stockton grew up.

The Trust was set up to advance matters of religious enquiry, religious studies, Aboriginal studies, education and research for the local community and the Australian community at large. The logo of the Trust is a stylised representation of an engraving of concentric circles carved by Aboriginal people found at Woodford.
The objects of the Trust include:
1. To review and continue the research initiated by Fr Stockton in religious studies, Aboriginal studies and archaeology.
2. An emphasis on arousing awareness and collaborative participation to:

- Disseminate knowledge and ideas on the above and related topics.
- To host forums, talks and conferences for the advancement of matters of religious and social concern. Engage in interfaith, cross-cultural and interdisciplinary dialogue.
- Publish talks, papers and books, especially those whose authors are members of, or working with the local community.

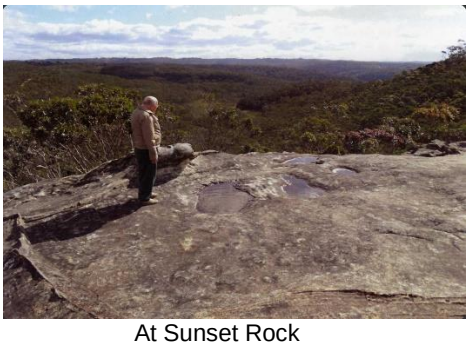
Eugene Stockton is the Founder and Chairperson for the Trust, and is a priest-archaeologist, still living at Lawson. As a priest of the Diocese of Parramatta (NSW), he was a longtime seminary lecturer and served in parish, university and Aboriginal ministries. He has degrees in Divinity, Philosophy and Sacred Scripture. As an archaeologist he has engaged in

excavations and surveys in many parts of the Middle East and Australia. These varied interests have led to many publications, especially in the pursuit of an Australian spirituality. Born in 1934, Eugene is named for his mother's former employer, St Columba's Rector, Monsignor Eugene Brauer. His father had died soon after his birth, and his mother worked to raise her children. As a child Eugene spent many hours exploring the bush near his home, from whence his love of archaeology and Aboriginal culture arose. He became a regular member of archaeological digs, gaining valuable experience. By the time he was ordained into the priesthood in he was conducting his own digs.



Upon his ordination

In more recent years

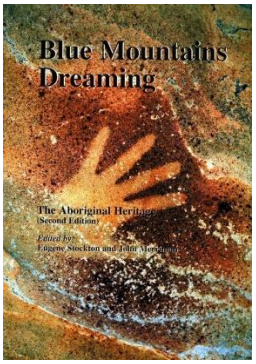


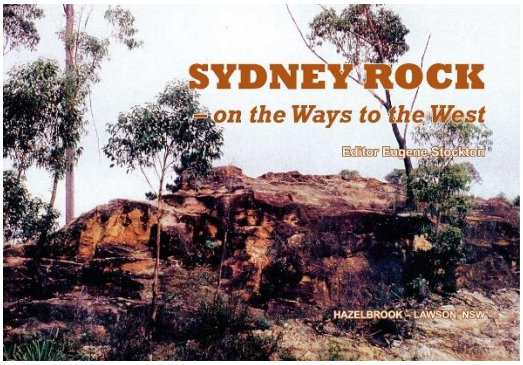
At Sunset Rock

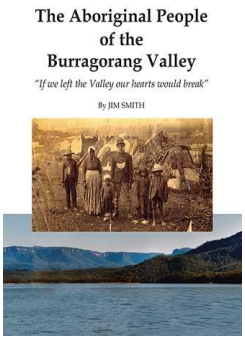
In later years he studied at St Columba's Minor Seminary in Springwood, and at St Patrick's Seminary near Manly. He was ordained in St Mary's Cathedral on 8 March 1958.He worked as Aboriginal Chaplain in the Archdiocese of Sydney and became interested in Aboriginal spiritualty and history, directing his talents to the study of local archaeology.
An early publication was "Blue Mountains Dreaming". Others include:

- "Arabian Cult Stones" 1982, Landmarks;
- "A Spiritual Search in a Southern Land" 1990;
- "The Aboriginal gift: Spirituality for a Nation" 1995;
- "Aboriginal Church Paintings" 2010;
- "Sydney Rock – on the Ways to the West"; and
- "This Tortuous Ridge – Lawson to Linden".

The Trust also publishes books for others such as "The Aboriginal people of the Burragorang Valley" 2016 by Jim Smith.







Following 60 years in the Ministry, Eugene now lives in the house he built for his mother 50 years ago and enjoys the company of his family and friends who still live in the district, retired in the same area in which he grew up, although limiting his forays into mainstream life.
He retired in order to live the life of a "hermit", a life of key times of silence and solitude in prayer, not necessarily living away from the world.
Today he now spends most of his time expressing this through writing. His latest book is "The Deep Within: Towards an Archetypal Theology".

He is an advocate for care for the earth and the environment, leading meditation days in the Blue Mountains, when participants spend time in the bush reflecting on their relationship with God and the natural world.
The Secretary and Executive Officer for the Trust is Allan Walsh. Allan has had a lifetime involvement in the printing and publishing industry and in his retirement devotes much of his time, energy and skills to the work of the Trust — from the design, typesetting and layout of our books to handling orders and queries from customers. Allan is the person to contact with queries about the Trust.
Maureen Anderson is the Treasurer, Brian Coyne is the Webmaster and Online Editor, and Laurie Woods is a Trustee.

The Registered Office of the Trust is at 254 Great Western Highway, Lawson, NSW Australia 2783.
Telephone: 02 4759 1034

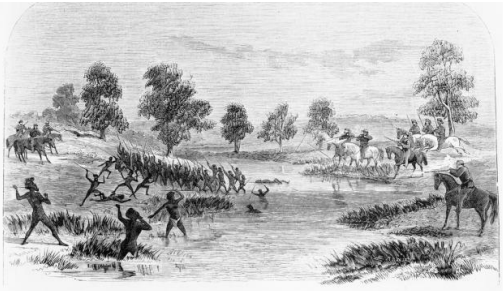
Massacres Mapping: University of Newcastle

More than 150 Aboriginal and Torres Strait islander massacres that are alleged to have occurred during the spread of settlement in Australia are now documented in an online digital map, created by University of Newcastle researchers in 2017.
The online tool records the massacre site locations, available details of the individual massacres and the sources corroborating evidence of the massacres. The study initially covered frontier violence that occurred from the arrival of the first fleet in 1788 to the colonisation of the Northern Territory, South Australia and remote Queensland up to 1930.
Developed by University of Newcastle historian, Professor Lyndall Ryan, a member of the Centre for 21st Century Humanities and the Centre for the History of Violence, the map is a significant step in the recognition of the periods of violence in Australia's history.
"*The biggest argument in the scholarship of massacre is 'how do we know it happened?"* Professor Ryan said.
Most massacres took place in secret and were designed to not be discovered, so finding evidence of them is a major challenge. This digital tool brings significant historical information out of the depths of archives, bringing it to life in an accessible and visual format. With this map we've developed a template to identify massacres and a process to corroborate disparate sources. They include settler diaries, newspaper reports, Aboriginal evidence and archives from State and Federal repositories. The map pulls the sources together to form a coherent list of frontier massacres spanning 80 years across Eastern Australia.
The project was funded over a four year period by an Australian Research Council (ARC) grant investigating violence on the Australian Colonial Frontier, 1788-1960.
In 2017 Professor Ryan said:
So far we have mapped Tasmania, Victoria, most of NSW and Queensland and have about 150 massacres listed at present. It's likely to end up being more than 200 across an 80-year period from settlement to 1872 as we progress the map further.
There were more than 60 massacres in Victoria across 15 years; and 30 massacres along the NSW/Queensland border between 1840 to 1850. The map shows there were very intense periods of violence in particular regions. We are still working on mapping the rest of Australia and hope to have that complete within two years.

The publicly available map is to be found at:
https://c21ch.newcastle.edu.au/colonialmassacres
The website is also a contact point for the public to contribute historical information they may have about massacres to the project.
Professor Ryan explained further:
At present it's a preliminary list as we expect to find more massacres as people come forward with more evidence …….. In Australia very few perpetrators were brought to justice. I'm a historian so it's not my intention to bring people to justice with this map. However, we do know the impact of massacre reverberates across the generations. When I visit Aboriginal communities today the first thing they do is take you to the massacre site.

The University now reports that as of July 2018 the number of Aboriginal and Torres Strait Islander massacres verified and recorded on the online digital map has risen to 240, following an influx of valuable information and evidence from regional communities around Australia.
The response from the Australian public had been overwhelmingly positive since the launch of stage one of the research project in 2017.
Professor Ryan comments that:
The high level of community interest and engagement comes from regional Australia, where most of the incidents took place, suggesting that people in the regions really do want to know what happened …… It's important to document these incidents because they resolve the long standing question: how violent was the colonial frontier? The map shows that massacre was widespread and affected hundreds of Aboriginal and Torres Strait Islander communities.
Massacres of Aboriginal people were typically carried out by hunting parties of soldiers, armed settlers, mounted police and/or native police with six to 40 men in each party, averaging eight to 10 men.
The evidence has found that characteristics of massacres varied by time and place, and the weapons used were swords, pistols, muskets, bayonets, cannons, carbines, repeating rifles and strychnine poison. Aboriginal peoples' weapons were spears, waddies and hatchets.
Some Aboriginal communities asked the researchers not to pinpoint the exact location of where their ancestors were killed, so the map records an approximate site instead.
The research team found many major massacres happened alongside rivers, but some battle sites are now under dams, reservoirs and weirs.
Professor Ryan said.
That's where the majority of Aboriginal people were, that was where the good pastoral land was and that's where the settlers wanted to be.
Ian Evans (OAM, PhD) historian, makes comments and offers an alternative point of view to the news coming from the University of Newcastle's massacre map.
The way in which the map's records have been set up has produced a shocking result. I cannot speak for the whole of Australia on this matter but I do have some knowledge of the circumstances in Tasmania in the first half of the 19th century.



Artist's impression: Rufus River 1841

Artist's impression: Musgrave Range 1879

A brief examination of other events recorded on the map reveals that it is not a reasonable and nuanced depiction of conflict between Aborigines and Europeans in the 19th century. The map throws all responsibility for Aboriginal deaths onto European settlers and the Colonial administration. An independent audit should be arranged to check the validity of the map's claims …….. There was bitter conflict and there were atrocities on both sides.

Patsy Moppett

Editor's note: There has been some considerable discussion online about this Project, and the accuracy and intentions of its findings. Readers are advised to research the discussion and form their own opinions. One way to assist in the authentication of the Project results is to contribute to the information collected to date, as suggested by the research team.
The research team welcomes suggestions for additions or modifications to the site, the data and the map. People can visit the website and click the contact tab, where they can provide details via a form; or they can email colonialfrontier@newcastle.edu.au and attach any relevant documents.

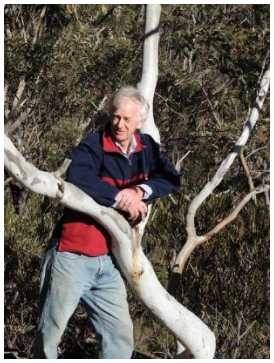
Book Launch: Padley of the Pedestal – James McMillan Padley

A launch of "*Padley of the Pedestal - James McMillan Padley*", by local author Keith Painter, will be held at 3pm on Friday 19th October 2018 at Lithgow Library Learning Centre.
It will be followed the next day by a rededication of the restored Padley monument at Hassans Walls Lookout, on the morning of Saturday 20th October 2018. (The 20th will be the centenary of the death of James Padley.)
Some descendants of James's brother George (the only one who had children) will be attending.

James Padley



The author

Padley Pedestal

James McMillan Padley was the driving force behind the Lithgow Progress Association in the early 1900s and the chief instigator of development of visitor facilities at Hassans Walls Lookout. He had a furniture shop in Lithgow from 1902 until his death in 1918.

Further information should be available by mid-September and will be distributed by BMACHO. You can also contact the Library, or the author at greatguides@mountainmistbooks.com

The Technical Side
Allowing old buildings to "breathe"

Modern buildings rely on impervious outer layers to exclude moisture, or other barriers which prevent moisture entering the fabric and creating damage.
In old buildings, the cobb, bricks or stones were generally bonded with weak and porous mortars made of lime/sand, earth, or earth/lime mortars. External walls constructed with these materials were rendered with lime render, and then often limewashed so the structure was able to "breathe". When it rained, moisture was absorbed a few millimetres into the external surface but was able to evaporate when the rain stopped, helped by the drying effects of the sun and wind. The surface had a rough texture which maximised the surface area and increased evaporation.
The "breathing" amounts simply to the action of moisture entering the wall which should be able to evaporate.
Thatched roofs over mud walls were built to direct water away from the building, and the construction materials could take in and let out moisture due to their mature, as long as the building location was on a well-drained site.
Tiles, shingles and slate roofs allowed for the movement of air between each component to allow for drying and movement.
Internally, walls were plastered with lime and finished with simple breathable paints. The limewash could be decorated with natural pigments. Any excess internal humidity was dispersed via chimneys, vents or simply draughts, or absorbed by the breathable surfaces.
In addition, a kitchen stove or open fire burnt from autumn until spring, drawing air through the home and keeping internal surfaces dry. Provided the building was maintained, the structure remained essentially dry.

In recent times builders have tried to apply modern techniques to breathing structures on traditional buildings. These cement renders, plastic paints, waterproof sealants, damp proof membranes and insulation materials, where suitable for contemporary buildings, can act as a barrier to the older building's natural ability to breathe. The mix of technologies traps water within porous materials and exacerbates the very problems that they are trying to resolve.
A certain amount of moisture in an old wall is acceptable, simply because it can evaporate away easily. However, if moisture increases excessively within a masonry wall, the likelihood of decay also increases. Timbers can occur in solid masonry walls as lintels over windows or doorways, as beams or joist ends etc. If the moisture content increases within these timber elements it can become subject to wet and dry rot. In the masonry the mortar will also become susceptible if the moisture levels persist.

When repairing an old building, such techniques should be understood to obtain a successful outcome:

- Paint systems and external renders – must be able to allow moisture through but also allow it to evaporate. Sometimes this may result in a breakdown of the surface finish and require re painting/rendering. Sacrificial renders and paints are used in this instance, which need regular monitoring and replacement. Generally, no synthetic modern materials should be applied to the masonry or plaster surfaces of historic buildings.
- Pointing - If an old wall is repointed with a modern cement mortar, water will still be able to penetrate the wall through the masonry or cracks in the mortar but will be unable to evaporate back through the mortar and will be forced back out through the face of the masonry. This can lead to an increased decay of the masonry. A soft lime mortar with lower strength to the masonry should be used for pointing. The mortar will decay and may appear to be sacrificial, but it is cheaper and easier to re-point at intervals with the lime mortar rather than having to replace whole bricks or blocks of stone.
- Internal plaster and finishes - if the exterior surface of a building is sealed to prevent moisture intrusion, and the internal surface has been left with the original lime plaster then moisture which is unable to evaporate to the outside will find its way internally with an increase in dampness and humidity, which has a cooling effect and represents a considerable heat loss. If the internal wall is also sealed this will only act to further trap moisture and either force it further upwards in the building affecting the plaster above, or down to affect foundations.

Other instances where dampness and moisture is able to build up against or within a wall include where soil or leaves have built up above the floor level and dampness can be transmitted into the wall and into the house; hard-surfaced paths which allow rain to splash up the wall or which trap damp in the soil near the wall; and broken, leaking or blocked rainwater pipes which continually wet the wall and adjacent ground surface. It can often be a simple matter to level soil, remove litter, and fix the stormwater fixtures.

Under normal circumstances, old buildings will work well if they are maintained in the same way as they were constructed. All external and internal finished should be permeable. Where the application of impermeable finished has been undertaken, and once deterioration is observed, remedial action is required which may involve the removal of such materials and replacement with porous surface treatments. This must be undertaken with care to avoid further damage to the building, and compromises may be required. Paints can be scraped off carefully, renders can be chipped off in small sections, mortars can sometimes be cut out. All these techniques risk damage to the main masonry fabric. Where a complete replacement is not possible the wall should be kept as dry as possible and well ventilated to prevent moisture entering between the external and internal surfaces.

If you are dealing with an old building, professional advice is readily available from a variety of publications, and suitably qualified architects, builders and tradesmen, experienced in the restoration of historic buildings.

Community events & updates

Successful grant funding

On Monday, 13 August 2018 Blue Mountains based Member of the Legislative Council Shayne Mallard MP announced that the Blue Mountains region has been the successful recipient of four key heritage grants in the NSW Government "Heritage Near Me Activation Grants", saying:
"The four grants valued at $375,000 are for projects including conservation of the Explorers Tree at Katoomba, the Woodford Reserve at Woodford, restoration of old Mt Wilson Public School and opening the heritage building on Parke St Katoomba, which all represent important elements of the local heritage that can now be preserved for future generations."

The projects are elaborated upon as follows:

- **Project Name: Pulpit Hill Precinct (including Explorers Tree) Interpretation Project**: The Pulpit Hill Precinct contains the "Explorer's marked tree", convict grave stone arrangements and natural area landscape values. This Interpretation Project will ensure opportunities for community engagement, appreciation and enjoyment of the significant heritage values which are provided at Pulpit Hill, with a focus on conservation of the significance elements. Total approved: $100,000.00.
- **Project Name: Woodford Reserve and Grounds – Interpretation, Access and Conservation**: Woodford Reserve has significant European, Aboriginal and landscape values - this project will change people's perception of this place with appropriate access which has not been available, with a comprehensive interpretation of the Reserve and its immediate environs fragmented through subdivision and with conservation of its highly significant elements. Total Approved: $75,000.00.
- **Project Name: Restoration of Old Mt Wilson School**: The undertaking of urgent structural repairs to conserve the historic buildings of the Old Mt Wilson School (home of the Mt Wilson & Mt Irvine Historical Society archives) and to ensure safe public access and new adaptive uses as part of the Mt Wilson Community Precinct. Restoration works will provide increased community amenities and access to heritage space. Total Approved: $100,000.00.
- **Project Name: Mountain Culture opens in heritage building on Parke St, Katoomba**: Open a heritage building to the public as a community space in Katoomba, located in the UNESCO World Heritage Blue Mountains, giving the town the opportunity to further cement itself as a tourist destination, with the building supported economically by a microbrewery, restaurant and art space. Total Approved: $100,000.00.

HERITAGE NEAR ME

Mr Mallard said: *"By encouraging the community to use and enjoy our heritage places we ensure they are valued and protected for future generations".*
This year marks the third round of Heritage Near Me Activation Grants. Over the three years, a total of $8 million has been awarded to support 107 local heritage projects across the state.
BMACHO wrote supporting letters for the first three of the above grants, and congratulates all four recipients, wishing them well in their endeavours. *Patsy Moppett*

History Week 2018

History Week is the annual, state-wide celebration of history organised by the History Council of New South Wales (HCNSW). Initiated by the HCNSW in 1997, History Week is a fantastic opportunity for member organisations, large and small, throughout NSW to engage and educate the community about the vitality, diversity and meaning of history and its practice.
The History Council of NSW's flagship festival, History Week 2018: *Life and Death* (1-9 September), will explore life's defining moments and the impact of death on communities across time.
The theme of *Life and Death* will include:

- life's milestones and how different cultures come to terms with death.
- how we commemorate people's lives.
- what rituals and burial practices reveal about our relationship with and understanding of life and death.
- how death has been feared, used as a form of punishment and shattered communities.
- how communities have rebuilt after loss, shared stories across generations and inspired remembrance and creative expression.

In 2018, History Week commences on 31 August with the NSW Premier's History Awards**.** Another feature event is the Annual History Lecture and Awards on the night of 4 September. Overall, there are close to 100 events being staged throughout NSW in History Week.
Blue Mountains events include:
Hidden in Plain View: The Aboriginal people of coastal Sydney: Saturday 1 September 2018, Blackheath Public School Hall:
Aboriginal peoples did not disappear or die out after European arrival in 1788, but they were left out of historical narratives. Historian and archaeologist Dr Paul Irish discusses this poorly understood period of history and brings Aboriginal lives and culture back into view.
The Final Journey: making tracks to the last station: 8-9 September 2018, Valley Heights Locomotive Depot Heritage Museum.
Valley Heights Locomotive Depot Heritage Museum has a number of special activities and exhibits to coincide with History Week 2018: exhibits on transportation of the deceased, themed photographic displays, other related exhibits, local stories and 20 minute steam train rides.

The complete interactive program of History Week events is available on the History Council website: www.events.historyweek.com.au

Mount St Marys, Katoomba - update

Further to BMACHO's article on Mount St Mary's at Katoomba, Newsletter No. 55, March-April 2018, this significant property is once again on the market.
Commercial Real Estate declares: "…. *it has been vacant for the last two decades and has become popular among abandoned-building enthusiasts and vandals*."
The current owner acquired the property in 2014 and has apparently made efforts to restore the building and preserve some of its historic features.
Although there have been numerous attempts to sell the site in recent years, no success has been forthcoming. A development consent had previously been approved through Blue Mountains City Council for the restoration of the existing building and construction of 122 apartments, however this has now lapsed.

Listed on the Blue Mountains Local Environmental Plan 2015, Schedule 5, and the NSW State Heritage Register, the inventory sheet states:
"The physical location, expansive modified landscape setting, and imposing complex of ecclesiastical buildings dominated by a tower, lends Mount St Mary's great aesthetic significance in the cultural landscapes of the Blue Mountains. It remains a visually significant landmark at the eastern gateway to Katoomba and has great social significance for the former religious community, students, and wider Blue Mountains communities."
It is to be hoped that a buyer will be forthcoming in the near future to develop this significant feature of Katoomba's history. *Patsy Moppett*

Fernhill, Mulgoa - update

Further to the BMACHO article on Fernhill at Mulgoa, Newsletter issue No. 51, July-August 2017, an update is provided on the development of the property.
As is known, Rookwood General Cemeteries Reserve Trust had taken up an option to development the 384-hectare site into a cemetery to replace the current Rookwood Cemetery.
However, it seems that the Trust has had to walk away from the deal after failing to gain loan and Ministerial approval within its due diligence period.

The Rookwood Trust had agreed to purchase the historic Mulgoa property in March 2018 for $30 million, but their conditional offer lapsed, relating also to Penrith City Council's concerns of the impact of a cemetery on the heritage landscape surrounding the 1840s-built mansion. In a recent statement Rookwood General Cemeteries Reserve Trust chief executive George Simpson said "*with no formal approval from the Minister at this time RGCRT is unable to proceed with the purchase of the Fernhill estate.*
The Trust itself had originally stated that they were not going ahead if the community did not want a cemetery at Fernhill, and the project would be dropped".

The estate is more recently best known as the former home of property tycoon Warren Anderson before bankruptcy forced him out and the keys were handed over in 2011 to his financier Angas Securities. Anderson told The Australian he had written letters to politicians at all levels of government in an effort to save the estate from being turned into a cemetery.
In the meantime, the NSW government has purchased the site for $27.25 million. The government is yet to announce what they plan to do with the property or which state department will manage it.
A spokesperson from the Department of Planning and Environment said the Department needed to assess legislative and management changes required to enable it to be opened to public access.
"The Department of Planning and Environment will work to find an appropriate state agency to develop the management plans necessary to open the site for public access," the spokesman said.
The local community, through the Mulgoa Progress Association and Warren Anderson, have applauded this public ownership move.
The RGCRT will now need to find another suitable area large enough for their and Sydney's future needs.
It will be a nervous wait on the government's intentions for the place, given the green light given to the Badgery's Creek airport, and the subsequent residential and transport demands of such a proposal in the western Sydney area. *Patsy Moppett*

National Trust of Australia - Blue Mountains Branch

The Blue Mountains Branch of the National Trust covers an area stretching from Lapstone to Mt Victoria. The Branch Committee is elected each year at the AGM and currently comprises thirteen members, including the Chairman, Secretary, and Treasurer. All these people are volunteers, who give their time furthering the aim of the National Trust to "*preserve our natural and built heritage*". The tasks which they carry out towards this aim are many and varied including taking the necessary action in response to developments in the Blue Mountains which may threaten that heritage. They organise activities with an historical or heritage theme such as walks and bus trips, and undertake fund raising street stalls, which also provide social opportunities for members. These activities also raise funds for the Trust.

The funds raised from these activities are used to support the Trust's three Blue Mountains properties, Everglades Historic House and Gardens, the Woodford Academy and Norman Lindsay Gallery, as well as the general activities of the Trust. The group welcomes volunteers willing to serve on their committee, to help with the organising of their various activities, and encourages members and the community to attend their functions.
Some activities planned for the coming months include:

- HAWKESBURY ARTIST'S TRAIL - DAY BUS TRIP: Saturday 22nd September.
- TOUR TO MAITLAND, MORPETH AND SURROUNDS: Tuesday 6th November to Thursday 8th November.
- NORMAN LINDSAY GALLERY: Puddin' Day, Sunday 14th October.

For more information on their activities or to join the committee please email bmnt1814@gmail.com or contact Rhona on 02 4757 2424.

Blue Mountains Cultural Centre

Exhibition: Blue Mountains Botanica

View exhibitions and join them for a diverse program of storytelling, workshops, walks & talks at the Blue Mountains Cultural Centre and Blue Mountains Botanic Garden, Mt Tomah. Developed in partnership with the Royal Botanic Gardens and Domain Trust *Blue Mountains Botanica* delves into the history of botanical exploration of the Blue Mountains and features historical botanical illustrations, plant specimens and archival material drawn from the National Herbarium of NSW, the Daniel Solander Library and the Blue Mountains Botanic Garden, Mount Tomah.
25 August – 14 October 2018

For further information on the program, contact:

Conservation Management Strategy for Section of Cox's Road

Blue Mountains City Council announced recently that a Conservation Management Strategy (CMS) has been completed for a significant section of the historic Cox's Road at Linden. The Strategy sets out a framework for the appropriate care, conservation and ongoing use of remnants of the Road, to minimize day to day threats.
This part of the route lies between bushland and the rear yards of private properties and has provided access into natural areas such as the Paradise Pool and other bushland features. However, it has also presented privacy and security issues for adjacent residents.
The CMS will guide future activities in the vicinity, including the development of an interpretation plan, archival recording of historic fabric, and re-routing the existing bush access trail. This will enable protection of the remaining historic features of the Cox's Road, whilst retaining safe and environmentally appropriate access to the bushland sites and protecting the privacy and security of nearby residents.

The sensitivities of the Aboriginal community regarding the role the road played in the European occupation of the Blue Mountains will be recognized, and thorough consultation undertaken.
Council worked with the Blue Mountains Region of NPWS, the NSW Rural Fire Service, Traditional Owners, other State agencies, along with the Linden Residents' Association, to develop the Strategy.

Stakeholders celebrate the recognition of the significance of Cox's Road in a CMP

Remnants of this Linden section of the Cox's Road route

The Conservation Management Strategy was supported by a $10,000 grant from the NSW Office of Environment & Heritage and the NSW Heritage Council, with Council contributing about $15,000 towards the Plan. *Patsy Moppett*

BMACHO Workshops

BMACHO has recently received funding from Blue Mountains City Council to hold workshops during the coming 6 months and has sought to determine topics which might benefit members relating to their group activities, records and collections, successfully addressing the positives and negatives of the BMACHO membership.

The committee has resolved to hold the first workshop on 24 October 2018 at Wentworth Falls, dealing with *"Archival appraisal and description",* and a more formal announcement will be confirmed after our Committee Meeting on 3rd September 2018.
We are aware that a number of our members are very keen to hold a "*Practical writing of grant applications*" workshop and this is being considered.
In general, and to date, the following topics have been suggested:

- Archival appraisal and description
- The practical side of writing grant applications
- Cataloguing/managing records and collections
- Accessioning
- Assessing the significance of collections
- Storage of records and collections
- "Connecting up" - for not-for-profit member organisations, who may benefit from significant discounts. Establishing and managing your website.
- The Greater Blue Mountains Heritage Trail - how it can be managed better to benefit members.
- Sharing of positive and successful methodologies with other member organisations.

BMACHO is now seeking feedback from members on the following questions:

- What topic do you find most beneficial?
- What services are missing?
- Where does your organisation struggle?
- What are the main heritage concerns with regard to your records or collections?
- Do you have any positive experiences to share which might assist other organisations? Do any of these experiences fit into the suggested workshop themes?

Places in each workshop will be limited, and preference for attendance will be for the BMACHO membership. However, the public will also be welcome should numbers allow.
Through these workshops, BMACHO is hoping to complement the workshops currently planned by Blue Mountains City Council's museums advisory Service (see below).

BMACHO Committee

Feedback can be provided via the BMACHO email address: bmacho.heritage@gmail.com

Blue Mountains Workshop: Muse

Responding to interests and concerns expressed during this year through meetings, visits, current status review and emails Gay Hendriksen, Museums Advisor to Blue Mountains City Council, has developed what she hopes will be a useful practical workshop series - *Muse.*

The free *Muse* workshop series is part of the museum advisor service provided by Blue Mountains City Council and Museums & Galleries NSW.
The series will provide tools, resources and skills development for regional museums, archives, library and gallery sector in the Blue Mountains.
To be eligible for this program you need to be a member of a regional museum, archive, library and gallery or associated organisation in the Blue Mountains region.

The first workshop day will be jam packed, to be held on Tuesday 11th September 2018 starting at 9am at 30 Parke Street, Katoomba:

- Brad Moore, BMCC Aboriginal Liason officer will give a brief overview of Council's perspective,
- Elizabeth Hadlow, senior conservator at State archives will be talking paper conservation,
- Kate Chidlow, Conservator at MAAS will talk textile conservation, storage and display and
- Gay will follow up with Registration and cataloguing, looking at the EHive online tool.

This will be followed by a plenary and information share which was so successful at the meet and greet earlier in the year.
The sessions are limited in number so if you don't make it to the list please email Gay and she will put you on the waiting list.

Note: a further workshop is scheduled for 6th November 2018. Information will be available from Gay closer to the date.

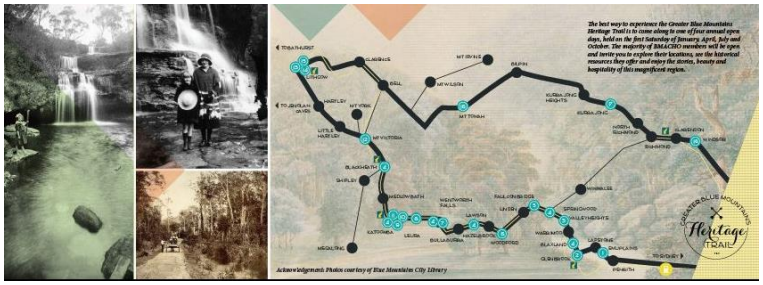
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.
BMACHO is planning a review of the operation of the Trail over the coming months, with a view to the issue of the next brochure in 2019. Your feedback will be most welcome – see Editorial on page 3.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2018-2019 (from March 2018) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett. Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

Tasmanian Magic Research Project

Further to the Heritage Newsletter article in issue No.37 of March-April 2015, on "Farm Magic", historian Dr Ian Evans has provided an update on the second field season in January 2018 for the Tasmanian Magic Research Project. This Project is funded by the University of Hertfordshire, The UK Vernacular Architecture Group and Steven G. Sharman, and was established to find and record evidence of the material culture of magic in Tasmania during the nineteenth century.

Magic left no contemporary documentary record but its role in the lives of Tasmanians is evident in the evil-averting (apotropaic) marks on their houses and other structures and in objects concealed in buildings. Concealed objects including shoes and garments have been found in houses and other buildings in many locations throughout Tasmania.

Project site visits occurred every day between 6th January and 27th January 2018, with the exception of Thursday, 18th January. Evidence of magic in the form of evil-averting marks and practices was found at various locations throughout both survey areas in the northern and southern midlands. Sufficient evidence was gathered to enable some conclusions to be reached. It appears that there is no single form of evil-averting magic practiced throughout Tasmania, but particular groups within the community practiced their own varieties of magic that they found to be widespread.

Flame burn mark

Mummified cat

Old boot

Hexafoil

Director, Dr Ian Evans reported that:

……. this season's work of the Tasmanian Magic Research Project has been uploaded to Academia.edu and is available for download now.

The team consisted of Tully Brookes, location scout, Steve Dunbar, photographer, Vanessa Grant and myself. Ruth Hazeleton placed progress reports on social media, including Facebook.

We spent the whole of January visiting rural properties in Tasmania's northern midlands. Our work was supported by the University of Hertfordshire, the UK Vernacular Architecture Group and by Steven Sharman. We owe a debt of gratitude to the property owners who welcomed us and made their property available for research.

We inspected stables, barns, woolsheds, mills and a number of unusual buildings. These included a cider house and a squab house where pigeons were raised as an emergency food source. We also looked for a leech pit in which injured horses were placed to enable leeches to suck congested blood from their bruised limbs and bodies. The leech pit, not relevant to the main aim of the Project but too interesting to ignore, had unfortunately been filled in.

But evidence of the use of magic by British colonists was found and interesting conclusions arrived at. We now know that various groups within the community practised their own individual varieties of magic.

Builders placed shoes, garments and occasionally cats in voids in houses and other buildings under construction to lure evil beings from the underworld away from the human occupants of the buildings.

The professionals who managed the stables on the larger estates burnt candle-flame shaped marks on the stalls, the purpose of which appears to have been to inoculate these buildings against fire. Burn marks were not found in mum-and-dad stables on smaller properties.

We also noted the use of X marks on hinges made by blacksmiths. A good number of the larger properties had their own blacksmith's shop so it would appear that the use of the letter X on hinges in buildings used for storage or preparation of food was common among blacksmiths.

It's reasonable to suspect that there were other groups within 19th century communities who had their own varieties of magical rituals.

We have not yet been able to positively identify the practitioners known as cunning men and cunning women in Tasmania but strongly suspect their presence here, albeit one with a very low profile.

This concludes research in the midlands of Tasmania. The Project has been successful and has achieved its objective.

While fieldwork has been confined to Tasmania there is every reason to believe that magic was used in the same way throughout the Australian colonies. Until very recently Australia was thought to be a desert as far as the practice of magic in the 19th century was concerned. This belief has now been discredited.

Previous research into magic in Australia was confined to the contemporary documentary archive. There is nothing to be found there. The evidence was written on the houses and other buildings constructed by European settlers and can still be seen on those buildings today.

Ian Evans with examples of protective marks

The Tasmanian Magic Research Project had its first field trips in 2017, the idea originating from conversations Dr Evans had with some friends in the United Kingdom.

The Project's surveys of Tasmania are expected to produce results that will be applicable Australia-wide and of international significance. The protection symbols, which include hexafoils, deliberate candle burn marks, and clothing and shoes concealed in voids in buildings were used in the UK for centuries.
Dr Evans told The Examiner that it
"……. was common practice for builders, to conceal clothing, shoes and other items into voids in houses. Dead cats were used, for unknown reasons, when builders couldn't get access to the house's new owners' garments or shoes to place into the void. Common places to find garments or cats include underneath the front step, in the chimney or under the hearth. The most notable discovery, of 39 concealed shoes and a variety of other objects, was found at Woodbury, north of Oatlands……"
Subsequently Dr Evans had had inquiries from other states, including a recent one from Galong NSW.
The group is looking for volunteer researchers with expertise in photography (and their own cameras) as well as people who can do measured drawings of buildings where marks have been identified.
They are also seeking funding - please contact them if you can offer assistance.

For further information contact Dr. Ian Evans evansthebook@gmail.com

Food for thought ..... Editor's note

BMACHO continues to promote the Greater Blue Mountains Heritage Trail, and you are encouraged to provide feedback and input into the pending review of the Trail operation, which will result in the issue of the third brochure in 2019.

The Trail was initiated in 2015, the brainchild of BMACHO member Richard Woolley and the previous BMACHO President John Leary, (both deceased), to promote the history and cultural heritage of the region, together with the resources of BMACHO members.
A new brochure is issued every two years, the contents of which are reviewed with each issue. In terms of BMACHO member participants, features include the listing of "Hidden Gems" and places to eat and stay.
"Accessible by road or partly by rail, the Greater Blue Mountains Heritage Trail offers historically minded visitors the opportunity to explore these important resources, as well as the spectacular scenery, through the historical societies, family history societies, museums, galleries, historic gardens and historic businesses that appear on the GBMHT brochure".
So, if the Trail has worked for you, we would like to know how and why. If it has had little impact, this information too, is a valuable insight into how the wider community sees our Trail and our Region.
It may be appropriate, early in 2019, to hold a workshop for Trail participants, to discuss the various issues, good or bad.
Please advise BMACHO of your thoughts on this matter within the next few months, to enable a thorough review of the worth of the project for 2019.

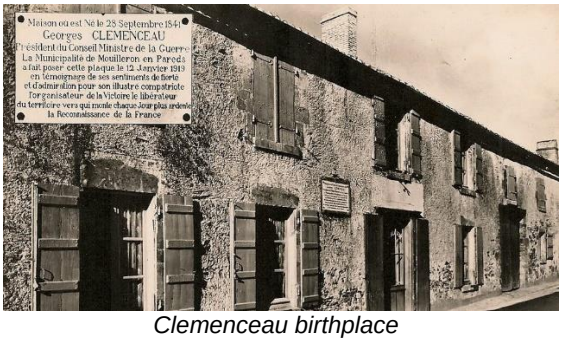
Georges Benjamin Clemenceau – "Father of Victory"

The recently held Tour de France commenced Stage 2 in the village of Mouilleron-Saint-Germain. Commentators noted that the Tour did this to honour the memory of Georges Clemenceau who was born and is buried here. The town has a museum dedicated to Clemenceau and another famous son of Mouilleron, Jean de Lattre de Tassigny (a French General in North Africa and involved in the invasion of the south of France in August 1944, during World War II). Mouilleron-Saint-Germain is the result of a fusion in 2016 of two communes, called Mouilleron-en-Pareds and Saint-Germain-l'Aiguiller. The main town is Mouilleron-en-Pareds. So, who was Georges Clemenceau?
Georges Benjamin Clemenceau was a French statesman, politician, physician and journalist, who became the Prime Minister of France during World War I. He first held office from 1906 to 1909, and then was elected again from 1917 to 1920. He was one of the principal architects of the Treaty of Versailles at the Paris Peace Conference of 1919. He was nicknamed the *Father of Victory* or *The Tiger* and took a harsh position against the defeated Germany, and the stand which he felt France should take.

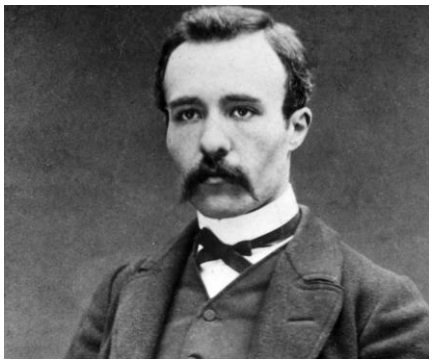
Mouilleron-en-Pareds, Vendee



Clemenceau birthplace

Clemenceau was a native of the Vendée region, born in 1841 to his physician father Benjamin Clemenceau and his mother Sophie Eucharie Gautrea, at Mouilleron-en-Pareds. During his youth Georges studied in the Lycée in Nantes, and then went to Paris to study medicine. He received his Doctor of Medicine in 1865, founded several literary magazines, and wrote many articles, most of which attacked the imperial regime of Napoleon III.

Clemenceau and others founded a journal, *Le Travail ("Work"),* which expressed views that were to characterize his future political actions. It was seized by the police, and Clemenceau was imprisoned for 73 days. Upon his release, he started a new paper, *Le Matin ("Morning"),* which was in turn seized by the authorities. Clemenceau soon left France for the United States when the imperial agents began cracking down on dissidents.

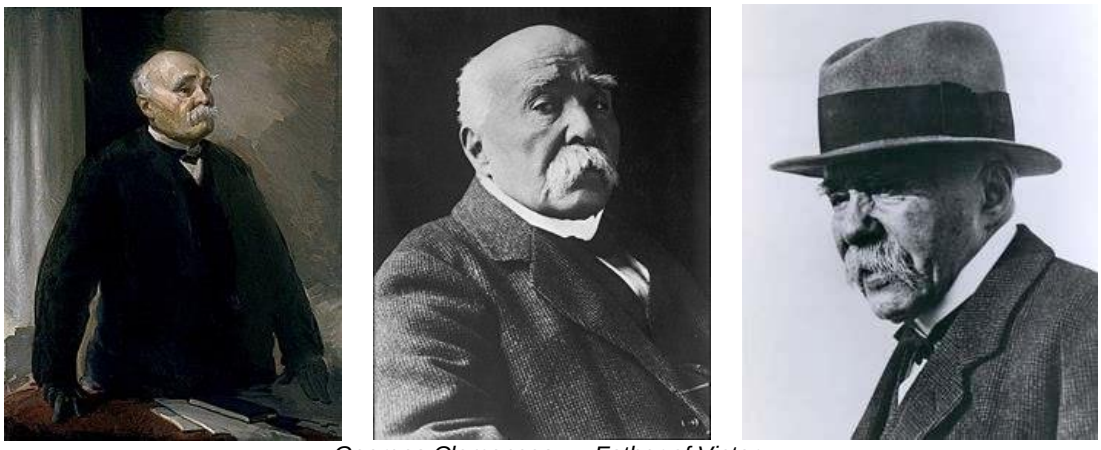


Georges Clemenceau – political activist

He worked in New York in the years 1865-69, following the American Civil War. He maintained a medical practice but spent much of his time on political journalism for a Parisian newspaper. He taught French at the home of Calvin Rood in Great Barrington, Massachusetts, and taught at a private girls' school in Stamford, Connecticut. In 1869, he married one of his students, Mary Eliza Plummer. She was the daughter of William Kelly Plummer and wife Harriet A. Taylor. Georges and Mary had three children together, two daughters and a son, before the marriage ended in a contentious divorce.
Clemenceau returned to Paris after the French defeat at the Battle of Sedan in 1870 during the Franco-Prussian War and the fall of the Second French Empire.
In 1876 Clemenceau returned to national politics and was elected to the Chamber of Deputies. His highly individual debating style, marked by a caustic wit, soon won him undisputed leadership of the radicals. Clemenceau possessed a genius for destructive criticism and won the appellation of the "*Tiger*" for his role in destroying Cabinets.
His hostility to the Franco-Russian Alliance so increased his unpopularity that in the French legislative elections of 1893, he was defeated for his seat in the Chamber of Deputies, after having held it continuously since 1876. After this defeat, Clemenceau confined his political activities to journalism for nearly a decade.
The miners' strike in the Pas de Calais after the Courrières mine disaster, which resulted in the death of more than one thousand persons, threatened widespread disorder in May 1906. Clemenceau had remained in the Chamber of Deputies, ordering the military against the strikers and repressing a wine-growers' strike in the Languedoc-Roussillon region. Clemenceau's speech to the Chamber of Deputies positioned him as the strong man of the day in French politics. When the Sarrien ministry resigned in October, Clemenceau became premier.
Clemenceau was defeated on 20 July 1909 in a discussion in the Chamber of Deputies on the state of the navy. Between 1909 and 1912, Clemenceau dedicated his time to travel, conferences and the treatment of an illness of his own, travelling to South America in 1910, to Brazil, Uruguay and Argentina.
At the outbreak of World War I in France in August 1914, Clemenceau's newspaper was one of the first to be censored by the government. He criticized the government for its lack of transparency and its ineffectiveness, while defending the patriotic union sacrée against the German Empire, and wielded considerable political influence.
In November 1917, at one of the darkest hours for the French war effort in World War I, Clemenceau was again appointed Prime Minister. Unlike his predecessors, he discouraged internal disagreement and called for peace among the senior politicians. This was a first, or at least for France.

Georges Clemenceau – Prime Minister of France – The Tiger

Clemenceau was also well received by the media, because they felt that France was in need of strong leadership. It was widely recognized that throughout the war he was never discouraged and never stopped believing that France could achieve total victory.
He made numerous visits to the front lines, risking his own life by insulting and threatening the German soldiers in person directly from the trenches. These visits, his speeches, and his verbal threats directly to the enemy impressed the soldiers and contributed to Clemenceau's title "*Père la Victoire" (Father of Victory).*
At the Paris Peace Conference of February 1919 it was decided that since the Conference was being held in France, Clemenceau would be the most appropriate President. He also spoke both English and French, the official languages of the Conference.
During the Conference an assassination attempt was made on Clemenceau by a disgruntled Frenchman, and the shot fired hit him between the ribs, just missing his vital organs. Too dangerous to remove, the bullet remained with him for the rest of his life.
The Treaty of Versailles was signed later that year in June 1919, and Clemenceau had to defend the Treaty against critics who viewed the compromises Clemenceau had negotiated as inadequate for French national interests. Clemenceau's main speech on the Treaty was delivered in September. He said that he knew the treaty was not perfect, but that the war had been fought by a coalition and therefore the treaty would express the lowest common denominator of those involved.
In 1919 France adopted a new electoral system. Clemenceau resigned as Prime Minister as soon as the presidential election was held in 1920 and took no further part in politics.
Clemenceau believed in human perfectibility through scientific knowledge and moral effort. He firmly upheld liberty and natural rights and was influenced by the ideas of Auguste Comte, J. S. Mill, and Charles Darwin.



Georges Clemenceau – Father of Victory

He continued writing travelling and lecturing and wrote his memoirs. His interests however were not confined to politics and journalism. Clemenceau was a close friend of the artist Claude Monet. He knew the importance of exercise and practiced fencing every morning

even when he was an old man. He also took an intense interest in Japanese art, especially Japanese ceramics, and amassed a large collection of pieces.
Georges Benjamin Clemenceau died in Paris on 24 November 1929 aged 88 and was buried at Mouchamps. His memoirs of the war and the peace settlement were published after his death.
Some of his quotes for thought:
"I'm more interested in the lives of those who failed because it shows they tried to beat their limits."
"It's better to lose than to win on the same side as villains".

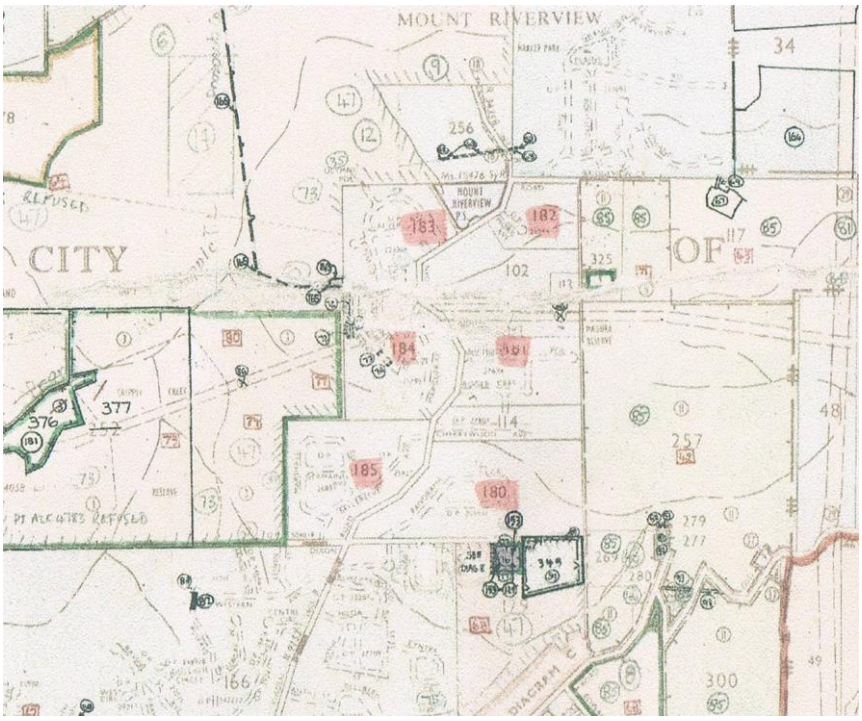
Origins of Mt Riverview

Mt Riverview is located to the north east of Blaxland, and to the north of Glenbrook, on the edge of the Blue Mountains escarpment to the west of the Nepean River, overlooking Emu Plains and Penrith. Today it is a residential town which offers walking opportunities through its various recreational reserves, including Harley Park, walking tracks to Winmalee and lookouts with beautiful scenic views. It also features a small shopping centre, a school, tennis court, woodcraft centre, churches, fire brigade and other community facilities.
However, the locality had remained untouched Crown land until 1907, when it was subdivided into six lots (180 to 185) varying in size from 35 acres to 52 acres. In 1908 Riverview Lookout was featured on early maps, but land in the area was not offered up for sale until 1920.
The first block of land was not sold until then and was acquired by Mr. Chas R Grandquist (Lot 181). In 1923 the last lot of land was purchased (Lot 184).



Extract of Parish of Strathdon

- Lot 180 – GC Singleton

- Lot 181 - Chas R Grandquist
- Lot 182 - BF Cummins, then Ferguson & Hall
- Lot 183 – Tomkins, then Blue Mountains City Council
- Lot 184 - F.T. Buxell, then CM Curvers
- Lot 185 – Henry Leahy

As early as 1914, according to a map from that year, an area was classified as a "Special Area being held for Returned Soldiers". The gully to the west of Blackbutt Circle was deemed suitable land for returned soldiers to undertake beekeeping activities.
Bernhard Cummins was also one of the first purchasers in the 1920s. He set up a lookout in a tree on his property at the end of what is now Bunbinla Avenue, which he named Mount Riverview Lookout. For a small cost, visitors could climb the tree via a set of steps/stairs and obtain a view over the Penrith and Emu Plains Valley. He also ran a tearoom and art gallery nearby. However, the complex was destroyed by fires in 1944. The location is now the site of the scout hall.
The Crown land adjoining Cummings property was declared "for public recreation." Cummins then sold the land in 1952 to a trust for the All Services Welfare Society, with a view to creating the Mt Riverview Village, for ex-servicemen, women, and their families. The village was to be a showpiece built over about 5 years, incorporating a community centre, school, two churches, 14 shops, a club, service station, and kindergarten, as well as 800 houses in a residential area. Each house would have a half acre of land and the streets would be lined with orange trees and feature dry stone walls. As the project had the backing of the Legion, blocks of land were keenly sought after in the new estate. This plan did not eventuate, as the owner of the land, Ian Ferguson, was declared bankrupt. Any people who had paid money for the land already had nothing to show for their purchase.
Bellereeve Avenue was established and building lots developed in 1953, Marshall Road and Germaine Road in 1955. In 1956, the development from the southern side of Bunbinla Avenue to Cherrywood Avenue took place. In 1957, Anthony Avenue and Marguerite Avenue were created. Marguerite Avenue was named after the wife of John Curvers, a Dutchman who owned the land at the time. Panorama Crescent and Dixon Road followed in 1960, and Curvers Drive in 1961.
In the early 1960s Charles Degotardi purchased and subdivided land he called the Grandview Estate, which was completed in September 1964. It involved all of the development north of Rusden Road, including Emu Plains Road and Grandview Drive.
In 1976 the establishment of the Blackbutt Circle Estate took place, a part of which the Department of Education purchased for the school.

Harley Park

View over Penrith Valley

The main purchase of school property was made in September 1959, when the Blue Mountains City Council purchased Lot 183 from Clive and Errol Tompkins, sons of the original owner. The Council sold a portion of this land to the Department of Education in February 1962 for a future school site, although the school was not built until 1971. It operated from then but was not officially opened until 1974. The remaining portion of land

was subdivided by the Council in 1964, making provision for shops, a water tower, recreation facilities and community services, and developing the remainder for housing.

Decorated water tower

Mt Riverview School

The town name was not gazetted until 1964. This followed an appeal by the local progress association to Blue Mountains City Council, before which the town was considered as part of Blaxland.

Blue Mountain Education & Resource Trust, Lawson

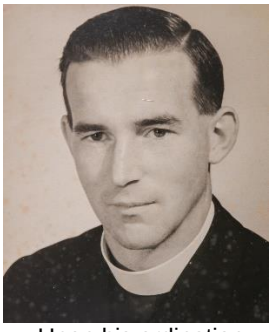
The Blue Mountain Education and Resource Trust was established in 2008 by the Rev Fr Eugene Stockton, based at Lawson, the original "Blue Mountain". The name, Blue Mountain [singular], was taken from the original name for the village of Lawson, where Fr Stockton grew up.

The Trust was set up to advance matters of religious enquiry, religious studies, Aboriginal studies, education and research for the local community and the Australian community at large. The logo of the Trust is a stylised representation of an engraving of concentric circles carved by Aboriginal people found at Woodford.
The objects of the Trust include:
1. To review and continue the research initiated by Fr Stockton in religious studies, Aboriginal studies and archaeology.
2. An emphasis on arousing awareness and collaborative participation to:

- Disseminate knowledge and ideas on the above and related topics.
- To host forums, talks and conferences for the advancement of matters of religious and social concern. Engage in interfaith, cross-cultural and interdisciplinary dialogue.
- Publish talks, papers and books, especially those whose authors are members of, or working with the local community.

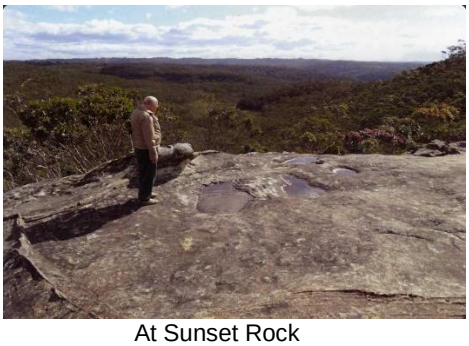
Eugene Stockton is the Founder and Chairperson for the Trust, and is a priest-archaeologist, still living at Lawson. As a priest of the Diocese of Parramatta (NSW), he was a longtime seminary lecturer and served in parish, university and Aboriginal ministries. He has degrees in Divinity, Philosophy and Sacred Scripture. As an archaeologist he has engaged in

excavations and surveys in many parts of the Middle East and Australia. These varied interests have led to many publications, especially in the pursuit of an Australian spirituality. Born in 1934, Eugene is named for his mother's former employer, St Columba's Rector, Monsignor Eugene Brauer. His father had died soon after his birth, and his mother worked to raise her children. As a child Eugene spent many hours exploring the bush near his home, from whence his love of archaeology and Aboriginal culture arose. He became a regular member of archaeological digs, gaining valuable experience. By the time he was ordained into the priesthood in he was conducting his own digs.



Upon his ordination

In more recent years

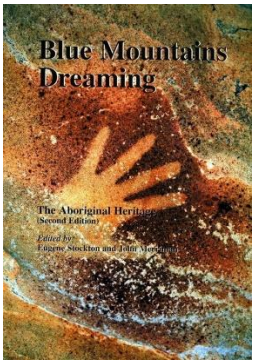


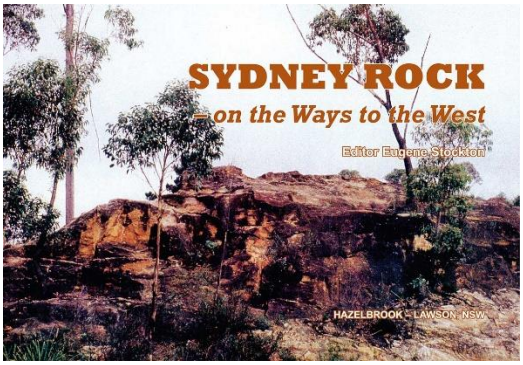
At Sunset Rock

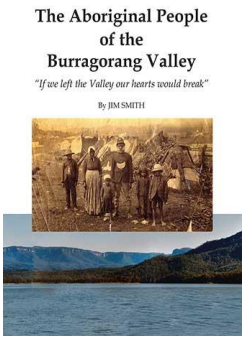
In later years he studied at St Columba's Minor Seminary in Springwood, and at St Patrick's Seminary near Manly. He was ordained in St Mary's Cathedral on 8 March 1958.He worked as Aboriginal Chaplain in the Archdiocese of Sydney and became interested in Aboriginal spiritualty and history, directing his talents to the study of local archaeology.
An early publication was "Blue Mountains Dreaming". Others include:

- "Arabian Cult Stones" 1982, Landmarks;
- "A Spiritual Search in a Southern Land" 1990;
- "The Aboriginal gift: Spirituality for a Nation" 1995;
- "Aboriginal Church Paintings" 2010;
- "Sydney Rock – on the Ways to the West"; and
- "This Tortuous Ridge – Lawson to Linden".

The Trust also publishes books for others such as "The Aboriginal people of the Burragorang Valley" 2016 by Jim Smith.







Following 60 years in the Ministry, Eugene now lives in the house he built for his mother 50 years ago and enjoys the company of his family and friends who still live in the district, retired in the same area in which he grew up, although limiting his forays into mainstream life.
He retired in order to live the life of a "hermit", a life of key times of silence and solitude in prayer, not necessarily living away from the world.
Today he now spends most of his time expressing this through writing. His latest book is "The Deep Within: Towards an Archetypal Theology".

He is an advocate for care for the earth and the environment, leading meditation days in the Blue Mountains, when participants spend time in the bush reflecting on their relationship with God and the natural world.
The Secretary and Executive Officer for the Trust is Allan Walsh. Allan has had a lifetime involvement in the printing and publishing industry and in his retirement devotes much of his time, energy and skills to the work of the Trust — from the design, typesetting and layout of our books to handling orders and queries from customers. Allan is the person to contact with queries about the Trust.
Maureen Anderson is the Treasurer, Brian Coyne is the Webmaster and Online Editor, and Laurie Woods is a Trustee.

The Registered Office of the Trust is at 254 Great Western Highway, Lawson, NSW Australia 2783.
Telephone: 02 4759 1034
Secretary: (02) 4758 7049

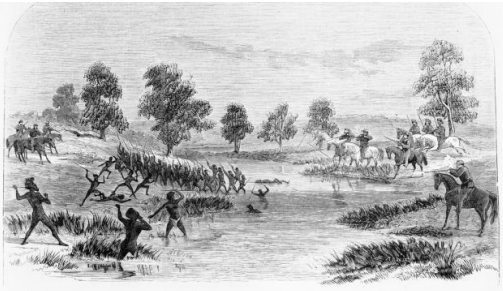
Massacres Mapping: University of Newcastle

More than 150 Aboriginal and Torres Strait islander massacres that are alleged to have occurred during the spread of settlement in Australia are now documented in an online digital map, created by University of Newcastle researchers in 2017.
The online tool records the massacre site locations, available details of the individual massacres and the sources corroborating evidence of the massacres. The study initially covered frontier violence that occurred from the arrival of the first fleet in 1788 to the colonisation of the Northern Territory, South Australia and remote Queensland up to 1930.
Developed by University of Newcastle historian, Professor Lyndall Ryan, a member of the Centre for 21st Century Humanities and the Centre for the History of Violence, the map is a significant step in the recognition of the periods of violence in Australia's history.
"*The biggest argument in the scholarship of massacre is 'how do we know it happened?"* Professor Ryan said.
Most massacres took place in secret and were designed to not be discovered, so finding evidence of them is a major challenge. This digital tool brings significant historical information out of the depths of archives, bringing it to life in an accessible and visual format. With this map we've developed a template to identify massacres and a process to corroborate disparate sources. They include settler diaries, newspaper reports, Aboriginal evidence and archives from State and Federal repositories. The map pulls the sources together to form a coherent list of frontier massacres spanning 80 years across Eastern Australia.
The project was funded over a four year period by an Australian Research Council (ARC) grant investigating violence on the Australian Colonial Frontier, 1788-1960.
In 2017 Professor Ryan said:
So far we have mapped Tasmania, Victoria, most of NSW and Queensland and have about 150 massacres listed at present. It's likely to end up being more than 200 across an 80-year period from settlement to 1872 as we progress the map further.
There were more than 60 massacres in Victoria across 15 years; and 30 massacres along the NSW/Queensland border between 1840 to 1850. The map shows there were very intense periods of violence in particular regions. We are still working on mapping the rest of Australia and hope to have that complete within two years.

The publicly available map is to be found at:
https://c21ch.newcastle.edu.au/colonialmassacres
The website is also a contact point for the public to contribute historical information they may have about massacres to the project.
Professor Ryan explained further:
At present it's a preliminary list as we expect to find more massacres as people come forward with more evidence …….. In Australia very few perpetrators were brought to justice. I'm a historian so it's not my intention to bring people to justice with this map. However, we do know the impact of massacre reverberates across the generations. When I visit Aboriginal communities today the first thing they do is take you to the massacre site.

The University now reports that as of July 2018 the number of Aboriginal and Torres Strait Islander massacres verified and recorded on the online digital map has risen to 240, following an influx of valuable information and evidence from regional communities around Australia.
The response from the Australian public had been overwhelmingly positive since the launch of stage one of the research project in 2017.
Professor Ryan comments that:
The high level of community interest and engagement comes from regional Australia, where most of the incidents took place, suggesting that people in the regions really do want to know what happened …… It's important to document these incidents because they resolve the long standing question: how violent was the colonial frontier? The map shows that massacre was widespread and affected hundreds of Aboriginal and Torres Strait Islander communities.
Massacres of Aboriginal people were typically carried out by hunting parties of soldiers, armed settlers, mounted police and/or native police with six to 40 men in each party, averaging eight to 10 men.
The evidence has found that characteristics of massacres varied by time and place, and the weapons used were swords, pistols, muskets, bayonets, cannons, carbines, repeating rifles and strychnine poison. Aboriginal peoples' weapons were spears, waddies and hatchets.
Some Aboriginal communities asked the researchers not to pinpoint the exact location of where their ancestors were killed, so the map records an approximate site instead.
The research team found many major massacres happened alongside rivers, but some battle sites are now under dams, reservoirs and weirs.
Professor Ryan said.
That's where the majority of Aboriginal people were, that was where the good pastoral land was and that's where the settlers wanted to be.
Ian Evans (OAM, PhD) historian, makes comments and offers an alternative point of view to the news coming from the University of Newcastle's massacre map.
The way in which the map's records have been set up has produced a shocking result. I cannot speak for the whole of Australia on this matter but I do have some knowledge of the circumstances in Tasmania in the first half of the 19th century.



Artist's impression: Rufus River 1841

Artist's impression: Musgrave Range 1879

A brief examination of other events recorded on the map reveals that it is not a reasonable and nuanced depiction of conflict between Aborigines and Europeans in the 19th century. The map throws all responsibility for Aboriginal deaths onto European settlers and the Colonial administration. An independent audit should be arranged to check the validity of the map's claims …….. There was bitter conflict and there were atrocities on both sides.

Patsy Moppett

Editor's note: There has been some considerable discussion online about this Project, and the accuracy and intentions of its findings. Readers are advised to research the discussion and form their own opinions. One way to assist in the authentication of the Project results is to contribute to the information collected to date, as suggested by the research team.
The research team welcomes suggestions for additions or modifications to the site, the data and the map. People can visit the website and click the contact tab, where they can provide details via a form; or they can email colonialfrontier@newcastle.edu.au and attach any relevant documents.

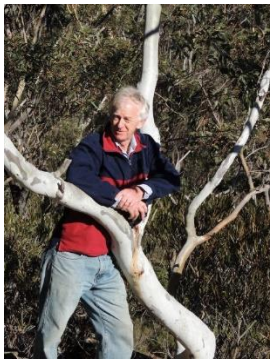
Book Launch: Padley of the Pedestal – James McMillan Padley

A launch of "*Padley of the Pedestal - James McMillan Padley*", by local author Keith Painter, will be held at 3pm on Friday 19th October 2018 at Lithgow Library Learning Centre.
It will be followed the next day by a rededication of the restored Padley monument at Hassans Walls Lookout, on the morning of Saturday 20th October 2018. (The 20th will be the centenary of the death of James Padley.)
Some descendants of James's brother George (the only one who had children) will be attending.

James Padley



The author

Padley Pedestal

James McMillan Padley was the driving force behind the Lithgow Progress Association in the early 1900s and the chief instigator of development of visitor facilities at Hassans Walls Lookout. He had a furniture shop in Lithgow from 1902 until his death in 1918.

Further information should be available by mid-September and will be distributed by BMACHO. You can also contact the Library, or the author at greatguides@mountainmistbooks.com

The Technical Side
Allowing old buildings to "breathe"

Modern buildings rely on impervious outer layers to exclude moisture, or other barriers which prevent moisture entering the fabric and creating damage.
In old buildings, the cobb, bricks or stones were generally bonded with weak and porous mortars made of lime/sand, earth, or earth/lime mortars. External walls constructed with these materials were rendered with lime render, and then often limewashed so the structure was able to "breathe". When it rained, moisture was absorbed a few millimetres into the external surface but was able to evaporate when the rain stopped, helped by the drying effects of the sun and wind. The surface had a rough texture which maximised the surface area and increased evaporation.
The "breathing" amounts simply to the action of moisture entering the wall which should be able to evaporate.
Thatched roofs over mud walls were built to direct water away from the building, and the construction materials could take in and let out moisture due to their mature, as long as the building location was on a well-drained site.
Tiles, shingles and slate roofs allowed for the movement of air between each component to allow for drying and movement.
Internally, walls were plastered with lime and finished with simple breathable paints. The limewash could be decorated with natural pigments. Any excess internal humidity was dispersed via chimneys, vents or simply draughts, or absorbed by the breathable surfaces.
In addition, a kitchen stove or open fire burnt from autumn until spring, drawing air through the home and keeping internal surfaces dry. Provided the building was maintained, the structure remained essentially dry.

In recent times builders have tried to apply modern techniques to breathing structures on traditional buildings. These cement renders, plastic paints, waterproof sealants, damp proof membranes and insulation materials, where suitable for contemporary buildings, can act as a barrier to the older building's natural ability to breathe. The mix of technologies traps water within porous materials and exacerbates the very problems that they are trying to resolve.
A certain amount of moisture in an old wall is acceptable, simply because it can evaporate away easily. However, if moisture increases excessively within a masonry wall, the likelihood of decay also increases. Timbers can occur in solid masonry walls as lintels over windows or doorways, as beams or joist ends etc. If the moisture content increases within these timber elements it can become subject to wet and dry rot. In the masonry the mortar will also become susceptible if the moisture levels persist.

When repairing an old building, such techniques should be understood to obtain a successful outcome:

- Paint systems and external renders – must be able to allow moisture through but also allow it to evaporate. Sometimes this may result in a breakdown of the surface finish and require re painting/rendering. Sacrificial renders and paints are used in this instance, which need regular monitoring and replacement. Generally, no synthetic modern materials should be applied to the masonry or plaster surfaces of historic buildings.
- Pointing - If an old wall is repointed with a modern cement mortar, water will still be able to penetrate the wall through the masonry or cracks in the mortar but will be unable to evaporate back through the mortar and will be forced back out through the face of the masonry. This can lead to an increased decay of the masonry. A soft lime mortar with lower strength to the masonry should be used for pointing. The mortar will decay and may appear to be sacrificial, but it is cheaper and easier to re-point at intervals with the lime mortar rather than having to replace whole bricks or blocks of stone.
- Internal plaster and finishes - if the exterior surface of a building is sealed to prevent moisture intrusion, and the internal surface has been left with the original lime plaster then moisture which is unable to evaporate to the outside will find its way internally with an increase in dampness and humidity, which has a cooling effect and represents a considerable heat loss. If the internal wall is also sealed this will only act to further trap moisture and either force it further upwards in the building affecting the plaster above, or down to affect foundations.

Other instances where dampness and moisture is able to build up against or within a wall include where soil or leaves have built up above the floor level and dampness can be transmitted into the wall and into the house; hard-surfaced paths which allow rain to splash up the wall or which trap damp in the soil near the wall; and broken, leaking or blocked rainwater pipes which continually wet the wall and adjacent ground surface. It can often be a simple matter to level soil, remove litter, and fix the stormwater fixtures.

Under normal circumstances, old buildings will work well if they are maintained in the same way as they were constructed. All external and internal finished should be permeable. Where the application of impermeable finished has been undertaken, and once deterioration is observed, remedial action is required which may involve the removal of such materials and replacement with porous surface treatments. This must be undertaken with care to avoid further damage to the building, and compromises may be required. Paints can be scraped off carefully, renders can be chipped off in small sections, mortars can sometimes be cut out. All these techniques risk damage to the main masonry fabric. Where a complete replacement is not possible the wall should be kept as dry as possible and well ventilated to prevent moisture entering between the external and internal surfaces.

If you are dealing with an old building, professional advice is readily available from a variety of publications, and suitably qualified architects, builders and tradesmen, experienced in the restoration of historic buildings.

Community events & updates

Successful grant funding

On Monday, 13 August 2018 Blue Mountains based Member of the Legislative Council Shayne Mallard MP announced that the Blue Mountains region has been the successful recipient of four key heritage grants in the NSW Government "Heritage Near Me Activation Grants", saying:
"The four grants valued at $375,000 are for projects including conservation of the Explorers Tree at Katoomba, the Woodford Reserve at Woodford, restoration of old Mt Wilson Public School and opening the heritage building on Parke St Katoomba, which all represent important elements of the local heritage that can now be preserved for future generations."

The projects are elaborated upon as follows:

- **Project Name: Pulpit Hill Precinct (including Explorers Tree) Interpretation Project**: The Pulpit Hill Precinct contains the "Explorer's marked tree", convict grave stone arrangements and natural area landscape values. This Interpretation Project will ensure opportunities for community engagement, appreciation and enjoyment of the significant heritage values which are provided at Pulpit Hill, with a focus on conservation of the significance elements. Total approved: $100,000.00.
- **Project Name: Woodford Reserve and Grounds – Interpretation, Access and Conservation**: Woodford Reserve has significant European, Aboriginal and landscape values - this project will change people's perception of this place with appropriate access which has not been available, with a comprehensive interpretation of the Reserve and its immediate environs fragmented through subdivision and with conservation of its highly significant elements. Total Approved: $75,000.00.
- **Project Name: Restoration of Old Mt Wilson School**: The undertaking of urgent structural repairs to conserve the historic buildings of the Old Mt Wilson School (home of the Mt Wilson & Mt Irvine Historical Society archives) and to ensure safe public access and new adaptive uses as part of the Mt Wilson Community Precinct. Restoration works will provide increased community amenities and access to heritage space. Total Approved: $100,000.00.
- **Project Name: Mountain Culture opens in heritage building on Parke St, Katoomba**: Open a heritage building to the public as a community space in Katoomba, located in the UNESCO World Heritage Blue Mountains, giving the town the opportunity to further cement itself as a tourist destination, with the building supported economically by a microbrewery, restaurant and art space. Total Approved: $100,000.00.

HERITAGE NEAR ME

Mr Mallard said: *"By encouraging the community to use and enjoy our heritage places we ensure they are valued and protected for future generations".*
This year marks the third round of Heritage Near Me Activation Grants. Over the three years, a total of $8 million has been awarded to support 107 local heritage projects across the state.
BMACHO wrote supporting letters for the first three of the above grants, and congratulates all four recipients, wishing them well in their endeavours. *Patsy Moppett*

History Week 2018

History Week is the annual, state-wide celebration of history organised by the History Council of New South Wales (HCNSW). Initiated by the HCNSW in 1997, History Week is a fantastic opportunity for member organisations, large and small, throughout NSW to engage and educate the community about the vitality, diversity and meaning of history and its practice.
The History Council of NSW's flagship festival, History Week 2018: *Life and Death* (1-9 September), will explore life's defining moments and the impact of death on communities across time.
The theme of *Life and Death* will include:

- life's milestones and how different cultures come to terms with death.
- how we commemorate people's lives.
- what rituals and burial practices reveal about our relationship with and understanding of life and death.
- how death has been feared, used as a form of punishment and shattered communities.
- how communities have rebuilt after loss, shared stories across generations and inspired remembrance and creative expression.

In 2018, History Week commences on 31 August with the NSW Premier's History Awards**.** Another feature event is the Annual History Lecture and Awards on the night of 4 September. Overall, there are close to 100 events being staged throughout NSW in History Week.
Blue Mountains events include:
Hidden in Plain View: The Aboriginal people of coastal Sydney: Saturday 1 September 2018, Blackheath Public School Hall:
Aboriginal peoples did not disappear or die out after European arrival in 1788, but they were left out of historical narratives. Historian and archaeologist Dr Paul Irish discusses this poorly understood period of history and brings Aboriginal lives and culture back into view.
The Final Journey: making tracks to the last station: 8-9 September 2018, Valley Heights Locomotive Depot Heritage Museum.
Valley Heights Locomotive Depot Heritage Museum has a number of special activities and exhibits to coincide with History Week 2018: exhibits on transportation of the deceased, themed photographic displays, other related exhibits, local stories and 20 minute steam train rides.

The complete interactive program of History Week events is available on the History Council website: www.events.historyweek.com.au

Mount St Marys, Katoomba - update

Further to BMACHO's article on Mount St Mary's at Katoomba, Newsletter No. 55, March-April 2018, this significant property is once again on the market.
Commercial Real Estate declares: "…. *it has been vacant for the last two decades and has become popular among abandoned-building enthusiasts and vandals*."
The current owner acquired the property in 2014 and has apparently made efforts to restore the building and preserve some of its historic features.
Although there have been numerous attempts to sell the site in recent years, no success has been forthcoming. A development consent had previously been approved through Blue Mountains City Council for the restoration of the existing building and construction of 122 apartments, however this has now lapsed.

Listed on the Blue Mountains Local Environmental Plan 2015, Schedule 5, and the NSW State Heritage Register, the inventory sheet states:
"The physical location, expansive modified landscape setting, and imposing complex of ecclesiastical buildings dominated by a tower, lends Mount St Mary's great aesthetic significance in the cultural landscapes of the Blue Mountains. It remains a visually significant landmark at the eastern gateway to Katoomba and has great social significance for the former religious community, students, and wider Blue Mountains communities."
It is to be hoped that a buyer will be forthcoming in the near future to develop this significant feature of Katoomba's history. *Patsy Moppett*

Fernhill, Mulgoa - update

Further to the BMACHO article on Fernhill at Mulgoa, Newsletter issue No. 51, July-August 2017, an update is provided on the development of the property.
As is known, Rookwood General Cemeteries Reserve Trust had taken up an option to development the 384-hectare site into a cemetery to replace the current Rookwood Cemetery.
However, it seems that the Trust has had to walk away from the deal after failing to gain loan and Ministerial approval within its due diligence period.

The Rookwood Trust had agreed to purchase the historic Mulgoa property in March 2018 for $30 million, but their conditional offer lapsed, relating also to Penrith City Council's concerns of the impact of a cemetery on the heritage landscape surrounding the 1840s-built mansion. In a recent statement Rookwood General Cemeteries Reserve Trust chief executive George Simpson said "*with no formal approval from the Minister at this time RGCRT is unable to proceed with the purchase of the Fernhill estate.*
The Trust itself had originally stated that they were not going ahead if the community did not want a cemetery at Fernhill, and the project would be dropped".

The estate is more recently best known as the former home of property tycoon Warren Anderson before bankruptcy forced him out and the keys were handed over in 2011 to his financier Angas Securities. Anderson told The Australian he had written letters to politicians at all levels of government in an effort to save the estate from being turned into a cemetery.
In the meantime, the NSW government has purchased the site for $27.25 million. The government is yet to announce what they plan to do with the property or which state department will manage it.
A spokesperson from the Department of Planning and Environment said the Department needed to assess legislative and management changes required to enable it to be opened to public access.
"The Department of Planning and Environment will work to find an appropriate state agency to develop the management plans necessary to open the site for public access," the spokesman said.
The local community, through the Mulgoa Progress Association and Warren Anderson, have applauded this public ownership move.
The RGCRT will now need to find another suitable area large enough for their and Sydney's future needs.
It will be a nervous wait on the government's intentions for the place, given the green light given to the Badgery's Creek airport, and the subsequent residential and transport demands of such a proposal in the western Sydney area. *Patsy Moppett*

National Trust of Australia - Blue Mountains Branch

The Blue Mountains Branch of the National Trust covers an area stretching from Lapstone to Mt Victoria. The Branch Committee is elected each year at the AGM and currently comprises thirteen members, including the Chairman, Secretary, and Treasurer. All these people are volunteers, who give their time furthering the aim of the National Trust to "*preserve our natural and built heritage*". The tasks which they carry out towards this aim are many and varied including taking the necessary action in response to developments in the Blue Mountains which may threaten that heritage. They organise activities with an historical or heritage theme such as walks and bus trips, and undertake fund raising street stalls, which also provide social opportunities for members. These activities also raise funds for the Trust.

The funds raised from these activities are used to support the Trust's three Blue Mountains properties, Everglades Historic House and Gardens, the Woodford Academy and Norman Lindsay Gallery, as well as the general activities of the Trust. The group welcomes volunteers willing to serve on their committee, to help with the organising of their various activities, and encourages members and the community to attend their functions.
Some activities planned for the coming months include:

- HAWKESBURY ARTIST'S TRAIL - DAY BUS TRIP: Saturday 22nd September.
- TOUR TO MAITLAND, MORPETH AND SURROUNDS: Tuesday 6th November to Thursday 8th November.
- NORMAN LINDSAY GALLERY: Puddin' Day, Sunday 14th October.

For more information on their activities or to join the committee please email bmnt1814@gmail.com or contact Rhona on 02 4757 2424.

Blue Mountains Cultural Centre

Exhibition: Blue Mountains Botanica

View exhibitions and join them for a diverse program of storytelling, workshops, walks & talks at the Blue Mountains Cultural Centre and Blue Mountains Botanic Garden, Mt Tomah. Developed in partnership with the Royal Botanic Gardens and Domain Trust *Blue Mountains Botanica* delves into the history of botanical exploration of the Blue Mountains and features historical botanical illustrations, plant specimens and archival material drawn from the National Herbarium of NSW, the Daniel Solander Library and the Blue Mountains Botanic Garden, Mount Tomah.
25 August – 14 October 2018

For further information on the program, contact:

Conservation Management Strategy for Section of Cox's Road

Blue Mountains City Council announced recently that a Conservation Management Strategy (CMS) has been completed for a significant section of the historic Cox's Road at Linden. The Strategy sets out a framework for the appropriate care, conservation and ongoing use of remnants of the Road, to minimize day to day threats.
This part of the route lies between bushland and the rear yards of private properties and has provided access into natural areas such as the Paradise Pool and other bushland features. However, it has also presented privacy and security issues for adjacent residents.
The CMS will guide future activities in the vicinity, including the development of an interpretation plan, archival recording of historic fabric, and re-routing the existing bush access trail. This will enable protection of the remaining historic features of the Cox's Road, whilst retaining safe and environmentally appropriate access to the bushland sites and protecting the privacy and security of nearby residents.

The sensitivities of the Aboriginal community regarding the role the road played in the European occupation of the Blue Mountains will be recognized, and thorough consultation undertaken.
Council worked with the Blue Mountains Region of NPWS, the NSW Rural Fire Service, Traditional Owners, other State agencies, along with the Linden Residents' Association, to develop the Strategy.

Stakeholders celebrate the recognition of the significance of Cox's Road in a CMP

Remnants of this Linden section of the Cox's Road route

The Conservation Management Strategy was supported by a $10,000 grant from the NSW Office of Environment & Heritage and the NSW Heritage Council, with Council contributing about $15,000 towards the Plan. *Patsy Moppett*

BMACHO Workshops

BMACHO has recently received funding from Blue Mountains City Council to hold workshops during the coming 6 months and has sought to determine topics which might benefit members relating to their group activities, records and collections, successfully addressing the positives and negatives of the BMACHO membership.

The committee has resolved to hold the first workshop on 24 October 2018 at Wentworth Falls, dealing with *"Archival appraisal and description",* and a more formal announcement will be confirmed after our Committee Meeting on 3rd September 2018.
We are aware that a number of our members are very keen to hold a "*Practical writing of grant applications*" workshop and this is being considered.
In general, and to date, the following topics have been suggested:

- Archival appraisal and description
- The practical side of writing grant applications
- Cataloguing/managing records and collections
- Accessioning
- Assessing the significance of collections
- Storage of records and collections
- "Connecting up" - for not-for-profit member organisations, who may benefit from significant discounts. Establishing and managing your website.
- The Greater Blue Mountains Heritage Trail - how it can be managed better to benefit members.
- Sharing of positive and successful methodologies with other member organisations.

BMACHO is now seeking feedback from members on the following questions:

- What topic do you find most beneficial?
- What services are missing?
- Where does your organisation struggle?
- What are the main heritage concerns with regard to your records or collections?
- Do you have any positive experiences to share which might assist other organisations? Do any of these experiences fit into the suggested workshop themes?

Places in each workshop will be limited, and preference for attendance will be for the BMACHO membership. However, the public will also be welcome should numbers allow.
Through these workshops, BMACHO is hoping to complement the workshops currently planned by Blue Mountains City Council's museums advisory Service (see below).

BMACHO Committee

Feedback can be provided via the BMACHO email address: bmacho.heritage@gmail.com

Blue Mountains Workshop: Muse

Responding to interests and concerns expressed during this year through meetings, visits, current status review and emails Gay Hendriksen, Museums Advisor to Blue Mountains City Council, has developed what she hopes will be a useful practical workshop series - *Muse.*

The free *Muse* workshop series is part of the museum advisor service provided by Blue Mountains City Council and Museums & Galleries NSW.
The series will provide tools, resources and skills development for regional museums, archives, library and gallery sector in the Blue Mountains.
To be eligible for this program you need to be a member of a regional museum, archive, library and gallery or associated organisation in the Blue Mountains region.

The first workshop day will be jam packed, to be held on Tuesday 11th September 2018 starting at 9am at 30 Parke Street, Katoomba:

- Brad Moore, BMCC Aboriginal Liason officer will give a brief overview of Council's perspective,
- Elizabeth Hadlow, senior conservator at State archives will be talking paper conservation,
- Kate Chidlow, Conservator at MAAS will talk textile conservation, storage and display and
- Gay will follow up with Registration and cataloguing, looking at the EHive online tool.

This will be followed by a plenary and information share which was so successful at the meet and greet earlier in the year.
The sessions are limited in number so if you don't make it to the list please email Gay and she will put you on the waiting list.

Note: a further workshop is scheduled for 6th November 2018. Information will be available from Gay closer to the date.

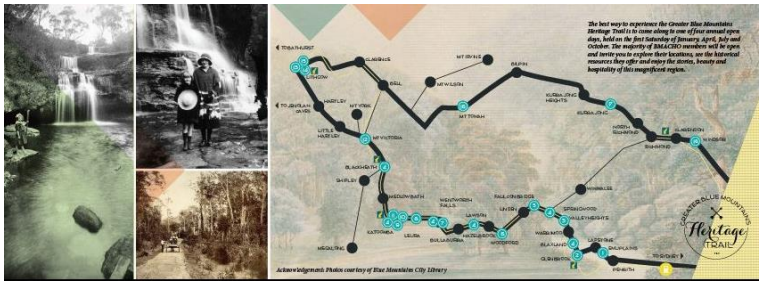
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.
BMACHO is planning a review of the operation of the Trail over the coming months, with a view to the issue of the next brochure in 2019. Your feedback will be most welcome – see Editorial on page 3.

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au

For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2018-2019 (from March 2018) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett. Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. Content does not necessarily represent or reflect the views and opinions of BMACHO, its committee or its members. If errors are found feedback is most welcome.

The Windmill in Australia

In Australia, the windmill is a rural icon, associated with agriculture, the outback and the arid Australian landscape. But its origins go way back into antiquity, and in many countries in Europe they are conserved as a museum object or heritage item rather than a working machine.

A windmill is a machine that converts the energy of wind into usable energy by means of rotating vanes called sails or blades. Centuries ago, windmills were used to mill grain, pump water, or both. The majority of modern windmills take the form of wind turbines used to generate electricity, or wind pumps used to pump water, either for land drainage or to extract groundwater.

Colonial Sydney

Early development

The Greek engineer Heron of Alexandria in the first century presents the earliest known instance of using a wind-driven wheel to power a machine. Another early example of a wind-driven wheel was the prayer wheel, which has been used in Tibet and China since the fourth century.

Although "sails" had been used to move ships at sea, it was the Persians who converted the use of wind for grinding grain between 500 and 900 A.D. They attached several "sails" to a vertical shaft that was connected to a grind-stone or pump, housed in a building.

Although early windmills were mounted horizontally, it was eventually developed into a vertical tower structure, as in Persia. By mounting the mill this way, the sails were able to

rotate to face the wind direction - an essential requirement for windmills to operate economically where wind directions are variable.
Wind pumps were used to pump water since at least the 9th century in what is now Afghanistan, and in Iran and Pakistan. The use of wind pumps became widespread across the Muslim world and later spread to China and India.
Windmills first appeared in Europe at about the time of the Crusades (1096-1270) but the design was different to the Persian model. By the end of the 13th century the mill body was being made of masonry, being common in Great Britain and English-speaking countries of the former British Empire, Denmark, and Germany but rare in other places. By the 14th century windmills became popular in Europe, where the total number of wind-powered mills was estimated to have been around 200,000 at the peak in 1850, which is modest compared to some 500,000 waterwheels. Water windmills were applied in regions where there was too little water, where rivers froze in winter and in flat lands where the flow of the river was too slow to provide the required power.

Spain

Netherlands

USA

Windmills were later used extensively in Europe, particularly in the Netherlands and the East Anglia area of Great Britain, from the late Middle Ages onwards, to drain land for agricultural or building purposes. It is said that “windmills built the Netherlands”, where they were used to pump water from the land into canals that took the water back to the sea. Without these windmills, parts of the Netherlands would still be flooded, and farmers would never have grown fruit, vegetables and tulips.
However, the industrial revolution saw wind and water power replaced by steam as the primary industrial energy source, and eventually by internal combustion engines. In recent years windmill technology is making a comeback and the wind turbine is being touted as an important alternative to the use of fossil fuels in the future.
The windmill as we know it in Australia, the American windmill, or wind engine, was invented by the American Daniel Halladay in 1854 and was used mostly for lifting water from wells. Larger versions were also used for sawing wood, chopping hay, and shelling and grinding grain. In early California and some other states, the windmill was part of a self-contained domestic water system which included a hand-dug well and a wooden water tower supporting a redwood tank enclosed by wooden siding known as a tankhouse. During the late 19th century steel blades and steel towers replaced wooden construction.
These wind pumps were and are still used extensively on agricultural properties in the United States, Canada, Southern Africa, and Australia. They feature a large number of blades, so they turn slowly with considerable torque in low winds and are self-regulating in high winds. A tower-top gearbox and crankshaft convert the rotary motion into reciprocating strokes carried downward through a rod to the pump cylinder below.

Colonial Sydney

Colonial windmills were depicted on many early paintings of the day. The tallest structures around Sydney Cove were windmills which has resulted in few physical remains. Yet their presence left a lasting legacy in early colonial landscape art and the minds and hearts of many contemporaries.

Mill Hill 1797

Government Domain 1836

The first windmills were sought to grind grain for the colony. Parts were sent for from England and the first government windmill, a stone structure, was erected in 1797 on Flagstaff Hill or Windmill Hill (now Observatory Hill). It soon fell into disrepair. A second windmill, known as the military windmill, was built in 1798 on the site where Clarence Street now crosses the top of Grosvenor Street. However, a violent three-day storm ravaged Sydney in June 1799 and this windmill was destroyed. It was slowly repaired and served the colony until about 1840.

A third windmill was built in 1806 by Nathanial Lucas, near the site where Fort Street public school now stands. This mill was a large wooden structure, known as the wooden government mill.

The demand for flour for bread soon meant that private windmills overtook the government ones. During the early nineteenth century, windmills dotted the entire Sydney landscape, all the way from The Rocks to Parramatta.

Yet with the march of industrial progress that characterised the mid to late nineteenth century, steam and coal power increasingly began to take over and the picturesque sails of Sydney's windmills gradually disappeared from the skyline. They were dismantled, and the various parts reused in the building of other structures, so there are few remains. One at Mill Hill Road, Waverley was a wooden post mill and operated from 1846 until it was levelled to the ground in 1878. It was probably the last Sydney mill in existence.

A few stones of one windmill under the stage at the Sydney Conservatorium of Music were discovered during archaeological excavations in the 1990s. Stone from Hyndes mill, the largest mill in Darlinghurst, was later reused to build Beare's Stairs in Caldwell Street. The stone from Thomas Barker's windmill was used to build two terrace houses in Kellet Street, Kings Cross which remain today on the corner of Kellet Lane.

The Australian icon

Australia with its vast rural areas is still a stronghold of this inexpensive low maintenance method of watering stock and moving water for irrigation.

Windmills as we know them appeared in Australia in the later part of the 1800's. The first to appear were the large European type windmills used for milling purposes but unfortunately, they were too expensive to build and not suited to providing water in the outback. A cheaper, less powerful windmill was required to water to stock, farms, goldfields and emerging country towns.

The windmill gradually disappeared from the urban landscape as its purpose to grind grain was over taken by other production processes using steam and coal.
However, for rural people, for stock and crops to survive in the harsh arid conditions of Australia, a continuous supply of water was required, and it was the windmill that provided a permanent water supply to the early settlers of Australia, as it could be constructed on site using hand tools.
Windmills are still constructed today for water supply purposes. Originally there were several well-known manufacturers, including the following:

- ***Alston:***

James Alston was born in 1850 at Southwark, England, and arrived in Australia with his parents in 1861. He served a four year apprenticeship in the iron trade. As a young man, in the early 1880's, James Alston set himself up in business as a blacksmith and agricultural machine manufacturer in the town of Warrnambool on the south-west coast of Victoria. In 1886, he patented an all metal mill with a modern type, multi-sailed wheel. After moving to Melbourne in the late 1990's, improvements and innovations to the Alston windmill continued.

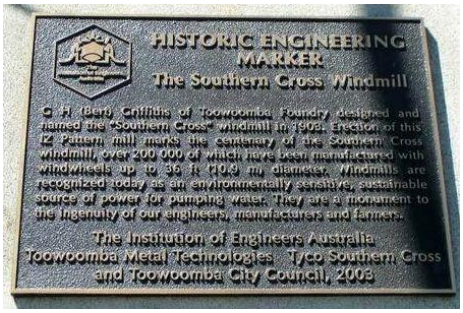
Alston was a prolific inventor. His last known patents for improvements to windmills were issued in the mid 1930's. At that time, James Alston must have been around 85 years of age.
Alston's, for much of the life of the company until the outbreak of World War II, held the lion's share of the Australian windmill market and also exported to countries such as China, India and parts of Africa.
However, James Alston died in 1943, and without his guiding hand at the helm, the firm of James Alston and Sons Pty. Ltd. went into gradual decline, plagued by a post-war shortage of steel and inhibited by rather outmoded designs. By the late 1950's the firm was almost non-operational and ended in bankruptcy about 1960. The vacuum left by flagging Alston sales was filled rapidly by more modern types of windmills, such as Southern Cross, Comet and Metters.

- ***Southern Cross:***

In 1871 George Griffiths set up a mechanical workshop in Toowoomba thus starting what is now the Southern Cross Group of Engineering Companies. His first wooden framed windmills were built in 1876, trading as Southern Cross Windmills from 1903. Between 1876 and 1884 these simple direct acting windmills were made in several sizes up to 16ft in diameter. A range of both geared and direct action self-oiling mills is in production to this day. By 1990 more than 200,000 had been produced, the majority for use in rural Australia where they have become an indelible feature of our landscape.
In 1893, during the depression and flood, Mr J A (Alfred) Griffiths designed the "Zephyr" windmill. Although there had been some previously made in the United States of America, this was the first geared windmill made in Australia. As well as being geared for easier starting, the Zephyr had a wheel on the upwind side of the tower but was still of wooden construction.

Southern Cross

Alfred Griffiths



Plaque at Toowoomba

After noting that his windmills were not as effective as the American models, he designed a new mill and in 1903, the Toowoomba factory sold its first commercial windmill under the trade name the "Southern Cross". Designed by A Griffiths, they were simple, robust and relatively cheap. They became one of the best known and sold windmills in Australia. Up until 1992, each mill was stamped with a unique serial number. From 1992 onwards, each mill is stamped with a number that identified the day, month, year and the mill number assembled on that day.

- ***Comet:***

Comet specialised in the design and manufacture of windmill pumping plants for outback Australia. Mr Sidney Williams (1851-1936), the original founder of Comet Windmills, manufactured a diverse range of rural products. He founded the Sidney Williams & Company in 1879 in Rockhampton. Williams recognised that wind is the greatest natural source of energy and that it is freely available day and night.
Their engineering works at Dulwich Hill was the largest and most-up-to-date windmill factory in Australia at the time. In 1920, the Government introduced contracting for windmill pumping plants, which was to run for the following 30 years. This included for railways, councils, the Water Commission, stock routes, etc. In the Northern Territory, Comet pumping plants were the sole choice on all major stock routes and were the predominant force in all other states for other Government contracts.

Sid Williams

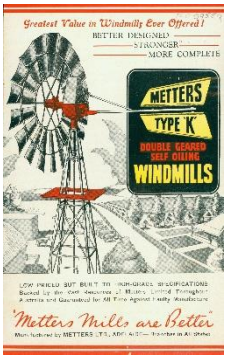
COMET
WINDMILLS AUSTRALIA
SINCE 1879

In the 1940's the firm manufactured guns and equipment for World War II. Comet's Sidney Williams and most other manufacturers were ordered to undertake the manufacture of items for the defence industry. These items included brake drums or bogey wheel castings for tanks and armoured carriers, steel frame army huts principally for the New Guinea campaign. High precision gauges & jigs were made in a specially built and equipped annexe at Dulwich Hill for the small arms factory at Lithgow, and for Comet Mills to equip stock routes in the Northern Territory in support of the beef industry.
Comet made a range of windmills and pumps, and made corrugated tanks, tank stands, sheep jetters, steel frame buildings, steel dips, fire ploughs, saw benches, winches.
The company survived two World Wars, the Depression and subsequent economic recessions. They became known as Australia's leading mill and have been referred to as "the Rolls Royce of Windmills".
In the early 2000's Comet Windmills Australia relocated from Dulwich Hill to Macksville on the mid north coast of NSW, where they continue to manufacture windmills and have also

diversified into construction of towers for modern renewable energy power and storage technology.

- ***Metters:***

In the late 1800's Fred Metters, son of an English migrant, set up a factory in Adelaide making fuel stoves. The business thrived and eventually he had factories in Sydney (1902) and Perth (1896). In 1907 Metter sold his interests to his partner Henry Spring and Metters Limited was formed. During WW I the range of products produced by the firm included gas and fuel stoves, domestic appliances, agricultural machinery, water tanks, grave markers, and cooking appliances for the armed forces. By 1927 they were also making windmills. They made a range of windmills from the 1930s, some quite different from the conventional ones, in a range of sizes, the most common being the Metters K and Metters M models. They exported windmills as far away as Cyprus, built in Adelaide and Perth. In later years they were the subject of a series of takeovers by other companies.



The company expanded enormously over the next decades to include the manufacture of bathtubs, televisions, pipes and pipe fittings, eventually moving over to include the use of plastics in product development in the 1960's.

Conclusion: Of course, wind turbines are the way of the future, seeking renewable energy for electricity generation, and a number of factors have resulted in a decrease for the demand for windmills generally.

In spite of alternative pumping systems and the introduction of water schemes, the fact that windmills were well constructed and proved to be very reliable, means that some windmills built over 50 years ago are still operating and still pumping water up from under the ground today! However, only a handful of Australian windmill manufacturers exist today.

Windmills now hold an iconic status in Australian culture, symbolising triumph over natural barriers by the early settlers.

The way of the past

Across the extensive and sparsely populated pastoral regions of the continent, windmills still often stand tall, asserting settler ingenuity and perseverance in the harsh Australian landscape. Even the skeleton of a disused and damaged windmill still captures the imagination.

Food for thought ..... Editor's note

In October and November 2018, with thoughts of the 100th anniversary of World War 1, the Blue Mountains Art Gallery is holding an exhibition *"to take the viewer on an experiential journey of remembrance, and a search for meaning beyond myth and memory".*
No matter who you are, thoughts of the Great War and its aftermath will hold significant and often personal meaning.
Penrith City Library also seeks to remember the contribution made by service men and women with an evening filled with information sharing, remembrance and storytelling. This special evening event will be their way to pay tribute to the five years of service to the country by local men and women.
When men and women set off to serve their country on the stage of war, they knew they would meet adversity. Those at home also knew that their loved ones may face danger and may never return. However, in the heroism of the time and the passion for monarch & country, they went, putting aside their fears to fight for the people and the land they loved. The aftermath was not considered apart from the thought of freedom.
The soldiers on the battlefront thought constantly of home, and their return to family and friends. Those at home looked forward to the day of return. Neither one realised just how much this conflict would change the world and themselves.
Communications between home and the front were limited and news travelled slowly. Each only saw the war from within the context of their personal circumstances, and through what the government and the media would allow.
It is in hindsight that information on the total conflict gradually emerged, and much of the full horror of that war is now known.

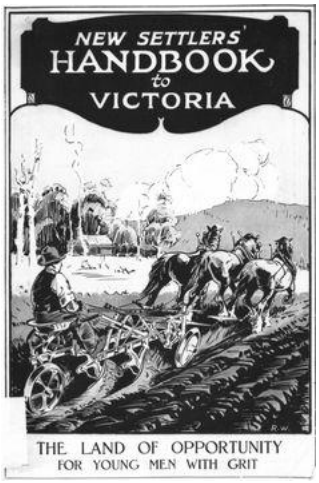
This was a war that changed the known world, from governments down to individuals. The soldiers came home expecting to see their world as they left it, as they had been dreaming of in the trenches. It was not the same. Those at home welcomed their loved ones home, those who did return, with open arms. But they were not the same people who left a few months or years before.
Once it was realised that the returned servicemen and women were often traumatised, mentally and/or physically, everyone sought to provide for some form of rehabilitation. Sometimes it worked, sometimes it didn't.
The Soldier Settlement Schemes were a government attempt to play a part in this rehabilitation. The added problems for servicemen that arose could not be envisaged by the well-meaning leaders of the time. But at least they tried. And learning from the mistakes made, the same extremity of frustration was not repeated after WW II.
There will be any number of events across the country in the coming weeks which will seek to turn our thoughts to the memory of those who fought and the many who died that we could be free. To experience just one of these activities would be to acknowledge that we still care and hold great regard and respect what they did for us.

Lest we forget

Soldier Settlement Schemes

Following World War I Australia's Prime Minister Billy Hughes promised that post-war Australia would be *"a land fit for heroes"*. As part of a larger economic plan aimed to boost the post-war economy through the development of Australia's rural sector, several Repatriation Acts were passed in parliaments across Australia. These were also called the Soldier Settlement Schemes.
Settlement plans initially began during World War I, with South Australia first enacting legislation in 1915. NSW followed in 2016 and Victoria in 2017, as the schemes gained impetus across Australia. The Commonwealth Government's role was to select and acquire land whilst the State government authorities would process applications and grant land allotments. Each Australian state government felt the importance of providing a source of income for returning soldiers as well as recognising the personal and family sacrifices made by them. Crown land was used where possible, but much land was acquired. By 1924, just over 24 million acres (97,000 km²) had been acquired or allocated. Of this nearly 6.3 million acres (25,000 km²) was purchased and 18 million acres (73,000 km²) was Crown land set aside. Some 23.2 million acres (93,900 km²) had been allotted 23,367 farms across Australia.
Billy Hughes felt he needed to provide the soldiers with a stable country and a job. But Australia had changed as a result of the war: women held down many jobs which would normally have been held by men in peacetime although were paid much less. They had developed skills during the war which served them well after, and the returned soldiers were

for the most part unskilled even for basic work. The world was in recession and machines had replaced many operations previously carried out manually.



LAND
FOR
RETURNED SOLDIERS

IT is proposed to make available certain areas for the special purpose of providing for returned soldiers. Arrangements have been made for setting apart an area of about 250,000 acres in the Wyalong-Hillston country, which will be served by new railways.

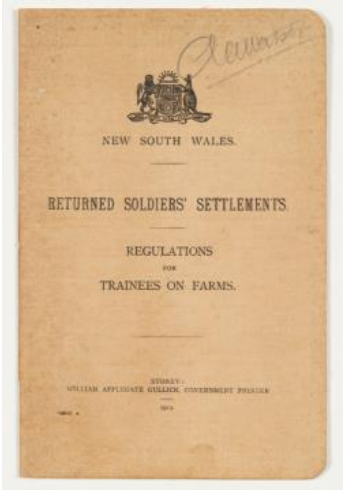
The bulk of this land is suitable for wheat growing under modern up-to-date farming conditions. Further similar areas elsewhere will also be made available. In addition, the Land Boards throughout the State will be authorised to give preference to returned soldiers in ballots for any ordinary Crown lands which may from time to time become available.

In order that the extent of this preference may be understood, I may say I anticipate that 2,000,000 acres will be made available during the financial year ending 30th June, 1916. In addition, large areas will be thrown open for selection in subsequent years. Much of this land will be suitable for wheat growing and dairying.

It is further proposed to take similar action as regards farms in the Murrumbidgee Irrigation Area. A number of farms will be set apart exclusively for returned soldiers, and the Commissioner will give preference to returned soldiers in respect of other farms made available for ordinary applications.

The whole policy of the Lands Department will be governed by an anxiety to give compensating advantages wherever possible to men who risk their lives in the service of the Empire.

W. G. ASHFORD,
Minister for Lands.



NEW SOUTH WALES.

RETURNED SOLDIERS' SETTLEMENTS.

REGULATIONS
FOR
TRAINEES ON FARMS.

Even the already employed working classes objected to the preferential employment of soldiers in the workforce. The socialist movements which arose after the war were abhorrent to the soldiers who had fought to save their country and their flag.

A *"quiet life in the country"* was what post-WWI governments planned for wounded and returning soldiers, but historians generally agree that the soldier-settlement schemes were largely a failure. The program saw the creation of around 23,000 farms nation-wide across 9 million hectares. The schemes granted returned soldiers small parcels of farming land but didn't offer the hard-won peace many servicemen had hoped for.

University of New England Lecturer Dr Nathan Wise said while governments put training and job opportunities in place for returned soldiers, they set many up for failure as a result of a lack of infrastructure and the offer of small and unviable parcels of the land. *"As early as 1915 the idea was being developed that they'll try and re-settle soldiers on the land…..It was believed that after experiencing horrific warfare they could return to the land and enjoy a peaceful and rural lifestyle which would be better for their body and their mind."* At the same time there was a belief that in the post-war years there would be a need to increase

Australian production agriculturally and so these soldiers could continue to contribute to the nation economically.

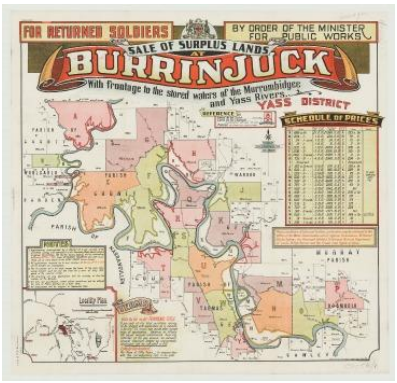
However, many soldiers were not farmers, the blocks were too small and farms were often created in areas not suited to agriculture (bad soils, steep and rocky). Wheat prices dropped soon after the war and a drought hit in 1918. It meant a life of severe poverty for the soldiers and their families who settled in those districts. Poverty, low agricultural prices and a lack of farming skills were not the only hurdles which first-time farmers were confronted. Many had lost limbs or suffered other major injuries during the war that made farming near impossible. The Western Australian government settled more than 5000 returned soldiers, many from the British Army, on farms. By 1929, just over 3500 remained on the land. Difficulties encountered by soldier settlers across Australia during the 1920s sparked a Commonwealth investigation to account for losses. In 1929 Justice Pike identified the main causes of settler failure as a lack of capital and land, settler unsuitability, and falling prices for agricultural produce.

By 1928, one-third of the soldiers gave up and returned to the city - and unemployment. The government lost £25 million.

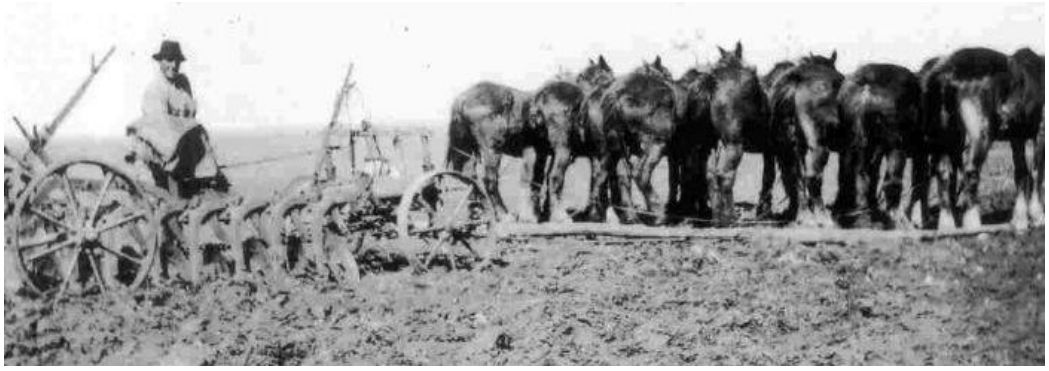
Although the settlers endeavoured to support each other, it was the onset of the Depression in 1929 that was the nail in the coffin for many. A report by the Royal Commission on Soldier Settlement as early as 1925, acknowledged major faults in the program, but struggled to find a solution that would benefit all soldiers due to the diversity of the scheme. Legislative amendments could not halt the deteriorating retention rate, and in 1926 the Royal Commission found fault with major elements of the scheme, concluding that it was doomed by too lenient qualification rules, unworkable financial obligations and undue political influence. Little practical was done after 1926 apart from shoring up the remaining settlers, but failures continued. In 1929, a survey of soldier land settlement found that in Tasmania only 777 out of 1976 settlers retained their properties – a failure rate of 61 percent, the worst in Australia. Financial losses were extremely heavy, and the Depression compounded the problems.

The rules for settlement were set down. In most cases Crown land was set apart for returning soldiers who, in order to buy or lease such a block, were required to be certified as

qualified and to remain in residence on that land for 5 years. In this way remote rural areas set aside for such settlement were guaranteed a population expansion which remained to increase infrastructure in the area.
Those eligible to apply for land were ex-service personnel including women from the Australian Army Nursing Service (AANS) with at least six months war service. Despite being legally able to take up land, there is evidence that women were not openly encouraged to do so. Applicants were required to place a tender with the Department of Lands with successful applications being decided by ballot system.
The land was available to the soldiers on affordable terms and they could also receive advances of money to make improvements to the land and purchase seeds and equipment. Soldiers who were successful in gaining such a block of land had the opportunity to start a farming life in a number of rural activities including wool, dairy, cattle, pigs, fruit, fodder and grain. These initial land allotments resulted in triumph for some and despair for others. Indeed, specifically following World War I, in some cases these new farmers, unable to cope with the climatic variances of Australia and devoid of the capital to increase stock or quality of life, simply walked off the land back to the large towns and cities from whence they had come.
The story for 1,500 of the 5,000 soldier settlers in NSW who, crippled by falling agricultural prices and the looming Great Depression, was that they surrendered their blocks. Although the scheme was ultimately deemed a failure, and widely criticised for bringing further hardship to veterans, there were a few individual stories of triumph. Often, the soldier farmers who managed to hang on to their land benefited from those who walked away, in taking up abandoned allotments and consolidating the properties into something more viable, such as Edgeroi Station near Narrabri.
During the 1920s the experience of the soldiers was mixed - many soldiers could not find good jobs and some soldiers who took up the government's offer of settlement in the country met with disappointment. The soldiers had returned to a changed society where women took new social liberties, opposition to war had appeared, and the soldiers' role in Australia was no longer clear. Ultimately, the returned soldiers became part of the Australian workforce which had difficulty securing improvements in their working conditions during this period.
The procedure of supporting such soldiers was repeated after World War II with all Australian State governments using the previous and amended forms of such acts of parliament to reinvigorate the program for a new generation of returned soldiers.
The report on land settlement by the Rural Reconstruction Commission in the early 1940's enumerated factors that led to the "*settlement disasters*" after World War I: lack of farm management skills on the part of many settlers, inadequate advisory services, excessive prices for stock and equipment, the fall in commodity prices in 1920–24, poor quality of Crown lands, over-valuation of properties, inadequate farm sizes, heavy capital debt and interest burdens, and unsatisfactory Commonwealth–State relations.
The RSL (formed originally in 1916), favoured leasehold tenure, whereas the Commission considered that freehold would provide settlers with the incentive to develop their holdings. In its second report, presented to the government in January 1944, the Commission stated



that Commonwealth involvement in soldier settlement was inevitable, due to repatriation and financial aspects. The role of the States should be to select the land and the settlers, and assist in administration, while the Commonwealth should assess production requirements in relation to market prospects and decide which plans were feasible. It proposed that there be a Commonwealth Investigating Authority, with the power of veto over State settlement plans, and a Commonwealth Financial Authority, attached to the Commonwealth Bank.
The success of the program increased after World War II when the infrastructure required for these new farmers was improved as a direct result of learning from the mistakes that came during and after the first attempts at such settlement. After World War II Soldier Settlement was also more successful aided by better policy decisions, more arable land and a booming economy that provided greater returns on rural production.
A more modest and closely managed scheme was embarked upon with more stringent qualifications. By the 1960s some 28 percent of the 551 post-Second World War settlers in Tasmania had “failed” due to poor administration and under-funding, but overall this scheme was more successful.



Ultimately, and following much debate amongst stakeholders, the War Service Land Settlement Scheme provided farms in every State to about 12,000 returned soldiers from 1949, compared with more than 37,000 who acquired farms in the years after World War I. In general, the efforts of government and its advisers to avoid the mistakes of the past were successful. By providing more comprehensive training, greater care in the selection and subdivision of land, and funding on a much larger scale, they ensured that most soldier settlers remained on the land and achieved a reasonable standard of living.
Although the failure rate was much lower, the re-establishment of this relatively small number of servicemen had been costly for governments. By 1976 the Commonwealth and State governments had written off the current equivalent of more than $500 million on the War Service Land Settlement Scheme.
Funded by the Australian Research Council, Monash University and the University of New England, a website was created in 2011 dedicated to the memory of Soldier Settlement in NSW. Although the project is currently on hold, it intends to examine the history of soldier settlement in NSW reclaiming a virtually untouched field in the State’s environmental, social, political and cultural history. It will record the forgotten stories of a generation of men and women who survived the Great War and restore history to the communities that made it.

Hammons Holdings wins Bridge Climb

The Sydney Harbour Bridge climb will change hands for the first time, after its long-term operator, BridgeClimb Sydney, lost its bid for a new twenty year contract. Hammons Holdings Pty Ltd, the operator of Scenic World in the Blue Mountains has won the contract, as announced by Roads & Maritime Services on 15th June 2018. Thirteen expressions of interest had been received from Australian and international tenderers of the highest quality and reputation.

BridgeClimb Sydney chairman and founder Paul Cave started the business after helping to organise a bridge climb for an international business convention. Since Mr Cave's BridgeClimb began guiding people over the arch in 1998, 4 million people from more than 140 countries have climbed the Harbour Bridge.

Since then BridgeClimb has established itself as an integral part of the Sydney scene. They love the Bridge and have celebrated its key milestones with Bridge workers, descendants of chief engineer JJC Bradfield, and Sydneysiders alike.

BridgeClimb Sydney

Other companies to lose out to Hammons included Merlin Entertainments, Anytime Fitness, Dreamworld, Belgravia Leisure, and a Queensland company that operates a zip line beside Cairns' Skyrail gondola.

Hammons Holdings acknowledged the pioneering work of Paul Cave in developing the bridge into a popular tourist destination and look forward to working in partnership with the Government to build on that work.

Hammons Holdings director David Hammon said his company would expand opportunities for international, interstate and local visitors, including looking at ways to make new climbs on the bridge, and initiating ways that people might experience the history and the story of the bridge. He advised:

"Underpinning our vision for the bridge is the idea of improving accessibility for the public and bringing it to life with new technology, so that more visitors can experience this iconic landmark in a safe and sustainable way. We also see potential to link the Blue Mountains and Sydney Harbour Bridge as tourist destinations, boosting the flow of visitors from one to the other and creating economic opportunities for western Sydney and the state in the process."

Hammons Holdings P/L is a three generation family business with a long history and highly successful tourism track record in the Blue Mountains at Scenic World. They have been operating Scenic World for more than 73 years. With a strong safety record achieved in a challenging outdoor environment, Scenic World is now Australia's most-visited privately-

owned attraction, hosting more than one million visitors annually, 60% of whom are international visitors.

David & Anthea Hammon

David & Anthea with their father Phillip

Hammons Holdings is also an early-stage investor in Sydney Zoo in Western Sydney. The Sydney Harbour Bridge appointment positions the company to create a corridor of iconic visitor experiences spanning the Bridge, Sydney Zoo and Scenic World.
They have issued a statement saying:
"We are delighted to have been recently selected by the NSW government as the new operator of Sydney Harbour Bridge Tourism Activities from 1 October 2018."
The appointment marks a major step forward for Hammons Holdings and Scenic World, led by Blue Mountains-based siblings Anthea and David Hammon.
David Hammon stated:
"As third generation leaders in family business, Anthea and I have lived and breathed attractions from a young age. We've been surrounded by talented experts who have helped us to evolve the business and break new ground, and we're looking forward to continuing that journey into the future."
Scenic World managing director Anthea Hammon added:
The appointment was well aligned with Hammons Holdings' long-term vision to invest in the tourism sector and open up a corridor of iconic tourism experiences in Western Sydney, spanning the Bridge, Scenic World and Sydney Zoo in which Hammons Holdings is an early stage investor.
It's an honour to have the opportunity to showcase our skills in innovation and customer experience on a broader level, extending our efforts to showcase NSW to visitors from near and far."
Hammons Holdings emphasize that tickets to climb the bridge purchased before 1 October 2018 will remain valid for the date booked. *Patsy Moppett*

Razor slashing incident at Mt. Victoria, 1932

Stephen Davis of Mt Victoria & District Historical Society has been delving into local records at Mt Victoria and provides the following account of this gruesome incident:

"Further to last month's C.A.R.A. report regarding historical titbits recorded in the museum's diary, one was dated March/April 2006. It concerned a George Whitfield claiming his father was a mounted policeman stationed at Mt. Victoria. Well, I got busy using *Trove* and found four articles naming a Constable V.O. Whitfield involved in a peculiar case in 1932. A summary of this case follows":

A couple consisting of Eric Arthur Stanton, 30/32, labourer/shearer, and Madeline Ada Bayliss, 18, housemaid, had been living as man and wife for 8 months, having been unable to marry, as neither could find employment (remember 1932 was a year of the Great Depression). The pair travelled by train from Glen Innes to Sydney without paying their fares (jumping the rattler as it was termed at the time). From Sydney they continued their journey by train to Penrith, this time paying their fares. Apparently, they slept overnight in a carriage as they were awakened by it's moving the next morning. After arrival at Mt. Victoria (the Caves Express, maybe?), the couple camped on a vacant allotment near Jersey St. in the township.

About 1.30 pm on July 13th, Constable V.O. Whitfield was called to this allotment. A quarrel had apparently broken out between the couple with Stanton accusing Bayliss of having an "improper relationship" with his (Stanton's) stepfather.

However, Constable Whitfield received another call about 9 pm of the same day to go along the Bell Road (now called Darling Causeway) to a spot three-quarters of a mile from the police station at Mt. Victoria. Constable Whitfield found the girl's face covered in blood, and Stanton was bleeding freely from incised wounds to the throat. Upon inquiring, Bayliss said that Stanton had "did his block" slashing her with a razor and then cut his own throat.

Both were taken to the Blue Mountains District Anzac Hospital, where Dr. R. W. Richards inserted 27 stitches in Bayliss's face. Subsequently the case was brought before Katoomba Police Court where Stanton was charged with maliciously wounding Madeline Ada Bayliss.

The case got mentioned in the *Sydney Truth* with the headline and opening paragraph of:

> *AWEFUL RAZOR SLASHING*
> *Man Under Arrest...*
> *The mountain township of Mount Victoria has had the serenity of its daily life rudely disturbed by an allegedly attempted murder and suicide....*

Stanton was committed for trial at Parramatta Quarter Sessions for 4th October with bail being allowed, with surety of £40 each. The defendant was informed of the Poor Prisoners Defence Act.

At the following trial there was a minor sensation, and I quote *Sydney Morning Herald's* account of the hearing:

> *HYSTERICAL GIRL CARRIED OUT OF COURT*
> *Effort to Save Man from Gaol*
>
> *There were dramatic moments with a climax of a screaming girl being carried from the court by two policemen at the Parramatta Quarters Sessions....*
>
> *Bayliss tried to retract her statements made at the previous police court as being untrue, saying to the Crown Prosecutor, Mr. Berne, 'I won't answer any more questions'. Judge Tomson responded with, 'You will answer as I direct. Do you want to be punished for contempt of court? Well, then I warn you.'*
>
> *Later, Bayliss said, 'I love him (Stanton), I want to marry him and be happy.'*
>
> *Stanton was sentenced by his honour to three years imprisonment labour (there were three previous convictions for assaulting police). At this point Bayliss threw herself on the floor and screamed, 'You won't take him to gaol, You won't! You won't!'. She continued to cry out between sobs, as two policemen picked her up and carried her outside.*

V.O. Whitfield was also mentioned in other more mundane cases such as burglaries etc., but the above account was the most colourful encountered so far involving the Constable.

The Technical Side

The Apothecary

The Apothecary is a very early profession known by a number of names including pharmacist, chemist, Doctor of Pharmacy, druggist, or simply doctor. The general practitioner and the pharmacist share a common ancestor in the apothecary.
The term “apothecary” derives from the Greek word for a repository or storehouse and is the science and technique of preparing and dispensing drugs, linking health sciences with chemical sciences, aiming to ensure the safe and effective use of pharmaceutical drugs.
Early man learnt methods to relieve the symptoms of illness and injury through trial and error and passed this knowledge on to others. Although early man’s methods were crude, many of today's medicines spring from sources as simple and elementary as those which were within reach back then.

Babylon in ancient Mesopotamia, provides the earliest known record of the practice of the art of the pharmacist or apothecary. Practitioners of about 2600 B.C. were priest, pharmacist and physician, all in one. Medical texts on clay tablets recorded the symptoms of illness, the prescription and directions for compounding, then an invocation to the gods.
Chinese Emperor Shen Nung (about 2000 B.C.) sought out and investigated the medicinal value of several hundred herbs and is reputed to have tested many of them on himself.
Egyptian medicine dates from about 2900 B.C., with the best known and most important pharmaceutical record being the "Papyrus Ebers" (1500 B.C.), a collection of 800 prescriptions, mentioning 700 drugs.
Similarly, the ancient Greeks and Romans are recorded as being heavily involved in the treatment of illness, injury and disease, and their methods are well documented.
Galen (130-200 A.D.) practiced and taught both pharmacy and medicine in Rome, and his principles for preparing and compounding medicines ruled in the Western world for 1,500 years. His name is still associated with that class of pharmaceuticals compounded by mechanical means.
During the Middle Ages remnants of western knowledge were preserved in monasteries (fifth to twelfth centuries). The monks are known to have been taught in the cloisters as early as the seventh century, and gathered herbs in the field, or raised them in their own herb gardens. They often grew perishable medicinal crops close at hand in a courtyard so that they could make fresh preparations and extractions. These they prepared according to the art of the apothecary for the benefit of the sick and injured.

In some trades, skills and knowledge were secret, and little about them has been published. For the apothecary's trade, there were textbooks, and many survive. The pharmacopoeias were official registers describing the properties, preparation, and use of drugs and other medicines. By the nineteenth century, pharmacopoeia had replaced the herbals that had provided both medical and gardening information since the Middle Ages.

In its investigation of herbal and chemical ingredients, the work of the apothecary may be regarded as a precursor of the modern sciences of chemistry and pharmacology, prior to the formulation of scientific methods.
In addition to dispensing herbs and medicine, the apothecary offered general medical advice and a range of services that are now performed by other specialist practitioners. Apothecary shops sold ingredients and medicines they prepared to other medical practitioners, as well as dispensing them to patients. Eventually the job of medical diagnosis and medicine preparation was separated out into independent professions.
Apothecaries used their own measurement system to provide precise weighing of small quantities, and dispensed poisons as well as medicines, when, as is still the case, medicines could be either beneficial or harmful if inappropriately used. Protective methods to prevent accidental ingestion of poisons included the use of specially shaped containers for potentially poisonous substances.
Many recipes included herbs, minerals, and pieces of animals (meats, fats, skins) that were ingested, made into paste for external use, or used as aromatherapy. Trial and error were the main source or finding successful remedies, as little was known about the chemistry of why certain treatments worked.
The scope of pharmacy practice now includes more traditional roles such as compounding and dispensing medications, as well as community, hospital, clinical, ambulatory care consultant, internet, veterinary, nuclear, military and specialty. Pharmacists, therefore, just like the original apothecary or herbalist, are the experts on drug therapy and are the primary health professionals who optimize use of medication for the benefit of their patients.

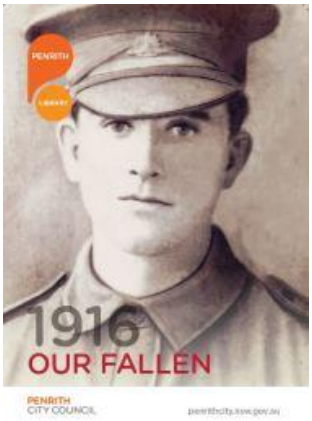
Penrith City Library remembers the Great War - noble work recognised

Penrith City Library will remember the Great War in an evening of reflection to mark the end of the first World War 100 years ago. The evening will be filled with information sharing,

remembrance and storytelling. This special evening event will be their way to pay tribute to the five years of service to our country by our local men and women.
The evening will include: ·

- Talk by Steven Ford on researching a family's military history.
- Talk by Lorraine Stacker, Penrith Librarian, and the presentation of the final (1918) *Our Fallen* booklet to those present.
  Lorraine will also launch the Library's publication project *Noble work recognised: The City of Penrith remembers the Great War*. This publication will include the biographies of their fallen soldiers, the biographies of their local nurses who served in the war, selected biographies of those who returned, histories of local honor rolls and war memorials and soldier settlements.
- Talk by Dr Penny Stannard, NSW State Archives Senior Exhibitions Curator, on the *Windows into Wartime* exhibition that will be in Penrith Library from 24 October to 30 November 2018.



The event will be held on Wednesday 21 November 2018 – 6pm for 6.30pm, with supper on arrival.
This is a special evening not to be missed. Tickets ($5) went on sale from 22 October.

Lorraine Stacker

For further information contact the library on www.penrithhistory.com

Exhibition: Contemporary Gallipoli

Blue Mountains Cultural Centre 20 October – 25 November 2018
Coinciding with the 100th anniversary of the end of World War I, Blue Mountains City Art Gallery will showcase the touring exhibition *Contemporary Gallipoli*, an exhibition originally created to mark the ANZAC Centenary in April 2015, a Macquarie University Gallery Touring exhibition curated by Meredith Brice.
Contemporary Gallipoli includes a diverse array of new works created by both emerging and established artists from Canakkale, near the Gallipoli Peninsula, Turkey, and Australia, whose work unites to take the viewer on an experiential journey of remembrance, and a search for meaning beyond myth and memory.

MACQUARIE University

Community Programs: Saturday 3rd November from 11am: join artist and independent curator Meredith Brice on a multi-sensory experience of the *Contemporary Gallipoli* exhibition. This talk will be followed by a gallery performance of *Gallipoli Sensings* played by members of the Royal Australian Navy Band.

Blue Mountains Cultural Centre

Heritage Near Me – funding for earth buildings

The village of O'Connell near Bathurst has been a recent recipient of funding through the Heritage Near Me program, to go towards the conservation of O'Connell's earth building heritage.

The grant of $100,000.00 was announced by Bathurst MP Paul Toole. He advised that: *"It will implement a program of earth building conservation at a number of locations and will incorporate a training program for owners and managers and other interested industry professionals who work with earth architecture relating to these types of buildings. A heritage trail interpreting this significant aspect of local heritage will also be implemented."*

Mr Toole also said that the University of Sydney will use the buildings involved to explore the way it teaches its Masters of Heritage Conservation degree.

Two O'Connell examples of earth buildings which would come under the program are:

- Lindlegreen barn, owned by Vanessa & Brad Hargans, which has associations with the Hassall family (Rowland Hassall was appointed by Governor Macquarie as Superintendent of Government Stock in 1815; Thomas Hassall became Samuel Marsden's curate in Parramatta and in 1822 he married Marsden's eldest daughter Ann).
- A cottage owned by Gavin Christie on his property Yarrabin.

Lindlegreen barn

The unassuming Lindlegreen barn has been recognised as state significant and has been added to the State Heritage Register. It is believed to have been constructed around 1827 and demonstrates how traditional Welsh and English building techniques were utilized by colonists in rural NSW when other normal building materials, such as timber, were less unavailable.

Yarrabin cottage

The cob method of building uses a mixture of soil, clay, straw and water laid as a continuous course, trampled, then smoothed. Each course has to dry and set before the next is laid in a time-consuming but effective process. *Patsy Moppett*

Visit www.environment.nsw.gov.au/heritage-near-me for more information on the range of grant programs assisting local communities, owners and managers of heritage items.

Winter Magic Festival 2019

Winter Magic is the largest community event in the Blue Mountains and is a joyous celebration of creativity and community that attracts tens of thousands of people to Katoomba for a brilliant happening of art, creativity and performance. In 2019 the Festival is returning after a 12-month hiatus.

The Winter Magic Festival Association Incorporated is a not-for-profit organisation, run entirely by volunteers. Each year the Association elects a committee, which runs the Festival. The Committee, in collaboration with key stakeholders and community members, is planning for a magical 2019. There is a lot to do, and only a short time frame to do it in. They are now calling for expressions of interest from volunteers, performers, stallholders and all the other people who make the Festival happen.

Winter Magic attracts audiences and media from the entire Blue Mountains area, Sydney, the Central West, and beyond. Sponsorship means your name can reach thousands of people, both in the lead up and on the day itself. The best way to be involved in the Winter Magic Festival and to ensure its survival is to become a member of the Association.

If you would like to be a member of the Winter Magic Festival Association, or want to confirm your current membership, please email their secretary, Ian Dudley-Bestow, stating you would like to join, and he will explain how to deposit the funds necessary to secure your membership – it's the princely sum of $2! You'll get a warm glow from supporting this free event. *Winter Magic Festival Committee*

If you would like to more information about sponsoring Winter Magic 2019, please send any email enquiries to: sponsors@wintermagic.com.au

For general inquiries:

Exhibition: Dust – an exhibition about insects, collections and heritage buildings

The last artistic event of the Woodford Academy's 2018 program opened with a launch on Saturday 15 September 2018 at the Academy. It could be viewed on 20 October & will again be accessible on 17 November 2018.
The "Dust" exhibition brings together artists and museum professionals to explore the processes of collection care underway at the Blue Mountains' oldest colonial buildings, the Woodford Academy. In an Australian first, the Academy buildings will be progressively wrapped and left to "cook" over the coming summer, eradicating the infestation of insects that have taken up residence in the building and its collections.
"Dust" engages with the idea of collection care while at the same time examining the lives and activities of insects. Just like we do, insects seek the right conditions to thrive and grow; that they may nest in our precious memory-objects and spaces is of no consequence to them. Dust highlights the materiality of insect bodies, museum objects and heritage environments and gives expression to the productive and destructive forces inherent to human-insect relationships.

Flyer image credit: Ingeborg Hansen *Sketch: National Trust*
Silverfish, 2018. Screen print on paper. 56 x 76cm

Visual artists Erica Seccombe, Ingeborg Hansen, Freedom Wilson and writer, performer and all-round 'creatrix' Cat Jones join Sydney University Museum's Julie Taylor, Madeleine Snedden, Rachel Lawrence, Christopher Jones and Stuart Humphreys to present a suite of vibrant and fascinating audio and visual works that showcase the good, the bad and the ugly of the insect world. Developed by local Blue Mountains artist Jacqueline Spedding in conversation with Elizabeth Burgess from the Woodford Academy, "Dust" celebrates the work of Spedding's fellow artists and museum colleagues who have backgrounds in art and science, both professionally and creatively.
Museum Entry & Exhibition:

- Adults $6
- Concession/Child (4-16yrs) $4

- Family $15 (2 adults, 2 children)
- Guided Tours - $2/Person (4+years)

Woodford Academy: 90-92 Great Western Highway, Woodford (on street parking available on Vale Rd). Contact: woodfordacademy@gmail.com
As a volunteer managed property, all proceeds from Woodford Academy open days and events directly contributes to the conservation of the Blue Mountains oldest building

Elizabeth Burgess

Collaboration and Community

History Associate Professor Tanya Evans, Director of the Centre for Applied History at Macquarie University, would like to make contact with people who would be interested in contributing to a project of historical research focusing on the workers and families involved with mining in the Jamison Valley prior to World War I.

Tanya is particularly keen to involve local and family historians in her investigation of family and community relationships, and the lived experience of miners and their families at home and at work. All contributions will be duly acknowledged in publications arising from this project.
Tanya would be delighted to hear from anybody who would be willing to participate in this project by sharing the results of their own research in local or family history, passing on oral traditions, or providing access to photographs, diaries and family heirlooms.
Tanya and her colleague Professor Grace Karskens (U.N.S.W.), would be happy to talk further about the project at a meeting of your society.

Macquarie University

Tanya can be contacted by email at:
tanya.evans@mq.edu.au
Postal: MHPIR Arts, Level 2 The Australian Hearing Hub, 16 University Avenue, Macquarie University NSW 2109

Associate Professor Tanya Evans MRes
Director for MHIS Director, Centre for Applied History, Department of Modern History, Politics and International Relations, Macquarie University
President of the History Council of New South Wales.

The Knowledgeable Object Symposium and Training Workshop

This event will be held at the end of November 2018 over two days:

- Training workshop Tuesday 27 November.
- Symposium on Wednesday 28 November.

The symposium is a result of a Macquarie University learning and teaching strategic priorities project about connecting museum collections with curriculum. It will explore what it is that makes objects so valuable in educational and museum contexts. They will share what they have learnt but are also eager to hear from others interested in the subject.
They currently seek Expressions of Interest for oral presentations, workshops, panel discussions and poster presentations.
If you are interested, please submit an abstract (using their template) by Friday 5th October 2018. Registration for the event is free and opened in late September.
If you are interested or would like to know more, please email ahmuseum@mq.edu.au

The workshop is aimed at early career professionals and students working/ studying in education and the GLAM sector as well as teachers involved in the pilot project.
Registration (including full program details) opened in late September, and applicants will be expected to briefly explain why they wish to participate and what they expect to gain from the workshop.
There will be a selection process and to allow for hands-on and work in small groups, the workshop is limited to a maximum of 30 participants.
Registration fee: There is no fee for attending the workshop. Parking, food and drink during the day will also be provided. Participants, or their organisations, will be expected to cover any travel and accommodation costs.
When and Where: The workshop will be held on Tuesday 27th November 10am-4pm, at 10 Hadenfeld Ave, Macquarie University, NSW 2109.
If you are interested or would like to know more, please email ahmuseum@mq.edu.au
Anyone who has registered interest will be notified as soon as the program is finalised and the online registration is open.

Macquarie University

Reminder: BMACHO Workshop – Writing grant applications

BMACHO will be holding a Grant Applications workshop for members, with funding provided by the Blue Mountains City Council's Community Assistance Grant.

- When: February 2019 – details to be provided via email in November 2018.
- Where: Meeting Room at Blue Mountains Historical Society, 99 Blaxland Road, Wentworth Falls

This will be a full day workshop and morning tea and lunch will be provided. Places in the workshop will be limited, and preference for attendance will be for the BMACHO membership. However, the public will also be welcome should numbers allow.

BMACHO Committee

Attendance at the workshop is free, but please RSVP if you are attending, along with any dietary requirements. Inquiries:
Email: bmacho.heritage@gmail.com
Phone: 02 4751 5834, leaving a message if unanswered.

Changing of the guard

BMACHO would like to offer congratulations to member groups on the recent election of their new committees.
The incoming committees are comprised as follows:

Glenbrook & District Historical Society

President: Denis Bainbridge
Vice-presidents: Doug Knowles & Joan Peard
Secretary: Neil McGlashan
Treasurer: Anton von Schulenburg
Committee: Pam Thompson, Warren Page, Jan Dingwall
Librarian & Research: Bill Peard
Historian: Tim Miers
Public Officer: Kevin Frappel.

Mount Victoria & District Historical Society

Chairman: Tim K Jones
Vice President: Barbara Palmer
Secretary: Peter Lammiman
Treasurer: Jack Thompson
Committee: Stephen Davis, Jean Winston, Kay Graham, Roy Bennett.

Colo Shire Family History Group

President: Carolynne Cooper
Vice-president: Paul McDonald
Secretary: Neil Renaud
Treasurer: Joy Shepherd
Members: Wanda Deacon, Maree Windress, one vacancy.

Kurrajong Comleroy Historical Society

President: David Griffiths
Vice President: Steve Rawling

Secretary: Marguerite Wyborn
Treasurer: Pat O'Toole
Committee: Suzanne Smith, Jennifer Griffiths, Deborah Hallam, Terry Murray

Patsy Moppett

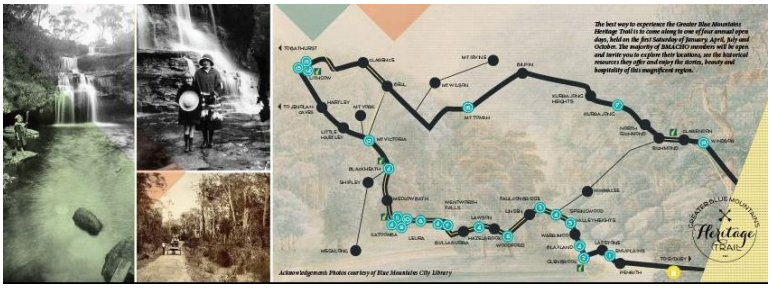
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

BMACHO is planning a review of the operation of the Trail brochure over the coming months, with a view to the issue of the next brochure in 2019. Once again, your feedback will be most welcome!

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

Merry Christmas and a happy & safe New Year to all!

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains

Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2018-2019 (from March 2018) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

Disclaimer: views and opinions expressed in Heritage originate from many sources and contributors. Every effort is taken to ensure accuracy of material. The Windmill in Australia

In Australia, the windmill is a rural icon, associated with agriculture, the outback and the arid Australian landscape. But its origins go way back into antiquity, and in many countries in Europe they are conserved as a museum object or heritage item rather than a working machine.

A windmill is a machine that converts the energy of wind into usable energy by means of rotating vanes called sails or blades. Centuries ago, windmills were used to mill grain, pump water, or both. The majority of modern windmills take the form of wind turbines used to generate electricity, or wind pumps used to pump water, either for land drainage or to extract groundwater.

Colonial Sydney

Early development

The Greek engineer Heron of Alexandria in the first century presents the earliest known instance of using a wind-driven wheel to power a machine. Another early example of a wind-driven wheel was the prayer wheel, which has been used in Tibet and China since the fourth century.

Although "sails" had been used to move ships at sea, it was the Persians who converted the use of wind for grinding grain between 500 and 900 A.D. They attached several "sails" to a vertical shaft that was connected to a grind-stone or pump, housed in a building.

Although early windmills were mounted horizontally, it was eventually developed into a vertical tower structure, as in Persia. By mounting the mill this way, the sails were able to

rotate to face the wind direction - an essential requirement for windmills to operate economically where wind directions are variable.
Wind pumps were used to pump water since at least the 9th century in what is now Afghanistan, and in Iran and Pakistan. The use of wind pumps became widespread across the Muslim world and later spread to China and India.
Windmills first appeared in Europe at about the time of the Crusades (1096-1270) but the design was different to the Persian model. By the end of the 13th century the mill body was being made of masonry, being common in Great Britain and English-speaking countries of the former British Empire, Denmark, and Germany but rare in other places. By the 14th century windmills became popular in Europe, where the total number of wind-powered mills was estimated to have been around 200,000 at the peak in 1850, which is modest compared to some 500,000 waterwheels. Water windmills were applied in regions where there was too little water, where rivers froze in winter and in flat lands where the flow of the river was too slow to provide the required power.

Spain

Netherlands

USA

Windmills were later used extensively in Europe, particularly in the Netherlands and the East Anglia area of Great Britain, from the late Middle Ages onwards, to drain land for agricultural or building purposes. It is said that “windmills built the Netherlands”, where they were used to pump water from the land into canals that took the water back to the sea. Without these windmills, parts of the Netherlands would still be flooded, and farmers would never have grown fruit, vegetables and tulips.
However, the industrial revolution saw wind and water power replaced by steam as the primary industrial energy source, and eventually by internal combustion engines. In recent years windmill technology is making a comeback and the wind turbine is being touted as an important alternative to the use of fossil fuels in the future.
The windmill as we know it in Australia, the American windmill, or wind engine, was invented by the American Daniel Halladay in 1854 and was used mostly for lifting water from wells. Larger versions were also used for sawing wood, chopping hay, and shelling and grinding grain. In early California and some other states, the windmill was part of a self-contained domestic water system which included a hand-dug well and a wooden water tower supporting a redwood tank enclosed by wooden siding known as a tankhouse. During the late 19th century steel blades and steel towers replaced wooden construction.
These wind pumps were and are still used extensively on agricultural properties in the United States, Canada, Southern Africa, and Australia. They feature a large number of blades, so they turn slowly with considerable torque in low winds and are self-regulating in high winds. A tower-top gearbox and crankshaft convert the rotary motion into reciprocating strokes carried downward through a rod to the pump cylinder below.

Colonial Sydney

Colonial windmills were depicted on many early paintings of the day. The tallest structures around Sydney Cove were windmills which has resulted in few physical remains. Yet their presence left a lasting legacy in early colonial landscape art and the minds and hearts of many contemporaries.

Mill Hill 1797

Government Domain 1836

The first windmills were sought to grind grain for the colony. Parts were sent for from England and the first government windmill, a stone structure, was erected in 1797 on Flagstaff Hill or Windmill Hill (now Observatory Hill). It soon fell into disrepair. A second windmill, known as the military windmill, was built in 1798 on the site where Clarence Street now crosses the top of Grosvenor Street. However, a violent three-day storm ravaged Sydney in June 1799 and this windmill was destroyed. It was slowly repaired and served the colony until about 1840.

A third windmill was built in 1806 by Nathanial Lucas, near the site where Fort Street public school now stands. This mill was a large wooden structure, known as the wooden government mill.

The demand for flour for bread soon meant that private windmills overtook the government ones. During the early nineteenth century, windmills dotted the entire Sydney landscape, all the way from The Rocks to Parramatta.

Yet with the march of industrial progress that characterised the mid to late nineteenth century, steam and coal power increasingly began to take over and the picturesque sails of Sydney's windmills gradually disappeared from the skyline. They were dismantled, and the various parts reused in the building of other structures, so there are few remains. One at Mill Hill Road, Waverley was a wooden post mill and operated from 1846 until it was levelled to the ground in 1878. It was probably the last Sydney mill in existence.

A few stones of one windmill under the stage at the Sydney Conservatorium of Music were discovered during archaeological excavations in the 1990s. Stone from Hyndes mill, the largest mill in Darlinghurst, was later reused to build Beare's Stairs in Caldwell Street. The stone from Thomas Barker's windmill was used to build two terrace houses in Kellet Street, Kings Cross which remain today on the corner of Kellet Lane.

The Australian icon

Australia with its vast rural areas is still a stronghold of this inexpensive low maintenance method of watering stock and moving water for irrigation.

Windmills as we know them appeared in Australia in the later part of the 1800's. The first to appear were the large European type windmills used for milling purposes but unfortunately, they were too expensive to build and not suited to providing water in the outback. A cheaper, less powerful windmill was required to water to stock, farms, goldfields and emerging country towns.

The windmill gradually disappeared from the urban landscape as its purpose to grind grain was over taken by other production processes using steam and coal.
However, for rural people, for stock and crops to survive in the harsh arid conditions of Australia, a continuous supply of water was required, and it was the windmill that provided a permanent water supply to the early settlers of Australia, as it could be constructed on site using hand tools.
Windmills are still constructed today for water supply purposes. Originally there were several well-known manufacturers, including the following:

- ***Alston:***

James Alston was born in 1850 at Southwark, England, and arrived in Australia with his parents in 1861. He served a four year apprenticeship in the iron trade. As a young man, in the early 1880's, James Alston set himself up in business as a blacksmith and agricultural machine manufacturer in the town of Warrnambool on the south-west coast of Victoria. In 1886, he patented an all metal mill with a modern type, multi-sailed wheel. After moving to Melbourne in the late 1990's, improvements and innovations to the Alston windmill continued.

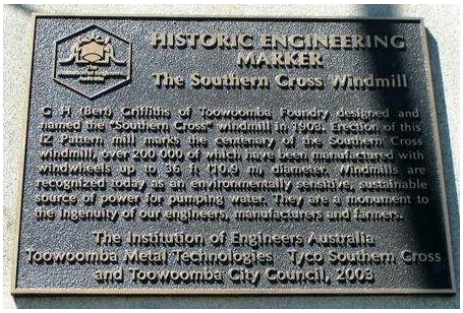
Alston was a prolific inventor. His last known patents for improvements to windmills were issued in the mid 1930's. At that time, James Alston must have been around 85 years of age.
Alston's, for much of the life of the company until the outbreak of World War II, held the lion's share of the Australian windmill market and also exported to countries such as China, India and parts of Africa.
However, James Alston died in 1943, and without his guiding hand at the helm, the firm of James Alston and Sons Pty. Ltd. went into gradual decline, plagued by a post-war shortage of steel and inhibited by rather outmoded designs. By the late 1950's the firm was almost non-operational and ended in bankruptcy about 1960. The vacuum left by flagging Alston sales was filled rapidly by more modern types of windmills, such as Southern Cross, Comet and Metters.

- ***Southern Cross:***

In 1871 George Griffiths set up a mechanical workshop in Toowoomba thus starting what is now the Southern Cross Group of Engineering Companies. His first wooden framed windmills were built in 1876, trading as Southern Cross Windmills from 1903. Between 1876 and 1884 these simple direct acting windmills were made in several sizes up to 16ft in diameter. A range of both geared and direct action self-oiling mills is in production to this day. By 1990 more than 200,000 had been produced, the majority for use in rural Australia where they have become an indelible feature of our landscape.
In 1893, during the depression and flood, Mr J A (Alfred) Griffiths designed the "Zephyr" windmill. Although there had been some previously made in the United States of America, this was the first geared windmill made in Australia. As well as being geared for easier starting, the Zephyr had a wheel on the upwind side of the tower but was still of wooden construction.

Southern Cross

Alfred Griffiths



Plaque at Toowoomba

After noting that his windmills were not as effective as the American models, he designed a new mill and in 1903, the Toowoomba factory sold its first commercial windmill under the trade name the "Southern Cross". Designed by A Griffiths, they were simple, robust and relatively cheap. They became one of the best known and sold windmills in Australia. Up until 1992, each mill was stamped with a unique serial number. From 1992 onwards, each mill is stamped with a number that identified the day, month, year and the mill number assembled on that day.

- ***Comet:***

Comet specialised in the design and manufacture of windmill pumping plants for outback Australia. Mr Sidney Williams (1851-1936), the original founder of Comet Windmills, manufactured a diverse range of rural products. He founded the Sidney Williams & Company in 1879 in Rockhampton. Williams recognised that wind is the greatest natural source of energy and that it is freely available day and night.
Their engineering works at Dulwich Hill was the largest and most-up-to-date windmill factory in Australia at the time. In 1920, the Government introduced contracting for windmill pumping plants, which was to run for the following 30 years. This included for railways, councils, the Water Commission, stock routes, etc. In the Northern Territory, Comet pumping plants were the sole choice on all major stock routes and were the predominant force in all other states for other Government contracts.

Sid Williams

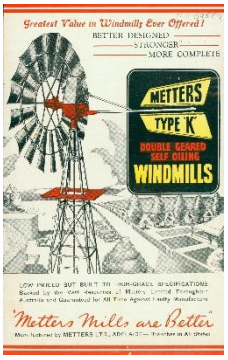
COMET
WINDMILLS AUSTRALIA
SINCE 1879

In the 1940's the firm manufactured guns and equipment for World War II. Comet's Sidney Williams and most other manufacturers were ordered to undertake the manufacture of items for the defence industry. These items included brake drums or bogey wheel castings for tanks and armoured carriers, steel frame army huts principally for the New Guinea campaign. High precision gauges & jigs were made in a specially built and equipped annexe at Dulwich Hill for the small arms factory at Lithgow, and for Comet Mills to equip stock routes in the Northern Territory in support of the beef industry.
Comet made a range of windmills and pumps, and made corrugated tanks, tank stands, sheep jetters, steel frame buildings, steel dips, fire ploughs, saw benches, winches.
The company survived two World Wars, the Depression and subsequent economic recessions. They became known as Australia's leading mill and have been referred to as "the Rolls Royce of Windmills".
In the early 2000's Comet Windmills Australia relocated from Dulwich Hill to Macksville on the mid north coast of NSW, where they continue to manufacture windmills and have also

diversified into construction of towers for modern renewable energy power and storage technology.

- ***Metters:***

In the late 1800's Fred Metters, son of an English migrant, set up a factory in Adelaide making fuel stoves. The business thrived and eventually he had factories in Sydney (1902) and Perth (1896). In 1907 Metter sold his interests to his partner Henry Spring and Metters Limited was formed. During WW I the range of products produced by the firm included gas and fuel stoves, domestic appliances, agricultural machinery, water tanks, grave markers, and cooking appliances for the armed forces. By 1927 they were also making windmills. They made a range of windmills from the 1930s, some quite different from the conventional ones, in a range of sizes, the most common being the Metters K and Metters M models. They exported windmills as far away as Cyprus, built in Adelaide and Perth. In later years they were the subject of a series of takeovers by other companies.



The company expanded enormously over the next decades to include the manufacture of bathtubs, televisions, pipes and pipe fittings, eventually moving over to include the use of plastics in product development in the 1960's.

Conclusion: Of course, wind turbines are the way of the future, seeking renewable energy for electricity generation, and a number of factors have resulted in a decrease for the demand for windmills generally.

In spite of alternative pumping systems and the introduction of water schemes, the fact that windmills were well constructed and proved to be very reliable, means that some windmills built over 50 years ago are still operating and still pumping water up from under the ground today! However, only a handful of Australian windmill manufacturers exist today.

Windmills now hold an iconic status in Australian culture, symbolising triumph over natural barriers by the early settlers.

The way of the past

Across the extensive and sparsely populated pastoral regions of the continent, windmills still often stand tall, asserting settler ingenuity and perseverance in the harsh Australian landscape. Even the skeleton of a disused and damaged windmill still captures the imagination.

Patsy Moppett

Food for thought ..... Editor's note

In October and November 2018, with thoughts of the 100th anniversary of World War 1, the Blue Mountains Art Gallery is holding an exhibition *"to take the viewer on an experiential journey of remembrance, and a search for meaning beyond myth and memory".*
No matter who you are, thoughts of the Great War and its aftermath will hold significant and often personal meaning.
Penrith City Library also seeks to remember the contribution made by service men and women with an evening filled with information sharing, remembrance and storytelling. This special evening event will be their way to pay tribute to the five years of service to the country by local men and women.
When men and women set off to serve their country on the stage of war, they knew they would meet adversity. Those at home also knew that their loved ones may face danger and may never return. However, in the heroism of the time and the passion for monarch & country, they went, putting aside their fears to fight for the people and the land they loved. The aftermath was not considered apart from the thought of freedom.
The soldiers on the battlefront thought constantly of home, and their return to family and friends. Those at home looked forward to the day of return. Neither one realised just how much this conflict would change the world and themselves.
Communications between home and the front were limited and news travelled slowly. Each only saw the war from within the context of their personal circumstances, and through what the government and the media would allow.
It is in hindsight that information on the total conflict gradually emerged, and much of the full horror of that war is now known.

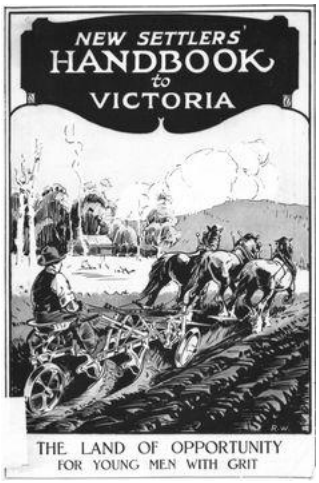
This was a war that changed the known world, from governments down to individuals. The soldiers came home expecting to see their world as they left it, as they had been dreaming of in the trenches. It was not the same. Those at home welcomed their loved ones home, those who did return, with open arms. But they were not the same people who left a few months or years before.
Once it was realised that the returned servicemen and women were often traumatised, mentally and/or physically, everyone sought to provide for some form of rehabilitation. Sometimes it worked, sometimes it didn't.
The Soldier Settlement Schemes were a government attempt to play a part in this rehabilitation. The added problems for servicemen that arose could not be envisaged by the well-meaning leaders of the time. But at least they tried. And learning from the mistakes made, the same extremity of frustration was not repeated after WW II.
There will be any number of events across the country in the coming weeks which will seek to turn our thoughts to the memory of those who fought and the many who died that we could be free. To experience just one of these activities would be to acknowledge that we still care and hold great regard and respect what they did for us.

Lest we forget

Soldier Settlement Schemes

Following World War I Australia's Prime Minister Billy Hughes promised that post-war Australia would be *"a land fit for heroes"*. As part of a larger economic plan aimed to boost the post-war economy through the development of Australia's rural sector, several Repatriation Acts were passed in parliaments across Australia. These were also called the Soldier Settlement Schemes.
Settlement plans initially began during World War I, with South Australia first enacting legislation in 1915. NSW followed in 2016 and Victoria in 2017, as the schemes gained impetus across Australia. The Commonwealth Government's role was to select and acquire land whilst the State government authorities would process applications and grant land allotments. Each Australian state government felt the importance of providing a source of income for returning soldiers as well as recognising the personal and family sacrifices made by them. Crown land was used where possible, but much land was acquired. By 1924, just over 24 million acres (97,000 km²) had been acquired or allocated. Of this nearly 6.3 million acres (25,000 km²) was purchased and 18 million acres (73,000 km²) was Crown land set aside. Some 23.2 million acres (93,900 km²) had been allotted 23,367 farms across Australia.
Billy Hughes felt he needed to provide the soldiers with a stable country and a job. But Australia had changed as a result of the war: women held down many jobs which would normally have been held by men in peacetime although were paid much less. They had developed skills during the war which served them well after, and the returned soldiers were

for the most part unskilled even for basic work. The world was in recession and machines had replaced many operations previously carried out manually.



LAND
FOR
RETURNED SOLDIERS

IT is proposed to make available certain areas for the special purpose of providing for returned soldiers. Arrangements have been made for setting apart an area of about 250,000 acres in the Wyalong-Hillston country, which will be served by new railways.

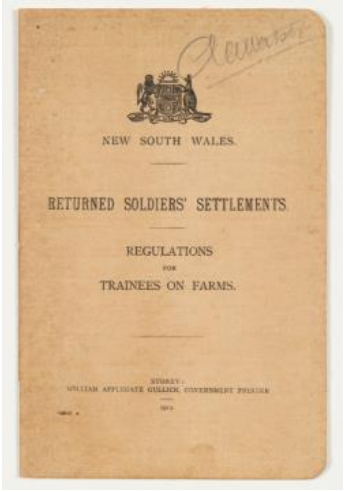
The bulk of this land is suitable for wheat growing under modern up-to-date farming conditions. Further similar areas elsewhere will also be made available. In addition, the Land Boards throughout the State will be authorised to give preference to returned soldiers in ballots for any ordinary Crown lands which may from time to time become available.

In order that the extent of this preference may be understood, I may say I anticipate that 2,000,000 acres will be made available during the financial year ending 30th June, 1916. In addition, large areas will be thrown open for selection in subsequent years. Much of this land will be suitable for wheat growing and dairying.

It is further proposed to take similar action as regards farms in the Murrumbidgee Irrigation Area. A number of farms will be set apart exclusively for returned soldiers, and the Commissioner will give preference to returned soldiers in respect of other farms made available for ordinary applications.

The whole policy of the Lands Department will be governed by an anxiety to give compensating advantages wherever possible to men who risk their lives in the service of the Empire.

W. G. ASHFORD,
Minister for Lands.



NEW SOUTH WALES.

RETURNED SOLDIERS' SETTLEMENTS.

REGULATIONS
FOR
TRAINEES ON FARMS.

Even the already employed working classes objected to the preferential employment of soldiers in the workforce. The socialist movements which arose after the war were abhorrent to the soldiers who had fought to save their country and their flag.

A *"quiet life in the country"* was what post-WWI governments planned for wounded and returning soldiers, but historians generally agree that the soldier-settlement schemes were largely a failure. The program saw the creation of around 23,000 farms nation-wide across 9 million hectares. The schemes granted returned soldiers small parcels of farming land but didn't offer the hard-won peace many servicemen had hoped for.

University of New England Lecturer Dr Nathan Wise said while governments put training and job opportunities in place for returned soldiers, they set many up for failure as a result of a lack of infrastructure and the offer of small and unviable parcels of the land. *"As early as 1915 the idea was being developed that they'll try and re-settle soldiers on the land…..It was believed that after experiencing horrific warfare they could return to the land and enjoy a peaceful and rural lifestyle which would be better for their body and their mind."* At the same time there was a belief that in the post-war years there would be a need to increase

Australian production agriculturally and so these soldiers could continue to contribute to the nation economically.

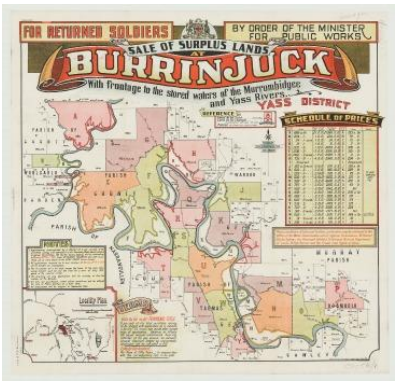
However, many soldiers were not farmers, the blocks were too small and farms were often created in areas not suited to agriculture (bad soils, steep and rocky). Wheat prices dropped soon after the war and a drought hit in 1918. It meant a life of severe poverty for the soldiers and their families who settled in those districts. Poverty, low agricultural prices and a lack of farming skills were not the only hurdles which first-time farmers were confronted. Many had lost limbs or suffered other major injuries during the war that made farming near impossible. The Western Australian government settled more than 5000 returned soldiers, many from the British Army, on farms. By 1929, just over 3500 remained on the land. Difficulties encountered by soldier settlers across Australia during the 1920s sparked a Commonwealth investigation to account for losses. In 1929 Justice Pike identified the main causes of settler failure as a lack of capital and land, settler unsuitability, and falling prices for agricultural produce.

By 1928, one-third of the soldiers gave up and returned to the city - and unemployment. The government lost £25 million.

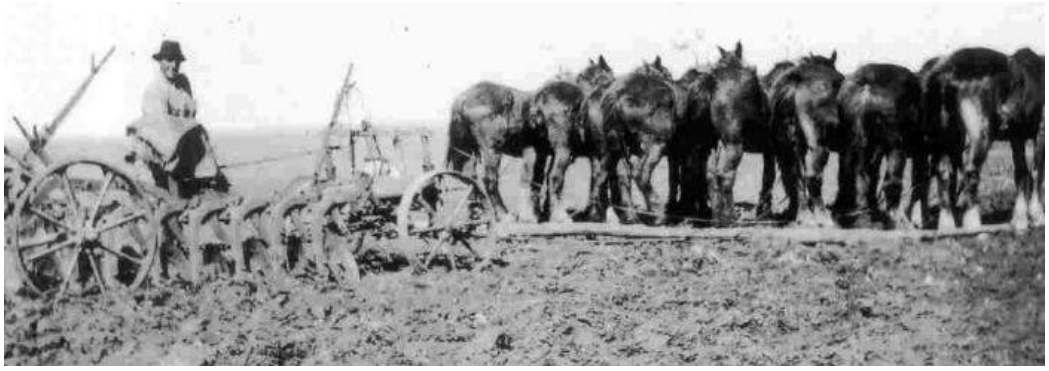
Although the settlers endeavoured to support each other, it was the onset of the Depression in 1929 that was the nail in the coffin for many. A report by the Royal Commission on Soldier Settlement as early as 1925, acknowledged major faults in the program, but struggled to find a solution that would benefit all soldiers due to the diversity of the scheme. Legislative amendments could not halt the deteriorating retention rate, and in 1926 the Royal Commission found fault with major elements of the scheme, concluding that it was doomed by too lenient qualification rules, unworkable financial obligations and undue political influence. Little practical was done after 1926 apart from shoring up the remaining settlers, but failures continued. In 1929, a survey of soldier land settlement found that in Tasmania only 777 out of 1976 settlers retained their properties – a failure rate of 61 percent, the worst in Australia. Financial losses were extremely heavy, and the Depression compounded the problems.

The rules for settlement were set down. In most cases Crown land was set apart for returning soldiers who, in order to buy or lease such a block, were required to be certified as

qualified and to remain in residence on that land for 5 years. In this way remote rural areas set aside for such settlement were guaranteed a population expansion which remained to increase infrastructure in the area.
Those eligible to apply for land were ex-service personnel including women from the Australian Army Nursing Service (AANS) with at least six months war service. Despite being legally able to take up land, there is evidence that women were not openly encouraged to do so. Applicants were required to place a tender with the Department of Lands with successful applications being decided by ballot system.
The land was available to the soldiers on affordable terms and they could also receive advances of money to make improvements to the land and purchase seeds and equipment. Soldiers who were successful in gaining such a block of land had the opportunity to start a farming life in a number of rural activities including wool, dairy, cattle, pigs, fruit, fodder and grain. These initial land allotments resulted in triumph for some and despair for others. Indeed, specifically following World War I, in some cases these new farmers, unable to cope with the climatic variances of Australia and devoid of the capital to increase stock or quality of life, simply walked off the land back to the large towns and cities from whence they had come.
The story for 1,500 of the 5,000 soldier settlers in NSW who, crippled by falling agricultural prices and the looming Great Depression, was that they surrendered their blocks. Although the scheme was ultimately deemed a failure, and widely criticised for bringing further hardship to veterans, there were a few individual stories of triumph. Often, the soldier farmers who managed to hang on to their land benefited from those who walked away, in taking up abandoned allotments and consolidating the properties into something more viable, such as Edgeroi Station near Narrabri.
During the 1920s the experience of the soldiers was mixed - many soldiers could not find good jobs and some soldiers who took up the government's offer of settlement in the country met with disappointment. The soldiers had returned to a changed society where women took new social liberties, opposition to war had appeared, and the soldiers' role in Australia was no longer clear. Ultimately, the returned soldiers became part of the Australian workforce which had difficulty securing improvements in their working conditions during this period.
The procedure of supporting such soldiers was repeated after World War II with all Australian State governments using the previous and amended forms of such acts of parliament to reinvigorate the program for a new generation of returned soldiers.
The report on land settlement by the Rural Reconstruction Commission in the early 1940's enumerated factors that led to the "*settlement disasters*" after World War I: lack of farm management skills on the part of many settlers, inadequate advisory services, excessive prices for stock and equipment, the fall in commodity prices in 1920–24, poor quality of Crown lands, over-valuation of properties, inadequate farm sizes, heavy capital debt and interest burdens, and unsatisfactory Commonwealth–State relations.
The RSL (formed originally in 1916), favoured leasehold tenure, whereas the Commission considered that freehold would provide settlers with the incentive to develop their holdings. In its second report, presented to the government in January 1944, the Commission stated



that Commonwealth involvement in soldier settlement was inevitable, due to repatriation and financial aspects. The role of the States should be to select the land and the settlers, and assist in administration, while the Commonwealth should assess production requirements in relation to market prospects and decide which plans were feasible. It proposed that there be a Commonwealth Investigating Authority, with the power of veto over State settlement plans, and a Commonwealth Financial Authority, attached to the Commonwealth Bank.
The success of the program increased after World War II when the infrastructure required for these new farmers was improved as a direct result of learning from the mistakes that came during and after the first attempts at such settlement. After World War II Soldier Settlement was also more successful aided by better policy decisions, more arable land and a booming economy that provided greater returns on rural production.
A more modest and closely managed scheme was embarked upon with more stringent qualifications. By the 1960s some 28 percent of the 551 post-Second World War settlers in Tasmania had “failed” due to poor administration and under-funding, but overall this scheme was more successful.



Ultimately, and following much debate amongst stakeholders, the War Service Land Settlement Scheme provided farms in every State to about 12,000 returned soldiers from 1949, compared with more than 37,000 who acquired farms in the years after World War I. In general, the efforts of government and its advisers to avoid the mistakes of the past were successful. By providing more comprehensive training, greater care in the selection and subdivision of land, and funding on a much larger scale, they ensured that most soldier settlers remained on the land and achieved a reasonable standard of living.
Although the failure rate was much lower, the re-establishment of this relatively small number of servicemen had been costly for governments. By 1976 the Commonwealth and State governments had written off the current equivalent of more than $500 million on the War Service Land Settlement Scheme.
Funded by the Australian Research Council, Monash University and the University of New England, a website was created in 2011 dedicated to the memory of Soldier Settlement in NSW. Although the project is currently on hold, it intends to examine the history of soldier settlement in NSW reclaiming a virtually untouched field in the State’s environmental, social, political and cultural history. It will record the forgotten stories of a generation of men and women who survived the Great War and restore history to the communities that made it.

Hammons Holdings wins Bridge Climb

The Sydney Harbour Bridge climb will change hands for the first time, after its long-term operator, BridgeClimb Sydney, lost its bid for a new twenty year contract. Hammons Holdings Pty Ltd, the operator of Scenic World in the Blue Mountains has won the contract, as announced by Roads & Maritime Services on 15th June 2018. Thirteen expressions of interest had been received from Australian and international tenderers of the highest quality and reputation.

BridgeClimb Sydney chairman and founder Paul Cave started the business after helping to organise a bridge climb for an international business convention. Since Mr Cave's BridgeClimb began guiding people over the arch in 1998, 4 million people from more than 140 countries have climbed the Harbour Bridge.

Since then BridgeClimb has established itself as an integral part of the Sydney scene. They love the Bridge and have celebrated its key milestones with Bridge workers, descendants of chief engineer JJC Bradfield, and Sydneysiders alike.

BridgeClimb Sydney

Other companies to lose out to Hammons included Merlin Entertainments, Anytime Fitness, Dreamworld, Belgravia Leisure, and a Queensland company that operates a zip line beside Cairns' Skyrail gondola.

Hammons Holdings acknowledged the pioneering work of Paul Cave in developing the bridge into a popular tourist destination and look forward to working in partnership with the Government to build on that work.

Hammons Holdings director David Hammon said his company would expand opportunities for international, interstate and local visitors, including looking at ways to make new climbs on the bridge, and initiating ways that people might experience the history and the story of the bridge. He advised:

"Underpinning our vision for the bridge is the idea of improving accessibility for the public and bringing it to life with new technology, so that more visitors can experience this iconic landmark in a safe and sustainable way. We also see potential to link the Blue Mountains and Sydney Harbour Bridge as tourist destinations, boosting the flow of visitors from one to the other and creating economic opportunities for western Sydney and the state in the process."

Hammons Holdings P/L is a three generation family business with a long history and highly successful tourism track record in the Blue Mountains at Scenic World. They have been operating Scenic World for more than 73 years. With a strong safety record achieved in a challenging outdoor environment, Scenic World is now Australia's most-visited privately-

owned attraction, hosting more than one million visitors annually, 60% of whom are international visitors.

David & Anthea Hammon

David & Anthea with their father Phillip

Hammons Holdings is also an early-stage investor in Sydney Zoo in Western Sydney. The Sydney Harbour Bridge appointment positions the company to create a corridor of iconic visitor experiences spanning the Bridge, Sydney Zoo and Scenic World.
They have issued a statement saying:
"We are delighted to have been recently selected by the NSW government as the new operator of Sydney Harbour Bridge Tourism Activities from 1 October 2018."
The appointment marks a major step forward for Hammons Holdings and Scenic World, led by Blue Mountains-based siblings Anthea and David Hammon.
David Hammon stated:
"As third generation leaders in family business, Anthea and I have lived and breathed attractions from a young age. We've been surrounded by talented experts who have helped us to evolve the business and break new ground, and we're looking forward to continuing that journey into the future."
Scenic World managing director Anthea Hammon added:
The appointment was well aligned with Hammons Holdings' long-term vision to invest in the tourism sector and open up a corridor of iconic tourism experiences in Western Sydney, spanning the Bridge, Scenic World and Sydney Zoo in which Hammons Holdings is an early stage investor.
It's an honour to have the opportunity to showcase our skills in innovation and customer experience on a broader level, extending our efforts to showcase NSW to visitors from near and far."
Hammons Holdings emphasize that tickets to climb the bridge purchased before 1 October 2018 will remain valid for the date booked. *Patsy Moppett*

Razor slashing incident at Mt. Victoria, 1932

Stephen Davis of Mt Victoria & District Historical Society has been delving into local records at Mt Victoria and provides the following account of this gruesome incident:

"Further to last month's C.A.R.A. report regarding historical titbits recorded in the museum's diary, one was dated March/April 2006. It concerned a George Whitfield claiming his father was a mounted policeman stationed at Mt. Victoria. Well, I got busy using *Trove* and found four articles naming a Constable V.O. Whitfield involved in a peculiar case in 1932. A summary of this case follows":

A couple consisting of Eric Arthur Stanton, 30/32, labourer/shearer, and Madeline Ada Bayliss, 18, housemaid, had been living as man and wife for 8 months, having been unable to marry, as neither could find employment (remember 1932 was a year of the Great Depression). The pair travelled by train from Glen Innes to Sydney without paying their fares (jumping the rattler as it was termed at the time). From Sydney they continued their journey by train to Penrith, this time paying their fares. Apparently, they slept overnight in a carriage as they were awakened by it's moving the next morning. After arrival at Mt. Victoria (the Caves Express, maybe?), the couple camped on a vacant allotment near Jersey St. in the township.

About 1.30 pm on July 13th, Constable V.O. Whitfield was called to this allotment. A quarrel had apparently broken out between the couple with Stanton accusing Bayliss of having an "improper relationship" with his (Stanton's) stepfather.

However, Constable Whitfield received another call about 9 pm of the same day to go along the Bell Road (now called Darling Causeway) to a spot three-quarters of a mile from the police station at Mt. Victoria. Constable Whitfield found the girl's face covered in blood, and Stanton was bleeding freely from incised wounds to the throat. Upon inquiring, Bayliss said that Stanton had "did his block" slashing her with a razor and then cut his own throat.

Both were taken to the Blue Mountains District Anzac Hospital, where Dr. R. W. Richards inserted 27 stitches in Bayliss's face. Subsequently the case was brought before Katoomba Police Court where Stanton was charged with maliciously wounding Madeline Ada Bayliss.

The case got mentioned in the *Sydney Truth* with the headline and opening paragraph of:

> *AWEFUL RAZOR SLASHING*
> *Man Under Arrest...*
> *The mountain township of Mount Victoria has had the serenity of its daily life rudely disturbed by an allegedly attempted murder and suicide....*

Stanton was committed for trial at Parramatta Quarter Sessions for 4th October with bail being allowed, with surety of £40 each. The defendant was informed of the Poor Prisoners Defence Act.

At the following trial there was a minor sensation, and I quote *Sydney Morning Herald's* account of the hearing:

> *HYSTERICAL GIRL CARRIED OUT OF COURT*
> *Effort to Save Man from Gaol*
>
> *There were dramatic moments with a climax of a screaming girl being carried from the court by two policemen at the Parramatta Quarters Sessions....*
>
> *Bayliss tried to retract her statements made at the previous police court as being untrue, saying to the Crown Prosecutor, Mr. Berne, 'I won't answer any more questions'. Judge Tomson responded with, 'You will answer as I direct. Do you want to be punished for contempt of court? Well, then I warn you.'*
>
> *Later, Bayliss said, 'I love him (Stanton), I want to marry him and be happy.'*
>
> *Stanton was sentenced by his honour to three years imprisonment labour (there were three previous convictions for assaulting police). At this point Bayliss threw herself on the floor and screamed, 'You won't take him to gaol, You won't! You won't!'. She continued to cry out between sobs, as two policemen picked her up and carried her outside.*

V.O. Whitfield was also mentioned in other more mundane cases such as burglaries etc., but the above account was the most colourful encountered so far involving the Constable.

The Technical Side

The Apothecary

The Apothecary is a very early profession known by a number of names including pharmacist, chemist, Doctor of Pharmacy, druggist, or simply doctor. The general practitioner and the pharmacist share a common ancestor in the apothecary.
The term “apothecary” derives from the Greek word for a repository or storehouse and is the science and technique of preparing and dispensing drugs, linking health sciences with chemical sciences, aiming to ensure the safe and effective use of pharmaceutical drugs.
Early man learnt methods to relieve the symptoms of illness and injury through trial and error and passed this knowledge on to others. Although early man’s methods were crude, many of today's medicines spring from sources as simple and elementary as those which were within reach back then.

Babylon in ancient Mesopotamia, provides the earliest known record of the practice of the art of the pharmacist or apothecary. Practitioners of about 2600 B.C. were priest, pharmacist and physician, all in one. Medical texts on clay tablets recorded the symptoms of illness, the prescription and directions for compounding, then an invocation to the gods.
Chinese Emperor Shen Nung (about 2000 B.C.) sought out and investigated the medicinal value of several hundred herbs and is reputed to have tested many of them on himself.
Egyptian medicine dates from about 2900 B.C., with the best known and most important pharmaceutical record being the "Papyrus Ebers" (1500 B.C.), a collection of 800 prescriptions, mentioning 700 drugs.
Similarly, the ancient Greeks and Romans are recorded as being heavily involved in the treatment of illness, injury and disease, and their methods are well documented.
Galen (130-200 A.D.) practiced and taught both pharmacy and medicine in Rome, and his principles for preparing and compounding medicines ruled in the Western world for 1,500 years. His name is still associated with that class of pharmaceuticals compounded by mechanical means.
During the Middle Ages remnants of western knowledge were preserved in monasteries (fifth to twelfth centuries). The monks are known to have been taught in the cloisters as early as the seventh century, and gathered herbs in the field, or raised them in their own herb gardens. They often grew perishable medicinal crops close at hand in a courtyard so that they could make fresh preparations and extractions. These they prepared according to the art of the apothecary for the benefit of the sick and injured.

In some trades, skills and knowledge were secret, and little about them has been published. For the apothecary's trade, there were textbooks, and many survive. The pharmacopoeias were official registers describing the properties, preparation, and use of drugs and other medicines. By the nineteenth century, pharmacopoeia had replaced the herbals that had provided both medical and gardening information since the Middle Ages.

In its investigation of herbal and chemical ingredients, the work of the apothecary may be regarded as a precursor of the modern sciences of chemistry and pharmacology, prior to the formulation of scientific methods.
In addition to dispensing herbs and medicine, the apothecary offered general medical advice and a range of services that are now performed by other specialist practitioners. Apothecary shops sold ingredients and medicines they prepared to other medical practitioners, as well as dispensing them to patients. Eventually the job of medical diagnosis and medicine preparation was separated out into independent professions.
Apothecaries used their own measurement system to provide precise weighing of small quantities, and dispensed poisons as well as medicines, when, as is still the case, medicines could be either beneficial or harmful if inappropriately used. Protective methods to prevent accidental ingestion of poisons included the use of specially shaped containers for potentially poisonous substances.
Many recipes included herbs, minerals, and pieces of animals (meats, fats, skins) that were ingested, made into paste for external use, or used as aromatherapy. Trial and error were the main source or finding successful remedies, as little was known about the chemistry of why certain treatments worked.
The scope of pharmacy practice now includes more traditional roles such as compounding and dispensing medications, as well as community, hospital, clinical, ambulatory care consultant, internet, veterinary, nuclear, military and specialty. Pharmacists, therefore, just like the original apothecary or herbalist, are the experts on drug therapy and are the primary health professionals who optimize use of medication for the benefit of their patients.

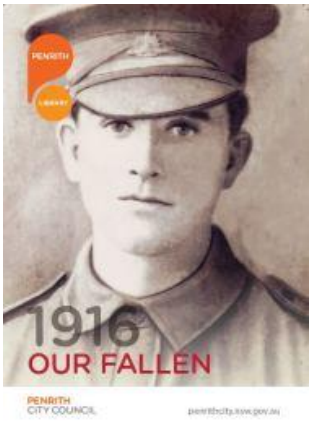
Penrith City Library remembers the Great War - noble work recognised

Penrith City Library will remember the Great War in an evening of reflection to mark the end of the first World War 100 years ago. The evening will be filled with information sharing,

remembrance and storytelling. This special evening event will be their way to pay tribute to the five years of service to our country by our local men and women.
The evening will include: ·

- Talk by Steven Ford on researching a family's military history.
- Talk by Lorraine Stacker, Penrith Librarian, and the presentation of the final (1918) *Our Fallen* booklet to those present.
  Lorraine will also launch the Library's publication project *Noble work recognised: The City of Penrith remembers the Great War*. This publication will include the biographies of their fallen soldiers, the biographies of their local nurses who served in the war, selected biographies of those who returned, histories of local honor rolls and war memorials and soldier settlements.
- Talk by Dr Penny Stannard, NSW State Archives Senior Exhibitions Curator, on the *Windows into Wartime* exhibition that will be in Penrith Library from 24 October to 30 November 2018.



The event will be held on Wednesday 21 November 2018 – 6pm for 6.30pm, with supper on arrival.
This is a special evening not to be missed. Tickets ($5) went on sale from 22 October.

Lorraine Stacker

Exhibition: Contemporary Gallipoli

Blue Mountains Cultural Centre 20 October – 25 November 2018
Coinciding with the 100th anniversary of the end of World War I, Blue Mountains City Art Gallery will showcase the touring exhibition *Contemporary Gallipoli*, an exhibition originally created to mark the ANZAC Centenary in April 2015, a Macquarie University Gallery Touring exhibition curated by Meredith Brice.
Contemporary Gallipoli includes a diverse array of new works created by both emerging and established artists from Canakkale, near the Gallipoli Peninsula, Turkey, and Australia, whose work unites to take the viewer on an experiential journey of remembrance, and a search for meaning beyond myth and memory.

MACQUARIE University

Community Programs: Saturday 3rd November from 11am: join artist and independent curator Meredith Brice on a multi-sensory experience of the *Contemporary Gallipoli* exhibition. This talk will be followed by a gallery performance of *Gallipoli Sensings* played by members of the Royal Australian Navy Band.

Blue Mountains Cultural Centre

Heritage Near Me – funding for earth buildings

The village of O'Connell near Bathurst has been a recent recipient of funding through the Heritage Near Me program, to go towards the conservation of O'Connell's earth building heritage.

The grant of $100,000.00 was announced by Bathurst MP Paul Toole. He advised that: *"It will implement a program of earth building conservation at a number of locations and will incorporate a training program for owners and managers and other interested industry professionals who work with earth architecture relating to these types of buildings. A heritage trail interpreting this significant aspect of local heritage will also be implemented."*

Mr Toole also said that the University of Sydney will use the buildings involved to explore the way it teaches its Masters of Heritage Conservation degree.

Two O'Connell examples of earth buildings which would come under the program are:

- Lindlegreen barn, owned by Vanessa & Brad Hargans, which has associations with the Hassall family (Rowland Hassall was appointed by Governor Macquarie as Superintendent of Government Stock in 1815; Thomas Hassall became Samuel Marsden's curate in Parramatta and in 1822 he married Marsden's eldest daughter Ann).
- A cottage owned by Gavin Christie on his property Yarrabin.

Lindlegreen barn

The unassuming Lindlegreen barn has been recognised as state significant and has been added to the State Heritage Register. It is believed to have been constructed around 1827 and demonstrates how traditional Welsh and English building techniques were utilized by colonists in rural NSW when other normal building materials, such as timber, were less unavailable.

Yarrabin cottage

The cob method of building uses a mixture of soil, clay, straw and water laid as a continuous course, trampled, then smoothed. Each course has to dry and set before the next is laid in a time-consuming but effective process. *Patsy Moppett*

Winter Magic Festival 2019

Winter Magic is the largest community event in the Blue Mountains and is a joyous celebration of creativity and community that attracts tens of thousands of people to Katoomba for a brilliant happening of art, creativity and performance. In 2019 the Festival is returning after a 12-month hiatus.

The Winter Magic Festival Association Incorporated is a not-for-profit organisation, run entirely by volunteers. Each year the Association elects a committee, which runs the Festival. The Committee, in collaboration with key stakeholders and community members, is planning for a magical 2019. There is a lot to do, and only a short time frame to do it in. They are now calling for expressions of interest from volunteers, performers, stallholders and all the other people who make the Festival happen.

Winter Magic attracts audiences and media from the entire Blue Mountains area, Sydney, the Central West, and beyond. Sponsorship means your name can reach thousands of people, both in the lead up and on the day itself. The best way to be involved in the Winter Magic Festival and to ensure its survival is to become a member of the Association.

If you would like to be a member of the Winter Magic Festival Association, or want to confirm your current membership, please email their secretary, Ian Dudley-Bestow, stating you would like to join, and he will explain how to deposit the funds necessary to secure your membership – it's the princely sum of $2! You'll get a warm glow from supporting this free event. *Winter Magic Festival Committee*

If you would like to more information about sponsoring Winter Magic 2019, please send any email enquiries to: sponsors@wintermagic.com.au

For general inquiries:
Address; PO Box 454, Katoomba NSW 2780

Exhibition: Dust – an exhibition about insects, collections and heritage buildings

The last artistic event of the Woodford Academy's 2018 program opened with a launch on Saturday 15 September 2018 at the Academy. It could be viewed on 20 October & will again be accessible on 17 November 2018.
The "Dust" exhibition brings together artists and museum professionals to explore the processes of collection care underway at the Blue Mountains' oldest colonial buildings, the Woodford Academy. In an Australian first, the Academy buildings will be progressively wrapped and left to "cook" over the coming summer, eradicating the infestation of insects that have taken up residence in the building and its collections.
"Dust" engages with the idea of collection care while at the same time examining the lives and activities of insects. Just like we do, insects seek the right conditions to thrive and grow; that they may nest in our precious memory-objects and spaces is of no consequence to them. Dust highlights the materiality of insect bodies, museum objects and heritage environments and gives expression to the productive and destructive forces inherent to human-insect relationships.

Flyer image credit: Ingeborg Hansen *Sketch: National Trust*
Silverfish, 2018. Screen print on paper. 56 x 76cm

Visual artists Erica Seccombe, Ingeborg Hansen, Freedom Wilson and writer, performer and all-round 'creatrix' Cat Jones join Sydney University Museum's Julie Taylor, Madeleine Snedden, Rachel Lawrence, Christopher Jones and Stuart Humphreys to present a suite of vibrant and fascinating audio and visual works that showcase the good, the bad and the ugly of the insect world. Developed by local Blue Mountains artist Jacqueline Spedding in conversation with Elizabeth Burgess from the Woodford Academy, "Dust" celebrates the work of Spedding's fellow artists and museum colleagues who have backgrounds in art and science, both professionally and creatively.
Museum Entry & Exhibition:

- Adults $6
- Concession/Child (4-16yrs) $4

- Family $15 (2 adults, 2 children)
- Guided Tours - $2/Person (4+years)

Woodford Academy: 90-92 Great Western Highway, Woodford (on street parking available on Vale Rd). Contact: woodfordacademy@gmail.com
As a volunteer managed property, all proceeds from Woodford Academy open days and events directly contributes to the conservation of the Blue Mountains oldest building

Elizabeth Burgess

Collaboration and Community

History Associate Professor Tanya Evans, Director of the Centre for Applied History at Macquarie University, would like to make contact with people who would be interested in contributing to a project of historical research focusing on the workers and families involved with mining in the Jamison Valley prior to World War I.

Tanya is particularly keen to involve local and family historians in her investigation of family and community relationships, and the lived experience of miners and their families at home and at work. All contributions will be duly acknowledged in publications arising from this project.
Tanya would be delighted to hear from anybody who would be willing to participate in this project by sharing the results of their own research in local or family history, passing on oral traditions, or providing access to photographs, diaries and family heirlooms.
Tanya and her colleague Professor Grace Karskens (U.N.S.W.), would be happy to talk further about the project at a meeting of your society.

Macquarie University

Tanya can be contacted by email at:
tanya.evans@mq.edu.au
Postal: MHPIR Arts, Level 2 The Australian Hearing Hub, 16 University Avenue, Macquarie University NSW 2109

Associate Professor Tanya Evans MRes
Director for MHIS Director, Centre for Applied History, Department of Modern History, Politics and International Relations, Macquarie University
President of the History Council of New South Wales.

The Knowledgeable Object Symposium and Training Workshop

This event will be held at the end of November 2018 over two days:

- Training workshop Tuesday 27 November.
- Symposium on Wednesday 28 November.

The symposium is a result of a Macquarie University learning and teaching strategic priorities project about connecting museum collections with curriculum. It will explore what it is that makes objects so valuable in educational and museum contexts. They will share what they have learnt but are also eager to hear from others interested in the subject.
They currently seek Expressions of Interest for oral presentations, workshops, panel discussions and poster presentations.
If you are interested, please submit an abstract (using their template) by Friday 5th October 2018. Registration for the event is free and opened in late September.
If you are interested or would like to know more, please email ahmuseum@mq.edu.au

The workshop is aimed at early career professionals and students working/ studying in education and the GLAM sector as well as teachers involved in the pilot project.
Registration (including full program details) opened in late September, and applicants will be expected to briefly explain why they wish to participate and what they expect to gain from the workshop.
There will be a selection process and to allow for hands-on and work in small groups, the workshop is limited to a maximum of 30 participants.
Registration fee: There is no fee for attending the workshop. Parking, food and drink during the day will also be provided. Participants, or their organisations, will be expected to cover any travel and accommodation costs.
When and Where: The workshop will be held on Tuesday 27th November 10am-4pm, at 10 Hadenfeld Ave, Macquarie University, NSW 2109.
If you are interested or would like to know more, please email ahmuseum@mq.edu.au
Anyone who has registered interest will be notified as soon as the program is finalised and the online registration is open.

Macquarie University

Reminder: BMACHO Workshop – Writing grant applications

BMACHO will be holding a Grant Applications workshop for members, with funding provided by the Blue Mountains City Council's Community Assistance Grant.

- When: February 2019 – details to be provided via email in November 2018.
- Where: Meeting Room at Blue Mountains Historical Society, 99 Blaxland Road, Wentworth Falls

This will be a full day workshop and morning tea and lunch will be provided. Places in the workshop will be limited, and preference for attendance will be for the BMACHO membership. However, the public will also be welcome should numbers allow.

BMACHO Committee

Attendance at the workshop is free, but please RSVP if you are attending, along with any dietary requirements. Inquiries:
Email: bmacho.heritage@gmail.com
Phone: 02 4751 5834, leaving a message if unanswered.

Changing of the guard

BMACHO would like to offer congratulations to member groups on the recent election of their new committees.
The incoming committees are comprised as follows:

Glenbrook & District Historical Society

President: Denis Bainbridge
Vice-presidents: Doug Knowles & Joan Peard
Secretary: Neil McGlashan
Treasurer: Anton von Schulenburg
Committee: Pam Thompson, Warren Page, Jan Dingwall
Librarian & Research: Bill Peard
Historian: Tim Miers
Public Officer: Kevin Frappel.

Mount Victoria & District Historical Society

Chairman: Tim K Jones
Vice President: Barbara Palmer
Secretary: Peter Lammiman
Treasurer: Jack Thompson
Committee: Stephen Davis, Jean Winston, Kay Graham, Roy Bennett.

Colo Shire Family History Group

President: Carolynne Cooper
Vice-president: Paul McDonald
Secretary: Neil Renaud
Treasurer: Joy Shepherd
Members: Wanda Deacon, Maree Windress, one vacancy.

Kurrajong Comleroy Historical Society

President: David Griffiths
Vice President: Steve Rawling

Secretary: Marguerite Wyborn
Treasurer: Pat O'Toole
Committee: Suzanne Smith, Jennifer Griffiths, Deborah Hallam, Terry Murray

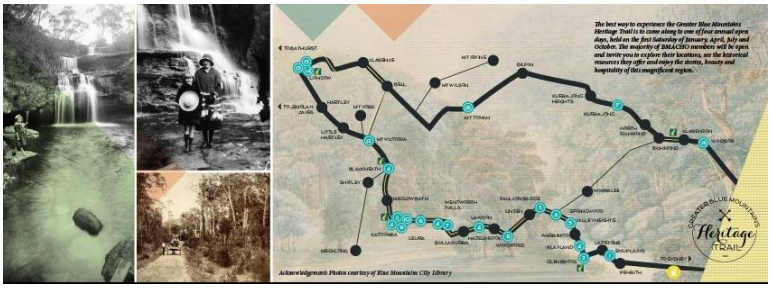
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.

Heritage with Altitude!!

The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.

BMACHO is planning a review of the operation of the Trail brochure over the coming months, with a view to the issue of the next brochure in 2019. Once again, your feedback will be most welcome!

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

Merry Christmas and a happy & safe New Year to all!

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains

Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2018-2019 (from March 2018) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett.
Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendrikson.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

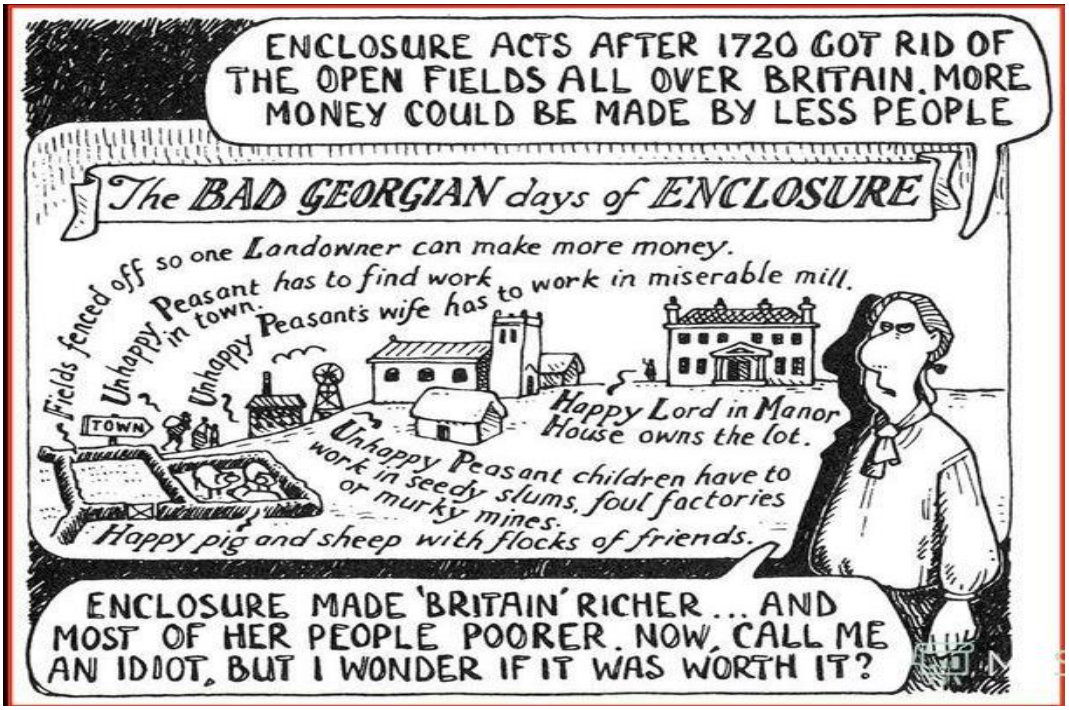
The Rebecca Riots

In the early 1700s, the industrial revolution in England resulted in, amongst other things, the significant "enclosure" movement. Enclosure (sometimes inclosure) was the legal process in England of consolidating or enclosing small landholdings into larger farms for the stated purpose of making them more productive. Once enclosed, use of the land became restricted to the owner, and it ceased to be common land for communal use.

Enclosures were regulated by Parliament and a separate Act of Enclosure was required for each village that wished to enclose its land. In 1801, Parliament passed a general Enclosure Act, which enabled any village, where three-quarters of the landowners agreed, to enclose its land.



However, the Enclosure Acts removed the prior rights of local people to utilise rural land they had often used for generations. Wealthy farmers bought land from small farmers, then benefited from economies of scale in farming huge tracts of land, at the same time paying low wages to tenant farmers and increasing taxes and other charges.

By the 1830s and 1840s the rural communities of England, Ireland, Scotland and Wales were in extreme poverty. In 1837 and 1838 the whole area suffered from poor harvests,

being worse in the south west, where atrocious seasons of rain forced farmers to buy corn at famine prices to feed themselves, their animals and their families, which further eroded what little capital they had. Farmers were faced with a drastic reduction in their income but had no financial relief in similar reductions in their expenses, mainly rents, tithes, county rates, poor rates and the turnpike tolls. Farm rents stayed mainly static, but the tithes, tolls and poor rates increased.

With the potato famine of 1843 massive numbers left the land if they could afford to and emigrated to other countries such as Australia or moved to the cities seeking work in the new industrial climate. Those who remained were trapped under oppressive landlords, and in dire straits. The coming of the railways made it easier to leave, but despite the migrations and emigrations, populations increased and it became harder to earn a decent livelihood. Churches were demanding tithes, and over their heads was also the position that if you did not have enough money to support yourself you had to go into one of the new workhouses where conditions were worse than for the worst paid labourer outside.

Seeing themselves as victims of tyranny and oppression some farmers and their workers took the law into their own hands to rid themselves of these unjust taxes. The first institutions to be attacked were the hated toll-gates.

In Wales one response to this tyranny was the Rebecca Riots. These took place between 1839 and 1843 in South and Mid Wales and were a series of protests by farmers and agricultural workers in response to perceived unfair taxation. The rioters, often men dressed as women, took their actions against toll-gates, as they were tangible representations of high taxes and tolls.

In the early 19th century many toll gates on the roads in Wales were operated by trusts comprised of wealthy landowners which were supposed to maintain and improve the roads, funding this from tolls. These men decided how much to charge and how many toll gates were to be built. However, many trusts charged extortionate tolls and diverted the money raised to other uses.

TABLE of TOLLS.

For every time they pass over this BRIDGE.

	s	d
For every Coach, Landau, Hearse, Chaise, Chair, or such like Carriages drawn by Six Horses, Mares, Geldings, or Mules	2	0
Ditto by Four Ditto	1	6
Ditto by Two Ditto	1	0
Ditto by One Ditto	0	6
For every Horse, Mule, Ass, pair of Oxen, Drawing or Harnessed to draw any Waggon, Cart, or such like carriage, for each Horse &	0	3
For a Horse, Mule, or Ass, laden or unladen and not drawing	0	3
For a Horse, Mule, or Ass carrying double	0	2
For an Ox, Cow, or neat cattle	0	1
For a Calf, Pig, Sheep, or lamb	0	0½
For every Horse, Mule Ass, or carriage going on the roads and not over the Bridge, half the said tolls.		
For every Foot passenger going over the Bridge	0	0½

N.B. This Bridge being private property every Officer or Soldier, whether on duty or not, is liable to pay toll for passing over as well as any Luggage waggon, Post coaches the Royal Family.

The farming community had suffered badly through poor harvests in the years preceding the protests, and tolls were one of the biggest expenses a local farmer faced. The charges levied to do even the simplest of things, such as taking animals and crops to market and bringing fertilisers back for the fields, threatened their livelihood and very existence.

In the late 1830s, a group of English toll-renters took over the region's trusts. The main issue was the exacting method of the toll collection and the big toll increases of side-bars. The side-bars were simple toll gates, away from the main trunk roads, placed strategically on by-roads to catch any traffic that had tried to bypass the main toll booths via side lanes. These side-bars particularly increased the cost dramatically of farmers carting lime to their fields which was needed as fertilizer or to counteract acidity in soil.

In 1839 a new tollgate at Efailwen was destroyed, an obvious target as it was situated on the road used by those carrying lime back from the coast. The Whitland Turnpike Trust rebuilt the gate, only for it to be destroyed again later in the year.

Thomas Rees was the first “Rebecca” and it was he who destroyed the tollgates at Yr Efail Wen in Carmarthenshire. Sometimes Rebecca would appear as an old blind woman who would stop at a toll-gate and say, “*My children, something is in my way*”, at which her “daughters” would appear and tear down the gates. As soon as the authorities replaced them, Rebecca and her daughters would return and tear them down again.
Early appearances of Rebecca were sporadic isolated outbursts, with the main rioting not beginning until the winter of 1842. The riots were mainly confined to the counties of Pembrokeshire, Cardiganshire and Carmarthenshire. Although these early uprisings were few and uncommon, they were the first appearance of mobs dressed in the guise of the daughters of Rebecca, dressed in women’s clothing and with their faces blackened.
The name “Rebecca” was said to be that of the mythical leader and her helpers and followers (daughters). The origin is said to be a verse in the Bible, Genesis 24:60 – *“And they blessed Rebekah and said unto her, Thou art our sister, be thou the mother of thousands of millions, and let thy seed possess the gate of those which hate them”.*

Another interpretation was that the clothes were borrowed from a local woman called Rebecca living at the foot of the Preseli Hills. The story says that this woman was an old maid and her clothes were borrowed because she was the only woman tall enough and large enough in the village whose clothing would fit men.
At first a small number of uprisings occurred, where the Rebeccas seized and destroyed some toll gates. A historic horn was used to gather the Rebeccas to meetings. It was not for another three years that further rioting occurred. In particular the side bars were targeted, and the rioters often brought up other general economic conditions with issues such as land rents. In 1843 a group of about 2,000 attacked one of the work houses. Troops were called in as riots became more violent.
Mass meetings were held to raise grievances like tithes, rents, the poor law and many other issues. There was also an attack on the workhouse in Carmarthen in 1843 and other violent actions when shots were fired. The riots caused at least one fatality. In 1843 in the village of Hendy, a young woman and gate keeper named Sarah Williams died. She had been warned beforehand that the rioters were on their way but refused to leave. On the night of her death she could be heard by a family living up the road, who had locked their doors from the rioters, shouting "*I know who you are*". Williams called for help at the house of John Thomas, a labourer, to extinguish a fire at the toll gate, but when she returned to the toll house, a shot was heard. Williams returned to the house of John Thomas and collapsed at the threshold of the house where she died.
From August 1843, local and open protest meetings were taking the place of riots, partly due to the farmers scaling back on violent activity, and also due to the increasing presence of troop. Another major factor that saw the riots reduce were the activities of a group of petty criminals masquerading as Rebecca.
In 1844 the Turnpikes, South Wales Act, to consolidate and amend the laws relating to turnpike trusts in Wales, was passed. Some rent reductions were achieved, the toll rates

were improved, destroyed toll-houses were rebuilt, and the protests prompted several reforms, including a Royal Commission into the question of toll roads.
Some rioters were caught and sentenced to transportation, and social conditions changed over the next decade. Improvements in the laws and the use of the railway eased many of the transport problems in west Wales. People could move more easily to find work and obtain provisions, and this helped reduce pressure in rural areas for jobs. The ending of the Corn Laws in 1846 and attempts in 1847 to make the Poor Law less cruel, also helped.

2014 re-enactment

Aberystwyth Southgate Tollhouse

The much hated tollgates then all but disappeared from the roads of South Wales for over 100 years, until they were reintroduced in 1966 to collect tolls for crossing the Severn Road Bridge, although this time it could be considered as a tax on the English for the privilege of crossing the border into Wales, as there is no charge in the other direction for the Welsh crossing into England!

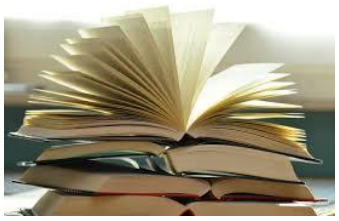
Food for thought ..... Editor's note

We commence the New Year with a riot! And go on to look at beautiful gardens in both public and private hands, and another riot (of colour) in stained glass over the centuries. We look at awards and funding, anniversaries and commemorations, a book launch and an exhibition, festivals and workshops. What an exciting heritage we have in this region!
And whilst we acknowledge the passing of a former member of the Richmond community in Ron Rozzoli, we welcome in new committees in other areas for 2019.
The new year promises to see the moving forward of the Zig Zag project at Lithgow, the celebration of Moyne Farm and its place in Hartley history, and more networking and workshopping on a number of fronts.
There is always something to see and do, and so many opportunities to broaden our horizons on the heritage world, all information being readily available on the internet. The internet plays a significant part in our heritage education and research, but never forget the ubiquitous BOOK!

Even when reading is impossible, the presence of books acquired produces such an ecstasy that the buying of more books than one can read is nothing less than the soul reaching towards infinity ….. we cherish books even if unread, their mere presence exudes comfort, their ready access reassurance.

A Edward Newton (1848-1940): American author, publisher, and avid book collector



Never a wiser word spoken!
So, put the feet up, take in this Newsletter, and reach for a book off the shelf to get you through the rest of the festive season and the summer heat!

Patsy Moppett

Milton Park & Retford Park, Bowral

Milton Park

The NSW government has recently advised that the Executive Director of the Heritage Division, as delegate of the Heritage Council of NSW resolved, on 16 June 2018, to give notice of the intention to consider listing Milton Park, Bowral, on the State Heritage Register in acknowledgement of its heritage significance to the people of New South Wales. This advice is in accordance with section 33(1)(a) of the Heritage Act 1977 (NSW). Any members of the community, owners, managers, organisations or other interested parties were invited to make a written submission regarding the proposed listing and significance of Milton Park by 7 August 2018.
Milton Park is an outstanding example of a hill station property in the Southern Highlands of New South Wales. The layout and remaining components of the former larger estate, including the homestead, gardens, extensive plantings of windbreaks and collection of outbuildings, form a cultural landscape of high aesthetic value. The gardens are significant in their own right, for their visual and stylistic characteristics. The house, cottages and stables

Milton Park house and gardens

were commenced construction by Anthony Hordern (1889-1970) from 1911, and the gardens originally established were greatly enhanced by Mary Hordern in the 1930's. The original architects were Morrow & De Putron, and new accommodation wings, designed by the architectural firm Phillip Cox and Partners, were added in the 1980's.
Milton Park is associated with Anthony (Tony) Hordern, a fourth-generation member of the Sydney retailing dynasty who founded the famous Anthony Hordern's stores. The gardens are part of the group of celebrated gardens created by the Hordern family, around their residences, in Sydney and the Southern Highlands. Milton Park was named after the town of Milton on the south coast which was founded by Hordern's maternal grandfather, John Booth.
The collection of early outbuildings and structures is significant in illustrating the development of the estate as a pastoral property and together with nearby Retford Park, is associated with the Hordern family's involvement with Royal Agricultural Show. The place is also significant for its association with the King Ranch company and development of the Santa Gertrudis cattle breed in Australia.
From 1960-1976 Milton Park was owned by King Ranch (Aust) P/L, although Peter Baillieu and his wife Edwina, a daughter of the Horderns, lived there from 1977 until 1984. In 1984 the property was sold and the then new owners, Drs Ron White and John Cooper initiated a program to establish the house as the centre of a country house hotel resort.

Estate plans held at Retford Park

Retford Park

BMACHO readers will recall the BMACHO article on Retford Park, Newsletter issue No. 57, July-August 2018.
Retford Park is also a historically significant property, erected in 1887 by Samuel Hordern (1849-1909) merchant and stockbreeder, and his wife Jane, nee Booth.
The property's European history extends back to grants of land promised to Edward Riley senior by Governor Macquarie in 1821. (The Riley family and their custodianship of land in the Wingecarribee district are separate a story in themselves). Originally known as Bloomfield (sometimes referred to as Broomfield), the property was subdivided by the Rileys

in 1880 and the first Samuel Hordern (second son of the abovementioned Anthony Hordern of Milton Park), co-proprietor of Anthony Hordern and Sons and one of the largest retail firms in Sydney at the time, bought 760 acres which he named Retford Park, a name linked to the home of his grandmother at Retford, Nottingham. That place was also utilised in the naming of Retford Hall at Darling Point, which had been built by his father, Anthony.
The grand rendered brick Italianate style residence at Retford Park was designed by architect Albert Bond and is set on a low rise. The eastern wing, added in 1907, was designed by the architects Morrow and De Putron.

Retford Park mansion and outbuildings

Together with his brother Anthony, Samuel Hordern established the significant Hordern empire, which included commercial and agricultural enterprises. After Samuel's death in 1909 the property was transferred to Samuel Hordern 2nd, Anthony Hordern and John Booth. In 1935 Samuel Hordern, the younger, became a joint owner, a tenant in common with the other three owners. In 1940 Anthony Hordern, the younger, also became a joint tenant of the property.
The property stayed in the Hordern family's hands until at least 1953 when it was sold to business associates, stockbroker Lennox Bode of Hordern, Utz and Bode and Stanley Walton. The family continued to live there and almost certainly retained a financial interest through company associations. Bode and Walton almost immediately transferred the holding to Kamilaroi Pty Ltd, later known as Gibraltar Pty Ltd.
In 1960 Sam Hordern died suddenly after a car accident, an event which lead to the departure of the Hordern family. The large garden had been developed by Lady Hordern, wife of Sir Samuel Hordern, in the 1930's.
In November 1963 King Ranch (Australia) Pty. Ltd., put the homestead portion of Retford Park up for auction, seeing it as surplus to their needs. The property consisted of the mansion, manager's residence, eight cottages, two horse stables, an enclosed round house, seven cattle stores with numerous adjoining yards. The considerable number of outbuildings and farm infrastructure have been retained and were structurally sound.
As it did not sell immediately, King Ranch undertook a subdivision, and Lot 2 of the subdivision was purchased by James Oswald Fairfax, of the newspaper publishing family, in November 1964. James Fairfax then started to turn it from an agricultural property to a gentleman's residence. James Fairfax, who had direct associations with the Fairfax publishing family business which was a major force in Australian publishing, was also recognised as an informed and active collector of art works of all kinds and Retford Park houses a considerable portion of his notable collection.
The building was remodelled in 1966 by English gardener, John Codrington, and a swimming pool and pavilion were added in 1969.
Fairfax then continued to enhance the buildings and their surrounds, including a complete repainting of the exterior of the mansion in 1994. Fairfax was a renowned collector with exceptional taste and the wealth to indulge his passion. Of significance at Retford Park is his collection which contains examples of antique furniture, glass, silver, porcelain, sculpture, bronze busts by Rodin and Epstein and a collection of contemporary Australian paintings. Initially Fairfax used the house on weekends and to entertain friends and business

Retford Park gardens

associates, and it eventually became his home and primary residence in the mid -1990s. The archives at Retford Park reveal that many well-known visitors have visited the place including Princess Margaret, Countess of Snowden of Great Britain, Princess Margaret of Hesse and the Rhine, and numerous artists, friends and associates from the business and art world. State and National Governors and current and former prime ministers have also been guests.

James Fairfax AC always believed that Retford Park should be preserved for the enjoyment and benefit of future generations, particularly those of the local district. In 2016 and in fulfilment of his ambition, Mr. Fairfax gifted his historic Retford Park home to the National Trust of Australia (NSW). It was in August 2017 that the National Trust officially took control of the property.

In recent years Fairfax was unable to travel having suffered a series of heart attacks. He passed away in January 2017. Fairfax Media CEO Greg Hywood stated "*His generous spirit and philanthropy has created a legacy that will continue to enrich the lives of Australians for many generations to come*."

Fairfax will be remembered as one of Australia's greatest patrons of the arts.

Blackheath Soldiers Memorial Park Master Plan

Blackheath Soldiers Memorial Park is located within the township of Blackheath in Blue Mountains NSW, approximately 115km west of Sydney. The Park is located approximately 500m from Blackheath shops on the northern side of the railway line, and is valued for its cultural heritage, social significance and abundant recreation opportunities.

Local indigenous people of the Darug tribal group are believed to have used this area as a camp site prior to European settlement, due to its reliable water supply and abundant wildlife. These natural water bodies were later used as dams collecting water for the railway and for the golf course between 1909 and 1914.

Undated

1957

1963

The Blackheath Park reserve was dedicated in 1888, and South Park in 1895. In 1919 following WWI the Memorial Park project began. James Dawes, superintendent of Centennial Park, came to Blackheath and carried out the initial planning of the area. The final layout of the park occurred under Blue Mountains Council Engineer, Mr. H.L. Swindlehurst, local nurseryman Mr. Kerslake, James Dawes and the Council Alderman. Blackheath volunteers who had enlisted were commemorated by the construction of pathways and the planting of rhododendrons, and the pool started construction in 1925. The pools and a duck pond were developed on top of the former railway dams which dated to 1883. Dressing pavilions and the entry area were erected in 1930, and the official opening was in 1931.

The memorial gates were constructed about the same time and reflect the consolidation of the whole reserve into what we know as the gardens today.

The unique play equipment was constructed in the 1960s and 1970s. Due to safety concerns these were removed for a time but are now reinstated.

Any master planning process for reserve management helps Blue Mountains City Council to prioritise projects that enhance the function, character and appearance of the park progressively as funding becomes available. In other words, the master plan will act like a “blueprint” for the park and will help guide Council's design and spending priorities into the future.

Amenities & pathways

Pool and pavilions

Wishing well

Community consultation is the first stage of the master plan process and is to simply gather ideas, opinions and suggestions. Once this stage of community consultation closes, designers will create an initial master plan proposal. There will be further consultation on the initial draft plan. Feedback will inform development of a final draft plan which will then be presented to the Council to be placed on public exhibition.

Playground

Shelter pavilion

Memorial Gates

The public exhibition stage allows for further rounds of community engagement with the project, with members of the public able to make submissions. These submissions will then be considered by Council and the necessary amendments made before final adoption. Council already has an adopted Plan of Management 2009 for the Park, which will continue to guide how the values and permitted uses of the park area are maintained and managed. To date the consultation process has been as follows:

- 10 October 2018 - Opening of Master Plan Community Ideas Consultation on BM Have Your Say.
- 25 October 2018 - Close of Tender for Hydrology Study of Blackheath Soldiers Memorial Park.
- 23 November 2018 - Close of Master Plan Community Ideas Consultation - BM Have Your Say.
- 6 December 2018 - A workshop was held to gather community feedback.

Contributions to this consultation are now closed for evaluation and review, and the Project team will report back on key outcomes, which will be documented at *haveyoursay*. This may include a summary of all contributions collected as well as recommendations for future action.

Council has now produced a set of Change Guidelines to examine ideas and options for the Park which were considered at the December workshop. Initially, matters such as accessibility, heritage and infrastructure, trees and water were identified. The project will be carried out in three phases:

1. Establish a set of Change Guidelines.
2. Undertake community consultation.
3. Prepare a heritage impact statement.

Initial works may include adaptation to the existing pools and the pool pavilion, upgrading of the existing play equipment and facilities, wheel chair access, succession planting and changes to existing creek lines.

Certain relevant legislation will be considered including local government LEPs and DCPs, bushfire, environmental, heritage, the Disability Discrimination Act 1992, the Crown Lands Act 1989 and the Crown Lands Management Act 2016.

The Change Guidelines identified a number of actions:

1. Timing, maintenance and budget for the works.
2. Doing as much as necessary but as little as possible, to protect the integrity of the Park's heritage and landscape value.
3. Undertake a Landscape Management Plan, incorporating a succession planting regime.
4. Undertake an Interpretation Strategy, incorporating signage.
5. Services and security upgrades and compliances.
6. Accessibility, pathways, pools and equipment.
7. Examination of drainage and water movement through the site in terms of obsolete infrastructure and affected creeklines.
8. Archival recording of the existing Park and any proposed works.

Other matters which may be examined under the Guidelines include:

- The path from the upper car park to the top of Gallipoli Steps is in need of upgrade particularly for mothers taking toddlers down to the pool.
- The recorded list of 77 men who served in WWI actually contains only 73 names, but trees were planted and had name plates for 76 men. This requires rectification.
- Examination and assessment of the play equipment for safety and stability. The metal features require repainting.

Further workshops are proposed as part of the consultation process, and BMACHO will attempt to provide updates as they come to hand.

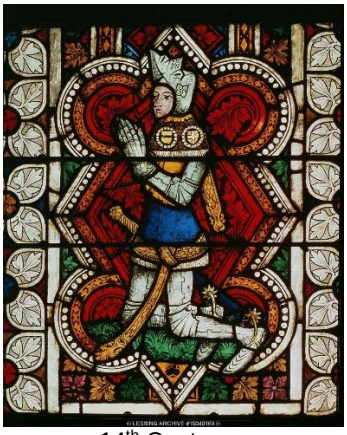
The Technical Side
Stained glass

Stained glass is simply the use of glass that has been coloured, by adding metallic salts during its manufacture. It has traditionally been used in churches and other significant religious buildings during its history, and more recently in commercial and residential buildings. Stained glass inspired the lives of the faithful through religious narratives in churches and cloisters, celebrated family and political ties in other public buildings, and even decorated the windows of private houses.

We take windows for granted, but there was a time when glass panes were too expensive for most people, and only in the late 1400s did glass panels become wider-spread, so that middle class and wealthy people could have them in their homes.

Stained glass has been produced since ancient times. Both the Egyptians and the Romans excelled at the manufacture of small colored glass objects. Phoenicia was also important in glass manufacture.

13th Century



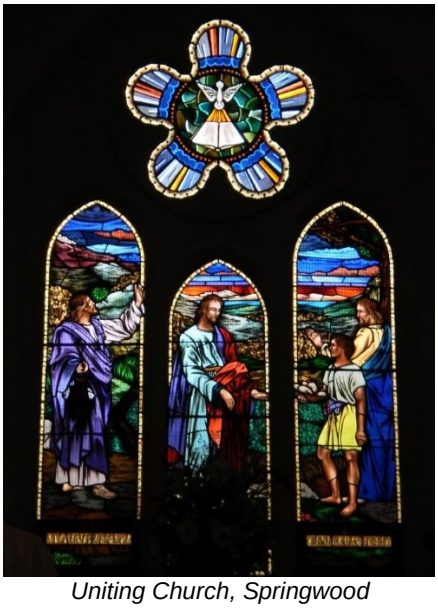
14th Century

17th Century

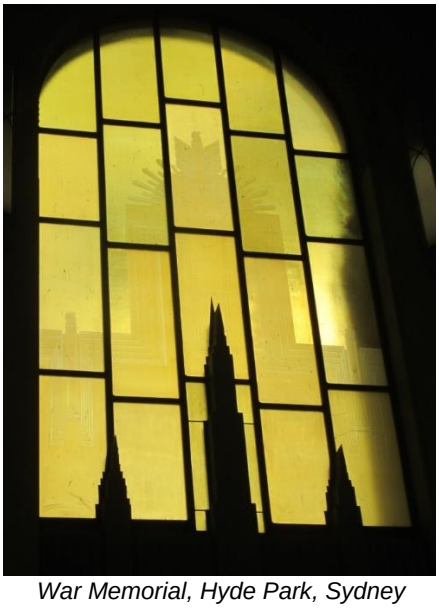
In early Christian churches of the 4th and 5th centuries, there are many remaining windows which are filled with ornate patterns of thinly-sliced alabaster set into wooden frames, giving a stained-glass like effect. Evidence of stained glass windows in churches and monasteries in Britain can be found as early as the 7th century, with the earliest known reference dates being from 675 AD. Hundreds of pieces of coloured glass and lead, dating back to the late 7th century, have been discovered on various sites. Stained glass, as an art form, reached its height in the Middle Ages.

The making of stained-glass windows has hardly changed since the 12th century. The first significant developments in the glass painter's craft appear to have been made in the early years of the 14th century. By the late 1400s glass became more affordable, and houses were increasingly fitted with clear glass windows, sometimes inset with small stained-glass panels. Glass in a range of previously unavailable secondary colours - smoky ambers, moss greens, and violet - became generally available for the first time. At the end of the 15th century a whole new range of vitreous enamels was developed, and by the middle of the 16th century the technique of painting in enamel colours on glass began to be of major importance.

In the Middle East, the glass industry of Syria continued during the Islamic period, the most important products being highly transparent colourless glass and gilded glass, rather than coloured glass. The production of coloured glass in Southwest Asia existed by the 8th century, at which time one alchemist gave some 46 recipes for producing coloured glass and described the technique of cutting glass into artificial gemstones.
Where stained glass was produced in Europe, the style evolving from the Gothic to the Classical, which is now well represented in Germany, Belgium and the Netherlands, despite the rise of Protestantism. In France, much glass of this period was produced at the Limoges factory, and in Italy at Murano, where stained glass and faceted lead crystal are often coupled together in the same window. The French Revolution however brought about the neglect or destruction of many windows in France.
Similarly, under the Reformation in England under Henry VIII, large numbers of medieval and Renaissance windows were smashed and replaced with plain glass. Few remain undamaged. With later waves of destruction, the traditional methods of working with stained glass died away and were not revived in England until the early 19th century.
Political disturbances in the mid-17th century created a scarcity of coloured glass throughout Europe, and gradually the traditional use of coloured glass was replaced by new techniques.
The Catholic revival in England in the early 19th century with its renewed interest in the medieval church, brought a revival of church building in the Gothic style, with the architectural movement led by Augustus Pugin. Many new churches were erected in large towns and many old churches were restored. This brought about a great demand for the revival of the art of stained glass window making.

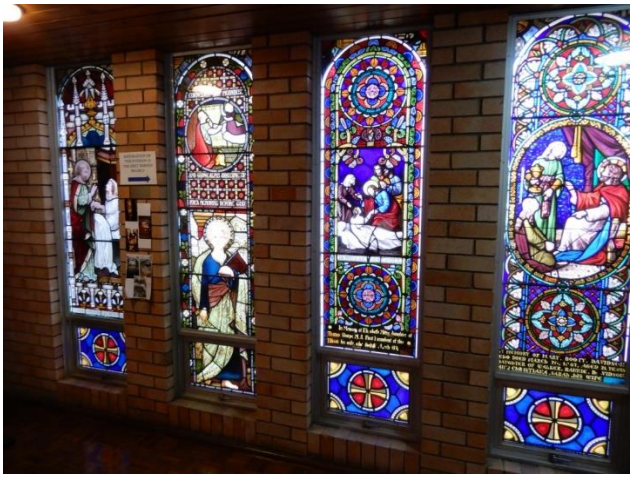


Uniting Church, Springwood



War Memorial, Hyde Park, Sydney

"*Stained glass windows*" refer to small pieces of glass arranged to form patterns or pictures, held together (traditionally) by strips of lead and supported by a rigid frame. The art of stained glass can be traced from such earlier art forms as mosaic and enamelling. From the mosaicist came the conception of composing images out of many separate pieces of coloured glass. Painted details and other stain were often used to enhance the design. The term stained glass is also applied to windows in which the colours have been painted onto the glass and then fused to the glass in a kiln.
The craft of making stained glass usually requires the skills to create a design/ picture in the first place, and then the engineering knowhow to assemble the design into an acceptable format.
The use of stained glass prevents outsiders looking into a building but allows the occupants to still receive a degree of light, albeit in a decorative way. The window must be weather proof and self supporting to last, and many have done so since at least the Middle Ages.

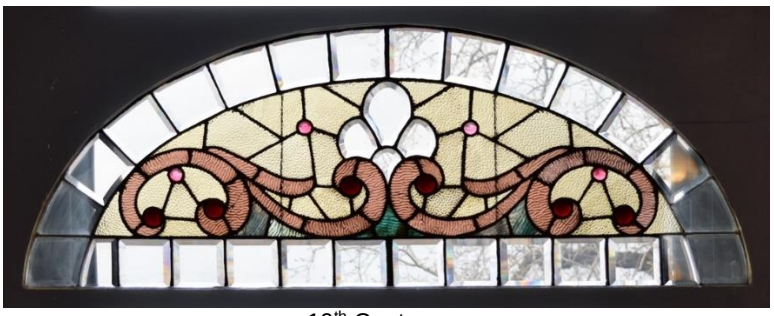


All Saints Cathedral, Bathurst

Turkish bath house, Mt Wilson

Factories were set up in medieval times to utilise silica to manufacture glass. Glass was coloured by adding metallic oxide powders or finely divided metals while it is in a molten state. Copper oxides produce green or bluish green, cobalt makes deep blue, and gold produces wine red and violet glass, manganese for purple, antimony for yellow, and iron for green. Much modern red glass is produced using copper, which is less expensive than gold and gives a brighter, more vermilion shade of red. Modern stained-glass artists now have a wide range of resources to use as well as the work of centuries of other artists to draw on as they continue the tradition.

19th Century



19th Century

A traditional narrative window has panels which relate a story. A figurative window could have rows of saints or dignitaries. Scriptural texts or mottoes are sometimes included and perhaps the names of the patrons or the person to whose memory the window is dedicated. In a window of a traditional type, it is usually left to the discretion of the designer to fill the surrounding areas with borders, floral motifs and canopies.

Details of faces, hair and hands can be painted onto the inner surface of the glass using a special glass paint which contains finely ground lead or copper filings, ground glass, gum arabic and a medium such as wine, vinegar or (traditionally) urine. The art of painting details became increasingly elaborate and reached its height in the early 20th century.

In the 16th century, a range of glass stains were introduced, most of them coloured by ground glass particles. They were a form of enamel, painted onto the glass. Once the glass is cut and painted, the pieces were assembled by slotting them into H-sectioned lead frames. All the joints were then soldered together, and the glass pieces prevented from rattling and the window made weatherproof by forcing a soft oily cement or mastic between the glass and the frames. In modern windows, copper foil is now sometimes used instead of lead.

Stained glass may be considered a technique akin to painting, but also as an art of painting with light. Whatever techniques or materials it may employ, its own most unique and

indispensable effects are always the product of colouring, refracting, obscuring, and fragmenting light.

Modern glass art

The most relevant questions to be answered upon examination and interpretation of a panel are:

- Who made the panel?
- Who or what event is it a memorial to?
- Who was the donor or patron?
- What is the relevance of any symbolism depicted?
- Are there any specific or unusual techniques utilised in the piece?
- Is there evidence of deterioration?

Select colleges and universities hold fine arts programs which teach the craft of stained glass making, and today working with stained glass is a very popular hobby.
The quality and craftsmanship of the stained glass work will vary over time dependant on the skills of the artists, the techniques available at the time and the interpretation taken on by the beholder. However, the highly skilled workmanship which goes into the making of a stained glass panel cannot be denied. *Patsy Moppett*

Moyne Farm, Little Hartley

National Trust 2019 Heritage Festival Premier Event

OPEN DAY: Sunday 5th May 2019

An open day will be held at Moyne Farm, Little Hartley on Sunday 5th May courtesy of the Di Falco Family and the Lithgow Branch of the National Trust. There will be a ceremony to rededicate the restored and heritage fenced 1826 graveyard and an event to celebrate the outstanding restoration of the 1820-22 homestead by its current owners, the Di Falco family. The day will include a presentation giving an insight into the detail of the house restoration and a chance to view the precious three-room Blakeley's Redgum slab cottage, that sits in the midst of the larger homestead building, the slab cottage walls having been preserved as a feature of the modernised building.

Moyne cemetery and farmhouse

Gates will open at 10am for formal proceedings to commence 11am. A detailed timetable of proceedings will be published on the Moyne Farm Open Day website at https://www.trybooking.com/ZZBH
A nominal charge of $10 per head is being levied to defray costs and cover the cost of a commemorative handout that visitors will receive on the day. Children are admitted free.

Museums and Galleries of NSW - 2018 IMAGinE Awards

BMACHO would like to acknowledge and congratulate BMACHO member organisations who recently featured in the NSW Museums and Galleries 2018 IMAGinE Awards:

Mt Victoria *Hawkesbury*

CATEGORY: EXHIBITION PROJECTS – MUSEUMS
Volunteer organisations or organisations with 2 or less paid staff

Highly Commended

- **Mount Victoria & District Historical Society Museum**
  150th Anniversary of Railway in Mt Victoria Exhibition

Exploring themes beyond steam trains this exhibition uncovered a rich social history. The exhibition took the form of a photographic and multimedia display relating to the arrival of mechanised transport to the district and explored numerous themes including; the impact on Indigenous people, social history, industry, agriculture, architecture, tourism and education. Newly developed interactive elements included a touch screen display, digital projections and local oral history recordings.

CATEGORY: EXHIBITION PROJECTS – MUSEUMS
Small/medium organisations with 3 - 10 paid staff

Highly Commended

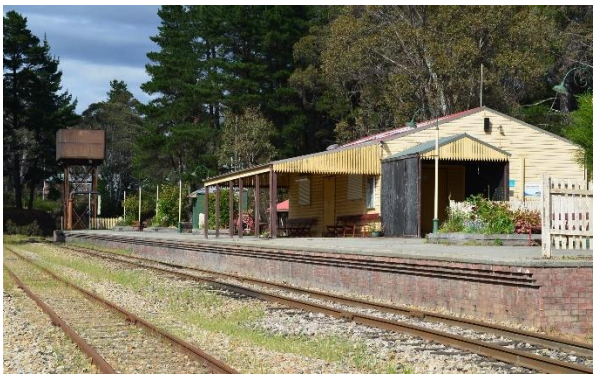
- **Hawkesbury Regional Museum**
  Food Bowl Farming: Migrants and Food Production in the Hawkesbury District 1794-1994

This exhibition traced the cultural history of food production in the Hawkesbury since 1794. It explored the lives of migrant farmers, patterns of land use and cultivation, buildings, tools and technology and the influence of cultural tradition and ethnicity on local farming. The exhibition* represented the first time an intensive research project has been undertaken to interpret and present the history of migration in the development of farming in the Hawkesbury district.

**It was noted that BMACHO member Kurrajong- Comleroy Historical Society was a partner in the Hawkesbury exhibition.*

Zig Zag Railway Restoration Funding

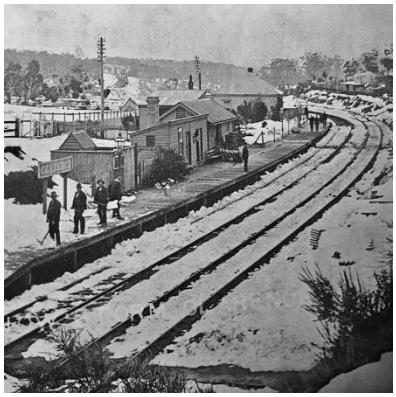
At a function on the site on 29 November 2018 the NSW Government announced a pledge of $2.3 million of NSW Government funding to restore and bolster the historic railway.



The iconic Zig Zag Railway in Lithgow will be brought back to life after many years of inactivity, vandalism and difficulties, and then the bushfires of 2013 when it was badly burned. The NSW Government has pledged $2.3 million towards restoring the much-loved tourism railway. Zig Zag Railway carriages, tracks and infrastructure suffered significant damage during the 2013 bushfire, which also destroyed 210 homes and damaged 150 others across the Blue Mountains in October 2013.

Premier Gladys Berejiklian, who was on hand for the announcement on Thursday 29th November as part of the recent NSW Cabinet's two-day tour of Bathurst and Lithgow, said the Zig Zag Railway was an important link to the state's rail history and this funding would open up the attraction to thousands of new tourists each year.

"Zig Zag was one of our state's greatest engineering feats, providing passage across the Blue Mountains and opening up regional NSW," Ms Berejiklian said. *"The redeveloped Zig Zag railway is expected to attract over 60,000 tourists to Lithgow each year. By helping restore this iconic railway, the NSW Liberals and Nationals Government is supporting jobs in Lithgow, boosting tourism across the Blue Mountains and strengthening the local economy."*



Station in 1910

The Zig Zag is a full size, narrow gauge railway located at Clarence, 10 km east of Lithgow in the Blue Mountains of NSW. Opened in 1869, the Zig Zag replaced animal-drawn carts, creating trade and commerce opportunities by reducing freight transport times from days to hours. The zig zag construction was constructed to transport people and produce from the western plains of NSW to Sydney and was replaced in 1910 by a ten tunnel deviation.
The trains, track and rollingstock have been maintained and operated by the Zig Zag Railway Co-op Ltd, a voluntary, "not for profit" co-operative.
The Zig Zag Railway ran tourist steam trains and rail motors between 1975 and 2012, and the co-operative is working hard to re-open the railway to passengers in late 2019.

Patsy Moppett

Zig Zag is a non-profit co-operative that relies on ticket sales and donations to keep the magic of steam alive. Your donation of $2 and above is tax deductible. Visit their website to make a donation.
www.zigzagrailway.com.au

Lawson Celebrates 90th Anniversary: Our Lady of the Nativity

The first of the celebrations took place on 9 September 2018 when students from the Our Lady of the Nativity (OLN) Catholic Primary School took part in a Mass celebrating the feast of Our Lady's birthday (September 8). The students presented a song at the conclusion of the liturgy to mark the event.
Then, on 21 October, the anniversary celebrations continued with the commemoration of the Laying of the Foundation Stone at Our Lady of the Nativity church on that day in 1928.
A Mass was followed by morning tea, a display of historical photos, and the taking of an official 90th anniversary photo of parishioners.

1928

2018

Chair of the Parish Management Team Leonard Blahut says it might be a surprise to some that the parish is holding anniversary events just 10 years out from the centenary, but it was seen as a good opportunity to galvanise the parish community and provide both opportunities for celebration and formation.
"It's always a good thing to celebrate your history and at the same time look to the future," says Leonard.

"It's a small community in Lawson and there is a kind of special bond or energy. The people are very generous, especially when it comes to appeals and that kind of thing".
The Catholics of Lawson were originally part of the Katoomba parish and started working towards having their own church in the 1890s, and in 1903 Cardinal Patrick Moran blessed and opened a small wooden building dedicated to Our Lady Help of Christians in Ridge Street, Lawson. It was later moved to the present behind the Church and served as a school and church until the present church was built.
The Foundation Stone of the new church was blessed and laid by His Eminence Cardinal Bonaventura Ceretti, Apostolic Delegate to Australia, on 21 October 1928. The completed church was blessed by Archbishop Michael Kelly on 7 April 1929 and Lawson became a separate parish with Fr Patrick Conway as the first parish priest.
More recently, the church was restored and refurbished after it was damaged by fire in May 2015.

Celebrations

Memorabilia

The 90th anniversary of the blessing of the foundation stone featured a display of photos from the big day in 1928, curated and presented by parishioner Allan Walsh.
"Over the years I've been involved in collecting some of these photos," Allan says. *"Now, they just seem to come my way. I haven't got all the history, but I've got some of it and it's good to be able to show them on these occasions."*
The celebrations at Lawson continued on Sunday 11 November when Bishop Vincent Long presided at the parish's 90th anniversary Mass.
"Back to OLN Lawson" 90th Anniversary Ball will be held on 6 April 2019 then on 7 April Mass to remember the Consecration and Blessing of the Church will be concelebrated by many of the priests who have been part of the Our Lady of the Nativity Lawson community over the years.
Parish Priest Fr Paul Slyney says the anniversary commemorations are a great opportunity for celebration in the small parish.
"It's a lovely community," he says. *"We always say that Lawson is the best-kept secret in the Diocese. People own their parish and really care for it."*

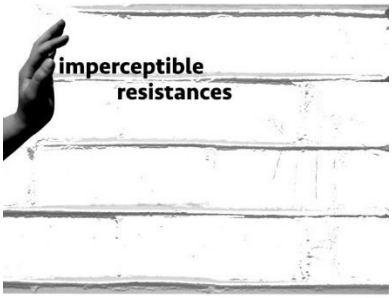
Allan Walsh

Parishioners and visitors are invited to share their stories of OLN to be published in the 90th Anniversary book. Send submissions to:

OLN Parish Office 254 Great Western Highway, Lawson 2783
Email: allan.walsh@exemail.com.au

Exhibition: Imperceptible Resistances

Modern Arts Projects Blue Mountains (MAPBM)
The pending exhibition at Everglades Historic House and Gardens 37 Everglades Avenue, Leura, is sure to catch the imagination of the wider heritage community with the thoughts it provokes.



Within the framework of contemporary politics of public space and conservation concerns, heritage sites remain places of resistance to development and change. Responding to site, contexts and wider theoretical concerns MAPBM artists explore their role in networked systems where they affect change through resistance.
This members' exhibition is curated by Lizzy Marshall.
Featured Artists: Vivienne Dadour, Frank Davey & Tess Rapa, Fiona Davies, Beata Geyer, Anne Graham, Danica Knezevic, Tom Loveday, Fleur MacDonald, Paul Mosig, Sean O'Keeffe, Naomi Oliver, Ebony Secombe, Rebecca Waterstone, Gianni Wise.

Everglades

- Exhibition Opening: Saturday 1st December 2018 2pm - 4pm
- Exhibition Details: 2nd - 23rd December Wednesday - Sunday 11am -3pm

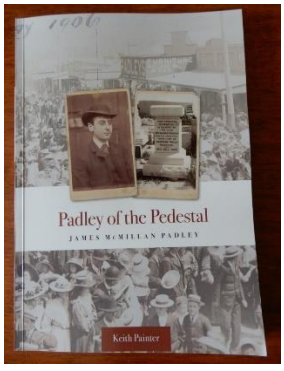
Book launch: Padley of the Pedestal – James McMillan Padley

This book launch was held at the Lithgow Library Learning Centre, on 19th October 2018, and was attended by a large group of family and friends of the author Keith Painter, as well as descendants of the Padley family.
It was followed the next day by a rededication of the restored Padley monument at Hassans Walls Lookout.
James Padley was one of seven children, most of whom did not marry. Some descendants of James's brother George were in attendance from Queensland, making the trip not just for the launch but also to hand over a collection of memorabilia which has been unearthed during the author's research.



James McMillan Padley was the driving force behind the Lithgow Progress Association in the early 1900s and the chief instigator of development of visitor facilities at Hassans Walls Lookout. He also had a furniture shop in Lithgow from 1902 until his death in 1918 and was renowned for being a tireless worker for the community. If there was a committee for some worthwhile activity Padley was on it! From Hassans Walls, to his Irish Terriers, to the Patriotic Committee to the Caledonian Society – Padley was there. But his reputation had

developed itself much earlier than his time at Lithgow and when he left the Windsor and Parkes communities in his previous lives, he was sorely missed in each town.
Stemming from his publication in 2017 on Hassan's Walls, Keith came to see the significance of James Padley's activities in Lithgow and seeks in this most recent book to remind the people of Lithgow of Padley's enormous role in the development of the town.
During the book launch we were introduced to the Padley descendants and told a little of the research measures undertaken by Keith to bring this most recent book together. The journey of his research experiences is a story in itself!
James Padley was often described as "indefatigable", and at the pedestal unveiling former Lithgow Mayor Stephen Lesley described Keith as the same in his search for the truth, and thanked Keith for bringing James Padley back to Lithgow. *Patsy Moppett*

The book is available at most local book stores in Bathurst, Lithgow and the Blue Mountains, and also from the author, Keith Painter:

Post: Mountain Mist Books, 51 Nelson St, Raglan NSW 2795.

Saluting their Service Commemorations Program - Major Commemorative Grants

The Australian Government announced in November 2018 the commencement of the *Saluting their Service Commemorations Program* of funding. The objective of the Program is to preserve Australia's wartime heritage. It aims to involve people throughout the nation in a wide range of projects and activities that highlight the service and sacrifice of Australia's service personnel in wars, conflicts and peace operations, and to promote appreciation and understanding of the role that those who served have played in shaping the nation. Funding will be provided for state/territory or nationally significant commemorative activities which commemorate these aims.
Applications opened on 6 November 2018 and close at 2pm AEDT on 10 January 2019.
For further information about eligibility and how to apply, go to the Grant Round Application page of the Community Grants Hib website. Information about applying for this funding can also be found through GrantConnect (see below).

The following documents are available to assist your application or inquiries:

- Grant Opportunity Guidelines
- Questions and Answers
- Sponsored Organisation/Individual – Letter of Declaration Template
- Commonwealth Simple Grant Agreement Shell
- Commonwealth Grant Agreement Terms and Conditions

If you would like assistance or seek the Grant Opportunity documents, please call the Community Grants Hub Hotline on **1800 020 283** and/or contact:
support@communitygrants.gov.au
grantconnect@finance.org.au

Australian Government

Australian Heritage Festival 2019 – Connecting People, Places & the Past

The Australian Heritage Festival 2019 theme is *Connecting People, Places and the Past.* The Festival will bring to life all chapters of Australian culture and history, telling the stories of diverse and distinctive experiences that make up our communities.

Events across Australia will be held at historic buildings, landmarks, shipwrecks and sacred sites. The festival will bring together communities from all walks of life to recognise and celebrate heritage and culture through ceremony, song and dance, performance art, art in various media and artefacts, talks on books and stories, and guided tours of towns, places and spaces.

The Australian Heritage Festival is created with the vision of recognizing and celebrating the significance of our natural, historic and Indigenous heritage places and ensuring they are valued by Australians, protected for future generations and cared for by the community. The National Trust of Australia is proud to coordinate the Festival nationally, supported by funding from the Australian Government.

This year's festival will host an array of events across the nation from **18 April – 19 May 2019**.

Key dates for individuals and organisations holding events for the Festival include:

- 25 October: 2018: Registration for community events opens.
- February 2019: The Festival website goes live.
- 29 March 2019: Registration of events closes.
- 18 April 2019: Australian Heritage Festival opens.
- 19 May 2019: Australian Heritage Festival closes.
- 20 May 2019 – 20 June 2019: Evaluation of the Festival with event organisers and visitors from the community is carried out.

Download the Event Organisers' Toolkit today (*www.nationaltrust.org.au/ahf)* which outlines all you will need to complete your registration. Community events need to reflect the theme of the Festival. The National Trust will promote your event and provide support, as outlined in the Toolkit.

The National Trust of Australia look forward to welcoming Australians and international visitors to another year of the Australian Heritage Festival and the wonderful range of exhibitions, walking tours, films, expert talks, workshops, food fairs, guided tours of historical sites, ceremonies, demonstrations, special dinners and lunches this program has to offer. Let them connect you to *People, Places and the Past*.

National Trust of Australia

Vale Ronald Francis Rozzoli

In late 2018 the Hawkesbury community was saddened by the death of Ron Rozzoli, following a long and courageous fight for life. He passed away at home with his family around him, on 16th October 2018.

There was a private funeral for family and a Memorial Service was held in the Ron Rozzoli Room at the Richmond School of Arts.

Richmond School of Arts

Ronald Francis Rozzoli is remembered by his wife Margaret and family. Ron was a Life Member of the Richmond Literary Institute, School of Arts. One of the community rooms in the Deerubbin Centre at Windsor was named the Rozzoli Room in 2005 after Ron and his brother Kevin. Kevin represented the Hawkesbury electorate for 30 years.

The Rozzoli family came to the Hawkesbury in 1940. Ron's father Frank established a retail jewellery business in 1946 in Richmond. Frank Rozzoli was a member of the Horological Guild of Australia and also provided watch and clock repairs. His sons Ronald and Kevin were both State Apprenticeship winners in watchmaking. Rozzoli Jewellers were on what is now called Hawkesbury Valley Way (Windsor Road) in Richmond. Ron continued the family business from 1975 when his father died, until his retirement in 1995. He has always taken a keen interest in the local community, and was Honorary Secretary of Richmond School of Arts, from 1960 to 2003.

Ron & Margaret have been strong supportive members of the Kurrajong Comleroy Historical Society.

Patsy Moppett

Archives Appraisal and Description Workshop

This successful workshop was held at Hobby's Reach on 24th October 2018 and was well attended by about 23 people who came from all across the Blue Mountains as well as Colo and Kurrajong. The National Trust, Blue Mountains Historical Society and Charles Sturt University were also represented.

The principal presenter was Fiona Burn, former archiver researcher at the National Archives of Australia from 1983 to 2015. In retirement she works as a part time research officer, with short term contracts at the National Archives.

Fiona provided an introduction to archiving, outlining the difference between individual and organizational responsibilities, and their long-term moral and legal responsibilities. She put two questions which an archivist or an organization must ask:

- WHY do we retain these records?
- Why do WE retain these records?

The subtle difference was then explained. She indicated an excellent reference for every archivist, that being "Keeping Archives", the 2nd or 3rd Edition, and provided an extensive list of definitions relating to the topic.

Fiona then went on to discuss appraisal, providing a useful but general Appraisal Checklist, noting that the list would vary from archive to archive, providing examples of acquisition polices, and collection forms.

Fiona Burn

Professor Ian Jack

Professor Ian Jack, Senior Fellow and Archivist, St Andrew's College, University of Sydney, presented a case study on St Andrew's College.
Ian explained the arrangement of the college archives and indicated the reasoning as to how this listing worked for that particular archive.
A session was then held where actual archive material was provided by Fiona and Ian and inspected by the group, questions being posed as to archiving and handling.
Towards the close of the day, Gay Hendriksen, Museums and Galleries Advisor to Blue Mountains City Council, led a plenary session with the other two presenters where issues and queries resulting from the day were discussed.

Examining the material

Plenary session

A number of handouts were provided on the day, and the group provided vigorous discussion on the various topics, asking questions of the presenters about their own particular situations. The session also made suggestions as to topics for future workshops should the opportunity arise.
BMACHO advises that should anyone require any of the handouts, please contact BMACHO with your details and the material will be provided/emailed.
BMACHO thanked the presenters for their insights into the subject and attendees for coming along. They thanked Blue Mountains City Council for the funding opportunity to hold the workshops, and Blue Mountains Historical Society for the use of the venue. *Patsy Moppett*

BMACHO Workshop – Writing Grant Applications

BMACHO will be holding a Grant Applications workshop for members, with funding provided by the Blue Mountains City Council's Community Assistance Grant.

- When: 9.30am, Saturday 23rd February 2019.
- Where: Meeting Room at Blue Mountains Historical Society, 99 Blaxland Road, Wentworth Falls

Planning for this workshop is to be finalised, but email notification will be circulated in January 2019. Places in the workshop will be limited, and preference for attendance will be for the BMACHO membership. However, the public will also be welcome should numbers allow.

BMACHO Committee

Attendance at the workshop is free, but please RSVP if you are attending, along with any dietary requirements. Inquiries:
Email: bmacho.heritage@gmail.com
Phone: 02 4751 5834, leaving a message if unanswered.

2019 MUSE workshops:

Responding again to interests and concerns expressed during 2018 through meetings, visits, current status review and emails Gay Hendriksen, Museums Advisor to Blue Mountains City Council, will continue what she hopes will be the useful practical workshop series - *Muse.*
The free *Muse* workshop series is part of the museum advisor service provided by Blue Mountains City Council and Museums & Galleries NSW.
The series will provide tools, resources and skills development for regional museums, archives, library and gallery sector in the Blue Mountains.
To be eligible for this program you need to be a member of a regional museum, archive, library and gallery or associated organisation in the Blue Mountains region.
The sessions are limited in number so if you don't make it to the list please email Gay and she will put you on the waiting list.
The upcoming topics will include:

Workshop 1: Housekeeping - which will cover disaster planning, best practice museum administration - such as policy work (collection policies etc), volunteering rights and responsibilities.

Workshop 2: Significance Assessment, museum object cataloguing, and collection management.

Workshop dates are yet to be advised.

Changing of the guard

BMACHO would like to offer congratulations to member groups on the recent election of their new committees.
The incoming committees for 2018-2019 are comprised as follows:

Springwood Historical Society

President: Peter Chinn

Vice Presidents: Sue Fulton, Doug Knowles
Secretary: Dick Morony
Treasurer: Sara Matthews
Assistant Treasurer: Sue Fulton
Research Officer Peter Chinn
Assistant Research Officer: Nerida Russell.
Bulletin Editor: Dick Morony
Publicity Officer: Trish Browne

Valley Heights Locomotive Depot Heritage Museum

Chairman: Henk Luf
Secretary: Ross Stenning
Treasurer: John Carter
Publicity Manager: Keith Ward
Retail Manager: Andrew Tester
Building Restoration Manager: Dave Grove
Building Services Manager: Ted Dickson
Grounds Maintenance Manager: Stephen Corrigan
Workshop Manager: Terry Matchett
Membership Officer: Jeff Russell
Large Exhibits Manager: Bruce Coxon
Small Exhibits Curator: Mike Pensini
Model Railway Manager: Ray Beharrell
Perway Manager: Ted Dickson
Honorary Historian: Ted Dickson
Honorary Librarian: Andrew Tester
Planning & Development Manager: Vacant (new position)
Patrons: Mark Greenhill, Susan Templeman, Trish Doyle, Neil Cramm

Woodford Academy:

Chairperson: Elizabeth Burgess
Deputy Chair: Felicity Anderson
Secretary: Rae Clapshaw
Treasurer: Noel Burgess
Executive Members: Margaret Harrison, Kate O'Neill & Jenny Szemenyei

Hawkesbury Historical Society

President: Ian Jack
Senior Vice: President: Ted Brill
Vice President: Jan Barkley-Jack
Secretary/Public Officer: Neville Dehn
Treasurer: Heather Gillard
Auditor: Vacant
Publicity Officer: Vacant
Newsletter: Jan Redford
Web Administrator: Richard Gillard
Bookshop Manager: Heather Gillard
Committee Members: Rebecca Turnbull, Sean Flavin, Ellen Jordan, Richard Gillard
Publications Committee: Jan Redford, Jan Barkley-Jack, Rebecca Turnbull
HHS Collections Committee: Rebecca Turnbull, Carol Curruthers

Friends of The Paragon

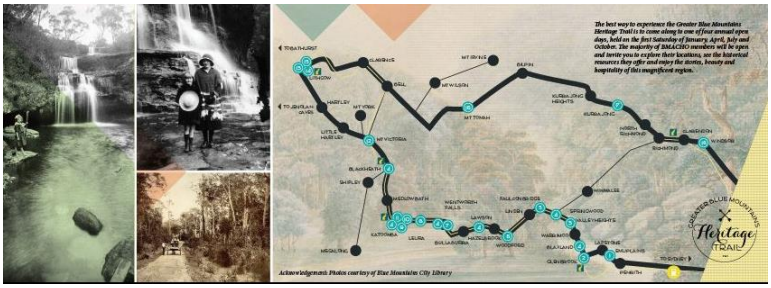
President: Robert Strange
Vice President: Ian Jack

Secretary: Julie O'Keeffe
Treasurer: Robert Trenchard-Smith
Curator: Linsi Braith
Communication & publicity: Carlene Martin
Honorary solicitor: Hal Ginges

Patsy Moppett

Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.
The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.
BMACHO is planning a review of the operation of the Trail brochure over the coming months, with a view to the issue of a new and revised brochure in 2019. Once again, your feedback will be most welcome!

If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Wendy Blaxland, Fiona Burn, Ray Christison, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter, Philip Hammon and Dr Peter Rickwood.

Committee: The management committee for 2018-2019 (from March 2018) is: Patsy Moppett (President and ***Heritage*** Newsletter Editor), Ian Jack (Vice President), Fiona Burn (Secretary), Philip Hammon (Treasurer), Dick Morony (Public Officer/Membership Secretary/ Calendar Editor), Suzanne Smith (Events and Venue Co-ordinator), Jan Koperberg (Correspondence Secretary), Summar Hipworth, Rae Clapshaw and Roy Bennett. Greater Blue Mountains Heritage Trail sub-committee: Fiona Burn, Jan Koperberg, Rae Clapshaw and Suzanne Smith, with guest member Gay Hendriksen.
Blue Mountains History Conference 2018 sub-committee: Summar Hipworth, Ian Jack, Jan Koperberg and Patsy Moppett.

The Nine Standards

A group of drystone cairns dominate the skyline along a ridge a few miles south east of Kirkby Stephen, just outside the Yorkshire Dales National Park, in the Pennine Hills of England.

The Nine Standards, as they are known, some of which were originally more than four metres high, are on the line of the Coast to Coast Walk between Kirkby Stephen and Keld. Situated at a height of 650m, their original purpose is uncertain, but one possibility is that they marked the boundary between Westmorland and Swaledale.

At the summit of the locality is a trig point that marks the watershed divide across England. From this point, rivers flow west toward the Irish Sea and east toward the North Sea. The Nine Standards along the Ridge offer significant views to the north west, the south west, the west and south east. They are by far the most striking and popular landmark in this area, no matter what time of year you visit them.

The origin of the nine “stone men” or cairns is a mystery, and some of them are now in a perilous state, although some restoration repairs and rebuilding has been undertaken in recent times. It is a very exposed site and affected by all extremes of weather.

Interpretation of the site may lead one to imagine any number from seven to ten or even eleven cairns. In height, they vary from 2m to almost 4m. In shape they are mostly round and cylindrical, except the northernmost one which is square. One is pyramidal and another stepped. They extend in a line some 75m long, pointing roughly north-north-east.

It is amazing that they have never been allowed to fall apart completely, to collapse and disappear. People want to see them up there, in the belief perhaps that they keep watch

over the valley as they seem always to have done. Amazing also because we simply do not know who built them, when and why. It is said that they are very ancient and are marked on 18th century official and published maps. They are also found on an old hand drawn parchment sketch map of Swaledale.

One theory of local tradition is that they were constructed by the Roman army to look like troops from a distance. Another is that they were built to resemble an armed encampment that might deter invading Scots prior to the Union of the Crowns in 1603.
The cairns are mentioned as a prominent waypoint on over 30 parish and manorial boundary perambulations dating back almost 500 years. It is probable that they were used as waypoints and landmarks even earlier.
Finally, an Old Welsh document about events in the 6th century describes a crucial defeat of the invading Saxons by Britons in the mountains, northwest of York at a place called "toothed mountain", a vivid description of the Nine Standards.
So, there are good grounds for thinking that the Nine Standards have been on the Kirkby Stephen skyline certainly for over 500 years, probably for 800 years, and maybe for a great deal longer than that. But why are there nine? Are they boundary landmarks, signposts or burials?

One speculative study suggested some of the possibilities for their origins in the pre-Conquest period, extending back as far as the Bronze Age.
It is evident that there is no accepted archaeology to tell the story, and no one has so far taken a serious look at the Nine Standards. However, it can only be a matter of time before someone provides definitive answers to the many questions which are asked.
Or do we simply leave well alone and simply enjoy the romance of these ancient sentinels who stand guard over the landscape!

Patsy Moppett

Food for thought ..... Editor's note

Rare Trades

This issue we publicise the Bathurst Heritage Trades Trail again (see page 17), after such a successful event in 2018. It will be staged on 18th and 19th May 2019.

BMACHO have been spreading the rare trades word for some time now, covering skills such as blacksmithing, dry stone walling, and many other such occupations. This issue we talk about the cordwainer, as opposed to the bespoke shoemaker covered in a previous issue. It is really exciting to know that people still value these trades, in a world that seems to try to do everything the quick and easy way. The value and quality of work carried out by the old methods cannot be denied, with items and structures lasting much longer than modern cheap imitations.

These events are aimed at increasing public awareness and showcasing arts and skills to enable people to obtain a better understanding of the trade or craft. Exhibitors are always happy to demonstrate their art and talk freely about the ins and outs of what they are doing. Rare Trades shows have been featured across Victoria and Queensland for many years. NSW is now getting on the bandwagon.

In this Rare Trades revival, exhibitors to the events come from across the Central West and Blue Mountains regions and beyond. Another similar event, which will include workshops, is planned for Portland NSW on 30-31 March 2019 (see page 16), being staged by the Aussie Leather Crafters organisation, and includes many other tradesmen and women.
So, place these dates in your autumn calendars and don't miss out!

ERRATA!
Newsletter No. 60, January-February 2019, Page 12 shows stained glass windows, and one in particular as being the Uniting Church, Springwood. However, it has been brought to the Editor's attention that this window is in fact in Christ Church, Springwood! The middle window is actually cracked in the top of the middle window near the face of the image of Jesus. Many thanks to the advisor, in making sure we get it right!!

Taxes, taxes, taxes ……

Last issue we looked at the riots caused by the toll gate taxes in Wales and mentioned that there were various other costs – taxes, tithes and charges, which drained already low incomes.
We complain today about taxes too and think we are hard done by. However, back in Georgian days there were some astonishing taxes which we would never experience and consider as ridiculous, which were simply levied to raise money which was misdirected to other purposes!
They had newspaper and perfume taxes, alcohol taxes and medicine taxes, which we can relate to now. But other more obscure taxes included the candle or beeswax tax, the beard tax, the window tax, the brick tax, the clock & watch tax, the hat tax, the playing card tax and the more dramatic tolerance tax!
The brick tax: This tax was introduced in England in 1784 as a means of helping to pay for the wars being fought in the American Colonies. Tax was paid at the rates of 4 shilling per thousand bricks. Tradesmen and developers found the way to reduce this tax was simple – make bigger bricks, so that you would use less! But the government simply changed its rules and stipulated a maximum size for a brick. This put some of the smaller companies out of business, and also meant that more timber was used as an alternative. The tax was finally abolished in 1850 as it was regarded as a detrimental tax to industrial development, at which point bricks became again the popular choice as a building material, and commercial brick makers began to proliferate throughout the country.
The candle or beeswax tax: From 1709 the English government created another tax on the making of candles, and the making of candles in the home was forbidden unless you held a licence and paid tax. As a result, rush lighting became used as this was exempt. Rushes were dipped in animal fat then left to harden; these could then be lit at both ends, they only provided light for a very brief period of time though, but they were tax free! Was this "burning the candle at both ends"? It can be imagined that many a house fire resulted from this practice.

It is said that Oliver Cromwell chided his wife for sewing by the light of two candles, blowing one out in horror at her extravagance.
This was one of the few times when you could save tax by sitting in the dark doing nothing! When the tax was finally repealed, candle makers celebrated by producing highly decorative candles, something still with us today.

The clock & watch tax: In an attempt to generate revenue for the country, in 1797 William Pitt imposed yet another tax – the clock tax. This tax required a payment of five shillings on every clock, even within a private home, two shillings and sixpence on pocket-watches of silver or other metal, and ten shillings on those of gold. This proved immensely unpopular and was scrapped after only nine months.

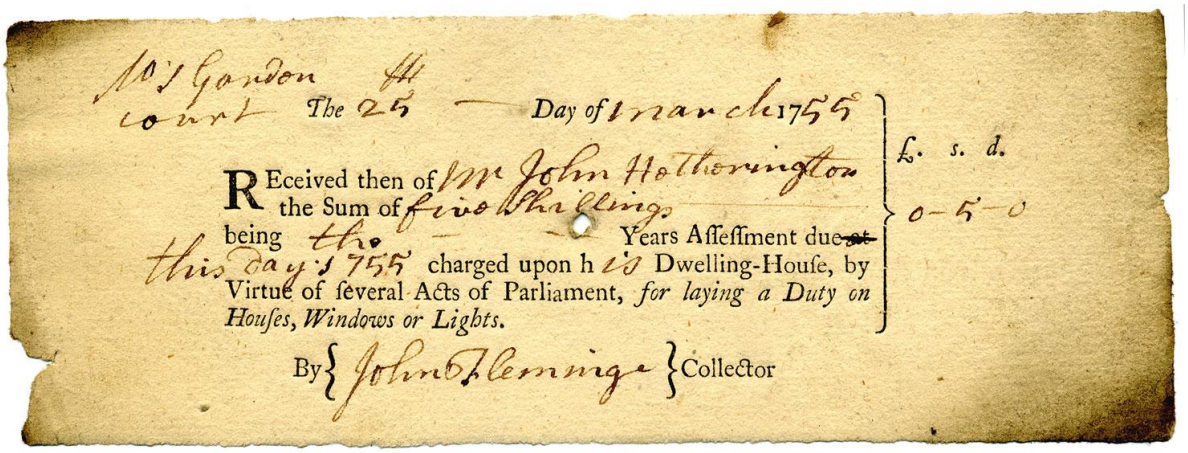
The hat tax: In 1784, the English government introduced a tax on hats, forcing manufacturers to buy a licence and put a revenue duty "stamp" inside each hat. Levied on men's hats the tax was introduced during the first ministry of Pitt the Younger and was designed to be a simple way of raising revenue for the government in a rough accordance with each person's relative wealth. It was supposed that the rich would have a large number of expensive hats, whereas the poor might have one cheap hat or none at all. Heavy fines were given to anyone, milliner or hat wearer, who failed to pay the hat tax. However, the death penalty was reserved for forgers of hat-tax revenue stamps!

The playing card tax: Playing-cards were seen by the rulers of England as a ready source of revenue, particularly when there were wars to be paid for. So, the makers and later the purchasers, paid a tax on each pack. Instances are recorded of taxes being raised in 1588, in 1628, during Queen Anne's reign, and from 1711 onwards, until the tax was finally abolished in 1960 (!) since by then it was more trouble to collect than it was worth. Playing cards was seen as addictive gambling and as such proved to be an easy source of income generation. In order to prevent tax avoidance, the ace of spades was held by customs and only issued once duty had been paid by the card maker.

Window tax: In 1696 there was a financial crisis across England created by a growing inflation caused by the many conflicts both in Ireland and on the continent. One of the forms of taxation created to help pay the debt was known as the Window Tax. The tax would be paid on a house of more than six windows. One way for a person to by-pass the tax was to brick up one or two windows over the stated six, even today on some older houses the bricked-up windows are still there. This tax pre-dated the Georgian period but continued throughout and after the Georgian period. There was a flat rate of two shillings per house but if you had over 20 windows was a colossal eight shillings! There were of course some exemptions such as people in receipt of parish relief. The tax was amended several times and often regarded as unfair and seen by some as a tax of light and air.

A costly construction

Bricking up



Mr Gordon
court The 25th Day of March 1755

REceived then of Mr John Hotherington the Sum of five Shillings being the Years Assessment due at this day 1755 charged upon h[is] Dwelling-House, by Virtue of several Acts of Parliament, *for laying a Duty on Houses, Windows or Lights.*

£. s. d.
0-5-0

By { John Flemings } Collector

When the United Kingdom of Great Britain came into being in 1707, the window tax continued, and was finally repealed in 1851.

The beard tax: In 1535, King Henry VIII of England, who wore a beard himself, introduced a tax on beards. The tax was a graduated tax, varying with the wearer's social position. His daughter, Elizabeth I of England, reintroduced the beard tax, taxing every beard of more than two weeks' growth, although it was poorly enforced.
A beard tax also applied in Russia. Archaeologists in Russia have recently stumbled upon a 1699 coin issued to mark compliance with the "Beard Tax," which Tsar Peter the Great had introduced the year before. Peter instituted the tax upon his return from a tour of Western Europe, where he saw few beards. Beards had fallen out of favor in Europe over the course of the 17th century.

King Henry VIII

Russian beard tax token

Peter the Great

To enforce the ban on beards, the tsar empowered police to forcibly and publicly shave those who refused to pay the tax. Resistance to going clean shaven was widespread with many believing that it was a religious requirement for a man to wear a beard. The tax levied depended upon the status of the bearded man. Those who paid the tax were required to carry a beard token. This was a copper or silver token with a Russian Eagle on the reverse and on the obverse the lower part of a face with nose, mouth, whiskers, and beard. Several different versions were minted between the issuance of the decree and its lifting in 1772, when many of the tokens were melted down and repurposed.
Tolerance tax: the tolerance tax was a tax that was levied against Jews of Hungary, then part of the Austrian Empire between 1747 and 1797. The tax was based on the German statute that a Jew was obliged to pay a certain tax to be "tolerated".
In 1747, during the reign of Empress Maria Theresa, the Jews of Hungary were taxed for the privilege of remaining in the empire and were threatened with expulsion if they did not pay. The Jews also had to pay heavier bridge and ferry tolls than the Christians. They were not allowed to live in Croatia and Slavonia, in Baranya and Heves Counties, or in several free royal towns and localities; nor might they visit the markets there.
The method of calculating the tolerance tax varied over time and location, according to the size of household, occupation, and income-producing assets.

In 1783, Emperor Joseph II, the son of Maria Theresa, allowed Jews to settle in Pest, while enacting a tolerance tax, which the Jews had to pay to the town.
After 1789, the Jews paid a tax on kosher meat, a marriage tax, and a tax on the synagogues and cemeteries.
In 1797, after the death of Joseph II, a candle tax was placed on Jewish religious candles. In Croatia, Slavonia, and Dalmatia, new rights were granted to Jews in 1840, but the "tolerance tax" remained in force. *Patsy Moppett*

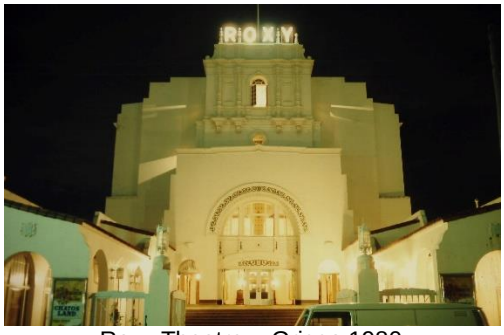
Roxy Theatre, Parramatta

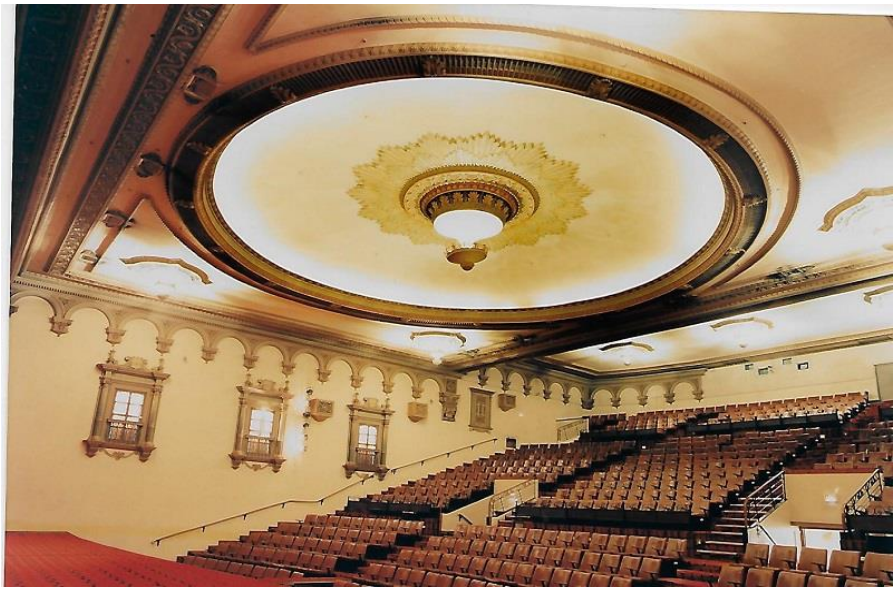
Parramatta's Spanish styled Roxy Theatre, with its magnificent arcaded forecourt, was opened in February 1930. Seating 2,000 people, it brought Parramatta to a standstill on its opening night as thousands thronged to see the new theatre.

Roxy Theatre – Adey 1980



Roxy Theatre – Griggs 1980

The Roxy is unique to Australia as a theatre building and is subject to five major heritage listings: the NSW State Heritage Register, the National Trust, the National Register of Australia, the Royal Institute of Architects and Parramatta City Council LEP.
To be listed on five such registers already makes it a unique, important, and irreplaceable heritage building, not only to Parramatta and Sydney but to the nation itself.
Hoyts acquired the Roxy in 1944 and operated it as their Parramatta flagship. In 1976 they subdivided it into three screens, in keeping with the economic viability of the time. The huge dress circle became the main auditorium, with two smaller cinemas built in the former stalls area. The latter involved the demolition of the huge and ornamental proscenium arch and some side wall grilles. While this was not desirable, it did at least allow the Roxy to have a new lease of life as a three screen cinema. Hoyts finally sold the Roxy in 1991, but continued to lease it back until 1995, when Village Roadshow took over. The Roxy closed as a cinema in 2002 and was converted to a hotel and restaurant.
The latter failed after several years and today the theatre stands disused. It is now the subject of a "*Concept Development Application*" which allows for a 33 storey commercial tower to be built behind and above the theatre, by demolishing the rear of the building from the dress circle back. The tower would be supported on legs driven through the side walls of the theatre, according to the DA. The Spanish foyers would become an entrance to the tower and its function rooms. The roof would be removed and replaced with a flat roof but retaining how much of the auditorium decoration is unclear. The existing 600 seat dress circle theatre would be retained.



Dress circle – Adey 1980

This "*concept*" claims that two function rooms and a 600 seat former cinema amounts to an entertainment centre for Parramatta. A 600 seat cinema is useless in today's world and Parramatta already has ten screens in the nearby Westfield. It is also useless as a comedy/concert venue, not having dressing rooms or back stage facilities. No parking facilities are provided for the function rooms.

The Concept DA has been refused by Parramatta City Council, the Heritage Council of NSW, and the Sydney Central Planning Panel. The developer has appealed to the Land and Environment Court, and a hearing will be held in March 2019.

It is the National Trust's position, and that of the Parramatta Branch and also other groups, that the Roxy be acquired from the developer in a land swap deal, to bring it into public ownership. This would be a win-win situation for all parties. The theatre should then be fully restored as a world class facility with 1,500 seats [by re-instating the stalls] and building a new stage and flytower. There are several examples of this in other Australian cities where the restored theatre has revitalised the area around it. Look at the magnificent Capitol Theatre in Sydney. Toowoomba took its derelict Empire Theatre, fully restored it as a live performance venue, and built two more live theatres adjacent. Subiaco in Perth has taken the Regal, a former cinema, and revamped it with a new stage and flytower. Newcastle restored its magnificent Civic Theatre with new stage facilities, and at present the 130 year old Victoria Theatre is about to be restored, which has been disused for some 30 years.

The Trust encourages the NSW State Government and Parramatta City Council to show vision and leadership and acquire this irreplaceable building for the people of Australia and restore it to world class performing arts standards. To build a 33 storey tower behind and above it would destroy this fabulous theatre and remove a once only opportunity to provide a performing arts centrepiece for Parramatta and the western suburbs.

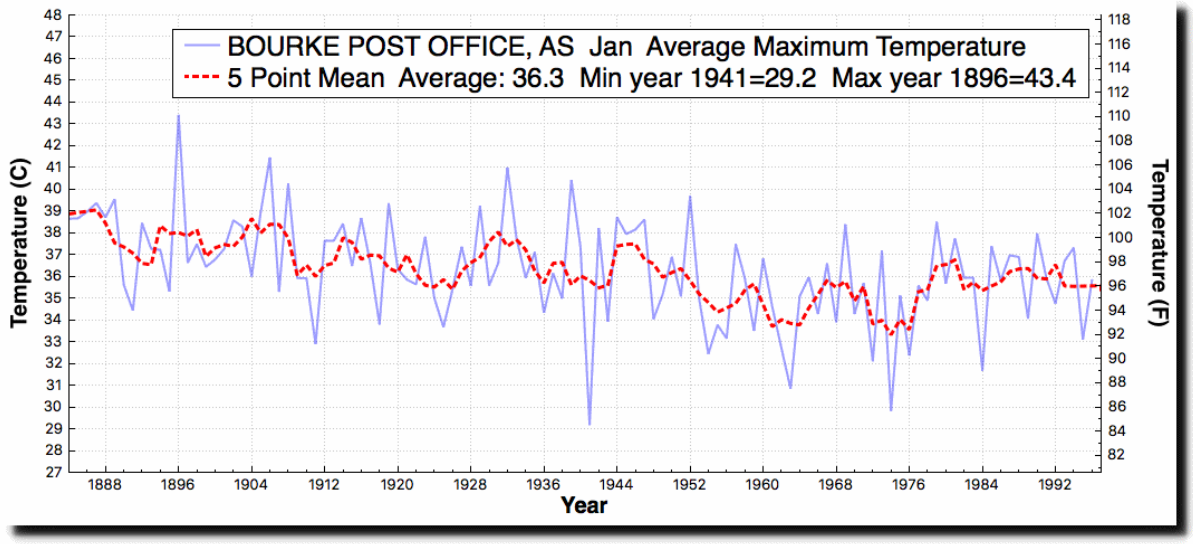
Les Tod, Deputy President of the Parramatta Branch of the National Trust

Heat Waves – part of our Australian heritage

As I sit in my stuffy office writing this Newsletter, struggling with the heat and trying to keep the inside air moving, at 28 degrees inside and 35 outside, my daughter emails me a news article from January 1896. Suddenly I feel quite cool!

Across the country that year a heat wave saw an extreme twenty four day period when temperatures hit 48 degrees centigrade. People fled the cities to the mountains on trains, the railways scheduling extra services at discount prices for those seeking relief from the heat. The maximum temperature was above 38.9 C degrees for over three weeks (100 degrees F equals 38 degrees C) and many people including children and elderly people died. Hospitals

were overcrowded, bushfires burned across the countryside and people were dropping dead in the streets.
During the 1896 heat wave some 435 deaths were recorded, 89% of them within New South Wales. Deaths also occurred in South Australia, Western Australia, Victoria and Queensland. Bourke, in NSW, lost 1.6% of its population to the heat: temperatures of 40℃ in the shade were already being recorded in October, mid-spring the year before.
The heat wave was described as one of the worst in living memory, commencing the second week of January. Although the level of heat measured is tempered by the methods of measurement available at the time, a temperature was recorded 119 degrees F in the shade at 2pm at Wilcannnia. Heat exhaustion and apoplexy took many, including infants.
The heat was sending people “insane”, leaving them helplessly wandering the streets before collapsing. Cattle, horses and sheep died by the hundreds as water tanks and dams dried up, and settlers’ homes were burnt by bushfires. The death toll continued to rise as the heatwave entered its fourth week.



Average Maximum Temperature at Bourke Post Office1884 to 1996

Reports came in from across the country, from as far afield as Perth and Kalgoorlie, Brisbane and Bourke. Some centres registered temperatures as follows:

- Geraldton: 125 degrees F.
- Brewarrinna: 116 degrees F.
- Bourke: 118 degrees F.
- Wilcannia: 118 degrees F.
- Carathool: 115 degrees F.
- Hay: 113 degrees F.
- Deniliquin: 105 degrees F.
- Windsor: 112 degrees F.
- Lyndhurst: 110 degrees F.
- Ungarie: 120 degrees F.

Water supply was running short and typhoid fever and kindred diseases became very prevalent, along with sunstroke and fever. At Nymagee the drinking water was condemned by doctors as being quite unfit to drink, and very conducive to hydatids.
At Lithgow coal mining was seriously interfered with, the furnaces being shut down owing to scarcity of water, throwing a lot of men out of employment. At Tamworth the maize was wilting and turning yellow. At Tenterfield grass and young crops were withering.
Most businesses across the colony had closed their doors, except for hotels, as residents laid low waiting for the heat wave to break.

The Perth "Daily News" reported the decision of Messrs Stevens and Wilkinson to close the pantomime season for a few days on account of the hot weather, which was generally approved by playgoers!

Wilcannia Hospital 1896

THE HEAT ON MARRA.

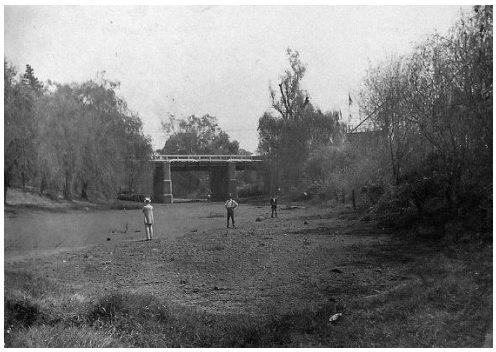
Mr. M. R. Dow writes from Marra station, River Darling, stating that the following figures indicate shade readings of the thermometer during January :—January 1, 110 degrees ; 2, 101 ; 3, 105 ; 4, 109 ; 5, 120 ; 6, 126 ; 7, 122 ; 8, 118 ; 9, 117 ; 10, 118 ; 11, 117 ; 12, 120 ; 13, 124 ; 14, 111 ; 15, 112 ; 16, 124 ; 17, 126 ; 18, 114 ; 19, 110 ; 20, 124 ; 21, 130 ; 22, 124 ; 23, 127 ; 24, 127 ; 25, 95 ; 26, 99 ; 27, 107 ; 28, 103 ; 29, 90 ; 30, 103 ; 31, 109. On several occasions during the month the glasses stood at 105 and 107 degrees at midnight and 1 a.m. The figures were the readings of three different glasses, which were hung in the front verandah at the Marra station, and were placed out from the wall on a frame to allow the air to get round them, thereby preventing the heat from the wall affecting the instruments.

Report from Marra Station

The Mayor of Perth (Mr H. J. Saunders) was commended on the rapidity with which he got through the business of the City Council. At the monthly meeting, the heat was almost unbearable, with the thermometer in the room registering over 100 degrees. Councillor George, however, did not consider that the dignity of a councillor should be upheld when the mercury was at boiling point. Before the meeting opened, he divested himself of his coat and waistcoat, unstrapped his braces, and “delivered himself of oratorical utterances in his shirt sleeves”. Before doing this, he appealed to the Mayor, who was tastefully dressed in an Indian officer's full evening costume, for permission to partially disrobe, and was given a hesitating, though diplomatic answer in the affirmative!

The Western Herald published a list of the temperatures from 1 January through to 28 January, which ranged from 102 degrees F to 120 degrees F. They also published a list of some 62 victims of the heat wave from 12 January, which included 3 children, two people whose Christian names were not known, and one victim whose name was totally unknown. Daily temperatures in parts of NSW in January and February can be up to 48 °C (118 °F). The highest maximum temperature was recorded as 50.7 °C (123.3 °F) at Oodnadatta on 2 January 1960, which is the highest official temperature recorded in Australia.

Bore drying up



Dry lagoon Wagga

Heat waves occur from time to time, and the government astronomer in 1897, having studied the Australian climate, estimated that they occur every 19 years. An extreme year occurred in 1878, and although 1897 was also bad, the astronomer could not deny that 1896 was the worst to date.

Heatwaves are Australia’s deadliest natural hazard, and nowadays authorities encourage vulnerable people to have plans to cope with extreme heat. Businesses also suffer

disruption, and most companies with employees working on machinery or outdoors report lower than normal productivity.
Dealing with the heat has become a part of our heritage in this country of exceptional climatic extremes. Australia has a long history of deadly heatwaves and records are available from episodes of extreme heat, reaching back as early as 1844. Although the temperatures today are not a lot different, the extent of heat waves have not been the same as 1896, and back in 1896 there were not the conveniences of air conditioning, and often no power to avail themselves of electric fans and other cooling devices. Water supplies were drying up and the remaining water became contaminated, and could not even be used for cooling. There was simply no escape, especially out west, and people simply succumbed.

Chance of a lifetime to visit Moyne Farm, Little Hartley c1822

The story of John Grant, a nineteen-year-old Irish convict, makes an inspiring tale of luck, both good and bad, a classic example of the lifechanging opportunity that transportation represented for some of our earliest immigrants. This story is doubly enchanting, given its accessibility through the quality research and writings of Jacqueline Grant in *"Providence - The Life and Times of John Grant"* published in 1994, ISBN 0-646-17563-7 and shortly to be republished as a third edition.
Grant's story makes a fascinating read. His bad luck was to be convicted in a British controlled Ireland on trumped up attempted murder charges; his good luck and skill was in building a huge grazing empire on the Lachlan, despite fierce competition from "exclusives" equally eager to build their landholdings.
Assigned to Deputy Surgeon William Redfern, Grant built a strong friendship with Redfern and his wife Sarah and a useful link to power through Redfern's close association with Governor Macquarie. By 1817, Grant was Redfern's overseer, in 1819 he received his Ticket of Leave and by 1820 was moving cattle across the mountains both for Redfern and for himself. He acquired a land grant in the Kanimbla Valley, then known as the Vale of Clwydd, on which he built a cottage c1822 that he named Moyne Farm.

Moyne Farm tucked away in a valley at the junction of the three permanent creeks that first attracted John Grant to the site

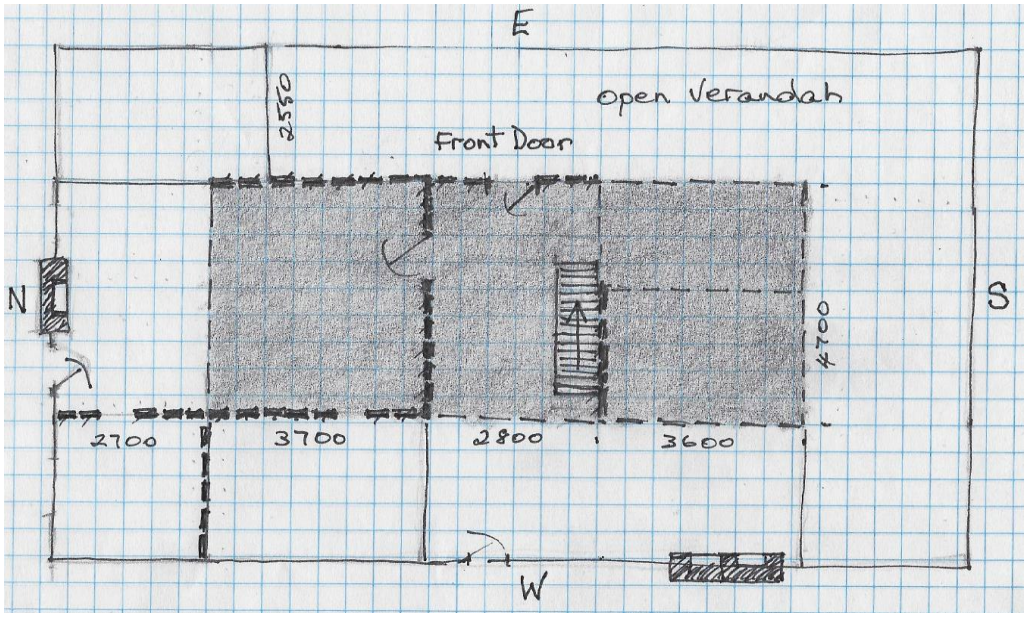
Moyne Farm homestead is one of the oldest buildings still standing west of the Blue Mountains. With the original three-room slab cottage largely still intact within the much

extended late 19th century building, it is undoubtedly the oldest timber building west of the mountains.

Recent times have seen restoration of the annexed c1826 Moyne Farm graveyard, courtesy of a grant from the NSW Government's Heritage Near Me program. Concurrently, a major renovation of the homestead has been undertaken by the Di Falco family, the farm's current owners. This project has seen the peeling away of years of addition and overlay to reveal the remains of the original convict-built cottage, complete with an attic in the roof cavity. It has resulted in the recovery of a building once in an advanced state of dilapidation, whilst preserving the features of its humble origins.

Measuring some thirty feet long and fifteen feet wide, the original structure has been extended all around by some nine feet, probably fairly soon after the completion of the original structure, leaving the original vertical slab-built cottage protected at the centre of the much larger building. This extension of the original cottage and the fact that the roof of the whole has been well maintained, has left the cottage at the heart of the building, intact as a remarkable example of convict craftmanship. According to Jaqueline Grant's research, Grant had five convicts assigned to him. One wonders how he was able to find such skill in that small team.

View along the western top plate showing the recessed wall slabs and the cross bearers secured by hardwood pegs through the eave board and showing the nine-inch eave overhang of the original slab walled cottage.



Sketch plan of the house with the original cottage footprint shaded. Emboldened wall indicates where original slab walls remain.

Its three rooms, two measuring some fifteen feet by twelve feet and a middle (corridor) room measuring fifteen feet by nine feet, were long ago gentrified, the walls being covered with much-painted, pine lining boards. Great was the surprise when the dilapidated lining boards were removed to reveal the original vertical slab building. Slabs uniformly two and a half inches thick and six to nine inches wide set into trenched top and bottom plates of some five-inch square slabs showing the dapple cut of an expert adze man, now exposed and burnished in the restored building.

This original cottage is extraordinary in its simplicity. The eaves extend a mere nine inches beyond the slab walls and there is no evidence of a verandah. The northern room shows a break in the top plate that was possibly the point where the chimney of a long-gone fireplace penetrated. In subsequent years, the surrounding “verandah like” extension was added, enclosed on three sides to make rooms around the perimeter. Three fireplaces and chimneys still stand in that enclosing outer perimeter wall.

The carpentry in the inner original building is memorable. The rectangle created by the top plates of the external wall have been precisely let into the rough timber, part round bearers that support the attic floor. The ends of these bearers have been squared off and let through a mortise in the eave board and secured with a hardwood peg. An unusual feature of the building is the dimension of the doors which are over six feet high.

During the 2019 Australian Heritage Festival, the Lithgow Branch of the National Trust, supported by the Di Falco family, will hold an Open Day to celebrate John Grant’s life and the story of Moyne Farm on 5 May 2019. Visitors will be able to watch a presentation on the recent renovation and view the completed works. They will hear speakers on John Grant and have an opportunity to inspect the cemetery and to attend a commemoration of the 1826 burial of Jane, John Grant’s first wife. The day will also include light entertainment and refreshments and lunch will be available for purchase provided by the local Hartley Rural Fire Service Canteen.

Book to attend this once in a lifetime opportunity by going to our Lithgow National Trust event booking website *“Moyne Farm Open Day*” at https://www.trybooking.com/ZZBH

A nominal entrance charge of $10 per adult will help to defray costs and entitle visitors who book online to receive a commemorative booklet as a keepsake of the day.

Ramsay Moodie

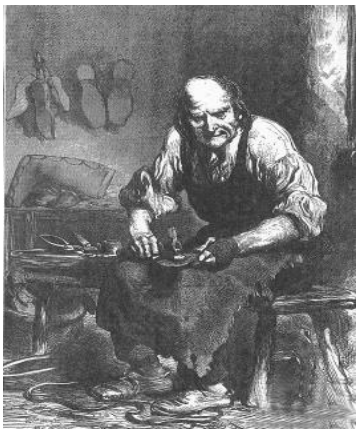
The Technical Side

The Cordwainer

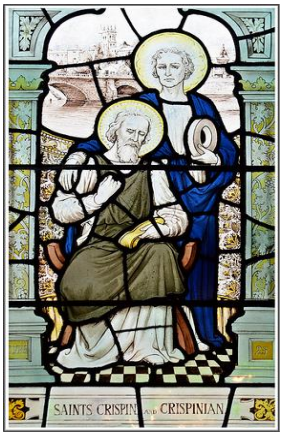
Back in the January-February issue No 54 of the Heritage Newsletter, we presented an article on the bespoke shoemaker, who made shoes to order. As opposed to this we now discuss the cordwainer, a tradesman who made new shoes from new leather. The cordwainer's trade is contrasted also with the cobbler's trade, who, according to a tradition in Britain, were restricted to repairing shoes using old leather.

The word stems from the Anglo-Norman *cordewaner*, or cordonnier, which entered the English language following the Norman invasion of 1066, and initially denoted a worker in cordwain or cordovan, the leather historically produced in Moorish Córdoba, Spain in the Middle Ages, made from the hide of the Musoli goat. Medieval cordovan leather was used for the highest quality shoes, but cordwainers also used domestically produced leathers and were not solely producers of luxury footwear. Since this date the term cordouan, or cordovan leather, has been applied to several varieties of leather. Today cordovan leather is a vegetable tanned horse "shell," and like the Medieval cordwain is used only for the highest quality shoes. The earliest attestation in English is a reference to Randolf se cordewanere, ca. 1100. The term is now considered obsolete except where it persists in the name of a trade-guild or company, or where otherwise employed by trade unions.

The early separate guilds held that cobblers were not permitted to work in new leather. Where a cobbler made shoes it was usually from old leather, going so far as to collect worn-out footwear, cut it apart, and remanufacture cheap shoes entirely from salvaged leather. The difference between the two trades was once considered so vast, it was a serious insult to call a shoemaker a cobbler (the latter of which, not so coincidentally, is a term that also means to work clumsily or bungle).



The shoemaking and cobbler trades were forced to merge around the beginning of the 19th century when the introduction of mass manufactured shoes left shoemakers out of work and having to accept lower paying repair jobs.
In London, the occupation of cordwainer was historically controlled by the guild of the Worshipful Company of Cordwainers. They were granted a royal charter of incorporation in 1439 but had received their first Ordinances in 1272. The ward of the City of London named Cordwainer is historically where most cordwainers lived and worked.
The first English cordwainers to arrive in America came in 1607 and settled in Jamestown, Virginia.
Cordwainers were also among the early settlers of Canada. In 14 June 1749, the newly appointed Lieutenant Governor of Nova Scotia, Edward Cornwallis, arrived in Canada in the *Sphinx*, and established a settlement in Canada which is now Halifax. When the thirteen transport ships following the *Sphinx* reached the harbour with the initial 2,576 British settlers, among them were nineteen cordwainers.
Shoemakers generally over time have shown a clear preference for the title cordwainer, conscious of the distinguished history and tradition it conveys. Today's cordwainer is no exception. The current generation of boot and shoemakers includes a growing number of tradesmen and tradeswomen, who having largely adopted traditional hand-sewn techniques supplemented by simple machines, continue to practice skills established centuries ago. In the face of declining domestic footwear production, it can easily be said that the future of this trade lies in its past and is being insured by the these modern cordwainers.



Saints Crispin & Crispinian

The patron saints of the cordwainer were Saints Crispin & Crispinian, born to a noble Roman family in the 3rd century AD. Crispin and Crispinian fled persecution for their faith, ending up at Soissons, where they preached Christianity to the Gauls whilst making shoes by night. While it is stated that they were twin brothers, that has not been positively proved.

They earned enough by their trade to support themselves and also to aid the poor. Their success attracted the ire of the governor of Belgic Gaul, who had them tortured and thrown into the river with millstones around their necks. Though they survived, they were beheaded later by the Emperor c. 285–286.

The feast day of Saints Crispin and Crispinian is 25 October. Although this feast was removed from the Roman Catholic Church's universal liturgical calendar following the Second Vatican Council, the two saints are still commemorated on that day in a recent edition of the Roman Church's martyrology.

In the sixth century a stately basilica was erected at Soissons over the graves of these saints, and St. Eligius, a famous goldsmith, made a costly shrine for the head of St. Crispinian.

They are the patron saints of cobblers, glove makers, lace makers, lace workers, leather workers, saddle makers, saddlers, shoemakers, tanners and weavers.

Community events & updates

Special History Workshop: Researching & Commemorating the "Spanish Flu"

This year commemorates the 100th anniversary of the peak year of the great, so-called, "Spanish Flu", which had a significant impact on the whole world, including Australia. The pneumonic influenza or "Spanish flu" pandemic that circled the world in 1918–19 left few communities untouched.

Join the Colo Shire Family History Group for a practical workshop, where they will review the bigger picture of the pandemic before considering how its impact might be commemorated locally. Participants will explore the value of local sites and collections in uncovering the flu's personal, social and enduring effects. They will then turn to practical outcomes: how you might transform your research into stories relevant to your community. From monuments and walking tours to websites and booklets, use this workshop to map out practical projects for the centenary year of 2019.

This workshop will be facilitated by Dr Peter Hobbins, a medical historian at the University of Sydney and a Councillor of the Royal Australian Historical Society. His recent book, *Stories from the Sandstone: Quarantine Inscriptions from Australia's Immigrant Past*, won the NSW Community and Regional History Prize in the 2017 Premier's History Awards.
They are inviting individuals and organisations to attend or send representatives (up to 3) to the event, both to hear what Peter can tell us and to take the next step of planning a follow up process (research, a publication, a presentation) to commemorate the specific impacts of the event in the Hawkesbury area.
The speaker and the Committee believe there is a wealth of information out there on the local effects of this momentous world-wide event. *Neil Renaud*
Date: Thursday 7 March 2019, starting at 10.00am
Venue: Hugh Williams Room, Hawkesbury Regional Museum (8 Baker St, Windsor)
RSVP by Monday 25 February 2019 (this workshop is <u>FREE</u>)

Please contact the Secretary, Neil Renaud, to book your place or obtain further details.
Neil Renaud Ph: 0423 157 089 or nrenaud@bigpond.com

Aussie Leather Crafters #4, Portland NSW

Aussie Leather Crafters is a not for profit community group with a charter of promoting leathercraft throughout the Australian community. They do this by having periodic gatherings where likeminded members get together to share their skills and promote their craft to others.
At *Aussie Leather Crafters# 4*, they plan to have demonstrations by some well-known Australian leathercrafters and leathercraft workshops for members and the general public. They have invited the knife makers and blacksmiths groups along with various other traditional craft groups to join them for the weekend to stage a family event for members, participants and the local surrounding communities. Demonstrations will be free to all vendors, participants, workshop participants, camping or entry ticket holders.

There will be leathercraft demonstrations and workshops, and other demonstrations include knife making & blacksmithing, bushcraft, wood working, Medieval archery and logo design.

The event will be open on 30th and 31st March 2019, and accessible to the public from 10.00 am to 4.00 pm both days, and onsite parking and camping will be available.
The venue for *Aussie Leathercrafters Gathering #4* is at The Foundations at Portland, 67 Williwa St Portland NSW 2847, which is the site of the old Portland Cement works. The site is currently being redeveloped, with Portland being just 20 minutes past Lithgow, and the gateway to the beautiful Central West region. *Ron Evans*

For tickets, vendor stalls or further information, contact Ron Evans aussieleathercrafters@gmail.com or Google *Tickets for Aussie Leather Crafters Gather #4*

2019 MUSE workshops:

Responding again to interests and concerns expressed during 2018 through meetings, visits, current status review and emails Gay Hendriksen, Museums Advisor to Blue Mountains City Council, will continue what she hopes will be the useful practical workshop series - *Muse.*
The free *Muse* workshop series is part of the museum advisor service provided by Blue Mountains City Council and Museums & Galleries NSW.
The series will provide tools, resources and skills development for regional museums, archives, library and gallery sector in the Blue Mountains.
To be eligible for this program you need to be a member of a regional museum, archive, library and gallery or associated organisation in the Blue Mountains region.
The sessions are limited in number so if you don't make it to the list please email Gay and she will put you on the waiting list.
The upcoming topics will include:

Workshop 1: Housekeeping - which will cover disaster planning, best practice museum administration - such as policy work (collection policies etc), volunteering rights and responsibilities.

Workshop 2: Significance Assessment, museum object cataloguing, and collection management.

Gay advises that a Museum Meet will be held on 5 March 2019 at the Cultural Centre at Katoomba (9am to 1pm), to look at what is happening over the coming year and have a catchup and information share - what do you have planned for the year, what things do you need help with, how can we help on projects etc.
The next Muse workshops will be on 7th May and 6th August 2019.

For further information contact:
Gay Hendriksen, The Rowan Tree Heritage and Cultural Services

Bathurst Heritage Trades Trail 2019

Bathurst Heritage Trades Trail is a Bathurst Regional Council initiative supported by a number of community heritage and history groups including Bathurst District Historical Society, Bathurst Heritage Network, The National Trust, Bathurst Bead & Wire Craft Guild, Bathurst Embroidery Guild and the Bathurst Family History Group. It will take place during Bathurst Heritage Week, on the 18th and 19th of May 2019, and will feature heritage trades in a number of heritage buildings and precincts around Bathurst.
It is aimed at increasing public awareness of heritage for locals and visitors. It is a not-for-profit community activity, and venues will be managed and manned by volunteers.
The Heritage Trades concept will be based around several heritage locations, each showcasing genuine heritage artisan trades in Bathurst heritage buildings or precincts over two days, as part of Bathurst Heritage Week, Bathurst Autumn Colours and the National Trust Australian Heritage Festival.
See their Facebook page, *Bathurst Heritage Trades Trail,* which includes a video of the event.

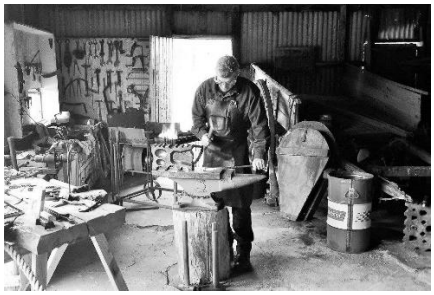
BATHURST

HERITAGE TRADES TRAIL

REDISCOVER

TRADITIONAL CRAFTSMANSHIP

The organising committee is inviting submission of expressions of interest in showcasing traditional trade or craft skills at one of the elements of the Trail. They are particularly interested in people who can demonstrate and discuss their trade with the public. There is no charge to demonstrators, and they can sell their products as well without any commission. Exhibitors who only sell their product and do not demonstrate are not encouraged and will be required to pay a fee to participate, as will food vendors.
The Trail runs from 10.00am to 4.00pm both days, with set up possible on the Friday afternoon immediately before and bump out on the Monday morning after.
The organising committee would be responsible for all logistics, a professional OH&S risk assessment, all set up, running and clean up, portable toilets, small marquees and traffic management.



Marketing is extensive, particularly via online and social media channels, as this is intended as a visitor attracting event in addition to engaging the local community. Marketing and promotion are carried out by Bathurst Regional Council, and the individual community groups involved. You are encouraged to promote the event through your Trade or Craft organisation, and your network of contacts. Sharing from their Facebook page is a powerful way to spread the word.
They would like to know as soon as possible what facilities and equipment you would need us to arrange for you, if any. If you are an Agricultural Trade or an outdoors trade, they would encourage you to bring your own gazebo and tables etc.
They have a tight timetable to bring the event together and encourage exhibitors to confirm at an early date. Please contact them at heritagebathurst@gmail.com in the first instance with any queries and issues.

Sandy Bathgate

For any queries contact the organisers at heritagebathurst@gmail.com

Exhibition: An Aerial Disaster for John Brittany North

On Sunday 27th January 2019, the Blue Mountains Historical Society's 19th century cottage museum, *Tarella,* opened for viewing, being the first formal Open Day for 2019. *The Sun Room Gallery* provided a new exhibition to greet the new year, *An Aerial Disaster for John Britty North.*

The Bleichert Aerial Ropeway 1891

The exhibition displays artefacts related to the collapse of the Bleichert Aerial Ropeway at Katoomba in 1889 or January 1890. These artefacts and photographs are largely from the private collection of Philip Hammon, together with some photographs from the Blue Mountains Historical Society and display the ropeway and surrounds at the time of operation in the late 1800s.

The exhibition was also able to be viewed at the Open Day on Sunday 24th February 2019 and will still be available at the Open Day on Sunday 24th March 2019.

Robyne Ridge

Opening hours are from 10am to 3pm.
Entry charges to Tarella are $5.00 for adults and $2.00 for children.
Entry to the exhibition is free with entry to Tarella. Please note that they can only accept cash, as they have no card facilities.

Location: Hobby's Reach, 99 Blaxland Road, Wentworth Falls

History Week 2019 – Memory & Landscapes

History Week is the annual, state-wide celebration of history organised by the History Council of New South Wales (HCNSW). Initiated by the HCNSW in 1997, *History Week* is a fantastic opportunity for member organisations, large and small, throughout NSW to engage and educate the community about the vitality, diversity and meaning of history and its practice.

The History Council of NSW's festival, *History Week 2019*: *Memory & Landscapes* (30 August 2019 to 8th September 2019), will explore our relationship to landscapes through the ways that we remember and continue to interact with them.

The theme of *Memory & Landscapes* may include:

- Remembering where we come from
- Spiritual, physical, social and cultural connection to place
- Stories of travel & migration
- Creative or analytic depiction, interpretation or analysis
- Landscape as canvas, gallery and film set
- Landscape as a threat or a treat
- Agriculture, environment and land care
- Conflict, death, dispossession, murder, genocide
- Landscape then and now – changes over years, centuries and millennia
- Memory in landscapes – memorials and monuments
- Memorialisation

In 2019, *History Week* commences on 30 August with the NSW Premier's History Awards. Another feature event is the Annual History Lecture and Awards on the night of 3 September. Overall, there will be close to 100 events being staged throughout NSW in *History Week.*

Registrations for *History Week* 2019 are now open and close at 5pm on Friday, 14th June 2019.

You must be a member of the History Council of NSW to register an event for *History Week 2019*. Events must be relevant to the practice of history and the theme, *Memory and Landscapes*, and will be published at the discretion of the History Council. The event must take place during History Week 31st August - 8th September 2019.

Members apply through the HCNSW to host history events relating to the annual theme. Previous events have included talks and lectures, behind the scene tours and heritage trails, exhibitions and radio features, film festivals, open historic houses and gardens, book sales and launches. They encourage applicants to think creatively about the form their event will take.

In 2019, *History Week* will commence on 30 August with the *NSW Premier's History Awards* held at the State Library of New South Wales. This is followed by 9 days of events (Saturday 31 August – Sunday 8 September) that are staged by members for a general audience, all around NSW. These events are publicised by the History Council of NSW through their various platforms and channels, including an interactive program that allows attendees to sort events by content, genre and region.

Patsy Moppett

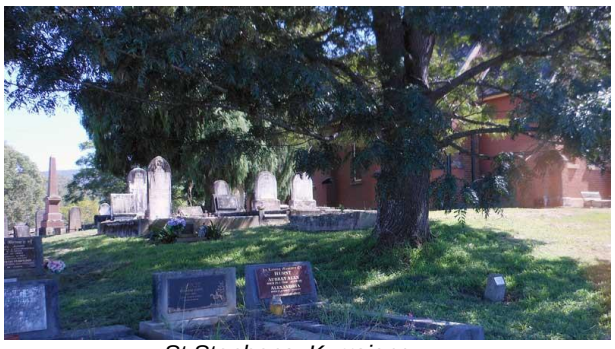
The complete interactive program of History Week events is available on the History Council website: www.events.historyweek.com.au

Vale Chris Upton

Just prior to Christmas 2018 Colo Shire Family History Group (CSFHG) suffered a great loss, with the death of their Editor, Chris Upton, aged just 59 years, who had been battling

illness for the past two years. In the last few months he had been travelling weekly for treatment, continuing with his fulltime occupation, producing the group's Newsletter and working hard on their next publication – *St Stephens Volume 4*.

Chris Upton

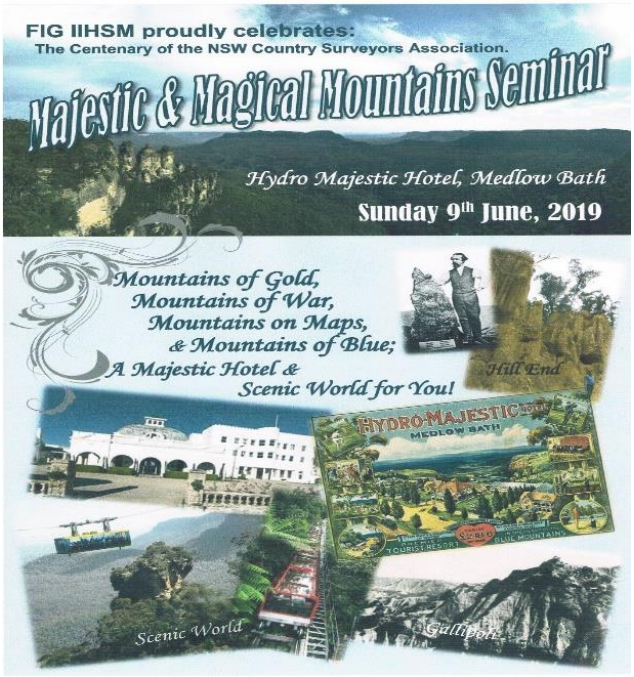


St Stephens, Kurrajong

Chris's parents were from two pioneer Hawkesbury families, the Uptons and the Robinsons. When Chris became Editor of a Newsletter for Kurrajong-Comleroy Historical Society, he soon became immersed in the local history. When CSFHG was formed as a separate group, Chris began producing their Newsletter from August 2016.
In recent years Chris has spent a lot of his time putting together the group's research and stories for the *St Stephens* Volumes. His attention to detail and accuracy is very well known, and he has worked well with the team of transcribers and tactfully kept them on the right path. The Secretary, Neil Renaud, recently wrote a history of Archibald Bell, once more with Chris's helpful assistance.
Chris will be sorely missed by all, and condolences go out to his brother Greg, Greg's wife Stephany and their three children.

Joy Shepherd CSFHG

FIG IIHSM Seminar – Majestic & Magical Mountains



2019 History Seminar Program

Venue: Majestic Ballroom, Hydro Majestic Hotel, Medlow Bath

Immerse yourself amongst the ambience of an elegant past to hear amazing tales of mountain surveying while gazing through the historic windows to be spellbound by the breath-taking wonderland of scenery! You will forget that it is winter outside while you enjoy a sumptuous repast alongside one of the fireplaces which have warmed their guests for over 110 years.

From 8am REGISTRATION & EARLY COFFEE

Full Day Chairman – John Brock

SESSION ONE: Surveyors Measuring History **Chair: Kerima-Gae Topp**

8.40am Welcome dignitaries & guests
8.50am Official Opening
9.10am Special Presentation: Gallipoli's Anzac Hero Surveyor: J.N. Murray, Land Surveyor – Mark Murray, Licensed Surveyor, (JNs grandson)
9.45am Highlights of the 100-year History of the N.S.W. Country Surveyors Association – Dr Terry Kass
10.20am .....MORNING TEA.....

SESSION TWO: Edging Towards the Mountains Pass **Chair: Phil Hayward**

10.50am William Dawes: Sydney's Star Surveyor Goes Up the Blue Mountains - John Brock
11.20am Blue Mountains to Bridgetown: The Life & Journeys of Barrallier – The Frenchman Who Almost Beat the Mountain Barrier – Andy McQueen
11.50am George Evans: Surveying King of the Mountains – Professor Ian Jack
12.20pm Three Surveyors of the Wollemi: Frederick D'Arcy, William Romaine Govett & Major Hugh Clews – Andy McQueen
12.50pm .....BUFFET LUNCH.....

SESSION THREE: Surveying the Road to Gold **Chair: Bob Harrison**

2.00pm Computer Modelling Mitchell's Majestic Map of the Nineteen Counties - Angus Scown
2.30pm Surveyors of Gold – Merlin's Magical Photo Collection Monument Project at Hill End – John Brock
2.50pm Surveyors Through the Eyes of a Non-Surveyor – Kerima-Gae Topp
3.20pm .....AFTERNOON TEA.....

SESSION FOUR: Scenic World & The Hydro Majestic **Chair: John Brock**

3.50pm Surveying Scenic World – Phil Hammon / Mark Bowler
4.20pm History of the Hydro Majestic Hotel – TBA
4.50pm Tours of the Hydro Majestic Hotel – various guides in groups of 30
5.50pm End – Browse Through the Museum
6.00pm – 8.00pm .....COCKTAIL PARTY.....

This seminar is not to be missed and is to be held at the Hydro Majestic Hotel, Medlow Bath, on Sunday 9 June 2019.
FIG is the *Federatione Internationale des Geometres* (translated from French as the International Federation of Surveyors founded in 1878 in Paris). The IIHSM is a permanent institution under the FIG called the International Institution for the History of Surveying and Measurement.

History Walks Programme for 2019 - Glenbrook & District Historical Society Inc.

All walks are on Saturdays, led by Doug Knowles & Team.

March 9th **9.00am** **"Lennox Bridge"** and the old stone quarry, Brookside Creek, Dunn's Steam Saw Mill relics, and earth dam.

30th **9.00am** **"The Descent to the West:"** Mt. York **:** Three short return walks on the three most historic roads to the West**:** Cox's Pass 1815, Lawsons Road 1822, and the newest road, Berghofer's Pass 1909.
Includes Tea/coffee, biscuits. **Special Walk: $12.00 Adults**

April 13th **9.00am** **"Eastern Zig Zag Railway"** This walk on the 1867 Zig Zag Railway & Knapsack Viaduct, also extends to the first improvement, the Lapstone Hill Tunnel 1892. [East Portal only,] and the wash-away section 1906.

May 11th **9.00am** **"Eastern Zig Zag Railway."** This walk is focussed on the Knapsack Gully stone viaduct and offers good photographic opportunities. Includes Gatehouse No. 1, 1867 and the Knapsack refuge sidings 1909.

June 8th 1.30pm "Duck Hole--Glenbrook Creek." Old roadway construction and pump site for railway water supply to old Glenbrook Station.

29th 1.30pm "The Mountains Murders." Captain Lee Weller's grave site and rock inscriptions.

July 13th **9.00am** **"Faulconbridge Steam Sawmill Site."** Engine remnants and other relics. Operated 1914-1925.

Aug. 10th **9.00am** **"Bull's Creek."** Railway relics: Stone dam and steam pump relics.

"Macquarie" Open Weekend, O'Connell

Includes an exhibition in the convict barracks by "Mountains & Metal" of contemporary jewellery and silverware

Evidence supports the assertion that *"Macquarie",* containing the original 1000 acre land grant to Lieutenant William Lawson by Governor Lachlan Macquarie as Lawson's reward for his contribution in finding a way across the Blue Mountains, is the oldest farm and oldest continuing residence west of the Great Divide. In its 200 years of European history, *"Macquarie"* has only had two owners prior to the current owners, Paul and Bonnie Hennessy, namely, the Lawson family followed by the McKibbin family. Accordingly, it remains remarkably unaltered.

The work of *"Mountains & Metal"* will be on display for the weekend. This group of jewellers, silversmiths and artisans from the Blue Mountains and surroundings welcome you to view their work in this unique setting. All items are for sale – come and meet the artists.

The event will take place on the weekend of 6, 7 April 2019 at "Macquarie", 3397 O'Connell Road, O'Connell, south east of Bathurst.
The property will be open from 10am to 3pm, commencing with a *Welcome to Country* each day.
"Macquarie" is situated approximately 12 kilometres south east of Bathurst on the O'Connell Road and approximately 8 km from the Great Western Highway.
Entry fee is $10per person, with a booklet included. Concessions are available for families, children and seniors.
Entry and refreshment proceeds will go to St Vincent de Paul Bathurst to distribute to drought affected farmers.
Tables and chairs will be set out on the lawns and refreshments will be available.

Paul & Bonny Hennessy

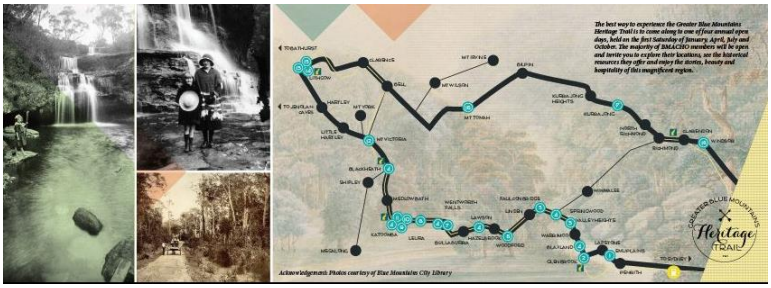
Greater Blue Mountains Heritage Trail Update

Westpac
Australia's First Bank



BMACHO continues to promote the Greater Blue Mountains Heritage Trail and members' upcoming events. BMACHO reprinted the Heritage Trail brochure in 2017 which was distributed to visitors' centres across the region.
The Trail is an ideal activity for the kids and grandkids, be it in the school holidays or any weekend! Collect the Greater Blue Mountains Heritage Trail brochure at participating venues and Visitor Information Centres.
BMACHO is currently undertaking a review of the operation of the Trail brochure over the coming months, with a view to the issue of a new and revised brochure in 2019. Once again, your feedback will be most welcome!
If you are a member and you would like further information, or if you would like to become a member, please email the BMACHO Secretary at committee@bluemountainsheritage.com.au
For general information about BMACHO and the Trail, see heritagedrive.com.au or www.facebook.com/GBMHeritageTrail
To find out more about BMACHO visit www.bluemountainsheritage.com.au

BLUE MOUNTAINS ASSOCIATION OF CULTURAL HERITAGE ORGANISATIONS INC.

Registered office: 1/19 Stypandra Place, Springwood 2777. (02) 4751 5834
Email: committee@bluemountainsheritage.com.au or j.koperberg@bigpond.com
Website: www.bluemountainsheritage.com.au **ABN**: 53 994 839 952

The organisation: Blue Mountains Association of Cultural & Heritage Organisations Inc. (BMACHO) was established in April 2006 after local historical and heritage societies and individuals recognised the need for the creation of a cultural heritage strategy for the local government area (LGA) of Blue Mountains City Council. The constituency now embraces but is not limited to, the LGAs of Blue Mountains, Lithgow, Hawkesbury and Penrith. BMACHO membership includes historical and heritage groups, museums, commercial enterprises with an historical or heritage component in its core business, local government (local studies units, library collections) and a limited number of individual members by invitation such as but not necessarily academics. The objectives of the organisation are:

1. To raise public consciousness of the value of cultural heritage
2. To encourage and assist cultural heritage
3. To initiate and support cultural heritage activities not already covered by member organisations.

One of the aims of BMACHO is to bring the various bodies into closer contact to encourage them to work more closely together and to provide a combined voice on matters of importance within the heritage sector.

Affiliations: BMACHO is a member of the Royal Australian Historical Society.

Publications: BMACHO's official newsletter ***Heritage*** is edited by Patsy Moppett. The annual refereed *Blue Mountains History Journal* is edited by Dr Peter Rickwood and occasional papers are published from time to time.

Membership: The following organisations are members of BMACHO: Blue Mountains Botanic Garden, Mt Tomah; Blue Mountains City Library; Blue Mountains Cultural Heritage Centre; Blue Mountain Education & Research Trust; Blue Mountains Family History Society Inc; Blue Mountains Historical Society; Bygone Beautys Treasured Teapot Museum and Tearooms; City of Lithgow Mining Museum Inc; Colo Shire Family History Group; Eskbank Rail Heritage Centre; Everglades Historic House & Gardens; Friends of the Paragon Inc; Glenbrook & District Historical Society Inc; Hartley District Progress Association; Hawkesbury Historical Society Inc; Kurrajong-Comleroy Historical Society Inc; Leuralla NSW Toy & Railway Museum; Lithgow & District Family History Society Inc; Lithgow – Eskbank House Museum and Lithgow Regional Library – Local Studies; Mt Victoria & District Historical Society Inc; Mt Wilson & Mt Irvine Historical Society Inc (including Turkish Bath Museum); National Trust of Australia (NSW) – Blue Mountains Branch; National Trust of Australia (NSW) – Lithgow Branch; Nepean District Historical Society Inc; Norman Lindsay Gallery and Museum; Scenic World Blue Mountains Limited; Springwood Historical Society Inc; Transport Signal Communication Museum Inc; Valley Heights Locomotive Depot Heritage Museum, Woodford Academy Management Committee, Zig Zag Railway Co-op Ltd. The following are individual members: Fiona Burn, Philip Hammon, Dr Wayne Hanley, Associate Professor Ian Jack, Ian Milliss, Patsy Moppett, Keith Painter and Dr Peter Rickwood.
